

CODE OF FEDERAL REGULATIONS

Title 50 Wildlife and Fisheries

Parts 600 to 659

Revised as of October 1, 2021

Containing a codification of documents
of general applicability and future effect

As of October 1, 2021

Published by the Office of the Federal Register
National Archives and Records Administration
as a Special Edition of the Federal Register

U.S. GOVERNMENT OFFICIAL EDITION NOTICE

Legal Status and Use of Seals and Logos

The seal of the National Archives and Records Administration (NARA) authenticates the Code of Federal Regulations (CFR) as the official codification of Federal regulations established under the Federal Register Act. Under the provisions of 44 U.S.C. 1507, the contents of the CFR, a special edition of the Federal Register, shall be judicially noticed. The CFR is prima facie evidence of the original documents published in the Federal Register (44 U.S.C. 1510).

It is prohibited to use NARA's official seal and the stylized Code of Federal Regulations logo on any republication of this material without the express, written permission of the Archivist of the United States or the Archivist's designee. Any person using NARA's official seals and logos in a manner inconsistent with the provisions of 36 CFR part 1200 is subject to the penalties specified in 18 U.S.C. 506, 701, and 1017.

Use of ISBN Prefix

This is the Official U.S. Government edition of this publication and is herein identified to certify its authenticity. Use of the 0-16 ISBN prefix is for U.S. Government Publishing Office Official Editions only. The Superintendent of Documents of the U.S. Government Publishing Office requests that any reprinted edition clearly be labeled as a copy of the authentic work with a new ISBN.

*To cite the regulations in
this volume use title,
part and section num-
ber. Thus, 50 CFR 600.5
refers to title 50, part
600, section 5.*

Explanation

The Code of Federal Regulations is a codification of the general and permanent rules published in the Federal Register by the Executive departments and agencies of the Federal Government. The Code is divided into 50 titles which represent broad areas subject to Federal regulation. Each title is divided into chapters which usually bear the name of the issuing agency. Each chapter is further subdivided into parts covering specific regulatory areas.

Each volume of the Code is revised at least once each calendar year and issued on a quarterly basis approximately as follows:

Title 1 through Title 16.....	as of January 1
Title 17 through Title 27.....	as of April 1
Title 28 through Title 41.....	as of July 1
Title 42 through Title 50.....	as of October 1

The appropriate revision date is printed on the cover of each volume.

LEGAL STATUS

The contents of the Federal Register are required to be judicially noticed (44 U.S.C. 1507). The Code of Federal Regulations is prima facie evidence of the text of the original documents (44 U.S.C. 1510).

HOW TO USE THE CODE OF FEDERAL REGULATIONS

The Code of Federal Regulations is kept up to date by the individual issues of the Federal Register. These two publications must be used together to determine the latest version of any given rule.

To determine whether a Code volume has been amended since its revision date (in this case, October 1, 2021), consult the “List of CFR Sections Affected (LSA),” which is issued monthly, and the “Cumulative List of Parts Affected,” which appears in the Reader Aids section of the daily Federal Register. These two lists will identify the Federal Register page number of the latest amendment of any given rule.

EFFECTIVE AND EXPIRATION DATES

Each volume of the Code contains amendments published in the Federal Register since the last revision of that volume of the Code. Source citations for the regulations are referred to by volume number and page number of the Federal Register and date of publication. Publication dates and effective dates are usually not the same and care must be exercised by the user in determining the actual effective date. In instances where the effective date is beyond the cut-off date for the Code a note has been inserted to reflect the future effective date. In those instances where a regulation published in the Federal Register states a date certain for expiration, an appropriate note will be inserted following the text.

OMB CONTROL NUMBERS

The Paperwork Reduction Act of 1980 (Pub. L. 96-511) requires Federal agencies to display an OMB control number with their information collection request.

Many agencies have begun publishing numerous OMB control numbers as amendments to existing regulations in the CFR. These OMB numbers are placed as close as possible to the applicable recordkeeping or reporting requirements.

PAST PROVISIONS OF THE CODE

Provisions of the Code that are no longer in force and effect as of the revision date stated on the cover of each volume are not carried. Code users may find the text of provisions in effect on any given date in the past by using the appropriate List of CFR Sections Affected (LSA). For the convenience of the reader, a “List of CFR Sections Affected” is published at the end of each CFR volume. For changes to the Code prior to the LSA listings at the end of the volume, consult previous annual editions of the LSA. For changes to the Code prior to 2001, consult the List of CFR Sections Affected compilations, published for 1949-1963, 1964-1972, 1973-1985, and 1986-2000.

“[RESERVED]” TERMINOLOGY

The term “[Reserved]” is used as a place holder within the Code of Federal Regulations. An agency may add regulatory information at a “[Reserved]” location at any time. Occasionally “[Reserved]” is used editorially to indicate that a portion of the CFR was left vacant and not dropped in error.

INCORPORATION BY REFERENCE

What is incorporation by reference? Incorporation by reference was established by statute and allows Federal agencies to meet the requirement to publish regulations in the Federal Register by referring to materials already published elsewhere. For an incorporation to be valid, the Director of the Federal Register must approve it. The legal effect of incorporation by reference is that the material is treated as if it were published in full in the Federal Register (5 U.S.C. 552(a)). This material, like any other properly issued regulation, has the force of law.

What is a proper incorporation by reference? The Director of the Federal Register will approve an incorporation by reference only when the requirements of 1 CFR part 51 are met. Some of the elements on which approval is based are:

- (a) The incorporation will substantially reduce the volume of material published in the Federal Register.
- (b) The matter incorporated is in fact available to the extent necessary to afford fairness and uniformity in the administrative process.
- (c) The incorporating document is drafted and submitted for publication in accordance with 1 CFR part 51.

What if the material incorporated by reference cannot be found? If you have any problem locating or obtaining a copy of material listed as an approved incorporation by reference, please contact the agency that issued the regulation containing that incorporation. If, after contacting the agency, you find the material is not available, please notify the Director of the Federal Register, National Archives and Records Administration, 8601 Adelphi Road, College Park, MD 20740-6001, or call 202-741-6010.

CFR INDEXES AND TABULAR GUIDES

A subject index to the Code of Federal Regulations is contained in a separate volume, revised annually as of January 1, entitled CFR INDEX AND FINDING AIDS. This volume contains the Parallel Table of Authorities and Rules. A list of CFR titles, chapters, subchapters, and parts and an alphabetical list of agencies publishing in the CFR are also included in this volume.

An index to the text of “Title 3—The President” is carried within that volume.

The Federal Register Index is issued monthly in cumulative form. This index is based on a consolidation of the “Contents” entries in the daily Federal Register.

A List of CFR Sections Affected (LSA) is published monthly, keyed to the revision dates of the 50 CFR titles.

REPUBLICATION OF MATERIAL

There are no restrictions on the republication of material appearing in the Code of Federal Regulations.

INQUIRIES

For a legal interpretation or explanation of any regulation in this volume, contact the issuing agency. The issuing agency’s name appears at the top of odd-numbered pages.

For inquiries concerning CFR reference assistance, call 202-741-6000 or write to the Director, Office of the Federal Register, National Archives and Records Administration, 8601 Adelphi Road, College Park, MD 20740-6001 or e-mail fedreg.info@nara.gov.

SALES

The Government Publishing Office (GPO) processes all sales and distribution of the CFR. For payment by credit card, call toll-free, 866-512-1800, or DC area, 202-512-1800, M-F 8 a.m. to 4 p.m. e.s.t. or fax your order to 202-512-2104, 24 hours a day. For payment by check, write to: US Government Publishing Office – New Orders, P.O. Box 979050, St. Louis, MO 63197-9000.

ELECTRONIC SERVICES

The full text of the Code of Federal Regulations, the LSA (List of CFR Sections Affected), The United States Government Manual, the Federal Register, Public Laws, Public Papers of the Presidents of the United States, Compilation of Presidential Documents and the Privacy Act Compilation are available in electronic format via www.govinfo.gov. For more information, contact the GPO Customer Contact Center, U.S. Government Publishing Office. Phone 202-512-1800, or 866-512-1800 (toll-free). E-mail, ContactCenter@gpo.gov.

The Office of the Federal Register also offers a free service on the National Archives and Records Administration’s (NARA) website for public law numbers, Federal Register finding aids, and related information. Connect to NARA’s website at www.archives.gov/federal-register.

The e-CFR is a regularly updated, unofficial editorial compilation of CFR material and Federal Register amendments, produced by the Office of the Federal Register and the Government Publishing Office. It is available at www.ecfr.gov.

OLIVER A. POTTS,
Director,
Office of the Federal Register
October 1, 2021

THIS TITLE

Title 50—WILDLIFE AND FISHERIES is composed of thirteen volumes. The parts in these volumes are arranged in the following order: Parts 1–16; part 17 (17.1 to 17.95(a)), part 17 (17.95(b)), part 17 (17.95(c) to (e)), part 17 (17.95(f) to end of 17.95), part 17 (17.96 to 17.98), part 17 (17.99(a) to (h)), part 17 (17.99(i) to end of part 17), parts 18–199, parts 200–227, parts 228–599, parts 600–659, and part 660 to end. The first nine volumes consist of parts 1–16, part 17 (17.1 to 17.95(a)), part 17 (17.95(b)), part 17 (17.95(c) to (e)), part 17 (17.95(f) to end of 17.95), part 17 (17.96 to 17.98), part 17 (17.99(a) to 17.99(h)), part 17 (17.99(i) to end of part 17), and parts 18–199 and contain the current regulations issued under chapter I—United States Fish and Wildlife Service, Department of the Interior. The tenth volume (parts 200–227) contains the current regulations issued under chapter II—National Marine Fisheries Service, National Oceanic and Atmospheric Administration, Department of Commerce. The eleventh volume (parts 228–599) contains the remaining current regulations issued under chapter II—National Marine Fisheries Service, National Oceanic and Atmospheric Administration, Department of Commerce; and the current regulations issued under chapter III—International Fishing and Related Activities; chapter IV—Joint Regulations (United States Fish and Wildlife Service, Department of the Interior and National Marine Fisheries Service, National Oceanic and Atmospheric Administration, Department of Commerce); Endangered Species Committee regulations; and chapter V—Marine Mammal Commission. The twelfth and thirteenth volumes (parts 600–659 and part 660 to end) contain the current regulations issued under chapter VI—Fishery Conservation and Management, National Oceanic and Atmospheric Administration, Department of Commerce. The contents of these volumes represent all current regulations codified under this title of the CFR as of October 1, 2021.

Alphabetical listings of endangered and threatened wildlife and plants appear in §§ 17.11 and 17.12.

The OMB control numbers for the National Oceanic and Atmospheric Administration appear in 15 CFR 902.1.

For this volume, Robert J. Sheehan, III was Chief Editor. The Code of Federal Regulations publication program is under the direction of John Hyrum Martinez, assisted by Stephen J. Frattini.

Title 50—Wildlife and Fisheries

(This book contains parts 600 to 659)

	<i>Part</i>
CHAPTER VI—Fishery Conservation and Management, National Oceanic and Atmospheric Administration, Department of Commerce	600

CHAPTER VI—FISHERY CONSERVATION AND MANAGEMENT, NATIONAL OCEANIC AND ATMOSPHERIC ADMINISTRATION, DEPARTMENT OF COMMERCE

EDITORIAL NOTE: Nomenclature changes to chapter VI appear at 69 FR 53361, 53362, Sept. 1, 2004.

<i>Part</i>		<i>Page</i>
600	Magnuson-Stevens Act provisions	5
622	Fisheries of the Caribbean, Gulf of Mexico, and South Atlantic	232
635	Atlantic highly migratory species	466

PART 600—MAGNUSON-STEVENS ACT PROVISIONS

Subpart A—General

- Sec.
- 600.5 Purpose and scope.
- 600.10 Definitions.
- 600.15 Other acronyms.

Subpart B—Regional Fishery Management Councils

- 600.105 Intercouncil boundaries.
- 600.110 Intercouncil fisheries.
- 600.115 Statement of organization, practices, and procedures (SOPP).
- 600.117 Council coordination committee (CCC).
- 600.120 Employment practices.
- 600.125 Budgeting, funding, and accounting.
- 600.130 Protection of confidentiality of statistics.
- 600.133 Scientific and Statistical Committee (SSC).
- 600.134 Stipends.
- 600.135 Meeting procedures.
- 600.140 Procedure for proposed regulations.
- 600.150 Disposition of records.
- 600.155 Freedom of Information Act (FOIA) requests.

Subpart C—Council Membership

- 600.205 Principal state officials and their designees.
- 600.207 Pacific Fishery Management Council Tribal Indian representative and alternate.
- 600.210 Terms of Council members.
- 600.215 Council nomination and appointment procedures.
- 600.220 Oath of office.
- 600.225 Rules of conduct.
- 600.227 Lobbying.
- 600.230 Removal.
- 600.235 Financial disclosure and recusal.
- 600.240 Security assurances.
- 600.245 Council member compensation.
- 600.250 Council member training.

Subpart D—National Standards

- 600.305 General.
- 600.310 National Standard 1—Optimum Yield.
- 600.315 National Standard 2—Scientific Information.
- 600.320 National Standard 3—Management Units.
- 600.325 National Standard 4—Allocations.
- 600.330 National Standard 5—Efficiency.
- 600.335 National Standard 6—Variations and Contingencies.
- 600.340 National Standard 7—Costs and Benefits.
- 600.345 National Standard 8—Communities.

- 600.350 National Standard 9—Bycatch.
- 600.355 National Standard 10—Safety of Life at Sea.

Subpart E—Confidentiality of Statistics

- 600.405 Types of statistics covered.
- 600.410 Collection and maintenance of statistics.
- 600.415 Access to statistics.
- 600.420 Control system.
- 600.425 Release of statistics.

Subpart F—Foreign Fishing

- 600.501 Vessel permits.
- 600.502 Vessel reports.
- 600.503 Vessel and gear identification.
- 600.504 Facilitation of enforcement.
- 600.505 Prohibitions.
- 600.506 Observers.
- 600.507 Recordkeeping.
- 600.508 Fishing operations.
- 600.509 Prohibited species.
- 600.510 Gear avoidance and disposal.
- 600.511 Fishery closure procedures.
- 600.512 Scientific research.
- 600.513 Recreational fishing.
- 600.514 Relation to other laws.
- 600.515 Interpretation of 16 U.S.C. 1857(4).
- 600.516 Total allowable level of foreign fishing (TALFF).
- 600.517 Allocations.
- 600.518 Fee schedule for foreign fishing.
- 600.520 Northwest Atlantic Ocean fishery.
- 600.525 Applicability of Subpart F to Canadian Albacore Fishing Vessels off the West Coast.
- 600.530 Pacific albacore fishery.

Subpart G—Preemption of State Authority Under Section 306(b)

- 600.605 General policy.
- 600.610 Factual findings for Federal preemption.
- 600.615 Commencement of proceedings.
- 600.620 Rules pertaining to the hearing.
- 600.625 Secretary's decision.
- 600.630 Application for reinstatement of state authority.

Subpart H—General Provisions for Domestic Fisheries

- 600.705 Relation to other laws.
- 600.710 Permits.
- 600.715 Recordkeeping and reporting.
- 600.720 Vessel and gear identification.
- 600.725 General prohibitions.
- 600.730 Facilitation of enforcement.
- 600.735 Penalties.
- 600.740 Enforcement policy.
- 600.745 Scientific research activity, exempted fishing, and exempted educational activity.
- 600.746 Observers.

Pt. 600

600.747 Guidelines and procedures for determining new fisheries and gear.

Subpart I—Fishery Negotiation Panels

600.750 Definitions.
600.751 Determination of need for a fishery negotiation panel.
600.752 Use of conveners and facilitators.
600.753 Notice of intent to establish a fishery negotiation panel.
600.754 Decision to establish a fishery negotiation panel.
600.755 Establishment of a fishery negotiation panel.
600.756 Conduct and operation of a fishery negotiation panel.
600.757 Operational protocols.
600.758 Preparation of report.
600.759 Use of report.
600.760 Fishery Negotiation Panel lifetime.

Subpart J—Essential Fish Habitat (EFH)

600.805 Purpose and scope.
600.810 Definitions and word usage.
600.815 Contents of Fishery Management Plans.

Subpart K—EFH Coordination, Consultation, and Recommendations

600.905 Purpose, scope, and NMFS/Council cooperation.
600.910 Definitions and word usage.
600.915 Coordination for the conservation and enhancement of EFH.
600.920 Federal agency consultation with the Secretary.
600.925 NMFS EFH Conservation Recommendations to Federal and state agencies.
600.930 Council comments and recommendations to Federal and state agencies.

Subpart L—Fishing Capacity Reduction Framework

600.1000 Definitions.
600.1001 Requests.
600.1002 General requirements.
600.1003 Content of a request for a financed program.
600.1004 Accepting a request for, and determinations about initiating, a financed program.
600.1005 Content of a request for a subsidized program.
600.1006 Accepting a request for, and determinations about conducting, a subsidized program.
600.1007 Reduction amendments.
600.1008 Implementation plan and implementation regulations.
600.1009 Bids.
600.1010 Referenda.
600.1011 Reduction methods and other conditions.

50 CFR Ch. VI (10–1–21 Edition)

600.1012 Reduction loan.
600.1013 Fee payment and collection.
600.1014 Fee collection deposits, disbursements, records, and reports.
600.1015 Late charges.
600.1016 Enforcement.
600.1017 Prohibitions and penalties.

Subpart M—Specific Fishery or Program Fishing Capacity Reduction Regulations

600.1100 General. [Reserved]
600.1101 Inshore fee system for repayment of the loan to harvesters of Pollock from the directed fishing allowance allocated to the inshore component under section 206(b)(1) of the AFA.
600.1102 Pacific Coast groundfish fee.
600.1103 Bering Sea and Aleutian Islands (BSAI) Crab species program.
600.1104 Bering Sea and Aleutian Islands (BSAI) crab species fee payment and collection system.
600.1105 Longline catcher processor subsector of the Bering Sea and Aleutian Islands (BSAI) non-pollock groundfish fishery program.
600.1106 Longline catcher processor subsector Bering Sea and Aleutian Islands (BSAI) non-pollock groundfish species fee payment and collection system.
600.1107 Southeast Alaska Purse Seine Salmon Fishery capacity reduction program, including fee payment and collection system.
600.1108 Longline catcher processor subsector of the Bering Sea and Aleutian Islands (BSAI) non-pollock groundfish fishery program.

Subpart N—Shark Fin Removal, Possession, Transfer and Landing

600.1200 Purpose and scope.
600.1201 Relation to other laws.
600.1202 Definitions.
600.1203 Prohibitions.

Subpart O—Limited Access Privilege Programs

600.1300–600.1309 [Reserved]
600.1310 New England and Gulf of Mexico Individual Fishing Quota Referenda.

Subpart P—Marine Recreational Fisheries of the United States

600.1400 Definitions.
600.1405 Angler registration.
600.1410 Registry process.
600.1415 Procedures for designating exempted states-general provisions.
600.1416 Requirements for exempted state designation based on submission of state license holder data.

Fishery Conservation and Management

§ 600.10

600.1417 Requirements for exempted state designation based on submission of recreational survey data.

Subpart Q—Vessel Monitoring System Type-Approval

- 600.1500 Definitions and acronyms.
- 600.1501 Vessel Monitoring System type-approval process.
- 600.1502 Communications functionality.
- 600.1503 Position report data formats and transmission.
- 600.1504 Latency requirement.
- 600.1505 Messaging.
- 600.1506 Electronic forms.
- 600.1507 Communications security.
- 600.1508 Field and technical services.
- 600.1509 General.
- 600.1510 Notification of type-approval.
- 600.1511 Changes or modifications to type-approvals.
- 600.1512 Type-approval revocation process.
- 600.1513 Type-approval revocation appeals process.
- 600.1514 Revocation effective date and notification to vessel owners.
- 600.1515 Litigation support.
- 600.1516 Reimbursement opportunities for revoked Vessel Monitoring System type-approval products.

Subpart R—Standardized Bycatch Reporting Methodology

- 600.1600 Purpose and scope.
- 600.1605 Definitions and word usage.
- 600.1610 Establishing and reviewing standardized bycatch reporting methodologies in fishery management plans.

AUTHORITY: 5 U.S.C. 561 and 16 U.S.C. 1801 *et seq.*

SOURCE: 61 FR 32540, June 24, 1996, unless otherwise noted.

Subpart A—General

§ 600.5 Purpose and scope.

(a) This part contains general provisions governing the operation of the eight Regional Fishery Management Councils established by the Magnuson-Stevens Act and describes the Secretary's role and responsibilities under the Act. The Councils are institutions created by Federal law and must conform to the uniform standards established by the Secretary in this part.

(b) This part also governs all foreign fishing under the Magnuson-Stevens Act, prescribes procedures for the conduct of preemption hearings under section 306(b) of the Magnuson-Stevens

Act, and collects the general provisions common to all domestic fisheries governed by this chapter.

(c) This part also governs fishing capacity reduction programs under the Magnuson-Stevens Act.

[61 FR 32540, June 24, 1996, as amended at 63 FR 7075, Feb. 12, 1998; 65 FR 31443, May 18, 2000]

§ 600.10 Definitions.

Unless defined otherwise in other parts of Chapter VI, the terms in this chapter have the following meanings:

Administrator means the Administrator of NOAA (Under Secretary of Commerce for Oceans and Atmosphere) or a designee.

Advisory group means a Scientific and Statistical Committee (SSC), Fishing Industry Advisory Committee (FIAC), or Advisory Panel (AP) established by a Council under the Magnuson-Stevens Act.

Advisory panel (AP) means a committee formed, selected, and formally designated as a Magnuson-Stevens Act Section 302(g)(2) advisory panel by the Council's Statement of organization, practices, and procedures (SOPP), or by a formal charge to the committee made by the chair and recorded in the Council's minutes, to assist it in carrying out its functions. An AP may include individuals who are not members of the Council.

Agent, for the purpose of foreign fishing (subpart F), means a person appointed and maintained within the United States who is authorized to receive and respond to any legal process issued in the United States to an owner and/or operator of a vessel operating under a permit and of any other vessel of that Nation fishing subject to the jurisdiction of the United States. Any diplomatic official accepting such an appointment as designated agent waives diplomatic or other immunity in connection with such process.

Aggregate or summary form means confidential data structured in such a way that the identity of the submitter cannot be determined either from the present release of the data or in combination with other releases.

Albacore means the species *Thunnus alalunga*, or a part thereof.

§ 600.10

50 CFR Ch. VI (10–1–21 Edition)

Allocated species means any species or species group allocated to a foreign nation under § 600.517 for catching by vessels of that Nation.

Allocation means direct and deliberate distribution of the opportunity to participate in a fishery among identifiable, discrete user groups or individuals.

Allowable chemical means a substance, generally used to immobilize marine life so it can be captured alive, that, when introduced into the water, does not take Gulf and South Atlantic prohibited coral (as defined at 50 CFR 622.2) and is allowed by Florida or Hawaii or the U.S. Pacific Insular Area for the harvest of tropical fish.

Anadromous species means species of fish that spawn in fresh or estuarine waters of the United States and that migrate to ocean waters.

Angling means fishing for, attempting to fish for, catching or attempting to catch fish by any person (angler) with a hook attached to a line that is hand-held or by rod and reel made for this purpose.

Area of custody means any vessel, building, vehicle, live car, pound, pier or dock facility where fish might be found.

Assistant Administrator means the Assistant Administrator for Fisheries, NOAA, or a designee.

Atlantic tunas means bluefin, albacore, bigeye, skipjack, and yellowfin tunas found in the Atlantic Ocean.

Atlantic Tunas Convention Act means the Atlantic Tunas Convention Act of 1975, 16 U.S.C. 971–971h.

Authorized officer means:

(1) Any commissioned, warrant, or petty officer of the USCG;

(2) Any special agent or fishery enforcement officer of NMFS;

(3) Any officer designated by the head of any Federal or state agency that has entered into an agreement with the Secretary and the Commandant of the USCG to enforce the provisions of the Magnuson-Stevens Act or any other statute administered by NOAA; or

(4) Any USCG personnel accompanying and acting under the direction of any person described in paragraph (1) of this definition.

Authorized species means any species or species group that a foreign vessel is

authorized to retain in a joint venture by a permit issued under Activity Code 4 as described by § 600.501(c).

Automatic reel means a reel that remains attached to a vessel when in use from which a line and attached hook(s) are deployed. The line is payed out from and retrieved on the reel electrically or hydraulically.

Bandit gear means vertical hook and line gear with rods that are attached to the vessel when in use. Lines are retrieved by manual, electric, or hydraulic reels.

Barrier net means a small-mesh net used to capture coral reef or coastal pelagic fishes.

Bigeye tuna means the species *Thunnus obesus*, or a part thereof.

Billfish means Atlantic billfish (blue marlin, white marlin, sailfish, longbill spearfish, or roundscale spearfish).

Bluefin tuna means the species *Thunnus thynnus*, or a part thereof.

Blue marlin means the species *Makaira nigricans*, or a part thereof.

Bully net means a circular frame attached at right angles to a pole and supporting a conical bag of webbing.

Buoy gear means fishing gear consisting of a float and one or more lines suspended therefrom. A hook or hooks are on the lines at or near the end. The float and line(s) drift freely and are retrieved periodically to remove catch and rebait hooks.

Carcass means a fish in whole condition or that portion of a fish that has been gilled and/or gutted and the head and some or all fins have been removed, but that is otherwise in whole condition.

Cast net means a circular net with weights attached to the perimeter.

Catch limit means the total allowable harvest or take from a single fishing trip or day, as defined in this section.

Catch, take, or harvest includes, but is not limited to, any activity that results in killing any fish or bringing any live fish on board a vessel.

Center means one of the five NMFS Fisheries Science Centers.

Charter boat means a vessel less than 100 gross tons (90.8 mt) that meets the requirements of the U.S. Coast Guard to carry six or fewer passengers for hire.

Fishery Conservation and Management

§ 600.10

Coast Guard Commander means one of the commanding officers of the Coast Guard units specified in Table 1 of § 600.502, or a designee.

Codend means the terminal, closed end of a trawl net.

Compensation fishing means fishing conducted for the purpose of recovering costs associated with resource surveys and scientific studies that support the management of a fishery, or to provide incentive for participation in such studies. Compensation fishing may include fishing during or subsequent to such surveys or studies.

Confidential statistics are those submitted as a requirement of an FMP and that reveal the business or identity of the submitter.

Conservation engineering means the development and assessment of fishing technologies and fishing techniques designed to conserve target and non-target species, and may include the study of fish behavior and the development and testing of new gear technologies and fishing techniques to minimize bycatch and any adverse effects on essential fish habitat and promote efficient harvest of target species. Conservation engineering may include the assessment of existing fishing technologies applied in novel ways. An example would be assessing the ability of a bycatch reduction device (BRD), designed and proven in one fishery, to reduce bycatch in another fishery. Conservation engineering meeting the definition of scientific research activity is not fishing.

Continental shelf fishery resources means the species listed under section 3(7) of the Magnuson-Stevens Act.

Council means one of the eight Regional Fishery Management Councils established by the Magnuson-Stevens Act.

Data, statistics, and information are used interchangeably.

Dealer means the person who first receives fish by way of purchase, barter, or trade.

Designated representative means the person appointed by a foreign nation and maintained within the United States who is responsible for transmitting information to and submitting reports from vessels of that Nation and establishing observer transfer arrange-

ments for vessels in both directed and joint venture activities.

Dip net means a small mesh bag, sometimes attached to a handle, shaped and framed in various ways. It is operated by hand or partially by mechanical power to capture the fish.

Directed fishing, for the purpose of foreign fishing (subpart F), means any fishing by the vessels of a foreign nation for allocations of fish granted that Nation under § 600.517.

Director means the Director of the Office of Sustainable Fisheries, 1315 East-West Highway, Silver Spring, MD 20910.

Discard means to release or return fish to the sea, whether or not such fish are brought fully on board a fishing vessel.

Dredge means a gear consisting of a mouth frame attached to a holding bag constructed of metal rings or mesh.

Drop net means a small, usually circular net with weight around the perimeter and a float in the center.

Essential fish habitat (EFH) means those waters and substrate necessary to fish for spawning, breeding, feeding, or growth to maturity. For the purpose of interpreting the definition of essential fish habitat: "Waters" include aquatic areas and their associated physical, chemical, and biological properties that are used by fish and may include aquatic areas historically used by fish where appropriate; "substrate" includes sediment, hard bottom, structures underlying the waters, and associated biological communities; "necessary" means the habitat required to support a sustainable fishery and the managed species' contribution to a healthy ecosystem; and "spawning, breeding, feeding, or growth to maturity" covers a species' full life cycle.

Exclusive economic zone (EEZ) means the zone established by Presidential Proclamation 5030, 3 CFR part 22, dated March 10, 1983, and is that area adjacent to the United States which, except where modified to accommodate international boundaries, encompasses all waters from the seaward boundary of each of the coastal states to a line on which each point is 200 nautical miles (370.40 km) from the baseline from which the territorial sea of the United States is measured.

§ 600.10

50 CFR Ch. VI (10–1–21 Edition)

Exempted educational activity means an activity that would otherwise be considered fishing, conducted by an educational institution accredited by a recognized national or international accreditation body, of limited scope and duration, that is otherwise prohibited by this chapter VI, but that is authorized by the appropriate Regional Administrator or Director for educational purposes, i.e., the instruction of an individual or group, and authorized capture of only the amount of fish necessary to demonstrate the lesson.

Exempted or experimental fishing means fishing from a vessel of the United States that involves activities otherwise prohibited by this chapter VI, but that are authorized under an exempted fishing permit (EFP). The regulations in § 600.745 refer exclusively to exempted fishing. References elsewhere in this chapter to experimental fishing mean exempted fishing under this part.

Fillet means to remove slices of fish flesh from the carcass by cuts made parallel to the backbone.

Fish means:

(1) When used as a noun, means any finfish, mollusk, crustacean, or parts thereof, and all other forms of marine animal and plant life other than marine mammals and birds.

(2) When used as a verb, means to engage in “fishing,” as defined below.

Fishery means:

(1) One or more stocks of fish that can be treated as a unit for purposes of conservation and management and that are identified on the basis of geographic, scientific, technical, recreational, or economic characteristics, or method of catch; or

(2) Any fishing for such stocks.

Fishery management unit (FMU) means a fishery or that portion of a fishery identified in an FMP relevant to the FMP’s management objectives. The choice of an FMU depends on the focus of the FMP’s objectives, and may be organized around biological, geographic, economic, technical, social, or ecological perspectives.

Fishery resource means any fish, any stock of fish, any species of fish, and any habitat of fish.

Fishing, or to fish means any activity, other than scientific research con-

ducted by a scientific research vessel, that involves:

(1) The catching, taking, or harvesting of fish;

(2) The attempted catching, taking, or harvesting of fish;

(3) Any other activity that can reasonably be expected to result in the catching, taking, or harvesting of fish; or

(4) Any operations at sea in support of, or in preparation for, any activity described in paragraphs (1), (2), or (3) of this definition.

Fishing industry advisory committee (FIAC) means an advisory group formed and selected by a regional fishery management council under the authority of the Magnuson-Stevens Act section 302(g)(3)(A) and formally designated in the Council’s SOPP or by a formal charge to the FIAC made by the chair and recorded in the Council’s minutes. A FIAC is not an “advisory panel” as defined under this section.

Fishing vessel means any vessel, boat, ship, or other craft that is used for, equipped to be used for, or of a type that is normally used for:

(1) Fishing; or

(2) Aiding or assisting one or more vessels at sea in the performance of any activity relating to fishing, including, but not limited to, preparation, supply, storage, refrigeration, transportation, or processing.

Fish weir means a large catching arrangement with a collecting chamber that is made of non-textile material (wood, wicker) instead of netting as in a pound net.

Foreign fishing means fishing by a foreign fishing vessel.

Foreign fishing vessel (FFV) means any fishing vessel other than a vessel of the United States, except those foreign vessels engaged in recreational fishing, as defined in this section.

Gear conflict means any incident at sea involving one or more fishing vessels:

(1) In which one fishing vessel or its gear comes into contact with another vessel or the gear of another vessel; and

(2) That results in the loss of, or damage to, a fishing vessel, fishing gear, or catch.

Fishery Conservation and Management

§ 600.10

Gillnet means a panel of netting, suspended vertically in the water by floats along the top and weights along the bottom, to entangle fish that attempt to pass through it.

Governing International Fishery Agreement (GIFA) means an agreement between the United States and a foreign nation or Nations under section 201(c) of the Magnuson-Stevens Act.

Grants Officer means the NOAA official authorized to sign, on behalf of the Government, the cooperative agreement providing funds to support the Council's operations and functions.

Greenwich mean time (GMT) means the local mean time at Greenwich, England. All times in this part are GMT unless otherwise specified.

Handgear means handline, harpoon, or rod and reel.

Hand harvest means harvesting by hand.

Handline means fishing gear that is set and pulled by hand and consists of one vertical line to which may be attached leader lines with hooks.

Harass means to unreasonably interfere with an individual's work performance, or to engage in conduct that creates an intimidating, hostile, or offensive environment.

Harpoon or *harpoon gear* means fishing gear consisting of a pointed dart or iron attached to the end of a line several hundred feet in length, the other end of which is attached to a floatation device. Harpoon gear is attached to a pole or stick that is propelled only by hand, and not by mechanical means.

Headboat means a vessel that holds a valid Certificate of Inspection issued by the U.S. Coast Guard to carry passengers for hire.

Hook and line means one or more hooks attached to one or more lines (can include a troll).

Hoop net means a cone-shaped or flat net which may or may not have throats and flues stretched over a series of rings or hoops for support.

Industry means both recreational and commercial fishing, and includes the harvesting, processing, and marketing sectors.

International radio call sign (IRCS) means the unique radio identifier assigned a vessel by the appropriate authority of the flag state.

Joint venture means any operation by a foreign vessel assisting fishing by U.S. fishing vessels, including catching, scouting, processing and/or support. (A joint venture generally entails a foreign vessel processing fish received from U.S. fishing vessels and conducting associated support activities.)

Lampara net means a surround net with the sections of netting made and joined to create bagging. It is hauled with purse rings and is generally much smaller in size than a purse seine net.

Land means to begin offloading fish, to offload fish, or to arrive in port or at a dock, berth, beach, seawall, or ramp.

Limited access system means a system that limits participation in a fishery to those satisfying certain eligibility criteria or requirements contained in a fishery management plan or associated regulation.

Longbill spearfish means the species *Tetrapturus pfluegeri*, or a part thereof.

Longline means a line that is deployed horizontally and to which gangions and hooks or pots are attached. Longlines can be stationary, anchored, or buoyed lines that may be hauled manually, electrically, or hydraulically.

Magnuson-Stevens Act means the Magnuson-Stevens Fishery Conservation and Management Act, as amended (16 U.S.C. 1801 *et seq.*), formerly known as the Magnuson Act.

Metric ton (mt) means 1,000 kg (2,204.6 lb).

nm means nautical mile (6,076 ft (1,852 m)).

Official number means the documentation number issued by the USCG or the certificate number issued by a state or by the USCG for an undocumented vessel.

Operator, with respect to any vessel, means the master or other individual aboard and in charge of that vessel.

Optimum yield (OY) means the amount of fish that:

(1) Will provide the greatest overall benefit to the Nation, particularly with respect to food production and recreational opportunities, and taking into account the protection of marine ecosystems;

(2) Is prescribed as such on the basis of the maximum sustainable yield from

§ 600.10

the fishery, as reduced by any relevant economic, social, or ecological factor; and

(3) In the case of an overfished fishery, provides for rebuilding to a level consistent with producing the maximum sustainable yield in such fishery.

Owner, with respect to any vessel, means:

(1) Any person who owns that vessel in whole or in part;

(2) Any charterer of the vessel, whether bareboat, time, or voyage;

(3) Any person who acts in the capacity of a charterer, including, but not limited to, parties to a management agreement, operating agreement, or any similar agreement that bestows control over the destination, function, or operation of the vessel; or

(4) Any agent designated as such by a person described in paragraph (1), (2), or (3) of this definition.

Pelagic longline means a longline that is suspended by floats in the water column and that is not fixed to or in contact with the ocean bottom.

Plan Team means a Council working group selected from agencies, institutions, and organizations having a role in the research and/or management of fisheries, whose primary purpose is to assist the Council in the preparation and/or review of FMPs, amendments, and supporting documents for the Council, and/or SSC and AP.

Postmark means independently verifiable evidence of the date of mailing, such as a U.S. Postal Service postmark, or other private carrier postmark, certified mail receipt, overnight mail receipt, or a receipt issued upon hand delivery to a representative of NMFS authorized to collect fishery statistics.

Pot means trap.

Powerhead means any device with an explosive charge, usually attached to a spear gun, spear, pole, or stick, that may or may not fire a projectile upon contact.

Predominately means, with respect to fishing in a fishery, that more fishing on a stock or stocks of fish covered by the FMP occurs, or would occur in the absence of regulations, within or beyond the EEZ than occurs in the aggregate within the boundaries of all states

50 CFR Ch. VI (10–1–21 Edition)

off the coasts of which the fishery is conducted.

Processing, for the purpose of foreign fishing (subpart F), means any operation by an FFV to receive fish from foreign or U.S. fishing vessels and/or the preparation of fish, including, but not limited to, cleaning, cooking, canning, smoking, salting, drying, or freezing, either on the FFV's behalf or to assist other foreign or U.S. fishing vessels.

Product recovery rate (PRR) means a ratio expressed as a percentage of the weight of processed product divided by the round weight of fish used to produce that amount of product.

Prohibited species, with respect to a foreign vessel, means any species of fish that that vessel is not specifically allocated or authorized to retain, including fish caught or received in excess of any allocation or authorization.

Purchase means the act or activity of buying, trading, or bartering, or attempting to buy, trade, or barter.

Purse seine means a floated and weighted encircling net that is closed by means of a drawstring threaded through rings attached to the bottom of the net.

Recreational fishing, with respect to a foreign vessel, means any fishing from a foreign vessel not operated for profit and not operated for the purpose of scientific research. It may not involve the sale, barter, or trade of part or all of the catch (see § 600.513).

Retain on board means to fail to return fish to the sea after a reasonable opportunity to sort the catch.

Region means one of six NMFS Regional Offices responsible for administering the management and development of marine resources of the United States in their respective geographical regions.

Regional Administrator means the Administrator of one of the six NMFS Regions described in Table 1 to § 600.502, or a designee.

Regional Program Officer means the NMFS official designated in the terms and conditions of the grant award responsible for monitoring, recommending, and reviewing any technical aspects of the application for Federal assistance and the award.

Fishery Conservation and Management

§ 600.10

Rod and reel means a hand-held (including rod holder) fishing rod with a manually or electrically operated reel attached.

Round means a whole fish—one that has not been gilled, gutted, beheaded, or definned.

Roundscale spearfish means the species *Tetrapturus georgii*, or a part thereof.

Round weight means the weight of the whole fish before processing or removal of any part.

Sailfish means the species *Istiophorus platypterus*, or a part thereof.

Sale or sell means the act or activity of transferring property for money or credit, trading, or bartering, or attempting to so transfer, trade, or barter.

Science and Research Director (also referred to as “Center Director”) means the Director of one of the six NMFS Fisheries Science Centers described in Table 1 to § 600.502, or a designee.

Scientific cruise means the period of time during which a scientific research vessel is operated in furtherance of a scientific research project, beginning when the vessel leaves port to undertake the project and ending when the vessel completes the project as provided for in the applicable scientific research plan.

Scientific research activity is, for the purposes of this part, an activity in furtherance of a scientific fishery investigation or study that would meet the definition of fishing under the Magnuson-Stevens Act, but for the exemption applicable to scientific research activity conducted from a scientific research vessel. Scientific research activity includes, but is not limited to, sampling, collecting, observing, or surveying the fish or fishery resources within the EEZ, at sea, on board scientific research vessels, to increase scientific knowledge of the fishery resources or their environment, and to test a hypothesis as part of a planned, directed investigation or study conducted according to methodologies generally accepted as appropriate for scientific research. At-sea scientific fishery investigations address one or more topics involving taxonomy, biology, physiology, behavior, disease, aging, growth, mortality, migration,

recruitment, distribution, abundance, ecology, stock structure, bycatch or other collateral effects of fishing, conservation engineering, and catch estimation of fish species considered to be a component of the fishery resources within the EEZ. Scientific research activity does not include the collection and retention of fish outside the scope of the applicable research plan, or the testing of fishing gear. Data collection designed to capture and land quantities of fish for product development, market research, and/or public display are not scientific research activities. For foreign vessels, such data collection activities are considered scientific research if they are carried out in full cooperation with the United States.

Scientific research plan means a detailed, written formulation, prepared in advance of the research, for the accomplishment of a scientific research project. At a minimum, a sound scientific research plan should include:

(1) A description of the nature and objectives of the project, including the hypothesis or hypotheses to be tested.

(2) The experimental design of the project, including a description of the methods to be used, the type and class of any vessel(s) to be used, and a description of sampling equipment.

(3) The geographical area(s) in which the project is to be conducted.

(4) The expected date of first appearance and final departure of the research vessel(s) to be employed, and deployment and removal of equipment, as appropriate.

(5) The expected quantity and species of fish to be taken and their intended disposition, and, if significant amounts of a managed species or species otherwise restricted by size or sex are needed, an explanation of such need.

(6) The name, address, and telephone/telex/fax number of the sponsoring organization and its director.

(7) The name, address, and telephone/telex/fax number, and curriculum vitae of the person in charge of the project and, where different, the person in charge of the research project on board the vessel.

(8) The identity of any vessel(s) to be used including, but not limited to, the vessel's name, official documentation number and IRCS, home port, and

name, address, and telephone number of the owner and master.

Scientific research vessel means a vessel owned or chartered by, and controlled by, a foreign government agency, U.S. Government agency (including NOAA or institutions designated as federally funded research and development centers), U.S. state or territorial agency, university (or other educational institution accredited by a recognized national or international accreditation body), international treaty organization, or scientific institution. In order for a domestic commercial fishing vessel to meet this definition, it must be under the control of a qualifying agency or institution, and operate in accordance with a scientific research plan, for the duration of the scientific research activity. In order for a vessel that is owned or chartered and controlled by a foreign government to meet this definition, the vessel must have scientific research as its exclusive mission during the scientific activity in question, and the vessel operations must be conducted in accordance with a scientific research plan.

Scouting means any operation by a vessel exploring (on the behalf of an FFV or U.S. fishing vessel) for the presence of fish by visual, acoustic, or other means that do not involve the catching of fish.

Secretary means the Secretary of Commerce or a designee.

Seine means a net with long narrow wings, that is rigged with floats and weights.

Skipjack tuna means the species *Katsuwonus pelamis*, or a part thereof.

Slurp gun means a tube-shaped suction device that operates somewhat like a syringe by sucking up the fish.

Snare means a device consisting of a pole to which is attached a line forming at its end a loop with a running knot that tightens around the fish when the line is pulled.

Spear means a sharp, pointed, or barbed instrument on a shaft. Spears can be operated manually or shot from a gun or sling.

State means each of the several states, the District of Columbia, the Commonwealth of Puerto Rico, American Samoa, the Virgin Islands, Guam, the Northern Mariana Islands, and any

other Commonwealth, territory, or possession of the United States.

State employee means any employee of the state agency responsible for developing and monitoring the state's program for marine and/or anadromous fisheries.

Statement of Organization, Practices, and Procedures (SOPP) means a statement by each Council describing its organization, practices, and procedures as required under section 302(f)(6) of the Magnuson-Stevens Act.

Stock assessment means the process of collecting and analyzing biological and statistical information to determine the changes in the abundance of fishery stocks in response to fishing, and, to the extent possible, to predict future trends of stock abundance. Stock assessments are based on resource surveys; knowledge of the habitat requirements, life history, and behavior of the species; the use of environmental indices to determine impacts on stocks; and catch statistics. Stock assessments are used as a basis to "assess and specify the present and probable future condition of a fishery" (as is required by the Magnuson-Stevens Act), and are summarized in the Stock Assessment and Fishery Evaluation or similar document.

Stock Assessment and Fishery Evaluation (SAFE) means a document or set of documents that provides Councils with a summary of the most recent biological condition of species in an FMU, and the social and economic condition of the recreational and commercial fishing industries and the fish processing industries. It summarizes, on a periodic basis, the best available scientific information concerning the past, present, and possible future condition of the stocks and fisheries being managed under Federal regulation.

Submersible means a manned or unmanned device that functions or operates primarily underwater and is used to harvest fish, i.e., precious corals, with mechanical arms.

Substantially (affects) means, for the purpose of subpart G, with respect to whether a state's action or omission will substantially affect the carrying out of an FMP for a fishery, that those effects are important or material, or considerable in degree. The effects of a

Fishery Conservation and Management

§ 600.15

state's action or omission for purposes of this definition include effects upon:

(1) The achievement of the FMP's goals or objectives for the fishery;

(2) The achievement of OY from the fishery on a continuing basis;

(3) The attainment of the national standards for fishery conservation and management (as set forth in section 301(a) of the Magnuson-Stevens Act) and compliance with other applicable law; or

(4) The enforcement of regulations implementing the FMP.

Support means any operation by a vessel assisting fishing by foreign or U.S. vessels, including supplying water, fuel, provisions, fish processing equipment, or other supplies to a fishing vessel.

Swordfish means the species *Xiphias gladius*, or a part thereof.

Tangle net dredge means dredge gear consisting of weights and flimsy netting that hangs loosely in order to immediately entangle fish.

Total length (TL) means the straight-line distance from the tip of the snout to the tip of the tail (caudal fin) while the fish is lying on its side, normally extended.

Trammel net means a net consisting of two or more panels of netting, suspended vertically in the water column by a common float line and a common weight line. One panel of netting has a larger mesh size than the other(s) in order to entrap fish in a pocket.

Transship means offloading and onloading or otherwise transferring fish or fish products and/or transporting fish or products made from fish.

Trap means a portable, enclosed device with one or more gates or entrances and one or more lines attached to surface floats. Also called a pot.

Trawl means a cone or funnel-shaped net that is towed through the water, and can include a pair trawl that is towed simultaneously by two boats.

Trip means the time period that begins when a fishing vessel departs from a dock, berth, beach, seawall, ramp, or port to carry out fishing operations and that terminates with a return to a dock, berth, beach, seawall, ramp, or port.

U.S. observer or *observer* means any person serving in the capacity of an observer employed by NMFS, either directly or under contract, or certified as a supplementary observer by NMFS.

Vessel of the United States or *U.S. vessel* means:

(1) Any vessel documented under chapter 121 of title 46, United States Code;

(2) Any vessel numbered under chapter 123 of title 46, United States Code, and measuring less than 5 net tons;

(3) Any vessel numbered under chapter 123 of title 46, United States Code, and used exclusively for pleasure; or

(4) Any vessel not equipped with propulsion machinery of any kind and used exclusively for pleasure.

White Marlin means the species *Kajikia albidus*, or a part thereof.

Yellowfin tuna means the species *Thunnus albacares*, or a part thereof.

[61 FR 32540, June 24, 1996, as amended at 62 FR 14646, Mar. 27, 1997; 62 FR 66551, Dec. 19, 1997; 63 FR 7073, 7075, Feb. 12, 1998; 64 FR 4036, Jan. 27, 1999; 64 FR 29133, May 28, 1999; 64 FR 67516, Dec. 2, 1999; 67 FR 2375, Jan. 17, 2002; 67 FR 64312, Oct. 18, 2002; 69 FR 30240, May 27, 2004; 73 FR 67810, Nov. 17, 2008; 74 FR 42792, Aug. 25, 2009; 75 FR 59149, Sept. 27, 2010; 75 FR 57701, Sept. 22, 2010]

§ 600.15 Other acronyms.

(a) *Fishery management terms.* (1) ABC—acceptable biological catch

(2) ATCA—Atlantic Tunas Convention Act

(3) BFT (Atlantic bluefin tuna) means the subspecies of bluefin tuna, *Thunnus thynnus thynnus*, or a part thereof, that occurs in the Atlantic Ocean.

(4) BSD means the ICCAT bluefin tuna statistical document.

(5) CCC—Council coordination committee

(6) DAH—estimated domestic annual harvest

(7) DAP—estimated domestic annual processing

(8) EIS—environmental impact statement

(9) EY—equilibrium yield

(10) FIAC—Fishing industry advisory committee

(11) FMP—fishery management plan

(12) ICCAT means the International Commission for the Conservation of Atlantic Tunas.

(13) JVP—joint venture processing

§ 600.105

- (14) MSY—maximum sustainable yield
- (15) PMP—preliminary FMP
- (16) TAC—total allowable catch

Subpart B—Regional Fishery Management Councils

§ 600.105 Intercouncil boundaries.

(a) *New England and Mid-Atlantic Councils.* The boundary begins at the intersection point of Connecticut, Rhode Island, and New York at

50 CFR Ch. VI (10–1–21 Edition)

41°18'16.249" N. lat. and 71°54'28.477" W. long. and proceeds south 37°22'32.75" East to the point of intersection with the outward boundary of the EEZ as specified in the Magnuson-Stevens Act.

(b) *Mid-Atlantic and South Atlantic Councils.* The boundary begins at the seaward boundary between the States of Virginia and North Carolina (36°33'01.0" N. lat), and proceeds due east to the point of intersection with the outward boundary of the EEZ as specified in the Magnuson-Stevens Act.

(c) *South Atlantic and Gulf of Mexico Councils.* The boundary coincides with the line of demarcation between the Atlantic Ocean and the Gulf of Mexico, which begins at the intersection of the outer boundary of the EEZ, as specified in the Magnuson-Stevens Act, and 83°00' W. long., proceeds northward along that meridian to 24°35' N. lat., (near the Dry Tortugas Islands), thence eastward along that parallel, through Rebecca Shoal and the Quicksand Shoal, to the Marquesas Keys, and then through the Florida Keys to the mainland at the eastern end of Florida Bay, the line so running that the narrow waters within the Dry Tortugas Islands, the Marquesas Keys and the Florida Keys, and between the Florida Keys and the mainland, are within the Gulf of Mexico.

[61 FR 32540, June 24, 1996, as amended at 63 FR 7075, Feb. 12, 1998; 75 FR 59149, Sept. 27, 2010]

§ 600.110 Intercouncil fisheries.

If any fishery extends beyond the geographical area of authority of any one Council, the Secretary may—

(a) Designate a single Council to prepare the FMP for such fishery and any amendments to such FMP, in consultation with the other Councils concerned; or

(b) Require that the FMP and any amendments be prepared jointly by all the Councils concerned.

(1) A jointly prepared FMP or amendment must be adopted by a majority of the voting members, present and voting, of each participating Council. Different conservation and management measures may be developed for specific geographic areas, but the FMP should address the entire geographic range of the stock(s).

Fishery Conservation and Management

§ 600.120

(2) In the case of joint FMP or amendment preparation, one Council will be designated as the “administrative lead.” The “administrative lead” Council is responsible for the preparation of the FMP or any amendments and other required documents for submission to the Secretary.

(3) None of the Councils involved in joint preparation may withdraw without Secretarial approval. If Councils cannot agree on approach or management measures within a reasonable period of time, the Secretary may designate a single Council to prepare the FMP or may issue the FMP under Secretarial authority.

§ 600.115 Statement of organization, practices, and procedures (SOPP).

(a) Councils are required to publish and make available to the public a SOPP in accordance with such uniform standards as are prescribed by the Secretary (section 302(f)(6)) of the Magnuson-Stevens Act. The purpose of the SOPP is to inform the public how the Council operates within the framework of the Secretary’s uniform standards.

(b) Amendments to current SOPPs must be consistent with the guidelines in this section, subpart C of this part, the terms and conditions of the cooperative agreement (the funding agreement between the Council and NOAA that establishes Council funding and mandates specific requirements regarding the use of those funds), the statutory requirements of the Magnuson-Stevens Act, and other applicable law. Upon approval of a Council’s SOPP amendment by the Secretary, a notice of availability must be published in the FEDERAL REGISTER that includes an Internet address from which the amended SOPP may be read and downloaded and a mailing address to which the public may write to request copies.

(c) Councils may deviate, where lawful, from the guidelines with appropriate supporting rationale, and Secretarial approval of each amendment to a SOPP would constitute approval of any such deviations for that particular Council.

[61 FR 32540, June 24, 1996, as amended at 63 FR 7075, Feb. 12, 1998; 75 FR 59149, Sept. 27, 2010]

§ 600.117 Council coordination committee (CCC).

(a) The Councils may establish a Council coordination committee (CCC) consisting of the chairs, vice chairs, and executive directors of each of the eight Councils or other Council members or staff, in order to discuss issues of relevance to all Councils.

(b) The CCC is not subject to the requirements of the Federal Advisory Committee Act (5 U.S.C. App. 2). Procedures for announcing and conducting open and closed meetings of the CCC shall be in accordance with § 600.135.

[75 FR 59150, Sept. 27, 2010]

§ 600.120 Employment practices.

(a) Council staff positions must be filled solely on the basis of merit, fitness for duty, competence, and qualifications. Employment actions must be free from discrimination based on race, religion, color, national origin, sex, age, disability, reprisal, sexual orientation, status as a parent, or on any additional bases protected by applicable Federal, state, or local law.

(b) The annual pay rates for Council staff positions shall be consistent with the pay rates established for General Schedule Federal employees as set forth in 5 U.S.C. 5332, and the Alternative Personnel Management System for the U.S. Department of Commerce (62 FR 67434). The Councils have the discretion to adjust pay rates and pay increases based on cost of living (COLA) differentials in their geographic locations. COLA adjustments in pay rates and pay increases may be provided for staff members whose post of duty is located in Alaska, Hawaii, Guam, the U.S. Virgin Islands, the Northern Mariana Islands, and Puerto Rico.

(1) No pay adjustment based on geographic location shall exceed the COLA and locality pay adjustments available to Federal employees in the same geographic area.

(2) [Reserved]

(c) Salary increases funded in lieu of life and medical/dental policies are not permitted.

(d) Unused sick leave may be accumulated without limit, or up to a maximum number of days and contribution

§ 600.125

per day, as specified by the Council in its SOPP. Distributions of accumulated funds for unused sick leave may be made to the employee upon his or her retirement, or to his or her estate upon his or her death, as established by the Council in its SOPP.

(e) Each Council may pay for unused annual leave upon separation, retirement, or death of an employee.

(f) One or more accounts shall be maintained to pay for unused sick or annual leave as authorized under paragraphs (d) and (e) of this section, and will be funded from the Council's annual operating allowances. Councils have the option to deposit funds into these account(s) at the end of the budget period if unobligated balances remain. Interest earned on these account(s) will be maintained in the account(s), along with the principal, for the purpose of payment of unused annual and sick leave only. These account(s), including interest, may be carried over from year to year. Budgeting for accrued leave will be identified in the "Other" object class categories section of the SF-424A.

(g) A Council must notify the NOAA Office of General Counsel before seeking outside legal advice, which may be for technical assistance not available from NOAA. If the Council is seeking legal services in connection with an employment practices question, the Council must first notify the Department of Commerce's Office of the Assistant General Counsel for Administration, Employment and Labor Law Division. A Council may not contract for the provision of legal services on a continuing basis.

[66 FR 57886, Nov. 19, 2001]

§ 600.125 Budgeting, funding, and accounting.

(a) Council grant activities are governed by 15 CFR part 14 (Uniform Administrative Requirements for Grants and Agreements with Institutions of Higher Education, Hospitals, and other Non-Profit and Commercial Organizations), 2 CFR part 230 (Cost Principles for Non-Profit Organizations), 15 CFR part 14 (Audit Requirements for Institutions of Higher Education and Other Non-Profit Organizations), and the

50 CFR Ch. VI (10-1-21 Edition)

terms and conditions of the cooperative agreement.

(b) Councils may not independently enter into agreements, including grants, contracts, or cooperative agreements, whereby they will receive funds for services rendered. All such agreements must be approved and entered into by NOAA on behalf of the Councils.

(c) Councils are not authorized to accept gifts or contributions directly. All such donations must be directed to the NMFS Regional Administrator in accordance with applicable Department of Commerce regulations.

[66 FR 57887, Nov. 19, 2001, as amended at 75 FR 59150, Sept. 27, 2010]

§ 600.130 Protection of confidentiality of statistics.

Each Council must establish appropriate procedures for ensuring the confidentiality of the statistics that may be submitted to it by Federal or state authorities and may be voluntarily submitted to it by private persons, including, but not limited to (also see § 600.405):

(a) Procedures for the restriction of Council member, employee, or advisory group access and the prevention of conflicts of interest, except that such procedures must be consistent with procedures of the Secretary.

(b) In the case of statistics submitted to the Council by a state, the confidentiality laws and regulations of that state.

§ 600.133 Scientific and Statistical Committee (SSC).

(a) Each Council shall establish, maintain, and appoint the members of an SSC to assist it in the development, collection, evaluation, and peer review of such statistical, biological, economic, social, and other scientific information as is relevant to such Council's development and amendment of any fishery management plan.

(b) Each SSC shall provide its Council ongoing scientific advice for fishery management decisions, including recommendations for acceptable biological catch, preventing overfishing, maximum sustainable yield, and achieving rebuilding targets, and reports on

Fishery Conservation and Management

§ 600.135

stock status and health, bycatch, habitat status, social and economic impacts of management measures, and sustainability of fishing practices.

(c) Members appointed by the Councils to the SSCs shall be Federal employees, State employees, academicians, or independent experts and shall have strong scientific or technical credentials and experience.

(d) An SSC shall hold its meetings in conjunction with the meetings of the Council, to the extent practicable.

[75 FR 59150, Sept. 27, 2010]

§ 600.134 Stipends.

Stipends are available, subject to the availability of appropriations, to members of committees formally designated as SSCs under Sec. 301(g)(1)(a) or APs under Sec. 302(g)(2) of the Magnuson-Stevens Act who are not employed by the Federal Government or a State marine fisheries agency. For the purposes of this section, a state marine fisheries agency includes any state or tribal agency that has conservation, management, or enforcement responsibility for any marine fishery resource.

[75 FR 59150, Sept. 27, 2010]

§ 600.135 Meeting procedures.

(a) *Regular meetings.* Public notice of a regular meeting, including the meeting agenda, of each Council, CCC, SSC, AP, FIAC, or other committees established under Magnuson-Stevens Act, Sec. 302(g), must be published in the FEDERAL REGISTER at least 14 calendar days prior to the meeting date. Appropriate notice by any means that will result in wide publicity in the major fishing ports of the region (and in other major fishing ports having a direct interest in the affected fishery) must be given. E-mail notification and website postings alone are not sufficient. The published agenda of a regular meeting may not be modified to include additional matters for Council action without public notice given at least 14 calendar days prior to the meeting date, unless such modification is necessary to address an emergency under section 305(c) of the Magnuson-Stevens Act, in which case public notice shall be given immediately. Drafts of all regular public meeting notices must be received by

NMFS headquarters office at least 23 calendar days before the first day of the regular meeting. Councils must ensure that all public meetings are accessible to persons with disabilities, and that the public can make timely requests for language interpreters or other auxiliary aids at public meetings.

(b) *Emergency meetings.* Drafts of emergency public notices must be transmitted to the NMFS headquarters office at least 5 working days prior to the first day of the emergency meeting. Although notices of and agendas for emergency meetings are not required to be published in the FEDERAL REGISTER, notices of emergency meetings must be promptly announced through any means that will result in wide publicity in the major fishing ports of the region. E-mail notification and website postings alone are not sufficient.

(c) *Closed meetings.* After proper notification by any means that will result in wide publicity in the major fishing ports within the region and, having included in the notification the time and place of the meeting and the reason for closing any meeting or portion thereof to the public, a Council, CCC, SSC, AP, FIAC, or other committees:

(1) Must close any meeting, or portion thereof, that concerns information bearing a national security classification.

(2) May close any meeting, or portion thereof, that concerns matters or information pertaining to national security, employment matters, or briefings on litigation in which the Council is interested.

(3) May close any meeting, or portion thereof, that concerns internal administrative matters other than employment. Examples of other internal administrative matters include candidates for appointment to AP, SSC, and other subsidiary bodies and public decorum or medical conditions of members of a Council or its subsidiary bodies. In deciding whether to close a portion of a meeting to discuss internal administrative matters, the Council, CCC, SSC, AP, FIAC, or other committees should consider not only the privacy interests of individuals whose

§ 600.140

conduct or qualifications may be discussed, but also the interest of the public in being informed of Council operations and actions.

(d) Without the notice required by paragraph (c) of this section, a Council, CCC, SSC, AP, FIAC, or other committees may briefly close a portion of a meeting to discuss employment or other internal administrative matters. The closed portion of a meeting that is closed without notice may not exceed two hours.

(e) Before closing a meeting or portion thereof, the Council, CCC, SSC, AP, FIAC, or other committees should consult with the NOAA Office of General Counsel to ensure that the matters to be discussed fall within the exceptions to the requirement to hold public meetings described in paragraph (c) of this section.

(f) Actions that affect the public, although based on discussions in closed meetings, must be taken in public. For example, appointments to an AP must be made in the public part of the meeting; however, a decision to take disciplinary action against a Council employee need not be announced to the public.

(g) A majority of the voting members of any Council constitute a quorum for Council meetings, but one or more such members designated by the Council may hold hearings.

(h) Decisions of any Council are by majority vote of the voting members present and voting (except for a vote to propose removal of a Council member, see 50 CFR 600.230). Voting by proxy is permitted only pursuant to 50 CFR 600.205 (b). An abstention does not affect the unanimity of a vote.

(i) Voting members of the Council who disagree with the majority on any issue to be submitted to the Secretary, including principal state officials raising federalism issues, may submit a written statement of their reasons for dissent. If any Council member elects to file such a statement, it should be submitted to the Secretary at the same time the majority report is submitted.

[66 FR 57887, Nov. 19, 2001, as amended at 75 FR 59150, Sept. 27, 2010]

50 CFR Ch. VI (10–1–21 Edition)

§ 600.140 Procedure for proposed regulations.

(a) Each Council must establish a written procedure for proposed regulations consistent with section 303(c) of the Magnuson-Stevens Act. The procedure must describe how the Council deems proposed regulations necessary or appropriate for the purposes of implementing a fishery management plan or a plan amendment, or making modifications to regulations implementing a fishery management plan or plan amendment. In addition, the procedure must describe how the Council submits proposed regulations to the Secretary.

(b) The Councils must include the procedure for proposed regulations in its SOPP, see § 600.115, or other written documentation that is available to the public.

[75 FR 59150, Sept. 27, 2010]

§ 600.150 Disposition of records.

(a) Council records must be handled in accordance with NOAA records management office procedures. All records and documents created or received by Council employees while in active duty status belong to the Federal Government. When employees leave the Council, they may not take the original or file copies of records with them.

(b) Each Council is required to maintain documents generally available to the public on its Internet site. Documents for posting must include: fishery management plans and their amendments for the fisheries for which the Council is responsible, drafts of fishery management plans and plan amendments under consideration, analysis of actions the Council has under review, minutes or official reports of past meetings of the Council and its committees, materials provided by the Council staff to Council members in preparation for meetings, and other Council documents of interest to the public. For documents too large to maintain on the Web site, not available electronically, or seldom requested, the Council must provide copies of the documents for viewing at the Council office during regular business hours or

Fishery Conservation and Management

§ 600.207

may provide the documents through the mail.

[66 FR 57887, Nov. 19, 2001, as amended at 75 FR 59151, Sept. 27, 2010]

§ 600.155 Freedom of Information Act (FOIA) requests.

(a) FOIA requests received by a Council should be coordinated promptly with the appropriate NMFS Regional Office. The Region will forward the request to the NOAA FOIA Officer to secure a FOIA number and log the request into FOIAonline. The Region will also obtain clearance from the NOAA General Counsel's Office concerning initial determination for denial of requested information.

(b) FOIA request processing will be controlled and documented in the Region. The requests should be forwarded to the NOAA FOIA Officer who will enter the request into FOIAonline. The request will be assigned an official FOIA number and due date. In the event the Region determines that the requested information is exempt from disclosure, in full or in part, under the FOIA, the denial letter prepared for the Assistant Administrator's signature, along with the "Foreseeable Harm" Memo and list of documents to be withheld, must be cleared through the NMFS FOIA Liaison. Upon completion, a copy of the signed letter transmitting the information to the requester should be posted to FOIAonline by NMFS.

[80 FR 57738, Sept. 25, 2015]

Subpart C—Council Membership

§ 600.205 Principal state officials and their designees.

(a) Only a full-time state employee of the state agency responsible for marine and/or anadromous fisheries shall be appointed by a constituent state Governor as the principal state official for purposes of section 302(b) of the Magnuson-Stevens Act.

(b) A principal state official may name his/her designee(s) to act on his/her behalf at Council meetings. Individuals designated to serve as designees of a principal state official on a Council, pursuant to section 302(b)(1)(A) of the Magnuson-Stevens

Act, must be a resident of the state and be knowledgeable and experienced, by reason of his or her occupational or other experience, scientific expertise, or training, in the fishery resources of the geographic area of concern to the Council.

(c) New or revised appointments by state Governors of principal state officials and new or revised designations by principal state officials of their designees(s) must be delivered in writing to the appropriate NMFS Regional Administrator and the Council chair at least 48 hours before the individual may vote on any issue before the Council. A designee may not name another designee. Written appointment of the principal state official must indicate his or her employment status, how the official is employed by the state fisheries agency, and whether the official's full salary is paid by the state. Written designation(s) by the principal state official must indicate how the designee is knowledgeable and experienced in fishery resources of the geographic area of concern to the Council, the County in which the designee resides, and whether the designee's salary is paid by the state.

[66 FR 57888, Nov. 19, 2001]

§ 600.207 Pacific Fishery Management Council Tribal Indian representative and alternate.

(a) The tribal Indian representative to the Pacific Fishery Management Council may designate an alternate during the period of the representative's term. The designee must be knowledgeable concerning tribal rights, tribal law, and the fishery resources of the geographical area concerned.

(b) New or revised designations of an alternate by the tribal Indian representative must be delivered in writing to the appropriate NMFS Regional Administrator and the Council chair at least 48 hours before the designee may vote on any issue before the Council. In that written document, the tribal Indian representative must indicate how the designee meets the knowledge requirements under paragraph (a) of this section.

[75 FR 59151, Sept. 27, 2010]

§ 600.210 Terms of Council members.

(a) Voting members (other than principal state officials, the Regional Administrators, or their designees) are appointed for a term of 3 years and, except as discussed in paragraphs (b) and (c) of this section, may be reappointed. A voting member's Council service of 18 months or more during a term of office will be counted as service for the entire 3-year term.

(b) The anniversary date for measuring terms of membership is August 11. The Secretary may designate a term of appointment shorter than 3 years, if necessary, to provide for balanced expiration of terms of office. Members may not serve more than three consecutive terms.

(c) A member who has completed three consecutive terms will be eligible for appointment to another term one full year after completion of the third consecutive term.

[61 FR 32540, June 24, 1996, as amended at 63 FR 7073, Feb. 12, 1998; 75 FR 59151, Sept. 27, 2010]

§ 600.215 Council nomination and appointment procedures.

(a) *General.* (1) Each year, the 3-year terms for approximately one-third of the appointed members of the Councils expire. The Secretary of Commerce (Secretary) will appoint or new members or will reappoint seated members to another term to fill the seats being vacated.

(2) There are two categories of seats to which voting members are appointed: "Obligatory" and "At-large."

(i) Obligatory seats are state specific. Each constituent state is entitled to one seat on the Council on which it is a member, except that the State of Alaska is entitled to five seats and the State of Washington is entitled to two seats on the North Pacific Fishery Management Council. When the term of a state's obligatory member is expiring or when that seat becomes vacant before the expiration of its term, the governor of that state must submit the names of at least three qualified individuals to fill that Council seat.

(ii) The Magnuson-Stevens Act also provides for appointment, by the Secretary, of one treaty Indian tribal representative to the Pacific Fishery Man-

agement Council (Pacific Council). To fill that seat, the Secretary solicits written nominations from the heads of governments of those Indian Tribes with federally recognized fishing rights from the States of California, Oregon, Washington, or Idaho. The list of nominees must contain a total of at least three individuals who are knowledgeable and experienced regarding the fishery resources under the authority of the Pacific Council. The Secretary will appoint one tribal Indian representative from this list to the Pacific Council for a term of 3 years and rotate the appointment among the tribes.

(iii) At-large seats are regional. When the term of an at-large member is expiring or when that seat becomes vacant before the expiration of a term, the governors of all constituent states of that Council must each submit the names of at least three qualified individuals to fill the seat.

(b) *Responsibilities of State Governors.* (1) Council members are selected by the Secretary from lists of nominees submitted by Governors of the constituent states, pursuant to section 302(b)(2)(C) of the Magnuson-Stevens Act. For each applicable vacancy, a Governor must submit the names of at least three nominees who meet the qualification requirements of the Magnuson-Stevens Act. A Governor must provide a statement explaining how each of his/her nominees meet the qualification requirements, and must also provide appropriate documentation to the Secretary that each nomination was made in consultation with commercial and recreational fishing interests of that state and that each nominee is knowledgeable and experienced by reason of his or her occupational or other experience, scientific expertise, or training in one or more of the following ways related to the fishery resources of the geographical area of concern to the Council:

(i) Commercial fishing or the processing or marketing of fish, fish products, or fishing equipment;

(ii) Fishing for pleasure, relaxation, or consumption, or experience in any business supporting fishing;

Fishery Conservation and Management

§ 600.215

(iii) Leadership in a state, regional, or national organization whose members participate in a fishery in the Council's area of authority;

(iv) The management and conservation of natural resources, including related interactions with industry, government bodies, academic institutions, and public agencies. This includes experience serving as a member of a Council, Advisory Panel, Scientific and Statistical Committee, or Fishing Industry Advisory Committee;

(v) Representing consumers of fish or fish products through participation in local, state, or national organizations, or performing other activities specifically related to the education or protection of consumers of marine resources; or

(vi) Teaching, journalism, writing, consulting, practicing law, or researching matters related to fisheries, fishery management, and marine resource conservation.

(2) To assist in identifying qualifications, each nominee must furnish to the appropriate governor's office a current resume, or equivalent, describing career history—with particular attention to experience related to the criteria in paragraph (b)(1) of this section. Nominees may provide such information in any format they wish.

(3) A constituent State Governor must determine the state of residency of each of his/her nominees. A Governor may not nominate a non-resident of that state for appointment to a Council seat obligated to that state. A Governor may nominate residents of another constituent state of a Council for appointment to an at large seat on that Council.

(4) If, at any time during a term, a member changes residency to another state that is not a constituent state of that Council, or a member appointed to an obligatory seat changes residency to any other state, the member may no longer vote and must resign from the Council. For purposes of this paragraph, a state resident is an individual who maintains his/her principal residence within that constituent state and who, if applicable, pays income taxes to that state and/or to another appropriate jurisdiction within that state.

(5) When the terms of both an obligatory member and an at-large member expire concurrently, the Governor of the state holding the expiring obligatory seat may indicate that the nominees who were not selected for appointment to the obligatory seat may be considered for appointment to an at-large seat, provided that the resulting total number of nominees submitted by that governor for the expiring at-large seat is no fewer than three different nominees.

(c) Nominees to the Gulf of Mexico Fishery Management Council. (1) The Governors of States submitting nominees to the Secretary for appointment to the Gulf of Mexico Fishery Management Council shall include:

(i) At least one nominee each from the commercial, recreational, and charter fishing sectors, except that an individual who owns or operates a fish farm outside the United States shall not be considered to be a representative of the commercial or recreational sector; and

(ii) At least one other individual who is knowledgeable regarding the conservation and management of fisheries resources in the jurisdiction of the Council.

(2) Notwithstanding the requirements of paragraphs (a) and (b) of this section, if the Secretary determines that the list of names submitted by the Governor does not meet the requirements of paragraph (c)(1) of this section, the Secretary shall:

(i) Publish a notice in the FEDERAL REGISTER asking the residents of that State to submit the names and pertinent biographical data of individuals who would meet the requirements of this section that were not met for appointment to the Council; and

(ii) Add the name of any qualified individual submitted by the public who meets the requirements of this section that were not met to the list of names submitted by the Governor.

(3) The requirements of this paragraph (c) shall expire at the end of fiscal year 2012, meaning through September 30, 2012.

(d) *Responsibilities of eligible tribal Indian governments.* The tribal Indian representative on the Pacific Council will be selected by the Secretary from a list

of no fewer than three individuals submitted by the tribal Indian governments with federally recognized fishing rights from California, Oregon, Washington, and Idaho, pursuant to section 302(b)(5) of the Magnuson-Stevens Act. To assist in assessing the qualifications of each nominee, each head of an appropriate tribal Indian government must furnish to the Assistant Administrator a current resume, or equivalent, describing the nominee's qualifications, with emphasis on knowledge and experience related to the fishery resources affected by recommendations of the Pacific Council. Prior service on the Pacific Council in a different capacity will not disqualify nominees proposed by tribal Indian governments.

(e) *Nomination deadlines.* Nomination packages (governors' letters and completed nomination kits) must be forwarded by express mail under a single mailing to arrive at the address specified by the Assistant Administrator by March 15. For appointments outside the normal cycle, the Secretary will provide a deadline for receipt of nominations to the affected Council and state governors.

(1) *Obligatory seats.* (i) The Governor of the state for which the term of an obligatory seat is expiring should submit the names of at least three qualified individuals to fill that seat by the March 15 deadline. The Secretary will appoint to the Pacific Fishery Management Council a representative of an Indian tribe from a list of no fewer than three individuals submitted by the tribal Indian governments.

(ii) If the Governor or tribal Indian governments fail to provide a nomination letter and at least three complete nomination kits by March 15, the obligatory seat will remain vacant until all required information has been received and processed and the Secretary has made the appointment.

(2) *At-large seats.* (i) If a Governor chooses to submit nominations for an at-large seat, he/she must submit lists that contain at least three qualified nominees for each vacant seat. A nomination letter and a nomination kit for each qualified nominee must be forwarded by express mail under a single mailing to arrive at the address speci-

fied by the Assistant Administrator by March 15.

(ii) Nomination packages that are not substantially complete by March 15 may be returned to the nominating Governor. At-large members will be appointed from among the nominations submitted by the governors who complied with the nomination requirements.

(f) *Responsibilities of the Secretary.* (1) The Secretary must, to the extent practicable, ensure a fair and balanced apportionment, on a rotating or other basis, of the active participants (or their representatives) in the commercial and recreational fisheries in the Council's area of authority. Further, the Secretary must take action to ensure, to the extent practicable, that those persons dependent for their livelihood upon the fisheries in the Council's area of authority are fairly represented as voting members on the Councils.

(2) The Secretary will review each list submitted by a governor or the tribal Indian governments to ascertain whether the individuals on the list are qualified for the vacancy. If the Secretary determines that a nominee is not qualified, the Secretary will notify the appropriate Governor or tribal Indian government of that determination. The Governor or tribal Indian government shall then submit a revised list of nominees or resubmit the original list with an additional explanation of the qualifications of the nominee in question. The Secretary reserves the right to determine whether nominees are qualified.

(3) The Secretary will select the appointees from lists of qualified nominees provided by the Governors of the constituent Council states or of the tribal Indian governments that are eligible to nominate candidates for that vacancy.

(i) For Governor-nominated seats, the Secretary will select an appointee for an obligatory seat from the list of qualified nominees submitted by the governor of the state. In filling expiring at-large seats, the Secretary will select an appointee(s) for an at-large seat(s) from the list of all qualified candidates submitted. The Secretary will consider only complete slates of

Fishery Conservation and Management

§ 600.225

nominees submitted by the governors of the Council's constituent states. When an appointed member vacates his/her seat prior to the expiration of his/her term, the Secretary will fill the vacancy for the remainder of the term by selecting from complete nomination letters and kits that are timely and contain the required number of candidates.

(ii) For the tribal Indian seat, the Secretary will solicit nominations of individuals for the list referred to in paragraph (c) of this section only from those Indian tribes with federally recognized fishing rights from California, Oregon, Washington, or Idaho. The Secretary will consult with the Bureau of Indian Affairs, Department of the Interior, to determine which Indian tribes may submit nominations. Any vacancy occurring prior to the expiration of any term shall be filled in the same manner as described in paragraphs (d)(1) and (2) of this section, except that the Secretary may use the list referred to in paragraph (b)(1) of this section from which the vacating member was chosen. The Secretary shall rotate the appointment among the tribes, taking into consideration:

(A) The qualifications of the individuals on the list referred to in paragraph (c) of this section.

(B) The various rights of the Indian tribes involved, and judicial cases that set out the manner in which these rights are to be exercised.

(C) The geographic area in which the tribe of the representative is located.

(D) The limitation that no tribal Indian representative shall serve more than three consecutive terms in the Indian tribal seat.

[64 FR 4600, Jan. 29, 1999, as amended at 75 FR 59151, Sept. 27, 2010]

§ 600.220 Oath of office.

As trustees of the nation's fishery resources, all voting members must take an oath specified by the Secretary as follows: "I, [name of the person taking oath], as a duly appointed member of a Regional Fishery Management Council established under the Magnuson-Stevens Fishery Conservation and Management Act, hereby promise to conserve and manage the living marine resources of the United States of Amer-

ica by carrying out the business of the Council for the greatest overall benefit of the Nation. I recognize my responsibility to serve as a knowledgeable and experienced trustee of the Nation's marine fisheries resources, being careful to balance competing private or regional interests, and always aware and protective of the public interest in those resources. I commit myself to uphold the provisions, standards, and requirements of the Magnuson-Stevens Fishery Conservation and Management Act and other applicable law, and shall conduct myself at all times according to the rules of conduct prescribed by the Secretary of Commerce. This oath is given freely and without mental reservation or purpose of evasion."

[75 FR 59152, Sept. 27, 2010]

§ 600.225 Rules of conduct.

(a) Council members, as Federal office holders, and Council employees are subject to most Federal criminal statutes covering bribery, conflict-of-interest, disclosure of confidential information, and lobbying with appropriated funds.

(b) The Councils are responsible for maintaining high standards of ethical conduct among themselves, their staffs, and their advisory groups. In addition to abiding by the applicable Federal conflict of interest statutes, both members and employees of the Councils must comply with the following standards of conduct:

(1) No employee of a Council may use his or her official authority or influence derived from his or her position with the Council for the purpose of interfering with or affecting the result of an election to or a nomination for any national, state, county, or municipal elective office.

(2) Council members, employees, and contractors must comply with the Federal Cost Principles Applicable to Regional Fishery Management Council Grants and Cooperative Agreements, especially with regard to lobbying, and other restrictions with regard to lobbying as specified in § 600.227 of this part.

(3) No employee of a Council may be deprived of employment, position,

§ 600.227

work, compensation, or benefit provided for or made possible by the Magnuson-Stevens Act on account of any political activity or lack of such activity in support of or in opposition to any candidate or any political party in any national, state, county, or municipal election, or on account of his or her political affiliation.

(4) No Council member or employee may pay, offer, promise, solicit, or receive from any person, firm, or corporation a contribution of money or anything of value in consideration of either support or the use of influence or the promise of support or influence in obtaining for any person any appointive office, place, or employment under the Council.

(5) No employee of a Council may have a direct or indirect financial interest that conflicts with the fair and impartial conduct of his or her Council duties.

(6) No Council member, employee of a Council, or member of a Council advisory group may use or allow the use, for other than official purposes, of information obtained through or in connection with his or her Council employment that has not been made available to the general public.

(7) No Council member or employee of the Council may engage in criminal, infamous, dishonest, notoriously immoral, or disgraceful conduct.

(8) No Council member or employee of the Council may use Council property on other than official business. Such property must be protected and preserved from improper or deleterious operation or use.

(9)(i) Except as provided in § 600.235(h) or in 18 U.S.C. 208, no Council member may participate personally and substantially as a member through decision, approval, disapproval, recommendation, the rendering of advice, investigation, or otherwise, in a particular matter in which the member, the member's spouse, minor child, general partner, organization in which the member is serving as officer, director, trustee, general partner, or employee, or any person or organization with whom the member is negotiating or has any arrangement concerning prospective employment, has a financial interest. (Note that this financial in-

50 CFR Ch. VI (10–1–21 Edition)

terest is broader than the one defined in § 600.235(a).)

(ii) No Council member may participate personally and substantially as a member through decision, approval, disapproval, recommendation, the rendering of advice, investigation, or otherwise, in a particular matter primarily of individual concern, such as a contract, in which he or she has a financial interest, even if the interest has been disclosed in accordance with § 600.235.

[61 FR 32540, June 24, 1996, as amended at 63 FR 7075, Feb. 12, 1998; 63 FR 64185, Nov. 19, 1998; 75 FR 59152, Sept. 27, 2010]

§ 600.227 Lobbying.

(a) Council members, employees and contractors must comply with the requirements of 31 U.S.C. 1352 and Department of Commerce implementing regulations published at 15 CFR part 28, “New Restrictions on Lobbying.” These provisions generally prohibit the use of Federal funds for lobbying the Executive or Legislative Branches of the Federal Government in connection with the award. Because the Councils receive in excess of \$100,000 in Federal funding, the regulations mandate that the Councils must complete Form SF-LLL, “Disclosure of Lobbying Activities,” regarding the use of non Federal funds for lobbying. The Form SF-LLL shall be submitted within 30 days following the end of the calendar quarter in which there occurs any event that requires disclosure or that materially affects the accuracy of the information contained in any disclosure form previously filed. The recipient must submit the Forms SF-LLL, including those received from subrecipients, contractors, and subcontractors, to the Grants Officer.

(b) Council members, employees, and contractors must comply with the Federal Cost Principles Applicable to Regional Fishery Management Council Grants and Cooperative Agreements summarized as follows:

(1) Title 2 CFR part 230 - Cost Principles for Nonprofit Organizations (OMB Circular A-122) is applicable to the Federal assistance awards issued to the Councils.

(2) The purpose of the cost principles at 2 CFR part 230 is to define what

Fishery Conservation and Management

§ 600.235

costs can be paid on Federal awards issued to non-profit organizations. The regulation establishes both general principles and detailed items of costs.

(3) Under 2 CFR part 230, costs for certain lobbying activities are unallowable as charges to Federal awards. These activities would include any attempts to influence:

(i) The introduction of Federal or state legislation;

(ii) The enactment or modification of any pending legislation by preparing, distributing, or using publicity or propaganda, or by urging members of the general public to contribute to or to participate in any demonstration, march, rally, fundraising drive, lobbying campaign, or letter writing or telephone campaign.

(4) Generally, costs associated with providing a technical and factual presentation directly related to the performance of a grant, through hearing testimony, statements, or letters to Congress or a state legislature are allowable if made in response to a documented request.

(5) Costs associated with lobbying to influence state legislation in order to reduce the cost or to avoid material impairment of the organization's authority to perform the grant are also allowable.

[75 FR 59152, Sept. 27, 2010]

§ 600.230 Removal.

The Secretary may remove for cause any Secretarially appointed member of a Council in accordance with section 302(b)(6) of the Magnuson-Stevens Act, wherein the Council concerned first recommends removal of that member by not less than two-thirds of the voting members. A recommendation of a Council to remove a member must be made in writing to the Secretary and accompanied by a statement of the reasons upon which the recommendation is based.

[61 FR 32540, June 24, 1996, as amended at 63 FR 7073, Feb. 12, 1998]

§ 600.235 Financial disclosure and recusal.

(a) *Definitions.* For purposes of § 600.235:

Affected individual means an individual who is—

(1) Nominated by the Governor of a state or appointed by the Secretary of Commerce to serve as a voting member of a Council in accordance with section 302(b)(2) of the Magnuson-Stevens Act; or

(2) A representative of an Indian tribe appointed to the Pacific Council by the Secretary of Commerce under section 302(b)(5) of the Magnuson-Stevens Act who is not subject to disclosure and recusal requirements under the laws of an Indian tribal government.

(3) A member of an SSC shall be treated as an affected individual for the purposes of paragraphs (b)(1), (b)(5) through (b)(7), and (i) of this section.

Close causal link means that a Council decision would reasonably be expected to directly impact or affect the financial interests of an affected individual.

Council decision means approval of a fishery management plan (FMP) or FMP amendment (including any proposed regulations); request for amendment to regulations implementing an FMP; finding that an emergency exists involving any fishery (including recommendations for responding to the emergency); and comments to the Secretary on FMPs or amendments developed by the Secretary. It does not include a vote by a committee of a Council.

Designated official means an attorney designated by the NOAA General Counsel.

Expected and substantially disproportionate benefit means a positive or negative impact with regard to a Council decision that is likely to affect a fishery or sector of a fishery in which the affected individual has a significant financial interest.

Financial Interest Form means NOAA Form 88-195, "STATEMENT OF FINANCIAL INTERESTS For Use By Voting Members of, and Nominees to, the Regional Fishery Management Councils, and Members of the Scientific and Statistical Committee (SSC)" or such other form as the Secretary may prescribe.

Financial interest in harvesting, processing, lobbying, advocacy, or marketing (1) includes:

(i) Stock, equity, or other ownership interests in, or employment with, any company, business, fishing vessel, or other entity or employment with any entity that has any percentage ownership in or by another entity engaging in any harvesting, processing, lobbying, advocacy, or marketing activity in any fishery under the jurisdiction of the Council concerned;

(ii) Stock, equity, or other ownership interests in, or employment with, any company or other entity or employment with any entity that has any percentage ownership in or by another entity that provides equipment or other services essential to harvesting, processing, lobbying, advocacy, or marketing activities in any fishery under the jurisdiction of the Council concerned, such as a Chandler or a dock operation;

(iii) Employment with, or service as an officer, director, or trustee of, an association whose members include companies, vessels, or other entities engaged in any harvesting, processing, lobbying, advocacy, or marketing activities, or companies or other entities providing services essential to harvesting, processing, lobbying, advocacy, or marketing activities in any fishery under the jurisdiction of the Council concerned; and

(iv) Employment with an entity that has any percentage ownership in or by another entity providing consulting, legal, or representational services to any entity engaging in, or providing equipment or services essential to harvesting, processing, lobbying, advocacy, or marketing activities in any fishery under the jurisdiction of the Council concerned, or to any association whose members include entities engaged in the activities described in paragraphs (1)(i) and (ii) of this definition;

(2) Does not include stock, equity, or other ownership interests in, or employment with, an entity engaging in scientific fisheries research in any fishery under the jurisdiction of the Council concerned, unless it is covered under paragraph (1) of this definition. A financial interest in such entities is covered by 18 U.S.C. 208, the Federal conflict-of-interest statute.

Significant financial interest means:

(1) A greater than 10-percent interest in the total harvest of the fishery or sector of the fishery affected by the Council decision;

(2) A greater than 10-percent interest in the marketing or processing of the total harvest of the fishery or sector of the fishery affected by the Council decision; or

(3) Full or partial ownership of more than 10 percent of the vessels using the same gear type within the fishery or sector of the fishery affected by the Council decision.

(b) *Reporting.* (1) The Magnuson-Stevens Act requires the disclosure of any financial interest in harvesting, processing, lobbying, advocacy, or marketing activity that is being, or will be, undertaken within any fishery over which the Council concerned has jurisdiction. An affected individual must disclose such financial interest held by that individual; the affected individual's spouse, minor child, partner; or any organization (other than the Council) in which that individual is serving as an officer, director, trustee, partner, or employee. The information required to be reported must be disclosed on the Financial Interest Form (as defined in paragraph (a) of this section), or such other form as the Secretary may prescribe.

(2) The Financial Interest Form must be filed by each nominee for Secretarial appointment to the Council with the Assistant Administrator by April 15 or, if nominated after March 15, one month after nomination by the Governor. A seated voting member appointed by the Secretary must file a Financial Interest Form with the Executive Director of the appropriate Council within 45 days of taking office; must file an update of his or her statement with the Executive Director of the appropriate Council within 30 days of the time any such financial interest is acquired or substantially changed by the affected individual or the affected individual's spouse, minor child, partner, or any organization (other than the Council) in which that individual is serving as an officer, director, trustee, partner, or employee; and must update his or her form annually and file that update with the Executive Director of the appropriate Council by February 1

of each year, regardless of whether any information has changed on that form.

(3) The Executive Director must, in a timely manner, provide copies of and updates to the Financial Interest Forms of appointed Council members to the NMFS Regional Administrator, the Regional Attorney who advises the Council, the Department of Commerce Assistant General Counsel for Administration, and the NMFS Office of Sustainable Fisheries. These completed Financial Interest Forms shall be kept on file in the office of the NMFS Regional Administrator and at the Council offices, and shall be made available for public inspection at such offices during normal office hours. In addition, the forms shall be made available at each Council meeting or hearing and shall be posted for download from the Internet on the Council's website.

(4) Councils must retain the Financial Interest Form for a Council member for at least 5 years after the expiration of that individual's last term.

(5) The Regional Administrator must retain the Financial Interest Form for a Council member for 20 years from the date the form is signed by the Council member or in accordance with the current NOAA records schedule.

(6) An individual being considered for appointment to an SSC must file the Financial Interest Form with the Regional Administrator for the geographic area concerned within 45 days prior to appointment. A member of the SSC must file an update of his or her statement with the Regional Administrator for the geographic area concerned within 30 days of the time any such financial interest is acquired or substantially changed by the SSC member or the SSC member's spouse, minor child, partner, or any organization (other than the Council) in which that individual is serving as an officer, director, trustee, partner, or employee; and must update his or her form annually and file that update with the Regional Administrator by February 1 of each year.

(7) An individual who serves as an SSC member to more than one Council shall file Financial Interest Forms with each Regional Administrator for the geographic areas concerned.

(8) The Regional Administrator must retain the Financial Interest Forms of all SSC members for at least five years after the expiration of that individual's term on the SSC. Such forms are not subject to sections 302(j)(5)(B) and (C) of the Magnuson-Stevens Act.

(c) *Restrictions on voting.* (1) No affected individual may vote on any Council decision that would have a significant and predictable effect on a financial interest disclosed in his/her report filed under paragraph (b) of this section.

(2) As used in this section, a Council decision will be considered to have a "significant and predictable effect on a financial interest" if there is a close causal link between the decision and an expected and substantially disproportionate benefit to the financial interest in harvesting, processing, lobbying, advocacy, or marketing of any affected individual or the affected individual's spouse, minor child, partner, or any organization (other than the Council) in which that individual is serving as an officer, director, trustee, partner, or employee, relative to the financial interests of other participants in the same gear type or sector of the fishery. The relative financial interests of the affected individual and other participants will be determined with reference to the most recent fishing year for which information is available. However, for fisheries in which IFQs are assigned, the percentage of IFQs assigned to the affected individual will be the determining factor.

(3) In making a determination under paragraph (f) of this section as to whether a Council decision will have a significant and predictable effect on an affected individual's financial interests, the designated official will:

(i) Initially determine whether the action before the Council is a Council decision, and whether the affected individual has any financial interest in the fishery or sector of the fishery affected by the action.

(ii) If the designated official determines that the action is not a Council decision or that the affected individual does not have any financial interest in the fishery or sector of the fishery affected by the action, the designated official's inquiry ends and the designated

§ 600.235

official will determine that a voting recusal is not required under 50 CFR 600.235.

(iii) However, if the designated official determines that the action is a Council decision and that the affected individual has a financial interest in the fishery or sector of the fishery affected by the Council decision, a voting recusal is required under 50 CFR 600.235 if there is:

(A) An expected and substantially disproportionate benefit to the affected individual's financial interest (see paragraph (c)(5) of this section), and

(B) A close causal link (see paragraph (c)(4) of this section) between the Council decision and the expected and substantially disproportionate benefit to the affected individual's financial interest.

(4) A close causal link for Council decisions that either require or do not require implementing regulations is determined as follows:

(i) For all Council decisions that require implementing regulations and that affect a fishery or sector of a fishery in which an affected individual has a financial interest, a close causal link exists unless:

(A) The chain of causation between the Council decision and the affected individual's financial interest is attenuated or is contingent on the occurrence of events that are speculative or that are independent of and unrelated to the Council decision; or

(B) There is no real, as opposed to speculative, possibility that the Council decision will affect the affected individual's financial interest.

(ii) For Council decisions that do not require implementing regulations, a close causal link exists if there is a real, as opposed to speculative, possibility that the Council decision will affect the affected individual's financial interest.

(5) A designated official will determine that an expected and substantially disproportionate benefit exists if an affected individual has a significant financial interest (see paragraph (c)(6) of this section) in the fishery or sector of the fishery that is likely to be positively or negatively affected by the Council decision. The magnitude of the positive or negative impact is not de-

50 CFR Ch. VI (10–1–21 Edition)

terminative of whether there is an expected and substantially disproportionate benefit. The determining factor is the affected individual's significant financial interest in the fishery or sector of the fishery affected by the Council decision.

(6) When calculating significant financial interest, the designated official will rely on certain information.

(i) The information to be used is as follows:

(A) The designated official will use the information included in the Financial Interest Form and any other reliable and probative information provided in writing.

(B) The designated official may contact an affected individual to better understand the reported financial interest or any information provided in writing.

(C) The designated official will presume that the information reported on the Financial Interest Form is true and correct and the designated official is not responsible for determining the veracity of the reported information when preparing a determination under paragraph (f) of this section.

(D) If an affected individual does not provide information concerning the specific percentage of ownership of a financial interest reported on his or her Financial Interest Form, the designated official will attribute all harvesting, processing, or marketing activity of, and vessels owned by, the financial interest to the affected individual.

(ii) The designated official will apply the following principles when calculating an affected individual's financial interests relative to the significant financial interest thresholds for the fishery or sector of the fishery affected by the action. For purposes of this paragraph, use of the term "company" includes any business, vessel, or other entity.

(A) For attributions concerning direct ownership (companies owned by or that employ an affected individual) the designated official will attribute to an affected individual all harvesting, processing, and marketing activity of, and all vessels owned by, a company when

the affected individual owns 100 percent of that company. If an affected individual owns less than 100 percent of a company, the designated official will attribute to the affected individual the harvesting, processing, and marketing activity of, and vessels owned by, the company commensurate with the affected individual's percentage of ownership. The designated official will attribute to an affected individual all harvesting, processing, and marketing activity of, and all vessels owned by, a company that employs the affected individual.

(B) For attributions concerning indirect ownership (companies owned by an affected individual's company or employer) the designated official will attribute to the affected individual the harvesting, processing, and marketing activity of, and vessels owned by, a company that is owned by that affected individual's company or employer commensurate with the affected individual's percentage ownership in the directly owned company, and the directly owned company's ownership in the indirectly owned company.

(C) For attributions concerning parent ownership (companies that own some percentage of an affected individual's company or employer) the designated official will attribute to an affected individual all harvesting, processing, and marketing activity of, and all vessels owned by, a company that owns fifty percent or more of a company that is owned by the affected individual or that employs the affected individual. The designated official will not attribute to an affected individual the harvesting, processing, or marketing activity of, or any vessels owned by, a company that owns less than fifty percent of a company that is owned by the affected individual or that employs the affected individual.

(D) For attributions concerning employment or service with associations or organizations, an affected individual may be employed by or serve, either compensated or unpaid, as an officer, director, board member or trustee of an association or organization. The designated official will not attribute to the affected individual the vessels owned by, or the harvesting, processing, or marketing activity con-

ducted by, the members of that association or organization if such organization or association, as an entity separate from its members, does not own any vessels and is not directly engaged in harvesting, processing or marketing. However, if such organization or association receives from NMFS an allocation of harvesting or processing privileges, owns vessels, or is directly engaged in harvesting, processing or marketing, the designated official will attribute to the affected individual the vessels owned by, and all harvesting, processing, and marketing activity of, that association or organization.

(E) For the financial interests of a spouse, partner or minor child, the designated official will consider the following factors for ownership and employment.

(1) For the financial interests of a spouse, partner or minor child related to ownership, the designated official will attribute to an affected individual all harvesting, processing, and marketing activity of, and all vessels owned by, a company when the affected individual's spouse, partner or minor child owns 100 percent of that company. If an affected individual's spouse, partner or minor child owns less than 100 percent of a company, the designated official will attribute to the affected individual the harvesting, processing, and marketing activity of, and vessels owned by, the company commensurate with the spouse's, partner's or minor child's percentage of ownership.

(2) For the financial interests of a spouse, partner or minor child related to employment, the designated official will not attribute to an affected individual the harvesting, processing, or marketing activity of, or any vessels owned by, a company that employs the affected individual's spouse, partner or minor child when the spouse's, partner's or minor child's compensation are not influenced by, or fluctuate with, the financial performance of the company. The designated official will attribute to an affected individual all harvesting, processing, and marketing activity of, and all vessels owned by, a company that employs the Council member's spouse, partner or minor child when the spouse's, partner's or

minor child's compensation are influenced by, or fluctuate with, the financial performance of the company.

(7) A member of an SSC is not subject to the restrictions on voting under this section.

(d) *Voluntary recusal.* An affected individual who believes that a Council decision would have a significant and predictable effect on that individual's financial interest disclosed under paragraph (b) of this section may, at any time before a vote is taken, announce to the Council an intent not to vote on the decision and identify the financial interest that would be affected.

(e) *Participation in deliberations.* Notwithstanding paragraph (c) of this section, an affected individual who is recused from voting under this section may participate in Council and committee deliberations relating to the decision, after notifying the Council of the voting recusal and identifying the financial interest that would be affected.

(f) *Process and procedure for determination.* (1) At the request of an affected individual, and as provided under paragraphs (c)(3)–(6) of this section, the designated official shall determine for the record whether a Council decision would have a significant and predictable effect on that individual's financial interest. Unless subject to confidentiality requirements, all information considered will be made part of the public record for the decision. The affected individual may request a determination by notifying the designated official—

(i) Within a reasonable time before the Council meeting at which the Council decision will be made; or

(ii) During a Council meeting before a Council vote on the decision.

(2) The designated official may initiate a determination on the basis of—

(i) His or her knowledge of the fishery and the financial interests disclosed by an affected individual; or

(ii) Written and signed information received within a reasonable time before a Council meeting or, if the issue could not have been anticipated before the meeting, during a Council meeting before a Council vote on the decision.

(3) At the beginning of each Council meeting, or during a Council meeting

at any time reliable and probative information is received, the designated official shall announce the receipt of information relevant to a determination concerning recusal, the nature of that information, and the identity of the submitter of such information.

(4) If the designated official determines that the affected individual may not vote, the individual may state for the record how he or she would have voted. A Council Chair may not allow such an individual to cast a vote.

(5) A reversal of a determination under paragraph (g) of this section may not be treated as cause for invalidation or reconsideration by the Secretary of a Council's decision.

(6) Regional Recusal Determination Procedure Handbooks shall be developed for reach NMFS Region.

(i) Each NMFS Regional Office, in conjunction with NOAA Office of General Counsel, will publish and make available to the public its Regional Recusal Determination Procedure Handbook, which explains the process and procedure typically followed in preparing and issuing recusal determinations.

(ii) A Regional Recusal Determination Procedure Handbook must include:

(A) A statement that the Regional Recusal Determination Procedure Handbook is intended as guidance to describe the recusal determination process and procedure typically followed within the region.

(B) Identification of the Council(s) to which the Regional Recusal Determination Procedure Handbook applies. If the Regional Recusal Determination Procedure Handbook applies to multiple Councils, any procedure that applies to a subset of those Councils should clearly identify the Council(s) to which the procedure applies.

(C) A description of the process for identifying the fishery or sector of the fishery affected by the action before the Council.

(D) A description of the process for preparing and issuing a recusal determination relative to the timing of a Council decision.

(E) A description of the process by which the Council, Council members,

and the public will be made aware of recusal determinations.

(F) A description of the process for identifying the designated official(s) who will prepare recusal determinations and attend Council meetings.

(iii) A Regional Recusal Determination Procedure Handbook may include additional material related to the region's process and procedure for recusal determinations not specifically identified in paragraph (f)(6)(ii) of this section. A Regional Recusal Determination Procedure Handbook may be revised at any time upon agreement by the NMFS Regional Office and NOAA Office of General Counsel.

(g) *Review of determinations.* (1) Any Council member may file a written request to the NOAA General Counsel for review of the designated official's determination. A request for review must be received within 10 days of the determination.

(2) A Council member may request a review of any aspect of the recusal determination, including but not limited to, whether the action is a Council decision, the description of the fishery or sector of the fishery affected by the Council action, the calculation of an affected individual's financial interests or the finding of a significant financial interest, and the existence of a close causal link. A request for review must include a full statement in support of the review, including a concise statement as to why the Council member believes that the recusal determination is in error and why the designated official's determination should be reversed.

(3) If the request for review is from a Council member other than the affected individual whose vote is at issue, the requester must provide a copy of the request to the affected individual at the same time it is submitted to the NOAA General Counsel. The affected individual may submit a response to the NOAA General Counsel within 10 days from the date of his/her receipt of the request for review.

(4) The NOAA General Counsel must complete the review and issue a decision within 30 days from the date of receipt of the request for review. The NOAA General Counsel will limit the review to the record before the des-

ignated official at the time of the determination, the request, and any response.

(h) The provisions of 18 U.S.C. 208 regarding conflicts of interest do not apply to an affected individual who is a voting member of a Council appointed by the Secretary, as described under section 302(j)(1)(A)(ii) of the Magnuson-Stevens Act, and who is in compliance with the requirements of this section for filing a Financial Interest Form. The provisions of 18 U.S.C. 208 do not apply to a member of an SSC, unless that individual is an officer or employee of the United States or is otherwise covered by the requirements of 18 U.S.C. 208.

(i) It is unlawful for an affected individual to knowingly and willfully fail to disclose, or to falsely disclose, any financial interest as required by this section, or to knowingly vote on a Council decision in violation of this section. In addition to the penalties applicable under § 600.735, a violation of this provision may result in removal of the affected individual from Council or SSC membership.

[63 FR 64185, Nov. 19, 1998, as amended at 75 FR 59152, Sept. 27, 2010; 85 FR 56182, Sept. 11, 2020]

§ 600.240 Security assurances.

(a) DOC Office of Security will issue security assurances to Council members following completion of favorable background investigations. A Council member's appointment is conditional until such time as the background investigation has been favorably adjudicated. The Secretary will revoke the member's appointment if that member receives an unfavorable background investigation. In instances in which Council members may need to discuss, at closed meetings, materials classified for national security purposes, the agency or individual (e.g., Department of State, U.S. Coast Guard) providing such classified information will be responsible for ensuring that Council members and other attendees have the appropriate security clearances.

(b) Each nominee to a Council is required to complete a Certification of Status form ("form"). All nominees must certify, pursuant to the Foreign

§ 600.245

Agents Registration Act of 1938, whether they serve as an agent of a foreign principal. Each nominee must certify, date, sign, and return the form with his or her completed nomination kit. Nominees will not be considered for appointment to a Council if they have not filed this form. Any nominee who currently is an agent of a foreign principal will not be eligible for appointment to a Council, and therefore should not be nominated by a Governor for appointment.

[61 FR 32540, June 24, 1996, as amended 75 FR 59153, Sept. 27, 2010]

§ 600.245 Council member compensation.

(a) All voting Council members whose eligibility for compensation has been established in accordance with NOAA guidelines will be paid through the cooperative agreement as a direct line item on a contractual basis without deductions being made for Social Security or Federal and state income taxes. A report of compensation will be furnished each year by the member's Council to the proper Regional Program Officer, as required by the Internal Revenue Service. Such compensation may be paid on a full day's basis, whether in excess of 8 hours a day or less than 8 hours a day. The time is compensable where the individual member is required to expend a significant private effort that substantially disrupts the daily routine to the extent that a work day is lost to the member. "Homework" time in preparation for formal Council meetings is not compensable.

(b) Non-government Council members receive compensation for:

(1) Days spent in actual attendance at a meeting of the Council or jointly with another Council.

(2) Travel on the day preceding or following a scheduled meeting that precluded the member from conducting his normal business on the day in question.

(3) Meetings of standing committees of the Council if approved in advance by the Chair.

(4) Individual member meeting with scientific and technical advisors, when approved in advance by the Chair and a

50 CFR Ch. VI (10–1–21 Edition)

substantial portion of any day is spent at the meeting.

(5) Conducting or attending hearings, when authorized in advance by the Chair.

(6) Other meetings involving Council business when approved in advance by the Chair.

(c) The Executive Director of each Council must submit to the appropriate Regional Office annually a report, approved by the Council Chair, of Council member compensation authorized. This report shall identify, for each member, amount paid, dates, and location and purpose of meetings attended.

[61 FR 32540, June 24, 1996, as amended at 63 FR 7075, Feb. 12, 1998; 66 FR 57888, Nov. 19, 2001]

§ 600.250 Council member training.

(a) The Secretary shall provide a training course covering a variety of topics relevant to matters before the Councils and shall make the training course available to all Council members and staff and staff from NMFS regional offices and science centers. To the extent resources allow, the Secretary will make the training available to Council committee and advisory panel members.

(b) Council members appointed after January 12, 2007, shall, within one year of appointment, complete the training course developed by the Secretary. Any Council member who completed such a training course within 24 months of January 12, 2007, is considered to have met the training requirement of this section.

[75 FR 59154, Sept. 27, 2010]

Subpart D—National Standards

§ 600.305 General.

(a) *Purpose.* (1) This subpart establishes guidelines, based on the national standards, to assist in the development and review of FMPs, amendments, and regulations prepared by the Councils and the Secretary.

(2) In developing FMPs, the Councils have the initial authority to ascertain factual circumstances, to establish management objectives, and to propose management measures that will

achieve the objectives. The Secretary will determine whether the proposed management objectives and measures are consistent with the national standards, other provisions of the Magnuson-Stevens Act (MSA), and other applicable law. The Secretary has an obligation under section 301(b) of the MSA to inform the Councils of the Secretary's interpretation of the national standards so that they will have an understanding of the basis on which FMPs will be reviewed.

(3) The national standards are statutory principles that must be followed in any FMP. The guidelines summarize Secretarial interpretations that have been, and will be, applied under these principles. The guidelines are intended as aids to decision-making; FMPs formulated according to the guidelines will have a better chance for expeditious Secretarial review, approval, and implementation. FMPs that are not formulated according to the guidelines may not be approved by the Secretary if the FMP or FMP amendment is inconsistent with the MSA or other applicable law (16 U.S.C. 1854(a)(3)).

(b) *Fishery management objectives.* (1) Each FMP, whether prepared by a Council or by the Secretary, should identify what the FMP is designed to accomplish (*i.e.*, the management objectives to be attained in regulating the fishery under consideration). In establishing objectives, Councils balance biological constraints with human needs, reconcile present and future costs and benefits, and integrate the diversity of public and private interests. If objectives are in conflict, priorities should be established among them.

(2) To reflect the changing needs of the fishery over time, Councils should reassess the FMP's management objectives on a regular basis.

(3) How objectives are defined is important to the management process. Objectives should address the problems of a particular fishery. The objectives should be clearly stated, practicably attainable, framed in terms of definable events and measurable benefits, and based upon a comprehensive rather than a fragmentary approach to the problems addressed. An FMP should make a clear distinction between ob-

jectives and the management measures chosen to achieve them. The objectives of each FMP provide the context within which the Secretary will judge the consistency of an FMP's conservation and management measures with the national standards.

(c) *Stocks that require conservation and management.* (1) Magnuson-Stevens Act section 302(h)(1) requires a Council to prepare an FMP for each fishery under its authority that requires (or in other words, is in need of) conservation and management. 16 U.S.C. 1852(h)(1). Not every fishery requires Federal management. Any stocks that are predominately caught in Federal waters and are overfished or subject to overfishing, or likely to become overfished or subject to overfishing, are considered to require conservation and management. Beyond such stocks, Councils may determine that additional stocks require "conservation and management." (See Magnuson-Stevens Act definition at 16 U.S.C. 1802(5)). Based on this definition of conservation and management, and other relevant provisions of the Magnuson-Stevens Act, a Council should consider the following non-exhaustive list of factors when deciding whether additional stocks require conservation and management:

(i) The stock is an important component of the marine environment.

(ii) The stock is caught by the fishery.

(iii) Whether an FMP can improve or maintain the condition of the stock.

(iv) The stock is a target of a fishery.

(v) The stock is important to commercial, recreational, or subsistence users.

(vi) The fishery is important to the Nation or to the regional economy.

(vii) The need to resolve competing interests and conflicts among user groups and whether an FMP can further that resolution.

(viii) The economic condition of a fishery and whether an FMP can produce more efficient utilization.

(ix) The needs of a developing fishery, and whether an FMP can foster orderly growth.

(x) The extent to which the fishery is already adequately managed by states, by state/Federal programs, or by Federal regulations pursuant to other

FMPs or international commissions, or by industry self-regulation, consistent with the requirements of the Magnuson-Stevens Act and other applicable law.

(2) In evaluating factors in paragraphs (c)(1)(i) through (x) of this section, a Council should consider the specific circumstances of a fishery, based on the best scientific information available, to determine whether there are biological, economic, social and/or operational concerns that can and should be addressed by Federal management.

(3) When considering adding a stock to an FMP, no single factor is dispositive or required. One or more of the above factors, and any additional considerations that may be relevant to the particular stock, may provide the basis for determining that a stock requires conservation and management. Based on the factor in paragraph (c)(1)(iii) of this section, if the amount and/or type of catch that occurs in Federal waters is a significant contributing factor to the stock's status, such information would weigh heavily in favor of adding a stock to an FMP. However, Councils should consider the factor in paragraph (c)(1)(x) of this section before deciding to include a stock in an FMP. In many circumstances, adequate management of a fishery by states, state/Federal programs, or another Federal FMP would weigh heavily against a Federal FMP action. *See, e.g.*, 16 U.S.C. 1851(a)(7) and 1856(a)(3).

(4) When considering removing a stock from, or continuing to include a stock in, an FMP, Councils should prepare a thorough analysis of factors in paragraphs (c)(1)(i) through (x) of this section, and any additional considerations that may be relevant to the particular stock. As mentioned in paragraph (c)(3) of this section, if the amount and/or type of catch that occurs in Federal waters is a significant contributing factor to the stock's status, such information would weigh heavily in favor of continuing to include a stock in an FMP. Councils should consider weighting the factors as follows. Factors in paragraphs (c)(1)(i) through (iii) of this section should be considered first, as they address maintaining a fishery resource

and the marine environment. *See* 16 U.S.C. 1802(5)(A). These factors weigh in favor of continuing to include a stock in an FMP. Councils should next consider factors in paragraphs (c)(1)(iv) through (ix) of this section, which set forth key economic, social, and other reasons contained within the MSA for an FMP action. *See* 16 U.S.C. 1802(5)(B). Finally, a Council should consider the factor in paragraph (c)(1)(x) of this section before deciding to remove a stock from, or continue to include a stock in, an FMP. In many circumstances, adequate management of a fishery by states, state/Federal programs, or another Federal FMP would weigh in favor of removing a stock from an FMP. *See e.g.*, 16 U.S.C. 1851(a)(7) and 1856(a)(3).

(5) Councils may choose to identify stocks within their FMPs as ecosystem component (EC) species (*see* §§ 600.305(d)(13) and 600.310(d)(1)) if a Council determines that the stocks do not require conservation and management based on the considerations and factors in paragraph (c)(1) of this section. EC species may be identified at the species or stock level, and may be grouped into complexes. Consistent with National Standard 9, MSA section 303(b)(12), and other applicable MSA sections, management measures can be adopted in order to, for example, collect data on the EC species, minimize bycatch or bycatch mortality of EC species, protect the associated role of EC species in the ecosystem, and/or to address other ecosystem issues.

(6) A stock or stock complex may be identified in more than one FMP. In this situation, the relevant Councils should choose which FMP will be the primary FMP in which reference points for the stock or stock complex will be established. In other FMPs, the stock or stock complex may be identified as "other managed stocks" and management measures that are consistent with the objectives of the primary FMP can be established.

(7) Councils should periodically review their FMPs and the best scientific information available and determine if the stocks are appropriately identified. As appropriate, stocks should be reclassified within an FMP, added to or removed from an existing FMP, or

added to a new FMP, through an FMP amendment that documents the rationale for the decision.

(d) *Word usage within the National Standard Guidelines.* The word usage refers to all regulations in this subpart.

(1) *Must* is used, instead of “shall”, to denote an obligation to act; it is used primarily when referring to requirements of the Magnuson-Stevens Act, the logical extension thereof, or of other applicable law.

(2) *Shall* is used only when quoting statutory language directly, to avoid confusion with the future tense.

(3) *Should* is used to indicate that an action or consideration is strongly recommended to fulfill the Secretary’s interpretation of the Magnuson-Stevens Act, and is a factor reviewers will look for in evaluating a statement of organization, practices, and procedures (SOPP) or an FMP.

(4) *May* is used in a permissive sense.

(5) *Will* is used descriptively, as distinguished from denoting an obligation to act or the future tense.

(6) *Could* is used when giving examples, in a hypothetical, permissive sense.

(7) *Can* is used to mean “is able to,” as distinguished from “may.”

(8) *Examples* are given by way of illustration and further explanation. They are not inclusive lists; they do not limit options.

(9) *Analysis*, as a paragraph heading, signals more detailed guidance as to the type of discussion and examination an FMP should contain to demonstrate compliance with the standard in question.

(10) *Council* includes the Secretary, as applicable, when preparing FMPs or amendments under section 304(c) and (g) of the Magnuson-Stevens Act.

(11) *Target stocks* are stocks or stock complexes that fishers seek to catch for sale or personal use, including such fish that are discarded for economic or regulatory reasons as defined under Magnuson-Stevens Act section 3(9) and 3(38).

(12) *Non-target species* and *non-target stocks* are fish caught incidentally during the pursuit of target stocks in a fishery. Non-target stocks may require conservation and management and, if so, must be included in a FMP and be

identified at the stock or stock complex level. If non-target species are not in need of conservation and management, they may be identified in an FMP as ecosystem component species.

(13) *Ecosystem Component Species* (see §§ 600.305(c)(5) and 600.310(d)(1)) are stocks that a Council or the Secretary has determined do not require conservation and management, but desire to list in an FMP in order to achieve ecosystem management objectives.

(e) *Relationship of National Standard 1 to other national standards—General.* National Standard 1 addresses preventing overfishing and achieving optimum yield. See 16 U.S.C. 1851(a)(1) and 50 CFR 600.310. National Standards 2 through 10 provide further requirements for conservation and management measures in FMPs. See 16 U.S.C. 1851(a)(2) through (10) and 50 CFR 600.315 through 600.355. Below is a description of how some of the other National Standards intersect with National Standard 1.

(1) *National Standard 2* (see § 600.315). Management measures and reference points to implement NS1 must be based on the best scientific information available. When data are insufficient to estimate reference points directly, Councils should develop reasonable proxies to the extent possible (also see § 600.310(e)(1)(v)(B)). In cases where scientific data are severely limited, effort should also be directed to identifying and gathering the needed data. SSCs should advise their Councils regarding the best scientific information available for fishery management decisions.

(2) *National Standard 3* (see § 600.320). Reference points should generally be specified in terms of the level of stock aggregation for which the best scientific information is available (also see § 600.310(e)(1)(ii) and (iii)).

(3) *National Standard 6* (see § 600.335). Councils must build into the reference points and control rules appropriate consideration of risk, taking into account uncertainties in estimating harvest, stock conditions, life history parameters, or the effects of environmental factors.

(4) *National Standard 8* (see § 600.345). National Standard 8 addresses economic and social considerations and minimizing to the extent practicable

§ 600.310

adverse economic impacts on fishing communities within the context of preventing overfishing and rebuilding overfished stocks as required under National Standard 1 and other MSA provisions. Calculation of OY as reduced from maximum sustainable yield (MSY) also includes consideration of economic and social factors, but the combination of management measures chosen to achieve the OY must principally be designed to prevent overfishing and rebuild overfished stocks.

(5) *National Standard 9* (see § 600.350). Evaluation of stock status with respect to reference points must take into account mortality caused by bycatch. In addition, the estimation of catch should include the mortality of fish that are discarded.

[81 FR 71893, Oct. 18, 2016]

§ 600.310 National Standard 1—Optimum Yield.

(a) *Standard 1*. Conservation and management measures shall prevent overfishing while achieving, on a continuing basis, the optimum yield (OY) from each fishery for the U.S. fishing industry.

(b) *General*. (1) The guidelines set forth in this section describe fishery management approaches to meet the objectives of National Standard 1 (NS1), and include guidance on:

(i) Specifying maximum sustainable yield (MSY) and OY;

(ii) Specifying status determination criteria (SDC) so that overfishing and overfished determinations can be made for stocks and stock complexes in an FMP;

(iii) Preventing overfishing and achieving OY, incorporation of scientific and management uncertainty in control rules, and adaptive management using annual catch limits (ACL) and measures to ensure accountability (i.e., accountability measures (AMs)); and

(iv) Rebuilding stocks and stock complexes.

(2) *Overview of Magnuson-Stevens Act concepts and provisions related to NS1*—

(i) *MSY*. The Magnuson-Stevens Act establishes MSY as the basis for fishery management and requires that: The fishing mortality rate must not jeopardize the capacity of a stock or stock

50 CFR Ch. VI (10–1–21 Edition)

complex to produce MSY; the abundance of an overfished stock or stock complex must be rebuilt to a level that is capable of producing MSY; and OY must not exceed MSY.

(ii) *OY*. The determination of OY is a decisional mechanism for resolving the Magnuson-Stevens Act's conservation and management objectives, achieving an FMP's objectives, and balancing the various interests that comprise the greatest overall benefits to the Nation. OY is based on MSY as reduced under paragraphs (e)(3)(iii)(A) and (B) of this section. The most important limitation on the specification of OY is that the choice of OY and the conservation and management measures proposed to achieve it must prevent overfishing.

(iii) *ACLs and AMs*. Any FMP shall establish a mechanism for specifying ACLs in the FMP (including a multiyear plan), implementing regulations, or annual specifications, at a level such that overfishing does not occur in the fishery, including measures to ensure accountability (Magnuson-Stevens Act section 303(a)(15)).

(iv) *Reference points*. SDC, MSY, OY, acceptable biological catch (ABC), and ACL, which are described further in paragraphs (e) and (f) of this section, are collectively referred to as "reference points."

(v) *Scientific advice*. The Magnuson-Stevens Act has requirements regarding scientific and statistical committees (SSC) of the Regional Fishery Management Councils, including but not limited to, the following provisions (paragraphs (b)(2)(v)(A) through (D) of this section). See the National Standard 2 guidelines for further guidance on SSCs and the peer review process (§ 600.315).

(A) Each Regional Fishery Management Council shall establish an SSC as described in section 302(g)(1)(A) of the Magnuson-Stevens Act.

(B) Each SSC shall provide its Regional Fishery Management Council recommendations for ABC as well as other scientific advice, as described in Magnuson-Stevens Act section 302(g)(1)(B).

(C) The Secretary and each Regional Fishery Management Council may establish a peer review process for that Council for scientific information used

to advise the Council about the conservation and management of a fishery (*see* Magnuson-Stevens Act section 302(g)(1)(E)). If a peer review process is established, it should investigate the technical merits of stock assessments and other scientific information to be used by the SSC or agency or international scientists, as appropriate. For Regional Fishery Management Councils, the peer review process is not a substitute for the SSC and both the SSC and peer review process should work in conjunction with each other. For the Secretary, which does not have an SSC, the peer review process should provide the scientific information necessary.

(D) Each Council shall develop ACLs for each of its managed fisheries that may not exceed the “fishing level recommendations” of its SSC or peer review process (Magnuson-Stevens Act section 302(h)(6)). The SSC recommendation that is the most relevant to ACLs is ABC, as both ACL and ABC are levels of annual catch.

(3) *Approach for setting limits and accountability measures, including targets, for consistency with NSI.* When specifying limits and accountability measures, Councils must take an approach that considers uncertainty in scientific information and management control of the fishery. These guidelines describe how the Councils could address uncertainty such that there is a low risk that limits are exceeded as described in paragraphs (f)(2) and (g)(4) of this section.

(4) *Vulnerability.* A stock’s vulnerability to fishing pressure is a combination of its productivity, which depends upon its life history characteristics, and its susceptibility to the fishery. Productivity refers to the capacity of the stock to produce MSY and to recover if the population is depleted, and susceptibility is the potential for the stock to be impacted by the fishery, which includes direct captures, as well as indirect impacts of the fishery (*e.g.*, loss of habitat quality).

(c) *Summary of items to include in FMPs related to NSI.* This section provides a summary of items that Councils must include in their FMPs and FMP amendments in order to address ACL, AM, and other aspects of the NSI

guidelines. Councils must describe fisheries data for the stocks and stock complexes in their FMPs, or associated public documents such as Stock Assessment and Fishery Evaluation (SAFE) Reports. For all stocks and stock complexes that require conservation and management (*see* § 600.305(c)), the Councils must evaluate and describe the following items in their FMPs and amend the FMPs, if necessary, to align their management objectives to end or prevent overfishing and to achieve OY:

(1) MSY and SDC (*see* paragraphs (e)(1) and (2) of this section).

(2) OY at the stock, stock complex, or fishery level and provide the OY specification analysis (*see* paragraph (e)(3) of this section).

(3) ABC control rule (*see* paragraph (f)(2) of this section).

(4) Mechanisms for specifying ACLs (*see* paragraph (f)(4) of this section).

(5) AMs (*see* paragraph (g) of this section).

(6) Stocks and stock complexes that have statutory exceptions from ACLs and AMs (*see* paragraph (h)(1) of this section) or which fall under limited circumstances which require different approaches to meet the Magnuson-Stevens Act requirements (*see* paragraph (h)(2) of this section).

(d) *Stocks and stock complexes—*

(1) *Introduction.* As described in § 600.305(c), Councils should identify in their FMPs the stocks that require conservation and management. Such stocks must have ACLs, other reference points, and accountability measures. Other stocks that are identified in an FMP (*i.e.*, EC species or stocks that the fishery interacts with but are managed primarily under another FMP, *see* § 600.305(c)(5) through (6)) do not require ACLs, other reference points, or accountability measures.

(2) *Stock complex.* Stocks that require conservation and management can be grouped into stock complexes. A “stock complex” is a tool to manage a group of stocks within a FMP.

(i) At the time a stock complex is established, the FMP should provide, to the extent practicable, a full and explicit description of the proportional composition of each stock in the stock

complex. Stocks may be grouped into complexes for various reasons, including where stocks in a multispecies fishery cannot be targeted independent of one another; where there is insufficient data to measure a stock's status relative to SDC; or when it is not feasible for fishermen to distinguish individual stocks among their catch. Where practicable, the group of stocks should have a similar geographic distribution, life history characteristics, and vulnerabilities to fishing pressure such that the impact of management actions on the stocks is similar. The vulnerability of individual stocks should be considered when determining if a particular stock complex should be established or reorganized, or if a particular stock should be included in a complex.

(ii) *Indicator stocks.* (A) An indicator stock is a stock with measurable and objective SDC that can be used to help manage and evaluate more poorly known stocks that are in a stock complex.

(B) Where practicable, stock complexes should include one or more indicator stocks (each of which has SDC and ACLs). Otherwise, stock complexes may be comprised of: Several stocks without an indicator stock (with SDC and an ACL for the complex as a whole), or one or more indicator stocks (each of which has SDC and management objectives) with an ACL for the complex as a whole (this situation might be applicable to some salmon species). Councils should review the available quantitative or qualitative information (*e.g.*, catch trends, changes in vulnerability, fish health indices, etc.) of stocks within a complex on a regular basis to determine if they are being sustainably managed.

(C) If an indicator stock is used to evaluate the status of a complex, it should be representative of the typical vulnerability of stocks within the complex. If the stocks within a stock complex have a wide range of vulnerability, they should be reorganized into different stock complexes that have similar vulnerabilities; otherwise the indicator stock should be chosen to represent the more vulnerable stocks within the complex. In instances where an indicator stock is less vulnerable

than other members of the complex, management measures should be more conservative so that the more vulnerable members of the complex are not at risk from the fishery.

(D) More than one indicator stock can be selected to provide more information about the status of the complex.

(E) When indicator stocks are used, the stock complex's MSY could be listed as "unknown," while noting that the complex is managed on the basis of one or more indicator stocks that do have known stock-specific MSYs, or suitable proxies, as described in paragraph (e)(1)(v) of this section.

(e) *Features of MSY, SDC, and OY.* (1) *MSY.* Each FMP must include an estimate of MSY for the stocks and stock complexes that require conservation and management. MSY may also be specified for the fishery as a whole.

(i) *Definitions.* (A) *MSY* is the largest long-term average catch or yield that can be taken from a stock or stock complex under prevailing ecological, environmental conditions and fishery technological characteristics (*e.g.*, gear selectivity), and the distribution of catch among fleets.

(B) *MSY fishing mortality rate* (F_{msy}) is the fishing mortality rate that, if applied over the long term, would result in MSY.

(C) *MSY stock size* (B_{msy}) means the long-term average size of the stock or stock complex, measured in terms of spawning biomass or other appropriate measure of the stock's reproductive potential that would be achieved by fishing at F_{msy} .

(ii) *MSY for stocks.* MSY should be estimated for each stock based on the best scientific information available (see § 600.315).

(iii) *MSY for stock complexes.* When stock complexes are used, MSY should be estimated for one or more indicator stocks or for the complex as a whole (see paragraph (d)(2)(ii)).

(iv) *Methods of estimating MSY for an aggregate group of stocks.* Estimating MSY for an aggregate group of stocks (including stock complexes and the fishery as a whole) can be done using models that account for multi-species interactions, composite properties for a

group of similar species, biomass (energy) flow and production patterns, or other relevant factors (*see* paragraph (e)(3)(iv)(C) of this section).

(v) *Specifying MSY.* (A) Because MSY is a long-term average, it need not be estimated annually, but it must be based on the best scientific information available (*see* § 600.315), and should be re-estimated as required by changes in long-term environmental or ecological conditions, fishery technological characteristics, or new scientific information.

(B) When data are insufficient to estimate MSY directly, Councils should adopt other measures of reproductive potential that can serve as reasonable proxies for MSY, F_{msy} , and B_{msy} .

(C) The MSY for a stock or stock complex is influenced by its interactions with other stocks in its ecosystem and these interactions may shift as multiple stocks in an ecosystem are fished. Ecological and environmental information should be taken into account, to the extent practicable, when assessing stocks and specifying MSY. Ecological and environmental information that is not directly accounted for in the specification of MSY can be among the ecological factors considered when setting OY below MSY.

(D) As MSY values are estimates or are based on proxies, they will have some level of uncertainty associated with them. The degree of uncertainty in the estimates should be identified, when practicable, through the stock assessment process and peer review (*see* § 600.335), and should be taken into account when specifying the ABC Control rule (*see* paragraph (f)(2) of this section).

(2) *Status determination criteria*—(i) *Definitions.* (A) *Status determination criteria (SDC)* mean the measurable and objective factors, MFMT, OFL, and MSST, or their proxies, that are used to determine if overfishing has occurred, or if the stock or stock complex is overfished. Magnuson-Stevens Act (section 3(34)) defines both “overfishing” and “overfished” to mean a rate or level of fishing mortality that jeopardizes the capacity of a fishery to produce the MSY on a continuing basis. To avoid confusion, this section

clarifies that “overfished” relates to biomass of a stock or stock complex, and “overfishing” pertains to a rate or level of removal of fish from a stock or stock complex.

(B) *Overfishing* occurs whenever a stock or stock complex is subjected to a level of fishing mortality or total catch that jeopardizes the capacity of a stock or stock complex to produce MSY on a continuing basis.

(C) *Maximum fishing mortality threshold (MFMT)* means the level of fishing mortality (i.e. F), on an annual basis, above which overfishing is occurring. The MFMT or reasonable proxy may be expressed either as a single number (a fishing mortality rate or F value), or as a function of spawning biomass or other measure of reproductive potential.

(D) *Overfishing limit (OFL)* means the annual amount of catch that corresponds to the estimate of MFMT applied to a stock or stock complex’s abundance and is expressed in terms of numbers or weight of fish.

(E) *Overfished.* A stock or stock complex is considered “overfished” when its biomass has declined below MSST.

(F) *Minimum stock size threshold (MSST)* means the level of biomass below which the capacity of the stock or stock complex to produce MSY on a continuing basis has been jeopardized.

(G) *Approaching an overfished condition.* A stock or stock complex is approaching an overfished condition when it is projected that there is more than a 50 percent chance that the biomass of the stock or stock complex will decline below the MSST within two years.

(ii) *Specification of SDC and overfishing and overfished determinations.* Each FMP must describe how objective and measurable SDCs will be specified, as described in paragraphs (e)(2)(ii)(A) and (B) of this section. To be measurable and objective, SDC must be expressed in a way that enables the Council to monitor the status of each stock or stock complex in the FMP. Applying the SDC set forth in the FMP, the Secretary determines if overfishing is occurring and whether the stock or stock complex is overfished (Magnuson-Stevens Act section 304(e)). SDCs are often based on fishing rates or biomass levels

associated with MSY or MSY based proxies. When data are not available to specify SDCs based on MSY or MSY proxies, alternative types of SDCs that promote sustainability of the stock or stock complex can be used. For example, SDC could be based on recent average catch, fish densities derived from visual census surveys, length/weight frequencies, or other methods. In specifying SDC, a Council must provide an analysis of how the SDC were chosen and how they relate to reproductive potential of stocks of fish within the fishery. If alternative types of SDCs are used, the Council should explain how the approach will promote sustainability of the stock or stock complex on a long term basis. A Council should consider a process that allows SDCs to be quickly updated to reflect the best scientific information available. In the case of internationally-managed stocks, the Council may decide to use the SDCs defined by the relevant international body. In this instance, the SDCs should allow the Council to monitor the status of a stock or stock complex, recognizing that the SDCs may not be defined in such a way that a Council could monitor the MFMT, OFL, or MSST as would be done with a domestically managed stock or stock complex.

(A) *SDC to Determine Overfishing Status.* Each FMP must specify a method used to determine the overfishing status for each stock or stock complex. For domestically-managed stocks or stock complexes, one of the following methods (described in (e)(2)(ii)(A)(1) and (2) of this section) should be specified. If the necessary data to use one of the methods described in either subparagraph (e)(2)(ii)(A)(1) or (2) is not available, a Council may use an alternate type of overfishing SDC as described in paragraph (e)(2)(ii).

(1) *Fishing Mortality Rate Exceeds MFMT.* Exceeding the MFMT for a period of 1 year constitutes overfishing.

(2) *Catch Exceeds the OFL.* Exceeding the annual OFL for 1 year constitutes overfishing.

(3) *Multi-Year Approach to Determine Overfishing Status.* Subparagraphs (e)(2)(ii)(A) (1) and (2) establish methods to determine overfishing status based on a period of 1 year. As stated in

paragraph (e)(2)(ii)(A), a Council should specify, within the FMP, which of these methods will be used to determine overfishing status. However, in certain circumstances, a Council may utilize a multi-year approach to determine overfishing status based on a period of no more than 3 years. The Council should identify in its FMP or FMP amendment, circumstances when the multi-year approach is appropriate and will be used. Such circumstances may include situations where there is high uncertainty in the estimate of F in the most recent year, cases where stock abundance fluctuations are high and assessments are not timely enough to forecast such changes, or other circumstances where the most recent catch or F data does not reflect the overall status of the stock. The multi-year approach to determine overfishing status may not be used to specify future annual catch limits at levels that do not prevent overfishing.

(B) *SDC to determine overfished status.* The MSST or reasonable proxy must be expressed in terms of spawning biomass or other measure of reproductive potential. MSST should be between $\frac{1}{2} B_{msy}$ and B_{msy} , and could be informed by the life history of the stock, the natural fluctuations in biomass associated with fishing at MFMT over the long-term, the requirements of internationally-managed stocks, or other considerations.

(C) Where practicable, all sources of mortality including that resulting from bycatch, scientific research catch, and all fishing activities should be accounted for in the evaluation of stock status with respect to reference points.

(iii) *Relationship of SDC to environmental and habitat change.* Some short-term environmental changes can alter the size of a stock or stock complex without affecting its long-term reproductive potential. Long-term environmental changes may affect both the short-term size of the stock or stock complex and the long-term reproductive potential of the stock or stock complex.

(A) If environmental changes cause a stock or stock complex to fall below its MSST without affecting its long-term

reproductive potential, fishing mortality must be constrained sufficiently to allow rebuilding within an acceptable time frame (*see* also paragraph (j)(3)(i) of this section). SDC should not be respecified.

(B) If environmental, ecosystem, or habitat changes affect the long-term reproductive potential of the stock or stock complex, one or more components of the SDC must be respecified. Once SDC have been respecified, fishing mortality may or may not have to be reduced, depending on the status of the stock or stock complex with respect to the new criteria.

(C) If manmade environmental changes are partially responsible for a stock or stock complex's biomass being below MSST, in addition to controlling fishing mortality, Councils should recommend restoration of habitat and other ameliorative programs, to the extent possible (*see* also the guidelines issued pursuant to section 305(b) of the Magnuson-Stevens Act for Council actions concerning essential fish habitat).

(iv) *Secretarial approval of SDC.* Secretarial approval or disapproval of proposed SDC will be based on consideration of whether the proposal:

(A) Is based on the best scientific information available;

(B) Contains the elements described in paragraph (e)(2)(ii) of this section;

(C) Provides a basis for objective measurement of the status of the stock or stock complex against the criteria; and

(D) Is operationally feasible.

(3) *Optimum yield.* For stocks that require conservation and management, OY may be established at the stock, stock complex, or fishery level.

(i) *Definitions.*— (A) *Optimum yield (OY).* Magnuson-Stevens Act section (3)(33) defines “optimum,” with respect to the yield from a fishery, as the amount of fish that will provide the greatest overall benefit to the Nation, particularly with respect to food production and recreational opportunities and taking into account the protection of marine ecosystems; that is prescribed on the basis of the MSY from the fishery, as reduced by any relevant economic, social, or ecological factor; and, in the case of an overfished fish-

ery, that provides for rebuilding to a level consistent with producing the MSY in such fishery.

(B) In NS1, use of the phrase “achieving, on a continuing basis, the OY from each fishery” means: producing, from each stock, stock complex, or fishery, an amount of catch that is, on average, equal to the Council's specified OY; prevents overfishing; maintains the long term average biomass near or above B_{msy} ; and rebuilds overfished stocks and stock complexes consistent with timing and other requirements of section 304(e)(4) of the Magnuson-Stevens Act and paragraph (j) of this section.

(ii) *General.* OY is a long-term average amount of desired yield from a stock, stock complex, or fishery. An FMP must contain conservation and management measures, including ACLs and AMs, to achieve OY on a continuing basis, and provisions for information collection that are designed to determine the degree to which OY is achieved. These measures should allow for practical and effective implementation and enforcement of the management regime. If these measures cannot meet the dual requirements of NS1 (preventing overfishing while achieving, on a continuing basis, OY), Councils should either modify the measures or reexamine their OY specifications to ensure that the dual NS1 requirements can be met.

(iii) *Assessing OY.* An FMP must contain an assessment and specification of OY (MSA section 303(a)(3)). The assessment should include: a summary of information utilized in making such specification; an explanation of how the OY specification will produce the greatest benefits to the nation and prevent overfishing and rebuild overfished stocks; and a consideration of the economic, social, and ecological factors relevant to the management of a particular stock, stock complex, or fishery. Consistent with Magnuson-Stevens Act section 302(h)(5), the assessment and specification of OY should be reviewed on a continuing basis, so that it is responsive to changing circumstances in the fishery.

(A) *Determining the greatest benefit to the Nation.* In determining the greatest benefit to the Nation, the values that

should be weighed and receive serious attention when considering the economic, social, or ecological factors used in reducing MSY, or its proxy, to obtain OY are:

(1) The benefits of food production derived from providing seafood to consumers; maintaining an economically viable fishery together with its attendant contributions to the national, regional, and local economies; and utilizing the capacity of the Nation's fishery resources to meet nutritional needs.

(2) The benefits of recreational opportunities reflect the quality of both the recreational fishing experience and non-consumptive fishery uses such as ecotourism, fish watching, and recreational diving. Benefits also include the contribution of recreational fishing to the national, regional, and local economies and food supplies.

(3) The benefits of protection afforded to marine ecosystems are those resulting from maintaining viable populations (including those of unexploited species), maintaining adequate forage for all components of the ecosystem, maintaining evolutionary and ecological processes (*e.g.*, disturbance regimes, hydrological processes, nutrient cycles), maintaining productive habitat, maintaining the evolutionary potential of species and ecosystems, and accommodating human use.

(B) *Economic, Ecological, and Social Factors.* Councils should consider the management objectives of their FMPs and their management framework to determine the relevant social, economic, and ecological factors used to determine OY. There will be inherent trade-offs when determining the objectives of the fishery. The following is a non-exhaustive list of potential considerations for social, economic, and ecological factors.

(1) *Social factors.* Examples are enjoyment gained from recreational fishing, avoidance of gear conflicts and resulting disputes, preservation of a way of life for fishermen and their families, and dependence of local communities on a fishery (*e.g.*, involvement in fisheries and ability to adapt to change). Consideration may be given to fishery-related indicators (*e.g.*, number of fish-

ery permits, number of commercial fishing vessels, number of party and charter trips, landings, ex-vessel revenues etc.) and non-fishery related indicators (*e.g.*, unemployment rates, percent of population below the poverty level, population density, etc.), and preference for a particular type of fishery (*e.g.*, size of the fishing fleet, type of vessels in the fleet, permissible gear types). Other factors that may be considered include the effects that past harvest levels have had on fishing communities, the cultural place of subsistence fishing, obligations under tribal treaties, proportions of affected minority and low-income groups, and worldwide nutritional needs.

(2) *Economic factors.* Examples are prudent consideration of the risk of overharvesting when a stock's size or reproductive potential is uncertain (*see* § 600.335(c)(2)(i)), satisfaction of consumer and recreational needs, and encouragement of domestic and export markets for U.S. harvested fish. Other factors that may be considered include: The value of fisheries, the level of capitalization, the decrease in cost per unit of catch afforded by an increase in stock size, the attendant increase in catch per unit of effort, alternate employment opportunities, and economic contribution to fishing communities, coastal areas, affected states, and the nation.

(3) *Ecological factors.* Examples include impacts on EC species, forage fish stocks, other fisheries, predator-prey or competitive interactions, marine mammals, threatened or endangered species, and birds. Species interactions that have not been explicitly taken into account when calculating MSY should be considered as relevant factors for setting OY below MSY. In addition, consideration should be given to managing forage stocks for higher biomass than B_{msy} to enhance and protect the marine ecosystem. Also important are ecological or environmental conditions that stress marine organisms or their habitat, such as natural and manmade changes in wetlands or nursery grounds, and effects of pollutants on habitat and stocks.

(iv) *Specifying OY.* If the estimates of MFMT and current biomass are known

with a high level of certainty and management controls can accurately limit catch, then OY could be set very close to MSY, assuming no other reductions are necessary for social, economic, or ecological factors. To the degree that such MSY estimates and management controls are lacking or unavailable, OY should be set farther from MSY.

(A) The OY can be expressed in terms of numbers or weight of fish, and either as a single value or a range. When it is not possible to specify OY quantitatively, OY may be described qualitatively.

(B) The determination of OY is based on MSY, directly or through proxy. However, even where sufficient scientific data as to the biological characteristics of the stock do not exist, or where the period of exploitation or investigation has not been long enough for adequate understanding of stock dynamics, or where frequent large-scale fluctuations in stock size diminish the meaningfulness of the MSY concept, OY must still be established based on the best scientific information available.

(C) An OY established at a fishery level may not exceed the sum of the MSY values for each of the stocks or stocks complexes within the fishery. Aggregate level MSY estimates could be used as a basis for specifying OY for the fishery (see paragraph (e)(1)(iv) of this section). When aggregate level MSY is estimated, single stock MSY estimates can also be used to inform single stock management. For example, OY could be specified for a fishery, while other reference points are specified for individual stocks in order to prevent overfishing on each stock within the fishery.

(D) For internationally-managed stocks, fishing levels that are agreed upon by the U.S. at the international level are considered to be consistent with OY requirements under the MSA and these guidelines.

(v) *OY and foreign fishing.* Section 201(d) of the Magnuson-Stevens Act provides that fishing by foreign nations is limited to that portion of the OY that will not be harvested by vessels of the United States. The FMP must include an assessment to address the fol-

lowing, as required by section 303(a)(4) of the Magnuson-Stevens Act:

(A) The OY specification is the basis for establishing any total allowable level of foreign fishing (TALFF).

(B) Part of the OY may be held as a reserve to allow for domestic annual harvest (DAH). If an OY reserve is established, an adequate mechanism should be included in the FMP to permit timely release of the reserve to domestic or foreign fishermen, if necessary.

(C) *DAH.* Councils and/or the Secretary must consider the capacity of, and the extent to which, U.S. vessels will harvest the OY on an annual basis. Estimating the amount that U.S. fishing vessels will actually harvest is required to determine the surplus.

(D) *Domestic annual processing (DAP).* Each FMP must assess the capacity of U.S. processors. It must also assess the amount of DAP, which is the sum of two estimates: The estimated amount of U.S. harvest that domestic processors will process, which may be based on historical performance or on surveys of the expressed intention of manufacturers to process, supported by evidence of contracts, plant expansion, or other relevant information; and the estimated amount of fish that will be harvested by domestic vessels, but not processed (e.g., marketed as fresh whole fish, used for private consumption, or used for bait).

(E) *Joint venture processing (JVP).* When DAH exceeds DAP, the surplus is available for JVP.

(f) *Acceptable biological catch and annual catch limits—(1) Definitions.* (i) *Catch* is the total quantity of fish, measured in weight or numbers of fish, taken in commercial, recreational, subsistence, tribal, and other fisheries. Catch includes fish that are retained for any purpose, as well as mortality of fish that are discarded.

(ii) *Acceptable biological catch (ABC)* is a level of a stock or stock complex's annual catch, which is based on an ABC control rule that accounts for the scientific uncertainty in the estimate of OFL, any other scientific uncertainty, and the Council's risk policy.

(iii) *Annual catch limit (ACL)* is a limit on the total annual catch of a stock or stock complex, which cannot

exceed the ABC, that serves as the basis for invoking AMs. An ACL may be divided into sector-ACLs (*see* paragraph (f)(4) of this section).

(iv) *Control rule* is a policy for establishing a limit or target catch level that is based on the best scientific information available and is established by the Council in consultation with its SSC.

(v) *Management uncertainty* refers to uncertainty in the ability of managers to constrain catch so that the ACL is not exceeded, and the uncertainty in quantifying the true catch amounts (*i.e.*, estimation errors). The sources of management uncertainty could include: Late catch reporting; misreporting; underreporting of catches; lack of sufficient inseason management, including inseason closure authority; or other factors.

(vi) *Scientific uncertainty* refers to uncertainty in the information about a stock and its reference points. Sources of scientific uncertainty could include: Uncertainty in stock assessment results; uncertainty in the estimates of MFMT, MSST, the biomass of the stock, and OFL; time lags in updating assessments; the degree of retrospective revision of assessment results; uncertainty in projections; uncertainties due to the choice of assessment model; longer-term uncertainties due to potential ecosystem and environmental effects; or other factors.

(2) *ABC control rule.*— (i) For stocks and stock complexes required to have an ABC, each Council must establish an ABC control rule that accounts for scientific uncertainty in the OFL and for the Council's risk policy, and that is based on a comprehensive analysis that shows how the control rule prevents overfishing. The Council's risk policy could be based on an acceptable probability (at least 50 percent) that catch equal to the stock's ABC will not result in overfishing, but other appropriate methods can be used. When determining the risk policy, Councils could consider the economic, social, and ecological trade-offs between being more or less risk averse. The Council's choice of a risk policy cannot result in an ABC that exceeds the OFL. The process of establishing an ABC control rule may involve science advisors or

the peer review process established under Magnuson-Stevens Act section 302(g)(1)(E).

(ii) The ABC control rule must articulate how ABC will be set compared to the OFL based on the scientific knowledge about the stock or stock complex and taking into account scientific uncertainty (*see* paragraph (f)(1)(vi) of this section). The ABC control rule should consider reducing fishing mortality as stock size declines below B_{msy} and as scientific uncertainty increases, and may establish a stock abundance level below which fishing would not be allowed. When scientific uncertainty cannot be directly calculated, such as when proxies are used, then a proxy for the uncertainty should be established based on the best scientific information, including comparison to other stocks. The control rule may be used in a tiered approach to address different levels of scientific uncertainty. Councils can develop ABC control rules that allow for changes in catch limits to be phased-in over time or to account for the carry-over of some of the unused portion of the ACL from one year to the next. The Council must articulate within its FMP when the phase-in and/or carry-over provisions of the control rule can and cannot be used and how each provision prevents overfishing, based on a comprehensive analysis.

(A) *Phase-in ABC control rules.* Large changes in catch limits due to new scientific information about the status of the stock can have negative short-term effects on a fishing industry. To help stabilize catch levels as stock assessments are updated, a Council may choose to develop a control rule that phases in changes to ABC over a period of time, not to exceed 3 years, as long as overfishing is prevented each year (*i.e.*, the phased-in catch level cannot exceed the OFL in any year). In addition, the Councils should evaluate the appropriateness of phase-in provisions for stocks that are overfished and/or rebuilding, as the overriding goal for such stocks is to rebuild them in as short a time as possible.

(B) *Carry-over ABC control rules.* An ABC control rule may include provisions for the carry-over of some of the unused portion of an ACL (*i.e.*, an ACL

underage) from one year to increase the ABC for the next year, based on the increased stock abundance resulting from the fishery harvesting less than the full ACL. The resulting ABC recommended by the SSC must prevent overfishing and must consider scientific uncertainty consistent with the Council's risk policy. Carry-over provisions could also allow an ACL to be adjusted upwards as long as the revised ACL does not exceed the specified ABC. When considering whether to use a carry-over provision, Councils should consider the likely reason for the ACL underage. ACL underages that result from management uncertainty (e.g., premature fishery closure) may be appropriate circumstances for considering a carry-over provision. ACL underages that occur as a result of poor or unknown stock status may not be appropriate to consider in a carry-over provision. In addition, the Councils should evaluate the appropriateness of carry-over provisions for stocks that are overfished and/or rebuilding, as the overriding goal for such stocks is to rebuild them in as short a time as possible.

(3) *Specification of ABC.* ABC may not exceed OFL (see paragraph (e)(2)(i)(D) of this section). Councils and their SSC should develop a process by which the SSC can access the best scientific information available when implementing the ABC control rule (i.e., specifying the ABC). The SSC must recommend the ABC to the Council. An SSC may recommend an ABC that differs from the result of the ABC control rule calculation, based on factors such as data uncertainty, recruitment variability, declining trends in population variables, and other factors, but must provide an explanation for the deviation. For Secretarial FMPs or amendments, agency scientists or a peer review process would provide the scientific advice to establish ABC. For internationally-assessed stocks, an ABC as defined in these guidelines is not required if stocks fall under the international exception (see paragraph (h)(1)(ii) of this section). While the ABC is allowed to equal OFL, NMFS expects that in most cases ABC will be reduced from OFL to reduce the probability that overfishing might occur.

(i) *Expression of ABC.* ABC should be expressed in terms of catch, but may be expressed in terms of landings as long as estimates of bycatch and any other fishing mortality not accounted for in the landings are incorporated into the determination of ABC.

(ii) *ABC for overfished stocks.* For overfished stocks and stock complexes, a rebuilding ABC must be set to reflect the annual catch that is consistent with the schedule of fishing mortality rates (i.e., F_{rebuild}) in the rebuilding plan.

(4) *Setting the annual catch limit—* (i) *General.* ACL cannot exceed the ABC and may be set annually or on a multiyear plan basis. ACLs in coordination with AMs must prevent overfishing (see MSA section 303(a)(15)). If an Annual Catch Target (ACT), or functional equivalent, is not used, management uncertainty should be accounted for in the ACL. If a Council recommends an ACL which equals ABC, and the ABC is equal to OFL, the Secretary may presume that the proposal would not prevent overfishing, in the absence of sufficient analysis and justification for the approach. A “multiyear plan” as referenced in section 303(a)(15) of the Magnuson-Stevens Act is a plan that establishes harvest specifications or harvest guidelines for each year of a time period greater than 1 year. A multiyear plan must include a mechanism for specifying ACLs for each year with appropriate AMs to prevent overfishing and maintain an appropriate rate of rebuilding if the stock or stock complex is in a rebuilding plan. A multiyear plan must provide that, if an ACL is exceeded for a year, then AMs are implemented for the next year consistent with paragraph (g)(3) of this section.

(ii) *Sector-ACLs.* A Council may, but is not required to, divide an ACL into sector-ACLs. If sector-ACLs are used, sector-AMs should also be specified. “Sector,” for purposes of this section, means a distinct user group to which separate management strategies and separate catch quotas apply. Examples of sectors include the commercial sector, recreational sector, or various gear

groups within a fishery. If the management measures for different sectors differ in the degree of management uncertainty, then sector-ACLs may be necessary so that appropriate AMs can be developed for each sector. If a Council chooses to use sector-ACLs, the sum of sector-ACLs must not exceed the stock or stock complex level ACL. The system of ACLs and AMs designed must be effective in protecting the stock or stock complex as a whole. Even if sector-ACLs and sector-AMs are established, additional AMs at the stock or stock complex level may be necessary.

(iii) *ACLs for State-Federal Fisheries.* For stocks or stock complexes that have harvest in state or territorial waters, FMPs and FMP amendments should include an ACL for the overall stock that may be further divided. For example, the overall ACL could be divided into a Federal-ACL and state-ACL. However, NMFS recognizes that Federal management is limited to the portion of the fishery under Federal authority. *See* 16 U.S.C. 1856. When stocks are co-managed by Federal, state, tribal, and/or territorial fishery managers, the goal should be to develop collaborative conservation and management strategies, and scientific capacity to support such strategies (including AMs for state or territorial and Federal waters), to prevent overfishing of shared stocks and ensure their sustainability.

(iv) *Relationship between OY and the ACL framework.* The dual goals of NS1 are to prevent overfishing and achieve OY on a continuing basis. The ABC is an upper limit on catch that prevents overfishing within an established framework of risk and other considerations. As described in paragraph (e)(3) of this section, ecological, economic, and social factors, as well as values associated with determining the greatest benefit to the Nation, are important considerations in specifying OY. These types of considerations can also be considered in the ACL framework. For example, an ACL (or ACT) could be set lower than the ABC to account for ecological, economic, and social factors (*e.g.*, needs of forage fish, promoting stability, addressing market conditions, etc.). Additionally, economic, social, or ecological trade-offs could be

evaluated when determining the risk policy for an ABC control rule (*see* paragraph (f)(2) of this section). While OY is a long-term average amount of desired yield, there is, for each year, an amount of fish that is consistent with achieving the long-term OY. A Council can choose to express OY on an annual basis, in which case the FMP or FMP amendment should indicate that the OY is an “annual OY.” An annual OY cannot exceed the ACL.

(g) *Accountability measures (AMs)*—(1) *Introduction.* AMs are management controls to prevent ACLs, including sector-ACLs, from being exceeded, and to correct or mitigate overages of the ACL if they occur. AMs should address and minimize both the frequency and magnitude of overages and correct the problems that caused the overage in as short a time as possible. NMFS identifies two categories of AMs, inseason AMs and AMs for when the ACL is exceeded. The FMP should identify what sources of data will be used to implement AMs (*e.g.*, inseason data, annual catch compared to the ACL, or multi-year averaging approach).

(2) *Inseason AMs.* Whenever possible, FMPs should include inseason monitoring and management measures to prevent catch from exceeding ACLs. Inseason AMs could include, but are not limited to: An annual catch target (*see* paragraph (g)(4) of this section); closure of a fishery; closure of specific areas; changes in gear; changes in trip size or bag limits; reductions in effort; or other appropriate management controls for the fishery. If final data or data components of catch are delayed, Councils should make appropriate use of preliminary data, such as landed catch, in implementing inseason AMs. FMPs should contain inseason closure authority giving NMFS the ability to close fisheries if it determines, based on data that it deems sufficiently reliable, that an ACL has been exceeded or is projected to be reached, and that closure of the fishery is necessary to prevent overfishing. For fisheries without inseason management control to prevent the ACL from being exceeded, AMs should utilize ACTs that are set below ACLs so that catches do not exceed the ACL.

(3) *AMs for when the ACL is exceeded.* On an annual basis, the Council must determine as soon as possible after the fishing year if an ACL was exceeded. If an ACL was exceeded, AMs must be implemented as soon as possible to correct the operational issue that caused the ACL overage, as well as any biological consequences to the stock or stock complex resulting from the overage when it is known. These AMs could include, among other things, modifications of inseason AMs, the use or modification of ACTs, or overage adjustments. The type of AM chosen by a Council will likely vary depending on the sector of the fishery, status of the stock, the degree of the overage, recruitment patterns of the stock, or other pertinent information. If an ACL is set equal to zero and the AM for the fishery is a closure that prohibits fishing for a stock, additional AMs are not required if only small amounts of catch (including bycatch) occur, and the catch is unlikely to result in overfishing. For stocks and stock complexes in rebuilding plans, the AMs should include overage adjustments that reduce the ACLs in the next fishing year by the full amount of the overage, unless the best scientific information available shows that a reduced overage adjustment, or no adjustment, is needed to mitigate the effects of the overage.

(4) *Annual Catch Target (ACT) and ACT control rule.* ACTs, or the functional equivalent, are recommended in the system of AMs so that ACL is not exceeded. An ACT is an amount of annual catch of a stock or stock complex that is the management target of the fishery, and accounts for management uncertainty in controlling the catch at or below the ACL. ACT control rules can be used to articulate how management uncertainty is accounted for in setting the ACT. ACT control rules can be developed by the Council, in coordination with the SSC, to help the Council account for management uncertainty.

(5) *AMs based on multi-year average data.* Some fisheries have highly variable annual catches and lack reliable inseason or annual data on which to base AMs. If there are insufficient data upon which to compare catch to ACL,

AMs could be based on comparisons of average catch to average ACL over a three-year moving average period or, if supported by analysis, some other appropriate multi-year period. Councils should explain why basing AMs on a multi-year period is appropriate. Evaluation of the moving average catch to the average ACL must be conducted annually, and if the average catch exceeds the average ACL, appropriate AMs should be implemented consistent with paragraph (g)(3) of this section.

(6) *AMs for State-Federal Fisheries.* For stocks or stock complexes that have harvest in state or territorial waters, FMPs and FMP amendments must, at a minimum, have AMs for the portion of the fishery under Federal authority. Such AMs could include closing the EEZ when the Federal portion of the ACL is reached, or the overall stock's ACL is reached, or other measures.

(7) *Performance Standard.* If catch exceeds the ACL for a given stock or stock complex more than once in the last four years, the system of ACLs and AMs should be reevaluated, and modified if necessary, to improve its performance and effectiveness. If AMs are based on multi-year average data, the performance standard is based on a comparison of the average catch to the average ACL. A Council could choose a higher performance standard (e.g., a stock's catch should not exceed its ACL more often than once every five or six years) for a stock that is particularly vulnerable to the effects of overfishing, if the vulnerability of the stock has not already been accounted for in the ABC control rule.

(h) *Establishing ACL mechanisms and AMs in FMPs.* FMPs or FMP amendments must establish ACL mechanisms and AMs for all stocks and stock complexes that require conservation and management (see § 600.305(c)), unless paragraph (h)(1) of this section is applicable. These mechanisms should describe the annual or multiyear process by which ACLs, AMs, and other reference points such as OFL and ABC will be established.

(1) *Exceptions from ACL and AM requirements—(i) Life cycle.* Section 303(a)(15) of the Magnuson-Stevens Act “shall not apply to a fishery for species that have a life cycle of approximately

1 year unless the Secretary has determined the fishery is subject to overfishing of that species” (Pub. L. 109–479 104(b)(2)). This exception applies to a stock for which the average age of spawners in the population is approximately 1 year or less. While exempt from the ACL and AM requirements, FMPs or FMP amendments for these stocks must have SDC, MSY, OY, ABC, and an ABC control rule.

(ii) *International fishery agreements.* Section 303(a)(15) of the Magnuson-Stevens Act applies “unless otherwise provided for under an international agreement in which the United States participates” (Pub. L. 109–479 104(b)(1)). This exception applies to stocks or stock complexes subject to management under an international agreement, which is defined as “any bilateral or multilateral treaty, convention, or agreement which relates to fishing and to which the United States is a party” (see Magnuson-Stevens Act section 3(24)). These stocks would still need to have SDC, MSY, and OY.

(2) *Flexibility in application of NSI guidelines.* There are limited circumstances that may not fit the standard approaches to specification of reference points and management measures set forth in these guidelines. These include, among other things, conservation and management of Endangered Species Act listed species, harvests from aquaculture operations, stocks with unusual life history characteristics (e.g., Pacific salmon, where the spawning potential for a stock is spread over a multi-year period), and stocks for which data are not available either to set reference points based on MSY or MSY proxies, or to manage to reference points based on MSY or MSY proxies. In these circumstances, Councils may propose alternative approaches for satisfying requirements of the Magnuson-Stevens Act other than those set forth in these guidelines. Councils must document their rationale for any alternative approaches in an FMP or FMP amendment, which will be reviewed for consistency with the Magnuson-Stevens Act.

(i) *Fisheries data.* In their FMPs, or associated public documents such as SAFE reports as appropriate, Councils must describe general data collection

methods, as well as any specific data collection methods used for all stocks and stock complexes in their FMPs, including:

(1) Sources of fishing mortality (both landed and discarded), including commercial and recreational catch and bycatch in other fisheries;

(2) Description of the data collection and estimation methods used to quantify total catch mortality in each fishery, including information on the management tools used (e.g., logbooks, vessel monitoring systems, observer programs, landings reports, fish tickets, processor reports, dealer reports, recreational angler surveys, or other methods); the frequency with which data are collected and updated; and the scope of sampling coverage for each fishery; and

(3) Description of the methods used to compile catch data from various catch data collection methods and how those data are used to determine the relationship between total catch at a given point in time and the ACL for stocks and stock complexes that require conservation and management.

(j) *Council actions to address overfishing and rebuilding for stocks and stock complexes—*

(1) *Notification.* The Secretary will immediately notify in writing a Regional Fishery Management Council whenever the Secretary determines that:

(i) Overfishing is occurring;

(ii) A stock or stock complex is overfished;

(iii) A stock or stock complex is approaching an overfished condition; or

(iv) Existing remedial action taken for the purpose of ending previously identified overfishing or rebuilding a previously identified overfished stock or stock complex has not resulted in adequate progress (see MSA section 304(e)).

(2) *Timing of actions—*(i) *If a stock or stock complex is undergoing overfishing.* Upon notification that a stock or stock complex is undergoing overfishing, a Council should immediately begin working with its SSC (or agency scientists or peer review processes in the

case of Secretariially-managed fisheries) to ensure that the ABC is set appropriately to end overfishing. Councils should evaluate the cause of overfishing, address the issue that caused overfishing, and reevaluate their ACLs and AMs to make sure they are adequate.

(ii) *If a stock or stock complex is overfished or approaching an overfished condition.* Upon notification that a stock or stock complex is overfished or approaching an overfished condition, a Council must prepare and implement an FMP, FMP amendment, or proposed regulations within two years of notification, consistent with the requirements of section 304(e)(3) of the Magnuson-Stevens Act. Council actions should be submitted to NMFS within 15 months of notification to ensure sufficient time for the Secretary to implement the measures, if approved.

(3) *Overfished fishery.*—(i) Where a stock or stock complex is overfished, a Council must specify a time period for rebuilding the stock or stock complex based on factors specified in Magnuson-Stevens Act section 304(e)(4). This target time for rebuilding (T_{target}) shall be as short as possible, taking into account: The status and biology of any overfished stock, the needs of fishing communities, recommendations by international organizations in which the U.S. participates, and interaction of the stock within the marine ecosystem. In addition, the time period shall not exceed 10 years, except where biology of the stock, other environmental conditions, or management measures under an international agreement to which the U.S. participates, dictate otherwise. SSCs (or agency scientists or peer review processes in the case of Secretarial actions) shall provide recommendations for achieving rebuilding targets (see Magnuson-Stevens Act section 302(g)(1)(B)). The above factors enter into the specification of T_{target} as follows:

(A) *The minimum time for rebuilding a stock (T_{min}).* T_{min} means the amount of time the stock or stock complex is expected to take to rebuild to its MSY biomass level in the absence of any fishing mortality. In this context, the term “expected” means to have at least a 50 percent probability of attain-

ing the B_{msy} , where such probabilities can be calculated. The starting year for the T_{min} calculation should be the first year that the rebuilding plan is expected to be implemented.

(B) *The maximum time for rebuilding a stock or stock complex to its B_{msy} (T_{max}).*

(1) If T_{min} for the stock or stock complex is 10 years or less, then T_{max} is 10 years.

(2) If T_{min} for the stock or stock complex exceeds 10 years, then one of the following methods can be used to determine T_{max} :

(i) T_{min} plus the length of time associated with one generation time for that stock or stock complex. “Generation time” is the average length of time between when an individual is born and the birth of its offspring,

(ii) The amount of time the stock or stock complex is expected to take to rebuild to B_{msy} if fished at 75 percent of MFMT, or

(iii) T_{min} multiplied by two.

(3) In situations where T_{min} exceeds 10 years, T_{max} establishes a maximum time for rebuilding that is linked to the biology of the stock. When selecting a method for determining T_{max} , a Council, in consultation with its SSC, should consider the relevant biological data and scientific uncertainty of that data, and must provide a rationale for its decision based on the best scientific information available. One of the methods listed in subparagraphs (j)(3)(i)(B)(2)(ii) and (iii) may be appropriate, for example, if given data availability and the life history characteristics of the stock, there is high uncertainty in the estimate of generation time, or if generation time does not accurately reflect the productivity of the stock.

(C) *Target time to rebuilding a stock or stock complex (T_{target}).* T_{target} is the specified time period for rebuilding a stock that is considered to be as short a time as possible, taking into account the factors described in paragraph (j)(3)(i) of this section. T_{target} shall not exceed T_{max} , and the fishing mortality associated with achieving T_{target} is referred to as F_{rebuild} .

(ii) Council action addressing an overfished fishery must allocate both overfishing restrictions and recovery

benefits fairly and equitably among sectors of the fishery.

(iii) For fisheries managed under an international agreement, Council action addressing an overfished fishery must reflect traditional participation in the fishery, relative to other nations, by fishermen of the United States.

(iv) *Adequate Progress.* The Secretary shall review rebuilding plans at routine intervals that may not exceed two years to determine whether the plans have resulted in adequate progress toward ending overfishing and rebuilding affected fish stocks (MSA section 304(e)(7)). Such reviews could include the review of recent stock assessments, comparisons of catches to the ACL, or other appropriate performance measures. The Secretary may find that adequate progress is not being made if F_{rebuild} or the ACL associated with F_{rebuild} is exceeded, and AMs are not correcting the operational issue that caused the overage, nor addressing any biological consequences to the stock or stock complex resulting from the overage when it is known (see paragraph (g)(3) of this section). A lack of adequate progress may also be found when the rebuilding expectations of a stock or stock complex are significantly changed due to new and unexpected information about the status of the stock. If a determination is made under this provision, the Secretary will notify the appropriate Council and recommend further conservation and management measures, and the Council must develop and implement a new or revised rebuilding plan within two years (see MSA sections 304(e)(3) and (e)(7)(B)). For Secretariats-managed fisheries, the Secretary would take immediate action necessary to achieve adequate progress toward rebuilding and ending overfishing.

(v) While a stock or stock complex is rebuilding, revising rebuilding timeframes (i.e., T_{target} and T_{max}) or F_{rebuild} is not necessary, unless the Secretary finds that adequate progress is not being made.

(vi) If a stock or stock complex has not rebuilt by T_{max} , then the fishing mortality rate should be maintained at its current F_{rebuild} or 75 percent of the MFMT, whichever is less, until the

stock or stock complex is rebuilt or the fishing mortality rate is changed as a result of the Secretary finding that adequate progress is not being made.

(4) *Emergency actions and interim measures.* If a Council is developing a rebuilding plan or revising an existing rebuilding plan due to a lack of adequate progress (see MSA section 304(e)(7)), the Secretary may, in response to a Council request, implement interim measures that reduce, but do not necessarily end, overfishing (see MSA section 304(e)(6)) if all of the following criteria are met:

(i) The interim measures are needed to address an unanticipated and significantly changed understanding of the status of the stock or stock complex;

(ii) Ending overfishing immediately is expected to result in severe social and/or economic impacts to a fishery; and

(iii) The interim measures will ensure that the stock or stock complex will increase its current biomass through the duration of the interim measures.

(5) *Discontinuing a rebuilding plan based on new scientific information.* A Council may discontinue a rebuilding plan for a stock or stock complex before it reaches B_{msy} if the Secretary determines that the stock was not overfished in the year that the overfished determination (see MSA section 304(e)(3)) was based on and has never been overfished in any subsequent year including the current year.

(k) *International overfishing.* If the Secretary determines that a fishery is overfished or approaching a condition of being overfished due to excessive international fishing pressure, and for which there are no management measures (or no effective measures) to end overfishing under an international agreement to which the United States is a party, then the Secretary and/or the appropriate Council shall take certain actions as provided under Magnuson-Stevens Act section 304(i). The Secretary, in cooperation with the Secretary of State, must immediately take appropriate action at the international level to end the overfishing. In addition, within one year after the determination, the Secretary and/or appropriate Council shall:

(1) Develop recommendations for domestic regulations to address the relative impact of the U.S. fishing vessels on the stock. Council recommendations should be submitted to the Secretary.

(2) Develop and submit recommendations to the Secretary of State, and to the Congress, for international actions that will end overfishing in the fishery and rebuild the affected stocks, taking into account the relative impact of vessels of other nations and vessels of the United States on the relevant stock. Councils should, in consultation with the Secretary, develop recommendations that take into consideration relevant provisions of the Magnuson-Stevens Act and NSI guidelines, including section 304(e) of the Magnuson-Stevens Act and paragraph (j)(3)(iii) of this section, and other applicable laws. For highly migratory species in the Pacific, recommendations from the Western Pacific, North Pacific, or Pacific Councils must be developed and submitted consistent with Magnuson-Stevens Reauthorization Act section 503(f), as appropriate.

(3) *Considerations for assessing “relative impact.”* “Relative impact” under paragraphs (k)(1) and (2) of this section may include consideration of factors that include, but are not limited to: Domestic and international management measures already in place, management history of a given nation, estimates of a nation’s landings or catch (including bycatch) in a given fishery, and estimates of a nation’s mortality contributions in a given fishery. Information used to determine relative impact must be based upon the best available scientific information.

(1) *Exceptions to requirements to prevent overfishing.* Exceptions to the requirement to prevent overfishing could apply under certain limited circumstances. Harvesting one stock at its optimum level may result in overfishing of another stock when the two stocks tend to be caught together (This can occur when the two stocks are part of the same fishery or if one is bycatch in the other’s fishery). Before a Council may decide to allow this type of overfishing, an analysis must be performed and the analysis must contain a justification in terms of overall benefits, including a comparison of benefits

under alternative management measures, and an analysis of the risk of any stock or stock complex falling below its MSST. The Council may decide to allow this type of overfishing if the fishery is not overfished and the analysis demonstrates that all of the following conditions are satisfied:

(1) Such action will result in long-term net benefits to the Nation;

(2) Mitigating measures have been considered and it has been demonstrated that a similar level of long-term net benefits cannot be achieved by modifying fleet behavior, gear selection/configuration, or other technical characteristics in a manner such that no overfishing would occur; and

(3) The resulting rate of fishing mortality will not cause any stock or stock complex to fall below its MSST more than 50 percent of the time in the long term, although it is recognized that persistent overfishing is expected to cause the affected stock to fall below its B_{msy} more than 50 percent of the time in the long term.

[81 FR 71895, Oct. 18, 2016]

§ 600.315 National Standard 2—Scientific Information.

(a) *Standard 2.* Conservation and management measures shall be based upon the best scientific information available.

(1) Fishery conservation and management require high quality and timely biological, ecological, environmental, economic, and sociological scientific information to effectively conserve and manage living marine resources. Successful fishery management depends, in part, on the thorough analysis of this information, and the extent to which the information is applied for:

(i) Evaluating the potential impact that conservation and management measures will have on living marine resources, essential fish habitat (EFH), marine ecosystems, fisheries participants, fishing communities, and the nation; and

(ii) Identifying areas where additional management measures are needed.

(2) Scientific information that is used to inform decision making should

include an evaluation of its uncertainty and identify gaps in the information. Management decisions should recognize the biological (e.g., overfishing), ecological, sociological, and economic (e.g., loss of fishery benefits) risks associated with the sources of uncertainty and gaps in the scientific information.

(3) Information-limited fisheries, commonly referred to as “data-poor” fisheries, may require use of simpler assessment methods and greater use of proxies for quantities that cannot be directly estimated, as compared to data-rich fisheries.

(4) Scientific information includes, but is not limited to, factual input, data, models, analyses, technical information, or scientific assessments. Scientific information includes data compiled directly from surveys or sampling programs, and models that are mathematical representations of reality constructed with primary data. The complexity of the model should not be the defining characteristic of its value; the data requirements and assumptions associated with a model should be commensurate with the resolution and accuracy of the available primary data. Scientific information includes established and emergent scientific information. Established science is scientific knowledge derived and verified through a standard scientific process that tends to be agreed upon often without controversy. Emergent science is relatively new knowledge that is still evolving and being verified, therefore, may potentially be uncertain and controversial. Emergent science should be considered more thoroughly, and scientists should be attentive to effective communication of emerging science.

(5) Science is a dynamic process, and new scientific findings constantly advance the state of knowledge. Best scientific information is, therefore, not static and ideally entails developing and following a research plan with the following elements: Clear statement of objectives; conceptual model that provides the framework for interpreting results, making predictions, or testing hypotheses; study design with an explicit and standardized method of collecting data; documentation of methods, results, and conclusions; peer re-

view, as appropriate; and communication of findings.

(6) Criteria to consider when evaluating best scientific information are relevance, inclusiveness, objectivity, transparency and openness, timeliness, verification and validation, and peer review, as appropriate.

(i) *Relevance*. Scientific information should be pertinent to the current questions or issues under consideration and should be representative of the fishery being managed. In addition to the information collected directly about the fishery being managed, relevant information may be available about the same species in other areas, or about related species. For example, use of proxies may be necessary in data-poor situations. Analysis of related stocks or species may be a useful tool for inferring the likely traits of stocks for which stock-specific data are unavailable or are not sufficient to produce reliable estimates. Also, if management measures similar to those being considered have been introduced in other regions and resulted in particular behavioral responses from participants or business decisions from industry, such social and economic information may be relevant.

(ii) *Inclusiveness*. Three aspects of inclusiveness should be considered when developing and evaluating best scientific information:

(A) The relevant range of scientific disciplines should be consulted to encompass the scope of potential impacts of the management decision.

(B) Alternative scientific points of view should be acknowledged and addressed openly when there is a diversity of scientific thought.

(C) Relevant local and traditional knowledge (e.g., fishermen’s empirical knowledge about the behavior and distribution of fish stocks) should be obtained, where appropriate, and considered when evaluating the BSIA.

(iii) *Objectivity*. Scientific information should be accurate, with a known degree of precision, without addressable bias, and presented in an accurate, clear, complete, and balanced manner. Scientific processes should be free of undue nonscientific influences and considerations.

(iv) *Transparency and openness.* (A) The Magnuson-Stevens Act provides broad public and stakeholder access to the fishery conservation and management process, including access to the scientific information upon which the process and management measures are based. Public comment should be solicited at appropriate times during the review of scientific information. Communication with the public should be structured to foster understanding of the scientific process.

(B) Scientific information products should describe data collection methods, report sources of uncertainty or statistical error, and acknowledge other data limitations. Such products should explain any decisions to exclude data from analysis. Scientific products should identify major assumptions and uncertainties of analytical models. Finally, such products should openly acknowledge gaps in scientific information.

(v) *Timeliness.* Mandatory management actions should not be delayed due to limitations in the scientific information or the promise of future data collection or analysis. In some cases, due to time constraints, results of important studies or monitoring programs may be considered for use before they are fully complete. Uncertainties and risks that arise from an incomplete study should be acknowledged, but interim results may be better than no results to help inform a management decision. Sufficient time should be allotted to audit and analyze recently acquired information to ensure its reliability. Data collection methods are expected to be subjected to appropriate review before providing data used to inform management decisions.

(A) For information that needs to be updated on a regular basis, the temporal gap between information collection and management implementation should be as short as possible, subject to regulatory constraints, and such timing concerns should be explicitly considered when developing conservation and management measures. Late submission of scientific information to the Council process should be avoided if the information has circumvented the review process. Data collection is a continuous process, therefore analysis

of scientific information should specify a clear time point beyond which new information would not be considered in that analysis and would be reserved for use in subsequent analytical updates.

(B) Historical information should be evaluated for its relevance to inform the current situation. For example, some species' life history characteristics might not change over time. Other historical data (e.g., abundance, environmental, catch statistics, market and trade trends) provide time-series information on changes in fish populations, fishery participation, and fishing effort that may inform current management decisions.

(vi) *Verification and validation.* Methods used to produce scientific information should be verified and validated to the extent possible.

(A) *Verification* means that the data and procedures used to produce the scientific information are documented in sufficient detail to allow reproduction of the analysis by others with an acceptable degree of precision. External reviewers of scientific information require this level of documentation to conduct a thorough review.

(B) *Validation* refers to the testing of analytical methods to ensure that they perform as intended. Validation should include whether the analytical method has been programmed correctly in the computer software, the accuracy and precision of the estimates is adequate, and the estimates are robust to model assumptions. Models should be tested using simulated data from a population with known properties to evaluate how well the models estimate those characteristics and to correct for known bias to achieve accuracy. The concept of validation using simulation testing should be used, to the extent possible, to evaluate how well a management strategy meets management objectives.

(vii) *Peer review.* Peer review is a process used to ensure that the quality and credibility of scientific information and scientific methods meet the standards of the scientific and technical community. Peer review helps ensure objectivity, reliability, and integrity of scientific information. The peer review process is an organized method

that uses peer scientists with appropriate and relevant expertise to evaluate scientific information. The scientific information that supports conservation and management measures considered by the Secretary or a Council should be peer reviewed, as appropriate. Factors to consider when determining whether to conduct a peer review and if so, the appropriate level of review, include the novelty and complexity of the scientific information to be reviewed, the level of previous review and the importance of the information to be reviewed to the decision making process. Routine updates based on previously reviewed methods require less review than novel methods or data. If formal peer review is not practicable due to time or resource constraints, the development and analysis of scientific information used in or in support of fishery management actions should be as transparent as possible, in accordance with paragraph (a)(6)(iv) of this section. Other applicable guidance on peer review can be found in the Office of Management and Budget Final Information Quality Bulletin for Peer Review.

(b) *Peer review process.* The Secretary and each Council may establish a peer review process for that Council for scientific information used to advise about the conservation and management of the fishery. 16 U.S.C. 1852(g)(1)(E). A peer review process is not a substitute for an SSC and should work in conjunction with the SSC (see § 600.310(b)(2)(v)(C)). This section provides guidance and standards that should be followed in order to establish a peer review process per Magnuson-Stevens Act section 302(g)(1)(E).

(1) The objective or scope of the peer review, the nature of the scientific information to be reviewed, and timing of the review should be considered when selecting the type of peer review to be used. The process established by the Secretary and Council should focus on providing review for information that has not yet undergone rigorous peer review, but that must be peer reviewed in order to provide reliable, high quality scientific advice for fishery conservation and management. Duplication of previously conducted peer review should be avoided.

(i) *Form of process.* The peer review process may include or consist of existing Council committees or panels if they meet the standards identified herein. The Secretary and Council have discretion to determine the appropriate peer review process for a specific information product. A peer review can take many forms, including individual letter or written reviews and panel reviews.

(ii) *Timing.* The peer review should, to the extent practicable, be conducted early in the process of producing scientific information or a work product, so peer review reports are available for the SSC to consider in its evaluation of scientific information for its Council and the Secretary. The timing will depend in part on the scope of the review. For instance, the peer review of a new or novel method or model should be conducted before there is an investment of time and resources in implementing the model and interpreting the results. The results of this type of peer review may contribute to improvements in the model or assessment.

(iii) *Scope of work.* The scope of work or charge (sometimes called the terms of reference) of any peer review should be determined in advance of the selection of reviewers. The scope of work contains the objectives of the peer review, evaluation of the various stages of the science, and specific recommendations for improvement of the science. The scope of work should be carefully designed, with specific technical questions to guide the peer review process; it should ask peer reviewers to ensure that scientific uncertainties are clearly identified and characterized, it should allow peer reviewers the opportunity to offer a broad evaluation of the overall scientific or technical product under review, as well as to make recommendations regarding areas of missing information, future research, data collection, and improvements in methodologies, and it must not change during the course of the peer review. The scope of work may not request reviewers to provide advice on policy or regulatory issues (e.g., amount of precaution used in decision-making) which are within the purview of the Secretary and the Councils, or to

make formal fishing level recommendations which are within the purview of the SSC.

(2) *Peer reviewer selection.* The selection of participants in a peer review should be based on expertise, independence, and a balance of viewpoints, and be free of conflicts of interest.

(i) *Expertise and balance.* Peer reviewers must be selected based on scientific expertise and experience relevant to the disciplines of subject matter to be reviewed. The group of reviewers that constitute the peer review should reflect a balance in perspectives, to the extent practicable, and should have sufficiently broad and diverse expertise to represent the range of relevant scientific and technical perspectives to complete the objectives of the peer review.

(ii) *Conflict of interest.* Peer reviewers who are federal employees must comply with all applicable federal ethics requirements. Potential reviewers who are not federal employees must be screened for conflicts of interest in accordance with the NOAA Policy on Conflicts of Interest for Peer Review Subject to OMB's Peer Review Bulletin or other applicable rules or guidelines.

(A) Under the NOAA policy, peer reviewers must not have any conflicts of interest with the scientific information, subject matter, or work product under review, or any aspect of the statement of work for the peer review. For purposes of this section, a conflict of interest is any financial or other interest which conflicts with the service of the individual on a review panel because it: could significantly impair the reviewer's objectivity, or could create an unfair competitive advantage for a person or organization.

(B) No individual can be appointed to a review panel if that individual has a conflict of interest that is relevant to the functions to be performed. For reviews requiring highly specialized expertise, the limited availability of qualified reviewers might result in an exception when a conflict of interest is unavoidable; in this situation, the conflict must be promptly and publicly disclosed. Conflicts of interest include, but are not limited to, the personal financial interests and investments, employer affiliations, and consulting ar-

rangements, grants, or contracts of the individual and of others with whom the individual has substantial common financial interests, if these interests are relevant to the functions to be performed.

(iii) *Independence.* Peer reviewers must not have contributed or participated in the development of the work product or scientific information under review. For peer review of products of higher novelty or controversy, a greater degree of independence is necessary to ensure credibility of the peer review process. Peer reviewer responsibilities should rotate across the available pool of qualified reviewers or among the members on a standing peer review panel to prevent a peer reviewer from repeatedly reviewing the same scientific information, recognizing that, in some cases, repeated service by the same reviewer may be needed because of limited availability of specialized expertise.

(3) *Transparency.* A transparent process is one that ensures that background documents and reports from peer review are publicly available, subject to Magnuson-Stevens Act confidentiality requirements, and allows the public full and open access to peer review panel meetings. The evaluation and review of scientific information by the Councils, SSCs or advisory panels must be conducted in accordance with meeting procedures at § 600.135. Consistent with that section, public notice of peer review panel meetings should be announced in the FEDERAL REGISTER with a minimum of 14 days and with an aim of 21 days before the review to allow public comments during meetings. Background documents should be available for public review in a timely manner prior to meetings. Peer review reports describing the scope and objectives of the review, findings in accordance with each objective, and conclusions should be publicly available. Names and organizational affiliations of reviewers also should be publicly available.

(4) *Publication of the peer review process.* The Secretary will announce the establishment of a peer review process under Magnuson-Stevens Act section 302(g)(1)(E) in the FEDERAL REGISTER along with a brief description of the

process. In addition, detailed information on such processes will be made publicly available on the Council's Web site, and updated as necessary.

(c) *SSC scientific evaluation and advice to the Council.* Each scientific and statistical committee shall provide its Council ongoing scientific advice for fishery management decisions, including recommendations for acceptable biological catch, preventing overfishing, maximum sustainable yield, achieving rebuilding targets, and reports on stock status and health, bycatch, habitat status, social and economic impacts of management measures, and sustainability of fishing practices. 16 U.S.C. 1852(g)(1)(B).

(1) SSC scientific advice and recommendations to its Council are based on scientific information that the SSC determines to meet the guidelines for best scientific information available as described in paragraph (a) of this section. SSCs may conduct peer reviews or evaluate peer reviews to provide clear scientific advice to the Council. Such scientific advice should attempt to resolve conflicting scientific information, so that the Council will not need to engage in debate on technical merits. Debate and evaluation of scientific information is the role of the SSC.

(2) An SSC member may participate in a peer review when such participation is beneficial to the peer review due to the expertise and institutional memory of that member, or beneficial to the Council's advisory body by allowing that member to make a more informed evaluation of the scientific information. Participation of an SSC member in a peer review should not impair the ability of that member to fulfill his or her responsibilities to the SSC.

(3) If an SSC as a body conducts a peer review established under Magnuson-Stevens Act section 302(g)(1)(E) or individual members of an SSC participate in such a peer review, the SSC members must meet the peer reviewer selection criteria as described in paragraph (b)(2) of this section. In addition, the financial disclosure requirements under § 600.235, Financial Disclosure for Councils and Council committees, apply. When the SSC as a body is conducting a peer review, it should strive

for consensus and must meet the transparency guidelines under paragraphs (a)(6)(iv) and (b)(3) of this section. If consensus cannot be reached, minority viewpoints should be recorded.

(4) The SSC's evaluation of a peer review conducted by a body other than the SSC should consider the extent and quality of peer review that has already taken place. For Councils with extensive and detailed peer review processes (e.g., a process established pursuant to Magnuson-Stevens Act section 302(g)(1)(E)), the evaluation by the SSC of the peer reviewed information should not repeat the previously conducted and detailed technical peer review. However, SSCs must maintain their role as advisors to the Council about scientific information that comes from a peer review process. Therefore, the peer review of scientific information used to advise the Council, including a peer review process established by the Secretary and the Council under Magnuson-Stevens Act section 302(g)(1)(E), should be conducted early in the scientific evaluation process in order to provide the SSC with reasonable opportunity to consider the peer review report and make recommendations to the Council as required under Magnuson-Stevens Act section 302(g)(1)(B).

(5) If an SSC disagrees with the findings or conclusions of a peer review, in whole or in part, the SSC must prepare a report outlining the areas of disagreement, and the rationale and information used by the SSC for making its determination. This report must be made publicly available.

(6) Annual catch limits (ACLs) developed by a Council may not exceed its SSC's fishing level recommendations. 16 U.S.C. 1852(h)(6). Per the National Standard 1 Guidelines, the SSC fishing level recommendation that is most relevant to ACLs is acceptable biological catch (ABC), as both ACL and ABC are levels of annual catch (see § 600.310(b)(2)(v)(D)). The SSC is expected to take scientific uncertainty into account when making its ABC recommendation (§ 600.310(f)(4)). The ABC recommendation may be based upon input and recommendations from the peer review process. Any such peer review related to such recommendations

should be conducted early in the process as described in paragraph (c)(4) of this section. The SSC should resolve differences between its recommendations and any relevant peer review recommendations per paragraph (c)(5) of this section.

(d) *SAFE Report.* The term SAFE (Stock Assessment and Fishery Evaluation) report, as used in this section, refers to a public document or a set of related public documents, that provides the Secretary and the Councils with a summary of scientific information concerning the most recent biological condition of stocks, stock complexes, and marine ecosystems in the fishery management unit (FMU), essential fish habitat (EFH), and the social and economic condition of the recreational and commercial fishing interests, fishing communities, and the fish processing industries. Each SAFE report must be scientifically based with appropriate citations of data sources and information. Each SAFE report summarizes, on a periodic basis, the best scientific information available concerning the past, present, and possible future condition of the stocks, EFH, marine ecosystems, and fisheries being managed under Federal regulation.

(1) The Secretary has the responsibility to ensure that SAFE reports are prepared and updated or supplemented as necessary whenever new information is available to inform management decisions such as status determination criteria (SDC), overfishing level (OFL), optimum yield, or ABC values (§ 600.310(c)). The SAFE report and any comments or reports from the SSC must be available to the Secretary and Council for making management decisions for each FMP to ensure that the best scientific information available is being used. The Secretary or Councils may utilize any combination of personnel from Council, State, Federal, university, or other sources to acquire and analyze data and produce the SAFE report.

(2) The SAFE report provides information to the Councils and the Secretary for determining annual catch limits (§ 600.310(f)(5)) for each stock in the fishery; documenting significant trends or changes in the resource, ma-

rine ecosystems, and fishery over time; implementing required EFH provisions (§ 600.815(a)(10)); and assessing the relative success of existing relevant state and Federal fishery management programs. The SAFE report should contain an explanation of information gaps and highlight needs for future scientific work. Information on bycatch and safety for each fishery should also be summarized. In addition, the SAFE report may be used to update or expand previous environmental and regulatory impact documents and ecosystem descriptions.

(3) Each SAFE report should contain the following scientific information when it exists:

(i) Information on which to base catch specifications and status determinations, including the most recent stock assessment documents and associated peer review reports, and recommendations and reports from the Council's SSC.

(A) A description of the SDC (e.g., maximum fishing mortality rate threshold and minimum stock size threshold for each stock or stock complex in the fishery) (§ 600.310(e)(2)).

(B) Information on OFL and ABC, preventing overfishing, and achieving rebuilding targets. Documentation of the data collection, estimation methods, and consideration of uncertainty in formulating catch specification recommendations should be included (§ 600.310(f)(2)). The best scientific information available to determine whether overfishing is occurring with respect to any stock or stock complex, whether any stock or stock complex is overfished, whether the rate or level of fishing mortality applied to any stock or stock complex is approaching the maximum fishing mortality threshold, and whether the size of any stock or stock complex is approaching the minimum stock size threshold; and

(C) The best scientific information available in support of management measures necessary to rebuild an overfished stock or stock complex (if any) in the fishery to a level consistent with producing the MSY in that fishery.

(ii) Information on sources of fishing mortality (both landed and discarded), including commercial and recreational catch and bycatch in other fisheries

§ 600.320

50 CFR Ch. VI (10–1–21 Edition)

and a description of data collection and estimation methods used to quantify total catch mortality, as required by the National Standard 1 Guidelines (§ 600.310(i)).

(iii) Information on bycatch of non-target species for each fishery.

(iv) Information on EFH to be included in accordance with the EFH provisions (§ 600.815(a)(10)).

(v) Pertinent economic, social, community, and ecological information for assessing the success and impacts of management measures or the achievement of objectives of each FMP.

(4) Transparency in the fishery management process is enhanced by complementing the SAFE report with the documentation of previous management actions taken by the Council or Secretary including a summary of the previous ACLs, ACTs, and accountability measures (AMs), and assessment of management uncertainty.

(5) To facilitate the use of the information in the SAFE report, and its availability to the Council, NMFS, and the public:

(i) The SAFE report should contain, or be supplemented by, a summary of the information and an index or table of contents to the components of the report. Sources of information in the SAFE report should be referenced, unless the information is proprietary.

(ii) The SAFE report or compilation of documents that comprise the SAFE report and index must be made available by the Council or NMFS on a readily accessible Web site.

(e) *FMP development.* (1) FMPs must take into account the best scientific information available at the time of preparation. Between the initial drafting of an FMP and its submission for final review, new information often becomes available. This new information should be incorporated into the final FMP where practicable; but it is unnecessary to start the FMP process over again, unless the information indicates that drastic changes have occurred in the fishery that might require revision of the management objectives or measures.

(2) The fact that scientific information concerning a fishery is incomplete does not prevent the preparation and

implementation of an FMP (see related §§ 600.320(d)(2) and 600.340(b)).

(3) An FMP must specify whatever information fishermen and processors will be required or requested to submit to the Secretary. Information about harvest within state waters, as well as in the EEZ, may be collected if it is needed for proper implementation of the FMP and cannot be obtained otherwise. Scientific information collections for stocks managed cooperatively by Federal and State governments should be coordinated with the appropriate state jurisdictions, to the extent practicable, to ensure harvest information is available for the management of stocks that utilize habitats in state and federal managed waters. The FMP should explain the practical utility of the information specified in monitoring the fishery, in facilitating inseason management decisions, and in judging the performance of the management regime; it should also consider the effort, cost, or social impact of obtaining it.

(4) An FMP should identify scientific information needed from other sources to improve understanding and management of the resource, marine ecosystem, the fishery, and fishing communities.

(5) The information submitted by various data suppliers should be comparable and compatible, to the maximum extent possible.

(6) FMPs should be amended on a timely basis, as new information indicates the necessity for change in objectives or management measures consistent with the conditions described in paragraph (d) of this section (SAFE reports). Paragraphs (e)(1) through (5) of this section apply equally to FMPs and FMP amendments.

[78 FR 43086, July 19, 2013]

§ 600.320 National Standard 3—Management Units.

(a) *Standard 3.* To the extent practicable, an individual stock of fish shall be managed as a unit throughout its range, and interrelated stocks of fish shall be managed as a unit or in close coordination.

(b) *General.* The purpose of this standard is to induce a comprehensive approach to fishery management. The

geographic scope of the fishery, for planning purposes, should cover the entire range of the stocks(s) of fish, and not be overly constrained by political boundaries.

(c) *Unity of management.* Cooperation and understanding among entities concerned with the fishery (*e.g.*, Councils, states, Federal Government, international commissions, foreign nations) are vital to effective management. Where management of a fishery involves multiple jurisdictions, coordination among the several entities should be sought in the development of an FMP. Where a range overlaps Council areas, one FMP to cover the entire range is preferred.

(d) *Management unit.* The term “management unit” means a fishery or that portion of a fishery identified in an FMP as relevant to the FMP’s management objectives.

(1) *Basis.* The choice of a management unit depends on the focus of the FMP’s objectives, and may be organized around biological, geographic, economic, technical, social, or ecological perspectives.

(2) *Conservation and management measures.* FMPs should include conservation and management measures for that part of the management unit within U.S. waters, although the Secretary can ordinarily implement them only within the EEZ. The measures need not be identical for each geographic area within the management unit, if the FMP justifies the differences. A management unit may contain stocks of fish for which there is not enough information available to specify MSY and OY or their proxies.

(e) *Analysis.* An FMP should include discussion of the following:

(1) The range and distribution of the stocks, as well as the patterns of fishing effort and harvest.

(2) Alternative management units and reasons for selecting a particular one. A less-than-comprehensive management unit may be justified if, for example, complementary management exists or is planned for a separate geographic area or for a distinct use of the stocks, or if the unmanaged portion of the resource is immaterial to proper management.

(3) Management activities and habitat programs of adjacent states and their effects on the FMP’s objectives and management measures. Where state action is necessary to implement measures within state waters to achieve FMP objectives, the FMP should identify what state action is necessary, discuss the consequences of state inaction or contrary action, and make appropriate recommendations. The FMP should also discuss the impact that Federal regulations will have on state management activities.

(4) Management activities of other countries having an impact on the fishery, and how the FMP’s management measures are designed to take into account these impacts. International boundaries may be dealt with in several ways. For example:

(i) By limiting the management unit’s scope to that portion of the stock found in U.S. waters;

(ii) By estimating MSY for the entire stock and then basing the determination of OY for the U.S. fishery on the portion of the stock within U.S. waters; or

(iii) By referring to treaties or cooperative agreements.

[81 FR 71903, Oct. 18, 2016]

§ 600.325 National Standard 4—Allocations.

(a) *Standard 4.* Conservation and management measures shall not discriminate between residents of different states. If it becomes necessary to allocate or assign fishing privileges among various U.S. fishermen, such allocation shall be:

(1) Fair and equitable to all such fishermen.

(2) Reasonably calculated to promote conservation.

(3) Carried out in such manner that no particular individual, corporation, or other entity acquires an excessive share of such privileges.

(b) *Discrimination among residents of different states.* An FMP may not differentiate among U.S. citizens, nationals, resident aliens, or corporations on the basis of their state of residence. An FMP may not incorporate or rely on a state statute or regulation that discriminates against residents of another state. Conservation and management

measures that have different effects on persons in various geographic locations are permissible if they satisfy the other guidelines under Standard 4. Examples of these precepts are:

(1) An FMP that restricted fishing in the EEZ to those holding a permit from state X would violate Standard 4 if state X issued permits only to its own citizens.

(2) An FMP that closed a spawning ground might disadvantage fishermen living in the state closest to it, because they would have to travel farther to an open area, but the closure could be justified under Standard 4 as a conservation measure with no discriminatory intent.

(c) *Allocation of fishing privileges.* An FMP may contain management measures that allocate fishing privileges if such measures are necessary or helpful in furthering legitimate objectives or in achieving the OY, and if the measures conform with paragraphs (c)(3)(i) through (c)(3)(iii) of this section.

(1) *Definition.* An “allocation” or “assignment” of fishing privileges is a direct and deliberate distribution of the opportunity to participate in a fishery among identifiable, discrete user groups or individuals. Any management measure (or lack of management) has incidental allocative effects, but only those measures that result in direct distributions of fishing privileges will be judged against the allocation requirements of Standard 4. Adoption of an FMP that merely perpetuates existing fishing practices may result in an allocation, if those practices directly distribute the opportunity to participate in the fishery. Allocations of fishing privileges include, for example, per-vessel catch limits, quotas by vessel class and gear type, different quotas or fishing seasons for recreational and commercial fishermen, assignment of ocean areas to different gear users, and limitation of permits to a certain number of vessels or fishermen.

(2) *Analysis of allocations.* Each FMP should contain a description and analysis of the allocations existing in the fishery and of those made in the FMP. The effects of eliminating an existing allocation system should be examined. Allocation schemes considered, but re-

jected by the Council, should be included in the discussion. The analysis should relate the recommended allocations to the FMP’s objectives and OY specification, and discuss the factors listed in paragraph (c)(3) of this section.

(3) *Factors in making allocations.* An allocation of fishing privileges must be fair and equitable, must be reasonably calculated to promote conservation, and must avoid excessive shares. These tests are explained in paragraphs (c)(3)(i) through (c)(3)(iii) of this section:

(i) *Fairness and equity.* (A) An allocation of fishing privileges should be rationally connected to the achievement of OY or with the furtherance of a legitimate FMP objective. Inherent in an allocation is the advantaging of one group to the detriment of another. The motive for making a particular allocation should be justified in terms of the objectives of the FMP; otherwise, the disadvantaged user groups or individuals would suffer without cause. For instance, an FMP objective to preserve the economic status quo cannot be achieved by excluding a group of long-time participants in the fishery. On the other hand, there is a rational connection between an objective of harvesting shrimp at their maximum size and closing a nursery area to trawling.

(B) An allocation of fishing privileges may impose a hardship on one group if it is outweighed by the total benefits received by another group or groups. An allocation need not preserve the status quo in the fishery to qualify as “fair and equitable,” if a restructuring of fishing privileges would maximize overall benefits. The Council should make an initial estimate of the relative benefits and hardships imposed by the allocation, and compare its consequences with those of alternative allocation schemes, including the status quo. Where relevant, judicial guidance and government policy concerning the rights of treaty Indians and aboriginal Americans must be considered in determining whether an allocation is fair and equitable.

(ii) *Promotion of conservation.* Numerous methods of allocating fishing privileges are considered “conservation and management” measures under section

303 of the Magnuson-Stevens Act. An allocation scheme may promote conservation by encouraging a rational, more easily managed use of the resource. Or, it may promote conservation (in the sense of wise use) by optimizing the yield in terms of size, value, market mix, price, or economic or social benefit of the product. To the extent that rebuilding plans or other conservation and management measures that reduce the overall harvest in a fishery are necessary, any harvest restrictions or recovery benefits must be allocated fairly and equitably among the commercial, recreational, and charter fishing sectors of the fishery.

(iii) *Avoidance of excessive shares.* An allocation scheme must be designed to deter any person or other entity from acquiring an excessive share of fishing privileges, and to avoid creating conditions fostering inordinate control, by buyers or sellers, that would not otherwise exist.

(iv) *Other factors.* In designing an allocation scheme, a Council should consider other factors relevant to the FMP's objectives. Examples are economic and social consequences of the scheme, food production, consumer interest, dependence on the fishery by present participants and coastal communities, efficiency of various types of gear used in the fishery, transferability of effort to and impact on other fisheries, opportunity for new participants to enter the fishery, and enhancement of opportunities for recreational fishing.

[61 FR 32540, June 24, 1996, as amended at 63 FR 24234, May 1, 1998]

§ 600.330 National Standard 5—Efficiency.

(a) *Standard 5.* Conservation and management measures shall, where practicable, consider efficiency in the utilization of fishery resources; except that no such measure shall have economic allocation as its sole purpose.

(b) *Efficiency in the utilization of resources*—(1) *General.* The term “utilization” encompasses harvesting, processing, marketing, and non-consumptive uses of the resource, since management decisions affect all sectors of the industry. In considering efficient utilization of fishery resources, this stand-

ard highlights one way that a fishery can contribute to the Nation's benefit with the least cost to society: Given a set of objectives for the fishery, an FMP should contain management measures that result in as efficient a fishery as is practicable or desirable.

(2) *Efficiency.* In theory, an efficient fishery would harvest the OY with the minimum use of economic inputs such as labor, capital, interest, and fuel. Efficiency in terms of aggregate costs then becomes a conservation objective, where “conservation” constitutes wise use of all resources involved in the fishery, not just fish stocks.

(i) In an FMP, management measures may be proposed that allocate fish among different groups of individuals or establish a system of property rights. Alternative measures examined in searching for an efficient outcome will result in different distributions of gains and burdens among identifiable user groups. An FMP should demonstrate that management measures aimed at efficiency do not simply redistribute gains and burdens without an increase in efficiency.

(ii) Management regimes that allow a fishery to operate at the lowest possible cost (e.g., fishing effort, administration, and enforcement) for a particular level of catch and initial stock size are considered efficient. Restrictive measures that unnecessarily raise any of those costs move the regime toward inefficiency. Unless the use of inefficient techniques or the creation of redundant fishing capacity contributes to the attainment of other social or biological objectives, an FMP may not contain management measures that impede the use of cost-effective techniques of harvesting, processing, or marketing, and should avoid creating strong incentives for excessive investment in private sector fishing capital and labor.

(c) *Limited access.* A “system for limiting access,” which is an optional measure under section 303(b) of the Magnuson-Stevens Act, is a type of allocation of fishing privileges that may be considered to contribute to economic efficiency or conservation. For example, limited access may be used to combat overfishing, overcrowding, or overcapitalization in a fishery to

achieve OY. In an unutilized or underutilized fishery, it may be used to reduce the chance that these conditions will adversely affect the fishery in the future, or to provide adequate economic return to pioneers in a new fishery. In some cases, limited entry is a useful ingredient of a conservation scheme, because it facilitates application and enforcement of other management measures.

(1) *Definition.* Limited access (or limited entry) is a management technique that attempts to limit units of effort in a fishery, usually for the purpose of reducing economic waste, improving net economic return to the fishermen, or capturing economic rent for the benefit of the taxpayer or the consumer. Common forms of limited access are licensing of vessels, gear, or fishermen to reduce the number of units of effort, and dividing the total allowable catch into fishermen's quotas (a stock-certificate system). Two forms (i.e., Federal fees for licenses or permits in excess of administrative costs, and taxation) are not permitted under the Magnuson-Stevens Act, except for fees allowed under section 304(d)(2).

(2) *Factors to consider.* The Magnuson-Stevens Act ties the use of limited access to the achievement of OY. An FMP that proposes a limited access system must consider the factors listed in section 303(b)(6) of the Magnuson-Stevens Act and in § 600.325(c)(3). In addition, it should consider the criteria for qualifying for a permit, the nature of the interest created, whether to make the permit transferable, and the Magnuson-Stevens Act's limitations on returning economic rent to the public under section 304(d). The FMP should also discuss the costs of achieving an appropriate distribution of fishing privileges.

(d) *Analysis.* An FMP should discuss the extent to which overcapitalization, congestion, economic waste, and inefficient techniques in the fishery reduce the net benefits derived from the management unit and prevent the attainment and appropriate allocation of OY. It should also explain, in terms of the FMP's objectives, any restriction placed on the use of efficient techniques of harvesting, processing, or marketing. If, during FMP develop-

ment, the Council considered imposing a limited-entry system, the FMP should analyze the Council's decision to recommend or reject limited access as a technique to achieve efficient utilization of the resources of the fishing industry.

(e) *Economic allocation.* This standard prohibits only those measures that distribute fishery resources among fishermen on the basis of economic factors alone, and that have economic allocation as their only purpose. Where conservation and management measures are recommended that would change the economic structure of the industry or the economic conditions under which the industry operates, the need for such measures must be justified in light of the biological, ecological, and social objectives of the FMP, as well as the economic objectives.

[61 FR 32540, June 24, 1996, as amended at 63 FR 7075, Feb. 12, 1998; 63 FR 24234, May 1, 1998]

§ 600.335 National Standard 6—Variations and Contingencies.

(a) *Standard 6.* Conservation and management measures shall take into account and allow for variations among, and contingencies in, fisheries, fishery resources, and catches.

(b) *Conservation and management.* Each fishery exhibits unique uncertainties. The phrase "conservation and management" implies the wise use of fishery resources through a management regime that includes some protection against these uncertainties. The particular regime chosen must be flexible enough to allow timely response to resource, industry, and other national and regional needs. Continual data acquisition and analysis will help the development of management measures to compensate for variations and to reduce the need for substantial buffers. Flexibility in the management regime and the regulatory process will aid in responding to contingencies.

(c) *Variations.* (1) In fishery management terms, variations arise from biological, social, and economic occurrences, as well as from fishing practices. Biological uncertainties and lack of knowledge can hamper attempts to estimate stock size and strength, stock

location in time and space, environmental/habitat changes, and ecological interactions. Economic uncertainty may involve changes in foreign or domestic market conditions, changes in operating costs, drifts toward overcapitalization, and economic perturbations caused by changed fishing patterns. Changes in fishing practices, such as the introduction of new gear, rapid increases or decreases in harvest effort, new fishing strategies, and the effects of new management techniques, may also create uncertainties. Social changes could involve increases or decreases in recreational fishing, or the movement of people into or out of fishing activities due to such factors as age or educational opportunities.

(2) Every effort should be made to develop FMPs that discuss and take into account these vicissitudes. To the extent practicable, FMPs should provide a suitable buffer in favor of conservation. Allowances for uncertainties should be factored into the various elements of an FMP. Examples are:

(i) *Reduce OY.* Lack of scientific knowledge about the condition of a stock(s) could be reason to reduce OY.

(ii) *Establish a reserve.* Creation of a reserve may compensate for uncertainties in estimating domestic harvest, stock conditions, or environmental factors.

(iii) *Adjust management techniques.* In the absence of adequate data to predict the effect of a new regime, and to avoid creating unwanted variations, a Council could guard against producing drastic changes in fishing patterns, allocations, or practices.

(iv) *Highlight habitat conditions.* FMPs may address the impact of pollution and the effects of wetland and estuarine degradation on the stocks of fish; identify causes of pollution and habitat degradation and the authorities having jurisdiction to regulate or influence such activities; propose recommendations that the Secretary will convey to those authorities to alleviate such problems; and state the views of the Council on unresolved or anticipated issues.

(d) *Contingencies.* Unpredictable events—such as unexpected resource surges or failures, fishing effort greater than anticipated, disruptive gear con-

flicts, climatic conditions, or environmental catastrophes—are best handled by establishing a flexible management regime that contains a range of management options through which it is possible to act quickly without amending the FMP or even its regulations.

(1) The FMP should describe the management options and their consequences in the necessary detail to guide the Secretary in responding to changed circumstances, so that the Council preserves its role as policy-setter for the fishery. The description should enable the public to understand what may happen under the flexible regime, and to comment on the options.

(2) FMPs should include criteria for the selection of management measures, directions for their application, and mechanisms for timely adjustment of management measures comprising the regime. For example, an FMP could include criteria that allow the Secretary to open and close seasons, close fishing grounds, or make other adjustments in management measures.

(3) Amendment of a flexible FMP would be necessary when circumstances in the fishery change substantially, or when a Council adopts a different management philosophy and objectives.

§ 600.340 National Standard 7—Costs and Benefits.

(a) *Standard 7.* Conservation and management measures shall, where practicable, minimize costs and avoid unnecessary duplication.

(b) *Alternative management measures.* Management measures should not impose unnecessary burdens on the economy, on individuals, on private or public organizations, or on Federal, state, or local governments. Factors such as fuel costs, enforcement costs, or the burdens of collecting data may well suggest a preferred alternative.

(c) *Analysis.* The supporting analyses for FMPs should demonstrate that the benefits of fishery regulation are real and substantial relative to the added research, administrative, and enforcement costs, as well as costs to the industry of compliance. In determining the benefits and costs of management measures, each management strategy considered and its impacts on different

user groups in the fishery should be evaluated. This requirement need not produce an elaborate, formalistic cost/benefit analysis. Rather, an evaluation of effects and costs, especially of differences among workable alternatives, including the status quo, is adequate. If quantitative estimates are not possible, qualitative estimates will suffice.

(1) *Burdens.* Management measures should be designed to give fishermen the greatest possible freedom of action in conducting business and pursuing recreational opportunities that are consistent with ensuring wise use of the resources and reducing conflict in the fishery. The type and level of burden placed on user groups by the regulations need to be identified. Such an examination should include, for example: Capital outlays; operating and maintenance costs; reporting costs; administrative, enforcement, and information costs; and prices to consumers. Management measures may shift costs from one level of government to another, from one part of the private sector to another, or from the government to the private sector. Redistribution of costs through regulations is likely to generate controversy. A discussion of these and any other burdens placed on the public through FMP regulations should be a part of the FMP's supporting analyses.

(2) *Gains.* The relative distribution of gains may change as a result of instituting different sets of alternatives, as may the specific type of gain. The analysis of benefits should focus on the specific gains produced by each alternative set of management measures, including the status quo. The benefits to society that result from the alternative management measures should be identified, and the level of gain assessed.

[81 FR 71904, Oct. 18, 2016]

§ 600.345 National Standard 8—Communities.

(a) *Standard 8.* Conservation and management measures shall, consistent with the conservation requirements of the Magnuson-Stevens Act (including the prevention of overfishing and rebuilding of overfished stocks), take into account the importance of fishery resources to fishing

communities by utilizing economic and social data that are based upon the best scientific information available in order to:

(1) Provide for the sustained participation of such communities; and

(2) To the extent practicable, minimize adverse economic impacts on such communities.

(b) *General.* (1) This standard requires that an FMP take into account the importance of fishery resources to fishing communities. This consideration, however, is within the context of the conservation requirements of the Magnuson-Stevens Act. Deliberations regarding the importance of fishery resources to affected fishing communities, therefore, must not compromise the achievement of conservation requirements and goals of the FMP. Where the preferred alternative negatively affects the sustained participation of fishing communities, the FMP should discuss the rationale for selecting this alternative over another with a lesser impact on fishing communities. All other things being equal, where two alternatives achieve similar conservation goals, the alternative that provides the greater potential for sustained participation of such communities and minimizes the adverse economic impacts on such communities would be the preferred alternative.

(2) This standard does not constitute a basis for allocating resources to a specific fishing community nor for providing preferential treatment based on residence in a fishing community.

(3) The term “fishing community” means a community that is substantially dependent on or substantially engaged in the harvest or processing of fishery resources to meet social and economic needs, and includes fishing vessel owners, operators, and crew, and fish processors that are based in such communities. A fishing community is a social or economic group whose members reside in a specific location and share a common dependency on commercial, recreational, or subsistence fishing or on directly related fisheries-dependent services and industries (for example, boatyards, ice suppliers, tackle shops).

(4) The term “sustained participation” means continued access to the

Fishery Conservation and Management

§ 600.350

fishery within the constraints of the condition of the resource.

(c) *Analysis.* (1) FMPs must examine the social and economic importance of fisheries to communities potentially affected by management measures. For example, severe reductions of harvests for conservation purposes may decrease employment opportunities for fishermen and processing plant workers, thereby adversely affecting their families and communities. Similarly, a management measure that results in the allocation of fishery resources among competing sectors of a fishery may benefit some communities at the expense of others.

(2) An appropriate vehicle for the analyses under this standard is the fishery impact statement required by section 303(a)(9) of the Magnuson-Stevens Act. Qualitative and quantitative data may be used, including information provided by fishermen, dealers, processors, and fisheries organizations and associations. In cases where data are severely limited, effort should be directed to identifying and gathering needed data.

(3) To address the sustained participation of fishing communities that will be affected by management measures, the analysis should first identify affected fishing communities and then assess their differing levels of dependence on and engagement in the fishery being regulated. The analysis should also specify how that assessment was made. The best available data on the history, extent, and type of participation of these fishing communities in the fishery should be incorporated into the social and economic information presented in the FMP. The analysis does not have to contain an exhaustive listing of all communities that might fit the definition; a judgment can be made as to which are primarily affected. The analysis should discuss each alternative's likely effect on the sustained participation of these fishing communities in the fishery.

(4) The analysis should assess the likely positive and negative social and economic impacts of the alternative management measures, over both the short and the long term, on fishing communities. Any particular management measure may economically ben-

efit some communities while adversely affecting others. Economic impacts should be considered both for individual communities and for the group of all affected communities identified in the FMP. Impacts of both consumptive and non-consumptive uses of fishery resources should be considered.

(5) A discussion of social and economic impacts should identify those alternatives that would minimize adverse impacts on these fishing communities within the constraints of conservation and management goals of the FMP, other national standards, and other applicable law.

[63 FR 24234, May 1, 1998, as amended at 73 FR 67810, Nov. 17, 2008]

§ 600.350 National Standard 9—Bycatch.

(a) *Standard 9.* Conservation and management measures shall, to the extent practicable:

(1) Minimize bycatch; and

(2) To the extent bycatch cannot be avoided, minimize the mortality of such bycatch.

(b) *General.* This national standard requires Councils to consider the bycatch effects of existing and planned conservation and management measures. Bycatch can, in two ways, impede efforts to protect marine ecosystems and achieve sustainable fisheries and the full benefits they can provide to the Nation. First, bycatch can increase substantially the uncertainty concerning total fishing-related mortality, which makes it more difficult to assess the status of stocks, to set the appropriate OY and define overfishing levels, and to ensure that OYs are attained and overfishing levels are not exceeded. Second, bycatch may also preclude other more productive uses of fishery resources.

(c) *Definition—Bycatch.* The term “bycatch” means fish that are harvested in a fishery, but that are not sold or kept for personal use.

(1) *Inclusions.* Bycatch includes the discard of whole fish at sea or elsewhere, including economic discards and regulatory discards, and fishing mortality due to an encounter with fishing gear that does not result in capture of fish (i.e., unobserved fishing mortality).

(2) *Exclusions.* Bycatch excludes the following:

(i) Fish that legally are retained in a fishery and kept for personal, tribal, or cultural use, or that enter commerce through sale, barter, or trade.

(ii) Fish released alive under a recreational catch-and-release fishery management program. A catch-and-release fishery management program is one in which the retention of a particular species is prohibited. In such a program, those fish released alive would not be considered bycatch.

(iii) Fish harvested in a commercial fishery managed by the Secretary under Magnuson-Stevens Act sec. 304(g) or the Atlantic Tunas Convention Act of 1975 (16 U.S.C. 971d) or highly migratory species harvested in a commercial fishery managed by a Council under the Magnuson-Stevens Act or the Western and Central Pacific Fisheries Convention Implementation Act, that are not regulatory discards and that are tagged and released alive under a scientific tagging and release program established by the Secretary.

(d) *Minimizing bycatch and bycatch mortality.* The priority under this standard is first to avoid catching bycatch species where practicable. Fish that are bycatch and cannot be avoided must, to the extent practicable, be returned to the sea alive. Any proposed conservation and management measure that does not give priority to avoiding the capture of bycatch species must be supported by appropriate analyses. In their evaluation, the Councils must consider the net benefits to the Nation, which include, but are not limited to: Negative impacts on affected stocks; incomes accruing to participants in directed fisheries in both the short and long term; incomes accruing to participants in fisheries that target the bycatch species; environmental consequences; non-market values of bycatch species, which include non-consumptive uses of bycatch species and existence values, as well as recreational values; and impacts on other marine organisms. To evaluate conservation and management measures relative to this and other national standards, as well as to evaluate total fishing mortality, Councils must—

(1) *Promote development of a database on bycatch and bycatch mortality in the fishery to the extent practicable.* A review and, where necessary, improvement of data collection methods, data sources, and applications of data must be initiated for each fishery to determine the amount, type, disposition, and other characteristics of bycatch and bycatch mortality in each fishery for purposes of this standard and of section 303(a)(11) and (12) of the Magnuson-Stevens Act. Bycatch should be categorized to focus on management responses necessary to minimize bycatch and bycatch mortality to the extent practicable. When appropriate, management measures, such as at-sea monitoring programs, should be developed to meet these information needs.

(2) *For each management measure, assess the effects on the amount and type of bycatch and bycatch mortality in the fishery.* Most conservation and management measures can affect the amounts of bycatch or bycatch mortality in a fishery, as well as the extent to which further reductions in bycatch are practicable. In analyzing measures, including the status quo, Councils should assess the impacts of minimizing bycatch and bycatch mortality, as well as consistency of the selected measure with other national standards and applicable laws. The benefits of minimizing bycatch to the extent practicable should be identified and an assessment of the impact of the selected measure on bycatch and bycatch mortality provided. Due to limitations on the information available, fishery managers may not be able to generate precise estimates of bycatch and bycatch mortality or other effects for each alternative. In the absence of quantitative estimates of the impacts of each alternative, Councils may use qualitative measures. Information on the amount and type of bycatch should be summarized in the SAFE reports.

(3) *Select measures that, to the extent practicable, will minimize bycatch and bycatch mortality.* (i) A determination of whether a conservation and management measure minimizes bycatch or bycatch mortality to the extent practicable, consistent with other national

Fishery Conservation and Management

§ 600.355

standards and maximization of net benefits to the Nation, should consider the following factors:

(A) Population effects for the bycatch species.

(B) Ecological effects due to changes in the bycatch of that species (effects on other species in the ecosystem).

(C) Changes in the bycatch of other species of fish and the resulting population and ecosystem effects.

(D) Effects on marine mammals and birds.

(E) Changes in fishing, processing, disposal, and marketing costs.

(F) Changes in fishing practices and behavior of fishermen.

(G) Changes in research, administration, and enforcement costs and management effectiveness.

(H) Changes in the economic, social, or cultural value of fishing activities and nonconsumptive uses of fishery resources.

(I) Changes in the distribution of benefits and costs.

(J) Social effects.

(ii) The Councils should adhere to the precautionary approach found in the Food and Agriculture Organization of the United Nations (FAO) Code of Conduct for Responsible Fisheries (Article 6.5), which is available from the Director, Publications Division, FAO, Viale delle Terme di Caracalla, 00100 Rome, Italy, when faced with uncertainty concerning any of the factors listed in this paragraph (d)(3).

(4) *Monitor selected management measures.* Effects of implemented measures should be evaluated routinely. Monitoring systems should be established prior to fishing under the selected management measures. Where applicable, plans should be developed and coordinated with industry and other concerned organizations to identify opportunities for cooperative data collection, coordination of data management for cost efficiency, and avoidance of duplicative effort.

(e) *Other considerations.* Other applicable laws, such as the MMPA, the ESA, and the Migratory Bird Treaty Act, require that Councils consider the impact of conservation and management measures on living marine re-

sources other than fish; i.e., marine mammals and birds.

[63 FR 24235, May 1, 1998, as amended at 73 FR 67811, Nov. 17, 2008]

§ 600.355 National Standard 10—Safety of Life at Sea.

(a) *Standard 10.* Conservation and management measures shall, to the extent practicable, promote the safety of human life at sea.

(b) *General.* (1) Fishing is an inherently dangerous occupation where not all hazardous situations can be foreseen or avoided. The standard directs Councils to reduce that risk in crafting their management measures, so long as they can meet the other national standards and the legal and practical requirements of conservation and management. This standard is not meant to give preference to one method of managing a fishery over another.

(2) The qualifying phrase “to the extent practicable” recognizes that regulation necessarily puts constraints on fishing that would not otherwise exist. These constraints may create pressures on fishermen to fish under conditions that they would otherwise avoid. This standard instructs the Councils to identify and avoid those situations, if they can do so consistent with the legal and practical requirements of conservation and management of the resource.

(3) For the purposes of this national standard, the safety of the fishing vessel and the protection from injury of persons aboard the vessel are considered the same as “safety of human life at sea. The safety of a vessel and the people aboard is ultimately the responsibility of the master of that vessel. Each master makes many decisions about vessel maintenance and loading and about the capabilities of the vessel and crew to operate safely in a variety of weather and sea conditions. This national standard does not replace the judgment or relieve the responsibility of the vessel master related to vessel safety. The Councils, the USCG, and NMFS, through the consultation process of paragraph (d) of this section, will review all FMPs, amendments, and regulations during their development to ensure they recognize any impact on the safety of human life at sea and

minimize or mitigate that impact where practicable.

(c) *Safety considerations.* The following is a non-inclusive list of safety considerations that should be considered in evaluating management measures under national standard 10.

(1) *Operating environment.* Where and when a fishing vessel operates is partly a function of the general climate and weather patterns of an area. Typically, larger vessels can fish farther offshore and in more adverse weather conditions than smaller vessels. An FMP should try to avoid creating situations that result in vessels going out farther, fishing longer, or fishing in weather worse than they generally would have in the absence of management measures. Where these conditions are unavoidable, management measures should mitigate these effects, consistent with the overall management goals of the fishery.

(2) *Gear and vessel loading requirements.* A fishing vessel operates in a very dynamic environment that can be an extremely dangerous place to work. Moving heavy gear in a seaway creates a dangerous situation on a vessel. Carrying extra gear can also significantly reduce the stability of a fishing vessel, making it prone to capsizing. An FMP should consider the safety and stability of fishing vessels when requiring specific gear or requiring the removal of gear from the water. Management measures should reflect a sensitivity to these issues and provide methods of mitigation of these situations wherever possible.

(3) *Limited season and area fisheries.* Fisheries where time constraints for harvesting are a significant factor and with no flexibility for weather, often called “derby” fisheries, can create serious safety problems. To participate fully in such a fishery, fishermen may fish in bad weather and overload their vessel with catch and/or gear. Where these conditions exist, FMPs should attempt to mitigate these effects and avoid them in new management regimes, as discussed in paragraph (e) of this section.

(d) *Consultation.* During preparation of any FMP, FMP amendment, or regulation that might affect safety of human life at sea, the Council should

consult with the USCG and the fishing industry as to the nature and extent of any adverse impacts. This consultation may be done through a Council advisory panel, committee, or other review of the FMP, FMP amendment, or regulations. Mitigation, to the extent practicable, and other safety considerations identified in paragraph (c) of this section should be included in the FMP.

(e) *Mitigation measures.* There are many ways in which an FMP may avoid or provide alternative measures to reduce potential impacts on safety of human life at sea. The following is a list of some factors that could be considered when management measures are developed:

(1) Setting seasons to avoid hazardous weather.

(2) Providing for seasonal or trip flexibility to account for bad weather (weather days).

(3) Allowing for pre- and post-season “soak time” to deploy and pick up fixed gear, so as to avoid overloading vessels with fixed gear.

(4) Tailoring gear requirements to provide for smaller or lighter gear for smaller vessels.

(5) Avoiding management measures that require hazardous at-sea inspections or enforcement if other comparable enforcement could be accomplished as effectively.

(6) Limiting the number of participants in the fishery.

(7) Spreading effort over time and area to avoid potential gear and/or vessel conflicts.

(8) Implementing management measures that reduce the race for fish and the resulting incentives for fishermen to take additional risks with respect to vessel safety.

[63 FR 24236, May 1, 1998]

Subpart E—Confidentiality of Statistics

§ 600.405 Types of statistics covered.

NOAA is authorized under the Magnuson-Stevens Act and other statutes to collect proprietary or confidential commercial or financial information. This part applies to all pertinent data

Fishery Conservation and Management

§ 600.415

required to be submitted to the Secretary with respect to any FMP including, but not limited to, information regarding the type and quantity of fishing gear used, catch by species in numbers of fish or weight thereof, areas in which fishing occurred, time of fishing, number of hauls, and the estimated processing capacity of, and the actual processing capacity utilized by, U.S. fish processors.

[61 FR 32540, June 24, 1996, as amended at 63 FR 7075, Feb. 12, 1998]

§ 600.410 Collection and maintenance of statistics.

(a) *General.* (1) All statistics required to be submitted to the Secretary are provided to the Assistant Administrator.

(2) After receipt, the Assistant Administrator will remove all identifying particulars from the statistics if doing so is consistent with the needs of NMFS and good scientific practice.

(3) Appropriate safeguards as specified by NOAA Directives, or other NOAA or NMFS internal procedures, apply to the collection and maintenance of all statistics, whether separated from identifying particulars or not, so as to ensure their confidentiality.

(b) *Collection agreements with states.* (1) The Assistant Administrator may enter into an agreement with a state authorizing the state to collect statistics on behalf of the Secretary.

(2) NMFS will not enter into a cooperative collection agreement with a state unless the state has authority to protect the statistics from disclosure in a manner at least as protective as these regulations.

§ 600.415 Access to statistics.

(a) *General.* In determining whether to grant a request for access to confidential data, the following information will be taken into consideration (also see § 600.130):

(1) The specific types of data required.

(2) The relevance of the data to conservation and management issues.

(3) The duration of time access will be required: continuous, infrequent, or one-time.

(4) An explanation of why the availability of aggregate or non-confidential summaries of data from other sources would not satisfy the requested needs.

(b) *Federal employees.* Statistics submitted as a requirement of an FMP and that reveal the identity of the submitter will only be accessible to the following:

(1) Personnel within NMFS responsible for the collection, processing, and storage of the statistics.

(2) Federal employees who are responsible for FMP development, monitoring, and enforcement.

(3) Personnel within NMFS performing research that requires confidential statistics.

(4) Other NOAA personnel on a demonstrable need-to-know basis.

(5) NOAA/NMFS contractors or grantees who require access to confidential statistics to perform functions authorized by a Federal contract or grant.

(c) *State personnel.* Upon written request, confidential statistics will only be accessible if:

(1) State employees demonstrate a need for confidential statistics for use in fishery conservation and management.

(2) The state has entered into a written agreement between the Assistant Administrator and the head of the state's agency that manages marine and/or anadromous fisheries. The agreement shall contain a finding by the Assistant Administrator that the state has confidentiality protection authority comparable to the Magnuson-Stevens Act and that the state will exercise this authority to limit subsequent access and use of the data to fishery management and monitoring purposes.

(d) *Councils.* Upon written request by the Council Executive Director, access to confidential data will be granted to:

(1) Council employees who are responsible for FMP development and monitoring.

(2) A Council for use by the Council for conservation and management purposes, with the approval of the Assistant Administrator. In addition to the information described in paragraph (a)

§ 600.420

of this section, the Assistant Administrator will consider the following in deciding whether to grant access:

(i) The possibility that Council members might gain personal or competitive advantage from access to the data.

(ii) The possibility that the suppliers of the data would be placed at a competitive disadvantage by public disclosure of the data at Council meetings or hearings.

(3) A contractor of the Council for use in such analysis or studies necessary for conservation and management purposes, with approval of the Assistant Administrator and execution of an agreement with NMFS as described by NOAA Administrative Order (NAO) 216-100.

(e) *Prohibitions.* Persons having access to these data are prohibited from unauthorized use or disclosure and are subject to the provisions of 18 U.S.C. 1905, 16 U.S.C. 1857, and NOAA/NMFS internal procedures, including NAO 216-100.

[61 FR 32540, June 24, 1996, as amended at 63 FR 7075, Feb. 12, 1998]

§ 600.420 Control system.

(a) The Assistant Administrator maintains a control system to protect the identity of submitters of statistics required by an FMP. The control system:

(1) Identifies those persons who have access to the statistics.

(2) Contains procedures to limit access to confidential data to authorized users.

(3) Provides for safeguarding the data.

(b) This system requires that all persons who have authorized access to the data be informed of the confidentiality of the data. These persons are required to sign a statement that they:

(1) Have been informed that the data are confidential.

(2) Have reviewed and are familiar with the procedures to protect confidential statistics.

§ 600.425 Release of statistics.

(a) The Assistant Administrator will not release to the public any statistics required to be submitted under an FMP in a form that would identify the submitter, except as required by law.

50 CFR Ch. VI (10-1-21 Edition)

(b) All requests from the public for statistics submitted in response to a requirement of an FMP will be processed consistent with the NOAA FOIA regulations (15 CFR part 903), NAO 205-14, Department of Commerce Administrative Orders 205-12 and 205-14 and 15 CFR part 4.

(c) NOAA does not release or allow access to confidential information in its possession to members of Council advisory groups, except as provided by law.

Subpart F—Foreign Fishing

§ 600.501 Vessel permits.

(a) *General.* (1) Each FFV fishing under the Magnuson-Stevens Act must have on board a permit issued under this section, unless it is engaged only in recreational fishing.

(2) Permits issued under this section do not authorize FFV's or persons to harass, capture, or kill marine mammals. No marine mammals may be taken in the course of fishing unless that vessel has on board a currently valid Authorization Certificate under the MMPA. Regulations governing the taking of marine mammals incidental to commercial fishing operations are contained in 50 CFR part 229 of this title.

(b) *Responsibility of owners and operators.* The owners and operators of each FFV are jointly and severally responsible for compliance with the Magnuson-Stevens Act, the applicable GIFA, this subpart, and any permit issued under the Magnuson-Stevens Act and this subpart. The owners and operators of each FFV bear civil responsibility for the acts of their employees and agents constituting violations, regardless of whether the specific acts were authorized or even forbidden by the employer or principal, and regardless of knowledge concerning the occurrence.

(c) *Activity codes.* Permits to fish under this subpart may be issued by the Assistant Administrator for the activities described in this paragraph, but the permits may be modified by regulations of this subpart and by the conditions and restrictions attached to the permit (see paragraphs (e)(1)(v) and

Fishery Conservation and Management

§ 600.501

(1) of this section). The Assistant Administrator may issue a permit, as appropriate, for one or more of the activity codes listed. Only vessels of nations having a GIFA with the United States may be issued permits for activity codes 1 through 9. A GIFA is not required for a vessel to be issued a permit for activity code 10. The activity codes are described as follows:

(1) *Activity Code 1.* Catching, scouting, processing, transshipping, and supporting foreign vessels. Activity is limited to fish harvested or to be harvested by foreign vessels in the EEZ.

(2) *Activity Code 2.* Processing, scouting, transshipping, and supporting foreign vessels. Activity is limited to fish harvested or to be harvested by foreign vessels in the EEZ.

(3) *Activity Code 3.* Transshipping, scouting, and supporting foreign vessels. Activity is limited to fish harvested or to be harvested by foreign vessels in the EEZ.

(4) *Activity Code 4.* Processing, scouting, transshipping, and supporting U.S. vessels delivering fish to foreign vessels. Activity is limited to the receipt of unprocessed fish harvested or to be harvested by U.S. vessels.

(5) *Activity Code 5.* Transshipping, scouting, and supporting foreign vessels. Transshipment limited to fish received or to be received from foreign vessels processing fish from U.S. harvesting vessels.

(6) *Activity Code 6.* Transshipping, scouting, and supporting U.S. vessels. Transshipment limited to U.S.-harvested fish processed on board U.S. vessels.

(7) *Activity Code 7.* Processing, transshipping, and supporting foreign vessels. Activity limited to fish harvested or to be harvested by foreign vessels seaward of the EEZ.

(8) *Activity Code 8.* Transshipping and supporting foreign vessels. Activity is limited to fish harvested or to be harvested seaward of the EEZ by foreign vessels or fish duly authorized for processing in the internal waters of one of the states.

(9) *Activity Code 9.* Supporting U.S. fishing vessels and U.S. fish processing vessels and any foreign fishing vessels authorized under any activity code under paragraph (c) of this subpart.

(10) *Activity Code 10.* Transshipping at sea for the purpose of transporting fish or fish products from a point within the EEZ or, with the concurrence of a state, within the boundaries of that state, to a point outside the United States.

(d) *Application.* (1) Applications for FFV permits authorizing activity codes 1 through 9 must be submitted by an official representative of a foreign nation to the DOS. Applications for permits authorizing activity codes 1 through 9 are available from, and should be submitted to, DOS, OES/OMC, Washington, DC 20520. Applications for FFV permits authorizing activity code 10 may be submitted by any person to the Assistant Administrator. Applications for permits authorizing activity code 10 are available from NMFS, Attn: Office of International Affairs, 1315 East West Highway, Silver Spring, Maryland 20910. All applicants should allow 90 days for review and comment by the public, involved governmental agencies, and appropriate Councils and for processing before the anticipated date to begin fishing. The permit application fee must be paid at the time of application according to § 600.518.

(2) Applicants must provide complete and accurate information requested on the permit application form.

(3) Applicants for FFV's that will support U.S. vessels in joint ventures (Activity Code 4) must provide the additional information specified by the permit application form.

(4) Each applicant may request to substitute one FFV for another of the same flag by submitting a new application form and a short explanation of the reason for the substitution to the appropriate address listed at paragraph (d)(1) of this section. Each substitution is considered a new application, and a new application fee must be paid. NMFS will promptly process an application for a vessel replacing a permitted FFV that is disabled or decommissioned, once the appropriate Council(s) and governmental agencies have been notified of the substituted application.

(e) *Issuance.* (1) Permits may be issued to an FFV by the Assistant Administrator after—

§ 600.501

50 CFR Ch. VI (10–1–21 Edition)

(i) The Assistant Administrator determines that the fishing described in the application will meet the requirements of the Magnuson-Stevens Act and approves the permit application.

(ii) The applicant has paid the fees and provided any assurances required by the Secretary in accordance with the provisions of § 600.518.

(iii) The applicant has appointed an agent.

(iv) The applicant has identified a designated representative.

(v) The applicant has accepted the general “conditions and restrictions” of receiving permits, as required by section 204(b)(7) of the Magnuson-Stevens Act, and any “additional restrictions” attached to the permit for the conservation and management of fishery resources or for the prevention of significant impairment of the national defense or security interests.

(2) The DOS will provide permits for activity codes 1 through 9 to the official representative of the applicant foreign nation. The Assistant Administrator will provide permits for activity code 10 directly to the applicant.

(3) An approved permit will contain—

(i) The name and IRCS of the FFV and its permit number.

(ii) The permitted fisheries and/or activity codes.

(iii) The date of issuance and expiration date, if other than December 31.

(iv) All conditions and restrictions, and any additional restrictions and technical modifications appended to the permit.

(4) Permits are not issued for boats that are launched from larger vessels. Any enforcement action that results from the activities of a launched boat will be taken against the permitted vessel.

(f) *Duration.* A permit is valid from its date of issuance to its date of expiration, unless it is revoked or suspended or the nation issuing the FFV’s documents does not accept amendments to the permit made by the Assistant Administrator in accordance with the procedures of paragraph (1) of this section. The permit will be valid for no longer than the calendar year in which it was issued.

(g) *Transfer.* Permits are not transferable or assignable. A permit is valid only for the FFV to which it is issued.

(h) *Display.* Each FFV operator must have a properly completed permit form available on board the FFV when engaged in fishing activities and must produce it at the request of an authorized officer or observer.

(i) *Suspension and revocation.* NMFS may apply sanctions to an FFV’s permit by revoking, suspending, or imposing additional permit restrictions on the permit under 15 CFR part 904, if the vessel is involved in the commission of any violation of the Magnuson-Stevens Act, the GIFA, or this subpart; if an agent and a designated representative are not maintained in the United States; if a civil penalty or criminal fine imposed under the Magnuson-Stevens Act has become overdue; or as otherwise specified in the Magnuson-Stevens Act.

(j) *Fees.* Permit application fees are described in § 600.518.

(k) *Change in application information.* The applicant must report, in writing, any change in the information supplied under paragraph (d) of this section to the Assistant Administrator within 15 calendar days after the date of the change. Failure to report a change in the ownership from that described in the current application within the specified time frame voids the permit, and all penalties involved will accrue to the previous owner.

(1) *Permit amendments.* (1) The Assistant Administrator may amend a permit by adding “additional restrictions” for the conservation and management of fishery resources covered by the permit, or for the national defense or security if the Assistant Administrator determines that such interests would be significantly impaired without such restrictions. Compliance with the added additional restrictions is a condition of the permit. Violations of added additional restrictions will be treated as violations of this subpart.

(2) The Assistant Administrator may make proposed additional restrictions effective immediately, if necessary, to prevent substantial harm to a fishery resource of the United States, to allow for the continuation of ongoing fishing operations, or to allow for fishing to

begin at the normal time for opening of the fishery.

(3) The Assistant Administrator will send proposed additional restrictions to each Nation whose vessels are affected (via the Secretary of State), to the appropriate Councils, and to the Commandant of the Coast Guard. NMFS will, at the same time, publish a document of any significant proposed additional restrictions in the FEDERAL REGISTER. The document will include a summary of the reasons underlying the proposal, and the reasons that any proposed additional restrictions are made effective immediately.

(4) The Nation whose vessels are involved, the owners of the affected vessels, their representatives, the agencies specified in paragraph (1)(3) of this section, and the public may submit written comments on the proposed additional restrictions within 30 days after publication in the FEDERAL REGISTER.

(5) The Assistant Administrator will make a final decision regarding the proposed additional restrictions as soon as practicable after the end of the comment period. The Assistant Administrator will provide the final additional restrictions to the Nation whose vessels are affected (via the Secretary of State) according to the procedures of paragraph (e) of this section. The Assistant Administrator will include with the final additional restrictions to the Nation, a response to comments submitted.

(6) Additional restrictions may be modified by following the procedures of paragraphs (1)(2) through (1)(5) of this section.

[61 FR 32540, June 24, 1996, as amended at 63 FR 7075, Feb. 12, 1998; 64 FR 39019, July 21, 1999; 76 FR 59305, Sept. 26, 2011]

§ 600.502 Vessel reports.

(a) The operator of each FFV must report the FFV's activities to the USCG and NMFS as specified in this section.

(b) All reports required by this section must be in English and in the formats specified in the permit additions and restrictions. Reports must be delivered via private or commercial communications facilities, facsimile, or other electronic means acceptable to NMFS and the USCG, directly to the

appropriate NMFS Region or Center and USCG commander. Weekly reports must also be delivered directly to the appropriate NMFS Region or Center (see tables 1 and 2 of this section). (The required reports may be delivered to the closest USCG communication station as indicated in table 3 of this section or other USCG communication station only if adequate private or commercial communications facilities have not been successfully contacted.) Radio reports must be made via radiotelegraphy, Telex, or facsimile where available. For the purposes of this section, a message is considered "transmitted" when its receipt is acknowledged by a communications facility and considered "delivered" upon its receipt by the offices of the appropriate USCG commander, NMFS Regional Office, or NMFS Center identified in table 2 of this section. Reports required by this section may be submitted by the vessel's designated representative; however, the operator of the FFV is responsible for the correct and timely filing of all required reports.

(c) *Activity reports.* The operator of each FFV must report the FFV's movements and activities before or upon the event, as specified in this paragraph (c). Appropriate forms, instructions, codes, and examples are contained in the conditions and restrictions of the FFV's permit. Each FFV report must contain the following information: The message identifier "VESREP" to indicate it is a vessel activity report, FFV name, international radio call sign IRCS, date (month and day based on GMT), time (hour and minute GMT), position (latitude and longitude to the nearest degree and minute) where required, area (by fishing area code) where required, the appropriate action code, confirmation codes where required, and the other information specified in paragraphs (c)(1) through (c)(11) of this section.

(1) "*BEGIN*". Each operator must specify the date, time, position, and area the FFV will actually "*BEGIN*" fishing in the EEZ and the species (by species code), product (by product code), and quantity of all fish and fish products (by product weight to the nearest hundredth of a metric ton) on board when entering the EEZ (action

code “BEGIN”). The message must be delivered at least 24 hours before the vessel begins to fish.

(2) “DEPART”. Each operator must specify the date, time, position, and area the FFV will “DEPART” the EEZ to embark or debark an observer, to visit a U.S. port, to conduct a joint venture in internal waters, or to otherwise temporarily leave an authorized fishing area, but not depart the seaward limit of the EEZ (action code “DEPART”). The message must be transmitted before the FFV departs the present fishing area and delivered within 24 hours of its transmittal.

(3) “RETURN”. Each operator must specify the date, time, position, and area the FFV will “RETURN” to the EEZ following a temporary departure, and the species (by species code), product (by product code), and quantity of all fish and fish products (by product weight to the nearest hundredth of a metric ton) on board that were received in a joint venture in internal waters (action code “RETURN”). The message must be transmitted before returning to the EEZ and delivered within 24 hours of its transmittal.

(4) “SHIFT”. Each operator must report each SHIFT in fishing area (as described for each fishery) by specifying the date, time, and position the FFV will start fishing, and the new area (action code “SHIFT”). The message must be transmitted before leaving the original area and delivered within 24 hours of its transmittal. If a foreign vessel operates within 20 nautical miles (37.04 km) of a fishing area boundary, its operator may submit in one message the shift reports for all fishing area shifts occurring during 1 fishing day (0001–2400 GMT). This message must be transmitted prior to the last shift expected to be made in the day and delivered within 24 hours of its transmittal.

(5) “JV OPS”. Each operator must specify the date, time, position, and area at which the FFV will “START” joint venture operations (action code “START JV OPS”) or “END” joint venture operations (action code “END JV OPS”). These reports must be made in addition to other activity reports made under this section. Each message must be transmitted before the event

and delivered within 24 hours of its transmittal.

(6) “TRANSFER”. The operator of each FFV that anticipates a transshipping operation in which the FFV will receive fish or fisheries products must specify the date, time, position and area the FFV will conduct the “TRANSFER” and the name and IRCS of the other FFV or U.S. vessel involved (action code “TRANSFER”). The report must include the permit activity code under which the transfer will be made. The message must be transmitted prior to the transfer and delivered within 24 hours of its transmittal. The movement of raw fish from a permitted foreign catching vessel or, under an Activity Code 4, from a U.S. fishing vessel to the reporting processing vessel and the return of nets or codends is not considered a transfer.

(7) “OFFLOADED”. Each operator must specify the date, time, position, and area the FFV “OFFLOADED” fish or fisheries products TO another FFV or a U.S. vessel in a transfer, the other FFV’s or U.S. vessel’s name, IRCS, Permit Activity Code under which the transfer was made, species (by species code) and quantity of fish and fisheries products (by product code and by product weight, to the nearest hundredth of a metric ton) offloaded (action code “OFFLOADED TO”). The message must be transmitted within 12 hours after the transfer is completed and delivered within 24 hours of its transmittal and before the FFV ceases fishing in the EEZ.

(8) “RECEIVED”. Each operator must specify the date, time, position and area the vessel “RECEIVED” fish or fisheries products FROM another FFV in a transfer, the other FFV’s or U.S. vessel’s name, IRCS, Permit Activity Code under which the receipt was made, species (by species code) and quantity of fish and fisheries products (by product code and by product weight, to the nearest hundredth of a metric ton) received (action code “RECEIVED FROM”). The message must be transmitted within 12 hours after the transfer is completed and delivered within 24 hours of its transmittal and before the vessel ceases fishing in the EEZ.

(9) “*CEASE*”. Each operator must specify the date, time, position, and area the FFV will “*CEASE*” fishing in order to leave the EEZ (action code “*CEASE*”). The message must be delivered at least 24 hours before the FFV’s departure.

(10) “*CHANGE*”. Each operator must report any “*CHANGE*” TO the FFV’s operations if the position or time of an event specified in an activity report will vary more than 5 nautical miles (9.26 km) or 4 hours from that previously reported, by sending a revised message inserting the word “*CHANGE*” in front of the previous report, repeating the name, IRCS, date, and time of the previous report, adding the word “*TO*” and the complete revised text of the new report (action code “*CHANGE TO*”). Changes to reports specifying an early beginning of fishing by an FFV or other changes to reports contained in paragraphs (c)(1) through (c)(9) of this section must be transmitted and delivered as if the “*CHANGE*” report were the original message.

(11) “*CANCEL*”. Each operator wanting to “*CANCEL*” a previous report may do so by sending a revised message, and inserting the word “*CANCEL*” in front of the previous report’s vessel name, IRCS, date, time and action code canceled (action code “*CANCEL*”). The message must be transmitted and delivered prior to the date and time of the event in the original message.

(d) The operator of an FFV will be in violation of paragraphs (c)(1) through (c)(9) of this section if the FFV does not pass within 5 nautical miles (9.26 km) of the position given in the report within 4 hours of the time given in the report.

(e) The notices required by this section may be provided for individual or groups of FFV’s (on a vessel-by-vessel basis) by authorized persons. An FFV operator may retransmit reports on the behalf of another FFV, if authorized by that FFV’s operator. This does not relieve the individual vessel operator of the responsibility of filing required reports. In these cases, the message format should be modified so that each line of text under “*VESREP*” is a separate vessel report.

(f) *Weekly reports.* (1) The operator of each FFV in the EEZ must submit appropriate weekly reports through the Nation’s designated representative. The report must arrive at the address and time specified in paragraph (g) of this section. The reports may be sent by facsimile or Telex, but a completed copy of the report form must be mailed or hand delivered to confirm the Telex. Appropriate forms, instructions, codes, and examples are contained in the conditions and restrictions of the FFV’s permit. Designated representatives may include more than one vessel report in a facsimile or Telex message, if the information is submitted on a vessel-by-vessel basis. Requests for corrections to previous reports must be submitted through the Nation’s designated representative and mailed or hand-delivered, together with a written explanation of the reasons for the errors. The appropriate Regional Administrator or Science and Research Director may accept or reject any correction and initiate any appropriate civil penalty actions.

(2) *Weekly catch report (CATREP).* The operator of each FFV must submit a weekly catch report stating any catch (Activity Code 1) in round weight of each species or species group allocated to that Nation by area and days fished in each area for the weekly period Sunday through Saturday, GMT, as modified by the fishery in which the FFV is engaged. Foreign vessels delivering unsorted, unprocessed fish to a processing vessel are not required to submit CATREP’s, if that processing vessel (Activity Code 2) submits consolidated CATREP’s for all fish received during each weekly period. No report is required for FFV’s that do not catch or receive foreign-caught fish during the reporting period.

(3) *Weekly receipts report (RECREP).* The operator of each FFV must submit a weekly report stating any receipts of U.S.-harvested fish in a joint venture (Activity Code 4) for the weekly period Sunday through Saturday, GMT, as modified by the fishery in which the FFV is engaged, for each fishing area, by authorized or prohibited species or species group; days fish received; round weight retained or returned to the U.S.

fishing vessel; number of codends received; and number of vessels transferring codends. The report must also include the names of U.S. fishing vessels transferring codends during the week. No report is required for FFV's that do not receive any U.S.-harvested fish during the reporting period.

(4) *Marine mammal report (MAMREP)*. The operator of each FFV must submit a weekly report stating any incidental catch or receipt of marine mammals (Activity Codes 1 or 2 and/or 4), the geographical position caught, the condition of the animal, number caught (if more than one of the same species and condition), and nationality of the catching vessel for the period Sunday through Saturday, GMT, as modified by the fishery in which the vessel is engaged. Foreign catching vessels delivering unsorted, unprocessed fish to processing vessel are not required to submit MAMREP's, provided that the processing or factory vessel (Activity Code 2) submits consolidated MAMREP's for all fish received during each weekly period. FFV's receiving U.S.-harvested fish in a joint venture (Activity Code 4) must submit consolidated reports for U.S. vessels operating

in the joint venture. No report is required for FFV's that do not catch or receive marine mammals during the reporting period.

(g) *Submission instructions for weekly reports*. The designated representative for each FFV must submit weekly reports in the prescribed format to the appropriate Regional Administrator or Science and Research Director of NMFS by 1900 GMT on the Wednesday following the end of the reporting period. However, by agreement with the appropriate Regional Administrator or Science and Research Director, the designated representative may submit weekly reports to some other facility of NMFS.

(h) *Alternative reporting procedures*. As an alternative to the use of the specific procedures provided, an applicant may submit proposed reporting procedures for a general type of fishery operation (i.e., transshipments under Activity Code 10) to the appropriate Regional Administrator and the USCG commander (see tables 1 and 2 to § 600.502 of this chapter). With the agreement of the USCG commander, the Regional Administrator may authorize the use of alternative reporting procedures.

TABLE 1 TO § 600.502—ADDRESSES

NMFS regional administrators	NMFS science and research directors	U.S. Coast Guard commanders
Administrator, Northeast Region, National Marine Fisheries Service, NOAA, One Blackburn Drive, Gloucester, MA 01930–2298.	Director, Northeast Fisheries Science Center, National Marine Fisheries Service, NOAA, 166 Water St., Woods Hole, MA 02543–1097.	Commander, Atlantic Area, U.S. Coast Guard, 431 Crawford St., Portsmouth, VA 23704.
Administrator, Southeast Region, National Marine Fisheries Service, 263 13th Ave. South, St. Petersburg, FL 33701.	Director, Southeast Fisheries Science Center, National Marine Fisheries Service, NOAA, 75 Virginia Beach Drive, Miami, FL 33149.	Commander, Atlantic Area, U.S. Coast Guard, Governor's Island, New York 10004.
Administrator, Northwest Region, National Marine Fisheries Service, NOAA, 7600 Sand Point Way, NE, BIN C15700, Bldg. 1, Seattle, WA 98115.	Director, Northwest Fisheries Science Center, National Marine Fisheries Service, NOAA, 2725 Montlake Blvd. East, Seattle, WA 98112–2097.	Commander, Pacific Area, U.S. Coast Guard, Government Island, Alameda, CA 94501.
Administrator, Alaska Region, National Marine Fisheries Service, NOAA, P.O. Box 21668, Juneau, AK 99802–1668.	Director, Alaska Fisheries Science Center, National Marine Fisheries Service, NOAA, 7600 Sand Point Way, NE, BIN C15700, Bldg. 4, Seattle, WA 98115–0070.	Commander, Seventeenth Coast Guard District, P.O. Box 25517, Juneau, AK 99802.
Administrator, Southwest Region, National Marine Fisheries Service, NOAA, 501 West Ocean Blvd., Suite 4200, Long Beach, CA 90802–4213.	Director, Southwest Fisheries Science Center, National Marine Fisheries Service, NOAA, P.O. Box 271, La Jolla, CA 92038–0271.	Commander, Fourteenth Coast Guard District, 300 Ala Moana Blvd., Honolulu, HI 96850.
Administrator, Pacific Islands Region, National Marine Fisheries Service, NOAA, 1845 Wasp Blvd., Bldg. 176, Honolulu, HI 96818.	Director, Pacific Islands Fisheries Science Center, National Marine Fisheries Service, NOAA, 1845 Wasp Blvd., Bldg. 176, Honolulu, HI 96818.	Commander, Fourteenth Coast Guard District, 300 Ala Moana Blvd., Honolulu, HI 96850.

Fishery Conservation and Management

§ 600.503

TABLE 2 TO § 600.502—AREAS OF RESPONSIBILITY OF NMFS AND U.S. COAST GUARD OFFICES

Area of responsibility/fishery	National Marine Fisheries Service	U.S. Coast Guard
Atlantic Ocean North of Cape Hatteras	Director, Northeast Science Center, Attn: Observer Program.	Commander, Atlantic Area.
Atlantic Ocean South of Cape Hatteras	Director, Northeast Science Center, Attn: Observer Program.	Commander, Atlantic Area.
Atlantic Tunas, Swordfish, Billfish and Sharks.	Director, Office of Sustainable Fisheries	Commander, Atlantic Area.
Gulf of Mexico and Caribbean Sea	Administrator, Southeast Region	Commander, Atlantic Area.
Pacific Ocean off the States of California, Oregon, and Washington.	Administrator, Northwest Region	Commander, Pacific Area.
North Pacific Ocean and Bering Sea off Alaska.	Administrator, Alaska Region	Commander, Seventeenth Coast Guard District.
Pacific Ocean off Hawaii, American Samoa, Guam, Commonwealth of the Northern Mariana Islands, and U.S. Insular Possessions in the Central and Western Pacific.	Administrator, Pacific Islands Region	Commander, Fourteenth Coast Guard District.

TABLE 3 TO § 600.502—U.S. COAST GUARD COMMUNICATIONS STATIONS AND FREQUENCIES

U.S. Coast Guard communications station	Radiotelephone		
	IRCS	Channel ¹	GMT time
Boston	NMF	A-E B,C D E	2330–1100. All. 1100–2330. (On request).

§ 600.503 Vessel and gear identification.

(a) *Vessel identification.* (1) The operator of each FFV assigned an IRCS must display that call sign amidships on both the port and starboard sides of the deckhouse or hull, so that it is visible from an enforcement vessel, and on an appropriate weather deck so it is visible from the air.

(2) The operator of each FFV not assigned an IRCS, such as a small trawler associated with a mothership or one of a pair of trawlers, must display the IRCS of the associated vessel, followed by a numerical suffix. (For example, JCZM-1, JCZM-2, etc., would be displayed on small trawlers not assigned an IRCS operating with a mothership whose IRCS is JCZM; JANP-1 would be

§ 600.504

displayed by a pair trawler not assigned an IRCS operating with a trawler whose IRCS is JANP.)

(3) The vessel identification must be in a color in contrast to the background and must be permanently affixed to the FFV in block Roman alphabet letters and Arabic numerals at least 1 m in height for FFV's over 20 m in length, and at least 0.5 m in height for all other FFV's.

(b) *Navigational lights and shapes.* Each FFV must display the lights and shapes prescribed by the International Regulations for Preventing Collisions at Sea, 1972 (TIAS 8587, and 1981 amendment TIAS 10672), for the activity in which the FFV is engaged (as described at 33 CFR part 81).

(c) *Gear identification.* (1) The operator of each FFV must ensure that all deployed fishing gear that is not physically and continuously attached to an FFV:

(i) Is clearly marked at the surface with a buoy displaying the vessel identification of the FFV (see paragraph (a) of this section) to which the gear belongs.

(ii) Has attached a light visible for 2 nautical miles (3.70 km) at night in good visibility.

(iii) Has a radio buoy.

Trawl codends passed from one vessel to another are considered continuously attached gear and are not required to be marked.

(2) The operator of each FFV must ensure that deployed longlines, strings of traps or pots, and gillnets are marked at the surface at each terminal end with: (see paragraphs (c)(1)(i) through (c)(1)(iii) of this section).

(3) Additional requirements may be specified for the fishery in which the vessel is engaged.

(4) Unmarked or incorrectly identified fishing gear may be considered abandoned and may be disposed of in accordance with applicable Federal regulations by any authorized officer.

(d) *Maintenance.* The operator of each FFV must—

(1) Keep the vessel and gear identification clearly legible and in good repair.

(2) Ensure that nothing on the FFV obstructs the view of the markings from an enforcement vessel or aircraft.

50 CFR Ch. VI (10–1–21 Edition)

(3) Ensure that the proper navigational lights and shapes are displayed for the FFV's activity and are properly functioning.

§ 600.504 Facilitation of enforcement.

(a) *General.* (1) The owner, operator, or any person aboard any FFV subject to this subpart must immediately comply with instructions and signals issued by an authorized officer to stop the FFV; to move the FFV to a specified location; and to facilitate safe boarding and inspection of the vessel, its gear, equipment, records, and fish and fish products on board for purposes of enforcing the Magnuson-Stevens Act and this subpart.

(2) The operator of each FFV must provide vessel position or other information when requested by an authorized officer within the time specified in the request.

(b) *Communications equipment.* (1) Each FFV must be equipped with a VHF-FM radiotelephone station located so that it may be operated from the wheelhouse. Each operator must maintain a continuous listening watch on channel 16 (156.8 MHz).

(2) Each FFV must be equipped with a radiotelephone station capable of communicating via 2182 kHz (SSB) radiotelephony and at least one set of working frequencies identified in table 3 to § 600.502 appropriate to the fishery in which the FFV is operating. Each operator must monitor and be ready to communicate via 2182 kHz (SSB) radiotelephone each day from 0800 GMT to 0830 GMT and 2000 to 2030 GMT, and in preparation for boarding.

(3) FFV's that are not equipped with processing facilities and that deliver all catches to a foreign processing vessel are exempt from the requirements of paragraph (b)(2) of this section.

(4) FFV's with no IRCS that do not catch fish and are used as auxiliary vessels to handle codends, nets, equipment, or passengers for a processing vessel are exempt from the requirements of paragraphs (b)(1) and (b)(2) of this section.

(5) The appropriate Regional Administrator, with the agreement of the appropriate USCG commander, may,

upon request by a foreign nation, accept alternatives to the radio requirements of this section to certain FFV's or types of FFV's operating in a fishery, provided they are adequate for the communications needs of the fishery.

(c) *Communications procedures.* (1) Upon being approached by a USCG vessel or aircraft, or other vessel or aircraft with an authorized officer aboard, the operator of any FFV subject to this subpart must be alert for communications conveying enforcement instructions. The enforcement unit may communicate by channel 16 VHF-FM radiotelephone, 2182 kHz (SSB) radiotelephone, message block from an aircraft, flashing light or flag signals from the International Code of Signals, hand signal, placard, loudhailer, or other appropriate means. The following signals, extracted from the International Code of Signals, are among those that may be used.

(i) "AA, AA, AA, etc.," which is the call for an unknown station. The signaled vessel should respond by identifying itself or by illuminating the vessel identification required by § 600.505.

(ii) "RY-CY", meaning "You should proceed at slow speed, a boat is coming to you".

(iii) "SQ3", meaning "You should stop or heave to; I am going to board you".

(iv) "L", meaning "You should stop your vessel instantly."

(2) Failure of an FFV's operator to stop the vessel when directed to do so by an authorized officer using VHF-FM radiotelephone (channel 16), 2182 kHz (SSB) radiotelephone (where required), message block from an aircraft, flashing light signal, flaghoist, or loudhailer constitutes a violation of this subpart.

(3) The operator of or any person aboard an FFV who does not understand a signal from an enforcement unit and who is unable to obtain clarification by radiotelephone or other means must consider the signal to be a command to stop the FFV instantly.

(d) *Boarding.* The operator of an FFV signaled for boarding must—

(1) Monitor 2182 kHz (SSB) radiotelephone and channel 16 (156.8 MHz) VHF-FM radiotelephone.

(2) Stop immediately and lay to or maneuver in such a way as to maintain

the safety of the FFV and facilitate boarding by the authorized officer and the boarding party or an observer.

(3) Provide the authorized officer, boarding party, or observer a safe pilot ladder. The operator must ensure the pilot ladder is securely attached to the FFV and meets the construction requirements of Regulation 17, Chapter V of the International Convention for the Safety of Life at Sea (SOLAS), 1974 (TIAS 9700 and 1978 Protocol, TIAS 10009), or a substantially equivalent national standard approved by letter from the Assistant Administrator, with agreement with the USCG. Safe pilot ladder standards are summarized below:

(i) The ladder must be of a single length of not more than 9 m (30 ft), capable of reaching the water from the point of access to the FFV, accounting for all conditions of loading and trim of the FFV and for an adverse list of 15°. Whenever the distance from sea level to the point of access to the ship is more than 9 m (30 ft), access must be by means of an accommodation ladder or other safe and convenient means.

(ii) The steps of the pilot ladder must be—

(A) Of hardwood, or other material of equivalent properties, made in one piece free of knots, having an efficient non-slip surface; the four lowest steps may be made of rubber of sufficient strength and stiffness or of other suitable material of equivalent characteristics.

(B) Not less than 480 mm (19 inches) long, 115 mm (4.5 inches) wide, and 25 mm (1 inch) in depth, excluding any non-slip device.

(C) Equally spaced not less than 300 millimeters (12 inches) nor more than 380 mm (15 inches) apart and secured in such a manner that they will remain horizontal.

(iii) No pilot ladder may have more than two replacement steps that are secured in position by a method different from that used in the original construction of the ladder.

(iv) The side ropes of the ladder must consist of two uncovered manila ropes not less than 60 mm (2.25 inches) in circumference on each side (or synthetic ropes of equivalent size and equivalent or greater strength). Each rope must be

§ 600.505

continuous, with no joints below the top step.

(v) Battens made of hardwood, or other material of equivalent properties, in one piece and not less than 1.80 m (5 ft 10 inches) long must be provided at such intervals as will prevent the pilot ladder from twisting. The lowest batten must be on the fifth step from the bottom of the ladder and the interval between any batten and the next must not exceed nine steps.

(vi) Where passage onto or off the ship is by means of a bulwark ladder, two handhold stanchions must be fitted at the point of boarding or leaving the FFV not less than 0.70 m (2 ft 3 inches) nor more than 0.80 m (2 ft 7 inches) apart, not less than 40 mm (2.5 inches) in diameter, and must extend not less than 1.20 m (3 ft 11 inches) above the top of the bulwark.

(4) When necessary to facilitate the boarding or when requested by an authorized officer or observer, provide a manrope, safety line, and illumination for the ladder; and

(5) Take such other actions as necessary to ensure the safety of the authorized officer and the boarding party and to facilitate the boarding and inspection.

(e) *Access and records.* (1) The owner and operator of each FFV must provide authorized officers access to all spaces where work is conducted or business papers and records are prepared or stored, including but not limited to, personal quarters and areas within personal quarters.

(2) The owner and operator of each FFV must provide to authorized officers all records and documents pertaining to the fishing activities of the vessel, including but not limited to, production records, fishing logs, navigation logs, transfer records, product receipts, cargo stowage plans or records, draft or displacement calculations, customs documents or records, and an accurate hold plan reflecting the current structure of the vessel's storage and factory spaces.

(f) *Product storage.* The operator of each permitted FFV storing fish or fish products in a storage space must ensure that all non-fish product items are neither stowed beneath nor covered by fish products, unless required to main-

50 CFR Ch. VI (10–1–21 Edition)

tain the stability and safety of the vessel. These items include, but are not limited to, portable conveyors, exhaust fans, ladders, nets, fuel bladders, extra bin boards, or other movable non-product items. These items may be in the space when necessary for safety of the vessel or crew or for storage of the product. Lumber, bin boards, or other dunnage may be used for shoring or bracing of product to ensure safety of crew and to prevent shifting of cargo within the space.

[61 FR 32540, June 24, 1996, as amended at 63 FR 7075, Feb. 12, 1998]

§ 600.505 Prohibitions.

(a) It is unlawful for any person to do any of the following:

(1) Ship, transport, offer for sale, sell, purchase, import, export, or have custody, control, or possession of any fish taken or retained in violation of the Magnuson-Stevens Act, the applicable GIFA, this subpart, or any permit issued under this subpart;

(2) Refuse to allow an authorized officer to board an FFV for purposes of conducting any search or inspection in connection with the enforcement of the Magnuson-Stevens Act, the applicable GIFA, this subpart, or any other permit issued under this subpart;

(3) Assault, resist, oppose, impede, intimidate, or interfere with any authorized officer in the conduct of any inspection or search described in paragraph (a)(2) of this section;

(4) Resist a lawful arrest for any act prohibited by the Magnuson-Stevens Act, the applicable GIFA, this subpart, or any permit issued under this subpart;

(5) Interfere with, delay, or prevent by any means the apprehension or arrest of another person with the knowledge that such other person has committed any act prohibited by the Magnuson-Stevens Act, the applicable GIFA, this subpart, or any permit issued under this subpart;

(6) Interfere with, obstruct, delay, oppose, impede, intimidate, or prevent by any means any boarding, investigation or search, wherever conducted, in the process of enforcing the Magnuson-Stevens Act, the applicable GIFA, this subpart, or any permit issued under this subpart;

Fishery Conservation and Management

§ 600.505

(7) Engage in any fishing activity for which the FFV does not have a permit as required under § 600.501;

(8) Engage in any fishing activity within the EEZ without a U.S. observer aboard the FFV, unless the requirement has been waived by the Assistant Administrator or appropriate Regional Administrator;

(9) Retain or attempt to retain, directly or indirectly, any U.S. harvested fish, unless the FFV has a permit for Activity Codes 4, 6, or 10;

(10) Use any fishing vessel to engage in fishing after the revocation, or during the period of suspension, of an applicable permit issued under this subpart;

(11) Violate any provision of the applicable GIFA;

(12) Falsely or incorrectly complete (including by omission) a permit application or permit form as specified in § 600.501 (d) and (k);

(13) Fail to report to the Assistant Administrator within 15 days any change in the information contained in the permit application for a FFV, as specified in § 600.501(k);

(14) Assault, resist, oppose, impede, intimidate, or interfere with an observer placed aboard an FFV under this subpart;

(15) Interfere with or bias the sampling procedure employed by an observer, including sorting or discarding any catch prior to sampling, unless the observer has stated that sampling will not occur; or tamper with, destroy, or discard an observer's collected samples, equipment, records, photographic film, papers, or effects without the express consent of the observer;

(16) Prohibit or bar by command, impediment, threat, coercion, or refusal of reasonable assistance, an observer from collecting samples, conducting product recovery rate determinations, making observations, or otherwise performing the observer's duties;

(17) Harass or sexually harass an authorized officer or observer;

(18) Fail to provide the required assistance to an observer as described at § 600.506 (c) and (e);

(19) Fail to identify, falsely identify, fail to properly maintain, or obscure the identification of the FFV or its gear as required by this subpart;

(20) Falsify or fail to make, keep, maintain, or submit any record or report required by this subpart;

(21) Fail to return to the sea or fail to otherwise treat prohibited species as required by this subpart;

(22) Fail to report or falsely report any gear conflict;

(23) Fail to report or falsely report any loss, jettisoning, or abandonment of fishing gear or other article into the EEZ that might interfere with fishing, obstruct fishing gear or vessels, or cause damage to any fishery resource or marine mammals;

(24) Continue Activity Codes 1 through 4 after those activity codes have been canceled under § 600.511;

(25) Fail to maintain health and safety standards set forth in § 600.506(d);

(26) Violate any provisions of regulations for specific fisheries of this subpart;

(27) On a scientific research vessel, engage in fishing other than recreational fishing authorized by applicable state, territorial, or Federal regulations;

(28) Violate any provision of this subpart, the Magnuson-Stevens Act, the applicable GIFA, any notice issued under this subpart or any permit issued under this subpart; or

(29) Attempt to do any of the foregoing.

(b) It is unlawful for any FFV, and for the owner or operator of any FFV except an FFV engaged only in recreational fishing, to fish—

(1) Within the boundaries of any state, unless:

(i) The fishing is authorized by the Governor of that state as permitted by section 306(c) of the Magnuson-Stevens Act to engage in a joint venture for processing and support with U.S. fishing vessels in the internal waters of that state; or

(ii) The fishing is authorized by, and conducted in accordance with, a valid permit issued under § 600.501, and the Governor of that state has indicated concurrence to allow fishing consisting solely of transporting fish or fish products from a point within the boundaries of that state to a point outside the United States; or

(2) Within the EEZ, or for any anadromous species or continental shelf

§ 600.506

fishery resources beyond the EEZ, unless the fishing is authorized by, and conducted in accordance with, a valid permit issued under § 600.501.

[61 FR 32540, June 24, 1996, as amended at 63 FR 7075, Feb. 12, 1998; 64 FR 39020, July 21, 1999]

§ 600.506 Observers.

(a) *General.* To carry out such scientific, compliance monitoring, and other functions as may be necessary or appropriate to carry out the purposes of the Magnuson-Stevens Act, the appropriate Regional Administrator or Science and Research Director (see table 2 to § 600.502) may assign U.S. observers to FFV's. Except as provided for in section 201(h)(2) of the Magnuson-Stevens Act, no FFV may conduct fishing operations within the EEZ unless a U.S. observer is aboard.

(b) *Effort plan.* To ensure the availability of an observer as required by this section, the owners and operators of FFV's wanting to fish within the EEZ will submit to the appropriate Regional Administrator or Science and Research Director and also to the Chief, Financial Services Division, NMFS, 1315 East West Highway, Silver Spring, MD 20910 a schedule of fishing effort 30 days prior to the beginning of each quarter. A quarter is a time period of 3 consecutive months beginning January 1, April 1, July 1, and October 1 of each year. The schedule will contain the name and IRCS of each FFV intending to fish within the EEZ during the upcoming quarter, and each FFV's expected date of arrival and expected date of departure.

(1) The appropriate Regional Administrator or Science and Research Director must be notified immediately of any substitution of vessels or any cancellation of plans to fish in the EEZ for FFV's listed in the effort plan required by this section.

(2) If an arrival date of an FFV will vary more than 5 days from the date listed in the quarterly schedule, the appropriate Regional Administrator or Science and Research Director must be notified at least 10 days in advance of the rescheduled date of arrival. If the notice required by this paragraph (b)(2) is not given, the FFV may not engage in fishing until an observer is available

50 CFR Ch. VI (10–1–21 Edition)

and has been placed aboard the vessel or the requirement has been waived by the appropriate Regional Administrator or Science and Research Director.

(c) *Assistance to observers.* To assist the observer in the accomplishment of his or her assigned duties, the owner and operator of an FFV to which an observer is assigned must—

(1) Provide, at no cost to the observer or the United States, accommodations for the observer aboard the FFV that are equivalent to those provided to the officers of that vessel.

(2) Cause the FFV to proceed to such places and at such times as may be designated by the appropriate Regional Administrator or Science and Research Director for the purpose of embarking and debarking the observer.

(3) Allow the observer to use the FFV's communications equipment and personnel upon demand for the transmission and receipt of messages.

(4) Allow the observer access to and use of the FFV's navigation equipment and personnel upon demand to determine the vessel's position.

(5) Allow the observer free and unobstructed access to the FFV's bridge, trawl, or working decks, holding bins, processing areas, freezer spaces, weight scales, cargo holds and any other space that may be used to hold, process, weigh, or store fish or fish products at any time.

(6) Allow the observer to inspect and copy the FFV's daily log, communications log, transfer log, and any other log, document, notice, or record required by these regulations.

(7) Provide the observer copies of any records required by these regulations upon demand.

(8) Notify the observer at least 15 minutes before fish are brought on board or fish or fish products are transferred from the FFV to allow sampling the catch or observing the transfer, unless the observer specifically requests not to be notified.

(9) Provide all other reasonable assistance to enable the observer to carry out his or her duties.

(d) *Health and safety standards.* All foreign fishing vessels to which an observer is deployed must maintain, at

all times that the vessel is in the EEZ, the following:

- (1) At least one working radar.
- (2) Functioning navigation lights as required by international law.
- (3) A watch on the bridge by appropriately trained and experienced personnel while the vessel is underway.
- (4) Lifeboats and/or inflatable life rafts with a total carrying capacity equal to or greater than the number of people aboard the vessel. Lifeboats and inflatable life rafts must be maintained in good working order and be readily available.
- (5) Life jackets equal or greater in number to the total number of persons aboard the vessel. Life jackets must be stowed in readily accessible and plainly marked positions throughout the vessel, and maintained in a state of good repair.
- (6) At least one ring life buoy for each 25 ft (7.6 m) of vessel length, equipped with automatic water lights. Ring life buoys must have an outside diameter of not more than 32 inches (81.3 cm) nor less than 30 inches (76.2 cm), and must be maintained in a state of good repair. Ring life buoys must be readily available, but not positioned so they pose a threat of entanglement in work areas. They must be secured in such a way that they can be easily cast loose in the event of an emergency.
- (7) At least one VHF-FM radio with a functioning channel 16 (156.8 MHz), International Distress, Safety and Calling Frequency, and one functioning AM radio (SSB-Single Side Band) capable of operating at 2182 kHz (SSB). Radios will be maintained in a radio room, chartroom, or other suitable location.
- (8) At least one Emergency Position Indicating Radio Beacon (EPIRB), approved by the USCG for offshore commercial use, stowed in a location so as to make it readily available in the event of an emergency.
- (9) At least six hand-held, rocket-propelled, parachute, red-flare distress signals, and three orange-smoke distress signals stowed in the pilothouse or navigation bridge in portable watertight containers.
- (10) All lights, shapes, whistles, foghorns, fog bells and gongs required by and maintained in accordance with

the International Regulations for Preventing Collisions at Sea.

(11) Clean and sanitary conditions in all living spaces, food service and preparation areas and work spaces aboard the vessel.

(e) *Observer transfers.* (1) The operator of the FFV must ensure that transfers of observers at sea via small boat or raft are carried out during daylight hours as weather and sea conditions allow, and with the agreement of the observer involved. The FFV operator must provide the observer 3 hours advance notice of at-sea transfers, so that the observer may collect personal belongings, equipment, and scientific samples.

(2) The FFV's involved must provide a safe pilot ladder and conduct the transfer according to the procedures of §600.504(d) to ensure the safety of the during the transfer.

(3) An experienced crew member must assist the observer in the small boat or raft in which the transfer is made.

(f) *Supplementary observers.* In the event funds are not available from Congressional appropriations of fees collected to assign an observer to a foreign fishing vessel, the appropriate Regional Administrator or Science and Research Director will assign a supplementary observer to that vessel. The costs of supplementary observers will be paid for by the owners and operators of foreign fishing vessels as provided for in paragraph (h) of this section.

(g) *Supplementary observer authority and duties.* (1) A supplementary observer aboard a foreign fishing vessel has the same authority and must be treated in all respects as an observer who is employed by NMFS, either directly or under contract.

(2) The duties of supplementary observers and their deployment and work schedules will be specified by the appropriate Regional Administrator or Science and Research Director.

(3) All data collected by supplementary observers will be under the exclusive control of the Assistant Administrator.

(h) *Supplementary observer payment—*
(1) *Method of payment.* The owners and operators of foreign fishing vessels must pay directly to the contractor the

costs of supplementary observer coverage. Payment must be made to the contractor supplying supplementary observer coverage either by letter of credit or certified check drawn on a federally chartered bank in U.S. dollars, or other financial institution acceptable to the contractor. The letter of credit used to pay supplementary observer fees to contractors must be separate and distinct from the letter of credit required by § 600.518(b)(2). Billing schedules will be specified by the terms of the contract between NOAA and the contractors. Billings for supplementary observer coverage will be approved by the appropriate Regional Administrator or Science and Research Director and then transmitted to the owners and operators of foreign fishing vessels by the appropriate designated representative. Each country will have only one designated representative to receive observer bills for all vessels of that country, except as provided for by the Assistant Administrator. All bills must be paid within 10 working days of the billing date. Failure to pay an observer bill will constitute grounds to revoke fishing permits. All fees collected under this section will be considered interim in nature and subject to reconciliation at the end of the fiscal year in accordance with paragraph (h)(4) of this section and § 600.518(d).

(2) *Contractor costs.* The costs charged for supplementary observer coverage to the owners and operators of foreign fishing vessels may not exceed the costs charged to NMFS for the same or similar services, except that contractors may charge to the owners and operators of foreign fishing vessels an additional fee to cover the administrative costs of the program not ordinarily part of contract costs charged to NMFS. The costs charged foreign fishermen for supplementary observers may include, but are not limited to the following:

- (i) Salary and benefits, including overtime, for supplementary observers.
- (ii) The costs of post-certification training required by paragraph (j)(2) of this section.
- (iii) The costs of travel, transportation, and per diem associated with deploying supplementary observers to foreign fishing vessels including the

cost of travel, transportation, and per diem from the supplementary observer's post of duty to the point of embarkation to the foreign fishing vessel, and then from the point of disembarkation to the post of duty from where the trip began. For the purposes of these regulations, the appropriate Regional Administrator or Science and Research Director will designate posts of duty for supplementary observers.

(iv) The costs of travel, transportation, and per diem associated with the debriefing following deployment of a supplementary observer by NMFS officials.

(v) The administrative and overhead costs incurred by the contractor and, if appropriate, a reasonable profit.

(3) *NMFS costs.* The owners and operators of foreign fishing vessels must also pay to NMFS as part of the surcharge required by section 201(i)(4) of the Magnuson-Stevens Act, the following costs:

(i) The costs of certifying applicants for the position of supplementary observer.

(ii) The costs of any equipment, including safety equipment, sampling equipment, operations manuals, or other texts necessary to perform the duties of a supplementary observer. The equipment will be specified by the appropriate Regional Administrator or Science and Research Director according to the requirements of the fishery to which the supplementary observer will be deployed.

(iii) The costs associated with communications with supplementary observers for transmission of data and routine messages.

(iv) For the purposes of monitoring the supplementary observer program, the costs for the management and analysis of data.

(v) The costs for data editing and entry.

(vi) Any costs incurred by NMFS to train, deploy or debrief a supplementary observer.

(vii) The cost for U.S. Customs inspection for supplementary observers disembarking after deployment.

(4) *Reconciliation.* Fees collected by the contractor in excess of the actual costs of supplementary observer coverage will be refunded to the owners and operators of foreign fishing vessels,

or kept on deposit to defray the costs of future supplementary observer coverage. Refunds will be made within 60 days after final costs are determined and approved by NMFS.

(i) *Supplementary observer contractors*—(1) *Contractor eligibility*. Supplementary observers will be obtained by NMFS from persons or firms having established contracts to provide NMFS with observers. In the event no such contract is in place, NMFS will use established, competitive contracting procedures to select persons or firms to provide supplementary observers. The services supplied by the supplementary observer contractors will be as described within the contract and as specified below.

(2) Supplementary observer contractors must submit for the approval of the Assistant Administrator the following:

(i) A copy of any contract, including all attachments, amendments, and enclosures thereto, between the contractor and the owners and operators of foreign fishing vessels for whom the contractor will provide supplementary observer services.

(ii) All application information for persons whom the contractor desires to employ as certified supplementary observers.

(iii) Billing schedules and billings to the owners and operators of foreign fishing vessels for further transmission to the designated representative of the appropriate foreign nation.

(iv) All data on costs.

(j) *Supplementary observers—certification, training*—(1) *Certification*. The appropriate Regional Administrator or Science and Research Director will certify persons as qualified for the position of supplementary observer once the following conditions are met:

(i) The candidate is a citizen or national of the United States.

(ii) The candidate has education or experience equivalent to the education or experience required of persons used as observers by NMFS as either Federal personnel or contract employees. The education and experience required for certification may vary according to the requirements of managing the foreign fishery in which the supplementary observer is to be deployed.

Documentation of U.S. citizenship or nationality, and education or experience will be provided from personal qualification statements on file with NMFS contractors who provide supplementary observer services, and will not require the submission of additional information to NMFS.

(2) *Training*. Prior to deployment to foreign fishing vessels, certified supplementary observers must also meet the following conditions:

(i) Each certified supplementary observer must satisfactorily complete a course of training approved by the appropriate Regional Administrator or Science and Research Director as equivalent to that received by persons used as observers by NMFS as either Federal personnel or contract employees. The course of training may vary according to the foreign fishery in which the supplementary observer is to be deployed.

(ii) Each certified supplementary observer must agree in writing to abide by standards of conduct as set forth in Department of Commerce Administrative Order 202-735 (as provided by the contractor).

(k) *Supplementary observer certification suspension or revocation*. (1) Certification of a supplementary observer may be suspended or revoked by the Assistant Administrator under the following conditions:

(i) A supplementary observer fails to perform the duties specified in paragraph (g)(2) of this section.

(ii) A supplementary observer fails to abide by the standards of conduct described by Department of Commerce Administrative Order 202-735.

(2) The suspension or revocation of the certification of a supplementary observer by the Assistant Administrator may be based on the following:

(i) Boarding inspection reports by authorized officers of the USCG or NMFS, or other credible information, that indicate a supplementary observer has failed to abide by the established standards of conduct; or

(ii) An analysis by NMFS of the data collected by a supplementary observer indicating improper or incorrect data collection or recording. The failure to

§ 600.507

50 CFR Ch. VI (10–1–21 Edition)

properly collect or record data is sufficient to justify decertification of supplementary observers; no intent to defraud need be demonstrated.

(3) The Assistant Administrator will notify the supplementary observer, in writing, of the Assistant Administrator's intent to suspend or revoke certification, and the reasons therefor, and provide the supplementary observer a reasonable opportunity to respond. If the Assistant Administrator determines that there are disputed questions of material fact, then the Assistant Administrator may in this respect appoint an examiner to make an informal fact-finding inquiry and prepare a report and recommendations.

[61 FR 32540, June 24, 1996, as amended at 63 FR 7074, 7075, Feb. 12, 1998; 64 FR 39020, July 21, 1999]

§ 600.507 Recordkeeping.

(a) *General.* The owner and operator of each FFV must maintain timely and accurate records required by this section as modified by the regulations for the fishery in which the FFV is engaged.

(1) The owner and operator of each FFV must maintain all required records in English, based on Greenwich mean time (GMT) unless otherwise specified in the regulation, and make them immediately available for inspection upon the request of an authorized officer or observer.

(2) The owner and operator of each FFV must retain all required records on board the FFV whenever it is in the EEZ, for 3 years after the end of the permit period.

(3) The owner and operator of each FFV must retain the required records and make them available for inspection upon the request of an authorized officer at any time during the 3 years after the end of the permit period, whether or not such records are on board the vessel.

(4) The owner and operator of each FFV must provide to the Assistant Administrator, in the form and at the times prescribed, any other information requested that the Assistant Administrator determines is necessary to fulfill the fishery conservation, management and enforcement purposes of the Magnuson-Stevens Act.

(b) *Communications log.* The owner and operator of each FFV must record in a separate communications log, at the time of transmittal, the time and content of each notification made under § 600.504.

(c) *Transfer log.* Except for the transfer of unsorted, unprocessed fish via codend from a catching vessel to a processing vessel (Activity Code 2 or 4), the owner and operator of each FFV must record, in a separate transfer log, each transfer or receipt of any fish or fishery product, including quantities transferred or offloaded outside the EEZ. The operator must record in the log within 12 hours of the completion of the transfer:

(1) The time and date (GMT) and location (in geographic coordinates) the transfer began and was completed.

(2) The product weight, by species and product (use species and product codes), of all fish transferred, to the nearest 0.01 mt.

(3) The name, IRCS, and permit number of both the FFV offloading the fish and the FFV receiving the fish.

(d) *Daily fishing log.* (1) The owner or operator of each FFV authorized to catch fish (Activity Code 1) must maintain a daily fishing log of the effort, catch and production of the FFV, as modified by paragraph (d)(2) of this section and the regulations for the fishery in which the FFV is engaged. The operator must maintain on a daily and cumulative basis for the permit period a separate log for each fishery (see table 2 to § 600.502) in which the FFV is engaged according to this section and in the format specified in the instructions provided with the permit or other format authorized under paragraph (i) of this section. Daily effort entries are required for each day the vessel conducts fishing operations within the EEZ. Daily entries are not required whenever the FFV is in port or engaged in a joint venture in the internal waters of a state. Each page of log may contain entries pertaining to only one day's fishing operations or one gear set, whichever is longer.

(2) The owner or operator of each FFV authorized to catch fish (Activity Code 1) and that delivers all catches to a processing vessel, must maintain only "SECTION ONE-EFFORT", of the

daily fishing log, provided the processing vessel maintains a daily consolidated fishing log as described in paragraphs (f) and (g) of this section.

(e) *Daily fishing log—contents.* The daily fishing log must contain the following information, as modified by paragraph (d)(2) of this section and the regulations for the fishery in which the FFV is engaged, and be completed according to the format and instructions provided with the permit or other format authorized under paragraph (i) of this section.

(1) “SECTION ONE-EFFORT” must contain on a daily basis—

(i) A consecutive page number, beginning with the first day the vessel started fishing operations within the EEZ and continuing throughout the log.

(ii) The date (based on GMT).

(iii) The FFV’s name.

(iv) The FFV’s IRCS.

(v) The FFV’s U.S. permit number.

(vi) The FFV’s noon (1200 GMT) position in geographic coordinates.

(vii) The master or operator’s signature or title.

(2) “SECTION ONE-EFFORT” must contain, for each trawl or set, as appropriate to the gear type employed—

(i) The consecutive trawl or set number, beginning with the first set of the calendar year.

(ii) The fishing area in which the trawl or set was completed.

(iii) The gear type.

(iv) The time the gear was set.

(v) The position of the set.

(vi) The course of the set.

(vii) The sea depth.

(viii) The depth of the set.

(ix) The duration of the set.

(x) The hauling time.

(xi) The position of the haul.

(xii) The number of pots or longline units (where applicable).

(xiii) The average number of hooks per longline unit (where applicable).

(xiv) The trawl speed (where applicable).

(xv) The mesh size of the trawl’s codend (where applicable).

(xvi) The estimated total weight of the catch for the trawl or set, to at least the nearest metric ton round weight.

(3) “SECTION TWO-CATCH” must contain, for each trawl or set—

(i) The consecutive set or trawl number from “SECTION ONE”.

(ii) The catch of each allocated species or species group to at least the nearest 0.1 mt round weight.

(iii) The prohibited species catch to at least the nearest 0.1 mt round weight or by number, as required by the regulations for the fishery in which the FFV is engaged.

(iv) The species code of each marine mammal caught and its condition when released.

(4) “SECTION TWO-CATCH” must contain, on a daily basis—

(i) The species codes for all allocated or prohibited species or species groups caught.

(ii) For each allocated species—the amount, to at least the nearest 0.1 mt, and the daily disposition, either processed for human consumption, used for fishmeal, or discarded; the daily catch by fishing area; the daily catch for all fishing areas; and the cumulative total catch.

(iii) For the total catch of allocated species—the amount to at least the nearest 0.1 mt and the daily disposition, daily total catch by fishing area, daily total catch for all fishing areas, and cumulative total catch.

(iv) The catch by fishing area, daily total, and cumulative total of each prohibited species.

(5) “SECTION THREE—PRODUCTION” must contain, on a daily basis, for each allocated species caught and product produced—

(i) The product by species code and product type.

(ii) The daily product recovery rate of each species and product.

(iii) The daily total product produced by species to at least the nearest 0.01 mt.

(iv) The cumulative total of each product to at least the nearest 0.01 mt.

(v) The cumulative amount of product transferred.

(vi) The balance of product remaining aboard the FFV.

(vii) The total daily amount, cumulative amount, transferred product and balance of frozen product aboard the FFV to the nearest 0.01 mt.

(viii) Transferred amount and balance of fishmeal and fish oil aboard to at least the nearest 0.01 mt.

(f) *Daily consolidated fishing or joint venture log.* The operator of each FFV that receives unsorted, unprocessed fish from foreign catching vessels (Activity Code 2) for processing or receives U.S.-harvested fish from U.S. fishing vessels in a joint venture (Activity Code 4) must maintain a daily joint venture log of the effort, catch and production of its associated U.S. or foreign fishing vessels and the processing vessel as modified by the regulations for the fishery in which the FFV is engaged. This log is separate and in addition to the log required by paragraph (d) of this section. The operator must maintain a separate log for each fishery in which the FFV is engaged, on a daily and cumulative basis, according to this section and in the format specified in the instructions provided with the permit or other format authorized under paragraph (i) of this section. Receipts of fish caught outside the EEZ must be included. Each page of the log may contain entries pertaining to only one day's fishing operations.

(g) *Daily joint venture log—contents.* Daily joint venture logs must contain the following information, as modified by the fishery in which the vessel is engaged, and be completed according to the format and instructions provided with the permit or other format authorized under paragraph (i) of this section.

(1) "SECTION ONE-EFFORT" must contain, on a daily basis, that information required in paragraph (e)(1) of this section.

(2) "SECTION ONE-EFFORT" must contain for each receipt of a codend—

(i) The consecutive codend number, beginning with the first codend received for the calendar year.

(ii) The name of the U.S. fishing vessel or the name and IRCS of the foreign fishing vessel the codend was received from.

(iii) The fishing area where the codend was received.

(iv) The time the codend was received.

(v) The position the codend was received.

(vi) The estimated weight of the codend to at least the nearest metric ton round weight.

(3) "SECTION TWO-CATCH" must contain, for each codend received—

(i) The consecutive codend number from "SECTION ONE".

(ii) The receipts of each authorized species or species group and its disposition, either processed for human consumption, used for fishmeal, discarded, or returned to the U.S. fishing vessel, to at least the nearest 0.1 mt round weight.

(iii) The estimated receipts of each prohibited species or species group and its disposition, either discarded or returned to the U.S. fishing vessel if authorized in the fishery in which the U.S. vessel is engaged, to at least the nearest 0.1 mt round weight.

(iv) The species code of each marine mammal received and its condition when released.

(4) "SECTION TWO-CATCH" must contain on a daily basis—

(i) The species codes of all authorized or prohibited species or species groups received.

(ii) The daily disposition, as described in paragraph (g)(3)(ii) of this section, daily total, and cumulative total receipts of each authorized species or species groups.

(iii) The daily disposition, daily total and cumulative total receipts of all authorized species or species groups.

(iv) The daily and cumulative total receipts of prohibited species groups and their disposition as described in paragraph (g)(3)(iii) of this section.

(5) "SECTION THREE—PRODUCTION" must contain, on a daily basis, for each authorized species or species group received and product produced, that information required in paragraph (e)(5) of this section.

(h) *Daily log maintenance.* The logs required by paragraphs (e) through (g) of this section must be maintained separately for each fishery (see table 2 to § 600.502).

(1) The effort section (all of "SECTION ONE") of the daily logs must be updated within 2 hours of the hauling or receipt time. The catch or receipt by trawl or set ("SECTION TWO") must be entered within 12 hours of the hauling or receipt time. The daily and cumulative total catch or receipts ("SECTION TWO") and the production portion ("SECTION THREE") of the

log must be updated within 12 hours of the end of the day on which the catch was taken. The date of catch is the day and time (GMT) the gear is hauled.

(2) Entries for total daily and cumulative catch or receipt weights (disposition “C” or “M”) must be based on the most accurate method available to the vessel, either scale round weights or factory weights converted to round weights. Entries for daily and cumulative weights of discarded or returned fish (disposition “D” or “R”) must be based on the most accurate method available to the vessel, either actual count, scale round weight, or estimated deck weights. Entries for product weights must be based on the number of production units (pans, boxes, blocks, trays, cans, or bags) and the average weight of the production unit, with reasonable allowances for water added. Allowances for water added cannot exceed 5 percent of the unit weight. Product weights cannot be based on the commercial or arbitrary wholesale weight of the product, but must be based on the total actual weight of the product as determined by representative samples.

(3) The owner or operator must make all entries in indelible ink, with corrections to be accomplished by lining out and rewriting, rather than erasure.

(i) Alternative log formats. As an alternative to the use of the specific formats provided, a Nation may submit a proposed log format for FFV’s of that Nation for a general type of fishery operation in a fishery (i.e., joint venture operations) to the appropriate Regional Administrator and the USCG commander (see tables 1 and 2 to §600.502). With the agreement of the USCG commander, the Regional Administrator may authorize the use of that log format for vessels of the requesting Nation.

[61 FR 32540, June 24, 1996, as amended at 63 FR 7075, Feb. 12, 1998]

§ 600.508 Fishing operations.

(a) *Catching*. Each FFV authorized for activity code 1 may catch fish. An FFV may retain its catch of any species or species group for which there is an unfilled national allocation. All fish caught will be counted against the national allocation, even if the fish are

discarded, unless exempted by the regulations of the fishery in which the FFV is engaged. Catching operations may be conducted as specified by the regulations of the fishery in which the FFV is engaged and as modified by the FFV’s permit.

(b) *Scouting*. Each FFV authorized for Activity Codes 1 through 6 may scout for fish. Scouting may be conducted only in the fisheries area authorized by the scouting vessel’s permit and under such other circumstances as may be designated in this subpart or the permit.

(c) *Processing*. Each FFV with Activity Code 1 or 2 may process fish. Processing may only be conducted whenever and wherever catching operations for FFV’s of that Nation are permitted, whenever and wherever joint venture operations are authorized by an FFV’s permit under Activity Code 4, and under such other circumstances as may be designated in this subpart or the permit.

(d) *Support*. Each FFV with Activity Codes 1, 2, 3, 5, or 8 may support other permitted FFV’s. Each FFV with Activity Codes 4 or 6 may support U.S. vessels. Support operations may be conducted only in the fisheries areas authorized by the supporting vessel’s permit, and under such other circumstances as may be designated in this subpart or the permit.

(e) *Joint ventures*. Each FFV with Activity Code 4 in addition to Activity Codes 1 or 2 may also conduct operations with U.S. fishing vessels. These joint venture operations with U.S. fishing vessels may be conducted throughout the EEZ, and under such other circumstances as may be designated in these regulations or the permit. FFV’s with activity code 4 may continue operations assisting U.S. fishing vessels, despite closures under §600.511(a).

(f) *Internal waters*. For FFV’s authorized under section 306(c) of the Magnuson-Stevens Act:

(1) Each FFV may engage in fish processing and support of U.S. fishing vessels within the internal waters of that state in compliance with terms and conditions set by the authorizing Governor.

(2) The owner or operator of each FFV must submit weekly reports on

§ 600.509

the amount of fish received from vessels of the United States and the location(s) where such fish were harvested.

(i) Reports must include:

(A) Vessel identification information for the FFV.

(B) Date of each receipt of fish.

(C) Amount of fish received, by species.

(D) Location(s) from which the fish received were harvested and the name and official number of the vessel of the United States that harvested the fish.

(ii) Owners or operators of FFV's processing fish in internal waters under the provisions of this paragraph (f) must request, from the Regional Administrator, the requirements regarding timing and submission of the reports, at least 15 days prior to the first receipt of fish from a vessel of the United States. The Regional Administrator shall stipulate the timing and submission requirements in writing.

(g) *Transshipping*. Each FFV with Activity Code 1, 2, 3, 4, 5, 6, 7, 8, or 10 may transship in accordance with this subpart and the vessel's permit.

[61 FR 32540, June 24, 1996, as amended at 62 FR 27183, May 19, 1997; 62 FR 34397, June 26, 1997; 64 FR 39020, July 21, 1999]

§ 600.509 Prohibited species.

(a) The owner or operator of each FFV must minimize its catch or receipt of prohibited species.

(b) After allowing for sampling by an observer (if any), the owner or operator of each FFV must sort its catch of fish received as soon as possible and return all prohibited species and species parts to the sea immediately with a minimum of injury, regardless of condition, unless a different procedure is specified by the regulations for the fishery in which the FFV is engaged. All prohibited species must be recorded in the daily fishing log and other fishing logs as specified by the regulations for the fishery in which the FFV is engaged.

(c) All species of fish that an FFV has not been specifically allocated or authorized under this subpart to retain, including fish caught or received in excess of any allocation or authorization, are prohibited species.

(d) It is a rebuttable presumption that any prohibited species or species

50 CFR Ch. VI (10-1-21 Edition)

part found on board an FFV was caught and retained in violation of this section.

§ 600.510 Gear avoidance and disposal.

(a) *Vessel and gear avoidance*. (1) FFV's arriving on fishing grounds where fishing vessels are already fishing or have set their gear for that purpose must ascertain the position and extent of gear already placed in the sea and must not place themselves or their fishing gear so as to interfere with or obstruct fishing operations already in progress. Vessels using mobile gear must avoid fixed fishing gear.

(2) The operator of each FFV must maintain on its bridge a current plot of broadcast fixed-gear locations for the area in which it is fishing, as required by the regulations for the fishery in which the FFV is engaged.

(b) *Gear conflicts*. The operator of each FFV that is involved in a conflict or that retrieves the gear of another vessel must immediately notify the appropriate USCG commander identified in tables 1 and 2 to § 600.502 and request disposal instructions. Each report must include:

(1) The name of the reporting vessel.

(2) A description of the incident and articles retrieved, including the amount, type of gear, condition, and identification markings.

(3) The location of the incident.

(4) The date and time of the incident.

(c) *Disposal of fishing gear and other articles*. (1) The operator of an FFV in the EEZ may not dump overboard, jettison or otherwise discard any article or substance that may interfere with other fishing vessels or gear, or that may catch fish or cause damage to any marine resource, including marine mammals and birds, except in cases of emergency involving the safety of the ship or crew, or as specifically authorized by communication from the appropriate USCG commander or other authorized officer. These articles and substances include, but are not limited to, fishing gear, net scraps, bale straps, plastic bags, oil drums, petroleum containers, oil, toxic chemicals or any manmade items retrieved in an FFV's gear.

(2) The operator of an FFV may not abandon fishing gear in the EEZ.

Fishery Conservation and Management

§ 600.512

(3) If these articles or substances are encountered, or in the event of accidental or emergency placement into the EEZ, the vessel operator must immediately report the incident to the appropriate USCG Commander indicated in tables 1 and 2 to § 600.502, and give the information required in paragraph (b) of this section.

§ 600.511 Fishery closure procedures.

(a) Activity Codes 1 and 2 for a fishery are automatically canceled in the following cases, unless otherwise specified by regulations specific to a fishery, when—

(1) The OY for any allocated species or species group has been reached in that fishery;

(2) The TALFF or catch allowance for any allocated species or species group has been reached in that fishery;

(3) The foreign nation's allocation for any allocated species or species group has been reached; or

(4) The letter of credit required in § 600.518(b)(2) is not established and maintained.

(b) Activity Code 4 is automatically canceled when—

(1) The OY for a species with a JVP amount is reached;

(2) The JVP amount for a species or species group is reached; or

(3) The letter of credit required in § 600.518(b)(2) is not established and maintained.

(c) *Notification.* (1) The Regional Administrator is authorized to close a fishery on behalf of NMFS. The Regional Administrator will notify each FFV's designated representative of closures.

(2) If possible, notice will be given 48 hours before the closure. However, each Nation and the owners and operators of all FFV's of that Nation are responsible for ending fishing operations when an allocation is reached.

(d) *Catch reconciliation.* Vessel activity reports, U.S. surveillance observations, observer reports, and foreign catch and effort reports will be used to make the determination listed in paragraphs (a) and (b) of this section. If NMFS estimates of catch or other values made during the season differ from those reported by the foreign fleets, efforts may be initiated by the des-

ignated representative of each Nation to resolve such differences with NMFS. If, however, differences still persist after such efforts have been made, NMFS estimates will be the basis for decisions and will prevail.

(e) *Duration.* Any closure under this section will remain in effect until an applicable new or increased allocation or JVP becomes available or the letter of credit required by § 600.518(b)(2) is re-established.

[61 FR 32540, June 24, 1996, as amended at 63 FR 7075, Feb. 12, 1998]

§ 600.512 Scientific research.

(a) *Scientific research activity.* Persons planning to conduct scientific research activities on board a scientific research vessel in the EEZ that may be confused with fishing are encouraged to submit to the appropriate Regional Administrator or Director, 60 days or as soon as practicable prior to its start, a scientific research plan for each scientific activity. The Regional Administrator or Director will acknowledge notification of scientific research activity by issuing to the operator or master of that vessel, or to the sponsoring institution, a Letter of Acknowledgment. This Letter of Acknowledgment is separate and distinct from any permit or consultation required under the MMPA, the ESA, or any other applicable law. The Regional Administrator or Director will include text in the Letter of Acknowledgment informing the applicant that such permits may be required and should be obtained from the agency prior to embarking on the activity. If the Regional Administrator or Director, after review of a research plan, determines that it does not constitute scientific research activity but rather fishing, the Regional Administrator or Director will inform the applicant as soon as practicable and in writing. In making this determination, the Regional Administrator, Director, or designee shall consider: the merits of the individual proposal and the institution(s) involved; whether the proposed activity meets the definition of scientific research activity; and whether the vessel meets all the requirements for a scientific research vessel. Foreign vessels that qualify as scientific research vessels and which are

§ 600.513

engaged in a scientific research activity may only engage in compensation fishing during the scientific research cruise and in accordance with the applicable scientific research plan. The Regional Administrator or Director may also make recommendations to revise the research plan to ensure the activity will be considered to be a scientific research activity. The Regional Administrator or Director may designate a Science and Research Director, or the Assistant Regional Administrator for Sustainable Fisheries, to receive scientific research plans and issue Letters of Acknowledgment. In order to facilitate identification of the activity as scientific research, persons conducting scientific research activities are advised to carry a copy of the scientific research plan and the Letter of Acknowledgment on board the scientific research vessel and to make it available for inspection upon the request of any authorized officer. It is recommended that for any scientific research activity, any fish, or parts thereof, retained pursuant to such activity be accompanied, during any ex-vessel activities, by a copy of the Letter of Acknowledgment. Activities conducted in accordance with a scientific research plan acknowledged by such a Letter of Acknowledgment are presumed to be scientific research activities. An authorized officer may overcome this presumption by showing that an activity does not fit the definition of scientific research activity or is outside the scope of the scientific research plan.

(b) *Reports.* Persons conducting scientific research are requested to submit a copy of any cruise report or other publication created as a result of the cruise, including the amount, composition, and disposition of their catch, to the appropriate Science and Research Director.

[61 FR 32540, June 24, 1996, as amended at 63 FR 7075, Feb. 12, 1998; 74 FR 42793, Aug. 25, 2009]

§ 600.513 Recreational fishing.

(a) Foreign vessels conducting recreational fishing must comply only with this section, and §§ 600.10, 600.504(a)(1), and 600.505 (as applicable). Such vessels may conduct recreational

50 CFR Ch. VI (10–1–21 Edition)

fishing within the EEZ and within the boundaries of a state. Any fish caught may not be sold, bartered, or traded.

(b) The owners or operator and any other person aboard any foreign vessel conducting recreational fishing must comply with any Federal laws or regulations applicable to the domestic fishery while in the EEZ, and any state laws or regulations applicable while in state waters.

§ 600.514 Relation to other laws.

(a) Persons affected by these regulations should be aware that other Federal and state statutes may apply to their activities.

(b) Fishing vessel operators must exercise due care in the conduct of fishing activities near submarine cables. Damage to submarine cables resulting from intentional acts or from the failure to exercise due care in the conduct of fishing operations subjects the fishing vessel operator to enforcement action under the International Convention for the Protection of Submarine Cables, and to the criminal penalties prescribed by the Submarine Cable Act (47 U.S.C. 21) and other laws that implement that Convention. Fishing vessel operators also should be aware that the Submarine Cable Act prohibits fishing operations at a distance of less than 1 nautical mile (1.85 km) from a vessel engaged in laying or repairing a submarine cable; or at a distance of less than 0.25 nautical mile (0.46 km) from a buoy or buoys intended to mark the position of a cable when being laid, or when out of order, or broken.

§ 600.515 Interpretation of 16 U.S.C. 1857(4).

Section 307(4) of the Magnuson-Stevens Act prohibits any fishing vessel other than a vessel of the United States (foreign fishing vessel) from operating in the EEZ if all of the fishing gear on board the vessel is not stowed in compliance with that section “unless such vessel is authorized to engage in fishing in the area in which the vessel is operating.” If such a vessel has a permit authorization that is limited to fishing activities other than catching, taking or harvesting (such as support, scouting or processing activities), it must have all of its fishing gear stowed

Fishery Conservation and Management

§ 600.518

at all times while it is in the EEZ. If such a vessel has a permit authorization to engage in catching, taking or harvesting activities, but such authorization is limited to a specific area within the EEZ, and/or to a specific period of time, the vessel must have all of its fishing gear stowed while it is in the EEZ, except when it is in the specific area authorized, and/or during the specific period of time authorized.

[61 FR 32540, June 24, 1996, as amended at 63 FR 7075, Feb. 12, 1998]

§ 600.516 Total allowable level of foreign fishing (TALFF).

(a) The TALFF, if any, with respect to any fishery subject to the exclusive fishery management authority of the United States, is that portion of the OY of such fishery, which cannot or will not be harvested by vessels of the United States. Allocations of TALFF are discretionary, except that the total allowable level shall be zero for fisheries determined by the Secretary to have adequate or excess domestic harvest capacity.

(b) Each specification of OY and each assessment of the anticipated U.S. harvest will be reviewed during each fishing season. Adjustments to TALFF's will be made based on updated information relating to status of stocks, estimated and actual performance of domestic and foreign fleets, and other relevant factors.

(c) Specifications of OY and the initial estimates of U.S. harvests and TALFF's at the beginning of the relevant fishing year will be published in the FEDERAL REGISTER. Adjustments to those numbers will be published in the FEDERAL REGISTER upon occasion or as directed by regulations implementing FMPs. For current apportionments, contact the appropriate Regional Administrator or the Director.

[61 FR 32540, June 24, 1996, as amended at 63 FR 7075, Feb. 12, 1998; 73 FR 67811, Nov. 17, 2008]

§ 600.517 Allocations.

The Secretary of State, in cooperation with the Secretary, determines the allocation among foreign nations of fish species and species groups. The Secretary of State officially notifies each foreign nation of its allocation.

The burden of ascertaining and accurately transmitting current allocations and status of harvest of an applicable allocation to fishing vessels is upon the foreign nation and the owner or operator of the FFV.

§ 600.518 Fee schedule for foreign fishing.

(a) *Permit application fees.* Each vessel permit application submitted under § 600.501 must be accompanied by a fee. The amount of the fee will be determined in accordance with the procedures for determining administrative costs of each special product or service contained in the NOAA Finance Handbook, which is available upon request from the Office of International Affairs (see address at § 600.501(d)(1)). The fee is specified with the application form. At the time the application is submitted, a check for the fees, drawn on a U.S. bank, payable to the order of "Department of Commerce, NOAA," must be sent to the Assistant Administrator. The permit fee payment must be accompanied by a list of the vessels for which the payment is made. In the case of applications for permits authorizing activity code 10, the permit application fee will be waived if the applicant provides satisfactory documentary proof to the Assistant Administrator that the foreign nation under which the vessel is registered does not collect a fee from a vessel of the United States engaged in similar activities in the waters of such foreign nation. The documentation presented (e.g., copy of foreign fishing regulations applicable to vessels of the United States) must clearly exempt vessels of the United States from such a fee.

(b) *Poundage fees—(1) Rates.* If a Nation chooses to accept an allocation, poundage fees must be paid at the rate specified in the following table.

TABLE—SPECIES AND POUNDAGE FEES
[Dollars per metric ton]

Species	Poundage fees
Northwest Atlantic Ocean fisheries:	
1. Butterfish	277.96
2. Herring, Atlantic	25.75
3. Herring, River	49.59
4. Mackerel, Atlantic	64.76
5. Other finfish	45.48
6. Squid, <i>Illex</i>	97.56

§ 600.520

50 CFR Ch. VI (10–1–21 Edition)

TABLE—SPECIES AND POUNDAGE FEES—
Continued
[Dollars per metric ton]

Species	Pound- age fees
7. Squid, <i>Loligo</i>	321.68

(2) *Method of payment of poundage fees and observer fees.* (i) If a Nation chooses to accept an allocation, a revolving letter of credit (L/C) must be established and maintained to cover the poundage fees for at least 25 percent of the previous year's total allocation at the rate in paragraph (b)(1) of this section, or as determined by the Assistant Administrator, plus the observer fees required by paragraph (c) of this section. The L/C must—

(A) Be irrevocable.

(B) Be with a bank subscribing to ICC Pub. 290.

(C) Designate “Department of Commerce, NOAA” as beneficiary;

(D) Allow partial withdrawals.

(E) Be confirmed by a U.S. bank.

(ii) The customer must pay all commissions, transmission, and service charges. No fishing will be allowed until the L/C is established, and authorized written notice of its issuance is provided to the Assistant Administrator.

(3) *Assessment of poundage fees.* Poundage fees will be assessed quarterly for the actual catch during January through March, April through June, July through September, and October through December. The appropriate Regional Administrator will reconcile catch figures with each country following the procedures of § 600.511(d). When the catch figures are agreed upon, NOAA will present a bill for collection as the documentary demand for payment to the confirming bank. If, after 45 days from the end of the quarter, catches have not been reconciled, the estimate of the Regional Administrator will stand and a bill will be issued for that amount. If necessary, the catch figures may be refined by the Regional Administrator during the next 60 days, and any modifications will be reflected in the next quarter's bill.

(c) *Observer fees.* The Assistant Administrator will notify the owners or operators of FFV's of the estimated an-

nual costs of placing observers aboard their vessels. The owners or operators of any such vessel must provide for repayment of those costs by including one-fourth of the estimated annual observer fee as determined by the Assistant Administrator in a L/C as prescribed in § 600.518(b)(2). During the fiscal year, payment will be withdrawn from the L/C as required to cover anticipated observer coverage for the upcoming fishery. The Assistant Administrator will reconcile any differences between the estimated cost and actual costs of observer coverage within 90 days after the end of the fiscal year.

(d) *Financial assurances.* (1) A foreign nation, or the owners and operators of certain vessels of that foreign nation, may be required by the Assistant Administrator to provide financial assurances. Such assurances may be required if—

(i) Civil and criminal penalties assessed against fishing vessels of the Nation have not effectively deterred violations;

(ii) Vessels of that Nation have engaged in fishing in the EEZ without proper authorization to conduct such activities;

(iii) The Nation's vessel owners have refused to answer administrative charges or summons to appear in court; or

(iv) Enforcement of Magnuson-Stevens Act civil or criminal judgments in the courts of a foreign nation is unattainable.

(2) The level of financial assurances will be guided by the level of penalties assessed and costs to the U.S. Government.

[61 FR 32540, June 24, 1996, as amended at 63 FR 7075, Feb. 12, 1998; 64 FR 39020, July 21, 1999; 66 FR 28132, May 22, 2001; 76 FR 59305, Sept. 26, 2011]

§ 600.520 Northwest Atlantic Ocean fishery.

(a) *Purpose.* Sections 600.520 and 600.525 regulate all foreign fishing conducted under a GIFA within the EEZ in the Atlantic Ocean north of 35°00' N. lat.

(b) *Authorized fishery—(1) Allocations.* Foreign vessels may engage in fishing only in accordance with applicable national allocations.

(2) *Time and area restrictions.* (i) Fishing, including processing, scouting, and support of foreign or U.S. vessels, is prohibited south of 35°00' N. lat., and north and east of a line beginning at the shore at 44°22' N. lat., 67°52' W. long. and intersecting the boundary of the EEZ at 44°11'12" N. lat., 67°16'46" W. long.

(ii) The Regional Administrator will consult with the Council prior to giving notice of any area or time restriction. NMFS will also consult with the USCG if the restriction is proposed to reduce gear conflicts. If NMFS determines after such consultation that the restriction appears to be appropriate, NMFS will publish the proposed restriction in the FEDERAL REGISTER, together with a summary of the information on which the restriction is based. Following a 30-day comment period, NMFS will publish a final action.

(iii) The Regional Administrator may rescind any restriction if he/she determines that the basis for the restriction no longer exists.

(iv) Any notice of restriction shall operate as a condition imposed on the permit issued to the foreign vessels involved in the fishery.

(3) *TALFF.* The TALFFs for the fisheries of the Northwest Atlantic Ocean are published in the FEDERAL REGISTER. Current TALFFs are also available from the Regional Administrator.

(4) *Species definitions.* The category "other finfish" used in TALFFs and in allocations includes all species except:

(i) The other allocated species, namely: Short-finned squid, long-finned squid, Atlantic herring, Atlantic mackerel, river herring (includes alewife, blueback herring, and hickory shad), and butterfish.

(ii) The prohibited species, namely: American plaice, American shad, Atlantic cod, Atlantic menhaden, Atlan-

tic redfish, Atlantic salmon, all marlin, all spearfish, sailfish, swordfish, black sea bass, bluefish, croaker, haddock, ocean pout, pollock, red hake, scup, sea turtles, sharks (except dogfish), silver hake, spot, striped bass, summer flounder, tilefish, yellowtail flounder, weakfish, white hake, windowpane flounder, winter flounder, witch flounder, Continental Shelf fishery resources, and other invertebrates (except nonallocated squids).

(5) *Closures.* The taking of any species for which a Nation has an allocation is permitted, provided that:

(i) The vessels of the foreign nation have not caught the allocation of that Nation for any species or species group (e.g., "other finfish"). When vessels of a foreign nation have caught an applicable allocation of any species, all further fishing other than scouting, processing, or support by vessels of that Nation must cease, even if other allocations have not been reached. Therefore, it is essential that foreign nations plan their fishing strategy to ensure that the reaching of an allocation for one species does not result in the premature closing of a Nation's fishery for other allocated species.

(ii) The fishery has not been closed for other reasons under § 600.511.

(6) *Allocation utilization.* Foreign fishing vessels may elect to retain or discard allocated species; however, the computation of allocation utilization and fee refunds will be based on the total quantity of that species that was caught. Prohibited species must always be returned to the sea as required under § 600.509.

(c) *Fishing areas.* For the purposes of the Northwest Atlantic Ocean fishery, fishing areas are that portion of the EEZ shown inside the boundaries of the "three digit statistical areas" described in Figure 1 to this section.

Figure 1 to § 600.520--Fishing Areas of the Northwest Atlantic Ocean Fisheries

[61 FR 32540, June 24, 1996, as amended at 63 FR 7075, Feb. 12, 1998]

§ 600.525 Applicability of subpart F to Canadian Albacore Fishing Vessels off the West Coast.

Fishing by vessels of Canada under the 1981 Treaty Between the Government of the United States of America and the Government of Canada on Pacific Coast Albacore Tuna Vessels and Port Privileges is regulated only under

this section and § 600.530 of this subpart F, and is exempt from any other requirements of this subpart F. Regulations governing fishing by U.S. vessels in waters under the fisheries jurisdiction of the Canada more than 12 nautical miles from the baseline from which the territorial sea is measured

Fishery Conservation and Management

§ 600.610

are found at §§300.170–300.176 of chapter II of this title.

[69 FR 31535, June 4, 2004]

§ 600.530 Pacific albacore fishery.

(a) *Purpose and scope.* This section regulates fishing by Canadian vessels under the 1981 Treaty Between the Government of the United States of America and the Government of Canada on Pacific Coast Albacore Tuna Vessels and Port Privileges as amended in 2002. Notwithstanding any other provision of this subpart F, fishing vessels of Canada may be authorized to fish in waters under the fisheries jurisdiction of the United States more than 12 nautical miles from the baseline from which the territorial sea is measured in accordance with the Treaty and this section, pursuant to Public Law 108–219 (118 Stat. 616; 16 U.S.C. 1821 note).

(b) *Definitions.* In addition to the definitions in the Magnuson-Stevens Fishery Conservation and Management Act and §600.10, the terms used in this subpart have the following meanings:

Fishing under the Treaty as amended in 2002 means to engage in fishing for albacore tuna in waters under the fisheries jurisdiction of the United States seaward of 12 nautical miles from the baseline from which the territorial sea is measured.

Regional Administrator means the Regional Administrator, Southwest Region, NMFS, 501 W. Ocean Boulevard, Suite 4200, Long Beach, CA 90802-4213, or a designee.

Reporting Office means the office designated by the Regional Administrator to take hail-in and hail-out reports from U.S. and Canadian vessel operators.

Treaty means the 1981 Treaty Between the Government of the United States of America and the Government of Canada on Pacific Coast Albacore Tuna Vessels and Port Privileges as amended in 2002.

(c) *Vessel list.* A Canadian vessel is not eligible to fish for albacore in U.S. waters under the Treaty as amended in 2002 unless the vessel is on the list provided to NMFS by the Government of Canada of vessels authorized by Canada to fish under the Treaty as amended in 2002.

(d) *Vessel identification.* A Canadian vessel fishing under the Treaty as amended in 2002 must clearly display its Canadian vessel registration number followed by the letter C in the same height and size as the numerals, consistent with Canadian vessel marking requirements.

(e) *Hail-in reports.* The operator of a Canadian Vessel eligible to fish for albacore in U.S. waters under the Treaty as amended in 2002 must file a hail-in report with the Reporting Office at least 24 hours prior to beginning any such fishing.

(f) *Hail-out Reports.* The operator of a Canadian vessel that has been fishing in U.S. waters under the Treaty as amended in 2002 must file a hail-out report with the Reporting Office at least 24 hours prior to exiting from U.S. waters.

(g) *Prohibitions.* It is prohibited for the operator of a Canadian vessel to engage in fishing in U.S. waters if the vessel:

(1) Is not on the vessel list in paragraph (c) of this section;

(2) Has not filed a hail-in report to advise of an intent to fish under the Treaty as amended in 2002 prior to engaging in such fishing; or

(3) Is not clearly marked in accordance with paragraph (d) of this section.

[69 FR 31535, June 4, 2004]

Subpart G—Preemption of State Authority Under Section 306(b)

§ 600.605 General policy.

It is the policy of the Secretary that preemption proceedings will be conducted expeditiously. The administrative law judge and counsel or other representative for each party are encouraged to make every effort at each stage of the proceedings to avoid delay.

§ 600.610 Factual findings for Federal preemption.

(a) The two factual findings for Federal preemption of state management authority over a fishery are:

(1) The fishing in a fishery that is covered by an FMP implemented under the Magnuson-Stevens Act is engaged in predominately within the EEZ and beyond such zone.

§ 600.615

(2) A state has taken any action, or omitted to take any action, the results of which will substantially and adversely affect the carrying out of such FMP.

(b) Whether fishing is engaged in “predominately” within or beyond the EEZ will be determined after consideration of relevant factors, including but not limited to, the catch (based on numbers, value, or weight of fish caught, or other relevant factors) or fishing effort during the appropriate period, and in light of historical patterns of the distribution of catch or fishing effort for such stock or stocks of fish.

(c) Whether relevant effects are substantial will be determined after consideration of the magnitude of such actual or potential effects. Relevant to this determination are various factors, including but not limited to, the proportion of the fishery (stock or stocks of fish and fishing for such stocks) that is subject to the effects of a particular state’s action or omission, the characteristics and status (including migratory patterns and biological condition) of the stock or stocks of fish in the fishery, and the similarity or dissimilarity between the goals, objectives, or policies of the state’s action or omission and the management goals or objectives specified in the FMP for the fishery or between the state and Federal conservation and management measures of the fishery.

[61 FR 32540, June 24, 1996, as amended at 63 FR 7075, Feb. 12, 1998]

§ 600.615 Commencement of proceedings.

(a) *Notice of proposed preemption.* (1) If a proceeding under this part is deemed necessary, the Administrator must issue a notice of proposed preemption to the Attorney General of the State or States concerned. The notice will contain:

(i) A recital of the legal authority and jurisdiction for instituting the proceeding.

(ii) A concise statement of the § 600.610 factual findings for Federal preemption upon which the notice is based.

(iii) The time, place, and date of the hearing.

50 CFR Ch. VI (10–1–21 Edition)

(2) The notice of proposed preemption will also be published in the FEDERAL REGISTER. This notification may be combined with any notice of proposed rulemaking published under paragraph (d)(1) of this section.

(b) *Response.* The state will have the opportunity to respond in writing to the notice of proposed preemption.

(c) *Amendment.* The Administrator may, at any time prior to the Secretary’s decision, withdraw the notice of proposed preemption. Upon motion of either party before the record is closed, the administrative law judge may amend the notice of proposed preemption.

(d) *Proposed regulations*—(1) *In general.* If additional regulations are required to govern fishing within the boundaries of a state, the Administrator may publish proposed regulations in the FEDERAL REGISTER concurrently with issuing the notification indicated in paragraph (a) of this section.

(2) *Emergency actions.* Nothing in this section will prevent the Secretary from taking emergency action under section 305(c) of the Magnuson-Stevens Act.

[61 FR 32540, June 24, 1996, as amended at 63 FR 7075, Feb. 12, 1998]

§ 600.620 Rules pertaining to the hearing.

(a) The civil procedure rules of the NOAA currently set forth in 15 CFR part 904, subpart C (or as subsequently amended), apply to the proceeding after its commencement by service of notice (pursuant to § 600.615) and prior to the Secretary’s decision (§ 600.625), except that the following sections will not apply:

(1) 15 CFR 904.201 (Definitions);

(2) 15 CFR 904.206(a)(1) (Duties and powers of Judge); and

(3) 15 CFR 904.272 (Administrative review of decision).

(b) *Additional duties and powers of judge*—(1) *Time periods.* The administrative law judge is authorized to modify all time periods pertaining to the course of the hearing (under §§ 600.615 and 600.620) to expedite the proceedings, upon application and appropriate showing of need or emergency circumstances by a party.

(2) *Intervention.* Intervention by persons not parties is not allowed.

§ 600.625 Secretary's decision.

(a) The Secretary will, on the basis of the hearing, record the administrative law judge's recommended decision:

(1) Accept or reject any of the findings or conclusions of the administrative law judge and decide whether the factual findings exist for Federal preemption of a state's authority within its boundaries (other than in its internal waters) with respect to the fishery in question;

(2) Reserve decision on the merits or withdraw the notice of proposed preemption; or

(3) Remand the case to the administrative law judge for further proceedings as may be appropriate, along with a statement of reasons for the remand.

(b) *Notification.* (1) If the factual findings for Federal preemption are determined to exist, the Secretary will notify in writing the Attorney General of that state and the appropriate Council(s) of the preemption of that state's authority. The Secretary will also direct the Administrator to promulgate appropriate regulations proposed under § 600.615(d) and otherwise to begin regulating the fishery within the state's boundaries (other than in its internal waters).

(2) If the factual findings for Federal preemption are determined not to exist, the Secretary will notify, in writing, the Attorney General of the state and the appropriate Council(s) of that determination. The Secretary will also direct the Administrator to issue a notice withdrawing any regulations proposed under § 600.615(d).

§ 600.630 Application for reinstatement of state authority.

(a) *Application or notice.* (1) At any time after the promulgation of regulations under § 600.625(b)(1) to regulate a fishery within a state's boundaries, the affected state may apply to the Secretary for reinstatement of state authority. The Secretary may also serve upon such state a notice of intent to terminate such Federal regulation. A state's application must include a clear and concise statement of:

(i) The action taken by the State to correct the action or omission found to

have substantially and adversely affected the carrying out of the FMP; or

(ii) Any changed circumstances that affect the relationship of the state's action or omission to take action to the carrying out of the FMP (including any amendment to such plan); and

(iii) Any laws, regulations, or other materials that the state believes support the application.

(2) Any such application received by the Secretary or notice issued to the State will be published in the FEDERAL REGISTER.

(b) *Informal response.* The Secretary has sole discretion to accept or reject the application or response. If the Secretary accepts the application or rejects any responses and finds that the reasons for regulation of the fishery within the boundaries of the state no longer prevail, the Secretary will promptly terminate such regulation and publish in the FEDERAL REGISTER any regulatory amendments necessary to accomplish that end.

(c) *Hearing.* The Secretary has sole discretion to direct the Administrator to schedule hearings for the receipt of evidence by an administrative law judge. Hearings before the administrative law judge to receive such evidence will be conducted in accordance with § 600.620. Upon conclusion of such hearings, the administrative law judge will certify the record and a recommended decision to the Secretary. If the Secretary, upon consideration of the state's application or any response to the notice published under § 600.630(a)(2), the hearing record, the recommended decision, and any other relevant materials finds that the reasons for regulation of the fishery within the boundaries of the state no longer prevail, the Secretary will promptly terminate such regulation and publish in the FEDERAL REGISTER any regulatory amendments necessary to accomplish that end.

Subpart H—General Provisions for Domestic Fisheries**§ 600.705 Relation to other laws.**

(a) *General.* Persons affected by these regulations should be aware that other Federal and state statutes and regulations may apply to their activities.

§ 600.710

Vessel operators may wish to refer to USCG regulations found in the Code of Federal Regulations title 33—Navigation and Navigable Waters and 46—Shipping; 15 CFR part 904, subpart D—Permit Sanctions and Denials; and title 43—Public Lands (in regard to marine sanctuaries).

(b) *State responsibilities.* Certain responsibilities relating to data collection and enforcement may be performed by authorized state personnel under a state/Federal agreement for data collection and a tripartite agreement among the state, the USCG, and the Secretary for enforcement.

(c) *Submarine cables.* Fishing vessel operators must exercise due care in the conduct of fishing activities near submarine cables. Damage to the submarine cables resulting from intentional acts or from the failure to exercise due care in the conduct of fishing operations subjects the fishing vessel operator to the criminal penalties prescribed by the Submarine Cable Act (47 U.S.C. 21) which implements the International Convention for the Protection of Submarine Cables. Fishing vessel operators also should be aware that the Submarine Cable Act prohibits fishing operations at a distance of less than 1 nautical mile (1.85 km) from a vessel engaged in laying or repairing a submarine cable; or at a distance of less than 0.25 nautical mile (0.46 km) from a buoy or buoys intended to mark the position of a cable when being laid or when out of order or broken.

(d) *Marine mammals.* Regulations governing exemption permits and the recordkeeping and reporting of the incidental take of marine mammals are set forth in part 229 of this title.

(e) *Halibut fishing.* Fishing for halibut is governed by regulations of the International Pacific Halibut Commission set forth at part 300 of this title.

(f) *Marine sanctuaries.* Regulations governing fishing activities inside the boundaries of national marine sanctuaries are set forth in 15 CFR part 922.

(g) *High seas fishing activities.* Regulations governing permits and requirements for fishing activities on the high seas are set forth in 50 CFR part 300, subparts A and R. Any vessel operating on the high seas must obtain a permit

50 CFR Ch. VI (10–1–21 Edition)

issued pursuant to the High Seas Fishing Compliance Act.

[61 FR 32540, June 24, 1996, as amended at 80 FR 62500, Oct. 16, 2015; 81 FR 51138, Aug. 3, 2016; 85 FR 15392, Mar. 18, 2020]

§ 600.710 Permits.

Regulations pertaining to permits required for certain fisheries are set forth in the parts of this chapter governing those fisheries.

§ 600.715 Recordkeeping and reporting.

Regulations pertaining to records and reports required for certain fisheries are set forth in the parts of this chapter governing those fisheries.

§ 600.720 Vessel and gear identification.

Regulations pertaining to special vessel and gear markings required for certain fisheries are set forth in the parts of this chapter governing those fisheries.

§ 600.725 General prohibitions.

It is unlawful for any person to do any of the following:

(a) Possess, have custody or control of, ship, transport, offer for sale, sell, purchase, land, import, export or re-export, any fish or parts thereof taken or retained in violation of the Magnuson-Stevens Act or any other statute administered by NOAA or any regulation or permit issued thereunder, or import, export, transport, sell, receive, acquire, or purchase in interstate or foreign commerce any fish taken, possessed, transported, or sold in violation of any foreign law or regulation, or any treaty or in contravention of a binding conservation measure adopted by an international agreement or organization to which the United States is a party.

(b) Transfer or attempt to transfer, directly or indirectly, any U.S.-harvested fish to any foreign fishing vessel, while such vessel is in the EEZ, unless the foreign fishing vessel has been issued a permit under section 204 of the Magnuson-Stevens Act, which authorizes the receipt by such vessel of U.S.-harvested fish.

(c) Fail to comply immediately with enforcement and boarding procedures specified in § 600.730.

(d) Refuse to allow an authorized officer to board a fishing vessel or to enter areas of custody for purposes of conducting any search, inspection, or seizure in connection with the enforcement of the Magnuson-Stevens Act or any other statute administered by NOAA.

(e) Dispose of fish or parts thereof or other matter in any manner, after any communication or signal from an authorized officer, or after the approach by an authorized officer or an enforcement vessel or aircraft.

(f) Assault, resist, oppose, impede, intimidate, threaten, or interfere with any authorized officer in the conduct of any search, inspection, or seizure in connection with enforcement of the Magnuson-Stevens Act or any other statute administered by NOAA.

(g) Interfere with, delay, or prevent by any means, the apprehension of another person, knowing that such person has committed any act prohibited by the Magnuson-Stevens Act or any other statute administered by NOAA.

(h) Resist a lawful arrest for any act prohibited under the Magnuson-Stevens Act or any other statute administered by NOAA.

(i) Make any false statement, oral or written, to an authorized officer concerning the taking, catching, harvesting, landing, purchase, sale, offer of sale, possession, transport, import, export, or transfer of any fish, or attempts to do any of the above.

(j) Interfere with, obstruct, delay, or prevent by any means an investigation, search, seizure, or disposition of seized property in connection with enforcement of the Magnuson-Stevens Act or any other statute administered by NOAA.

(k) Fish in violation of the terms or conditions of any permit or authorization issued under the Magnuson-Stevens Act or any other statute administered by NOAA.

(l) Fail to report catches as required while fishing pursuant to an exempted fishing permit.

(m) On a scientific research vessel, engage in fishing other than recreational fishing authorized by applicable state or Federal regulations.

(n) Trade, barter, or sell; or attempt to trade, barter, or sell fish possessed

or retained while fishing pursuant to an authorization for an exempted educational activity.

(o) Harass or sexually harass an authorized officer or an observer.

(p) Fail to show proof of passing the USCG Commercial Fishing Vessel Safety Examination or the alternate NMFS safety equipment examination, or fail to maintain the vessel safety conditions necessary to pass the examination, when required by NMFS pursuant to § 600.746.

(q) Fail to display a Commercial Fishing Vessel Safety Examination decal or a valid certificate of compliance or inspection pursuant to § 600.746.

(r) Fail to provide to an observer, a NMFS employee, or a designated observer provider information that has been requested pursuant to § 600.746, or fail to allow an observer, a NMFS employee, or a designated observer provider to inspect any item described at § 600.746.

(s) Fish without an observer when the vessel is required to carry an observer.

(t) Assault, oppose, impede, intimidate, or interfere with a NMFS-approved observer.

(u)(1) Prohibit or bar by command, impediment, threat, coercion, interference, or refusal of reasonable assistance, an observer from conducting his or her duties as an observer; or

(2) Tamper with or destroy samples or equipment.

(v) The use of any gear or participation in a fishery not on the following list of authorized fisheries and gear is prohibited after December 1, 1999. A fish, regardless whether targeted, may be retained only if it is taken within a listed fishery, is taken with a gear authorized for that fishery, and is taken in conformance with all other applicable regulations. Listed gear can only be used in a manner that is consistent with existing laws and regulations. The list of fisheries and authorized gear does not, in any way, alter or supersede any definitions or regulations contained elsewhere in this chapter. A person or vessel is prohibited from engaging in fishing or employing fishing gear when such fishing gear is prohibited or restricted by regulation under an FMP or other applicable law. However, after

December 1, 1999, an individual fisherman may notify the appropriate Council, or the Director, in the case of Atlantic highly migratory species, of the intent to use a gear or participate in a fishery not already on the list. Ninety days after such notification, the indi-

vidual may use the gear or participate in that fishery unless regulatory action is taken to prohibit the use of the gear or participate in the fishery (*e.g.*, through emergency or interim regulations). The list of authorized fisheries and gear is as follows:

Fishery	Authorized gear types
I. New England Fishery Management Council (NEFMC)	
1. Atlantic Sea Scallop Fishery (FMP):	
A. Dredge fishery	A. Dredge.
B. Trawl fishery	B. Trawl.
C. Hand harvest fishery	C. Hand harvest.
D. Recreational fishery	D. Hand harvest.
2. Iceland Scallop Fishery (Non-FMP):	
A. Dredge fishery	A. Dredge.
B. Trawl fishery	B. Trawl.
3. Atlantic Salmon Fishery (FMP)	No harvest or possession in the EEZ.
4. Striped Bass Fishery (Non-FMP)	No harvest or possession in the EEZ.
5. Northeast (NE) Multispecies Fishery (FMP):	
A. NE multispecies sink gillnet fishery	A. Gillnet.
B. North Atlantic bottom trawl fishery	B. Trawl.
C. Groundfish hook and line fishery	C. Longline, handline, rod and reel.
D. Mixed species trap and pot fishery	D. Trap, pot.
E. Dredge fishery	E. Dredge.
F. Seine fishery	F. Seine.
G. Recreational fishery	G. Rod and reel, handline, spear.
6. American Lobster Fishery (FMP):	
A. Lobster pot and trap fishery	A. Pot, trap.
B. North Atlantic bottom trawl fishery	B. Trawl.
C. Dredge fishery	C. Dredge.
D. Hand harvest fishery	D. Hand harvest.
E. Gillnet fishery	E. Gillnet.
F. Recreational fishery	F. Pot, trap, hand harvest.
7. Atlantic Herring Fishery (FMP):	
A. Trawl fishery	A. Trawl.
B. Purse seine fishery	B. Purse seine.
C. Gillnet fishery	C. Gillnet.
D. Herring pair trawl fishery	D. Pair trawl.
E. Dredge fishery	E. Dredge.
F. Recreational fishery	F. Hook and line, gillnet.
8. Spiny Dogfish Fishery (FMP jointly managed by MAFMC and NEFMC):	
A. Gillnet fishery	A. Gillnet.
B. Trawl fishery	B. Trawl.
C. Hook and line fishery	C. Hook and line, rod and reel, spear.
D. Dredge fishery	D. Dredge.
E. Longline fishery	E. Longline.
F. Recreational fishery	F. Hook and line, rod and reel, spear.
9. Atlantic Bluefish Fishery (FMP managed by MAFMC):	
A. Pelagic longline and hook and line fishery	A. Longline, handline.
B. Seine fishery	B. Purse seine, seine.
C. Mixed species pot and trap fishery	C. Pot, trap.
D. Bluefish, croaker, flounder trawl fishery	D. Trawl.
E. Gillnet fishery	E. Gillnet.
F. Dredge fishery	F. Dredge.
G. Recreational fishery	G. Rod and reel, handline, trap, pot, spear.
10. Atlantic Mackerel, Squid and Butterfish Fishery (FMP managed by the MAFMC):	
A. Mackerel, squid, and butterfish trawl fishery	A. Trawl.
B. Gillnet fishery	B. Gillnet.
C. Longline and hook-and-line fishery	C. Longline, handline, rod and reel.
D. Purse seine fishery	D. Purse seine.
E. Mixed species pot and trap fishery	E. Pot, trap.
F. Dredge fishery	F. Dredge.
G. Dip net fishery	G. Dip net.
H. Bandit gear fishery	H. Bandit gear.
I. Recreational fishery	I. Rod and reel, handline, pot, spear.
11. Surf Clam and Ocean Quahog Fishery (FMP managed by the MAFMC):	
A. Commercial fishery	A. Dredge, hand harvest.

Fishery Conservation and Management

\$ 600.725

Fishery	Authorized gear types
B. Recreational fishery	B. Hand harvest.
12. Atlantic Menhaden Fishery (Non-FMP):	
A. Purse seine fishery	A. Purse seine.
B. Trawl fishery	B. Trawl.
C. Gillnet fishery	C. Gillnet.
D. Commercial hook-and-line fishery	D. Hook and line.
E. Recreational fishery	E. Hook and line, snagging, cast nets.
13. Weakfish Fishery (Non-FMP):	
A. Commercial fishery	A. Trawl, gillnet, hook and line.
B. Recreational fishery	B. Hook and line, spear.
14. Atlantic Mussel and Sea Urchin Fishery (Non-FMP):	
A. Dredge fishery	A. Dredge.
B. Hand harvest fishery	B. Hand harvest.
C. Recreational fishery	C. Hand harvest.
15. Atlantic Skate Fishery (Non-FMP):	
A. Trawl fishery	A. Trawl.
B. Gillnet fishery	B. Gillnet.
C. Hook-and-line fishery	C. Longline and handline.
D. Dredge fishery	D. Dredge.
E. Recreational fishery	E. Rod and reel.
16. Crab Fishery (Non-FMP):	
A. Dredge fishery	A. Dredge.
B. Trawl fishery	B. Trawl.
C. Trap and pot fishery	C. Trap, pot.
17. Northern Shrimp Fishery (Non-FMP):	
A. Shrimp trawl fishery	A. Trawl.
B. Shrimp pot fishery	B. Pot.
18. Monkfish Fishery (FMP jointly managed by NEFMC and MAFMC):	
A. Trawl fishery	A. Trawl.
B. Gillnet fishery	B. Gillnet.
C. Longline fishery	C. Longline.
D. Dredge fishery	D. Dredge.
E. Trap and pot fishery	E. Trap, pot.
F. Recreational fishery	F. Rod and reel, spear.
19. Summer Flounder, Scup, Black Sea Bass Fishery (FMP managed by MAFMC):	
A. Trawl fishery	A. Trawl.
B. Longline and hook and line fishery	B. Longline, handline.
C. Mixed species pot and trap fishery	C. Pot, trap.
D. Gillnet fishery	D. Gillnet.
E. Dredge fishery	E. Dredge.
F. Recreational fishery	F. Rod and reel, handline, pot, trap, spear.
20. Hagfish Fishery (Non-FMP)	Trap, pot.
21. Tautog Fishery (Non-FMP):	
A. Gillnet fishery	A. Gillnet.
B. Pot and trap fishery	B. Pot, trap.
C. Rod and reel, hook and line fishery	C. Rod and reel, handline, hook and line.
D. Trawl fishery	D. Trawl.
E. Spear fishery	E. Spear.
F. Fyke net fishery	F. Fyke net.
G. Recreational fishery	G. Rod and reel, hook and line, handline, spear.
22. Recreational Fishery (Non-FMP)	Rod and reel, handline, spear, hook and line, hand harvest, bandit gear, powerhead, gillnet, cast net, pot, trap, dip net, bully net, snare.
23. Commercial Fishery (Non-FMP)	Trawl, pot, trap, gillnet, pound net, dredge, seine, handline, longline, hook and line, rod and reel, hand harvest, purse seine, spear, bandit gear, powerhead, dip net, bully net, snare, cast net, barrier net, slurp gun, allowable chemicals.
24. Dolphin/wahoo fishery (FMP managed by SAFMC)	Automatic reel, bandit gear, handline, pelagic longline, rod and reel, spear (including powerheads).

II. Mid-Atlantic Fishery Management Council (MAFMC)

1. Summer Flounder, Scup, Black Sea Bass Fishery (FMP):	
A. Trawl fishery	A. Trawl.
B. Pelagic longline and hook and line fishery	B. Longline, handline, rod and reel.
C. Mixed species pot and trap fishery	C. Pot, trap.
D. Gillnet fishery	D. Gillnet.
E. Dredge fishery	E. Dredge.
F. Recreational fishery	F. Rod and reel, handline, pot, trap, spear.
2. Atlantic Bluefish Fishery (FMP):	
A. Bluefish, croaker, and flounder trawl fishery	A. Trawl.

Fishery	Authorized gear types
B. Pelagic longline and hook and line fishery	B. Longline, handline, bandit gear, rod and reel.
C. Mixed species pot and trap fishery	C. Pot, trap.
D. Gillnet fishery	D. Gillnet.
E. Seine fishery	E. Purse seine, seine.
F. Dredge fishery	F. Dredge.
G. Recreational fishery	G. Rod and reel, handline, trap, pot, spear.
3. Atlantic Mackerel, Squid, and Butterfish Fishery (FMP):	
A. Mackerel, squid, and butterfish trawl fishery	A. Trawl.
B. Gillnet fishery	B. Gillnet.
C. Longline and hook-and-line fishery	C. Longline, handline, rod and reel.
D. Purse seine fishery	D. Purse seine.
E. Mixed species pot and trap fishery	E. Pot, trap.
F. Dredge fishery	F. Dredge.
G. Dip net fishery	G. Dip net.
H. Bandit gear fishery	H. Bandit gear.
I. Recreational fishery	I. Rod and reel, handline, pot, spear.
4. Surf Clam and Ocean Quahog Fishery (FMP):	
A. Commercial fishery	A. Dredge, hand harvest.
B. Recreational fishery	B. Hand harvest.
5. Atlantic Sea Scallop Fishery (FMP managed by NEFMC):	
A. Dredge fishery	A. Dredge.
B. Trawl fishery	B. Trawl.
C. Hand harvest fishery	C. Hand harvest.
D. Recreational fishery	D. Hand harvest.
6. Atlantic Menhaden Fishery (Non-FMP):	
A. Purse seine fishery	A. Purse seine.
B. Trawl fishery	B. Trawl.
C. Gillnet fishery	C. Gillnet.
D. Commercial hook-and-line fishery	D. Hook and line.
E. Recreational fishery	E. Hook and line, snagging, cast nets.
7. Striped Bass Fishery (Non-FMP)	No harvest or possession in the EEZ.
8. Northern Shrimp Trawl Fishery (Non-FMP)	Trawl.
9. American Lobster Fishery (FMP managed by NEFMC):	
A. Pot and trap fishery	A. Pot, trap.
B. Hand harvest fishery	B. Hand harvest.
C. Trawl fishery	C. Trawl.
D. Dredge fishery	D. Dredge.
E. Gillnet fishery	E. Gillnet.
F. Recreational fishery	F. Pot, trap, hand harvest.
10. Weakfish Fishery (Non-FMP):	
A. Commercial fishery	A. Trawl, gillnet, hook and line, rod and reel.
B. Recreational fishery	B. Hook and line, spear.
11. Whelk Fishery (Non-FMP):	
A. Trawl fishery	A. Trawl.
B. Pot and trap fishery	B. Pot, trap.
C. Dredge	C. Dredge.
D. Pound net, gillnet, seine	D. Pound net, gillnet, seine.
E. Recreational fishery	E. Hand harvest.
12. Monkfish Fishery (FMP jointly managed by NEFMC and MAFMC):	
A. Trawl fishery	A. Trawl.
B. Longline fishery	B. Longline, rod and reel.
C. Gillnet fishery	C. Gillnet.
D. Dredge fishery	D. Dredge.
E. Trap and pot fishery	E. Trap and pot.
F. Recreational fishery	F. Rod and reel, spear.
13. Tilefish Fishery (Non-FMP):	
A. Groundfish hook-and-line fishery	A. Longline, handline, rod and fishery reel.
B. Trawl fishery	B. Trawl.
C. Recreational fishery	C. Rod and reel, spear.
14. Spiny Dogfish Fishery (FMP jointly managed by MAFMC and NEFMC):	
A. Gillnet fishery	A. Gillnet.
B. Trawl fishery	B. Trawl.
C. Hook and line fishery	C. Hook and line, rod and reel, spear.
D. Dredge fishery	D. Dredge.
E. Longline fishery	E. Longline.
F. Recreational fishery	F. Hook and line, rod and reel, spear.
15. Tautog Fishery (Non-FMP):	
A. Gillnet fishery	A. Gillnet.
B. Pot and trap fishery	B. Pot, trap.
C. Rod and reel, hook and line handline fishery	C. Rod and reel, hook and line, handline.
D. Trawl fishery	D. Trawl.
E. Spear fishery	E. Spear.
F. Fyke net fishery	F. Fyke net.

Fishery Conservation and Management

\$ 600.725

Fishery	Authorized gear types
G. Recreational fishery	G. Rod and reel, handline, hook and line, spear.
16. Coastal Gillnet Fishery (Non-FMP)	Gillnet
17. Recreational Fishery (Non-FMP)	Rod and reel, handline, spear, hook and line, hand harvest, bandit gear, powerhead, gillnet, cast net.
18. NE Multispecies Fishery (FMP managed by NEFMC):	
A. NE multispecies sink gillnet fishery	A. Gillnet.
B. North Atlantic bottom trawl fishery	B. Trawl.
C. Groundfish hook and line	C. Longline, handline, rod and fishery reel.
D. Mixed species trap and pot fishery	D. Trap, pot.
E. Dredge fishery	E. Dredge.
F. Seine fishery	F. Seine.
G. Recreational fishery	G. Rod and reel, handline, spear.
19. Atlantic Skate Fishery (Non-FMP):	
A. Trawl fishery	A. Trawl.
B. Gillnet fishery	B. Gillnet.
C. Hook-and-line fishery	C. Longline and handline.
D. Dredge fishery	D. Dredge.
E. Recreational fishery	E. Rod and reel.
20. Crab Fishery (Non-FMP):	
A. Dredge fishery	A. Dredge.
B. Trawl fishery	B. Trawl.
C. Trap and pot fishery	C. Trap, pot.
21. Atlantic Herring Fishery (FMP managed by the NEFMC):	
A. Trawl fishery	A. Trawl.
B. Purse seine fishery	B. Purse seine.
C. Gillnet fishery	C. Gillnet.
D. Herring pair trawl fishery	D. Pair trawl.
E. Dredge fishery	E. Dredge.
F. Recreational fishery	F. Hook and line, gillnet.
22. South Atlantic Snapper-Grouper Fishery (FMP managed by the SAFMC):	
A. Commercial fishery	A. Longline, rod and reel, bandit gear, handline, spear, powerhead.
B. Black sea bass trap and pot fishery	B. Pot, trap.
C. Wreckfish fishery	C. Rod and reel, bandit gear, handline.
D. Recreational fishery	D. Handline, rod and reel, bandit gear, spear, powerhead.
23. South Atlantic Coastal Migratory Pelagics Fishery (FMP managed by the SAFMC):	
A. Commercial Spanish mackerel fishery	A. Handline, rod and reel, bandit gear, gillnet, cast net.
B. Commercial king mackerel fishery	B. Handline, rod and reel, bandit gear.
C. Other commercial coastal migratory pelagics fishery	C. Longline, handline, rod and reel, bandit gear.
D. Recreational fishery	D. Bandit gear, rod and reel, handline, spear.
24. Calico Scallops Fishery (Non-FMP):	
A. Trawl fishery	A. Trawl.
B. Dredge fishery	B. Dredge.
C. Recreational fishery	C. Hand harvest.
25. Sargassum Fishery (Non-FMP)	Trawl.
26. South Atlantic Shrimp Fishery (FMP)	Trawl.
27. Commercial Fishery (Non-FMP)	Trawl, pot, trap, gillnet, pound net, dredge, seine, handline, longline, hook and line, rod and reel, spear.
28. Dolphin/wahoo fishery (FMP managed by SAFMC)	Automatic reel, bandit gear, handline, pelagic longline, rod and reel, spear (including powerheads).

III. South Atlantic Fishery Management Council

1. Golden Crab Fishery (FMP)	Trap.
2. Crab Fishery (Non-FMP):	
A. Dredge fishery	A. Dredge.
B. Trawl fishery	B. Trawl.
C. Trap and pot fishery	C. Trap, pot.
3. Atlantic Red Drum Fishery (FMP)	No harvest or possession in the EEZ.
4. Coral and Coral Reef Fishery (FMP):	
A. Octocoral commercial fishery	Hand harvest.
B. Live rock aquaculture fishery	Hand harvest.
5. South Atlantic Shrimp Fishery (FMP)	Trawl.
6. South Atlantic Snapper-Grouper Fishery (FMP):	
A. Commercial fishery	A. Longline, rod and reel, bandit gear, handline, spear, powerhead.
B. Black sea bass pot fishery	B. Pot.
C. Wreckfish fishery	C. Rod and reel, bandit gear, handline.

Fishery	Authorized gear types
D. Recreational fishery	D. Handline, rod and reel, bandit gear, spear, powerhead.
7. South Atlantic Spiny Lobster Fishery (FMP):	
A. Commercial fishery	A. Trap, pot, dip net, bully net, snare, hand harvest.
B. Recreational fishery	B. Dip net, bully net, snare, hand harvest.
8. South Atlantic Coastal Migratory Pelagics Fishery (FMP):	
A. Commercial Spanish mackerel fishery	A. Handline, rod and reel, bandit gear, gillnet, cast net.
B. Commercial king mackerel fishery	B. Handline, rod and reel, bandit gear.
C. [Reserved].	
D. Recreational fishery	D. Bandit gear, rod and reel, handline, spear.
9. Spiny Dogfish Fishery (FMP jointly managed by NEFMC and SAFMC):	
A. Gillnet fishery	A. Gillnet.
B. Trawl fishery	B. Trawl.
C. Hook and line fishery	C. Hook and line, rod and reel, spear, bandit gear.
D. Dredge fishery	D. Dredge.
E. Longline fishery	E. Longline.
F. Recreational fishery	F. Hook and line, rod and reel, spear.
10. Smooth Dogfish Fishery (Non-FMP):	
A. Gillnet fishery	A. Gillnet.
B. Trawl fishery	B. Trawl.
C. Hook and line fishery	C. Hook and line, rod and reel, spear, bandit gear.
D. Dredge fishery	D. Dredge.
E. Longline fishery	E. Longline.
F. Recreational fishery	F. Hook and line, rod and reel, spear.
11. Atlantic Menhaden Fishery (Non-FMP):	
A. Purse seine fishery	A. Purse seine.
B. Trawl fishery	B. Trawl.
C. Gillnet fishery	C. Gillnet.
D. Commercial hook-and-line	D. Hook and line fishery.
E. Recreational fishery	E. Hook and line, snagging, cast nets.
12. Atlantic Mackerel, Squid, and Butterfish Trawl Fishery (Non-FMP)	Trawl.
13. Bait Fisheries (Non-FMP)	Purse seine.
14. Weakfish Fishery (Non-FMP):	
A. Commercial fishery	A. Trawl, gillnet, hook and line.
B. Recreational fishery	B. Hook and line, spear.
15. Whelk Fishery (Non-FMP):	
A. Trawl fishery	A. Trawl.
B. Pot and trap fishery	B. Pot, trap.
C. Dredge fishery	C. Dredge.
D. Recreational fishery	D. Hand harvest.
16. Marine Life Aquarium Fishery (Non-FMP)	Dip net, slurp gun, barrier net, drop net, allowable chemical, trap, pot, trawl.
17. Calico Scallop Fishery (Non-FMP):	
A. Dredge fishery	A. Dredge.
B. Trawl fishery	B. Trawl.
C. Recreational fishery	C. Hand harvest.
18. Summer Flounder Fishery (FMP managed by MAFMC):	
A. Commercial fishery	A. Trawl, longline, handline, rod and reel, pot, trap, gillnet, dredge.
B. Recreational fishery	B. Rod and reel, handline, pot, trap, spear.
19. Bluefish, Croaker, and Flounder Trawl and Gillnet Fishery (Bluefish FMP managed by MAFMC).	Trawl, gillnet.
20. Commercial Fishery (Non-FMP)	Trawl, gillnet, longline, handline, hook and line, rod and reel, bandit gear, cast net, pot, trap, lampara net, spear.
21. Recreational Fishery (Non-FMP)	Rod and reel, handline, spear, hook and line, hand harvest, bandit gear, powerhead, gillnet, cast net.
22. Sargassum Fishery (Non-FMP)	Trawl.
23. Octopus Fishery (Non-FMP)	Trap, pot.
24. Dolphin/wahoo fishery (FMP)	Automatic reel, bandit gear, handline, pelagic longline, rod and reel, spear (including powerheads).
25. Atlantic Migratory Group Cobia (Non-FMP):	
A. Commercial Fishery	A. Longline, handline, rod and reel, bandit gear, spear.
B. Recreational Fishery	B. Bandit gear, rod and reel, handline, spear.
IV. Gulf of Mexico Fishery Management Council	
1. Gulf of Mexico Red Drum Fishery (FMP)	No harvest or possession in the EEZ.
2. Coral Reef Fishery (FMP):	
A. Commercial fishery	A. Hand harvest.

Fishery Conservation and Management

\$ 600.725

Fishery	Authorized gear types
B. Recreational fishery	B. Hand harvest.
3. Gulf of Mexico Reef Fish Fishery (FMP):	
A. Snapper-Grouper reef fish longline and hook and line fishery	A. Longline, handline, bandit gear, rod and reel, buoy gear.
B. Other commercial fishery	B. Spear, powerhead, cast net, trawl.
C. Recreational fishery	C. Spear, powerhead, bandit gear, handline, rod reel, cast net.
4. Gulf of Mexico Shrimp Fishery (FMP):	
A. Gulf of Mexico commercial fishery	A. Trawl butterfly net, skimmer, cast net.
B. Recreational fishery	B. Trawl.
5. Gulf of Mexico Coastal Migratory Pelagics Fishery (FMP):	
A. Large pelagics longline fishery	A. Longline.
B. King/Spanish mackerel gillnet fishery	B. Gillnet.
C. Pelagic hook and line fishery	C. Bandit gear, handline, rod and reel.
D. Pelagic species purse seine fishery	D. Purse seine.
E. Recreational fishery	E. Bandit gear, handline, rod and reel, spear.
Gulf of Mexico Spiny Lobster Fishery (FMP):	
A. Commercial fishery	A. Trap, pot, dip net, bully net, hoop net, trawl, snare, hand harvest.
C. Recreational fishery	C. Dip net, bully net, pot, trap, snare, hand harvest.
6. Stone Crab Fishery (FMP):	
A. Trap and pot fishery	A. Trap, pot
B. Recreational fishery	B. Trap, pot, hand harvest.
7. Blue Crab Fishery (Non-FMP)	Trap, pot.
8. Golden Crab Fishery (Non-FMP)	Trap.
9. Mullet Fishery (Non-FMP):	
A. Trawl fishery	A. Trawl.
B. Gillnet fishery	B. Gillnet.
C. Pair trawl fishery	C. Pair trawl.
D. Cast net fishery	D. Cast net.
E. Recreational fishery	E. Bandit gear, handline, rod and reel, spear, cast net.
10. Inshore Coastal Gillnet Fishery (Non-FMP)	Gillnet.
11. Octopus Fishery (Non-FMP)	Trap, pot.
12. Marine Life Aquarium Fishery (Non-FMP)	Dip net, slurp gun, barrier net, drop net, allowable chemical, trap, pot, trawl.
13. Coastal Herring Trawl Fishery (Non-FMP)	Trawl.
14. Butterfish Trawl Fishery (Non-FMP)	Trawl.
15. Gulf of Mexico Groundfish (Non-FMP):	
A. Commercial fishery	A. Trawl, purse seine, gillnet.
B. Recreational fishery	B. Hook and line, rod and reel, spear.
16. Gulf of Mexico Menhaden Purse Seine Fishery (Non-FMP)	Purse seine.
17. Sardine Purse Seine Fishery (Non-FMP)	Purse seine.
18. Oyster Fishery (Non-FMP)	Dredge, tongs.
19. Commercial Fishery (Non-FMP)	Trawl, gillnet, hook and line, longline, handline, rod and reel, bandit gear, cast net, lampara net, spear.
20. Recreational Fishery (Non-FMP)	Bandit gear, handline, rod and reel, spear, bully net, gillnet, dip net, longline, powerhead, seine, slurp gun, trap, trawl, harpoon, cast net, hoop net, hook and line, hand harvest.
21. Offshore aquaculture (FMP)	Cages, net pens

V. Caribbean Fishery Management Council

1. Caribbean Spiny Lobster Fishery (FMP):	
A. Trap/pot fishery	A. Trap/pot.
B. Dip net fishery	B. Dip net.
C. Hand harvest fishery	C. Hand harvest, snare.
D. Recreational fishery	D. Dip net, trap, pot.
2. Caribbean Reef Fish Fishery (FMP):	
A. Longline/hook and line fishery	A. Longline, hook and line.
B. Trap/pot fishery	B. Trap, pot.
C. Recreational fishery	C. Dip net, handline, rod and reel, slurp gun, spear.
D. Other commercial fishery	D. Spear.
3. Coral and Reef Resources Fishery (FMP):	
A. Commercial fishery	A. Dip net, slurp gun.
B. Recreational fishery	B. Dip net, slurp gun, hand harvest.
4. Queen Conch Fishery (FMP):	
A. Commercial fishery	A. Hand harvest.
B. Recreational fishery	B. Hand harvest.
5. Caribbean Pelagics Fishery (Non-FMP):	
A. Pelagics drift gillnet fishery	A. Gillnet.
B. Pelagics longline/hook and line fishery	B. Longline/hook and line.
C. Recreational fishery	C. Spear, handline, longline, rod and reel.

Fishery	Authorized gear types
6. Commercial Fishery (Non-FMP)	Trawl, gillnet, hook and line, longline, handline, rod and reel, bandit gear, cast net, spear.
7. Recreational Fishery (Non-FMP)	Rod and reel, hook and line, spear, powerhead, handline, hand harvest, cast net.

VI. Pacific Fishery Management Council

1. Pacific Coast Salmon Fisheries (FMP):	
A. Commercial	A. Hook and line.
B. Recreational	B. Hook and line.
2. Pacific Coast Groundfish Fisheries (FMP):	
A. Commercial	A. Trawl, hook and line, pot/trap, demersal seine, set net, spear, and hand collection.
B. Recreational	B. Hook and line, spear.
3. Coastal Pelagic Species Fisheries (FMP):	
A. Commercial	A. Purse seine, lampara net, brail net, dip net, cast net, hook and line.
B. Recreational	B. Hook and line, spear, pot/trap, dip net, cast net, hand harvest, rake, harpoon, bow and arrow.
4. Highly Migratory Species Fisheries (FMP):	
A. Commercial	A. Hook and line, gillnet, harpoon, purse seine.
B. Recreational	B. Hook and line, spear, harpoon, bow and arrow.
5. Pacific Halibut Fisheries (Non-FMP):	
A. Commercial	A. Hook and line.
B. Recreational	B. Hook and line, spear.
6. Dungeness Crab Fisheries (Non-FMP):	
A. Commercial	A. Pot/trap.
B. Recreational North of 46°15' N. lat	B. Pot/trap, dip net, hand harvest.
C. Recreational South of 46°15' N. lat. and North of 42° N. lat ..	C. Pot/trap, hook and line, dip net, hand harvest, rake, crab loop.
D. Recreational South of 42° N. lat	D. Pot/trap, hand harvest, hoop net, crab loop.
7. Crab Fisheries for Species other than Dungeness crab (Non-FMP):	
A. Commercial Pot/Trap Fisheries South of 46°15' N. lat	A. Pot/trap.
B. Recreational North of 46°15' N. lat	B. Pot/trap, dip net, hand harvest.
C. Recreational South of 46°15' N. lat. and North of 42° N. lat ..	C. Pot/trap, hook and line, dip net, hand harvest, rake, crab loop.
D. Recreational South of 42° N. lat	D. Pot/trap, hand harvest, hoop net, crab loop.
8. Shrimp and Prawn Fisheries (Non-FMP):	
A. Commercial spot prawn	A. Pot/trap.
B. Commercial pink shrimp North of 46°15' N. lat	B. Trawl.
C. Commercial pink shrimp South of 46°15' N. lat	C. Pot/trap, trawl.
D. Commercial coonstripe shrimp South of 46°15' N. lat	D. Pot/trap.
E. Commercial ridgeback prawn South of 42° N. lat	E. Trawl.
F. Recreational North of 46°15' N. lat	F. Pot/trap, dip net, hand harvest.
G. Recreational South of 46°15' N. lat. and North of 42° N. lat ..	G. Pot/trap, hook and line, dip net, hand harvest, rake.
H. Recreational South of 42° N. lat	H. Pot/trap, hand harvest, dip net.
9. Hagfish Commercial Fisheries (Non-FMP)	Pot/trap.
10. Squid, all spp. except market squid or not otherwise prohibited, and Octopus Fisheries (Non-FMP):	
A. Commercial	A. Hook and line, pot/trap, dip net, seine, trawl, set net, spear, hand harvest.
B. Recreational Squid North of 42° N. lat	B. Hook and line, cast net, dip net, hand harvest.
C. Recreational Octopus North of 42° N. lat	C. Hook and line, pot/trap, dip net, hand harvest.
D. Recreational South of 42° N. lat	D. Hook and line, dip net, hand harvest.
11. White Sturgeon Fisheries (Non-FMP):	
A. Commercial South of 46°15' N. lat. and North of 42° N. lat ...	A. Trawl, pot/trap, hook and line, seine, dip net, spear.
B. Recreational North of 42° N. lat	B. Hook and line.
C. Recreational South of 42° N. lat	C. Hook and line, spear.
12. Sea Cucumber Fishery (Non-FMP):	
A. Commercial hand harvest fishery South of 46°15' N. lat	A. Hand harvest.
B. Commercial trawl South of 42° N. lat	B. Trawl.
13. Minor Finfish Commercial Fisheries South of 46°15' N. lat. and North of 42° N. lat. for: Salmon shark, Pacific pomfret, slender sole, wolf-eel, eelpout species, Pacific sandfish, skiffish, and walleye pollock Fisheries (Non-FMP).	Trawl, pot/trap, hook and line, seine, dipnet, spear.
14. Weathervane Scallop Commercial Fishery South of 46°15' N. lat. and North of 42° N. lat. (Non-FMP).	Trawl.
15. California Halibut, White Seabass Commercial Fisheries South of 42° N. lat. (Non-FMP):	
A. California halibut trawl	A. Trawl.
B. California halibut and white seabass set net	B. Gillnet, trammel net.
C. California halibut hook and line	C. Hook and line.

Fishery Conservation and Management

§ 600.725

Fishery	Authorized gear types
D. White seabass hook and line	D. Hook and line.
16. California Barracuda, White Seabass, and Yellowtail Drift-Net Commercial Fishery South of 42° N. lat. (Non-FMP).	Gillnet.
17. Pacific Bonito Commercial Net Fishery South of 42° N. lat. (Non-FMP).	Purse seine.
18. Lobster Commercial Pot and Trap Fishery South of 42° N. lat. (Non-FMP).	Pot/trap.
19. Finfish and Invertebrate Fisheries Not Listed Above and Not Otherwise Prohibited (Non-FMP):	
A. Commercial South of 46°15' N. lat	A. Hook and line, pot/trap, spear.
B. Recreational	B. Hook and line, spear, pot/trap, dip net, cast net, hand harvest, rake, harpoon, bow and arrow.

VII. North Pacific Fishery Management Council

1. Alaska Scallop Fishery (FMP)	Dredge.
2. Bering Sea (BS) and Aleutian Islands (AI) King and Tanner Crab Fishery (FMP):	
Pot fishery	Pot.
3. Bering Sea (BS) and Aleutian Islands (AI) King and Tanner Crab Fishery (FMP):	
Recreational fishery	Pot.
4. BS and AI Groundfish Fishery (FMP):	
A. Groundfish trawl fishery	A. Trawl.
B. Bottomfish hook-and-line, and handline fishery	B. Hook and line, handline.
C. Longline fishery	C. Longline.
D. BS and AI pot and trap fishery	D. Pot, trap.
5. BS and AI Groundfish Recreational Fishery (Non-FMP)	Handline, rod and reel, hook and line, pot, trap.
6. Gulf of Alaska (GOA) Groundfish Fishery (FMP):	
A. Groundfish trawl fishery	A. Trawl.
B. Bottomfish hook-and-line and handline fishery	B. Hook and line, handline.
C. Longline fishery	C. Longline.
D. GOA pot and trap fishery	D. Pot, trap.
E. Recreational fishery	E. Handline, rod and reel, hook and line, pot, trap.
7. Pacific Halibut Fishery (Non-FMP):	
A. Commercial (IFQ and CDQ)	A. Hook and line, pot.
B. Recreational	B. Single line with no more than 2 hooks attached or spear.
C. Subsistence	C. Setline gear and hand held gear of not more than 30 hooks, including longline, handline, rod and reel, spear, jig, and hand-troll gear.
8. Alaska High Seas Salmon Hook and Line Fishery: (FMP)	Hook and line.
9. Alaska Salmon Fishery (Non-FMP):	
A. Hook-and-line fishery	A. Hook and line.
B. Gillnet fishery	B. Gillnet.
C. Purse seine fishery	C. Purse seine.
D. Recreational fishery	D. Handline, rod and reel, hook and line.
10. Finfish Purse Seine Fishery (Non-FMP)	Purse seine.
11. Octopus/Squid Longline Fishery (Non-FMP)	Longline.
12. Finfish Handline and Hook-and-line Fishery (Non-FMP)	Handline, hook and line.
13. Recreational Fishery (Non-FMP)	Handline, rod and reel, hook line.
14. Commercial Fishery (Non-FMP)	Trawl, gillnet, hook and line, longline, handline, rod and reel, bandit gear, cast net, spear.

VIII. Western Pacific Fishery Management Council

1. Western Pacific Crustacean Fishery (FMP) (Fishery Ecosystem Plan, FEP).	Trap, hand harvest, hoop net.
2. Western Pacific Crustacean Fishery (Non-FEP):	
A. Commercial fishery	A. Gillnet, hand harvest, hoop net, spear, snare, trap, trawl.
B. Recreational fishery	B. Gillnet, hand harvest, hoop net, spear, snare, trap.
C. Charter fishery	C. Hand harvest, spear.
3. Western Pacific Precious Corals Fishery (FEP):	
A. Tangle net dredge fishery	A. Tangle net dredge.
B. Submersible fishery	B. Submersible.
C. Dive fishery	C. Hand harvest.
D. Recreational fishery	D. Hand harvest.
4. Western Pacific Precious Corals Fishery (Non-FEP)	Hand harvest, submersible, tangle net dredge.
5. Western Pacific Bottomfish and Seamount Groundfish Fishery (FEP)	
A. Bottomfish hook-and-line fishery	A. Bandit gear, buoy gear, handline, hook and line, rod and reel, hand harvest.
B. Seamount groundfish fishery	B. Longline, trawl.

Fishery	Authorized gear types
C. Bottom longline fishery	C. Longline, hook and line.
D. Trap fishery	D. Trap.
E. Spear fishery	E. Spear, powerhead.
6. Western Pacific Bottomfish and Seamount Groundfish Fishery (Non-FEP):	
A. Commercial fishery	A. Bandit gear, buoy gear, gillnet, handline, hook-and-line, longline, rod and reel, spear, trap.
B. Recreational fishery	B. Bandit gear, buoy gear, Gillnet, handline, hook and line, longline, rod and reel, spear, trap, slurp gun, hand harvest.
C. Charter fishery	C. Bandit gear, buoy gear, handline, hook-and-line, rod and reel, spear.
7. Western Pacific Pelagics Fishery (FEP):	
A. Longline Fishery	A. Longline.
B. Hook and line fishery	B. Bandit gear, buoy gear, handline, hook and line, rod and reel.
C. Purse seine fishery	C. Lampara net, purse seine.
D. Spear fishery	D. Spear, powerhead.
E. Squid jig fishery	E. Squid jig.
8. Western Pacific Pelagics Fishery (Non-FEP):	
A. Recreational fishery	A. Bandit gear, buoy gear, dip net, handline, hook and line, hoop net, powerhead, rod and reel, spear.
B. Commercial fishery	B. Bandit gear, buoy gear, dip net, handline, hook and line, hoop net, powerhead, rod and reel, spear.
C. Charter fishery	C. Bandit gear, buoy gear, dip net, handline, hook and line, hoop net, powerhead, rod and reel, spear.
9. Western Pacific Coastal Pelagics Fishery (Non-FEP)	Bandit gear, buoy gear, dip net, gillnet, handline, hook and line, hoop net, lampara net, purse seine, rod and reel, spear.
10. Western Pacific Squid and Octopus Fishery (Non-FEP)	Bandit gear, hand harvest, hook and line, rod and reel, spear, trap.
11. Western Pacific Coral Reef Fishery (Non-FEP)	Allowable chemical, barrier net, dip net, gillnet, hand harvest, seine, slurp gun, trap, spear, rod and reel, hook and line.
12. Recreational Fishery (Non-FEP)	Rod and reel, hook and line, handline, hand harvest, spear.
13. Commercial Fishery (Non-FEP)	Trawl, gillnet, hook and line, longline, handline, rod and reel, bandit gear, cast net, spear.
IX. Secretary of Commerce	
1. Atlantic Highly Migratory Species Fisheries (FMP):	
A. Swordfish handgear fishery	A. Rod and reel, harpoon, handline, bandit gear, buoy gear, green-stick gear.
B. Swordfish recreational fishery	B. Rod and reel, handline.
C. Pelagic longline fishery	C. Longline.
D. Shark gillnet fishery	D. Gillnet.
E. Shark bottom longline fishery	E. Longline.
F. Shark handgear fishery	F. Rod and reel, handline, bandit gear.
G. Shark recreational fishery	G. Rod and reel, handline.
H. Tuna purse seine fishery	H. Purse seine.
I. Tuna recreational fishery	I. Speargun gear (for bigeye, albacore, yellowfin, and skipjack tunas only); Rod and reel, handline (all tunas); green-stick gear (HMS Charter/Headboat Category only).
J. Tuna handgear fishery	J. Rod and reel, harpoon, handline, bandit gear.
K. Tuna harpoon fishery	K. Harpoon.
L. Atlantic billfish recreational fishery	L. Rod and reel.
M. Tuna green-stick fishery	M. Green-stick gear.
N. Commercial Caribbean Small Boat Fishery	N. Rod and reel, handline, harpoon, bandit gear, green-stick gear, buoy gear.
2. Commercial Fisheries (Non-FMP)	Rod and reel, handline, longline, gillnet, harpoon, bandit gear, purse seine, green-stick gear.

(w) Fail to maintain safe conditions for the protection of observers including compliance with all U.S. Coast Guard and other applicable rules, regulations, or statutes applicable to the

vessel and which pertain to safe operation of the vessel.

[61 FR 32540, June 24, 1996]

EDITORIAL NOTE: For FEDERAL REGISTER citations affecting § 600.725, see the List of CFR

Fishery Conservation and Management

§ 600.730

Sections Affected, which appears in the Finding Aids section of the printed volume and at www.govinfo.gov.

§ 600.730 Facilitation of enforcement.

(a) *General.* The operator of, or any other person aboard, any fishing vessel subject to parts 622 through 699 of this chapter must immediately comply with instructions and signals issued by an authorized officer to stop the vessel and with instructions to facilitate safe boarding and inspection of the vessel, its gear, equipment, fishing record (where applicable), and catch for purposes of enforcing the Magnuson-Stevens Act or any other statute administered by NOAA and this chapter.

(1) For the purposes of this section “freeboard” means the working distance between the top rail of the gunwale of a vessel and the water’s surface. Where cut-outs are provided in the bulwarks for the purpose of boarding personnel, freeboard means the distance between the threshold of the bulwark cut-out and the water’s surface.

(2) For the purposes of this section, “pilot ladder” means a flexible ladder constructed and approved to meet the U.S. Coast Guard standards for pilot ladders at 46 CFR subpart 163.003 entitled Pilot Ladder.

(b) *Communications.* (1) Upon being approached by a USCG vessel or aircraft, or other vessel or aircraft with an authorized officer aboard, the operator of a fishing vessel must be alert for communications conveying enforcement instructions.

(2) VHF-FM radiotelephone is the preferred method for communicating between vessels. If the size of the vessel and the wind, sea, and visibility conditions allow, a loudhailer may be used instead of the radio. Hand signals, placards, high frequency radiotelephone, or voice may be employed by an authorized officer, and message blocks may be dropped from an aircraft.

(3) If other communications are not practicable, visual signals may be transmitted by flashing light directed at the vessel signaled. USCG units will normally use the flashing light signal “L” as the signal to stop. In the International Code of Signals, “L” (.-..) means “you should stop your vessel instantly.” (Period (.) means a short

flash of light; dash (-) means a long flash of light.)

(4) Failure of a vessel’s operator promptly to stop the vessel when directed to do so by an authorized officer using loudhailer, radiotelephone, flashing light signal, or other means constitutes prima facie evidence of the offense of refusal to permit an authorized officer to board.

(5) The operator of a vessel who does not understand a signal from an enforcement unit and who is unable to obtain clarification by loudhailer or radiotelephone must consider the signal to be a command to stop the vessel instantly.

(c) *Boarding.* The operator of a vessel directed to stop must:

(1) Guard Channel 16, VHF-FM, if so equipped.

(2) Stop immediately and lay to or maneuver in such a way as to allow the authorized officer and his/her party to come aboard.

(3) Except for fishing vessels with a freeboard of 4 feet (1.25 m) or less, provide, when requested by an authorized officer or observer personnel, a pilot ladder capable of being used for the purpose of enabling personnel to embark and disembark the vessel safely. The pilot ladder must be maintained in good condition and kept clean.

(4) When necessary to facilitate the boarding or when requested by an authorized officer or observer, provide a manrope or safety line, and illumination for the pilot ladder.

(5) Take such other actions as necessary to facilitate boarding and to ensure the safety of the authorized officer and the boarding party.

(d) *Signals.* The following signals, extracted from the International Code of Signals, may be sent by flashing light by an enforcement unit when conditions do not allow communications by loudhailer or radiotelephone. Knowledge of these signals by vessel operators is not required. However, knowledge of these signals and appropriate action by a vessel operator may preclude the necessity of sending the signal “L” and the necessity for the vessel to stop instantly. (Period (.) means a short flash of light; dash (-) means a long flash of light.)

§ 600.735

(1) “AA” repeated (.-.-) is the call to an unknown station. The operator of the signaled vessel should respond by identifying the vessel by radio-telephone or by illuminating the vessel’s identification.

(2) “RY-CY” (.-. -.- -.-) means “you should proceed at slow speed, a boat is coming to you.” This signal is normally employed when conditions allow an enforcement boarding without the necessity of the vessel being boarded coming to a complete stop, or, in some cases, without retrieval of fishing gear which may be in the water.

(3) “SQ3” (... —.- ...—) means “you should stop or heave to; I am going to board you.”

[61 FR 32540, June 24, 1996, as amended at 61 FR 37225, July 17, 1996; 63 FR 7075, Feb. 12, 1998; 73 FR 67809, Nov. 17, 2008; 81 FR 88998, Dec. 9, 2016]

§ 600.735 Penalties.

Any person committing, or fishing vessel used in the commission of a violation of the Magnuson-Stevens Act or any other statute administered by NOAA and/or any regulation issued under the Magnuson-Stevens Act, is subject to the civil and criminal penalty provisions and civil forfeiture provisions of the Magnuson-Stevens Act, to this section, to 15 CFR part 904 (Civil Procedures), and to other applicable law.

[61 FR 32540, June 24, 1996, as amended at 63 FR 7075, Feb. 12, 1998]

§ 600.740 Enforcement policy.

(a) The Magnuson-Stevens Act provides four basic enforcement remedies for violations, in ascending order of severity, as follows:

(1) Issuance of a citation (a type of warning), usually at the scene of the offense (see 15 CFR part 904, subpart E).

(2) Assessment by the Administrator of a civil money penalty.

(3) For certain violations, judicial forfeiture action against the vessel and its catch.

(4) Criminal prosecution of the owner or operator for some offenses. It shall be the policy of NMFS to enforce vigorously and equitably the provisions of the Magnuson-Stevens Act by utilizing that form or combination of authorized

50 CFR Ch. VI (10–1–21 Edition)

remedies best suited in a particular case to this end.

(b) Processing a case under one remedial form usually means that other remedies are inappropriate in that case. However, further investigation or later review may indicate the case to be either more or less serious than initially considered, or may otherwise reveal that the penalty first pursued is inadequate to serve the purposes of the Magnuson-Stevens Act. Under such circumstances, the Agency may pursue other remedies either in lieu of or in addition to the action originally taken. Forfeiture of the illegal catch does not fall within this general rule and is considered in most cases as only the initial step in remedying a violation by removing the ill-gotten gains of the offense.

(c) If a fishing vessel for which a permit has been issued under the Magnuson-Stevens Act is used in the commission of an offense prohibited by section 307 of the Magnuson-Stevens Act, NOAA may impose permit sanctions, whether or not civil or criminal action has been undertaken against the vessel or its owner or operator. In some cases, the Magnuson-Stevens Act requires permit sanctions following the assessment of a civil penalty or the imposition of a criminal fine. In sum, the Magnuson-Stevens Act treats sanctions against the fishing vessel permit to be the carrying out of a purpose separate from that accomplished by civil and criminal penalties against the vessel or its owner or operator.

[61 FR 32540, June 24, 1996, as amended at 63 FR 7075, Feb. 12, 1998]

§ 600.745 Scientific research activity, exempted fishing, and exempted educational activity.

(a) *Scientific research activity.* Nothing in this part is intended to inhibit or prevent any scientific research activity conducted by a scientific research vessel. Persons planning to conduct scientific research activities on board a scientific research vessel in the EEZ or on the high seas are encouraged to submit to the appropriate Regional Administrator or Director, 60 days or as soon as practicable prior to its start, a

scientific research plan for each scientific activity. The Regional Administrator or Director will acknowledge notification of scientific research activity by issuing to the operator or master of that vessel, or to the sponsoring institution, a Letter of Acknowledgment. This Letter of Acknowledgment is separate and distinct from any permit or consultation required by the MMPA, the ESA, or any other applicable law. The Regional Administrator or Director will include text in the Letter of Acknowledgment informing the applicant that such a permit may be required and should be obtained from the agency prior to embarking on the activity. If the Regional Administrator or Director, after review of a research plan, determines that it does not constitute scientific research but rather fishing, the Regional Administrator or Director will inform the applicant as soon as practicable and in writing. In making this determination, the Regional Administrator, Director, or designee shall consider: the merits of the individual proposal and the institution(s) involved; whether the proposed activity meets the definition of scientific research activity; and whether the vessel meets all the requirements for a scientific research vessel. The Regional Administrator or Director may also make recommendations to revise the research plan to ensure the activity will be considered to be scientific research activity or recommend the applicant request an EFP. The Regional Administrator or Director may designate a Science and Research Director, or the Assistant Regional Administrator for Sustainable Fisheries, to receive scientific research plans and issue Letters of Acknowledgment. In order to facilitate identification of the activity as scientific research, persons conducting scientific research activities are advised to carry a copy of the scientific research plan and the Letter of Acknowledgment on board the scientific research vessel and to make it available for inspection upon the request of any authorized officer. It is recommended that for any scientific research activity, any fish, or parts thereof, retained pursuant to such activity be accompanied, during any ex-vessel activities, by a copy of the Let-

ter of Acknowledgment. Activity conducted in accordance with a scientific research plan acknowledged by such a Letter of Acknowledgment is presumed to be scientific research activity. An authorized officer may overcome this presumption by showing that an activity does not fit the definition of scientific research activity or is outside the scope of the scientific research plan.

(b) *Exempted fishing*—(1) *General*. A NMFS Regional Administrator or Director may authorize, for limited testing, public display, data collection, exploratory fishing, compensation fishing, conservation engineering, health and safety surveys, environmental cleanup, and/or hazard removal purposes, the target or incidental harvest of species managed under an FMP or fishery regulations that would otherwise be prohibited. Exempted fishing may not be conducted unless authorized by an EFP issued by a Regional Administrator or Director in accordance with the criteria and procedures specified in this section. Compensation fishing must be conducted under an EFP if the activity would otherwise be prohibited by applicable regulations unless the activity is specifically authorized under an FMP or a scientific research permit. Conservation engineering that does not meet the definition of scientific research activity, but does meet the definition of fishing must be conducted under an EFP if the activity would otherwise be prohibited by applicable regulations. Data collection designed to capture and land quantities of fish for product development, market research, and/or public display must be permitted under exempted fishing procedures. An EFP exempts a vessel only from those regulations specified in the EFP. All other applicable regulations remain in effect. The Regional Administrator or Director may charge a fee to recover the administrative expenses of issuing an EFP. The amount of the fee will be calculated, at least annually, in accordance with procedures of the NOAA Handbook for determining administrative costs of each special product or service; the fee may not exceed such

costs. Persons may contact the appropriate Regional Administrator or Director to determine the applicable fee.

(2) *Application.* An applicant for an EFP shall submit a completed application package to the appropriate Regional Administrator or Director, as soon as practicable and at least 60 days before the desired effective date of the EFP. Submission of an EFP application less than 60 days before the desired effective date of the EFP may result in a delayed effective date because of review requirements. The application package must include payment of any required fee as specified by paragraph (b)(1) of this section, and a written application that includes, but is not limited to, the following information:

- (i) The date of the application.
- (ii) The applicant's name, mailing address, and telephone number.
- (iii) A statement of the purposes and goals of the exempted fishery for which an EFP is needed, including justification for issuance of the EFP.
- (iv) For each vessel to be covered by the EFP, as soon as the information is available and before operations begin under the EFP:
 - (A) A copy of the USCG documentation, state license, or registration of each vessel, or the information contained on the appropriate document.
 - (B) The current name, address, and telephone number of the owner and master, if not included on the document provided for the vessel.
- (v) The species (target and incidental) expected to be harvested under the EFP, the amount(s) of such harvest necessary to conduct the exempted fishing, the arrangements for disposition of all regulated species harvested under the EFP, and any anticipated impacts on the environment, including impacts on fisheries, marine mammals, threatened or endangered species, and EFH.
- (vi) For each vessel covered by the EFP, the approximate time(s) and place(s) fishing will take place, and the type, size, and amount of gear to be used.
- (vii) The signature of the applicant.
- (viii) The Regional Administrator or Director, as appropriate, may request from an applicant additional information

necessary to make the determinations required under this section. An incomplete application or an application for which the appropriate fee has not been paid will not be considered until corrected in writing and the fee paid. An applicant for an EFP need not be the owner or operator of the vessel(s) for which the EFP is requested.

(3) *Issuance.* (i) The Regional Administrator or Director, as appropriate, will review each application and will make a preliminary determination whether the application contains all of the required information and constitutes an activity appropriate for further consideration. If the Regional Administrator or Director finds that any application does not warrant further consideration, both the applicant and the affected Council(s) will be notified in writing of the reasons for the decision. If the Regional Administrator or Director determines that any application warrants further consideration, notification of receipt of the application will be published in the FEDERAL REGISTER with a brief description of the proposal. Interested persons will be given a 15- to 45-day opportunity to comment on the notice of receipt of the EFP application. In addition, comments may be requested during public testimony at a Council meeting. If the Council intends to take comments on EFP applications at a Council meeting, it must include a statement to this effect in the Council meeting notice and meeting agenda. Multiple applications for EFPs may be published in the same FEDERAL REGISTER document and may be discussed under a single Council agenda item. The notification may establish a cut-off date for receipt of additional applications to participate in the same, or a similar, exempted fishing activity. The Regional Administrator or Director will also forward copies of the application to the Council(s), the U.S. Coast Guard, and the appropriate fishery management agencies of affected states, accompanied by the following information:

- (A) The effect of the proposed EFP on the target and incidental species, including the effect on any TAC.
- (B) A citation of the regulation or regulations that, without the EFP, would prohibit the proposed activity.

(C) Biological information relevant to the proposal, including appropriate statements of environmental impacts, including impacts on fisheries, marine mammals, threatened or endangered species, and EFH.

(ii) If the application is complete and warrants additional consultation, the Regional Administrator or Director may consult with the appropriate Council(s) concerning the permit application during the period in which comments have been requested. The Council(s) or the Regional Administrator or Director shall notify the applicant in advance of any public meeting at which the application will be considered, and offer the applicant the opportunity to appear in support of the application.

(iii) As soon as practicable after receiving a complete application, including all required analyses and consultations (e.g., NEPA, EFH, ESA and MMPA), and having received responses from the public, the agencies identified in paragraph (b)(3)(i) of this section, and/or after the consultation, if any, described in paragraph (b)(3)(ii) of this section, the Regional Administrator or Director shall issue the EFP or notify the applicant in writing of the decision to deny the EFP and the reasons for the denial. Grounds for denial of an EFP include, but are not limited to, the following:

(A) The applicant has failed to disclose material information required, or has made false statements as to any material fact, in connection with his or her application; or

(B) According to the best scientific information available, the harvest to be conducted under the permit would detrimentally affect the well-being of the stock of any regulated species of fish, marine mammal, threatened or endangered species, or EFH; or

(C) Issuance of the EFP would have economic allocation as its sole purpose (other than compensation fishing); or

(D) Activities to be conducted under the EFP would be inconsistent with the intent of this section, the management objectives of the FMP, or other applicable law; or

(E) The applicant has failed to demonstrate a valid justification for the permit; or

(F) The activity proposed under the EFP could create a significant enforcement problem.

(iv) The decision of a Regional Administrator or Director to grant or deny an EFP is the final action of NMFS. If the permit, as granted, is significantly different from the original application, or is denied, NMFS may publish notification in the FEDERAL REGISTER describing the exempted fishing to be conducted under the EFP or the reasons for denial.

(v) The Regional Administrator or Director should attach, as applicable, terms and conditions to the EFP, consistent with the purpose of the exempted fishing and as otherwise necessary for the conservation and management of the fishery resources and the marine environment, including, but not limited to:

(A) The maximum amount of each regulated species that can be harvested and landed during the term of the EFP, including trip limitations, where appropriate.

(B) The number, size(s), name(s), and identification number(s) of the vessel(s) authorized to conduct fishing activities under the EFP.

(C) A citation of the regulations from which the vessel is exempted.

(D) The time(s) and place(s) where exempted fishing may be conducted.

(E) The type, size, and amount of gear that may be used by each vessel operated under the EFP.

(F) Whether observers, a vessel monitoring system, or other electronic equipment must be carried on board vessels operating under the EFP, and any necessary conditions, such as predeployment notification requirements.

(G) Data reporting requirements necessary to document the activities, including catches and incidental catches, and to determine compliance with the terms and conditions of the EFP and established time frames and formats for submission of the data to NMFS.

(H) Other conditions as may be necessary to assure compliance with the purposes of the EFP, consistent with the objectives of the FMP and other applicable law.

(I) Provisions for public release of data obtained under the EFP that are

consistent with NOAA confidentiality of statistics procedures at set out in subpart E. An applicant may be required to waive the right to confidentiality of information gathered while conducting exempted fishing as a condition of an EFP.

(4) *Acknowledging permit conditions.* Upon receipt of an EFP, the permit holder must date and sign the permit, and retain the permit on board the vessel(s). The permit is not valid until signed by the permit holder. In signing the permit, the permit holder:

(i) Agrees to abide by all terms and conditions set forth in the permit, and all restrictions and relevant regulations; and

(ii) Acknowledges that the authority to conduct certain activities specified in the permit is conditional and subject to authorization and revocation by the Regional Administrator or Director.

(5) *Duration.* Unless otherwise specified in the EFP or a superseding notice or regulation, an EFP is valid for no longer than 1 year. EFPs may be renewed following the application procedures in this section.

(6) *Alteration.* Any permit that has been altered, erased, or mutilated is invalid.

(7) *Inspection.* Any EFP issued under this section must be carried on board the vessel(s) for which it was issued. The EFP must be presented for inspection upon request of any authorized officer. Any fish, or parts thereof, retained pursuant to an EFP issued under this paragraph must be accompanied, during any ex-vessel activities, by a copy of the EFP.

(8) *Inspection.* Any EFP issued under this section must be carried on board the vessel(s) for which it was issued. The EFP must be presented for inspection upon request of any authorized officer.

(9) *Sanctions.* Failure of a permittee to comply with the terms and conditions of an EFP may be grounds for revocation, suspension, or modification of the EFP with respect to all persons and vessels conducting activities under the EFP. Any action taken to revoke, suspend, or modify an EFP for enforcement purposes will be governed by 15 CFR part 904, subpart D.

(c) *Reports.* (1) NMFS requests that persons conducting scientific research activities from scientific research vessels submit a copy of any report or other publication created as a result of the activity, including the amount, composition, and disposition of their catch, to the appropriate Science and Research Director and Regional Administrator or Director.

(2) Upon completion of the activities of the EFP, or periodically as required by the terms and conditions of the EFP, persons fishing under an EFP must submit a report of their catches and any other information required, to the appropriate Regional Administrator or Director, in the manner and within the time frame specified in the EFP, but no later than 6 months after concluding the exempted fishing activity. Persons conducting EFP activities are also requested to submit a copy of any publication prepared as a result of the EFP activity.

(d) *Exempted educational activities—(1) General.* A NMFS Regional Administrator or Director may authorize, for educational purposes, the target or incidental harvest of species managed under an FMP or fishery regulations that would otherwise be prohibited. The trade, barter or sale of fish taken under this authorization is prohibited. The decision of a Regional Administrator or Director to grant or deny an exempted educational activity authorization is the final action of NMFS. Exempted educational activities may not be conducted unless authorized in writing by a Regional Administrator or Director in accordance with the criteria and procedures specified in this section. Such authorization will be issued without charge.

(2) *Application.* An applicant for an exempted educational activity authorization shall submit to the appropriate Regional Administrator or Director, at least 15 days before the desired effective date of the authorization, a written application that includes, but is not limited to, the following information:

- (i) The date of the application.
- (ii) The applicant's name, mailing address, and telephone number.
- (iii) A brief statement of the purposes and goals of the exempted educational

activity for which authorization is requested, including a general description of the arrangements for disposition of all species collected.

(iv) Evidence that the sponsoring institution is a valid educational institution, such as accreditation by a recognized national or international accreditation body.

(v) The scope and duration of the activity.

(vi) For each vessel to be covered by the authorization:

(A) A copy of the U.S. Coast Guard documentation, state license, or registration of the vessel, or the information contained on the appropriate document.

(B) The current name, address, and telephone number of the owner and master, if not included on the document provided for the vessel.

(vii) The species and amounts expected to be caught during the exempted educational activity, and any anticipated impacts on the environment, including impacts on fisheries, marine mammals, threatened or endangered species, and EFH.

(viii) For each vessel covered by the authorization, the approximate time(s) and place(s) fishing will take place, and the type, size, and amount of gear to be used.

(ix) The signature of the applicant.

(x) The Regional Administrator or Director may request from an applicant additional information necessary to make the determinations required under this section. An incomplete application will not be considered until corrected in writing.

(3) *Issuance.* (i) The Regional Administrator or Director, as appropriate, will review each application and will make a determination whether the application contains all of the required information, is consistent with the goals, objectives, and requirements of the FMP or regulations and other applicable law, and constitutes a valid exempted educational activity. The applicant will be notified in writing of the decision within 5 working days of receipt of the application.

(ii) The Regional Administrator or Director should attach, as applicable, terms and conditions to the authorization, consistent with the purpose of the

exempted educational activity and as otherwise necessary for the conservation and management of the fishery resources and the marine environment, including, but not limited to:

(A) The maximum amount of each regulated species that may be harvested.

(B) A citation of the regulations from which the vessel is being exempted.

(C) The time(s) and place(s) where the exempted educational activity may be conducted.

(D) The type, size, and amount of gear that may be used by each vessel operated under the authorization.

(E) Data reporting requirements necessary to document the activities and to determine compliance with the terms and conditions of the exempted educational activity.

(F) Such other conditions as may be necessary to assure compliance with the purposes of the authorization, consistent with the objectives of the FMP or regulations.

(G) Provisions for public release of data obtained under the authorization, consistent with NOAA confidentiality of statistics procedures in subpart E. An applicant may be required to waive the right to confidentiality of information gathered while conducting exempted educational activities as a condition of the authorization.

(iii) The authorization will specify the scope of the authorized activity and will include, at a minimum, the duration, vessel(s), persons, species, and gear involved in the activity, as well as any additional terms and conditions specified under paragraph (d)(3)(ii) of this section.

(4) *Duration.* Unless otherwise specified, authorization for an exempted educational activity is effective for no longer than 1 year, unless revoked, suspended, or modified. Authorizations may be renewed following the application procedures in this section.

(5) *Alteration.* Any authorization that has been altered, erased, or mutilated is invalid.

(6) *Transfer.* Authorizations issued under this paragraph (d) are not transferable or assignable.

(7) *Inspection.* Any authorization issued under this paragraph (d) must be carried on board the vessel(s) for which

it was issued, or be in the possession of at least one of the persons identified in the authorization, who must be present while the exempted educational activity is being conducted. The authorization must be presented for inspection upon request of any authorized officer. Activities that meet the definition of “fishing,” despite an educational purpose, are fishing. An authorization may allow covered fishing activities; however, fishing activities conducted outside the scope of an authorization for exempted educational activities are illegal. Any fish, or parts thereof, retained pursuant to an authorization issued under this paragraph must be accompanied, during any ex-vessel activities, by a copy of the authorization.

(e) *Observers.* NMFS-sanctioned observers or biological technicians conducting activities within NMFS-approved sea sampling and/or observer protocols are exempt from the requirement to obtain an EFP. For purposes of this section, NMFS-sanctioned observers or biological technicians include NMFS employees, NMFS observers, observers who are employees of NMFS-contracted observer providers, and observers who are employees of NMFS-permitted observer providers.

[61 FR 32540, June 24, 1996, as amended at 63 FR 7075, Feb. 12, 1998; 74 FR 42794, Aug. 25, 2009; 80 FR 62500, Oct. 16, 2015]

§ 600.746 Observers.

(a) *Applicability.* This section applies to any fishing vessel required to carry an observer as part of a mandatory observer program or carrying an observer as part of a voluntary observer program under the Magnuson-Stevens Act, MMPA (16 U.S.C. 1361 *et seq.*), the ATCA (16 U.S.C. 971 *et seq.*), the South Pacific Tuna Act of 1988 (16 U.S.C. 973 *et seq.*), or any other U.S. law.

(b) *Observer safety.* An observer will not be deployed on, or stay aboard, a vessel that is inadequate for observer deployment as described in paragraph (c) of this section.

(c) *Vessel inadequate for observer deployment.* A vessel is inadequate for observer deployment if it:

(1) Does not comply with the applicable regulations regarding observer accommodations (see 50 CFR parts 229,

285, 300, 600, 622, 635, 648, 660, and 679), or

(2) Has not passed a USCG Commercial Fishing Vessel Safety Examination, or for vessels less than 26 ft (8 m) in length, has not passed an alternate safety equipment examination, as described in paragraph (g) of this section.

(d) *Display or show proof.* A vessel that has passed a USCG Commercial Fishing Vessel Safety Examination must display or show proof of a valid USCG Commercial Fishing Vessel Safety Examination decal that certifies compliance with regulations found in 33 CFR Chapter 1 and 46 CFR Chapter 1, and which was issued within the last 2 years or at a time interval consistent with current USCG regulations or policy.

(1) In situations of mitigating circumstances, which may prevent a vessel from displaying a valid safety decal (broken window, etc.), NMFS, the observer, or NMFS’ designated observer provider may accept the following associated documentation as proof of the missing safety decal described in paragraph (d) of this section:

(i) A certificate of compliance issued pursuant to 46 CFR 28.710;

(ii) A certificate of inspection pursuant to 46 U.S.C. 3311; or

(iii) For vessels not required to obtain the documents identified in (d)(1)(i) and (d)(1)(ii) of this section, a dockside examination report form indicating the decal number and date and place of issue.

(e) *Visual inspection.* Upon request by an observer, a NMFS employee, or a designated observer provider, a vessel owner or operator must provide correct information concerning any item relating to any safety or accommodation requirement prescribed by law or regulation, in a manner and according to a timeframe as directed by NMFS. A vessel owner or operator must also allow an observer, a NMFS employee, or a designated observer provider to visually examine any such item.

(f) *Vessel safety check.* Prior to the initial deployment, the vessel owner or operator or the owner or operator’s designee must accompany the observer in a walk through the vessel’s major spaces to ensure that no obviously hazardous conditions exist. This action

Fishery Conservation and Management

§ 600.747

may be a part of the vessel safety orientation to be provided by the vessel to the observer as required by 46 CFR 28.270. The vessel owner or operator or the owner or operator's designee must also accompany the observer in checking the following major items as required by applicable USCG regulations:

(1) Personal flotation devices/ immersion suits;

(2) Ring buoys;

(3) Distress signals;

(4) Fire extinguishing equipment;

(5) Emergency position indicating radio beacon (EPIRB), when required, shall be registered to the vessel at its documented homeport;

(6) Survival craft, when required, with sufficient capacity to accommodate the total number of persons, including the observer(s), that will embark on the voyage; and

(7) Other fishery-area and vessel specific items required by the USCG.

(g) *Alternate safety equipment examination.* If a vessel is under 26 ft (8 m) in length, and in a remote location, and NMFS has determined that the USCG cannot provide a USCG Commercial Fishing Vessel Safety Examination due to unavailability of inspectors or to unavailability of transportation to or from an inspection station, the vessel will be adequate for observer deployment if it passes an alternate safety equipment examination conducted by a NMFS certified observer, observer provider, or a NMFS observer program employee, using a checklist of USCG safety requirements for commercial fishing vessels under 26 ft (8 m) in length. Passage of the alternative examination will only be effective for the single trip selected for observer coverage.

(h) *Duration.* The vessel owner or operator is required to comply with the requirements of this section when the vessel owner or operator is notified orally or in writing by an observer, a NMFS employee, or a designated observer provider, that his or her vessel has been selected to carry an observer. The requirements of this section continue to apply through the time of the observer's boarding, at all times the observer is aboard, and at the time the observer disembarks from the vessel at the end of the observed trip.

(i) *Effect of inadequate status.* A vessel that would otherwise be required to carry an observer, but is inadequate for the purposes of carrying an observer, as described in paragraph (c) of this section, and for allowing operation of normal observer functions, is prohibited from fishing without observer coverage.

[63 FR 27217, May 18, 1998, as amended at 67 FR 64312, Oct. 18, 2002; 72 FR 61818, Nov. 1, 2007]

§ 600.747 Guidelines and procedures for determining new fisheries and gear.

(a) *General.* Section 305(a) of the Magnuson-Stevens Act requires the Secretary to prepare a list of all fisheries under the authority of each Council, or the Director in the case of Atlantic highly migratory species, and all gear used in such fisheries. This section contains guidelines in paragraph (b) for determining when fishing gear or a fishery is sufficiently different from those listed in § 600.725(v) as to require notification of a Council or the Director in order to use the gear or participate in the unlisted fishery. This section also contains procedures in paragraph (c) for notification of a Council or the Director of potentially new fisheries or gear, and for amending the list of fisheries and gear.

(b) *Guidelines.* The following guidance establishes the basis for determining when fishing gear or a fishery is sufficiently different from those listed to require notification of the appropriate Council or the Director.

(1) The initial step in the determination of whether a fishing gear or fishery is sufficiently different to require notification is to compare the gear or fishery in question to the list of authorized fisheries and gear in § 600.725(v) and to the existing gear definitions in § 600.10.

(2) If the gear in question falls within the bounds of a definition in § 600.10 for an allowable gear type within that fishery, as listed under § 600.725(v), then the gear is not considered different, is considered allowable gear, and does not require notification of the Council or Secretary 90 days before it can be used in that fishery.

(3) If, for any reason, the gear is not consistent with a gear definition for a listed fishery as described in paragraph (b)(2) of this section, the gear is considered different and requires Council or Secretarial notification as described in paragraph (c) of this section 90 days before it can be used in that fishery.

(4) If a fishery falls within the bounds of the list of authorized fisheries and gear in § 600.725(v) under the Council's or Secretary's authority, then the fishery is not considered different, is considered an allowable fishery and does not require notification of the Council or Director before that fishery can occur.

(5) If a fishery is not already listed in the list of authorized fisheries and gear in § 600.725(v), then the fishery is considered different and requires notification as described in paragraph (c) of this section 90 days before it can occur.

(c) *Procedures.* If a gear or fishery does not appear on the list in § 600.725(v), or if the gear is different from that defined in § 600.10, the process for notification, and consideration by a Council or the Director, is as follows:

(1) *Notification.* After July 26, 1999, no person or vessel may employ fishing gear or engage in a fishery not included on the list of approved gear types in § 600.725(v) without notifying the appropriate Council or the Director at least 90 days before the intended use of that gear.

(2) *Notification procedures.* (i) A signed return receipt for the notice serves as adequate evidence of the date that the notification was received by the appropriate Council or the Director, in the case of Atlantic highly migratory species, and establishes the beginning of the 90-day notification period, unless required information in the notification is incomplete.

(ii) The notification must include:

(A) Name, address, and telephone number of the person submitting the notification.

(B) Description of the gear.

(C) The fishery or fisheries in which the gear is or will be used.

(D) A diagram and/or photograph of the gear, as well as any specifications and dimensions necessary to define the gear.

(E) The season(s) in which the gear will be fished.

(F) The area(s) in which the gear will be fished.

(G) The anticipated bycatch species associated with the gear, including protected species, such as marine mammals, sea turtles, sea birds, or species listed as endangered or threatened under the ESA.

(H) How the gear will be deployed and fished, including the portions of the marine environment where the gear will be deployed (surface, midwater, and bottom).

(iii) Failure to submit complete and accurate information will result in a delay in beginning the 90-day notification period. The 90-day notification period will not begin until the information received is determined to be accurate and complete.

(3) *Action upon receipt of notification—*

(i) *Species other than Atlantic Highly Migratory Species.* (A) Upon signing a return receipt of the notification by certified mail regarding an unlisted fishery or gear, a Council must immediately begin consideration of the notification and send a copy of the notification to the appropriate Regional Administrator.

(B) If the Council finds that the use of an unlisted gear or participation in a new fishery would not compromise the effectiveness of conservation and management efforts, it shall:

(1) Recommend to the RA that the list be amended;

(2) Provide rationale and supporting analysis, as necessary, for proper consideration of the proposed amendment; and

(3) Provide a draft proposed rule for notifying the public of the proposed addition, with a request for comment.

(C) If the Council finds that the proposed gear or fishery will be detrimental to conservation and management efforts, it will recommend to the RA that the authorized list of fisheries and gear not be amended, that a proposed rule not be published, give reasons for its recommendation of a disapproval, and may request NMFS to publish emergency or interim regulations, and begin preparation of an FMP or amendment to an FMP, if appropriate.

Fishery Conservation and Management

§ 600.751

(D) After considering information in the notification and Council's recommendation, NMFS will decide whether to publish a proposed rule. If information on the new gear or fishery being considered indicates it is likely that it will compromise conservation and management efforts under the Magnuson-Stevens Act, and no additional new information is likely to be gained from a public comment period, then a proposed rule will not be published and NMFS will notify the appropriate Council. In such an instance, NMFS will publish emergency or interim regulations to prohibit or restrict use of the gear or participation in the fishery. If NMFS determines that the proposed amendment is not likely to compromise conservation and management efforts under the Magnuson-Stevens Act, NMFS will publish a proposed rule in the FEDERAL REGISTER with a request for public comment.

(ii) *Atlantic Highly Migratory Species.* (A) Upon signing a return receipt of the notification by certified mail regarding an unlisted fishery or gear for Atlantic highly migratory species (HMS), NMFS will immediately begin consideration of the notification.

(B) Based on information in the notification and submitted by the Council, NMFS will make a determination whether the use of an unlisted gear or participation in an unlisted HMS fishery will compromise the effectiveness of conservation and management efforts under the Magnuson-Stevens Act. If it is determined that the proposed amendment will not compromise conservation and management efforts, NMFS will publish a proposed rule.

(C) If NMFS finds that the proposed gear or fishery will be detrimental to conservation and management efforts in this initial stage of review, it will not publish a proposed rule and notify the applicant of the negative determination with the reasons therefor.

(4) *Final determination and publication of a final rule.* Following public comment, NMFS will approve or disapprove the amendment to the list of gear and fisheries.

(i) If approved, NMFS will publish a final rule in the FEDERAL REGISTER and notify the applicant and the Council, if appropriate, of the final approval.

(ii) If disapproved, NMFS will withdraw the proposed rule, notify the applicant and the Council, if appropriate, of the disapproval; publish emergency or interim regulations, if necessary, to prohibit or restrict the use of gear or the participation in a fishery; and either notify the Council of the need to amend an FMP or prepare an amendment to an FMP in the case of Atlantic highly migratory species.

[64 FR 4043, Jan. 27, 1999]

Subpart I—Fishery Negotiation Panels

SOURCE: 62 FR 23669, May 1, 1997, unless otherwise noted.

§ 600.750 Definitions.

Consensus means unanimous concurrence among the members on a Fishery Negotiation Panel established under this rule, unless such Panel:

(1) Agrees to define such term to mean a general but not unanimous concurrence; or

(2) agrees upon another specified definition.

Fishery negotiation panel (FNP) means an advisory committee established by one or more Councils or the Secretary in accordance with these regulations to assist in the development of fishery conservation and management measures.

Interest means, with respect to an issue or matter, multiple parties that have a similar point of view or that are likely to be affected in a similar manner.

Report means a document submitted by an FNP in accordance with the Magnuson-Stevens Act.

[62 FR 23669, May 1, 1997, as amended at 63 FR 7075, Feb. 12, 1998]

§ 600.751 Determination of need for a fishery negotiation panel.

A Council or NMFS may establish an FNP to assist in the development of specific fishery conservation and management measures. In determining whether to establish an FNP, NMFS or the Council, as appropriate, shall consider whether:

§ 600.752

(a) There is a need for specific fishery conservation and management measures.

(b) There are a limited number of identifiable interests that will be significantly affected by the conservation and management measure.

(c) There is a reasonable likelihood that an FNP can be convened with a balanced representation of persons who:

(1) Can adequately represent the interests identified under paragraph (b) of this section.

(2) Are willing to negotiate in good faith to reach a consensus on a report regarding the issues presented.

(d) There is a reasonable likelihood that an FNP will reach a consensus on a report regarding the issues presented within 1 year from date of establishment of the FNP.

(e) The use of an FNP will not unreasonably delay Council or NMFS fishery management plan development or rule-making procedures.

(f) The costs of establishment and operation of an FNP are reasonable when compared to fishery management plan development or rulemaking procedures that do not use FNP procedures.

(g) The Council or NMFS has adequate resources and is willing to commit such resources, including technical assistance, to an FNP.

(h) The use of an FNP is in the public interest.

§ 600.752 Use of conveners and facilitators.

(a) *Purposes of conveners.* A Council or NMFS may use the services of a trained convener to assist the Council or NMFS in: (1) Conducting discussions to identify the issues of concern, and to ascertain whether the establishment of an FNP regarding such matter is feasible and appropriate.

(2) Identifying persons who will be significantly affected by the issues presented in paragraph (a)(1) of this section.

(b) *Duties of conveners.* The convener shall report findings under paragraph (a)(2) of this section and shall make recommendations to the Council or NMFS. Upon request of the Council or NMFS, the convener shall ascertain the names of persons who are willing

50 CFR Ch. VI (10–1–21 Edition)

and qualified to represent interests that will be significantly affected by the potential conservation and management measures relevant to the issues to be negotiated. The report and any recommendations of the convener shall be made available to the public upon request.

(c) *Selection of facilitator.* Notwithstanding section 10(e) of the Federal Advisory Committee Act (FACA), a Council or NMFS may nominate a person trained in facilitation either from the Federal Government or from outside the Federal Government to serve as an impartial, neutral facilitator for the negotiations of the FNP, subject to the approval of the FNP, by consensus. The facilitator may be the same person as the convener used under paragraph (a) of this section. If the FNP does not approve the nominee of the Council or NMFS for facilitator, the FNP shall submit a substitute nomination. If an FNP does not approve any nominee of the Council or NMFS for facilitator, the FNP shall select, by consensus, a person to serve as facilitator. A person designated to represent the Council or NMFS in substantive issues may not serve as facilitator or otherwise chair the FNP.

(d) *Roles and duties of facilitator.* A facilitator shall:

(1) Chair the meetings of the FNP in an impartial manner.

(2) Impartially assist the members of the FNP in conducting discussions and negotiations.

(3) Manage the keeping of minutes and records as required under section 10(b) and (c) of FACA.

§ 600.753 Notice of intent to establish a fishery negotiation panel.

(a) *Publication of notice.* If, after considering the report of a convener or conducting its own assessment, a Council or NMFS decides to establish an FNP, NMFS shall publish in the FEDERAL REGISTER and, as appropriate, in trade or other specialized publications, a document that shall include:

(1) An announcement that the Council or NMFS intends to establish an FNP to negotiate and develop a report concerning specific conservation and management measures.

Fishery Conservation and Management

§ 600.755

(2) A description of the subject and scope of the conservation and management measure, and the issues to be considered.

(3) A list of the interests that are likely to be significantly affected by the conservation and management measure.

(4) A list of the persons proposed to represent such interests and the person or persons proposed to represent the Council or NMFS.

(5) A proposed agenda and schedule for completing the work of the FNP.

(6) A description of administrative support for the FNP to be provided by the Council or NMFS, including technical assistance.

(7) A solicitation for comments on the proposal to establish the FNP, and the proposed membership of the FNP.

(8) An explanation of how a person may apply or nominate another person for membership on the FNP, as provided under paragraph (b) of this section.

(b) *Nomination of members and public comment.* Persons who may be significantly affected by the development of conservation and management measure and who believe that their interests will not be adequately represented by any person specified in a document under paragraph (a)(4) of this section may apply for, or nominate another person for, membership on the FNP to represent such interests. Each application or nomination shall include:

(1) The name of the applicant or nominee and a description of the interests such person shall represent.

(2) Evidence that the applicant or nominee is authorized to represent parties related to the interests the person proposes to represent.

(3) A written commitment that the applicant or nominee shall actively participate in good faith in the development of the conservation and management measure under consideration.

(4) The reasons that the persons specified in the document under paragraph (a)(4) of this section do not adequately represent the interests of the person submitting the application or nomination.

(c) *Public comment.* The Council or NMFS shall provide at least 30 calendar days for the submission of com-

ments and applications under this section.

§ 600.754 Decision to establish a fishery negotiation panel.

(a) *Determination to establish an FNP.* If, after considering comments and applications submitted under § 600.753, the Council or NMFS determines that an FNP can adequately represent the interests that will be significantly affected and that it is feasible and appropriate in the particular case, the Council or NMFS may establish an FNP.

(b) *Determination not to establish FNP.* If, after considering such comments and applications, the Council or NMFS decides not to establish an FNP, the Council or NMFS shall promptly publish notification of such decision and the reasons therefor in the FEDERAL REGISTER and, as appropriate, in trade or other specialized publications, a copy of which shall be sent to any person who applied for, or nominated another person for membership on the FNP to represent such interests with respect to the issues of concern.

§ 600.755 Establishment of a fishery negotiation panel.

(a) *General authority.* (1) A Council may establish an FNP to assist in the development of specific conservation and management measures for a fishery under its authority.

(2) NMFS may establish an FNP to assist in the development of specific conservation and management measures required for:

(i) A fishery for which the Secretary has authority under section 304(e)(5) of the Magnuson-Stevens Act, regarding rebuilding of overfished fisheries;

(ii) A fishery for which the Secretary has authority under 16 U.S.C. section 304(g), regarding highly migratory species; or

(iii) Any fishery with the approval of the appropriate Council.

(b) *Federal Advisory Committee Act (FACA)* In establishing and administering such an FNP, the Council or NMFS shall comply with the FACA with respect to such FNP.

(c) *Balance.* Each potentially affected organization or individual does not necessarily have to have its own representative, but each interest must be

§ 600.756

50 CFR Ch. VI (10–1–21 Edition)

adequately represented. The intent is to have a group that as a whole reflects a proper balance and mix of interests. Representatives must agree, in writing, to negotiate in good faith.

(d) *Membership.* The Council or NMFS shall limit membership on an FNP to no more than 25 members, unless the Council or NMFS determines that a greater number of members is necessary for the functioning of the FNP or to achieve balanced membership. Each FNP shall include at least one person representing the Council in addition to at least one person representing NMFS.

§ 600.756 Conduct and operation of a fishery negotiation panel.

(a) *Roles and duties of an FNP.* Each FNP shall consider the issue proposed by the Council or NMFS for consideration and shall attempt to reach a consensus concerning a report to assist in the development of a conservation and management measure with respect to such matter and any other matter the FNP determines is relevant to the development of a conservation and management measure. An FNP may adopt procedures for the operation of the FNP.

(b) *Roles and duties of representative of the council or NMFS.* The person or persons representing the Council or NMFS on an FNP shall participate in the deliberations and activities of the FNP with the same rights and responsibilities as other members of the FNP, and shall be authorized to fully represent the Council or NMFS in the discussions and negotiations of the FNP.

§ 600.757 Operational protocols.

(a) *Services of conveners and facilitators.* A Council or NMFS may employ or enter into contracts for the services of an individual or organization to serve as a convener or facilitator for an FNP established under § 600.755, or may use the services of a government employee to act as a convener or a facilitator for such an FNP.

(b) *Councils.* For an FNP proposed and established by one or more Councils approved expenses shall be paid out of the Council's operating budget.

(c) *Expenses of FNP members.* Members of an FNP shall be responsible for their own expenses of participation in such an FNP, except that NMFS or the Council may, in accordance with section 7(d) of FACA, pay for a member's reasonable travel and per diem expenses, and a reasonable rate of compensation, if:

(1) Such member certifies a lack of adequate financial resources to participate in the FNP.

(2) The Council or NMFS determines that such member's participation in the FNP is necessary to assure an adequate representation of the member's interest.

(d) *Administrative support.* The Council or NMFS shall provide appropriate administrative support to an FNP including technical assistance.

§ 600.758 Preparation of report.

(a) At the conclusion of the negotiations, an FNP may submit a report. Such report shall specify:

(1) All the areas where consensus was reached by the FNP, including, if appropriate, proposed conservation and management measures.

(2) Any other information submitted by members of the FNP.

(b) Upon receipt of the report, the Council or NMFS shall publish such report in the FEDERAL REGISTER for public comment.

§ 600.759 Use of report.

A Council or NMFS may, at its discretion, use all or a part of a report prepared in accordance with § 600.758 in the development of conservation and management measures. Neither a Council nor NMFS, whichever is appropriate, is required to use such report.

§ 600.760 Fishery Negotiation Panel lifetime.

(a) An FNP shall terminate upon either:

(1) Submission of a report prepared in accordance with § 600.758; or

(2) Submission of a written statement from the FNP to the Council or NMFS that no consensus can be reached.

(b) In no event shall an FNP exist for longer than 1 year from the date of establishment unless granted an extension. Upon written request by the FNP to the Council or NMFS, and written authorization from the Council or NMFS (whichever is appropriate), the Secretary may authorize an extension for a period not to exceed 6 months. No more than one extension may be granted per FNP.

Subpart J—Essential Fish Habitat (EFH)

SOURCE: 67 FR 2376, Jan. 17, 2002, unless otherwise noted.

§ 600.805 Purpose and scope.

(a) *Purpose.* This subpart provides guidelines for Councils and the Secretary to use in adding the required EFH provisions to an FMP, i.e., description and identification of EFH, adverse effects on EFH (including minimizing, to the extent practicable, adverse effects from fishing), and actions to conserve and enhance EFH.

(b) *Scope*—(1) *Species covered.* An EFH provision in an FMP must include all fish species in the fishery management unit (FMU). An FMP may describe, identify, and protect the habitat of species not in an FMU; however, such habitat may not be considered EFH for the purposes of sections 303(a)(7) and 305(b) of the Magnuson-Stevens Act.

(2) *Geographic.* EFH may be described and identified in waters of the United States, as defined in 33 CFR 328.3, and in the exclusive economic zone, as defined in § 600.10. Councils may describe, identify, and protect habitats of managed species beyond the exclusive economic zone; however, such habitat may not be considered EFH for the purposes of sections 303(a)(7) and 305(b) of the Magnuson-Stevens Act. Activities that may adversely affect such habitat can be addressed through any process conducted in accordance with international agreements between the United States and the foreign nation(s) undertaking or authorizing the action.

§ 600.810 Definitions and word usage.

(a) *Definitions.* In addition to the definitions in the Magnuson-Stevens Act

and § 600.10, the terms in this subpart have the following meanings:

Adverse effect means any impact that reduces quality and/or quantity of EFH. Adverse effects may include direct or indirect physical, chemical, or biological alterations of the waters or substrate and loss of, or injury to, benthic organisms, prey species and their habitat, and other ecosystem components, if such modifications reduce the quality and/or quantity of EFH. Adverse effects to EFH may result from actions occurring within EFH or outside of EFH and may include site-specific or habitat-wide impacts, including individual, cumulative, or synergistic consequences of actions.

Council includes the Secretary, as applicable, when preparing FMPs or amendments under sections 304(c) and (g) of the Magnuson-Stevens Act.

Ecosystem means communities of organisms interacting with one another and with the chemical and physical factors making up their environment.

Habitat areas of particular concern means those areas of EFH identified pursuant to § 600.815(a)(8).

Healthy ecosystem means an ecosystem where ecological productive capacity is maintained, diversity of the flora and fauna is preserved, and the ecosystem retains the ability to regulate itself. Such an ecosystem should be similar to comparable, undisturbed ecosystems with regard to standing crop, productivity, nutrient dynamics, trophic structure, species richness, stability, resilience, contamination levels, and the frequency of diseased organisms.

Overfished means any stock or stock complex, the status of which is reported as overfished by the Secretary pursuant to section 304(e)(1) of the Magnuson-Stevens Act.

(b) *Word usage.* The terms “must”, “shall”, “should”, “may”, “may not”, “will”, “could”, and “can” are used in the same manner as in § 600.305(c).

§ 600.815 Contents of Fishery Management Plans.

(a) *Mandatory contents*—(1) *Description and identification of EFH*—(i) *Overview.* FMPs must describe and identify EFH in text that clearly states the habitats

or habitat types determined to be EFH for each life stage of the managed species. FMPs should explain the physical, biological, and chemical characteristics of EFH and, if known, how these characteristics influence the use of EFH by the species/life stage. FMPs must identify the specific geographic location or extent of habitats described as EFH. FMPs must include maps of the geographic locations of EFH or the geographic boundaries within which EFH for each species and life stage is found.

(ii) *Habitat information by life stage.* (A) Councils need basic information to understand the usage of various habitats by each managed species. Pertinent information includes the geographic range and habitat requirements by life stage, the distribution and characteristics of those habitats, and current and historic stock size as it affects occurrence in available habitats. FMPs should summarize the life history information necessary to understand each species' relationship to, or dependence on, its various habitats, using text, tables, and figures, as appropriate. FMPs should document patterns of temporal and spatial variation in the distribution of each major life stage (defined by developmental and functional shifts) to aid in understanding habitat needs. FMPs should summarize (e.g., in tables) all available information on environmental and habitat variables that control or limit distribution, abundance, reproduction, growth, survival, and productivity of the managed species. The information should be supported with citations.

(B) Councils should obtain information to describe and identify EFH from the best available sources, including peer-reviewed literature, unpublished scientific reports, data files of government resource agencies, fisheries landing reports, and other sources of information. Councils should consider different types of information according to its scientific rigor. FMPs should identify species-specific habitat data gaps and deficits in data quality (including considerations of scale and resolution; relevance; and potential biases in collection and interpretation). FMPs must demonstrate that the best scientific information available was used

in the description and identification of EFH, consistent with national standard 2.

(iii) *Analysis of habitat information.* (A) The following approach should be used to organize the information necessary to describe and identify EFH.

(1) *Level 1: Distribution data are available for some or all portions of the geographic range of the species.* At this level, only distribution data are available to describe the geographic range of a species (or life stage). Distribution data may be derived from systematic presence/absence sampling and/or may include information on species and life stages collected opportunistically. In the event that distribution data are available only for portions of the geographic area occupied by a particular life stage of a species, habitat use can be inferred on the basis of distributions among habitats where the species has been found and on information about its habitat requirements and behavior. Habitat use may also be inferred, if appropriate, based on information on a similar species or another life stage.

(2) *Level 2: Habitat-related densities of the species are available.* At this level, quantitative data (i.e., density or relative abundance) are available for the habitats occupied by a species or life stage. Because the efficiency of sampling methods is often affected by habitat characteristics, strict quality assurance criteria should be used to ensure that density estimates are comparable among methods and habitats. Density data should reflect habitat utilization, and the degree that a habitat is utilized is assumed to be indicative of habitat value. When assessing habitat value on the basis of fish densities in this manner, temporal changes in habitat availability and utilization should be considered.

(3) *Level 3: Growth, reproduction, or survival rates within habitats are available.* At this level, data are available on habitat-related growth, reproduction, and/or survival by life stage. The habitats contributing the most to productivity should be those that support the highest growth, reproduction, and survival of the species (or life stage).

(4) *Level 4: Production rates by habitat are available.* At this level, data are

available that directly relate the production rates of a species or life stage to habitat type, quantity, quality, and location. Essential habitats are those necessary to maintain fish production consistent with a sustainable fishery and the managed species' contribution to a healthy ecosystem.

(B) Councils should strive to describe habitat based on the highest level of detail (i.e., Level 4). If there is no information on a given species or life stage, and habitat usage cannot be inferred from other means, such as information on a similar species or another life stage, EFH should not be designated.

(iv) *EFH determination.* (A) Councils should analyze available ecological, environmental, and fisheries information and data relevant to the managed species, the habitat requirements by life stage, and the species' distribution and habitat usage to describe and identify EFH. The information described in paragraphs (a)(1)(ii) and (iii) of this section will allow Councils to assess the relative value of habitats. Councils should interpret this information in a risk-averse fashion to ensure adequate areas are identified as EFH for managed species. Level 1 information, if available, should be used to identify the geographic range of the species at each life stage. If only Level 1 information is available, distribution data should be evaluated (e.g., using a frequency of occurrence or other appropriate analysis) to identify EFH as those habitat areas most commonly used by the species. Level 2 through 4 information, if available, should be used to identify EFH as the habitats supporting the highest relative abundance; growth, reproduction, or survival rates; and/or production rates within the geographic range of a species. FMPs should explain the analyses conducted to distinguish EFH from all habitats potentially used by a species.

(B) FMPs must describe EFH in text, including reference to the geographic location or extent of EFH using boundaries such as longitude and latitude, isotherms, isobaths, political boundaries, and major landmarks. If there are differences between the descriptions of EFH in text, maps, and tables, the textual description is ultimately determinative of the limits of EFH.

Text and tables should explain pertinent physical, chemical, and biological characteristics of EFH for the managed species and explain any variability in habitat usage patterns, but the boundaries of EFH should be static.

(C) If a species is overfished and habitat loss or degradation may be contributing to the species being identified as overfished, all habitats currently used by the species may be considered essential in addition to certain historic habitats that are necessary to support rebuilding the fishery and for which restoration is technologically and economically feasible. Once the fishery is no longer considered overfished, the EFH identification should be reviewed and amended, if appropriate.

(D) Areas described as EFH will normally be greater than or equal to aquatic areas that have been identified as "critical habitat" for any managed species listed as threatened or endangered under the Endangered Species Act.

(E) Ecological relationships among species and between the species and their habitat require, where possible, that an ecosystem approach be used in determining the EFH of a managed species. EFH must be designated for each managed species, but, where appropriate, may be designated for assemblages of species or life stages that have similar habitat needs and requirements. If grouping species or using species assemblages for the purpose of designating EFH, FMPs must include a justification and scientific rationale. The extent of the EFH should be based on the judgment of the Secretary and the appropriate Council(s) regarding the quantity and quality of habitat that are necessary to maintain a sustainable fishery and the managed species' contribution to a healthy ecosystem.

(F) If degraded or inaccessible aquatic habitat has contributed to reduced yields of a species or assemblage and if, in the judgment of the Secretary and the appropriate Council(s), the degraded conditions can be reversed through such actions as improved fish passage techniques (for stream or river blockages), improved water quality measures (removal of contaminants or increasing flows), and similar measures

that are technologically and economically feasible, EFH should include those habitats that would be necessary to the species to obtain increased yields.

(v) *EFH mapping requirements.* (A) FMPs must include maps that display, within the constraints of available information, the geographic locations of EFH or the geographic boundaries within which EFH for each species and life stage is found. Maps should identify the different types of habitat designated as EFH to the extent possible. Maps should explicitly distinguish EFH from non-EFH areas. Councils should confer with NMFS regarding mapping standards to ensure that maps from different Councils can be combined and shared efficiently and effectively. Ultimately, data used for mapping should be incorporated into a geographic information system (GIS) to facilitate analysis and presentation.

(B) Where the present distribution or stock size of a species or life stage is different from the historical distribution or stock size, then maps of historical habitat boundaries should be included in the FMP, if known.

(C) FMPs should include maps of any habitat areas of particular concern identified under paragraph (a)(8) of this section.

(2) *Fishing activities that may adversely affect EFH*—(i) *Evaluation.* Each FMP must contain an evaluation of the potential adverse effects of fishing on EFH designated under the FMP, including effects of each fishing activity regulated under the FMP or other Federal FMPs. This evaluation should consider the effects of each fishing activity on each type of habitat found within EFH. FMPs must describe each fishing activity, review and discuss all available relevant information (such as information regarding the intensity, extent, and frequency of any adverse effect on EFH; the type of habitat within EFH that may be affected adversely; and the habitat functions that may be disturbed), and provide conclusions regarding whether and how each fishing activity adversely affects EFH. The evaluation should also consider the cumulative effects of multiple fishing activities on EFH. The evaluation should list any past management ac-

tions that minimize potential adverse effects on EFH and describe the benefits of those actions to EFH. The evaluation should give special attention to adverse effects on habitat areas of particular concern and should identify for possible designation as habitat areas of particular concern any EFH that is particularly vulnerable to fishing activities. Additionally, the evaluation should consider the establishment of research closure areas or other measures to evaluate the impacts of fishing activities on EFH. In completing this evaluation, Councils should use the best scientific information available, as well as other appropriate information sources. Councils should consider different types of information according to its scientific rigor.

(ii) *Minimizing adverse effects.* Each FMP must minimize to the extent practicable adverse effects from fishing on EFH, including EFH designated under other Federal FMPs. Councils must act to prevent, mitigate, or minimize any adverse effects from fishing, to the extent practicable, if there is evidence that a fishing activity adversely affects EFH in a manner that is more than minimal and not temporary in nature, based on the evaluation conducted pursuant to paragraph (a)(2)(i) of this section and/or the cumulative impacts analysis conducted pursuant to paragraph (a)(5) of this section. In such cases, FMPs should identify a range of potential new actions that could be taken to address adverse effects on EFH, include an analysis of the practicability of potential new actions, and adopt any new measures that are necessary and practicable. Amendments to the FMP or to its implementing regulations must ensure that the FMP continues to minimize to the extent practicable adverse effects on EFH caused by fishing. FMPs must explain the reasons for the Council's conclusions regarding the past and/or new actions that minimize to the extent practicable the adverse effects of fishing on EFH.

(iii) *Practicability.* In determining whether it is practicable to minimize an adverse effect from fishing, Councils should consider the nature and extent of the adverse effect on EFH and the long and short-term costs and benefits

of potential management measures to EFH, associated fisheries, and the nation, consistent with national standard 7. In determining whether management measures are practicable, Councils are not required to perform a formal cost/benefit analysis.

(iv) Options for managing adverse effects from fishing. Fishery management options may include, but are not limited to:

(A) *Fishing equipment restrictions.* These options may include, but are not limited to: seasonal and areal restrictions on the use of specified equipment, equipment modifications to allow escapement of particular species or particular life stages (e.g., juveniles), prohibitions on the use of explosives and chemicals, prohibitions on anchoring or setting equipment in sensitive areas, and prohibitions on fishing activities that cause significant damage to EFH.

(B) *Time/area closures.* These actions may include, but are not limited to: closing areas to all fishing or specific equipment types during spawning, migration, foraging, and nursery activities and designating zones for use as marine protected areas to limit adverse effects of fishing practices on certain vulnerable or rare areas/species/life stages, such as those areas designated as habitat areas of particular concern.

(C) *Harvest limits.* These actions may include, but are not limited to, limits on the take of species that provide structural habitat for other species assemblages or communities and limits on the take of prey species.

(3) *Non-Magnuson-Stevens Act fishing activities that may adversely affect EFH.* FMPs must identify any fishing activities that are not managed under the Magnuson-Stevens Act that may adversely affect EFH. Such activities may include fishing managed by state agencies or other authorities.

(4) *Non-fishing related activities that may adversely affect EFH.* FMPs must identify activities other than fishing that may adversely affect EFH. Broad categories of such activities include, but are not limited to: dredging, filling, excavation, mining, impoundment, discharge, water diversions, thermal additions, actions that contribute to

non-point source pollution and sedimentation, introduction of potentially hazardous materials, introduction of exotic species, and the conversion of aquatic habitat that may eliminate, diminish, or disrupt the functions of EFH. For each activity, the FMP should describe known and potential adverse effects to EFH.

(5) *Cumulative impacts analysis.* Cumulative impacts are impacts on the environment that result from the incremental impact of an action when added to other past, present, and reasonably foreseeable future actions, regardless of who undertakes such actions. Cumulative impacts can result from individually minor, but collectively significant actions taking place over a period of time. To the extent feasible and practicable, FMPs should analyze how the cumulative impacts of fishing and non-fishing activities influence the function of EFH on an ecosystem or watershed scale. An assessment of the cumulative and synergistic effects of multiple threats, including the effects of natural stresses (such as storm damage or climate-based environmental shifts) and an assessment of the ecological risks resulting from the impact of those threats on EFH, also should be included.

(6) *Conservation and enhancement.* FMPs must identify actions to encourage the conservation and enhancement of EFH, including recommended options to avoid, minimize, or compensate for the adverse effects identified pursuant to paragraphs (a)(3) through (5) of this section, especially in habitat areas of particular concern.

(7) *Prey species.* Loss of prey may be an adverse effect on EFH and managed species because the presence of prey makes waters and substrate function as feeding habitat, and the definition of EFH includes waters and substrate necessary to fish for feeding. Therefore, actions that reduce the availability of a major prey species, either through direct harm or capture, or through adverse impacts to the prey species' habitat that are known to cause a reduction in the population of the prey species, may be considered adverse effects on EFH if such actions reduce the quality of EFH. FMPs should list the major

prey species for the species in the fishery management unit and discuss the location of prey species' habitat. Adverse effects on prey species and their habitats may result from fishing and non-fishing activities.

(8) *Identification of habitat areas of particular concern.* FMPs should identify specific types or areas of habitat within EFH as habitat areas of particular concern based on one or more of the following considerations:

- (i) The importance of the ecological function provided by the habitat.
- (ii) The extent to which the habitat is sensitive to human-induced environmental degradation.
- (iii) Whether, and to what extent, development activities are, or will be, stressing the habitat type.
- (iv) The rarity of the habitat type.

(9) *Research and information needs.* Each FMP should contain recommendations, preferably in priority order, for research efforts that the Councils and NMFS view as necessary to improve upon the description and identification of EFH, the identification of threats to EFH from fishing and other activities, and the development of conservation and enhancement measures for EFH.

(10) *Review and revision of EFH components of FMPs.* Councils and NMFS should periodically review the EFH provisions of FMPs and revise or amend EFH provisions as warranted based on available information. FMPs should outline the procedures the Council will follow to review and update EFH information. The review of information should include, but not be limited to, evaluating published scientific literature and unpublished scientific reports; soliciting information from interested parties; and searching for previously unavailable or inaccessible data. Councils should report on their review of EFH information as part of the annual Stock Assessment and Fishery Evaluation (SAFE) report prepared pursuant to § 600.315(e). A complete review of all EFH information should be conducted as recommended by the Secretary, but at least once every 5 years.

(b) *Development of EFH recommendations for Councils.* After reviewing the best available scientific information,

as well as other appropriate information, and in consultation with the Councils, participants in the fishery, interstate commissions, Federal agencies, state agencies, and other interested parties, NMFS will develop written recommendations to assist each Council in the identification of EFH, adverse impacts to EFH, and actions that should be considered to ensure the conservation and enhancement of EFH for each FMP. NMFS will provide such recommendations for the initial incorporation of EFH information into an FMP and for any subsequent modification of the EFH components of an FMP. The NMFS EFH recommendations may be provided either before the Council's development of a draft EFH document or later as a review of a draft EFH document developed by a Council, as appropriate.

(c) *Relationship to other fishery management authorities.* Councils are encouraged to coordinate with state and interstate fishery management agencies where Federal fisheries affect state and interstate managed fisheries or where state or interstate fishery regulations affect the management of Federal fisheries. Where a state or interstate fishing activity adversely affects EFH, NMFS will consider that action to be an adverse effect on EFH pursuant to paragraph (a)(3) of this section and will provide EFH Conservation Recommendations to the appropriate state or interstate fishery management agency on that activity.

Subpart K—EFH Coordination, Consultation, and Recommendations

SOURCE: 67 FR 2376, Jan. 17, 2002, unless otherwise noted.

§ 600.905 Purpose, scope, and NMFS/Council cooperation.

(a) *Purpose.* These procedures address the coordination, consultation, and recommendation requirements of sections 305(b)(1)(D) and 305(b)(2–4) of the Magnuson-Stevens Act. The purpose of these procedures is to promote the protection of EFH in the review of Federal and state actions that may adversely affect EFH.

(b) *Scope.* Section 305(b)(1)(D) of the Magnuson-Stevens Act requires the Secretary to coordinate with, and provide information to, other Federal agencies regarding the conservation and enhancement of EFH. Section 305(b)(2) requires all Federal agencies to consult with the Secretary on all actions or proposed actions authorized, funded, or undertaken by the agency that may adversely affect EFH. Sections 305(b)(3) and (4) direct the Secretary and the Councils to provide comments and EFH Conservation Recommendations to Federal or state agencies on actions that affect EFH. Such recommendations may include measures to avoid, minimize, mitigate, or otherwise offset adverse effects on EFH resulting from actions or proposed actions authorized, funded, or undertaken by that agency. Section 305(b)(4)(B) requires Federal agencies to respond in writing to such comments. The following procedures for coordination, consultation, and recommendations allow all parties involved to understand and implement the requirements of the Magnuson-Stevens Act.

(c) *Cooperation between Councils and NMFS.* The Councils and NMFS should cooperate closely to identify actions that may adversely affect EFH, to develop comments and EFH Conservation Recommendations to Federal and state agencies, and to provide EFH information to Federal and state agencies. NMFS will work with each Council to share information and to coordinate Council and NMFS comments and recommendations on actions that may adversely affect EFH. However, NMFS and the Councils also have the authority to act independently.

§ 600.910 Definitions and word usage.

(a) *Definitions.* In addition to the definitions in the Magnuson-Stevens Act and § 600.10, the terms in this subpart have the following meanings:

Adverse effect means any impact that reduces quality and/or quantity of EFH. Adverse effects may include direct or indirect physical, chemical, or biological alterations of the waters or substrate and loss of, or injury to, benthic organisms, prey species and their habitat, and other ecosystem

components, if such modifications reduce the quality and/or quantity of EFH. Adverse effects to EFH may result from actions occurring within EFH or outside of EFH and may include site-specific or habitat-wide impacts, including individual, cumulative, or synergistic consequences of actions.

Anadromous fishery resource under Council authority means an anadromous species managed under an FMP.

Federal action means any action authorized, funded, or undertaken, or proposed to be authorized, funded, or undertaken by a Federal agency.

Habitat areas of particular concern means those areas of EFH identified pursuant to § 600.815(a)(8).

State action means any action authorized, funded, or undertaken, or proposed to be authorized, funded, or undertaken by a state agency.

(b) *Word usage.* The terms “must”, “shall”, “should”, “may”, “may not”, “will”, “could”, and “can” are used in the same manner as in § 600.305(c).

§ 600.915 Coordination for the conservation and enhancement of EFH.

To further the conservation and enhancement of EFH in accordance with section 305(b)(1)(D) of the Magnuson-Stevens Act, NMFS will compile and make available to other Federal and state agencies, and the general public, information on the locations of EFH, including maps and/or narrative descriptions. NMFS will also provide information on ways to improve ongoing Federal operations to promote the conservation and enhancement of EFH. Federal and state agencies empowered to authorize, fund, or undertake actions that may adversely affect EFH are encouraged to contact NMFS and the Councils to become familiar with areas designated as EFH, potential threats to EFH, and opportunities to promote the conservation and enhancement of EFH.

§ 600.920 Federal agency consultation with the Secretary.

(a) *Consultation generally—(1) Actions requiring consultation.* Pursuant to section 305(b)(2) of the Magnuson-Stevens Act, Federal agencies must consult

with NMFS regarding any of their actions authorized, funded, or undertaken, or proposed to be authorized, funded, or undertaken that may adversely affect EFH. EFH consultation is not required for actions that were completed prior to the approval of EFH designations by the Secretary, e.g., issued permits. Consultation is required for renewals, reviews, or substantial revisions of actions if the renewal, review, or revision may adversely affect EFH. Consultation on Federal programs delegated to non-Federal entities is required at the time of delegation, review, and renewal of the delegation. EFH consultation is required for any Federal funding of actions that may adversely affect EFH. NMFS and Federal agencies responsible for funding actions that may adversely affect EFH should consult on a programmatic level under paragraph (j) of this section, if appropriate, with respect to these actions. Consultation is required for emergency Federal actions that may adversely affect EFH, such as hazardous material clean-up, response to natural disasters, or actions to protect public safety. Federal agencies should contact NMFS early in emergency response planning, but may consult after-the-fact if consultation on an expedited basis is not practicable before taking the action.

(2) *Approaches for conducting consultation.* Federal agencies may use one of the five approaches described in paragraphs (f) through (j) of this section to fulfill the EFH consultation requirements. The selection of a particular approach for handling EFH consultation depends on the nature and scope of the actions that may adversely affect EFH. Federal agencies should use the most efficient approach for EFH consultation that is appropriate for a given action or actions. The five approaches are: use of existing environmental review procedures, General Concurrence, abbreviated consultation, expanded consultation, and programmatic consultation.

(3) *Early notification and coordination.* The Federal agency should notify NMFS in writing as early as practicable regarding actions that may adversely affect EFH. Notification will facilitate discussion of measures to

conserve EFH. Such early coordination should occur during pre-application planning for projects subject to a Federal permit or license and during preliminary planning for projects to be funded or undertaken directly by a Federal agency.

(b) *Designation of lead agency.* If more than one Federal agency is responsible for a Federal action, the consultation requirements of sections 305(b)(2) through (4) of the Magnuson-Stevens Act may be fulfilled through a lead agency. The lead agency should notify NMFS in writing that it is representing one or more additional agencies. Alternatively, if one Federal agency has completed an EFH consultation for an action and another Federal agency acts separately to authorize, fund, or undertake the same activity (such as issuing a permit for an activity that was funded via a separate Federal action), the completed EFH consultation may suffice for both Federal actions if it adequately addresses the adverse effects of the actions on EFH. Federal agencies may need to consult with NMFS separately if, for example, only one of the agencies has the authority to implement measures necessary to minimize adverse effects on EFH and that agency does not act as the lead agency.

(c) *Designation of non-Federal representative.* A Federal agency may designate a non-Federal representative to conduct an EFH consultation by giving written notice of such designation to NMFS. If a non-Federal representative is used, the Federal action agency remains ultimately responsible for compliance with sections 305(b)(2) and 305(b)(4)(B) of the Magnuson-Stevens Act.

(d) *Best available information.* The Federal agency and NMFS must use the best scientific information available regarding the effects of the action on EFH and the measures that can be taken to avoid, minimize, or offset such effects. Other appropriate sources of information may also be considered.

(e) *EFH Assessments*—(1) *Preparation requirement.* For any Federal action that may adversely affect EFH, Federal agencies must provide NMFS with a written assessment of the effects of

that action on EFH. For actions covered by a General Concurrence under paragraph (g) of this section, an EFH Assessment should be completed during the development of the General Concurrence and is not required for the individual actions. For actions addressed by a programmatic consultation under paragraph (j) of this section, an EFH Assessment should be completed during the programmatic consultation and is not required for individual actions implemented under the program, except in those instances identified by NMFS in the programmatic consultation as requiring separate EFH consultation. Federal agencies are not required to provide NMFS with assessments regarding actions that they have determined would not adversely affect EFH. Federal agencies may incorporate an EFH Assessment into documents prepared for other purposes such as Endangered Species Act (ESA) Biological Assessments pursuant to 50 CFR part 402 or National Environmental Policy Act (NEPA) documents and public notices pursuant to 40 CFR part 1500. If an EFH Assessment is contained in another document, it must include all of the information required in paragraph (e)(3) of this section and be clearly identified as an EFH Assessment. The procedure for combining an EFH consultation with other environmental reviews is set forth in paragraph (f) of this section.

(2) *Level of detail.* The level of detail in an EFH Assessment should be commensurate with the complexity and magnitude of the potential adverse effects of the action. For example, for relatively simple actions involving minor adverse effects on EFH, the assessment may be very brief. Actions that may pose a more serious threat to EFH warrant a correspondingly more detailed EFH Assessment.

(3) *Mandatory contents.* The assessment must contain:

- (i) A description of the action.
- (ii) An analysis of the potential adverse effects of the action on EFH and the managed species.
- (iii) The Federal agency's conclusions regarding the effects of the action on EFH.
- (iv) Proposed mitigation, if applicable.

(4) *Additional information.* If appropriate, the assessment should also include:

- (i) The results of an on-site inspection to evaluate the habitat and the site-specific effects of the project.
- (ii) The views of recognized experts on the habitat or species that may be affected.
- (iii) A review of pertinent literature and related information.
- (iv) An analysis of alternatives to the action. Such analysis should include alternatives that could avoid or minimize adverse effects on EFH.
- (v) Other relevant information.

(5) *Incorporation by reference.* The assessment may incorporate by reference a completed EFH Assessment prepared for a similar action, supplemented with any relevant new project specific information, provided the proposed action involves similar impacts to EFH in the same geographic area or a similar ecological setting. It may also incorporate by reference other relevant environmental assessment documents. These documents must be provided to NMFS with the EFH Assessment.

(f) *Use of existing environmental review procedures—(1) Purpose and criteria.* Consultation and commenting under sections 305(b)(2) and 305(b)(4) of the Magnuson-Stevens Act should be consolidated, where appropriate, with interagency consultation, coordination, and environmental review procedures required by other statutes, such as NEPA, the Fish and Wildlife Coordination Act, Clean Water Act, ESA, and Federal Power Act. The requirements of sections 305(b)(2) and 305(b)(4) of the Magnuson-Stevens Act, including consultations that would be considered to be abbreviated or expanded consultations under paragraphs (h) and (i) of this section, can be combined with existing procedures required by other statutes if such processes meet, or are modified to meet, the following criteria:

- (i) The existing process must provide NMFS with timely notification of actions that may adversely affect EFH. The Federal agency should notify NMFS according to the same timeframes for notification (or for public comment) as in the existing process. Whenever possible, NMFS should have

at least 60 days notice prior to a final decision on an action, or at least 90 days if the action would result in substantial adverse impacts. NMFS and the action agency may agree to use shorter timeframes provided that they allow sufficient time for NMFS to develop EFH Conservation Recommendations.

(ii) Notification must include an assessment of the impacts of the action on EFH that meets the requirements for EFH Assessments contained in paragraph (e) of this section. If the EFH Assessment is contained in another document, the Federal agency must identify that section of the document as the EFH Assessment.

(iii) NMFS must have made a finding pursuant to paragraph (f)(3) of this section that the existing process can be used to satisfy the requirements of sections 305(b)(2) and 305(b)(4) of the Magnuson-Stevens Act.

(2) *NMFS response to Federal agency.* If an existing environmental review process is used to fulfill the EFH consultation requirements, the comment deadline for that process should apply to the submittal of NMFS EFH Conservation Recommendations under section 305(b)(4)(A) of the Magnuson-Stevens Act, unless NMFS and the Federal agency agree to a different deadline. If NMFS EFH Conservation Recommendations are combined with other NMFS or NOAA comments on a Federal action, such as NOAA comments on a draft Environmental Impact Statement, the EFH Conservation Recommendations will be clearly identified as such (e.g., a section in the comment letter entitled “EFH Conservation Recommendations”) and a Federal agency response pursuant to section 305(b)(4)(B) of the Magnuson-Stevens Act is required for only the identified portion of the comments.

(3) *NMFS finding.* A Federal agency with an existing environmental review process should contact NMFS at the appropriate level (regional offices for regional processes, headquarters office for national processes) to discuss how to combine the EFH consultation requirements with the existing process, with or without modifications. If, at the conclusion of these discussions, NMFS determines that the existing or

modified process meets the criteria of paragraph (f)(1) of this section, NMFS will make a finding that the process can be used to satisfy the EFH consultation requirements of the Magnuson-Stevens Act. If NMFS does not make such a finding, or if there are no existing consultation processes relevant to the Federal agency’s actions, the agency and NMFS should follow one of the approaches for consultation discussed in the following sections.

(g) *General Concurrence—(1) Purpose.* A General Concurrence identifies specific types of Federal actions that may adversely affect EFH, but for which no further consultation is generally required because NMFS has determined, through an analysis of that type of action, that it will likely result in no more than minimal adverse effects individually and cumulatively. General Concurrences may be national or regional in scope.

(2) *Criteria.* (i) For Federal actions to qualify for General Concurrence, NMFS must determine that the actions meet all of the following criteria:

(A) The actions must be similar in nature and similar in their impact on EFH.

(B) The actions must not cause greater than minimal adverse effects on EFH when implemented individually.

(C) The actions must not cause greater than minimal cumulative adverse effects on EFH.

(ii) Actions qualifying for General Concurrence must be tracked to ensure that their cumulative effects are no more than minimal. In most cases, tracking actions covered by a General Concurrence will be the responsibility of the Federal agency. However, NMFS may agree to track such actions. Tracking should include numbers of actions and the amount and type of habitat adversely affected, and should specify the baseline against which the actions will be tracked. The agency responsible for tracking such actions should make the information available to NMFS, the applicable Council(s), and to the public on an annual basis.

(iii) Categories of Federal actions may also qualify for General Concurrence if they are modified by appropriate conditions that ensure the actions will meet the criteria in paragraph (g)(2)(i) of this section. For example, NMFS may provide General Concurrence for additional actions contingent upon project size limitations, seasonal restrictions, or other conditions.

(iv) If a General Concurrence is proposed for actions that may adversely affect habitat areas of particular concern, the General Concurrence should be subject to a higher level of scrutiny than a General Concurrence not involving a habitat area of particular concern.

(3) *General Concurrence development.* A Federal agency may request a General Concurrence for a category of its actions by providing NMFS with an EFH Assessment containing a description of the nature and approximate number of the actions, an analysis of the effects of the actions on EFH, including cumulative effects, and the Federal agency's conclusions regarding the magnitude of such effects. If NMFS agrees that the actions fit the criteria in paragraph (g)(2)(i) of this section, NMFS will provide the Federal agency with a written statement of General Concurrence that further consultation is not required. If NMFS does not agree that the actions fit the criteria in paragraph (g)(2)(i) of this section, NMFS will notify the Federal agency that a General Concurrence will not be issued and that another type of consultation will be required. If NMFS identifies specific types of Federal actions that may meet the requirements for a General Concurrence, NMFS may initiate and complete a General Concurrence.

(4) *Further consultation.* NMFS may request notification for actions covered under a General Concurrence if NMFS concludes there are circumstances under which such actions could result in more than a minimal impact on EFH, or if it determines that there is no process in place to adequately assess the cumulative impacts of actions covered under the General Concurrence. NMFS may request further consultation for these actions on a case-by-case basis. Each General Concur-

rence should establish specific procedures for further consultation, if appropriate.

(5) *Notification.* After completing a General Concurrence, NMFS will provide a copy to the appropriate Council(s) and will make the General Concurrence available to the public by posting the document on the internet or through other appropriate means.

(6) *Revisions.* NMFS will periodically review and revise its General Concurrences, as appropriate.

(h) *Abbreviated consultation procedures—(1) Purpose and criteria.* Abbreviated consultation allows NMFS to determine quickly whether, and to what degree, a Federal action may adversely affect EFH. Federal actions that may adversely affect EFH should be addressed through the abbreviated consultation procedures when those actions do not qualify for a General Concurrence, but do not have the potential to cause substantial adverse effects on EFH. For example, the abbreviated consultation procedures should be used when the adverse effect(s) of an action could be alleviated through minor modifications.

(2) *Notification by agency and submittal of EFH Assessment.* Abbreviated consultation begins when NMFS receives from the Federal agency an EFH Assessment in accordance with paragraph (e) of this section and a written request for consultation.

(3) *NMFS response to Federal agency.* If NMFS determines, contrary to the Federal agency's assessment, that an action would not adversely affect EFH, or if NMFS determines that no EFH Conservation Recommendations are needed, NMFS will notify the Federal agency either informally or in writing of its determination. If NMFS believes that the action may result in substantial adverse effects on EFH, or that additional analysis is needed to assess the effects of the action, NMFS will request in writing that the Federal agency initiate expanded consultation. Such request will explain why NMFS believes expanded consultation is needed and will specify any new information needed. If expanded consultation is not necessary, NMFS will provide EFH Conservation Recommendations, if appropriate, pursuant to section

305(b)(4)(A) of the Magnuson-Stevens Act.

(4) *Timing.* The Federal agency must submit its EFH Assessment to NMFS as soon as practicable, but at least 60 days prior to a final decision on the action. NMFS must respond in writing within 30 days. NMFS and the Federal agency may agree to use a compressed schedule in cases where regulatory approvals or emergency situations cannot accommodate 30 days for consultation, or to conduct consultation earlier in the planning cycle for actions with lengthy approval processes.

(i) *Expanded consultation procedures—*

(1) *Purpose and criteria.* Expanded consultation allows maximum opportunity for NMFS and the Federal agency to work together to review the action's impacts on EFH and to develop EFH Conservation Recommendations. Expanded consultation procedures must be used for Federal actions that would result in substantial adverse effects to EFH. Federal agencies are encouraged to contact NMFS at the earliest opportunity to discuss whether the adverse effects of an action make expanded consultation appropriate.

(2) *Notification by agency and submittal of EFH Assessment.* Expanded consultation begins when NMFS receives from the Federal agency an EFH Assessment in accordance with paragraph (e) of this section and a written request for expanded consultation. Federal agencies are encouraged to provide in the EFH Assessment the additional information identified under paragraph (e)(4) of this section to facilitate review of the effects of the action on EFH.

(3) *NMFS response to Federal agency.* NMFS will:

(i) Review the EFH Assessment, any additional information furnished by the Federal agency, and other relevant information.

(ii) Conduct a site visit, if appropriate, to assess the quality of the habitat and to clarify the impacts of the Federal agency action. Such a site visit should be coordinated with the Federal agency and appropriate Council(s), if feasible.

(iii) Coordinate its review of the action with the appropriate Council(s).

(iv) Discuss EFH Conservation Recommendations with the Federal agency and provide such recommendations to the Federal agency, pursuant to section 305(b)(4)(A) of the Magnuson-Stevens Act.

(4) *Timing.* The Federal agency must submit its EFH Assessment to NMFS as soon as practicable, but at least 90 days prior to a final decision on the action. NMFS must respond within 60 days of submittal of a complete EFH Assessment unless consultation is extended by agreement between NMFS and the Federal agency. NMFS and Federal agencies may agree to use a compressed schedule in cases where regulatory approvals or emergency situations cannot accommodate 60 days for consultation, or to conduct consultation earlier in the planning cycle for actions with lengthy approval processes.

(5) *Extension of consultation.* If NMFS determines that additional data or analysis would provide better information for development of EFH Conservation Recommendations, NMFS may request additional time for expanded consultation. If NMFS and the Federal agency agree to an extension, the Federal agency should provide the additional information to NMFS, to the extent practicable. If NMFS and the Federal agency do not agree to extend consultation, NMFS must provide EFH Conservation Recommendations to the Federal agency using the best scientific information available to NMFS.

(j) *Programmatic consultation—*(1) *Purpose.* Programmatic consultation provides a means for NMFS and a Federal agency to consult regarding a potentially large number of individual actions that may adversely affect EFH. Programmatic consultation will generally be the most appropriate option to address funding programs, large-scale planning efforts, and other instances where sufficient information is available to address all reasonably foreseeable adverse effects on EFH of an entire program, parts of a program, or a number of similar individual actions occurring within a given geographic area.

(2) *Process.* A Federal agency may request programmatic consultation by

providing NMFS with an EFH Assessment in accordance with paragraph (e) of this section. The description of the proposed action in the EFH Assessment should describe the program and the nature and approximate number (annually or by some other appropriate time frame) of the actions. NMFS may also initiate programmatic consultation by requesting pertinent information from a Federal agency.

(3) *NMFS response to Federal agency.* NMFS will respond to the Federal agency with programmatic EFH Conservation Recommendations and, if applicable, will identify any potential adverse effects that could not be addressed programmatically and require project-specific consultation. NMFS may also determine that programmatic consultation is not appropriate, in which case all EFH Conservation Recommendations will be deferred to project-specific consultations. If appropriate, NMFS' response may include a General Concurrence for activities that qualify under paragraph (g) of this section.

(k) *Responsibilities of Federal agency following receipt of EFH Conservation Recommendations*—(1) *Federal agency response.* As required by section 305(b)(4)(B) of the Magnuson-Stevens Act, the Federal agency must provide a detailed response in writing to NMFS and to any Council commenting on the action under section 305(b)(3) of the Magnuson-Stevens Act within 30 days after receiving an EFH Conservation Recommendation from NMFS. Such a response must be provided at least 10 days prior to final approval of the action if the response is inconsistent with any of NMFS' EFH Conservation Recommendations, unless NMFS and the Federal agency have agreed to use alternative time frames for the Federal agency response. The response must include a description of measures proposed by the agency for avoiding, mitigating, or offsetting the impact of the activity on EFH. In the case of a response that is inconsistent with NMFS Conservation Recommendations, the Federal agency must explain its reasons for not following the recommendations, including the scientific justification for any disagreements with NMFS over the anticipated effects of the ac-

tion and the measures needed to avoid, minimize, mitigate, or offset such effects.

(2) *Further review of decisions inconsistent with NMFS or Council recommendations.* If a Federal agency decision is inconsistent with a NMFS EFH Conservation Recommendation, the Assistant Administrator for Fisheries may request a meeting with the head of the Federal agency, as well as with any other agencies involved, to discuss the action and opportunities for resolving any disagreements. If a Federal agency decision is also inconsistent with a Council recommendation made pursuant to section 305(b)(3) of the Magnuson-Stevens Act, the Council may request that the Assistant Administrator initiate further review of the Federal agency's decision and involve the Council in any interagency discussion to resolve disagreements with the Federal agency. The Assistant Administrator will make every effort to accommodate such a request. NMFS may develop written procedures to further define such review processes.

(1) *Supplemental consultation.* A Federal agency must reinstitute consultation with NMFS if the agency substantially revises its plans for an action in a manner that may adversely affect EFH or if new information becomes available that affects the basis for NMFS EFH Conservation Recommendations.

§ 600.925 NMFS EFH Conservation Recommendations to Federal and state agencies.

(a) *General.* Under section 305(b)(4)(A) of the Magnuson-Stevens Act, NMFS is required to provide EFH Conservation Recommendations to Federal and state agencies for actions that would adversely affect EFH. NMFS will not recommend that state or Federal agencies take actions beyond their statutory authority.

(b) *Recommendations to Federal agencies.* For Federal actions, EFH Conservation Recommendations will be provided to Federal agencies as part of EFH consultations conducted pursuant to § 600.920. If NMFS becomes aware of a Federal action that would adversely affect EFH, but for which a Federal

§ 600.930

agency has not initiated an EFH consultation, NMFS may request that the Federal agency initiate EFH consultation, or NMFS will provide EFH Conservation Recommendations based on the information available.

(c) *Recommendations to state agencies—*

(1) *Establishment of procedures.* The Magnuson-Stevens Act does not require state agencies to consult with the Secretary regarding EFH. NMFS will use existing coordination procedures or establish new procedures to identify state actions that may adversely affect EFH, and to determine the most appropriate method for providing EFH Conservation Recommendations to state agencies.

(2) *Coordination with states on recommendations to Federal agencies.* When an action that would adversely affect EFH is authorized, funded, or undertaken by both Federal and state agencies, NMFS will provide the appropriate state agencies with copies of EFH Conservation Recommendations developed as part of the Federal consultation procedures in § 600.920. NMFS will also seek agreements on sharing information and copies of recommendations with Federal or state agencies conducting similar consultation and recommendation processes to ensure coordination of such efforts.

(d) *Coordination with Councils.* NMFS will coordinate with each Council to identify the types of actions on which Councils intend to comment pursuant to section 305(b)(3) of the Magnuson-Stevens Act. For such actions NMFS will share pertinent information with the Council, including copies of NMFS' EFH Conservation Recommendations.

§ 600.930 Council comments and recommendations to Federal and state agencies.

Under section 305(b)(3) of the Magnuson-Stevens Act, Councils may comment on and make recommendations to the Secretary and any Federal or state agency concerning any activity or proposed activity authorized, funded, or undertaken by the agency that, in the view of the Council, may affect the habitat, including EFH, of a fishery resource under its authority. Councils must provide such comments and recommendations concerning any activity

50 CFR Ch. VI (10–1–21 Edition)

that, in the view of the Council, is likely to substantially affect the habitat, including EFH, of an anadromous fishery resource under Council authority.

(a) *Establishment of procedures.* Each Council should establish procedures for reviewing Federal or state actions that may adversely affect the habitat, including EFH, of a species under its authority. Each Council may receive information on actions of concern by methods such as directing Council staff to track proposed actions, recommending that the Council's habitat committee identify actions of concern, or entering into an agreement with NMFS to have the appropriate Regional Administrator notify the Council of actions of concern that would adversely affect EFH. Federal and state actions often follow specific timetables which may not coincide with Council meetings. Therefore, Councils should consider establishing abbreviated procedures for the development of Council recommendations.

(b) *Early involvement.* Councils should provide comments and recommendations on proposed state and Federal actions of concern as early as practicable in project planning to ensure thorough consideration of Council concerns by the action agency. Each Council should provide NMFS with copies of its comments and recommendations to state and Federal agencies.

Subpart L—Fishing Capacity Reduction Framework

AUTHORITY: 16 U.S.C. 1861a(b)–(e).

SOURCE: 65 FR 31443, May 18, 2000, unless otherwise noted.

§ 600.1000 Definitions.

In addition to the definitions in the Magnuson-Stevens Fishery Conservation and Management Act (Magnuson-Stevens Act) and in § 600.10 of this title, the terms used in this subpart have the following meanings:

Address of Record means the business address of a person, partnership, or corporation. Addresses listed on permits or other NMFS records are presumed to be business addresses, unless clearly indicated otherwise.

Fishery Conservation and Management

§ 600.1000

Bid means the price a vessel owner or reduction fishery permit holder requests for reduction of his/her fishing capacity. It is an irrevocable offer in response to the invitation to bid in § 600.1009.

Borrower means, individually and collectively, each post-reduction fishing permit holder and/or fishing vessel owner fishing in the reduction fishery.

Business plan means the document containing the information specified in § 600.1003(n) and required to be submitted with a request for a financed program.

Business week means a 7-day period, Saturday through Friday.

Controlling fishery management plan or program (CFMP) means either any fishery management plan or any state fishery management plan or program, including amendments to the plan or program, pursuant to which a fishery is managed.

Delivery value means:

(1) For unprocessed fish, all compensation that a fish buyer pays to a fish seller in exchange for fee fish; and

(2) For processed fish, all compensation that a fish buyer would have paid to a fish seller in exchange for fee fish if the fee fish had been unprocessed fish instead of processed fish.

Delivery value encompasses fair market value, as defined herein, and includes the value of all in-kind compensation or all other goods or services exchanged in lieu of cash. It is synonymous with the statutory term “ex-vessel value” as used in section 312 of the Magnuson Act.

Deposit principal means all collected fee revenue that a fish buyer deposits in a segregated account maintained at a federally insured financial institution for the sole purpose of aggregating collected fee revenue before sending the fee revenue to NMFS for repaying a reduction loan.

Fair market value means the amount that a buyer pays a seller in an arm’s length transaction or, alternatively, would pay a seller if the transaction were at arm’s length.

Fee means the amount that fish buyers deduct from the delivery value under a financed reduction program. The fee is the delivery value times the

reduction fishery’s applicable fee rate under section 600.1013.

Fee fish means all fish harvested from a reduction fishery involving a financed program during the period in which any amount of the reduction loan remains unpaid. The term fee fish excludes fish harvested incidentally while fishing for fish not included in the reduction fishery.

Final development plan means the document NMFS prepares, under § 600.1006(b) and based on the preliminary development plan the requester submits, for a subsidized program.

Financed means funded, in any part, by a reduction loan.

Fish buyer means the first ex-vessel party who:

(1) In an arm’s—length transaction, purchases fee fish from a fish seller;

(2) Takes fish on consignment from a fish seller; or

(3) Otherwise receives fish from a fish seller in a non arm’s-length transaction.

Fish delivery means the point at which a fish buyer first purchases fee fish or takes possession of fee fish from a fish seller.

Fishing capacity reduction specifications means the minimum amount of fishing capacity reduction and the maximum amount of reduction loan principal specified in a business plan.

Fish seller means the party who harvests and first sells or otherwise delivers fee fish to a fish buyer.

Fishery Management Plan (FMP) means any Federal fishery management plan, including amendments to the plan, that the Secretary of Commerce approves or adopts pursuant to section 303 of the Magnuson-Stevens Act.

Fund means the Fishing Capacity Reduction Fund, and each subaccount for each program, established in the U.S. Treasury for the deposit into, and disbursement from, all funds, including all reduction loan capital and all fee revenue, involving each program.

Implementation plan means the plan in § 600.1008 for carrying out each program.

Implementation regulations mean the regulations in § 600.1008 for carrying out each program.

§ 600.1000

50 CFR Ch. VI (10–1–21 Edition)

Net delivery value means the delivery value minus the fee.

Post-bidding referendum means a referendum that follows bidding under § 600.1009.

Post-reduction means after a program reduces fishing capacity in a reduction fishery.

Pre-bidding referendum means a referendum that occurs at any time after a request for a financed program but before a proposal under § 600.1008 of an implementation plan and implementation regulations.

Preliminary development plan means the document specified in § 600.1005(g) and required to be submitted with a request for a subsidized program.

Processed fish means fish in any form different from the form in which the fish existed at the time the fish was first harvested, unless any such difference in form represents, in the reduction fishery involved, the standard ex-vessel form upon which fish sellers and fish buyers characteristically base the delivery value of unprocessed fish.

Program means each instance of reduction under this subpart, in each reduction fishery—starting with a request and ending, for a financed program, with full reduction loan repayment.

Reduction means the act of reducing fishing capacity under any program.

Reduction amendment means any amendment, or, where appropriate, framework adjustment, to a CFMP that may be necessary for a program to meet the requirements of this subpart.

Reduction amendment specifications mean the reduction amendment to a CFMP specified in a business plan.

Reduction contract means the invitation to bid under § 600.1009, together with each bidder's irrevocable offer and NMFS' conditional or non-conditional acceptance of each such bid under § 600.1009.

Reduction cost means the total dollar amount of all reduction payments to fishing permit owners, fishing vessel owners, or both, in a reduction fishery.

Reduction fishery means the fishery or portion of a fishery to which a program applies. The reduction fishery must specify each included species, as well as any limitations by gear type, fishing

vessel size, geographic area, and any other relevant factor(s).

Reduction loan means a loan, under section 1111 and section 1112 of Title XI of the Merchant Marine Act, 1936, as amended (46 U.S.C. 1279f and g App.), for financing any portion, or all, of a financed program's reduction cost and repayable by a fee under, and in accordance with, § 600.1012, § 600.1013, and § 600.1014.

Reduction payment means the Federal Government's fishing capacity reduction payment to a fishing permit owner, fishing vessel owner, or both, under a reduction contract. Additionally, it is payment for reduction to each bidder whose bid NMFS accepts under § 600.1009. In a financed program each reduction payment constitutes a disbursement of a reduction loan's proceeds and is for either revoking a fishing permit or both revoking a fishing permit and withdrawing a vessel from fishing either by scrapping or title restriction.

Reduction permit means any fishing permit revoked in a program in exchange for a reduction payment under a reduction contract.

Reduction vessel means any fishing vessel withdrawn from fishing either by scrapping or title restriction in exchange for a reduction payment under a reduction contract.

Referendum means the voting process under § 600.1010 for approving the fee system for repaying a reduction loan.

Request means a request, under § 600.1001, for a program.

Requester means a Council for a fishery identified in § 600.1001(c) or a state governor for a fishery identified in § 600.1001(d), or a majority of permit holders in the fishery.

Scrap means to completely and permanently reduce a fishing vessel's hull, superstructures, and other fixed structural components to fragments having value, if any, only as raw materials for reprocessing or for other non-fisheries use.

Subsidized means wholly funded by anything other than a reduction loan.

Treasury percentage means the annual percentage rate at which NMFS must pay interest to the U.S. Treasury on any principal amount that NMFS borrows from the U.S. Treasury in order to

Fishery Conservation and Management

§ 600.1002

generate the funds with which to later disburse a reduction loan's principal amount.

Unprocessed fish means fish in the same form as the fish existed at the time the fish was harvested, unless any difference in form represents, in the reduction fishery involved, the standard ex-vessel form upon which fish sellers and fish buyers characteristically base the delivery value of unprocessed fish.

Vote means a vote in a referendum.

[65 FR 31443, May 18, 2000, as amended at 75 FR 62328, Oct. 8, 2010]

§ 600.1001 Requests.

(a) A Council, the Governor of a State under whose authority a proposed reduction fishery is subject, or a majority of permit holders in the fishery may request that NMFS conduct a program in that fishery. Each request shall be in writing. Each request shall satisfy the requirements of § 600.1003 or § 600.1005, as applicable, and enable NMFS to make the determinations required by § 600.1004 or § 600.1006, as applicable.

(b) NMFS cannot conduct a program in any fishery subject to the jurisdiction of a Council or a state unless NMFS first receives a request from the Council or the governor to whose jurisdiction the fishery is subject.

(c) For a fishery subject to the jurisdiction of a Council, only that Council can or must make the request. If the fishery is subject to the jurisdiction of two or more Councils, those Councils must make a joint request. No Council may make a request, or join in making a request, until after the Council conducts a public hearing about the request.

(d) For a fishery subject to the jurisdiction of a State, only the Governor of that State can make the request. If the fishery is subject to the jurisdiction of two or more states, the Governors of those States shall make a joint request. No Governor of a State may make a request, or join in making a request, until the State conducts a public hearing about the request.

(e) For a fishery under the direct management authority of the Secretary, NMFS may conduct a program on NMFS' own motion by fulfilling the requirements of this subpart that rea-

sonably apply to a program not initiated by a request.

(f) Where necessary to accommodate special circumstances in a particular fishery, NMFS may waive, as NMFS deems necessary and appropriate, compliance with any specific requirements under this subpart not required by statute.

[65 FR 31443, May 18, 2000, as amended at 75 FR 62328, Oct. 8, 2010]

§ 600.1002 General requirements.

(a) Each program must be:

(1) Necessary to prevent or end overfishing, rebuild stocks of fish, or achieve measurable and significant improvements in the conservation and management of the reduction fishery;

(2) Accompanied by the appropriate environmental, economic and/or socioeconomic analyses, in accordance with applicable statutes, regulations, or other authorities; and

(3) Consistent with the CFMP, including any reduction amendment, for the reduction fishery.

(b) Each CFMP for a reduction fishery must:

(1) Prevent the replacement of fishing capacity removed by the program through a moratorium on new entrants, restrictions on vessel upgrades, and other effort control measures, taking into account the full potential fishing capacity of the fleet;

(2) Establish a specified or target total allowable catch or other measures that trigger closure of the fishery or adjustments to reduce catch; and

(3) Include, for a financed program in a reduction fishery involving only a portion of a fishery, appropriate provisions for the post-reduction allocation of fish between the reduction fishery and the rest of the fishery that both protect the borrower's reduction investment in the program and support the borrower's ability to repay the reduction loan.

(c) The Secretary may not make a fishing capacity reduction program payment with respect to a reduction vessel that will not be scrapped unless the Secretary certifies that the vessel

§ 600.1003

50 CFR Ch. VI (10–1–21 Edition)

will not be used for fishing in the waters of the U.S., a foreign nation, or on the high seas.

[65 FR 31443, May 18, 2000, as amended at 75 FR 62328, Oct. 8, 2010]

§ 600.1003 Content of a request for a financed program.

A request for a financed program shall:

- (a) Specify the reduction fishery.
- (b) Project the amount of the reduction and specify what a reduction of that amount achieves in the reduction fishery.
- (c) Specify whether the program is to be wholly or partially financed and, if the latter, specify the amount and describe the availability of all funding from sources other than a reduction loan.
- (d) Project the availability of all Federal appropriation authority or other funding, if any, that the financed program requires, including the time at which funding from each source will be available and how that relates to the time at which elements of the reduction process are projected to occur.
- (e) Demonstrate how the program meets, or will meet after an appropriate reduction amendment, the requirements in § 600.1002(a).
- (f) Demonstrate how the CFMP meets, or will meet after an appropriate reduction amendment, the requirements in § 600.1002(b).
- (g) If a reduction amendment is necessary, include an actual reduction amendment or the requester's endorsement in principle of the reduction amendment specifications in the business plan. Endorsement in principle is non-binding.
- (h) Request that NMFS conduct, at the appropriate time, a referendum under § 600.1010 of this subpart.
- (i) List the names and addresses of record of all fishing permit or fishing vessel owners who are currently authorized to harvest fish from the reduction fishery, excluding those whose authority is limited to incidentally harvesting fish from the reduction fishery during directed fishing for fish not in the reduction fishery. The list shall be based on the best information available to the requester. The list shall take into account any limitation by type of

fishing gear operated, size of fishing vessel operated, geographic area of operation, or other factor that the proposed program involves. The list may include any relevant information that NMFS may supply to the requester.

(j) Specify the aggregate total allowable catch in the reduction fishery during each of the preceding 5 years and the aggregate portion of such catch harvested by the parties listed under paragraph (i) of this section.

(k) Specify the criteria for determining the types and number of fishing permits or fishing permits and fishing vessels that are eligible for reduction under the program. The criteria shall take into account:

- (1) The characteristics of the fishery;
- (2) Whether the program is limited to a particular gear type within the reduction fishery or is otherwise limited by size of fishing vessel operated, geographic area of operation, or other factor;
- (3) Whether the program is limited to fishing permits or involves both fishing permits and fishing vessels;
- (4) The reduction amendment required;
- (5) The needs of fishing communities;
- (6) Minimizing the program's reduction cost; and
- (7) All other relevant factors.

(l) Include the requester's assessment of the program's potential impact on fisheries other than the reduction fishery, including an evaluation of the likely increase in participation or effort in such other fisheries, the general economic impact on such other fisheries, and recommendations that could mitigate, or enable such other fisheries to mitigate, any undesirable impacts.

(m) Include any other information or guidance that would assist NMFS in developing an implementation plan and implementation regulations.

(n) Include a business plan, prepared by, or on behalf of, knowledgeable and concerned harvesters in the reduction fishery, that:

- (1) Specifies a detailed reduction methodology that accomplishes the maximum sustained reduction in the reduction fishery's fishing capacity at the least reduction cost and in the minimum period of time, and otherwise achieves the program result that the

Fishery Conservation and Management

§ 600.1003

requester specifies under paragraph (b) of this section. The methodology shall:

(i) Establish the appropriate point for NMFS to conduct a pre-bidding referendum and be sufficiently detailed to enable NMFS to readily:

(A) Design, propose, and adopt a timely and reliable implementation plan,

(B) Propose and issue timely and reliable implementation regulations,

(C) Invite bids,

(D) Accept or reject bids, and

(E) Complete a program in accordance with this subpart, and

(ii) Address, consistently with this subpart:

(A) The contents and terms of invitations to bid,

(B) Bidder eligibility,

(C) The type of information that bidders shall supply,

(D) The criteria for accepting or rejecting bids,

(E) The terms of bid acceptances,

(F) Any referendum procedures in addition to, but consistent with, those in § 600.1010, and

(G) All other technical matters necessary to conduct a program;

(2) Projects and supports the reduction fishery's annual delivery value during the reduction loan's repayment period based on documented analysis of actual representative experience for a reasonable number of past years in the reduction fishery;

(3) Includes the fishing capacity reduction specifications upon which both the pre-bidding referendum and the bidding under § 600.1009 will be based. The reduction loan's maximum principal amount cannot, at the interest rate projected to prevail at the time of reduction, exceed the principal amount that can be amortized in 20 years by 5 percent of the projected delivery value;

(4) States the reduction loan's repayment term and the fee rate, or range of fee rates, prospectively necessary to amortize the reduction loan over its repayment term;

(5) Analyzes and demonstrates the ability to repay the reduction loan at the minimum reduction level and at various reduction-level increments reasonably greater than the minimum one, based on the:

(i) Best and most representative historical fishing revenue and expense data and any other relevant productivity measures available in the reduction fishery, and

(ii) Projected effect of the program on the post-reduction operating economics of typical harvesters in the reduction fishery, with particular emphasis on the extent to which the reduction increases the ratio of delivery value to fixed cost and improves harvesting's other relevant productivity measures;

(6) Demonstrates how the business plan's proposed program meets, or will meet after an appropriate reduction amendment, the requirements in § 600.1002(a);

(7) Demonstrates how the CFMP meets, or will meet after an appropriate reduction amendment, the requirements in § 600.1002(b);

(8) Includes, if a reduction amendment is necessary, the reduction amendment specifications upon which the pre-bidding referendum will be based;

(9) Includes an assessment of the program's potential impact on fisheries other than the reduction fishery, including an evaluation of the likely increase in participation or effort in such other fisheries, the general economic impact on such other fisheries, and recommendations that could mitigate, or enable such other fisheries to mitigate, any undesirable impacts;

(10) Specifies the names and addresses of record of all fish buyers who can, after reduction, reasonably be expected to receive deliveries of fee fish. This shall be based on the best information available, including any information that NMFS may be able to supply to the business planners;

(11) Specifies, after full consultation with fish buyers, any special circumstances in the reduction fishery that may require the implementing regulations to contain provisions in addition to, or different from, those contained in § 600.1013 and/or § 600.1014 in order to accommodate the circumstances of, and practices in, the reduction fishery while still fulfilling the intent and purpose of § 600.1013 and/or § 600.1014—including, but not limited to:

(i) In the case of reduction fisheries in which state data confidentiality laws or other impediments may negatively affect the efficient and effective conduct of the same, specification of who needs to take what action to resolve any such impediments, and

(ii) In the case of reduction fisheries in which some fish sellers sell unprocessed, and other fish sellers sell processed fish to fish buyers, specification of an accurate and efficient method of establishing the delivery value of processed fish; and

(12) Demonstrates by a survey of potential voters, or by any other convincing means, a substantial degree of potential voter support for the business plan and confidence in its feasibility.

(o) Include the requester's statement of belief that the business plan, the CFMP, the reduction amendment specifications, and all other request aspects constitute a complete, realistic, and practical prospect for successfully completing a program in accordance with this subpart.

§ 600.1004 Accepting a request for, and determinations about initiating, a financed program.

(a) *Accepting a request.* Once it receives a request, NMFS will review any request for a financed program to determine whether the request conforms with the requirements of § 600.1003. If the request does not conform, NMFS will return the request with guidance on how to make the request conform. If the request conforms, NMFS shall accept it and publish a notice in the FEDERAL REGISTER requesting public comments on the request. Such notice shall state the name and address of record of each eligible voter, as well as the basis for having determined the eligibility of those voters. This shall constitute notice and opportunity to respond about adding eligible voters, deleting ineligible voters, and/or correcting any voter's name and address of record. If, in NMFS' discretion, the comments received in response to such notice warrants it, or other good cause warrants it, NMFS may modify such list by publishing another notice in the FEDERAL REGISTER.

(b) *Determination about initiating a financed program.* After receipt of a con-

forming request for a financed program, NMFS will, after reviewing and responding to any public comments received in response to the notice published in the FEDERAL REGISTER under paragraph (a) of this section, initiate the program if NMFS determines that:

(1) The program meets, or will meet after an appropriate reduction amendment, the requirements in § 600.1002(a);

(2) The CFMP meets, or will meet after an appropriate reduction amendment, the requirements in § 600.1002(b);

(3) The program, if successfully implemented, is cost effective;

(4) The reduction requested constitutes a realistic and practical prospect for successfully completing a program in accordance with this subpart and the borrower is capable of repaying the reduction loan. This includes enabling NMFS to readily design, propose, and adopt a timely and reliable implementation plan as well as propose and issue timely and reliable implementation regulations and otherwise complete the program in accordance with this subpart; and

(5) The program accords with all other applicable law.

§ 600.1005 Content of a request for a subsidized program.

A request for a subsidized program shall:

(a) Specify the reduction fishery.

(b) Project the amount of the reduction and specify what a reduction of that amount achieves in the reduction fishery.

(c) Project the reduction cost, the amount of reduction cost to be funded by Federal appropriations, and the amount, if any, to be funded by other sources.

(d) Project the availability of Federal appropriations or other funding, if any, that completion of the program requires, including the time at which funding from each source will be available and how that relates to the time at which elements of the reduction process are projected to occur.

(e) List the names and addresses of record of all fishing permit or fishing

Fishery Conservation and Management

§ 600.1006

vessel owners who are currently authorized to harvest fish from the reduction fishery, excluding those whose authority is limited to incidentally harvesting fish from the reduction fishery during directed fishing for fish not in the reduction fishery. The list shall be based on the best information available to the requester, including any information that NMFS may supply to the requester, and take into account any limitation by type of fishing gear operated, size of fishing vessel operated, geographic area of operation, or other factor that the proposed program involves.

(f) Specify the aggregate total allowable catch in the reduction fishery during each of the preceding 5 years and the aggregate portion of such catch harvested by the parties listed under paragraph (e) of this section.

(g) Include a preliminary development plan that:

(1) Specifies a detailed reduction methodology that accomplishes the maximum sustained reduction in the reduction fishery's fishing capacity at the least cost and in a minimum period of time, and otherwise achieves the program result that the requester specifies under paragraph (b) of this section. The methodology shall:

(i) Be sufficiently detailed to enable NMFS to prepare a final development plan to serve as the basis for NMFS to readily design, propose, and adopt a timely and reliable implementation plan and propose and issue timely and reliable implementation regulations, and

(ii) Include:

(A) The contents and terms of invitations to bid,

(B) Eligible bidders,

(C) The type of information that bidders shall supply,

(D) The criteria for accepting or rejecting bids, and

(E) The terms of bid acceptances;

(2) Specifies the criteria for determining the types and numbers of fishing permits or fishing permits and fishing vessels that are eligible for reduction under the program. The criteria shall take into account:

(i) The characteristics of the fishery,

(ii) Whether the program is limited to a particular gear type within the re-

duction fishery, or is otherwise limited by size of fishing vessel operated, geographic area of operation, or other factor,

(iii) Whether the program is limited to fishing permits or involves both fishing permits and fishing vessels,

(iv) The reduction amendment required,

(v) The needs of fishing communities, and

(vi) The need to minimize the program's reduction cost; and

(3) Demonstrates the program's cost effectiveness.

(h) Demonstrate how the program meets, or will meet after an appropriate reduction amendment, the requirements in § 600.1002(a).

(i) Demonstrate how the CFMP meets, or will meet after an appropriate reduction amendment, the requirements in § 600.1002(b)(1) and (2).

(j) Specify any other information or guidance that assists NMFS in preparing a final development plan and a proposed implementation plan and proposed implementation regulations.

(k) Include the requester's statement of belief that the program constitutes a reasonably realistic and practical prospect for successfully completing a program in accordance with this subpart.

§ 600.1006 Accepting a request for, and determinations about conducting, a subsidized program.

(a) *Accepting a request.* NMFS will review any request for a subsidized program submitted to NMFS to determine whether the request conforms with the requirements of § 600.1005. If the request does not conform, NMFS will return it with guidance on how to make the request conform. If the request conforms, NMFS shall accept it and publish a notice in the FEDERAL REGISTER requesting public comments about the request.

(b) *Final development plan.* After receipt of a conforming request, NMFS will prepare a final development plan if NMFS determines that the reduction requested constitutes a realistic and practical prospect for successfully completing a program in accordance with this subpart. This includes enabling NMFS to readily design, propose, and adopt a timely and reliable implementation plan as well as propose and

§ 600.1007

50 CFR Ch. VI (10–1–21 Edition)

issue timely and reliable implementation regulations and otherwise complete the program in accordance with this subpart. NMFS will, as far as possible, base the final development plan on the requester's preliminary development plan. Before completing the final development plan, NMFS will consult, as NMFS deems necessary, with the requester, Federal agencies, state and regional authorities, affected fishing communities, participants in the reduction fishery, conservation organizations, and other interested parties in preparing the final development plan.

(c) *Reaffirmation of the request.* After completing the final development plan, NMFS will submit the plan to the requester for the requester's reaffirmation of the request. Based on the final development plan, the reaffirmation shall: (1) Certify that the final development plan meets, or will meet after an appropriate reduction amendment, the requirements in § 600.1002(a);

(2) Certify that the CFMP meets, or will meet after an appropriate reduction amendment, the requirements in § 600.1002(b)(1) and (2); and

(3) Project the date on which the requester will forward any necessary reduction amendment and, if the requester is a Council, proposed regulations to implement the reduction amendment. The requester shall base any necessary reduction amendment on the final development plan.

(d) *Determinations about conducting a subsidized program.* After NMFS' receipt of the requester's reaffirmation, any required reduction amendment, and any proposed regulations required to implement the amendment, NMFS will initiate the program if NMFS determines that:

(1) The program meets, or will meet after an appropriate reduction amendment, the requirements in § 600.1002(a);

(2) The CFMP meets, or will meet after an appropriate reduction amendment, the requirements in § 600.1002(b)(1) and (2); and

(3) The program is reasonably capable of being successfully implemented;

(4) The program, if successfully implemented, will be cost effective; and

(5) The program is in accord with all other applicable provisions of the Magnuson-Stevens Act and this subpart.

§ 600.1007 Reduction amendments.

(a) Each reduction amendment may contain provisions that are either dependent upon or independent of a program. Each provision of a reduction amendment is a dependent provision unless the amendment expressly designates the provision as independent.

(b) Independent provisions are effective without regard to any subsequent program actions.

(c) Dependent provisions are initially effective for the sole limited purpose of enabling initiation and completion of the pre-reduction processing stage of a program.

(d) All dependent provisions of a reduction amendment for a financed program are fully in force and effect for all other purposes only when NMFS either:

(1) For bidding results that conform to the fishing capacity reduction specifications and are not subject to any other condition, notifies bidders, under § 600.1009(e)(3), that reduction contracts then exist between the bidders and the United States; or

(2) For bidding results that do not conform to the fishing capacity reduction specifications or are subject to any other condition, notifies bidders whose bids NMFS had conditionally accepted, under § 600.1010 (d)(8)(iii), that the condition pertaining to the reduction contracts between them and the United States is fulfilled.

(e) If NMFS does not, in accordance with this subpart and any special provisions in the implementation regulations, subsequently make all reduction payments that circumstances, in NMFS' judgment, reasonably permit NMFS to make and, thus, complete a program, no dependent provisions shall then have any further force or effect for any purpose and all final regulations involving such dependent provisions shall then be repealed.

§ 600.1008 Implementation plan and implementation regulations.

(a) As soon as practicable after deciding to initiate a program, NMFS will prepare and publish, for a 60-day public

Fishery Conservation and Management

§ 600.1008

comment period, a proposed implementation plan and implementation regulations. During the public comment period, NMFS will conduct a public hearing of the proposed implementation plan and implementation regulations in each state that the program affects.

(b) To the greatest extent practicable, NMFS will base the implementation plan and implementation regulations for a financed program on the business plan. The implementation plan for a financed program will describe in detail all relevant aspects of implementing the program, including:

- (1) The reduction fishery;
- (2) The reduction methodology;
- (3) The maximum reduction cost;
- (4) The maximum reduction loan amount, if different from the maximum reduction cost;
- (5) The reduction cost funding, if any, other than a reduction loan;
- (6) The minimum acceptable reduction level;
- (7) The potential amount of the fee;
- (8) The criteria for determining the types and number of fishing permits or fishing permits and fishing vessels eligible to participate in the program;
- (9) The invitation to bid and bidding procedures;
- (10) The criteria for determining bid acceptance;
- (11) The referendum procedures; and
- (12) Any relevant post-referendum reduction procedures other than those in the implementation regulations or this subpart.

(c) NMFS will base each implementation plan and implementation regulations for a subsidized program on the final development plan. The implementation plan will describe in detail all relevant aspects of implementing the program, including:

- (1) The reduction fishery;
- (2) The reduction methodology;
- (3) The maximum reduction cost;
- (4) The reduction-cost funding, if any, other than Federal appropriations;
- (5) The criteria for determining the types and number of fishing permits or fishing permits and fishing vessels eligible to participate in the program;
- (6) The invitation to bid and bidding procedures;

(7) The criteria for determining bid acceptance; and

(8) Any relevant post-bidding program procedures other than those in the implementation regulations or this subpart.

(d) The implementation regulations will:

(1) Specify, for invitations to bid, bids, and reduction contracts under § 600.1009:

- (i) Bidder eligibility,
- (ii) Bid submission requirements and procedures,
- (iii) A bid opening date, before which a bidder may not bid, and a bid closing date, after which a bidder may not bid,
- (iv) A bid expiration date after which the irrevocable offer contained in each bid expires unless NMFS, before that date, accepts the bid by mailing a written acceptance notice to the bidder at the bidder's address of record,
- (v) The manner of bid submission and the information each bidder shall supply for NMFS to deem a bid responsive,
- (vi) The conditions under which NMFS will accept or reject a bid,
- (vii) The manner in which NMFS will accept or reject a bid, and
- (viii) The manner in which NMFS will notify each bidder of bid acceptance or rejection;

(2) Specify any other special referendum procedures or criteria; and

(3) Specify such other provisions, in addition to and consistent with those in this subpart, necessary to regulate the individual terms and conditions of each program and reduction loan. This includes, but is not limited to:

(i) Provisions for the payment of costs and penalties for non-payment, non-collection, non-deposit, and/or non-disbursement of the fee in accordance with § 600.1013 and § 600.1014,

(ii) Prospective fee rate determinations, and

(iii) Any other aspect of fee payment, collection, deposit, disbursement, accounting, record keeping, and/or reporting.

(e) NMFS will issue final implementation regulations and adopt a final implementation plan within 45 days of the close of the public-comment period.

(f) NMFS may repeal the final implementation regulations for any program if:

§ 600.1009

50 CFR Ch. VI (10–1–21 Edition)

(1) For a financed program, the bidding results do not conform to the fishing capacity reduction specifications or a post-bidding referendum does not subsequently approve an industry fee system based on the bidding results;

(2) For a subsidized program, NMFS does not accept bids; and

(3) For either a financed program or a subsidized program, if NMFS is unable to make all reduction payments due to a material adverse change.

§ 600.1009 Bids.

(a) Each invitation to bid, bid, bid acceptance, reduction contract, and bidder—or any other party in any way affected by any of the foregoing—under this subpart is subject to the terms and conditions in this section:

(1) Each invitation to bid constitutes the entire terms and conditions of a reduction contract under which:

(i) Each bidder makes an irrevocable offer to the United States of fishing capacity for reduction, and

(ii) NMFS accepts or rejects, on behalf of the United States, each bidder's offer;

(2) NMFS may, at any time before the bid expiration date, accept or reject any or all bids;

(3) For a financed program in which bidding results do not conform to the fishing capacity reduction specifications, NMFS' acceptance of any bid is subject to the condition that the industry fee system necessary to repay the reduction loan is subsequently approved by a successful post-bidding referendum conducted under § 600.1010. Approval or disapproval of the industry fee system by post-bidding referendum is an event that neither the United States nor the bidders can control. Disapproval of the industry fee system by an unsuccessful post-bidding referendum fully excuses both parties from any performance and fully discharges all duties under any reduction contract;

(4) For a financed program in one reduction fishery that is being conducted under appropriate implementation regulations simultaneously with another financed program in another reduction fishery, where the acceptance of bids for each financed program is conditional upon successful post-bidding

referenda approving industry fee systems for both financed programs, NMFS' acceptance of all bids is, in addition to any condition under paragraph (a)(3) of this section, also subject to the additional conditions that both referenda approve the industry fee systems required for both financed programs—all as otherwise provided in paragraph (a)(3) of this section;

(5) Upon NMFS' acceptance of the bid and tender of a reduction payment, the bidder consents to:

(i) The revocation, by NMFS, of any reduction permit, and

(ii) Where the program also involves the withdrawal of reduction vessels from fishing:

(A) Title restrictions imposed by the U.S. Coast Guard on any reduction vessel that is Federally documented to forever prohibit and effectively prevent any future use of the reduction vessel for fishing;

(I) In any area subject to the jurisdiction of the United States, or any state, territory, commonwealth, or possession of the United States, or

(2) On the high seas, or

(3) In the waters of a foreign nation; or

(B) Scrapping of all reduction vessels involved in a fishing capacity reduction program, unless the reduction program vessel has been certified by the Secretary, and the requirements established under § 600.1002(c) are met. Where reduction vessel scrapping is involved and the reduction vessel's owner does not comply with the owner's obligation under the reduction contract to scrap the reduction vessel, the Secretary may take such measures as necessary to cause the reduction vessel's prompt scrapping. The scrapping will be at the reduction vessel owner's risk and expense. Upon completion of scrapping, NMFS will take such action as may be necessary to recover from the reduction vessel owner any cost, damages, or other expense NMFS incurred in the scrapping of the reduction vessel.

(6) Money damages not being an adequate remedy for a bidder's breach of a reduction contract, the United States is, in all particulars, entitled to specific performance of each reduction

Fishery Conservation and Management

§ 600.1010

contract. This includes, but is not limited to, the scrapping of a reduction vessel;

(7) Any reduction payment is available, upon timely and adequately documented notice to NMFS, to satisfy liens, as allowed by law, against any reduction permit/and or reduction vessel; provided, however, that:

(i) No reduction payment to any bidder either relieves the bidder of responsibility to discharge the obligation which gives rise to any lien or relieves any lien holder of responsibility to protect the lien holder's interest,

(ii) No reduction payment in any way gives rise to any liability of the United States for the obligation underlying any lien,

(iii) No lien holder has any right or standing, not otherwise provided by law, against the United States in connection with the revocation of any reduction permit or the title restriction or scrapping of any reduction vessel under this subpart, and

(iv) This subpart does not provide any lien holder with any right or standing to seek to set aside any revocation of any reduction permit or the title restriction or scrapping of any reduction vessel for which the United States made, or has agreed to make, any reduction payment. A lien holder is limited to recovery against the holder of the reduction permit or the owner of the reduction vessel as otherwise provided by law; and

(8) Each invitation to bid may specify such other terms and conditions as NMFS believes necessary to enforce specific performance of each reduction contract or otherwise to ensure completing each program. This includes, but is not limited to, each bidder's certification, subject to the penalties in § 600.1017, of the bidder's full authority to submit each bid and to dispose of the property involved in the bid in the manner contemplated by each invitation to bid.

(b) NMFS will not invite bids for any program until NMFS determines that:

(1) Any necessary reduction amendment is fully and finally approved and all provisions except those dependent on the completion of reduction are implemented;

(2) The final implementation plan is adopted and the final implementation regulations are issued;

(3) All required program funding is approved and in place, including all Federal appropriation and apportionment authority;

(4) Any reduction loan involved is fully approved;

(5) Any non-Federal funding involved is fully available at the required time for NMFS disbursement as reduction payments; and

(6) All other actions necessary to disburse reduction payments, except for matters involving bidding and post-bidding referenda, are completed.

(c) After making the affirmative determinations required under paragraph (b) of this section, NMFS will publish a FEDERAL REGISTER notice inviting eligible bidders to offer to the United States, under this subpart, fishing capacity for reduction.

(d) NMFS may extend a bid closing date and/or a bid expiration date for a reasonable period. NMFS may also issue serial invitations to bid if the result of previous bidding, in NMFS' judgment, warrant this.

(e) After the bid expiration date, NMFS will:

(1) Analyze responsive bids;

(2) Determine which bids, if any, NMFS accepts; and

(3) Notify, by U.S. mail at each bidder's address of record, those bidders whose bids NMFS accepts that a reduction contract now exists between them and the United States—subject, where appropriate, to the conditions provided for elsewhere in this subpart.

(f) NMFS will keep confidential the identity of all bidders whose bids NMFS does not accept. In financed programs where bidding results do not conform to the fishing capacity reduction specifications, NMFS also will keep confidential the identity of all bidders whose bids NMFS does accept until after completing a successful post-bidding referendum under § 600.1010.

[65 FR 31443, May 18, 2000, as amended at 75 FR 62329, Oct. 8, 2010]

§ 600.1010 Referenda.

(a) *Referendum success.* A referendum is successful if at least a majority of

the permit holders in the fishery who participate in the fishery cast ballots in favor of an industry fee system.

(b) *Pre-bidding referendum*—(1) *Initial referendum*. An initial pre-bidding referendum shall be conducted for each financed program. The business plan shall, subject to this subpart, determine the chronological relationship of the initial pre-bidding referendum to other pre-bidding aspects of the reduction process sequence. The initial pre-bidding referendum shall be based on the fishing capacity reduction specifications. If the initial pre-bidding referendum precedes the adoption of any necessary reduction amendment, the initial pre-bidding referendum shall also be based on the reduction amendment specifications. If the initial pre-bidding referendum follows the adoption of any necessary reduction amendment, the initial pre-bidding referendum shall also be based on the adopted reduction amendment;

(2) *Successful initial pre-bidding referendum*. If the initial pre-bidding referendum is successful, the reduction process will proceed as follows:

(i) If the initial pre-bidding referendum follows reduction amendment adoption, no second pre-bidding referendum shall be conducted,

(ii) If the initial pre-bidding referendum precedes reduction amendment adoption, a second pre-bidding referendum shall be conducted if, in NMFS' judgment, the reduction amendment subsequently adopted differs, in any respect materially affecting the borrower's reduction investment in the program and the borrower's ability to repay the reduction loan, from the reduction amendment specifications upon which the initial pre-bidding referendum successfully occurred. The sole purpose of any second pre-bidding referendum shall be to determine whether the voters authorize an industry fee system despite any such difference between the reduction amendment specifications and a subsequently adopted reduction amendment.

(3) *Unsuccessful initial pre-bidding referendum*. If the initial pre-bidding referendum is unsuccessful, the reduction process will either cease or NMFS may suspend the process pending an appro-

priate amendment of the business plan and the request.

(c) *Post-bidding referendum*. A post-bidding referendum shall occur only if, in NMFS' judgment, the result of bidding under § 600.1009 does not conform, in any material respect, to the fishing capacity reduction specifications and such result justifies, in NMFS' judgment, conducting a post-bidding referendum. Bidding that results in reducing fishing capacity in any amount not less than the minimum fishing capacity reduction amount for any reduction loan amount not more than the maximum reduction loan amount, and otherwise achieves all material requirements of the fishing capacity reduction specifications, shall conform to the fishing capacity reduction specifications. The sole purpose of any post-bidding referendum shall be to determine whether voters authorize an industry fee system for bidding that results in reducing fishing capacity in any amount materially less than the minimum amount in the fishing capacity reduction specifications.

(d) NMFS will conduct referenda in accordance with the following:

(1) *Eligible voters*. The parties eligible to vote in each referendum are the parties whose names are listed as being eligible to vote in the notice published in the FEDERAL REGISTER under § 600.1004(a);

(2) *Ballot issuance*. NMFS will mail, by U.S. certified mail, return receipt requested, a ballot to each eligible voter. Each ballot will bear a randomly derived, 5-digit number assigned to each eligible voter. Each ballot will contain a place for the voter to vote for or against the proposed industry fee system and a place, adjacent to the 5-digit number, for the signature of the fishing permit or fishing vessel owner to whom the ballot is addressed or, if the fishing permit or fishing vessel owner is an organization, the person having authority to vote and cast the ballot on the organization's behalf. Each ballot will contain a place for the person signing the ballot to print his or her name. NMFS will enclose with each ballot a specially-marked, postage-paid, pre-addressed envelope that each voter shall use to return the ballot to NMFS;

Fishery Conservation and Management

§ 600.1010

(3) *Voter certification.* Each ballot will contain a certification, subject to the penalties set forth in § 600.1017, that the person signing the ballot is the fishing permit or fishing vessel owner to whom the ballot is addressed or, if the fishing permit or fishing vessel owner is an organization, the person having authority to vote and cast the ballot on the organization's behalf;

(4) *Information included on a ballot.* Each ballot mailing will:

(i) Summarize the referendum's nature and purpose,

(ii) Specify the date by which NMFS must receive a ballot in order for the ballot to be counted as a qualified vote,

(iii) Identify the place on the ballot for the voter to vote for or against the proposed industry fee system, the place on the ballot where the voter shall sign the ballot, and the purpose of the return envelope,

(iv) For each pre-bidding referendum, state:

(A) The fishing capacity reduction specifications,

(B) The reduction loan's repayment term, and

(C) The fee rate, or range of fee rates, prospectively necessary to amortize the reduction loan over the loan's term,

(v) For each initial pre-bidding referendum that precedes reduction amendment adoption, state the reduction amendment specifications,

(vi) For each initial pre-bidding referendum that follows reduction amendment adoption, summarize the material aspects of the reduction amendment adopted,

(vii) For each second pre-bidding referendum, summarize how the adopted reduction amendment materially differs from the reduction amendment specifications upon which a successful initial pre-bidding referendum occurred and how this material difference affects the borrower's reduction investment in the program and the borrower's ability to repay the reduction loan,

(viii) For each post-bidding referendum, specify the actual bidding results that do not conform to the fishing capacity reduction specifications, and

(ix) State or include whatever else NMFS deems appropriate;

(5) *Enclosures to accompany a ballot.* Each ballot mailing will include:

(i) A specially-marked, postage-paid, and pre-addressed envelope that a voter must use to return the original of a ballot to NMFS by whatever means of delivery the voter chooses, and

(ii) Such other materials as NMFS deems appropriate;

(6) *Vote qualification.* A completed ballot qualifies to be counted as a vote if the ballot:

(i) Is physically received by NMFS on or before the last day NMFS specifies for receipt of the ballot,

(ii) Is cast for or against the proposed industry fee system,

(iii) Is signed by the voter,

(iv) Is the original ballot NMFS sent to the voter bearing the same 5-digit number that NMFS assigned to the voter, and

(v) Was returned to NMFS in the specially-marked envelope that NMFS provided for the ballot's return;

(6) *Vote tally and notification.* NMFS will:

(i) Tally all ballots qualified to be counted as referendum votes,

(ii) Notify, by U.S. mail at the address of record, all eligible voters who received ballots of:

(A) The number of potential voters,

(B) The number of actual voters who returned a ballot,

(C) The number of returned ballots that qualified to be counted as referendum votes,

(D) The number of votes for and the number of votes against the industry fee system, and

(E) Whether the referendum was successful and approved the industry fee system or unsuccessful and disapproved the industry fee system, and

(iii) If a successful referendum is a post-bidding referendum, NMFS will, at the same time and in the same manner, also notify the bidders whose bids were conditionally accepted that the condition pertaining to the reduction contracts between them and the United States is fulfilled;

(7) *Conclusiveness of referendum determinations.* NMFS' determinations about ballot qualifications and about all other referendum matters, including,

but not limited to, eligible voters and their addresses of record, are conclusive and final as of the date NMFS makes such determinations. No matter respecting such determinations shall impair, invalidate, avoid, or otherwise render unenforceable any referendum, reduction contract, reduction loan, or fee payment and collection obligation under § 600.1013 and § 600.1014 necessary to repay any reduction loan;

(8) *Ballot confidentiality.* NMFS will not voluntarily release the name of any party who voted. NMFS will restrict the availability of all voter information to the maximum extent allowed by law; and

(9) *Conclusive authorization of industry fee system.* Each successful referendum conclusively authorizes NMFS' imposition of an industry fee system—including the fee payment, collection, and other provisions regarding fee payment and collection under § 600.1013 and § 600.1014—to repay the reduction loan for each financed program that NMFS conducts under this subpart.

[65 FR 31443, May 18, 2000, as amended at 75 FR 62329, Oct. 8, 2010]

§ 600.1011 Reduction methods and other conditions.

(a) *Reduction permits or reduction permits and reduction vessels.* Each program may involve either the surrender and revocation of reduction permits or both the surrender and revocation of reduction permits and the withdrawal from fishing either by title restriction or by scrapping of reduction vessels. No financed program may, however, require such title restriction or scrapping of reduction vessels unless the business plan voluntarily includes the same.

(b) *Reduction permit revocation and surrender.* Each reduction permit is, upon NMFS' tender of the reduction payment for the reduction permit, forever revoked. Each reduction permit holder shall, upon NMFS' tender of the reduction payment, surrender the original reduction permit to NMFS. The reduction permit holder, upon NMFS' tender of the reduction payment, forever relinquishes any claim associated with the reduction permit and with the fishing vessel that was used to harvest fishery resources under the reduction permit that could qualify

the reduction permit holder or the fishing vessel owner for any present or future limited access system fishing permit in the reduction fishery.

(c) *Reduction vessel title restriction or scrapping.* For each program that involves reduction vessel title restriction or scrapping:

(1) Each reduction vessel that is subject to title restriction only and is thus not required to be scrapped, is, upon NMFS' tender of the reduction payment, forever prohibited from any future use for fishing in any area subject to the jurisdiction of the United States or any State, territory, possession, or commonwealth of the United States. NMFS will request that the U.S. Coast Guard permanently restrict each such reduction vessel's title to exclude the reduction vessel's future use for fishing in any such area;

(2) Each reduction vessel owner whose reduction vessel is required to be scrapped shall, upon NMFS' tender of the reduction payment, immediately cease all further use of the reduction vessel and arrange, without delay and at the reduction vessel owner's expense, to scrap the reduction vessel to NMFS' satisfaction, including adequate provision for NMFS to document the physical act of scrapping; and

(3) Each reduction vessel owner, upon NMFS' tender of the reduction payment, forever relinquishes any claim associated with the reduction vessel and with the reduction permit that could qualify the reduction vessel owner or the reduction permit holder for any present or future limited access system fishing permit in the reduction fishery.

(d) *Fishing permits in a non-reduction fishery.* A financed program that does not involve the withdrawal from fishing or scrapping of reduction vessels may not require any holder of a reduction permit in a reduction fishery to surrender any fishing permit in any non-reduction fishery or restrict or revoke any fishing permit other than a reduction permit in the reduction fishery, except those fishing permits authorizing the incidental harvesting of species in any non-reduction fishery during, and as a consequence of, directed fishing for species in the reduction fishery.

(e) *Reduction vessels disposition.* Where a business plan requires the withdrawal from fishing of reduction vessels as well as the revocation of reduction permits:

(1) Each reduction vessel that is not documented under Federal law must in every case always be scrapped, without regard to whether a program is a financed program or a subsidized program;

(2) No financed program may require any disposition of a reduction vessel documented under Federal law other than the title restriction in paragraph (b) of this section unless the business plan volunteers to do otherwise; and

(3) Any subsidized program may require the scrapping of reduction vessels documented under Federal law.

(f) *Reduction payments.* NMFS will disburse all reduction payments in the amount and in the manner prescribed in reduction contracts, except reduction payments that a bidder's reduction-contract nonperformance prevents NMFS from disbursing. In financed programs, the reduction loan's principal amount is the total amount of all reduction payments that NMFS disburses from the proceeds of a reduction loan. Any reduction payment that NMFS, because of a bidder's reduction-contract nonperformance, disburses but subsequently recovers, shall reduce the principal amount of the reduction loan accordingly.

(g) *Effect of reduction-contract non-performance.* No referendum, no reduction contract, no reduction loan, and no fee payment and collection obligation under § 600.1013 and § 600.1014 necessary to repay any reduction loan, shall be impaired, invalidated, avoided, or otherwise rendered unenforceable by virtue of any reduction contract's non-performance. This is without regard to the cause of, or reason for, non-performance. NMFS shall endeavor to enforce the specific performance of all reduction contracts, but NMFS' inability, for any reason, to enforce specific performance for any portion of such reduction contracts shall not relieve fish sellers of their obligation to pay, and fish buyers of their obligation to collect, the fee necessary to fully repay the full reduction loan balance that results from all reduction payments that

NMFS actually makes and does not recover.

(h) *Program completion.* Other than the payment and collection of the fee that repays a reduction loan and any other residual matters regarding reduction payments and the disposition of reduction permits and reduction vessels, a program shall be completed when NMFS tenders or makes all reduction payments under all reduction contracts that circumstances, in NMFS' judgment, reasonably permit NMFS to make.

§ 600.1012 Reduction loan.

(a) *Obligation.* The borrower shall be obligated to repay a reduction loan. The borrower's obligation to repay a reduction loan shall be discharged by fish sellers paying a fee in accordance with § 600.1013. Fish buyers shall be obligated to collect the fee in accordance with § 600.1013 and to deposit and disburse the fee revenue in accordance with § 600.1014.

(b) *Principal amount, interest rate, repayment term, and penalties for non-payment or non-collection.* The reduction loan shall be:

(1) In a principal amount that shall be determined by subsequent program events under this subpart, but which shall not exceed the maximum principal amount in the fishing capacity reduction specifications;

(2) At an annual rate, that shall be determined by subsequent events, of simple interest on the reduction loan's principal balance that shall equal 2 percent plus the Treasury percentage;

(3) Repayable over the repayment term specified in the business plan or otherwise determined by subsequent events; and

(4) Subject to such provisions as implementation regulations shall specify for the payment of costs and penalties for non-payment, non-collection, non-deposit, and/or non-disbursement in accordance with § 600.1013 and § 600.1014.

(c) *Effect of prospective interest rate.* Any difference between a prospective interest rate projected, for the purpose of any aspect of reduction planning or processing under this subpart, before the U.S. Treasury determines the Treasury percentage and an interest

§ 600.1013

rate first known after the U.S. Treasury determines the Treasury percentage shall not void, invalidate, or otherwise impair any reduction contract, any reduction loan repayment obligation, or any other aspect of the reduction process under this subpart. Should any such difference result in a reduction loan that cannot, at the maximum fee rate allowed by law, be repaid, as previously projected, within the maximum maturity, any amount of the reduction loan remaining unpaid at maturity shall be repaid after maturity by continuing fee payment and collection under this subpart at such maximum fee rate until the reduction loan's unpaid principal balance and accrued interest is fully repaid. The above notwithstanding, at the discretion of the Secretary, the reduction contract can be voided if a material adverse change affects the reduction contract, reduction loan obligation, or any other aspect of the reduction process under this subpart.

§ 600.1013 Fee payment and collection.

(a) *Amount.* The fee amount is the delivery value times the fee rate.

(b) *Rate.* NMFS will establish the fee rate. The fee rate may not exceed 5 percent of the delivery value. NMFS will establish the initial fee rate by calculating the fee revenue annually required to amortize a reduction loan over the reduction loan's term, projecting the annual delivery value, and expressing such fee revenue as a percentage of such delivery value. Before each anniversary of the initial fee rate determination, NMFS will recalculate the fee rate reasonably required to ensure reduction loan repayment. This will include any changed delivery value projections and any adjustment required to correct for previous delivery values higher or lower than projected.

(c) *Payment and collection.* (1) The full fee is due and payable at the time of fish delivery. Each fish buyer shall collect the fee at the time of fish delivery by deducting the fee from the delivery value before paying, or promising to pay, the net delivery value. Each fish seller shall pay the fee at the time of fish delivery by receiving from the fish buyer the net delivery value, or the fish buyer's promise to pay the net de-

50 CFR Ch. VI (10-1-21 Edition)

livery value, rather than the delivery value. Regardless of when the fish buyer pays the net delivery value, the fish buyer shall collect the fee at the time of fish delivery;

(2) In the event of any post-delivery payment for fee fish—including, but not limited to bonuses—whose amount depends on conditions that cannot be known until after fish delivery, that either first determines the delivery value or later increases the previous delivery value, the fish seller shall pay, and the fish buyer shall collect, at the time the amount of such post-delivery payment first becomes known, the fee that would otherwise have been due and payable as if the amount of the post-delivery payment had been known, and as if the post-delivery payment had consequently occurred, at the time of initial fish delivery;

(3)(i) Each fish seller shall be deemed to be, for the purpose of the fee collection, deposit, disbursement, and accounting requirements of this subpart, both the fish seller and the fish buyer, and shall be responsible for all requirements and liable for any penalties under this subpart applicable to fish sellers and/or fish buyers, each time that a fish seller sells fee fish to:

(A) Any party whose place of business is not located in the United States, who does not take delivery or possession of the fee fish in the United States, who is not otherwise subject to this subpart, or to whom or against whom NMFS cannot otherwise apply or enforce this subpart,

(B) Any party who is a general food-service wholesaler or supplier, a restaurant, a retailer, a consumer, some other type of end-user, or some other party not engaged in the business of buying fish from fish sellers for the purpose of reselling the fish, either with or without processing the fish, or

(C) Any other party who the fish seller has good reason to believe is a party not subject to this subpart or to whom or against whom NMFS cannot otherwise apply or enforce this subpart,

(ii) In each such case the fish seller shall, with respect to the fee fish involved in each such case, discharge, in

addition to the fee payment requirements of this subpart, all the fee collection, deposit, disbursement, accounting, record keeping, and reporting requirements that this subpart otherwise imposes on the fish buyer, and the fish seller shall be subject to all the penalties this subpart provides for a fish buyer's failure to discharge such requirements;

(4) Fee payment begins on the date NMFS specifies under the notification procedures of paragraph (d) of this section and continues without interruption at the fee rates NMFS specifies in accordance with this subpart until NMFS determines that the reduction loan is fully repaid. If a reduction loan is, for any reason, not fully repaid at the maturity of the reduction loan's original amortization period, fee payment and collection shall continue until the reduction loan is fully repaid, notwithstanding that the time required to fully repay the reduction loan exceeds the reduction loan's initially permissible maturity.

(d) *Notification.* (1) At least 30 days before the effective date of any fee or of any fee rate change, NMFS will publish a FEDERAL REGISTER notice establishing the date from and after which the fee or fee rate change is effective. NMFS will then also send, by U.S. mail, an appropriate notification to each affected fish seller and fish buyer of whom NMFS has notice;

(2) When NMFS determines that a reduction loan is fully repaid, NMFS will publish a FEDERAL REGISTER notice that the fee is no longer in effect and should no longer be either paid or collected. NMFS will then also send, by U.S. mail, notification to each affected fish seller and fish buyer of whom NMFS has knowledge;

(3) If NMFS fails to notify a fish seller or a fish buyer by U.S. mail, or if the fish seller or fish buyer otherwise does not receive the notice, of the date fee payments start or of the fee rate in effect, each fish seller is, nevertheless, obligated to pay the fee at the fee rate in effect and each fish buyer is, nevertheless, obligated to collect the fee at the fee rate in effect.

(e) *Failure to pay or collect.* (1) If a fish buyer refuses to collect the fee in the amount and manner that this subpart

requires, the fish seller shall then advise the fish buyer of the fish seller's fee payment obligation and of the fish buyer's fee collection obligation. If the fish buyer still refuses to properly collect the fee, the fish seller, within the next 7 calendar days, shall forward the fee to NMFS. The fish seller at the same time shall also advise NMFS in writing of the full particulars, including:

(i) The fish buyer's and fish seller's name, address, and telephone number,

(ii) The name of the fishing vessel from which the fish seller made fish delivery and the date of doing so,

(iii) The quantity and delivery value of each species of fee fish that the fish seller delivered, and

(iv) The fish buyer's reason, if known, for refusing to collect the fee in accordance with this subpart;

(2) If a fish seller refuses to pay the fee in the amount and manner that this subpart requires, the fish buyer shall then advise the fish seller of the fish buyer's collection obligation and of the fish seller's payment obligation. If the fish seller still refuses to pay the fee, the fish buyer shall then either deduct the fee from the delivery value over the fish seller's protest or refuse to buy the fee fish. The fish buyer shall also, within the next 7 calendar days, advise NMFS in writing of the full particulars, including:

(i) The fish buyer's and fish seller's name, address, and telephone number,

(ii) The name of the fishing vessel from which the fish seller made or attempted to make fish delivery and the date of doing so,

(iii) The quantity and delivery value of each species of fee fish the fish seller delivered or attempted to deliver,

(iv) Whether the fish buyer deducted the fee over the fish seller's protest or refused to buy the fee fish, and

(v) The fish seller's reason, if known, for refusing to pay the fee in accordance with this subpart.

(f) *Implementation regulations at variance with this section.* If any special circumstances in a reduction fishery require, in NMFS's judgment, fee payment and/or collection provisions in addition to, or different from, those in this section in order to accommodate the circumstances of, and practices in,

§ 600.1014

50 CFR Ch. VI (10–1–21 Edition)

a reduction fishery while still fulfilling the intent and purpose of this section, NMFS may, notwithstanding this section, include such provisions in the implementation regulations for such reduction fishery.

§ 600.1014 Fee collection deposits, disbursements, records, and reports.

(a) *Deposit accounts.* Each fish buyer that this subpart requires to collect a fee shall maintain a segregated account at a federally insured financial institution for the sole purpose of depositing collected fee revenue and disbursing the fee revenue directly to NMFS in accordance with paragraph (c) of this section.

(b) *Fee collection deposits.* Each fish buyer, no less frequently than at the end of each business week, shall deposit, in the deposit account established under paragraph (a) of this section, all fee revenue, not previously deposited, that the fish buyer collects through a date not more than two calendar days before the date of deposit. Neither the deposit account nor the principal amount of deposits in the account may be pledged, assigned, or used for any purpose other than aggregating collected fee revenue for disbursement to the Fund in accordance with paragraph (c) of this section. The fish buyer is entitled, at any time, to withdraw deposit interest, if any, but never deposit principal, from the deposit account for the fish buyer's own use and purposes.

(c) *Deposit principal disbursement.* On the last business day of each month, or more frequently if the amount in the account exceeds the account limit for insurance purposes, the fish buyer shall disburse to NMFS the full amount of deposit principal then in the deposit account. The fish buyer shall do this by check made payable to the Fund subaccount to which the deposit principal relates. The fish buyer shall mail each such check to the Fund subaccount lockbox that NMFS establishes for the receipt of the disbursements for each program. Each disbursement shall be accompanied by the fish buyer's settlement sheet completed in the manner and form that NMFS specifies. NMFS will specify the Fund subaccount lockbox and the manner and form of

settlement sheet by means of the notification in § 600.1013(d).

(d) *Records maintenance.* Each fish buyer shall maintain, in a secure and orderly manner for a period of at least 3 years from the date of each transaction involved, at least the following information:

(1) For all deliveries of fee fish that the fish buyer buys from each fish seller:

- (i) The date of delivery,
- (ii) The seller's identity,
- (iii) The weight, number, or volume of each species of fee fish delivered,
- (iv) The identity of the fishing vessel that delivered the fee fish,
- (v) The delivery value of each species of fee fish,
- (vi) The net delivery value,
- (vii) The identity of the party to whom the net delivery value is paid, if other than the fish seller,
- (viii) The date the net delivery value was paid, and
- (ix) The total fee amount collected;

(2) For all fee collection deposits to and disbursements from the deposit account:

- (i) The dates and amounts of deposits,
- (ii) The dates and amounts of disbursements to the Fund's lockbox account, and
- (iii) The dates and amounts of disbursements to the fish buyer or other parties of interest earned on deposits.

(e) *Annual report.* In each year, on the date to be specified in each implementation regulation, succeeding the year during which NMFS first implemented a fee, each fish buyer shall submit to NMFS a report, on or in the form NMFS specifies, containing the following information for the preceding year, or whatever longer period may be involved in the first annual report, for all fee fish each fish buyer purchases from fish sellers:

- (1) Total weight, number, or volume bought;
- (2) Total delivery value paid;
- (3) Total fee amounts collected;
- (4) Total fee collection amounts deposited by month;
- (5) Dates and amounts of monthly disbursements to each Fund lockbox account;

Fishery Conservation and Management

§ 600.1016

(6) Total amount of interest earned on deposits; and

(7) Depository account balance at year-end.

(f) *State records.* If landing records that a state requires from fish sellers contain some or all of the data that this section requires and state confidentiality laws or regulations do not prevent NMFS' access to the records maintained for the state, then fish buyers can use such records to meet appropriate portions of this section's record-keeping requirements. If, however, state confidentiality laws or regulations make such records unavailable to NMFS, then fish buyers shall maintain separate records for NMFS that meet the requirements of this section. If any state law or regulation prohibits fish buyers, or fish sellers where appropriate, from keeping, for the purpose of complying with any requirement of this section, separate records that involve some or all of the same data elements as the landing records that the fish buyers also keep, for state purposes and under state law or regulation, then a financed reduction program will not be possible.

(g) *Audits.* NMFS or its agents may audit, in whatever manner NMFS believes reasonably necessary for the duly diligent administration of reduction loans, the financial records of fish buyers and fish sellers in each reduction fishery in order to ensure proper fee payment, collection, deposit, disbursement, accounting, record keeping, and reporting. Fish buyers and fish sellers shall make all records of all program transactions involving post-reduction fish harvests, fish deliveries, and fee payments, collections, deposits, disbursements, accounting, record keeping, and reporting available to NMFS or NMFS' agents at reasonable times and places and promptly provide all requested information reasonably related to these records that such fish sellers and fish buyers may otherwise lawfully provide. Trip tickets (or similar accounting records establishing the pounds of fee fish that each fish buyer buys from each fish seller each time that each fish buyer does so and each price that each fish buyer then pays to each fish seller for the fee fish) are essential audit documentation.

(h) *Confidentiality of records.* NMFS and NMFS' auditing agents shall maintain the confidentiality of all data to which NMFS has access under this section and shall neither release the data nor allow the data's use for any purpose other than the purpose of this subpart; provided, however, that NMFS may aggregate such data so as to preclude their identification with any fish buyer or any fish seller and use them in the aggregate for other purposes).

(i) *Refunds.* When NMFS determines that a reduction loan is fully repaid, NMFS will refund any excess fee receipts, on a last-in/first-out basis, to the fish buyers. Fish buyers shall return the refunds, on a last-in/first-out basis, to the fish sellers who paid the amounts refunded.

(j) *Implementation regulations at variance with this section.* If any special circumstances in a reduction fishery require, in NMFS's judgment, fee collection deposit, disbursement, or records provisions in addition to, or different from, those in this section in order to accommodate the circumstances of, and practices in, a reduction fishery while still fulfilling the intent and purpose of this section, NMFS may, notwithstanding this section, include such provisions in the implementation regulations for such reduction fishery.

§ 600.1015 Late charges.

The late charge to fish buyers for fee payment, collection, deposit, and/or disbursement shall be one and one-half (1.5) percent per month, or the maximum rate permitted by state law, for the total amount of the fee not paid, collected, deposited, and/or disbursed when due to be paid, collected, deposited, and/or disbursed. The full late charge shall apply to the fee for each month or portion of a month that the fee remains unpaid, uncollected, undeposited, and/or undisbursed.

§ 600.1016 Enforcement.

In accordance with applicable law or other authority, NMFS may take appropriate action against each fish seller and/or fish buyer responsible for non-payment, non-collection, non-deposit, and/or non-disbursement of the fee in accordance with this subpart to enforce the collection from such fish

§ 600.1017

50 CFR Ch. VI (10–1–21 Edition)

seller and/or fish buyer of any fee (including penalties and all costs of collection) due and owing the United States on account of the loan that such fish seller and/or fish buyer should have, but did not, pay, collect, deposit, and/or disburse in accordance with this subpart. All such loan recoveries shall be applied to reduce the unpaid balance of the loan.

§ 600.1017 Prohibitions and penalties.

(a) The following activities are prohibited, and it is unlawful for any party to:

(1) Vote in any referendum under this subpart if the party is ineligible to do so;

(2) Vote more than once in any referendum under this subpart;

(3) Sign or otherwise cast a ballot on behalf of a voter in any referendum under this subpart unless the voter has fully authorized the party to do so and doing so otherwise comports with this subpart;

(4) Interfere with or attempt to hinder, delay, buy, or otherwise unduly or unlawfully influence any eligible voter's vote in any referendum under this subpart;

(5) Submit a fraudulent, unauthorized, incomplete, misleading, unenforceable by specific performance, or inaccurate bid in response to an invitation to bid under this subpart or, in any other way, interfere with or attempt to interfere with, hinder, or delay, any invitation to bid, any bid submitted under any invitation to bid, any reduction contract, or any other reduction process in connection with any invitation to bid;

(6) Revoke or attempt to revoke any bid under this subpart;

(7) Fail to comply with the terms and conditions of any invitation to bid, bid, or reduction contract under this subpart, including NMFS' right under such reduction contracts to specific performance;

(8) Fail to fully and properly pay and collect any fee due payable, and collectible under this subpart or otherwise avoid, decrease, interfere with, hinder, or delay any such payment and collection,

(9) Convert, or otherwise use for any purpose other than the purpose this

subpart intends, any paid or collected fee;

(10) Fail to fully and properly deposit on time the full amount of all fee revenue collected under this subpart into a deposit account and disburse the full amount of all deposit principal to the Fund's lockbox account—all as this subpart requires;

(11) Fail to maintain full, timely, and proper fee payment, collection, deposit, and/or disbursement records or make full, timely, and proper reports of such information to NMFS—all as this subpart requires;

(12) Fail to advise NMFS of any fish seller's refusal to pay, or of any fish buyer's refusal to collect, any fee due and payable under this subpart;

(13) Refuse to allow NMFS or agents that NMFS designates to review and audit at reasonable times all books and records reasonably pertinent to fee payment, collection, deposit, disbursement, and accounting under this subpart or otherwise interfere with, hinder, or delay NMFS or its agents in the course of their activities under this subpart;

(14) Make false statements to NMFS, any of the NMFS' employees, or any of NMFS' agents about any of the matters in this subpart;

(15) Obstruct, prevent, or unreasonably delay or attempt to obstruct, prevent, or unreasonably delay any audit or investigation NMFS or its agents conduct, or attempt to conduct, in connection with any of the matters in this subpart; and/or

(16) Otherwise materially interfere with the efficient and effective conduct of reduction and the repayment of reduction loans under this subpart.

(b) Any party who violates one or more of the prohibitions of paragraph (a) of this section is subject to the full range of penalties the Magnuson-Stevens Act and 15 CFR part 904 provide—including, but not limited to: civil penalties, sanctions, forfeitures, and punishment for criminal offenses—and to the full penalties and punishments otherwise provided by any other applicable law of the United States.

(c) Additionally, NMFS may take any and all appropriate actions, including the communication of action at law, against each party responsible for

Fishery Conservation and Management

§ 600.1101

the non-payment, non-collection, non-deposit, and/or non-disbursement in accordance with § 600.1013 and/or § 600.1014 to enforce the United States' receipt from such party of any fee—including penalties and all costs of collection—due and owing the United States on account of the reduction loan that such party should have, but did not, pay, collect, deposit, and/or disburse in accordance with § 600.1013 and/or § 600.1014. All such reduction loan recoveries shall be applied to reduce the unpaid balances of reduction loans.

Subpart M—Specific Fishery or Program Fishing Capacity Reduction Regulations

§ 600.1100 [Reserved]

§ 600.1101 Inshore fee system for repayment of the loan to harvesters of Pollock from the directed fishing allowance allocated to the inshore component under section 206(b)(1) of the AFA.

(a) *Definition.* In addition to the definitions in the Magnuson-Stevens Act and in § 679.2 of this title, the terms used in this subpart have the following meanings:

American Fisheries Act (AFA) means Title II of Pub.L. 105-277.

Borrower means (individually and collectively) all persons who, after January 1, 2000, harvest fee fish from the IC directed fishing allowance.

Business week means a 7-day period, Saturday through Friday.

Delivery value means the gross ex-vessel value of all fee fish at fish delivery.

Deposit principal means all collected fee revenue that a fish buyer deposits in a segregated deposit account maintained in a federally chartered national bank for the sole purpose of aggregating collected fee revenue before sending the fee revenue to NMFS for repaying the loan.

Fee means the six-tenths (0.6) of one cent that fish buyers deduct at fish delivery from the delivery value of each pound of round weight fee fish.

Fee fish means all pollock harvested from the IC directed fishing allowance beginning on February 10, 2000 and ending at such time as the loan's principal and interest are fully repaid.

Fish buyer means the first ex-vessel fish buyer who purchases fee fish from a fish seller.

Fish delivery means the point at which a fish buyer first takes delivery or possession of fee fish from a fish seller.

Fish seller means the harvester who catches and first sells fee fish to a fish buyer.

IC directed fishing allowance means the directed fishing allowance allocated to the inshore component under section 206(b)(1) of the AFA.

Loan means the loan authorized by section 207(a) of the AFA.

Net delivery value means the delivery value minus the fee.

Subaccount means the Inshore Component Pollock Subaccount of the Fishing Capacity Reduction Fund in the U.S. Treasury for the deposit of all funds involving the loan.

(b) *Loan*—(1) *Principal amount.* The loan's principal amount is \$75,000,000 (seventy five million dollars).

(2) *Interest.* Interest shall, from December 30, 1998, when NMFS disbursed the loan, until the date the borrower fully repays the loan, accrue at a fixed rate of 7.09 percent. Interest shall be simple interest and shall accrue on the basis of a 365-day year.

(3) *Repayment.* The fee shall be the exclusive source of loan repayment. The fee shall be paid on all fee fish.

(4) *Application of fee receipts.* NMFS shall apply all fee receipts it receives, first, to payment of the loan's accrued interest and, second, to reduction of the loan's principal balance.

(5) *Obligation.* The borrower shall repay the loan in accordance with the AFA and this subpart.

(c) *Fee payment and collection*—(1) *Payment and collection.* (i) The fee is due and payable at the time of fish delivery. Each fish buyer shall collect the fee at the time of fish delivery by deducting the fee from the delivery value

before paying or promising later to pay the net delivery value. Each fish seller shall pay the fee at the time of fish delivery by receiving from the fish buyer the net delivery value or the fish buyer's promise later to pay the net delivery value rather than the delivery value. Regardless of when the fish buyer pays the net delivery value, the fish buyer shall collect the fee at the time of fish delivery;

(ii)(A) Each fish seller shall be deemed, for the purpose of the fee collection, deposit, disbursement, and accounting requirements of this subpart, to be both the fish seller and the fish buyer—and all requirements and penalties under this subpart applicable to both a fish seller and a fish buyer shall equally apply to the fish seller—each time that the fish seller sells fee fish to:

(1) Any fish buyer whose place of business is not located in the United States, who does not take delivery or possession of the fee fish in the United States, who is not otherwise subject to this subpart, or to whom or against whom NMFS cannot otherwise apply or enforce this subpart,

(2) Any fish buyer who is a general food-service wholesaler or supplier, a restaurant, a retailer, a consumer, some other type of end-user, or some other fish buyer not engaged in the business of buying fish from fish sellers for the purpose of reselling the fish, or

(3) Any other fish buyer who the fish seller has good reason to believe is a fish buyer not subject to this subpart or to whom or against whom NMFS cannot otherwise apply or enforce this subpart,

(B) In each such case the fish seller shall, with respect to the fee fish involved in each such case, discharge, in addition to the fee payment requirements of this subpart, all the fee collection, deposit, disbursement, accounting, recordkeeping, and reporting requirements that this subpart otherwise imposes on the fish buyer, and the fish seller shall be subject to all the penalties this subpart provides for a fish buyer's failure to discharge such requirements;

(2) *Notification.* (i) NMFS will send an appropriate fee payment and collection commencement notification to each af-

ected fish seller and fish buyer of whom NMFS has knowledge.

(ii) When NMFS determines that the loan is fully repaid, NMFS will publish a FEDERAL REGISTER notification that the fee is no longer in effect and should no longer be either paid or collected. NMFS will then also send an appropriate fee termination notification to each affected fish seller and fish buyer of whom NMFS has knowledge;

(3) *Failure to pay or collect.* (i) If a fish buyer refuses to collect the fee in the amount and manner that this subpart requires, the fish seller shall then advise the fish buyer of the fish seller's fee payment obligation and of the fish buyer's fee collection obligation. If the fish buyer still refuses to properly collect the fee, the fish seller, within the next 7 calendar days, shall forward the fee to NMFS. The fish seller at the same time shall also advise NMFS in writing of the full particulars, including:

(A) The fish buyer's and fish seller's name, address, and telephone number,

(B) The name of the fishing vessel from which the fish seller made fish delivery and the date of doing so,

(C) The quantity and delivery value of fee fish that the fish seller delivered, and

(D) The fish buyer's reason (if known) for refusing to collect the fee in accordance with this subpart;

(ii) If a fish seller refuses to pay the fee in the amount and manner that this subpart requires, the fish buyer shall then advise the fish seller of the fish buyer's collection obligation and of the fish seller's payment obligation. If the fish seller still refuses to pay the fee, the fish buyer shall then either deduct the fee from the delivery value over the fish seller's protest or refuse to buy the fee fish. The fish buyer shall also, within the next 7 calendar days, advise NMFS in writing of the full particulars, including:

(A) The fish buyer's and fish seller's name, address, and telephone number,

(B) The name of the fishing vessel from which the fish seller made or attempted to make fish delivery and the date of doing so,

(C) The quantity and delivery value of fee fish the fish seller delivered or attempted to deliver,

Fishery Conservation and Management

§ 600.1101

(D) Whether the fish buyer deducted the fee over the fish seller's protest or refused to buy the fee fish, and

(E) The fish seller's reason (if known) for refusing to pay the fee in accordance with this subpart.

(d) *Fee collection deposits, disbursements, records, and reports*—(1) *Deposit accounts*. Each fish buyer that this subpart requires to collect a fee shall maintain a segregated account at a federally insured financial institution for the sole purpose of depositing collected fee revenue and disbursing the fee revenue directly to NMFS in accordance with paragraph (c) of this section.

(2) *Fee collection deposits*. Each fish buyer, no less frequently than at the end of each business week, shall deposit, in the deposit account established under paragraph (a) of this section, all fee revenue, not previously deposited, that the fish buyer has collected through a date not more than 2 calendar days before the date of deposit. Neither the deposit account nor the principal amount of deposits in the account may be pledged, assigned, or used for any purpose other than aggregating collected fee revenue for disbursement to the subaccount in accordance with paragraph (c) of this section. The fish buyer is entitled, at any time, to withdraw deposit interest, if any, but never deposit principal, from the deposit account for the fish buyer's own use and purposes.

(3) *Deposit principal disbursement*. On the last business day of each month, or more frequently if the amount in the account exceeds the account limit for insurance purposes, the fish buyer shall disburse to NMFS the full amount of deposit principal then in the deposit account. The fish buyer shall do this by check made payable to "NOAA Inshore Component Pollock Loan Subaccount." The fish buyer shall mail each such check to the subaccount lockbox account that NMFS establishes for the receipt of the disbursements of deposit principal. Each disbursement shall be accompanied by the fish buyer's settlement sheet completed in the manner and form that NMFS specifies. NMFS will specify the subaccount's lockbox and the manner and form of settlement sheet by means of the notification in § 600.1101(c).

(4) *Records maintenance*. Each fish buyer shall maintain, in a secure and orderly manner for a period of at least 3 years from the date of each transaction involved, at least the following information:

(i) For all deliveries of fee fish that the fish buyer buys from each fish seller:

- (A) The date of delivery,
- (B) The fish seller's identity,
- (C) The round weight of fee fish delivered,
- (D) The identity of the fishing vessel that delivered the fee fish,
- (E) The delivery value,
- (F) The net delivery value,
- (G) The identity of the party to whom the net delivery value is paid, if other than the fish seller,
- (H) The date the net delivery value was paid, and

(I) The total fee amount collected;

(ii) For all fee collection deposits to and disbursements from the deposit account:

(A) The dates and amounts of deposits,

(B) The dates and amounts of disbursements to the subaccount's lockbox account, and

(C) The dates and amounts of disbursements to the fish buyer or other parties of interest earned on deposits.

(5) *Annual report*. By January 15, 2001, and by each January 15 thereafter until the loan is fully repaid, each fish buyer shall submit to NMFS a report, on or in the form NMFS specifies, containing the following information for the preceding year for all fee fish each fish buyer purchases from fish sellers:

- (i) Total round weight bought;
- (ii) Total delivery value paid;
- (iii) Total fee amount collected;
- (iv) Total fee collection amounts deposited by month;
- (v) Dates and amounts of monthly disbursements to the subaccount lockbox;
- (vi) Total amount of interest earned on deposits; and
- (vii) Depository account balance at year-end.

(6) *State records*. If landing records that a state requires from fish sellers contain some or all of the data that this section requires and state confidentiality laws or regulations do not

prevent NMFS' access to the records maintained for the state, then fish buyers can use such records to meet appropriate portions of this section's record-keeping requirements. If, however, state confidentiality laws or regulations make such records unavailable to NMFS, then fish buyers shall maintain separate records for NMFS that meet the requirements of this section.

(7) *Audits.* NMFS or its agents may audit, in whatever manner NMFS believes reasonably necessary for the duly diligent administration of the loan, the financial records of the fish buyers and the fish sellers in order to ensure proper fee payment, collection, deposit, disbursement, accounting, recordkeeping, and reporting. Fish buyers and fish sellers shall make all records of all transactions involving fee fish catches, fish deliveries, and fee payments, collections, deposits, disbursements, accounting, recordkeeping, and reporting available to NMFS or its agents at reasonable times and places and promptly provide all requested information reasonably related to these records that such fish sellers and fish buyers may otherwise lawfully provide. Trip tickets (or similar accounting records establishing the round weight pounds of fee fish that each fish buyer buys from each fish seller each time that each fish buyer does so) are essential audit documentation.

(8) *Confidentiality of records.* NMFS and its auditing agents shall maintain the confidentiality of all data to which NMFS has access under this section and shall neither release the data nor allow the data's use for any purpose other than the purpose of this subpart, unless otherwise required by law; provided, however, that NMFS may aggregate such data so as to preclude their identification with any fish buyer or any fish seller and use them in the aggregate for other purposes.

(9) *Refunds.* When NMFS determines that the loan is fully repaid, NMFS will refund any excess fee receipts, on a last-in/first-out basis, to the fish buyers. Fish buyers shall return the refunds, on a last-in/first-out basis, to the fish sellers who paid the amounts refunded.

(e) *Late charges.* The late charge to fish buyers for fee payment, collection,

deposit, and/or disbursement shall be one and one-half (1.5) percent per month, or the maximum rate permitted by state law, for the total amount of the fee not paid, collected, deposited, and/or disbursed when due to be paid, collected, deposited, and/or disbursed within 5 days of the date due. The full late charge shall apply to the fee for each month or portion of a month that the fee remains unpaid, uncollected, undeposited, and/or undisbursed.

(f) *Enforcement.* In accordance with applicable law or other authority, NMFS may take appropriate action against each fish seller and/or fish buyer responsible for non-payment, non-collection, non-deposit, and/or non-disbursement of the fee in accordance with this subpart to enforce the collection from such fish seller and/or fish buyer of any fee (including penalties and all costs of collection) due and owing the United States on account of the loan that such fish seller and/or fish buyer should have, but did not, pay, collect, deposit, and/or disburse in accordance with this subpart. All such loan recoveries shall be applied to reduce the unpaid balance of the loan.

(g) *Prohibitions and penalties.* (1) The following activities are prohibited, and it is unlawful for anyone to:

(i) Avoid, decrease, interfere with, hinder, or delay payment or collection of, or otherwise fail to fully and properly pay or collect, any fee due and payable under this subpart or convert, or otherwise use for any purpose other than the purpose this subpart intends, any paid or collected fee;

(ii) Fail to fully and properly deposit on time the full amount of all fee revenue collected under this subpart into a deposit account and disburse the full amount of all deposit principal to the subaccount's lockbox account—all as this subpart requires;

(iii) Fail to maintain full, timely, and proper fee payment, collection, deposit, and/or disbursement records or make full, timely, and proper reports of such information to NMFS—all as this subpart requires;

(iv) Fail to advise NMFS of any fish seller's refusal to pay, or of any fish

Fishery Conservation and Management

§ 600.1102

buyer's refusal to collect, any fee due and payable under this subpart;

(v) Refuse to allow NMFS or agents that NMFS designates to review and audit at reasonable times all books and records reasonably pertinent to fee payment, collection, deposit, disbursement, and accounting under this subpart or otherwise interfere with, hinder, or delay NMFS or its agents in the course of their activities under this subpart;

(vi) Make false statements to NMFS, any of the NMFS' employees, or any of NMFS' agents about any of the matters in this subpart;

(vii) Obstruct, prevent, or unreasonably delay or attempt to obstruct, prevent, or unreasonably delay any audit or investigation NMFS or its agents conduct, or attempt to conduct, in connection with any of the matters in this subpart; and/or

(viii) Otherwise materially interfere with the efficient and effective repayment of the loan.

(2) Anyone who violates one or more of the prohibitions of paragraph (a) of this section is subject to the full range of penalties the Magnuson-Stevens Act and 15 CFR part 904 provide (including, but not limited to: civil penalties, sanctions, forfeitures, and punishment for criminal offenses) and to the full penalties and punishments otherwise provided by any other applicable law of the United States.

§ 600.1102 Pacific Coast groundfish fee.

(a) *Purpose.* This section implements the fee for repaying the reduction loan financing the Pacific Coast Groundfish Program authorized by section 212 of Division B, Title II, of Public Law 108-7 and implemented by a final notification in the FEDERAL REGISTER (July 18, 2003; 68 FR 42613).

(b) *Definitions.* Unless otherwise defined in this section, the terms defined in § 600.1000 of subpart L expressly apply to this section. The following terms have the following meanings for the purpose of this section:

Borrower means, individually and collectively, each post-reduction fishing permit holder and/or fishing vessel owner fishing in the reduction fishery, in any or all of the fee-share fisheries,

or in both the reduction fishery and any or all of the fee-share fisheries.

Deposit principal means all collected fee revenue that a fish buyer deposits in an account maintained at a federally insured financial institution for the purpose of aggregating collected fee revenue before sending the fee revenue to NMFS for repaying the reduction loan.

Fee fish means all fish harvested from the reduction fishery during the period in which any portion of the reduction fishery's subamount is outstanding and all fish harvested from each of the fee-share fisheries during the period in which any portion of each fee-share fishery's subamount is outstanding.

Fee-share fishery means each of the fisheries for coastal Dungeness crab and pink shrimp in each of the States of California and Oregon and the fishery for coastal Dungeness crab and ocean pink shrimp in the State of Washington.

Fee-share fishery subaccount means each of the six subaccounts established in the groundfish program's fund subaccount in which each of the six fee-share fishery subamounts are deposited.

Reduction fishery means all species in, and that portion of, the limited entry trawl fishery under the Federal Pacific Coast Groundfish Fishery Management Plan that is conducted under permits, excluding those registered to whiting catcher-processors, which are endorsed for trawl gear operation.

Reduction fishery subaccount means the subaccount established in the groundfish program's fund subaccount in which the reduction fishery subamount is deposited.

Subamount means each portion of the reduction loan's original principal amount which is allocated either to the reduction fishery or to any one of the fee-share fisheries.

(c) *Reduction loan amount.* The reduction loan's original principal amount is \$35,662,471.

(d) *Subamounts.* The subamounts of the reduction loan amount are:

- (1) Reduction fishery, \$28,428,719; and
- (2) Fee-share fisheries:

- (i) California coastal Dungeness crab fee-share fishery, \$2,334,334,

(ii) California pink shrimp fee-share fishery, \$674,202,

(iii) Oregon coastal Dungeness crab fee-share fishery, \$1,367,545,

(iv) Oregon pink shrimp fee-share fishery, \$2,228,845,

(v) Washington coastal Dungeness crab fee-share fishery, \$369,426, and

(vi) Washington ocean pink shrimp fee-share fishery, \$259,400.

(e) *Interest accrual inception.* Interest began accruing on each portion of the reduction loan amount on and from the date each such portion was disbursed.

(f) *Interest rate.* The reduction loan's interest rate is 6.97 percent. This is a fixed rate of interest for the full term of the reduction loan's life.

(g) *Repayment term.* For the purpose of determining fee rates, the reduction loan's repayment term shall be 30 years from March 1, 2004, but each fee shall continue for as long as necessary to fully repay each subamount.

(h) *Reduction loan.* The reduction loan shall be subject to the provisions of § 600.1012 of subpart L, except that:

(1) The borrower's obligation to repay the reduction loan shall be discharged by fish sellers in the reduction fishery and in each of the fee-share fisheries paying the fee applicable to each such fishery's subamount in accordance with § 600.1013 of subpart L, and

(2) Fish buyers in the reduction fishery and in each of the fee-share fisheries shall be obligated to collect the fee applicable to each such fishery's subamount in accordance with § 600.1013 of this subpart.

(i) *Fee collection, deposits, disbursements, records, and reports.* Fish buyers in the reduction fishery and in each of the fee share fisheries shall deposit and disburse, as well as keep records for and submit reports about, the fees applicable to each such fishery in accordance with § 600.1014 of this subpart, except that:

(1) *Deposit accounts.* Each fish buyer that this section requires to collect a fee shall maintain an account at a federally insured financial institution for the purpose of depositing collected fee revenue and disbursing the deposit principal directly to NMFS in accordance with paragraph (i)(3) of this section. The fish buyer may use this ac-

count for other operational purposes as well, but the fish buyer shall ensure that the account separately accounts for all deposit principal collected from the reduction fishery and from each of the six fee-share fisheries. The fish buyer shall separately account for all fee collections as follows:

(i) All fee collections from the reduction fishery shall be accounted for in a reduction fishery subaccount,

(ii) All fee collections from the California pink shrimp fee-share fishery shall be accounted for in a California shrimp fee-share fishery subaccount,

(iii) All fee collections from the California coastal Dungeness crab fishery shall be accounted for in a California crab fee-share fishery subaccount,

(iv) All fee collections from the Oregon pink shrimp fee-share fishery shall be accounted for in an Oregon shrimp fee-share fishery subaccount,

(v) All fee collections from the Oregon coastal Dungeness crab fee-share fishery shall be accounted for in an Oregon crab fee-share fishery subaccount,

(vi) All fee collections from the Washington ocean pink shrimp fee-share fishery shall be accounted for in a Washington ocean shrimp fee-share fishery subaccount, and

(vii) All fee collections from the Washington coastal Dungeness crab fishery shall be accounted for in a Washington crab fee-share fishery subaccount;

(2) *Fee collection deposits.* Each fish buyer, no less frequently than at the end of each month, shall deposit, in the deposit account established under paragraph (i)(1) of this section, all collected fee revenue not previously deposited that the fish buyer collects through a date not more than two calendar days before the date of deposit. The deposit principal may not be pledged, assigned, or used for any purpose other than aggregating collected fee revenue for disbursement to the fund in accordance with paragraph (i)(3) of this section. The fish buyer is entitled, at any time, to withdraw interest (if any) on the deposit principal, but never the deposit fee principal itself, for the fish buyer's own use and purposes;

(3) *Deposit principal disbursement.* Not later than the 14th calendar day after the last calendar day of each month, or

Fishery Conservation and Management

§ 600.1103

more frequently if the amount in the account exceeds the account limit for insurance purposes, the fish buyer shall disburse to NMFS the full deposit principal then in the deposit account, provided that the deposit principal then totals \$100 or more. If the deposit principal then totals less than \$100, the fish buyer need not disburse the deposit principal until either the next month during which the deposit principal then totals \$100 or more, or not later than the 14th calendar day after the last calendar day of any year in which the deposit principal has not since the last required disbursement totaled \$100 or more, whichever comes first. The fish buyer shall disburse deposit principal by check made payable to the groundfish program's fund subaccount. The fish buyer shall mail each such check to the groundfish program's fund subaccount lockbox that NMFS establishes for the receipt of groundfish program disbursements. Each disbursement shall be accompanied by the fish buyer's fee collection report completed in the manner and form which NMFS specifies. NMFS will, before fee payment and collection begins, specify the groundfish program's fund subaccount lockbox and the manner and form of fee collection report. NMFS will do this by means of the notification in § 600.1013(d) of subpart L. NMFS' fee collection report instructions will include provisions for the fish buyer to specify the amount of each disbursement which was disbursed from the reduction fishery subaccount and/or from each of the six fee-share fishery subaccounts;

(4) *Records maintenance.* Each fish buyer shall maintain, in a secure and orderly manner for a period of at least 3 years from the date of each transaction involved, at least the following information:

(i) For all deliveries of fee fish that the fish buyer buys from each fish seller:

- (A) The date of delivery,
- (B) The fish seller's identity,
- (C) The weight, number, or volume of each species of fee fish delivered,
- (D) Information sufficient to specifically identify the fishing vessel which delivered the fee fish,

(E) The delivery value of each species of fee fish,

(F) The net delivery value of each species of fee fish,

(G) The identity of the payor to whom the net delivery value is paid, if different than the fish seller,

(H) The date the net delivery value was paid,

(I) The total fee amount collected as a result of all fee fish, and

(J) The total fee amount collected as a result of all fee fish from the reduction fishery and/or all fee fish from each of the six fee-share fisheries; and

(ii) For all collected fee deposits to, and disbursements of deposit principal from, the deposit account include:

(A) The date of each deposit,

(B) The total amount deposited,

(C) The total amount deposited in the reduction fishery subaccount and/or in each of the six fee-share fishery subaccounts,

(D) The date of each disbursement to the Fund's lockbox,

(E) The total amount disbursed,

(F) The total amount disbursed from the reduction fishery subaccount and/or from each of the six fee-share fishery subaccounts, and

(G) The dates and amounts of disbursements to the fish buyer, or other parties, of interest earned on deposits; and

(5) *Annual report.* No fish buyer needs to submit an annual report about fee fish collection activities unless, during the course of an audit under § 600.1014(g), NMFS requires a fish buyer to submit such a report or reports.

(j) *Other provisions.* The reduction loan is, in all other respects, subject to the provisions of § 600.1012 through applicable portions of § 600.1017, except § 600.1014(e).

[70 FR 40229, July 13, 2005, as amended at 71 FR 28, Jan. 3, 2006]

§ 600.1103 Bering Sea and Aleutian Islands (BSAI) Crab species program.

(a) *Purpose.* This section's purpose is to implement the program that Section 144(d) of Division B of Pub. L. 106-554, as amended by section 2201 of Pub. L. 107-20 and section 205 of Pub. L. 107-117, enacted for BSAI crab species.

(b) *Terms.* Unless otherwise defined in this section, the terms defined in § 600.1000 expressly apply to the program for BSAI crab. Likewise, the terms defined in § 679.2 of this chapter also apply to terms not otherwise defined in either § 600.1000 or this section. The following terms used in this section have the following meanings for the purpose of this section:

Acceptance means NMFS' acceptance, on behalf of the United States, of a bid.

Bid means a bidder's irrevocable offer, in response to an invitation to bid under this section, to surrender, to have revoked, to have restricted, to relinquish, to have withdrawn, or to have extinguished by other means, in the manner this section requires, the bidder's reduction fishing interest.

Bid amount means the dollar amount of each bid.

Bidder means either a qualifying bidder bidding alone or a qualifying bidder and a co-bidder bidding together who at the time of bidding holds the reduction fishing interests specified at § 600.1018(e).

Bid crab means the crab that NMFS determines each bidder's reduction/history vessel (see definition) harvested, according to the State of Alaska's records of the documented harvest of crab, from each reduction endorsement fishery and from the Norton Sound fishery during the most recent 5 calendar years in which each reduction endorsement fishery was for any length of time open for directed crab fishing during a 10-calendar-year period beginning on January 1, 1990, and ending on December 31, 1999.

Bid score means the criterion by which NMFS decides in what order to accept bids in the reverse auction this section specifies.

Co-bidder means a person who is not a qualifying bidder, but who at the time of bidding owns the reduction/privilege vessel this section requires to be included in a bid and is bidding together with a qualifying bidder.

Crab means the crab species covered by the Fishery Management Plan for the Bering Sea/Aleutian Islands King and Tanner Crabs pursuant to § 679.2 of this chapter.

Crab license means a License Limitation Program license for crab issued pursuant to § 679.4(k)(5) of this chapter.

Crab reduction permit means a non-interim crab license endorsed for one or more reduction endorsement fisheries, regardless of whether it is also endorsed for the Norton Sound fishery.

FSD means NMFS' Financial Services Division, located in NMFS' Silver Spring, MD, headquarters office.

Non-crab reduction permit means a fishing license, including all of its predecessor history, for which a bidder is the holder of record on December 12, 2003 and which was issued based on the fishing history of the bidder's reduction/history vessel.

Norton Sound fishery means the non-reduction fishery defined in § 679.2 of this chapter as the area/species endorsement for Norton Sound red king and Norton Sound blue king crab.

NVDC means the U.S. Coast Guard's National Vessel Documentation Center located in Falling Waters, WV.

Qualifying bidder means a person who at the time of bidding is the license holder of record of a crab reduction permit.

Qualifying voter means a person who at the time of voting in a referendum is the license holder of record either of an interim or a non-interim crab license, except a crab license whose sole area/species endorsement is for the Norton Sound fishery.

RAM Program means NMFS' Restricted Access Management Program located in NMFS' Juneau, AK, regional office.

Reduction endorsement fishery means any of the seven fisheries that § 679.2 of this chapter defines as area/species endorsements except the area/species endorsement for the Norton Sound fishery.

Reduction fishery means the fishery for all crab covered by the Bering Sea/Aleutian Islands King and Tanner Crabs Fishery Management Plan under all area/species endorsements that section 679.2 of the chapter defines, except the area/species endorsement for the Norton Sound fishery.

Reduction fishing history means, for each bid, the complete documented harvest of the bidder's reduction/history vessel, upon any part of which

Fishery Conservation and Management

§ 600.1103

such harvest NMFS based issuance of the crab license included in the bid as a crab reduction permit, plus such fishing history, after the issuance of such crab license, of any other vessel upon which the bidder used such crab license.

Reduction fishing interest means, for each bid, the bidder's:

(1) Reduction fishing privilege (see definition);

(2) Crab reduction permit;

(3) Non-crab reduction permit;

(4) Reduction fishing history (see definition); and

(5) Any other claim that could in any way qualify the owner, holder, or retainer of any of the reduction components, or any person claiming under such owner, holder, or retainer, for any present or future limited access system fishing license or permit in any United States fishery (including, but not limited to, any harvesting privilege or quota allocation under any present or future individual fishing quota system).

Reduction fishing privilege means the worldwide fishing privileges of a bid's reduction/privilege vessel (see definition).

Reduction/history vessel means the vessel or vessels which generated the reduction fishing history.

Reduction loan sub-amount means the portion of the original principal amount of reduction loan this section specifies each reduction endorsement fishery must repay with interest.

Reduction/privilege vessel means the vessel designated on a crab license on December 12, 2003.

Referendum means a referendum under this section to determine whether voters approve the fee required to repay this program's reduction loan.

Replacement vessel means a reduction/history vessel which replaced the lost or destroyed one whose reduction fishing history qualified during the general qualification period and the endorsement qualification period and, which under the exceptions in Amendment 10, qualified during the recent participation period.

(c) *Relationship to this subpart*—(1) *Provisions that apply.* The provisions of § 600.1000 through § 600.1017 of this subpart apply to this program except as

paragraph (c)(2) of this section provides; and

(2) *Provisions that do not apply.* The following sections, or portions of them, of this subpart do not apply to this program:

(i) All of:

(A) Section 600.1001,

(B) Section 600.1002,

(C) Section 600.1003,

(D) Section 600.1004,

(E) Section 600.1005,

(F) Section 600.1006, and

(G) Section 600.1007,

(ii) The portions of § 600.1008:

(A) Pertaining to an implementation plan,

(B) Pertaining to a 60-day comment period for a proposed implementation regulation,

(C) Pertaining to public hearings in each State that the this program affects,

(D) Pertaining to basing the implementation regulation on a business plan,

(E) Within paragraphs (d)(1)(ii) through (viii),

(F) Within paragraph (d)(2)(ii),

(G) Within paragraph (e), and

(H) Within paragraph (f) and pertaining to fishing capacity reduction specifications and a subsidized program,

(iii) The portions of § 600.1009:

(A) Pertaining to fishing capacity reduction specifications,

(B) Within paragraph (a)(4),

(C) Pertaining to a reduction amendment,

(D) Within paragraph (a)(5)(ii), to the extent that the paragraph is inconsistent with the requirements of this section,

(E) Within paragraph (b)(i), and

(F) Pertaining to an implementation plan,

(iv) The portions of § 600.1010:

(A) Within paragraph (b),

(B) Pertaining to fishing capacity reduction specifications,

(C) Within paragraph (d)(1), and

(D) Within paragraphs (d)(4)(iv) through (vii),

(v) The portions of § 600.1011:

(A) That comprise the last sentence of paragraph (a),

(B) Within paragraph (d), and

(C) Within paragraph (e)(2),

(vi) The portions of § 600.1012:
(A) Within paragraph (b)(3) following the word “subpart”, and

(B) Within paragraph (b)(3), and

(vii) The last sentence of § 600.1014(f).

(d) *Reduction cost financing.* NMFS will use the proceeds of a reduction loan, authorized for this purpose, to finance 100 percent of the reduction cost. The original principal amount of the reduction loan will be the total of all reduction payments that NMFS makes under reduction contracts. This amount shall not exceed \$100 million.

(e) *Who constitutes a bidder.* A bidder is a person or persons who is the:

(1) Holder of record and person otherwise fully and legally entitled to offer, in the manner this section requires, the bid’s crab reduction permit and the bid’s non-crab reduction permit;

(2) Reduction/privilege vessel owner, title holder of record, and person otherwise fully and legally entitled to offer, in the manner this section requires, the bid’s reduction fishing privilege; and

(3) Retainer and person otherwise fully and legally entitled to offer, in the manner this section requires, the bid’s reduction fishing history.

(f) *How crab licenses determine qualifying bidders and qualifying voters—*(1) *Non-interim crab licenses.* Each person who is the record holder of a non-interim crab license endorsed for one or more reduction endorsement fisheries is both a qualifying bidder and a qualifying voter and can both bid and vote;

(2) *Interim crab licenses.* Each person who is the record holder of an interim crab license endorsed for one or more reduction endorsement fisheries is a qualifying voter but not a qualifying bidder and can vote but not bid;

(3) *Crab licenses endorsed solely for the Norton Sound Fishery.* Each person who is the record holder of any crab license endorsed solely for the Norton Sound fishery is neither a qualifying bidder nor a qualifying voter and can neither bid nor vote; and

(4) *Time at which qualifying bidders and voters must hold required crab licenses.* A qualifying bidder must be the record holder of the required crab license at the time the qualifying bidder submits its bid. A qualifying voter must be the record holder of the re-

quired crab license at the time the qualifying voter submits its referendum ballot.

(g) *Qualifying bidders and co-bidders—*

(1) *Qualifying bidders bidding alone.* There is no co-bidder when a qualifying bidder owns, holds, or retains all the required components of the reduction fishing interest;

(2) *Qualifying bidders bidding together with co-bidders.* When a qualifying bidder does not own the reduction/privilege vessel, the person who does may be the qualifying bidder’s co-bidder; and

(3) *Minimum reduction components that qualifying bidders must hold or retain when bidding with co-bidders.* At a minimum, a qualifying bidder must hold the crab reduction permit and the non-crab reduction permit and retain the reduction fishing history. The reduction/privilege vessel may, however, be owned by another person who is a co-bidder.

(h) *Reduction fishing interest—*(1) *General requirements.* Each bidder must:

(i) In its bid, offer to surrender, to have revoked, to have restricted, to relinquish, to have withdrawn, or to have extinguished by other means, in the manner that this section requires, the reduction fishing interest,

(ii) At the time of bidding, hold, own, or retain the reduction fishing interest and be fully and legally entitled to offer, in the manner that this section requires, the reduction fishing interest, and

(iii) Continuously thereafter hold, own, or retain the reduction fishing interest and remain fully and legally entitled to offer, in the manner that this section requires, the reduction fishing interest until:

(A) The bid expires without NMFS first having accepted the bid,

(B) NMFS notifies the bidder that NMFS rejects the bid,

(C) NMFS notifies the bidder that a reduction contract between the bidder and the United States no longer exists, or

(D) NMFS tenders reduction payment to the bidder;

(2) *Reduction/privilege vessel requirements.* The reduction/privilege vessel in each bid must be:

(i) The vessel designated, at the time this final rule is published in the FEDERAL REGISTER, on a crab license which becomes a bid's crab reduction permit, and

(ii) Be neither lost nor destroyed at the time of bidding;

(3) *Reduction fishing privilege requirements.* The reduction fishing privilege in each bid must be the reduction/privilege vessel's:

(i) Fisheries trade endorsement under the Merchant Marine Act, 1936 (46 U.S.C.A. 12108),

(ii) Qualification for any present or future U.S. Government approval under section (9)(c)(2) of the Shipping Act, 1916 (46 U.S.C. App. 808(c)(2)) for placement under foreign registry or operation under the authority of a foreign country, and

(iii) Any other privilege to ever fish anywhere in the world;

(4) *Crab reduction permit requirements.*

(i) Except as otherwise provided in paragraph (i) of this section, the crab reduction permit must in each bid:

(A) Be the crab license that NMFS issued on the basis of the bidder's reduction fishing history,

(B) Be non-interim at the time each bidder submits its bid, and

(C) Include an area/species endorsement for any one or more reduction endorsement fisheries,

(ii) Although the Norton Sound fishery is not a reduction endorsement fishery, an area/species endorsement for the Norton Sound fishery occurring on a crab reduction permit must be surrendered and revoked (and all fishing history involving it relinquished) in the same manner as all other reduction endorsement fisheries occurring on the crab reduction permit;

(5) *Non-crab reduction permit requirements.* The non-crab reduction permit must in each bid be every license, permit, or other harvesting privilege that:

(i) NMFS issued on the basis of the fishing history of the bidder's reduction/history vessel, and

(ii) For which the bidder was the license holder of record on the effective date of this section; and

(6) *Reduction fishing history requirements.* Except as otherwise provided in paragraph (i) of this section, the reduction fishing history in each bid must

that of a single reduction/history vessel.

(i) *Exceptions to the reduction fishing interest requirements*—(1) *Lost or destroyed vessel salvaged.* When a bidder has salvaged a lost or destroyed vessel and has made from the salvaged vessel the documented harvest of crab § 679.4(k)(5)(iii)(B)(3) of this chapter requires, the crab portion of the reduction fishing history is the salvaged vessel's documented harvest of crab; and

(2) *Lost or destroyed vessel not salvaged.* When a bidder has not salvaged the lost or destroyed vessel but has made from a replacement vessel the documented harvest of crab § 679.4(k)(5)(iii)(B)(3) of this chapter requires:

(i) The crab portion of the reduction fishing history is the total of the lost or destroyed vessel's documented harvest of crab through the date of such vessel's loss or destruction plus the replacement vessel's documented harvest of crab after such date, and

(ii) For the purposes of this program, the lost or destroyed vessel's documented harvest of crab merges with, and becomes a part of, the replacement vessel's documented harvest of crab; and

(3) *Acquired crab fishing history.* When a bidder, in the manner § 679.4(k)(5)(iv) of this chapter requires, has made a documented harvest of crab from one vessel and has acquired a replacement vessel's documented harvest of crab:

(i) The crab portion of the reduction fishing history is the total of the acquired documented harvest of crab through December 31, 1994, plus the documented harvest of crab after December 31, 1994, of the vessel from which the bidder made the documented crab harvest § 679.4(k)(5)(iv) of this chapter requires, and

(ii) [Reserved]

(iii) For the purposes of this program, the acquired documented harvest of crab merges with, and becomes a part of, the non-acquired documented harvest of crab.

(j) *Determining value of reduction/history vessels' bid crab*—(1) *In each fishery.* NMFS will determine the dollar value of each reduction/history vessel's bid crab in each reduction endorsement

fishery and in the Norton Sound Fishery by multiplying each reduction/history vessel's number of pounds of each species of bid crab by the average ex-vessel price per pound that the State of Alaska annually publishes for each crab species in the bid crab; and

(2) *In all fisheries.* NMFS will determine the dollar value of each reduction/history vessel's bid crab in all reduction endorsement fisheries and in the Norton Sound fishery by adding each of the products of the multiplications in paragraph (j)(1) of this section; and

(3) *Crab excluded from bid crab.* A reduction/history vessel's bid crab may not include, to the extent that NMFS has knowledge:

- (i) Triangle tanner crab, grooved tanner crab, and any other crab not involved in the various area/species endorsements,
- (ii) Discarded crab,
- (iii) Crab caught for personal use,
- (iv) Unspecified crab, and
- (v) Any other crab for which the dollar value, crab fishery, landing date, or harvesting vessel NMFS cannot, for whatever reason, determine.

(k) *Determining bid score.* NMFS will determine each bid score by dividing each bid amount by the sum in paragraph (j)(2) of this section.

(l) *Determining reduction loan sub-amount—(1) Value of all bid crab in each fishery.* NMFS will add the dollar value of bid crab of all accepted bidders' reduction/history vessels in each reduction endorsement fishery;

(2) *Value of all bid crab in all fisheries.* NMFS will add the dollar value of bid crab of all accepted bidders' reduction/history vessels in all reduction endorsement fisheries plus the Norton Sound fishery;

(3) *Each fishery as a percentage of all fisheries.* NMFS will divide each of the sums in paragraph (l)(1) of this section by the sum in paragraph (l)(2) of this section. The result of this calculation will be the dollar value of all bid crab in each reduction endorsement fishery as a percentage of the dollar value of all bid crab in all reduction endorsement fisheries plus the Norton Sound fishery;

(4) *Applying percentages to loan amount.* NMFS will multiply the reduc-

tion loan's full original principal amount by each of the yields in paragraph (1)(3) of this section; and

(5) *Loan sub-amount.* Each of the amounts resulting from the calculation in paragraph (1)(4) of this section will be the reduction loan subamount that a reduction endorsement fishery must repay.

(m) *Prospectively qualifying bidder and voter notification—(1) General.* At the appropriate point before issuing an invitation to bid, NMFS will publish a notification in the FEDERAL REGISTER listing all persons who at the time of publishing the notification prospectively are qualifying bidders and qualifying voters;

(2) *Qualifying bidder list.* The prospectively qualifying bidder list will include the names and addresses of record of each license holder of record for all non-interim crab licenses except only crab licenses whose sole area/species endorsement is for the Norton Sound fishery;

(3) *Qualifying voter list.* The prospectively qualifying voter list will include the names and addresses of record of each license holder of record for all non-interim and interim crab licenses except only crab licenses whose sole area/species endorsement is for the Norton Sound fishery;

(4) *Basis of lists.* NMFS will base both the lists on the RAM Program's license holder records for crab licenses meeting the requirements of § 679.4(k)(5) of this chapter as well as the requirements of this section;

(5) *Purpose.* The purpose of the notification is to provide the public notice of:

- (i) The prospectively qualifying bidders, and
- (ii) The prospectively qualifying voters; and

(6) *Public comment.* Any person who wants to comment about the notification has 30 days from the notification's publication date to do so. Persons should send their comments to both FSD and the RAM Program (at addresses that the notification will specify). Comments may address:

- (i) Persons who appear on one or more lists but should not,
- (ii) Persons who do not appear on one or more lists but should, and

(iii) Persons who believe their names and/or business mailing addresses appearing on one or more lists are incorrect.

(n) *Invitation to bid*—(1) *Notification*. At the appropriate point after issuing the notification in paragraph (m) of this section, NMFS will publish the invitation to bid in the FEDERAL REGISTER notification further specified in § 600.1009(c) of this subpart, along with a bidding form and terms of capacity reduction agreement. No person may, however, bid at this stage;

(2) *Notification contents*. The invitation to bid notification will state all applicable bid submission requirements and procedures (including, but not limited to, those included in this section). In particular, the invitation to bid notification will:

(i) State the date on which NMFS will invite bids by mailing an invitation to bid to each person on the prospectively qualifying bidder list,

(ii) State a bid opening date, before which a bidder may not bid, and a bid closing date, after which a bidder may not bid,

(iii) State a bid expiration date after which each bid expires unless, prior to that date, NMFS accepts the bid by mailing a written acceptance notice to the bidder at the bidder's address of record,

(iv) State the manner of bid submission and the information each bidder must submit for NMFS to deem a bid responsive,

(v) State any other information required for bid submission, and

(vi) Include a facsimile of the invitation to bid, along with a bidding form and terms of capacity reduction agreement comprising the entire terms and conditions of the reduction contract under which each bidder must bid and under which NMFS must accept a bid; and

(3) *Mailing*. On the date specified in this notification, NMFS will invite bids by mailing the invitation to bid and a bidding package, including a bidding form terms of capacity reduction agreement, to each person then on the prospectively qualifying bidder list. NMFS will not mail the invitation to bid to any potential co-bidder because NMFS will not then know which bids

may include a co-bidder. Each qualifying bidder is solely responsible to have any required co-bidder properly complete the bid. No person may bid before receiving the invitation to bid and the bidding package that NMFS mailed to that person.

(o) *Bids*—(1) *Content*. Each invitation to bid that NMFS mails to a qualifying bidder will have a bid form requiring each bid to:

(i) Identify, by name, regular mail address, telephone number, and (if available) electronic mail address, the qualifying bidder and each co-bidder,

(ii) State the bid amount in U.S. dollars,

(iii) Identify, by crab license number, the qualifying bidder's crab reduction permit and include an exact copy of this crab license (which the RAM Program issued),

(iv) Identify, by vessel name and official number, the bidder's reduction/privilege vessel, and include an exact copy of this vessel's official document (which NVDC issued),

(v) Identify, by license or permit number, each of the bidder's non-crab reduction permits; and include an exact copy of each of these licenses or permits (which the RAM Program issued for licenses or permits involving species under the jurisdiction of NMFS' Alaska Region and which other NMFS offices issued for licenses or permits involving species under those offices' jurisdiction),

(vi) Identify, separately for crab and for each other species:

(A) The qualifying bidder's reduction fishing history, and

(B) The dates that each portion of the reduction fishing history encompasses; the name and official number of the reduction/history vessel or vessels which gave rise to it; and the dates during which the qualifying bidder owned such vessels or, if the qualifying bidder acquired any reduction fishing history from another person, the name of the person from which the qualifying bidder acquired such reduction fishing history and the manner in which and the date on which the qualifying bidder did so,

(vii) State, declare, and affirm that the qualifying bidder holds the crab reduction permit and retains the complete reduction fishing history, and is fully and legally entitled to offer both in the manner this section requires,

(viii) State, declare, and affirm that either the qualifying bidder or the co-bidder owns the reduction/privilege vessel and holds the non-crab reduction permit and is fully and legally entitled to offer both in the manner that this section requires, and

(ix) Provide any other information or materials that NMFS believes is necessary and appropriate; and

(2) *Rejection.* NMFS, regardless of bid scores, will reject any bid that NMFS believes is unresponsive to the invitation to bid. All bid rejections will constitute final agency action as of the date of rejection. Before rejection, NMFS may, however, contact any bidder to attempt to correct a bid deficiency if NMFS, in its discretion, believes the attempt warranted.

(p) *Acceptance*—(1) *Reverse auction.* NMFS will determine which responsive bids NMFS accepts by using a reverse auction in which NMFS first accepts the responsive bid with the lowest bid score and successively accepts each additional responsive bid with the next lowest bid score until either there are no more responsive bids to accept or acceptance of the last responsive bid with the next lowest bid score would cause the reduction cost to exceed \$100 million. If two or more responsive bid scores are exactly the same, NMFS will first accept the bid that NMFS first received;

(2) *Notification.* NMFS will, after the conclusion of a successful referendum, notify accepted bidders that NMFS had, before the referendum, accepted their bids; and

(3) *Post-acceptance reduction permit transfer.* After NMFS has accepted bids, neither the RAM Program (nor any other NMFS office) will transfer to other persons any reduction permits that accepted bidders included in the bids unless and until FSD advises the RAM Program (or some other NMFS office) that the resulting reduction contracts are no longer in effect because a referendum failed to approve

the fee that this section requires to repay this program's reduction loan.

(q) *Reduction contracts subject to successful post-bidding referendum condition.* Although this program involves no fishing capacity reduction specifications under this subpart, each bid, each acceptance, and each reduction contract is nevertheless subject to the successful post-bidding referendum condition that § 600.1009(a)(3) of this subpart specifies for bidding results that do not conform to the fishing capacity reduction specifications.

(r) *Post-bidding referendum*—(1) *Purpose.* NMFS will conduct a post-bidding referendum whose sole purpose is to determine whether, based on the bidding results, qualifying voters who cast referendum ballots in the manner that this section requires authorize the fee required to repay this program's reduction loan;

(2) *Manner of conducting.* NMFS will mail a referendum ballot to each person then on the prospectively qualifying voter list for each crab license that the person holds and otherwise conduct the referendum as specified in § 600.1010 of this subpart;

(3) *One vote per crab license.* Each qualifying voter may cast only one vote for each crab license that each qualifying voter holds;

(4) *Crab license numbers on ballots.* Each referendum ballot that NMFS mails will contain the license number of the prospectively qualifying voter's crab license to which the ballot relates;

(5) *Potential reduction results stated.* Each referendum ballot that NMFS mails will state the aggregate potential reduction results of all the bids that NMFS accepted, including:

(i) The amount of reduction that all accepted bids potentially effect, including:

(A) The number of crab reduction permits, together with each area/species endorsement for which each of these licenses is endorsed,

(B) The number of reduction/privilege vessels and reduction/history vessels, and

(C) The aggregate and average dollar value of bid crab (together with the number of pounds of bid crab upon which NMFS based the dollar value), in each reduction endorsement fishery

Fishery Conservation and Management

§ 600.1103

and in the reduction fishery, for all reduction/history vessels during the period for which NMFS calculates the dollar value of bid crab,

(ii) The reduction loan sub-amount that each reduction endorsement fishery must repay if a referendum approves the fee, and

(iii) Any other useful information NMFS may then have about the potential sub-fee rate initially necessary in each reduction endorsement fishery to repay each reduction loan sub-amount; and

(6) *Notice that condition fulfilled.* If the referendum is successful, NMFS will notify accepted bidders, in the manner that § 600.1010(d)(6)(iii) of this subpart specifies, that a successful referendum has fulfilled the reduction contracts' successful post-bidding referendum condition specified in paragraph (q) of this section.

(s) *Reduction method.* In return for each reduction payment, NMFS will permanently:

(1) Revoke each crab reduction permit;

(2) Revoke each non-crab reduction permit;

(3) Revoke each reduction fishing privilege (which revocation will run with the reduction/privilege vessel's title in the manner § 600.1009(a)(5)(ii)(A) of this subpart requires and in accordance with 46 U.S.C. 12108(d));

(4) Effect relinquishment of each reduction fishing history for the purposes specified in this section by noting in the RAM Program records (or such other records as may be appropriate for reduction permits issued elsewhere) that the reduction fishing history has been relinquished under this section and will never again be available to anyone for any fisheries purpose; and

(5) Otherwise restrict in accordance with this subpart each reduction/privilege vessel and fully effect the surrender, revocation, restriction, relinquishment, withdrawal, or extinguishment by other means of all components of each reduction fishing interest.

(t) *Reduction payment tender and disbursement—(1) Fishing continues until tender.* Each accepted bidder may continue fishing as it otherwise would have absent the program until NMFS, after a successful referendum, tenders

reduction payment to the accepted bidder;

(2) *Notification to the public.* After a successful referendum but before tendering reduction payment, NMFS will publish a notification in the FEDERAL REGISTER listing all proposed reduction payments and putting the public on notice;

(i) Of the crab reduction permits, the reduction/privilege vessels, the reduction fishing histories, and the non-crab reduction permits upon whose holding, owning, retaining, or other legal authority representations accepted bidders based their bids and NMFS based its acceptances, and

(ii) That NMFS intends, in accordance with the reduction contracts, to tender reduction payments in return for the actions specified in paragraph (s) of this section;

(3) *Public response.* The public has 30 days after the date on which NMFS publishes the reduction payment tender notification to advise NMFS in writing of any holding, owning, or retaining claims that conflict with the representations upon which the accepted bidders based their bids and on which NMFS based its acceptances;

(4) *Tender and disbursement parties.* NMFS will tender reduction payments only to accepted bidders, unless otherwise provided contrary written instructions by accepted bidders. Creditors or other parties with secured or other interests in reduction/privilege vessels or reduction permits are responsible to make their own arrangements with accepted bidders;

(5) *Time of tender.* At the end of the reduction payment tender notification period, NMFS will tender reduction payments to accepted bidders, unless NMFS then knows of a material dispute about an accepted bidder's authority to enter into the reduction contract with respect to any one or more components of the reduction fishing interest that warrants, in NMFS' discretion, an alternative course of action;

(6) *Method of tender and disbursement.* NMFS will tender reduction payment by requesting from each accepted bidder specific, written instructions for paying the reduction payments. Upon receipt of these payment instructions,

NMFS will immediately disburse reduction payments in accordance with the payment instructions; and

(7) *Effect of tender.* Concurrently with NMFS' tender of reduction payment to each accepted bidder:

(i) All fishing activity for any species anywhere in the world in any way associated with each accepted bidder's reduction fishing interest must cease,

(ii) Each accepted bidder must retrieve all fixed fishing gear for whose deployment the accepted bidder's reduction/privilege vessel was responsible, and

(iii) NMFS will fully exercise its reduction contract rights with respect to the reduction fishing interest by taking the actions specified in paragraph (s) of this section.

(u) *Fee payment and collection*—(1) *Fish sellers who pay the fee.* Any person who harvests any crab, but whom ADF&G's fisheries reporting requirements do not require to record and submit an ADF&G fish ticket for that crab, is a fish seller for the purpose of paying any fee on that crab and otherwise complying with the requirements of § 600.1013 of this subpart;

(2) *Fish buyers who collect the fee.* Any person whom ADF&G's fisheries reporting requirements require to record and submit an ADF&G fish ticket for any crab that another person harvested is a fish buyer for the purpose of collecting the fee on that crab and otherwise complying with the requirements of § 600.1013 of this subpart; and

(3) *Persons who are both fish sellers and fish buyers and both pay and collect the fee.* Any person who harvests any crab, and whom ADF&G's fisheries reporting requirements require to record and submit an ADF&G fish ticket for that crab, is both a fish seller and a fish buyer for the purpose of paying and collecting the fee on that crab and otherwise complying with the requirements of § 600.1013 of this subpart.

(v) *Fishing prohibition and penalties*—

(1) *General.* Fishing, for the purpose of this section, includes the full range of activities defined in the term "fishing" in the Magnuson-Stevens Fishery Conservation and Management Act (16 U.S.C. 1801),

(2) *Prohibitions.* Concurrently with NMFS' tender of each reduction pay-

ment, and with the sole exception in paragraph (t)(7)(i) of this section, no person whatsoever may, and it is unlawful for any person to:

(i) Fish with or attempt to fish with, or allow others to fish with or attempt to fish with, the reduction/privilege vessel anywhere in the world for any species under any conditions and regardless of the reduction/privilege vessel's ownership or registry for so long as the reduction/privilege vessel exists. This prohibition includes, but is not limited to, fishing on the high seas or in the jurisdiction of any foreign country (to the extent prohibited by law) while operating under U.S. flag,

(ii) Place or attempt to place, or allow others to place or attempt to place, the reduction/privilege vessel under foreign flag or registry,

(iii) Operate or attempt to operate, or allow others to operate or attempt to operate, the reduction/privilege vessel under the authority of a foreign country to the extent prohibited by law,

(iv) Otherwise avoid or attempt to avoid, or allow others to avoid or attempt to avoid, the revocation of the reduction fishing privilege with respect to any reduction/privilege vessel, and

(v) Make any claim or attempt to make any claim, or allow others to claim or attempt to make any claim, for any present or future limited access fishing license or permit in any U.S. fishery (including, but not limited to, any quota allocation under any present or future individual quota allocation system) based in any way on any portion of a reduction fishing interest surrendered, revoked, restricted, relinquished, withdrawn, or extinguished by other means under this section; and

(3) *Penalties.* The activities that this paragraph prohibits are subject to the full penalties provided in § 600.1017 of this subpart, and immediate cause for NMFS to take action to, among other things:

(i) At the reduction/privilege vessel owner's expense, seize and scrap the reduction/privilege vessel, and

(ii) Pursue such other remedies and enforce such other penalties as may be applicable.

(w) *Program administration*—(1) *FSD responsibilities.* FSD is responsible for

Fishery Conservation and Management

§ 600.1104

implementing and administering this program. FSD will:

- (i) Issue all notifications and mailings that this section requires,
- (ii) Prepare and issue the invitation to bid,
- (iii) Receive bids,
- (iv) Reject bids,
- (v) Score bids,
- (vi) Make acceptances,
- (vii) Prepare and issue referendum ballots,
- (viii) Receive referendum ballots,
- (ix) Tally referendum ballots,
- (x) Determine referendum success or failure,
- (xi) Tender and disburse reduction payments,
- (xii) Administer reduction contracts,
- (xiii) Administer fees and reduction loan repayment, and
- (xiv) Discharge all other management and administration functions that this section requires;

(2) *RAM Program responsibilities.* Upon FSD's advice, the RAM Program (for fishing licenses under the jurisdiction of NMFS's Alaska Region) and any other appropriate NMFS authority (for fishing licenses under the jurisdiction of any other NMFS office) will revoke reduction permits and effect the surrender of fishing histories in accordance with this section; and

(3) *NVDC and MARAD responsibilities.* FSD will advise NVDC, MARAD, such other agency or agencies as may be involved, or all of them to revoke reduction/privilege vessels' fisheries trade endorsements and otherwise restrict reduction/privilege vessels in accordance with this section.

(x) *Reduction loan and reduction loan sub-amounts.* [Reserved]

[68 FR 69337, Dec. 12, 2003. Redesignated at 69 FR 53362, Sept. 1, 2004]

§ 600.1104 Bering Sea and Aleutian Islands (BSAI) crab species fee payment and collection system.

(a) *Purpose.* As authorized by Public Law 106-554, this section's purpose is to:

(1) In accordance with § 600.1012 of subpart L, establish:

- (i) The borrower's obligation to repay a reduction loan, and
- (ii) The loan's principal amount, interest rate, and repayment term; and

(2) In accordance with § 600.1013 through § 600.1016 of subpart L, implement an industry fee system for the reduction fishery.

(b) *Definitions.* Unless otherwise defined in this section, the terms defined in § 600.1000 of subpart L and § 600.1103 of this subpart expressly apply to this section. The following terms have the following meanings for the purpose of this section:

Crab rationalization crab means the same as in § 680.2 of this chapter.

Crab rationalization fisheries means the same as in § 680.2 of this chapter.

Reduction endorsement fishery means any of the seven fisheries that § 679.2 of this chapter formerly (before adoption of part 680 of this chapter) defined as crab area/species endorsements, except the area/species endorsement for Norton Sound red king. More specifically, the reduction endorsement fisheries, and the crab rationalization fisheries which (after adoption of part 680 of this chapter) correspond to the reduction endorsement fisheries, are:

(1) Bristol Bay red king (the corresponding crab rationalization fishery is Bristol Bay red king crab),

(2) Bering Sea and Aleutian Islands Area *C. opilio* and *C. bairdi* (the corresponding crab rationalization fisheries are two separate fisheries, one for Bering Sea snow crab and another for Bering Sea Tanner crab),

(3) Aleutian Islands brown king (the corresponding crab rationalization fisheries are the two separate fisheries, one for Eastern Aleutian Islands golden king crab and another for Western Aleutian Islands golden king crab),

(4) Aleutian Islands red king (the corresponding crab rationalization fishery is Western Aleutian Islands red king crab),

(5) Pribilof red king and Pribilof blue king (the corresponding crab rationalization fishery is Pribilof red king and blue king crab), and

(6) St. Matthew blue king (the corresponding crab rationalization fishery is also St. Matthew blue king crab).

Reduction fishery means the fishery for all crab rationalization crab, excluding CDQ allocations, in all crab rationalization fisheries.

§ 600.1105

50 CFR Ch. VI (10–1–21 Edition)

Sub-amount means the portion of the reduction loan amount for whose repayment the borrower in each reduction endorsement fishery is obligated.

(c) *Reduction loan amount.* The reduction loan's original principal amount is \$97,399,357.11.

(d) *Sub-amounts.* The sub-amounts are:

(1) For Bristol Bay red king, \$17,129,957.23;

(2) For Bering Sea and Aleutian Islands Area *C. opilio* and *C. bairdi*, \$66,410,767.20;

(3) For Aleutian Islands brown king, \$6,380,837.19;

(4) For Aleutian Islands red king, \$237,588.04;

(5) For Pribilof red king and Pribilof blue king, \$1,571,216.35; and

(6) For St. Matthew blue king, \$5,668,991.10.

(e) *Interest accrual from inception.* Interest began accruing on each portion of the reduction loan amount on and from the date on which NMFS disbursed each such portion.

(f) *Interest rate.* The reduction loan's interest rate shall be the applicable rate which the U.S. Treasury determines at the end of fiscal year 2005 plus 2 percent.

(g) *Repayment term.* For the purpose of determining fee rates, the reduction loan's repayment term is 30 years from January 19, 2005, but each fee shall continue indefinitely for as long as necessary to fully repay each subamount.

(h) *Reduction loan repayment.* (1) The borrower shall, in accordance with § 600.1012, repay the reduction loan;

(2) Fish sellers in each reduction endorsement fishery shall, in accordance with § 600.1013, pay the fee at the rate applicable to each such fishery's subamount;

(3) Fish buyers in each reduction endorsement fishery shall, in accordance with § 600.1013, collect the fee at the rate applicable to each such fishery;

(4) Fish buyers in each reduction endorsement fishery shall in accordance with § 600.1014, deposit and disburse, as well as keep records for and submit reports about, the fees applicable to each such fishery; except the requirements specified under paragraph (c) of this section concerning the deposit principal disbursement shall be made to

NMFS not later than the 7th calendar day of each month; and the requirements specified under paragraph (e) of this section concerning annual reports which shall be submitted to NMFS by July 1 of each calendar year; and,

(5) The reduction loan is, in all other respects, subject to the provisions of § 600.1012 through § 600.1017.

[70 FR 54656, Sept. 16, 2005, as amended at 71 FR 27210, May 10, 2006]

§ 600.1105 Longline catcher processor subsector of the Bering Sea and Aleutian Islands (BSAI) non-pollock groundfish fishery program.

(a) *Purpose.* This section implements the capacity reduction program that Title II, Section 219(e) of Public Law 108-447 enacted for the longline catcher processor subsector of the Bering Sea and Aleutian Islands (BSAI) non-pollock groundfish fishery.

(b) *Definitions.* Unless otherwise defined in this section, the terms defined in § 600.1000 of subpart L of this part expressly apply to this section. The following terms have the following meanings for the purpose of this section:

Act means Title II, Section 219 of Public Law 108-447.

AI means the Aleutian Islands.

Application Form means the form published on the FLCC's website that sets forth whether the qualifying LLP License is a Latent License and identifies the individual(s) authorized to execute and deliver Offers and Offer Ranking Ballots on behalf of the Subsector Member.

Auditor means Jack V. Tagart, Ph.D., d.b.a. Tagart Consulting.

Authorized Party means the individuals authorized by Subsector Members on the application form to execute and submit Offers, Rankings, protests and other documents and/or notices on behalf of Subsector Member.

Ballot means the form found on the auditor's website used to cast a vote in favor of, or in opposition to, the currently Selected Offers.

BS means the Bering Sea.

BSAI means the Bering Sea and the Aleutian Islands.

BSAI Pacific Cod ITAC means the Total Allowable Catch for Pacific cod after the subtraction of the 7.5 percent

Community Development Program reserve.

Capacity Reduction Agreement or Reduction Agreement means an agreement entered into by the Subsector Members and the FLCC under which the FLCC is permitted to develop and submit a Capacity Reduction Plan to the Secretary.

Certificate of Documentation (COD) means a document issued by the U.S. Coast Guard's National Documentation Center that registers the vessel with the United States Government.

Closing Vote means a vote held pursuant to paragraph (d)(7) of this section, after two-thirds ($\frac{2}{3}$) or more of the Nonoffering Subsector Members submit Ranking Forms electing to accept the Selected Offerors and close the Selection Process, and there are no unresolved Protests or Arbitrations.

Current Offer means an Offer submitted by a Subsector Member to the Auditor during any Submission Period and, with regard to such Offer, Offeror has not become a Rejected Offeror. The term "Current Offer" includes Selected Offers.

Current Offeror means an Offering Subsector Member that has submitted an Offer to the Auditor during any Submission Period and, with regard to such Offer, Offeror has not become a Rejected Offeror. The term "Current Offeror" includes Selected Offerors.

Database means the online LLP License database maintained by NMFS as downloaded by the Auditor pursuant to paragraph (c)(1) of this section.

Effective Date means the date the Capacity Reduction Agreement becomes effective pursuant to section 4.e of the Capacity Reduction Agreement.

Fishing Capacity Reduction Contract or Reduction Contract means the contract that any Current Offeror must sign and agree to abide by if NMFS accepts the offer by signing the Reduction Contract.

FLCC Counsel means Bauer Moynihan & Johnson LLP or other counsel representing the FLCC in any review or arbitration under the Capacity Reduction Agreement.

Latent License means an LLP License on which a vessel was not designated at the time an Offer is submitted.

LLP License means a Federal License Limitation Program groundfish license issued pursuant to §679.4(k) of this chapter or successor regulation that is noninterim and transferable, or that is interim and subsequently becomes noninterim and transferable, and that is endorsed for BS or AI catcher processor fishing activity, C/P, Pacific cod and hook and line gear.

Longline Subsector means the longline catcher processor subsector of the BSAI non-pollock groundfish fishery as defined in the Act.

Longline Subsector ITAC means the longline catcher processor subsector remainder of the Total Allowable Catch after the subtraction of the 7.5 percent Community Development Program reserve.

Nonoffering Subsector Member shall have the meaning ascribed thereto in paragraph (d)(5)(i) of this section.

Offer Content means all information included in Offers submitted to the Auditor pursuant to paragraph (d)(2)(ii) of this section.

Offer Form means the form found on the Auditor's website used to make an offer.

Offer(s) means a binding offer(s) from a Subsector Member to sell its LLP, right to participate in the fisheries, the fishing history associated with such LLP, and any vessel set forth on the Offer Form submitted by Offeror pursuant to the terms of this Capacity Reduction Agreement.

Opening Date means the first Monday following the Effective Date set forth in paragraph (c)(3) of this section.

Person includes any natural person(s) and any corporation, partnership, limited partnership, limited liability company, association or any other entity whatsoever, organized under the laws of the United States or of a state.

Prequalification Offer shall have the meaning ascribed thereto in paragraph (d)(2)(iii) of this section.

Ranking Form means the form posted by the Auditor pursuant to paragraph (d)(5)(iii) of this section.

Ranking Period shall have the meaning ascribed thereto in paragraph (d)(5)(ii) of this section.

Reduction Fishery means the BSAI non-pollock groundfish fishery.

Reduction Fishing Interests shall have the meaning ascribed thereto in the Fishing Capacity Reduction Contract.

Reduction Plan means a business plan prepared by the Subsector Members in accordance with Section 1 of the Capacity Reduction Agreement and forwarded to the Secretary for approval.

Reduction Privilege Vessel means the vessel listed on the Offeror's License Limitation Program license.

Rejected Offer means an Offer that has been through one or more Rankings and is not a Selected Offer following the latest Ranking Period, with respect to which the Offering Subsector Member's obligations have terminated pursuant to paragraphs (d)(2)(i) and (d)(6)(v) of this section.

Rejected Offeror means a Subsector Member that has submitted an Offer which has been ranked and was not posted as a Selected Offer pursuant to paragraph (d)(6)(ii) of this section.

Restricted Access Management (RAM) means the Restricted Access Management Program in the Alaska Region, NMFS, located in Juneau, Alaska.

Secretary means the Secretary of Commerce or a designee.

Selected Offer shall have the meaning ascribed thereto in paragraph (d)(6)(iv) of this section.

Selected Offeror means a Subsector Member that has submitted an Offer which has been ranked and is posted as a Selected Offer pursuant to paragraph (d)(6)(ii) of this section.

Selection Process means the process set forth in paragraph (d) of this section for selecting the fishing capacity to be removed by the Reduction Plan.

Submission Period(s) or Submitting Period(s) shall have the meaning ascribed thereto in paragraph (d)(3)(ii) of this section.

Subsector Member(s) means a member(s) of the Longline Subsector.

Web site means the internet Web site developed and maintained on behalf of the FLCC for implementation of the Selection Process described herein with a URL address of <http://www.freezerlonglinecoop.org>.

(c) *Qualification and enrollment of subsector members*—(1) *Distribution*. A copy of the Reduction Agreement, Application Form, and Reduction Contract shall be mailed to each holder of record

of an LLP License endorsed for BS or AI catcher processor activity, C/P, Pacific cod and hook and line gear, as the Auditor determines from the Database downloaded by the Auditor as of January 30, 2006, regardless of whether the LLP License is indicated in the Database as noninterim and transferable or otherwise.

(2) *Application*. Any person, regardless of whether having received the mailing described in paragraph (c)(1) of this section, may as a Subsector Member apply to enroll with the FLCC to participate in the Reduction Program, by submitting all of the following documents:

(i) Fully executed Reduction Agreement;

(ii) Photocopy of the LLP License(s) evidencing Subsector Member's qualification as a member of the Longline Subsector;

(iii) Unless applying as the holder of a Latent License, a photocopy of Federal Fisheries Permit for the vessel(s) designated on the LLP License(s) on the date the Reduction Agreement is signed by the Subsector Member;

(iv) Unless applying as the holder of a Latent License, a photocopy of the Certificate of Documentation (COD) for the vessel(s) designated on the LLP License(s) on the date the Reduction Agreement is signed by the Subsector Member; and

(v) An executed Application Form which sets forth whether the qualifying LLP License is a Latent License and identifies the individual(s) authorized to execute and deliver Offers and Offer Ranking Ballots on behalf of the Subsector Member.

(3) *Examination by Auditor*—(i) *In general*. Each application must be submitted to the Auditor who will examine applications for completeness and inconsistencies, whether on the face of the documents or with the Database. Any application which is incomplete or which contains inconsistencies shall be invalid. The Auditor shall notify by e-mail or mail an applicant of the basis for the Auditor's finding an application invalid. An applicant may resubmit a revised application. If the application meets all requirements, the Auditor may accept the application as valid and enroll the applicant.

(ii) *Interim LLP Licenses.* If an LLP License is interim and/or nontransferable, the applicant's enrollment shall be accepted as a Subsector Member and may fully participate in the Selection Process. However, any posting of an Offer submitted with respect to such LLP License shall note the status of such LLP License until that Subsector Member submits to the Auditor a letter from the RAM confirming that it is within the Subsector Member's control to cause the qualifying LLP License to be issued as noninterim and transferable upon withdrawal of all applicable appeals.

(4) *Enrollment period.* Applications that meet all requirements will be accepted until the Selection Process is completed.

(5) *Effective date.* The Effective Date of any Reduction Agreement shall be ten (10) calendar days after written notice is sent by the Auditor to each holder of record of an LLP License endorsed for BS or AI catcher processor activity, C/P, Pacific cod and hook and line gear (as determined by the Auditor from the Auditor's examination of the Database) advising that the number of Subsector Members that have delivered to the Auditor a complete Application, including a fully executed Reduction Agreement, exceeds seventy percent (70 percent) of the members of the Longline Subsector (as determined by the Auditor from the Auditor's examination of the Database).

(6) *Notice.* All notices related to the effective date of the Reduction Agreement shall be sent by the Auditor via registered mail.

(7) *Withdrawal.* A Subsector Member, unless such Subsector Member is a Current Offeror or Selected Offeror, may terminate the Reduction Agreement at any time with respect to that Subsector Member by giving ten (10) calendar days written notice to the Auditor preferably via e-mail. Withdrawal of a Subsector Member shall not affect the validity of the Reduction Agreement with respect to any other Subsector Members. Once effective, the Reduction Agreement shall continue in full force and effect regardless of whether subsequent withdrawals reduce the number of Subsector Members below that level required to effectuate

the Reduction Agreement. Attempted withdrawal by a Current Offeror or Selected Offeror shall be invalid, and such Offer shall remain a binding, irrevocable Offer, unaffected by the attempted withdrawal.

(d) *Selection of fishing capacity to be removed by Reduction Plan.* The fishing capacity removed by the Reduction Plan will be the Reduction Fishing Interests voluntarily offered through the Reduction Plan by offering Subsector Members and as selected by the Non-offering Subsector Members, up to an aggregate amount of thirty six million dollars (\$36,000,000) as set forth in this paragraph (d).

(1) *Overview.* The Selection Process will begin upon the Effective Date of the Reduction Agreement. The Selection Process will alternate on a weekly basis between:

(i) Submitting Periods, during which individual Subsector Members may submit Offers of fishing capacity they wish to include in the Reduction Plan; and

(ii) Ranking Periods, during which Nonoffering Subsector Members will rank the submitted Offers.

(2) *Offers—(i) Binding agreement.* An Offer from a Subsector Member shall be a binding, irrevocable offer from a Subsector Member to relinquish to NMFS the Reduction Fishing Interests for the price set forth on the Offer contingent on such Offer being a Selected Offer at the closing of the Selection Process. Once submitted, an Offer may not be revoked or withdrawn while that Offer is a Current Offer or Selected Offer. An Offer that is submitted by a Subsector Member, but is not a Selected Offer during the subsequent Ranking Period, shall be deemed to be terminated and the Subsector Member shall have no further obligation with respect to performance of that Offer.

(ii) *Offer content.* All Offers submitted to the Auditor shall include the following information: LLP License number; LLP License number(s) of any linked crab LLP Licenses; license MLOA (MLOA—maximum length overall of a vessel is defined at §679.2 of this chapter); the license area, gear and species endorsements; a summary of the Pacific cod catch history for the calendar years 1995–2004; and the offered

price. The Offer shall also state whether a vessel is currently designated on the LLP License and as such will be withdrawn from all fisheries if the Offer is selected for reduction in the Reduction Plan. If so, the Offer shall identify such vessel by name, official number, and current owner. In addition, the Offer shall provide a summary of the Pacific cod catch history for the calendar years 1995–2004 of the vessel to be retired from the fisheries. All summary catch histories included in Offers shall be calculated utilizing both the weekly production report and best blend methodology and shall separately state for each methodology the Pacific cod catch in metric tons and as a percentage of the overall catch for the longline catcher processor subsector on an annual basis for each of the required years. If the vessel stated to be withdrawn from the fisheries is not owned by the LLP License owner of record, the Offer shall be countersigned by the owner of record of the vessel. An Offer offering a Latent License shall state on the Offer Form that the offered LLP License is a Latent License. The Offer Form shall also include a comment section for any additional information that Offerors wish to provide to the Subsector Members concerning the Offer.

(iii) *Prequalification of offers.* A Subsector Member may submit a Prequalification Offer to the Auditor at any time prior to the Opening Date. A Prequalification Offer shall contain all elements of an Offer, except that a price need not be provided. The Auditor shall notify the Subsector Member submitting a Prequalification Offer as to any deficiencies as soon as practicable. All details of a Prequalification Offer shall be kept confidential by the Auditor.

(3) *Submitting an offer—(i) Offer submission.* Commencing on the first Tuesday following the Opening Date and during all Submission Periods until the Selection Process is closed, any Subsector Member may submit an Offer. All Offers are to be on the applicable form provided on the FLCC website, executed by an Authorized Party and submitted to the Auditor by facsimile. Any Subsector Member may submit an Offer during any Submission Period,

even if that Subsector Member has not submitted an Offer in any previous Submission Period. If a Subsector Member holds more than one LLP License, such Subsector Member may, but is not required to, submit an Offer for each LLP License held during a Submission Period.

(ii) *Submission periods.* The initial Submission Period shall commence at 9 a.m. (Pacific time) on the Tuesday following the Opening Date and end at 5 p.m. (Pacific time) on the Friday of that week. Subsequent Submission Periods shall commence at 9 a.m. (Pacific time) on the first Tuesday following the preceding Ranking Period and end at 5 p.m. (Pacific time) on the Friday of that week. All times set forth in the Reduction Agreement and used in the Offer process shall be the time kept in the Pacific time zone as calculated by the National Institute of Standards and Technology.

(iii) *Validity of offer.* The Auditor shall examine each Offer for consistency with the Database and information contained in the enrollment documents. If there is an inconsistency in the information contained in the Offer, any of the elements required of an Offer pursuant to paragraph (d)(2)(ii) of this section are missing, or the Auditor does not receive the original Offer Form before the Offers are to be posted pursuant to paragraph (d)(4) of this section, the Auditor shall notify the offering Subsector Member by e-mail or mail that the Offer is nonconforming as soon as practicable after discovering the basis of invalidity. The Subsector Member may submit a revised, conforming Offer prior to the close of that Submission Period or, in any subsequent Submission Period. Only one Offer may be submitted with respect to an LLP License during a Submission Period. In the event a Subsector Member submits more than one Offer with respect to an LLP License during a Submission Period, the first conforming Offer received by the Auditor shall be binding and irrevocable and any subsequent Offers shall be deemed invalid.

(iv) *Warranty.* By submitting an Offer, the Offering Subsector Member,

warrants and represents that the Offering Subsector Member has read and understands the terms of the Reduction Agreement, the Offer, and the Reduction Contract and has had the opportunity to seek independent legal counsel regarding such documents and/or agreements and the consequences of submitting an Offer.

(4) *Posting offers*—(i) *Current offers*. For each Offer received during a Submission Period, the Auditor shall post on the Website no later than 5 p.m. (Pacific time) on the following Tuesday all of the details of such Offer as set forth on the Offer Form. In addition, the Auditor shall post, as available to Auditor, a summary by year of up to ten (10) years catch history during the period 1995–2004 in total round weight equivalents and percentage of Longline Subsector ITAC harvested for any vessel that is included in the Offer. Subsector Member (or vessel owner, if other than the Subsector Member) expressly authorizes Auditor to release the catch history summary information previously prepared for that Subsector Member or vessel owner by the Auditor as part of the analysis of FLCC's membership's catch history previously conducted by the Auditor on behalf of the FLCC.

(ii) *Posting order*. Offers shall be posted on the Website by the Auditor in alphabetical order of the Offering Subsector Member's name.

(iii) *Questions as to offer*. The Auditor shall respond to no questions from Subsector Member regarding Offers except to confirm that the posting accurately reflects the details of the Offer. If an Offering Subsector Member notices an error in an Offer posting on the Website, such Subsector Member shall notify the Auditor as soon as practicable. The Auditor shall review such notice, the posting and the original Offer. If an error was made in posting the Auditor shall correct the posting as soon as practicable and notify the Subsector Members via e-mail or mail of the correction. In the event such an error is not discovered prior to Ranking, an Offering Subsector Member shall be bound to the terms of the submitted Offer, not the terms of the posted Offer.

(iv) *Archive*. The Auditor shall maintain on the Website an archive of prior Offers posted, which shall be available for review by all Subsector Members.

(5) *Ranking*—(i) *Eligibility*. Each Subsector Member that has not submitted an Offer during the preceding Submission Period, or whose vessel is not included as a withdrawing vessel in an Offer during the preceding Submission Period (i.e., a Nonoffering Subsector Member), may submit to the Auditor a Ranking Form during a Ranking Period. With respect to Ranking, a Subsector Member that holds more than one LLP License may participate in the Ranking process for each LLP License not included in an Offer.

(ii) *Ranking period*. The initial Ranking Period shall commence immediately after the Offers from the preceding Submission Period have been posted and end at 5 p.m. (Pacific time) on the Friday of that week. Subsequent Ranking Periods shall commence immediately after the Offers from the preceding Submission Period have been posted and end at 5 p.m. (Pacific time) on the Friday of that week.

(iii) *Ranking form*. Prior to each Ranking Period, the Auditor will post a Ranking Form on the Website in “pdf” file format. Each eligible Subsector Member wishing to rank the current Offers shall rank the Offers on the Ranking Form numerically in the Subsector Member's preferred order of purchase. The Offer that Subsector Member would most like to have accepted should be ranked number one (1), and subsequent Offers ranked sequentially until the Offer that the Subsector Member would least like to see accepted is ranked with the highest numerical score. A Subsector Member wishing to call for a Closing Vote shall, in lieu of ranking the Current Offers, mark the Ranking Form to accept the Selected Offers selected during the prior Ranking Period and close the Selection Process. To be valid, the Ranking Form must rank each Current Offer listed on the Ranking Form or, if applicable, be marked to call for a Closing Vote. Ranking Forms shall be submitted by sending a completed Ranking Form, signed by an Authorized Party, to the Auditor by facsimile or mail prior to the end of the Ranking

Period. A Subsector Member is not required to rank the Offers during a Ranking Period or call for a Closing Vote.

(iv) *Validity of subsector member ranking.* The Auditor shall examine each Ranking Form for completeness, whether the form either ranks the Offers or calls for a Closing Vote (but not both), and authorized signature. Any incomplete or otherwise noncompliant Ranking Form(s) shall be invalid, and shall not be included in the Rankings of the Current Offers. The Auditor shall notify the Subsector Member of the reason for declaring any Ranking Form invalid as soon as practicable. A Subsector Member may cure the submission of an invalid Ranking Form by submitting a complying Ranking Form if accomplished before the end of the applicable Ranking Period.

(6) *Ranking results*—(i) *Compiling the rankings.* Unless two-thirds ($\frac{2}{3}$) of the Nonoffering Subsector Members have called for a Closing Vote, the Auditor shall compile the results of the Ranking Forms by assigning one point for each position on a Ranking Form. That is, the Offer ranked number one (1) on a Ranking Form shall be awarded one (1) point, the Offer ranked two (2) shall receive two (2) points, and continuing on in this manner until all Offers have been assigned points correlating to its ranking on each valid Ranking Form. The Offer with the least number of total points assigned shall be the highest ranked Offer, and the Offer with the greatest total points assigned shall be the lowest ranked Offer.

(ii) *Posting rankings.* The Auditor shall post the results of the compilation of the Ranking Forms on the Website in alphabetical order based on the Offering Subsector Member's name no later than 5 p.m. (Pacific time) on the Monday following the Ranking Period. The Auditor shall post the highest consecutive ranking Offers that total thirty six million dollars (\$36,000,000) or less. Those Offering Subsector Members whose Offers are posted shall be deemed Selected Offerors and their Offers shall be deemed Selected Offers. Those Offering Subsector Members whose Offers are not posted shall be deemed Rejected Offerors.

(iii) *Selected offer information or confidentiality.* The Auditor shall post the name of the Offering Subsector Member, the amount of the Offer, and a summary of the total number of Ranking Forms received and the number of such forms on which the Members called for a Closing Vote. Other than the foregoing, the Auditor shall not post any details of the compilation of the Ranking Forms.

(iv) *Selected offerors.* Selected Offerors may not withdraw their Offers unless in subsequent rankings their Offers no longer are within the highest ranking Offers and they become Rejected Offerors. A Selected Offeror may, however, modify a Selected Offer solely to the extent such modification consists of a reduction in the Offer price. A Selected Offeror may submit a modified Offer to the Auditor during the next Offering Period as set forth in paragraph (d)(3) of this section. Unless a Selected Offeror becomes a Rejected Offeror in a subsequent Ranking, a Selected Offeror shall be bound by the terms of the lowest Selected Offer submitted as if such modified Offer had been the original Selected Offer. In the event a Selected Offeror submits a modified Offer and such Offer is not ranked because sufficient votes are received to call for a Closing Vote, the previously Selected Offer shall remain the Selected Offer.

(v) *Rejected offerors.* The Offer of a Rejected Offeror is terminated and the Rejected Offeror is no longer bound by the terms of its Offer. A Rejected Offeror may, at its sole discretion, resubmit the same Offer, submit a revised Offer, or elect not to submit an Offer during any subsequent Submission Period until the Selection Process is closed.

(vi) *Ties.* In the event there is a tie with respect to Offers which results in the tied Offers exceeding thirty-six million dollars (\$36,000,000), the tied Offers and all Offers ranked lower than the tied Offers shall be deemed to be rejected and the Rejected Offerors may, at their option, submit an Offer in a subsequent Submission Period.

(vii) *Archive.* Auditor shall maintain on the Website an archive of prior Offer Rankings as posted over the course of the Selection Process, which shall be available for Subsector Member review.

(7) *Closing.* The Selection Process will close when two-thirds ($\frac{2}{3}$) or more of the Nonoffering Subsector Members of the Longline Subsector, as determined by the Auditor, affirmatively vote to accept the Selected Offerors selected during the prior Ranking Period as part of the Reduction Plan to be submitted to the Secretary.

(i) *Call for vote.* A Closing Vote will be held when: at least two-thirds ($\frac{2}{3}$) of the Nonoffering Subsector Members submit Ranking Forms electing to accept the Selected Offerors and close the Selection Process in lieu of Ranking the current Offers; and there are no unresolved Protests or Arbitrations. The Auditor shall notify all Subsector Members by e-mail or mail and posting a notice on the Website as soon as practicable that a Closing Vote is to be held. Such notice shall state the starting and ending dates and times of the voting period, which shall be not less than three (3) nor more than seven (7) calendar days from the date of such notice. A voting period shall commence at 9 a.m. (Pacific time) on Monday and end at 5 p.m. on the Friday of that week.

(ii) *Voting.* No less than three (3) calendar days prior to the voting period, the Auditor will post a Closing Ballot on the Website in "pdf" file format. Each eligible Nonoffering Subsector Member wishing to vote shall print out the Closing Ballot, and, with respect to each of the currently Selected Offers on the Closing Ballot, vote either in favor of or opposed to accepting that Selected Offer and submit a completed and signed Closing Ballot to the Auditor preferably by facsimile prior to the end of the Voting Period.

(iii) *Ballot verification.* The Auditor shall examine each submitted Closing Ballot for completeness and authorized signature. Any incomplete Closing Ballot shall be void, and shall not be included in the voting results. The Auditor shall not notify the Subsector Member of an invalid Closing Ballot.

(iv) *Voting results.* The Auditor shall post the results of the Vote as soon as practicable after voting closes. Each Offer on the Closing Ballot that receives votes approving acceptance of such Offer from two-thirds ($\frac{2}{3}$) or more of the total number of Nonoffering

Subsector Members shall be a Selected Offeror and shall be the basis for the Reduction Plan submitted to NMFS. Any Offer on the Closing Ballot that does not receive such two-thirds ($\frac{2}{3}$) approval shall be rejected and shall not be included among the Offers included among the Reduction Plan submitted to NMFS.

(v) *Notification to NMFS.* Upon closing of the Selection Process, FLCC shall notify NMFS in writing of the identities of the Selected Offerors and provide to NMFS a completed and fully executed original Reduction Agreement from each of the Selected Offerors and a certified copy of the fully executed Reduction Agreement and Reduction Contract.

(e) *Submission of reduction plan, including repayment.* Upon completion of the offering process, the FLCC on behalf of the Subsector Members shall submit to NMFS the Reduction Plan which shall include the provisions set forth in this paragraph (e).

(1) *Capacity reduction.* The Reduction Plan shall identify as the proposed capacity reduction, without auction process, the LLP Licenses as well as the vessels and the catch histories related to the LLP Licenses, linked crab LLP Licenses, and any other fishing rights or other interests associated with the LLP Licenses and vessels included in the Selected Offers. The aggregate of all Reduction Agreements and Reduction Contracts signed by Subsector Members whose offers to participate in this buyback were accepted by votes of the Subsector Members, will together with the FLCC's supporting documents and rationale for recognizing that these offers represent the expenditure of the least money for the greatest capacity reduction, constitute the Reduction Plan to be submitted to NMFS for approval on behalf of the Secretary of Commerce.

(2) *Loan repayment*—(i) *Term.* As authorized by Section 219(B)(2) of the Act, the capacity reduction loan (the "Reduction Loan") shall be amortized over a thirty (30) year term. The Reduction Loan's original principal amount may not exceed thirty-six million dollars (\$36,000,000), but may be less if the reduction cost is less. Subsector Members acknowledge that in the event

payments made under the Reduction Plan are insufficient to repay the actual loan, the term of repayment shall be extended by NMFS until the loan is paid in full.

(ii) *Interest.* The Reduction Loan's interest rate will be the U.S. Treasury's cost of borrowing equivalent maturity funds plus 2 percent. NMFS will determine the Reduction Loan's initial interest rate when NMFS borrows from the U.S. Treasury the funds with which to disburse reduction payments. The initial interest rate will change to a final interest rate at the end of the Federal fiscal year in which NMFS borrows the funds from the U.S. Treasury. The final interest rate will be 2 percent plus a weighted average, throughout that fiscal year, of the U.S. Treasury's cost of borrowing equivalent maturity funds. The final interest rate will be fixed, and will not vary over the remainder of the reduction loan's 30-year term. The Reduction loan will be subject to a level debt amortization. There is no prepayment penalty.

(iii) *Fees.* The Reduction Loan shall be repaid by fees collected from the Longline Subsector. The fee amount will be based upon: The principal and interest due over the next twelve months divided by the product of the Hook & Line, Catcher Processor (Longline Subsector; sometimes referred to as the "H&LCP Subsector") portion of the BSAI Pacific cod ITAC (in metric tons) set by the North Pacific Fishery Management Council (NPFMC) in December of each year multiplied by 2,205 (i.e., the number of pounds in a metric ton). In the event that the Longline Subsector portion for the ensuing year is not available, the Longline Subsector portion forecast from the preceding year will be used to calculate the fee.

(A) The fee will be expressed in cents per pound rounded up to the next one-tenth of a cent. For example: If the principal and interest due equal \$2,900,000 and the Longline Subsector portion equals 100,000 metric tons, then the fee per round weight pound of Pacific cod will equal 1.4 cents per pound. [$2,900,000 / (100,000 \times 2,205) = .01315$]. The fee will be accessed and collected on Pacific cod to the extent possible and if

not, will be accessed and collected as provided for in this paragraph (e).

(B) Fees must be accessed and collected on Pacific cod used for bait or discarded. Although the fee could be up to 5 percent of the ex-vessel production value of all post-reduction Longline Subsector landings, the fee will be less than 5 percent if NMFS projects that a lesser rate can amortize the fishery's reduction loan over the reduction loan's 30-year term. In the event that the total principal and interest due exceeds 5 percent of the ex-vessel Pacific cod revenues, a penny per pound round weight fee will be calculated based on the latest available revenue records and NMFS conversion factors for pollock, arrowtooth flounder, Greenland turbot, skate, yellowfin sole and rock sole.

(C) The additional fee will be limited to the amount necessary to amortize the remaining twelve months principal and interest in addition to the 5 percent fee accessed against Pacific cod. The additional fee will be a minimum of one cent per pound. In the event that collections exceed the total principal and interest needed to amortize the payment due, the principal balance of the loan will be reduced. To verify that the fees collected do not exceed 5 percent of the fishery revenues, the annual total of principal and interest due will be compared to the latest available annual Longline Subsector revenues to ensure it is equal to or less than 5 percent of the total ex-vessel production revenues. In the event that any of the components necessary to calculate the next year's fee are not available, or for any other reason NMFS believes the calculation must be postponed, the fee will remain at the previous year's amount until such a time that new calculations are made and communicated to the post reduction fishery participants.

(D) It is possible that the fishery may not open during some years and no Longline Subsector portion of the ITAC is granted. Consequently, the fishery will not produce fee revenue with which to service the reduction loan during those years. However, interest will continue to accrue on the principal balance. When this happens, if the fee rate is not already at the

maximum 5 percent, NMFS will increase the fisheries' fee rate to the maximum 5 percent of the revenues for Pacific cod and the species mentioned in paragraph (e)(2)(iii)(B), apply all subsequent fee revenue first to the payment of accrued interest, and continue the maximum fee rates until all principal and interest payments become current. Once all principal and interest payments are current, NMFS will make a determination about adjusting the fee rate.

(iv) *Reduction loan.* NMFS has promulgated framework regulations generally applicable to all fishing capacity reduction programs (§600.1000 *et seq.*). The reduction loan shall be subject to the provisions of §600.1012, except that: the borrower's obligation to repay the reduction loan shall be discharged by the owner of the Longline Subsector license regardless of which vessel catches fish under this license and regardless of who processes the fish in the reduction fishery in accordance with §600.1013. Longline Subsector license owners in the reduction fishery shall be obligated to collect the fee in accordance with §600.1013.

(v) *Collection.* The LLP License holder of the vessel harvesting in the post-capacity reduction plan Longline Subsector shall be responsible for self-collecting the repayment fees owed by that LLP License holder. Fees shall be submitted to NMFS monthly and shall be due no later than fifteen (15) calendar days following the end of each calendar month.

(vi) *Record keeping and Reporting.* The holder of the LLP License on which a vessel harvesting in the post-capacity reduction plan Longline Subsector is designated shall be responsible for compliance with the applicable record keeping and reporting requirements.

(3) *Agreement with Secretary.* Each Selected Offeror, and vessel owner if not the Subsector Member, that has submitted a Selected Offer shall complete and deliver to the FLCC for inclusion in the Reduction Plan submitted to NMFS, designee for the Secretary, a completed and fully executed Reduction Contract. Any and all LLP License(s) and or vessels set forth on a Selected Offer shall be included as Re-

duction Fishing Interests in such Reduction Contract.

(f) *Decisions of the Auditor and the FLCC.* Time is of the essence in developing and implementing a Reduction Plan and, accordingly, the Offerors shall be limited to, and bound by, the decisions of the Auditor and the FLCC.

(1) The Auditor's examination of submitted applications, Offers, Prequalification Offers and Rankings shall be solely ministerial in nature. That is, the Auditor will verify whether the documents submitted by Subsector Members are, on their face, consistent with each other and the Database, in compliance with the requirements set forth in the Reduction Agreement, and, signed by an Authorized Party. The Auditor may presume the validity of all signatures on documents submitted. The Auditor shall not make substantive decisions as to compliance (e.g., whether an interim LLP License satisfies the requirements of the Act, or whether a discrepancy in the name appearing on LLP Licenses and other documents is material).

(2) [Reserved]

(g) *Enforcement/specific performance.* The parties to the Reduction Agreement have agreed that the opportunity to develop and submit a capacity reduction program for the Longline Subsector under the terms of the Act is both unique and finite and that failure of a Selected Offeror, and vessel owner, if not a Subsector Member, to perform the obligations provided by the Reduction Agreement will result in irreparable damage to the FLCC, the Subsector Members and other Selected Offerors. Accordingly, the parties to the Reduction Agreement expressly acknowledge that money damages are an inadequate means of redress and agree that upon the failure of the Selected Offeror, and vessel owner if not a Subsector Member, to fulfill its obligations under the Reduction Agreement that specific performance of those obligations may be obtained by suit in equity brought by the FLCC in any court of competent jurisdiction without obligation to arbitrate such action.

(h) *Miscellaneous—(1) Time/Holidays.* All times related to the Selection Process shall be the time kept in the Pacific time zone as calculated by the

National Institute of Standards and Technology. In the event that any date occurring within the Selection Process is a Federal holiday, the date shall roll over to the next occurring business day.

(2) *Termination.* The Reduction Agreement shall automatically terminate if no vote of acceptance is completed by December 31, 2007. The Reduction Agreement may be terminated at any time prior to approval of the Reduction Plan by NMFS, on behalf of the Secretary, by written notice from 50 percent of Subsector Members.

(3) *Choice of law/venue.* The Reduction Agreement shall be construed and enforced in accordance with the laws of the State of Washington without regard to its choice of law provisions. The parties submit to the exclusive personal jurisdiction of the United States District Court located in Seattle, Washington, with respect to any litigation arising out of or relating to the Reduction Agreement or out of the performance of services hereunder.

(4) *Incorporation.* All executed counterparts of the Reduction Agreement, Application Forms and Offers constitute the agreement between the parties with respect to the subject matter of the Reduction Agreement and are incorporated into the Reduction Agreement as if fully written.

(5) *Counterparts.* The Reduction Agreement may be executed in multiple counterparts and will be effective as to signatories on the Effective Date. The Reduction Agreement may be executed in duplicate originals, each of which shall be deemed to be an original instrument. All such counterparts and duplicate originals together shall constitute the same agreement, whether or not all parties execute each counterpart.

(i) The facsimile signature of any party to the Reduction Agreement shall constitute the duly authorized, irrevocable execution and delivery of the Reduction Agreement as fully as if the Reduction Agreement contained the original ink signatures of the party or parties supplying a facsimile signature.

(ii) [Reserved]

(i) *Amendment.* Subsector Member acknowledges that the Reduction Agree-

ment, the Reduction Contract, and the Reduction Plan may be subject to amendment to conform to the requirements for approval of the Reduction Plan by NMFS on behalf of the Secretary. The Auditor shall distribute to each Subsector Member in electronic format the amended form of the Reduction Agreement, the Reduction Contract, and the Reduction Plan, which amended documents in the form distributed by the Auditor and identified by the Auditor by date and version, the version of each such document then in effect at the time of any dispute arising or action taken shall be deemed binding upon the parties with respect to such dispute and/or action.

(j) *Warranties.* Subsector Member must expressly warrant and represent in the Reduction Agreement that:

(1) Subsector Member has had an opportunity to consult with Subsector Member's attorney or other advisors of Subsector Member with respect to the Reduction Agreement, the Reduction Contract, and the Act and the ramifications of the ratification of the Reduction Plan contemplated therein;

(2) Subsector Member has had understanding and appreciation of the ramifications of executing and delivering the Reduction Agreement and, free from coercion of any kind by the FLCC or any of its members, officers, agents and/or employees, executes and delivers the Reduction Agreement as the free and voluntary act of Subsector Member;

(3) The execution and delivery of the Reduction Agreement, does not and will not conflict with any provisions of the governing documents of Subsector Member;

(4) The person executing the Reduction Agreement has been duly authorized by Subsector Member to execute and deliver the Reduction Agreement and to undertake and perform the actions contemplated herein; and

(5) Subsector Member has taken all actions necessary for the Reduction Agreement to constitute the valid and binding obligation of Subsector Member, enforceable in accordance with its terms.

(k) *Approval of the reduction plan.* Acceptance of the Offers are at the sole discretion of NMFS on behalf of the

Fishery Conservation and Management

§ 600.1105

Secretary of Commerce. To be approved by NMFS, on behalf of the Secretary, any Reduction Plan developed and submitted in accordance with this section and subpart M to this part must be found by the Assistant Administrator of NMFS, to:

(1) Be consistent with the requirements of Section 219(e) of the FY 2005 Appropriations Act (Public Law 108-447);

(2) Be consistent with the requirements of Section 312(b) of the Magnuson-Stevens Fishery Conservation and Management Act (16 U.S.C. 1861(a)) except for the requirement that a Council or Governor of a State request such a program (as set out in section 312(b)(1)) and for the requirements of section 312(b)(4);

(3) Contain provisions for a fee system that provides for full and timely repayment of the capacity reduction loan by the Longline Subsector and that it provide for the assessment of such fees;

(4) Not require a bidding or auction process;

(5) Result in the maximum sustained reduction in fishing capacity at the least cost and in the minimum amount of time; and

(6) Permit vessels in the Longline Subsector to be upgraded to achieve efficiencies in fishing operations provided that such upgrades do not result in the vessel exceeding the applicable length, tonnage, or horsepower limitations set out in Federal law or regulation.

(1) *Referenda.* The provisions of § 600.1010 (including §§ 600.1004(a), 600.1008, 600.1009, 600.1013, 600.1014, and 600.1017(a)(5), (6) and (7)) shall apply to the Reduction Plan of this section to the extent that they do not conflict with this section or with subpart M of this part.

APPENDIX TO § 600.1105—FISHING CAPACITY REDUCTION CONTRACT: BERING SEA AND ALEUTIAN ISLANDS LONGLINE CATCHER PROCESSOR SUBSECTOR

FISHING CAPACITY REDUCTION CONTRACT: BERING SEA AND ALEUTIAN ISLANDS LONGLINE CATCHER PROCESSOR SUBSECTOR

This agreement, (the “Reduction Contract”) is entered into by and between the party or parties named in section 46 of this contract entitled, “Fishing Capacity Reduc-

tion Offer Submission Form and Reduction Fishing Interests Identification,” as the qualifying Offeror and as the co-Offeror (if there is a co-Offeror) (collectively the “Offeror”) and the United States of America, acting by and through the Secretary of Commerce, National Oceanic and Atmospheric Administration, National Marine Fisheries Service, Financial Services Division (“NMFS”). The Reduction Contract is effective when NMFS signs the Reduction Contract and, thereby, accepts the Offeror’s offer, subject to the condition subsequent of NMFS’ formal notification of a successful referendum.

Witnesseth

Whereas, Section 219, Title II, Division B of the Consolidated Appropriations Act, 2005, as enacted on December 8, 2004, (the “Act”) authorizes a fishing capacity reduction program implementing capacity reduction plans submitted to NMFS by catcher processor subsectors of the Bering Sea and Aleutian Islands (“BSAI”) non-pollock groundfish fishery as set forth in the Act;

Whereas, the longline catcher processor subsector (the “Longline Subsector”) is among the catcher processor subsectors eligible to submit to NMFS a capacity reduction plan under the terms of the Act;

Whereas, the Freezer Longline Conservation Cooperative (the “FLCC”) has developed and is submitting to NMFS concurrently with this Reduction Contract a capacity reduction plan for the Longline Subsector (the “Reduction Plan”);

Whereas, the selection process will be pursuant to the fishing capacity Reduction Contract and the Reduction Plan;

Whereas, the term “Reduction Fishery” is defined by the Reduction Plan as the longline catcher processor subsector of the BSAI non-pollock groundfish fishery;

Whereas, the Reduction Plan’s express objective is to permanently reduce harvesting capacity in the Reduction Fishery; Whereas, NMFS implements the Reduction Plan pursuant to Section 219 of the Act as well as the Magnuson-Stevens Fishery Conservation and Management Act (16 U.S.C. 1861a(b)–(e)) (as excepted by the Act, including inter alia, any requirement that the Reduction Plan include a bidding or auction process) and other applicable law;

Whereas, NMFS has promulgated framework regulations generally applicable to all fishing capacity reduction programs, portions of which are applicable to the Reduction Plan, (50 CFR 600.1000 *et seq.*);

Whereas, NMFS can implement the Reduction Plan only after giving notice to all members of the Longline Subsector of the Reduction Plan pursuant to Section 219(3)(b) of the Act and approval of the Reduction Plan by referendum of the Longline Subsector; and

Whereas, this Reduction Contract is submitted by Offeror and the FLCC as an integral element of the Reduction Plan and is expressly subject to the terms and conditions set forth herein, the framework regulations, the final rule (as used in this contract “final rule” means the final rule promulgated by NMFS which sets forth the regulations implementing the Reduction Plan for the Longline Subsector) and applicable law.

Now therefore, for good and valuable consideration and the premises and covenants hereinafter set forth the receipt and sufficiency of which the parties to the Reduction Contract hereby acknowledge, and intending to be legally bound hereby, the parties hereto agree as follows:

1. *Incorporation of Recitals.* The foregoing recitals are true and correct and are expressly incorporated herein by this reference.

2. *Further Incorporation.* The Act, framework regulations, final rule and any other rule promulgated pursuant to the Act are expressly incorporated herein by this reference. In the event of conflicting language, the framework regulations, the final rule and any other rule promulgated pursuant to the Act, take precedence over the Reduction Contract.

3. *Contract Form.* By completing and submitting the Reduction Contract to NMFS the Offeror hereby irrevocably offers to relinquish its Reduction Fishing Interests. If NMFS discovers any deficiencies in the Offeror’s submission to NMFS, NMFS may, at its sole discretion, contact the Offeror in an attempt to correct such offer deficiency. “Reduction Fishing Interests” means all of Offeror(s) rights, title and interest to the Groundfish Reduction Permit, Reduction Permit(s), Reduction Fishing Privilege and Reduction Fishing History as defined in this Reduction Contract.

4. *Groundfish Reduction Permit.* Offeror expressly acknowledges that it hereby offers to permanently surrender, relinquish, and have NMFS permanently revoke the valid non-interim Federal License Limitation Program groundfish license issued pursuant to 50 CFR 679.4(k) (or successor regulation) endorsed for Bering Sea or Aleutian Islands catcher processor fishing activity, C/P, Pacific cod, and hook and line gear identified in section 46 of this contract as well as any present or future claims of eligibility for any fishery privilege based upon such permit, including any Latent License and any offered and accepted interim permit that Offeror causes to become a non-interim permit, (the “Groundfish Reduction Permit”).

5. *Reduction Permit(s).* Offeror hereby acknowledges that it offers to permanently surrender, relinquish, and have NMFS permanently revoke any and all Federal fishery licenses, fishery permits, and area and species endorsements issued for any vessel

named on the Groundfish Reduction Permit as well as any present or future claims of eligibility for any fishery privilege based upon such permit, including any Latent License, (the “Reduction Permits”).

6. *Reduction Privilege Vessel.* The Reduction Privilege Vessel is the vessel listed on the Offeror’s License Limitation Program license.

7. *Reduction Fishing Privilege.* If a vessel is specified in section 46 of this contract (the “Reduction Privilege Vessel”), Offeror hereby acknowledges that Offeror offers to relinquish and surrender the Reduction Privilege Vessel’s fishing privilege and consents to the imposition of Federal vessel documentation restrictions that have the effect of permanently revoking the Reduction Privilege Vessel’s legal ability to fish anywhere in the world as well as its legal ability to operate under foreign registry or control—including the Reduction Privilege Vessel’s: fisheries trade endorsement under the Commercial Fishing Industry Vessel Anti-Reflagging Act (46 U.S.C. 12108); eligibility for the approval required under section 9(c)(2) of the Shipping Act, 1916 (46 U.S.C. App. 808(c)(2)), for the placement of a vessel under foreign flag or registry, as well as its operation under the authority of a foreign country; and the privilege otherwise to ever fish again anywhere in the world (the “Reduction Fishing Privilege”). Offeror agrees to instruct the United States Coast Guard’s Vessel Documentation Center to remove the fishery endorsement from the Reduction Privilege Vessel. If the Reduction Privilege Vessel is not a federally documented vessel, the Offeror offers to promptly scrap the vessel and allow NMFS whatever access to the scrapping NMFS deems reasonably necessary to document and confirm the scrapping.

8. *Reduction Fishing History.* Offeror surrenders, relinquishes, and consents to NMFS’ permanent revocation of the following Reduction Fishing History (the “Reduction Fishing History”):

a. The Reduction Privilege Vessel’s full and complete documented harvest of groundfish;

b. For any documented harvest of the Reduction Privilege Vessel whatsoever, including that specified in section 8 of this contract, any right or privilege to make any claim in any way related to any fishery privilege derived in whole or in part from any such other and documented harvest which could ever qualify any party for any future limited access system fishing license, permit, and other harvest authorization of any kind; including without limitation crab LLP licenses linked to License Limitation Program (“LLP”) licenses, state fishing rights appurtenant to Reduction Fishing Vessels, and all fishing history associated therewith, but without prejudice to any party who before submission of this offer

may have for value independently acquired the fishing history involving any such documented harvest;

c. Any documented harvest on any other vessel (Reduction Fishing Vessel) that gave rise to the Groundfish Reduction Permit; and

d. All fishing history associated with the latent LLP license identified on the Selected Offer and any fishing history associated with the fishing vessel that gave rise to the latent LLP license that remains in the Offeror's possession as of August 11, 2006 (*i.e.*, date of publication of the proposed rule in the FEDERAL REGISTER).

9. *Halibut, Sablefish and Crab IFQs Excluded.* Notwithstanding any other provision of this Reduction Contract, no right, title and/or interest to harvest, process or otherwise utilize individual fishing quota ("IFQ") quota share in the halibut, sablefish and crab fisheries pursuant to 50 CFR parts 679 and 680, nor crab LLP license history to the extent necessary for the issuance of crab IFQ pursuant to 50 CFR part 680 as in effect as of the date of this Contract, shall be included among Offeror's Reduction Fishing Interests.

10. *Representations and Warranties.* Offeror represents and warrants that, as of the date of submission of this Reduction Contract, Offeror is:

a. The holder of record, according to NMFS' official fishing license records, at the time of offer, of the Groundfish Reduction Permit and the Reduction Permit(s).

b. The Reduction Privilege Vessel's owner of record, according to the National Vessel Documentation Center's official vessel documentation records, at the time of offer, and that the Reduction Privilege Vessel is neither lost nor destroyed at the time of offer.

c. In retention of and fully and legally entitled to offer and dispose of hereunder, full and complete rights to the Reduction Privilege Vessel's full and complete Reduction Fishing History necessary to fully and completely comply with the requirements of section 8 of this contract.

11. *Offer Amount.* NMFS' payment to Offeror in the exact amount of the amount set forth by Offeror in section 46 of this contract is full and complete consideration for the Offeror's offer.

12. *Additional Offer Elements.* Offeror shall include with its offer an exact photocopy of the Reduction Privilege Vessel's official vessel documentation or registration (*i.e.*, the certificate of documentation the U.S. Coast Guard's National Vessel Documentation Center issued for federally documented vessels or the registration a State issues for State registered vessels) and an exact photocopy of the Groundfish Reduction Permit and all Reduction Permit(s). The Offeror shall also include with the offer all other information required in this Reduction Contract and other-

wise comply with Reduction Contract requirements.

13. *Use of Official Fishing License or Permit Databases.* Offeror expressly acknowledges that NMFS shall use the appropriate official governmental fishing license or permit database to:

Determine the Offeror's address of record; verify the Offeror's qualification to offer; determine the holder of record of the Groundfish Reduction Permit and Reduction Permit(s); and verify the Offeror's inclusion in the offer of all permits and licenses required to be offered in the Offer.

14. *Use of National Vessel Documentation Center Database.* Offeror expressly acknowledges that NMFS shall use the records of the National Vessel Documentation Center to determine the owner of record for a federally documented Reduction Privilege Vessel and the appropriate State records to determine the owner of record of a non-federally documented Reduction Privilege Vessel.

15. *Offeror to Ensure Accurate Records.* Offeror shall, to the best of its ability, ensure that the records of the databases relevant to sections 13 and 14 of this contract are true, accurate, and complete.

16. *Submissions are Irrevocable.* The parties hereto expressly acknowledge as the essence hereof that the Offeror voluntarily submits to NMFS this firm and irrevocable offer. The Offeror expressly acknowledges that it hereby waives any privilege or right to withdraw, change, modify, alter, rescind, or cancel any portion of the Reduction Contract and that the receipt date and time which NMFS marks on the Reduction Contract constitutes the date and time of the offer's submission.

17. *Offer Rejection.* NMFS shall reject an offer that NMFS deems is in any way unresponsive or not in conformance with the Reduction Contract, and the applicable law or regulations unless the Offeror corrects the defect and NMFS, in its sole discretion, accepts the correction.

18. *Notarized Offeror Signature(s) Required.* NMFS shall deem as non-responsive and reject an offer whose Offer Submission Form does not contain the notarized signatures of all persons required to sign the form on behalf of the Offeror.

19. *Offer Rejections Constitute Final Agency Action.* NMFS's offer rejections are conclusive and constitute final agency action as of the rejection date.

20. *Effect of Offer Submission.* Submitting an irrevocable offer conforming to the requirements stated herein entitles the Offeror to have NMFS accept the offer if NMFS, in its sole discretion, deems that the offer is fully responsive and complies with the Act, the final rule and any other rule promulgated pursuant to the Act.

21. *Offeror Retains Use.* After submitting an offer, the Offeror shall continue to hold, own,

or retain unimpaired every aspect of any and all LLP License(s) and or vessels set forth on an Offer included as Reduction Fishing Interests, until such time as: NMFS notifies the Offeror that the Reduction Plan is not in compliance with the Act or other applicable law and will not be approved by NMFS; notifies the Offeror that the referendum was unsuccessful; NMFS tenders the reduction payment and the Offeror complies with its obligations under the Reduction Contract; or NMFS otherwise excuses the Offeror's performance.

22. *Acceptance by Referendum.* NMFS shall formally notify the Offeror in writing whether the referendum is successful, which written notice shall inform Offeror that the condition subsequent has been satisfied. Therefore, Offeror expressly acknowledges that all parties must perform under the Reduction Contract and the Reduction Contract is enforceable against, and binding on, the Reduction Contract parties in accordance with the terms and conditions herein.

23. *Reduction Contract Subject to Federal Law.* The Reduction Contract is subject to Federal law.

24. *Notice to Creditors.* Upon NMFS' offer acceptance notice to the Offeror, Offeror agrees to notify all parties with secured interests in the Reduction Fishing Interests that the Offeror has entered into the Reduction Contract.

25. *Referendum.* Offeror acknowledges that the outcome of the referendum of the Reduction Plan is an occurrence over which NMFS has no control.

26. *Unsuccessful Referendum Excuses Performance.* An unsuccessful referendum excuses all parties hereto from every obligation to perform under the Reduction Contract. In such event, NMFS need not tender reduction payment and the Offeror need not surrender and relinquish or allow the revocation or restriction of any element of the Reduction Fishing Interest specified in the Reduction Contract. An unsuccessful referendum shall cause the Reduction Contract to have no further force or effect.

27. *Offeror Responsibilities upon Successful Referendum.* Upon NMFS' formal notification to the Offeror that the referendum was successful and that NMFS had accepted the Reduction Contract, Offeror shall immediately become ready to surrender and relinquish and allow the revocation or restriction of (as NMFS deems appropriate) the Reduction Fishing Interests.

28. *Written Payment Instructions.* After a successful referendum, NMFS shall tender reduction payment by requesting the Offeror to provide to NMFS, and the Offeror shall subsequently so provide, written payment instructions for NMFS' disbursement of the reduction payment to the Offeror or to the Offeror's order.

29. *Request for Written Payment Instructions Constitutes Tender.* NMFS' request to the Offeror for written payment instructions constitutes reduction payment tender, as specified in 50 CFR 600.1011.

30. *Offeror Responsibilities upon Tender.* Upon NMFS' reduction payment tender to the Offeror, the Offeror shall immediately surrender and relinquish and allow the revocation or restriction of (as NMFS deems appropriate) the Reduction Fishing Interests. The Offeror must then return the original of its Groundfish Reduction Permit and Reduction Permit(s) to NMFS. Concurrently with NMFS' reduction payment tender, the Offeror shall forever cease all fishing for any species with the Reduction Privilege Vessel and immediately retrieve all fishing gear, irrespective of ownership, previously deployed from the Reduction Privilege Vessel. Offeror agrees to authorize the United States Coast Guard to cancel the fishery endorsement in the Reduction Privilege Vessel.

31. *Reduction Privilege Vessel Lacking Federal Documentation.* Upon NMFS' reduction payment tender to the Offeror, the Offeror shall immediately scrap any vessel which the Offeror specified as a Reduction Privilege Vessel and which is documented solely under state law or otherwise lacks documentation under Federal law. The Offeror shall scrap such vessel at the Offeror's expense. The Offeror shall allow NMFS, its agents, or its appointees reasonable opportunity to observe and confirm such scrapping. The Offeror shall conclude such scrapping within a reasonable time.

32. *Future Harvest Privilege and Reduction Fishing History Extinguished.* Upon NMFS' reduction payment tender to the Offeror, the Offeror shall surrender and relinquish and consent to the revocation, restriction, withdrawal, invalidation, or extinguishment by other means (as NMFS deems appropriate), of any claim in any way related to any fishing privilege derived, in whole or in part, from the use or holdership of the Groundfish Reduction Permits and the Reduction Permit(s), from the use or ownership of the Reduction Privilege Vessel (subject to and in accordance with the provisions of section 8 of this contract), and from any documented harvest fishing history arising under or associated with the same which could ever qualify the Offeror for any future limited access fishing license, fishing permit, and other harvest authorization of any kind.

33. *Post Tender Use of Federally Documented Reduction Privilege Vessel.* After NMFS' reduction payment tender to the Offeror, the Offeror may continue to use a federally documented Reduction Privilege Vessel for any lawful purpose except "fishing" as defined under the Magnuson-Stevens Act and may transfer—subject to all restrictions in the Reduction Contract, other applicable regulations, and the applicable law—the vessel to a

new owner. The Offeror or any subsequent owner shall only operate the Reduction Privilege Vessel under the United States flag and shall not operate such vessel under the authority of a foreign country. In the event the Offeror fails to abide by such restrictions, the Offeror expressly acknowledges and hereby agrees to allow NMFS to pursue any and all remedies available to it, including, but not limited to, recovering the reduction payment and seizing the Reduction Privilege Vessel and scrapping it at the Offeror's expense.

34. *NMFS' Actions upon Tender.* Contemporaneously with NMFS' reduction payment tender to the Offeror, and without regard to the Offeror's refusal or failure to perform any of its Reduction Contract duties and obligations, NMFS shall: Permanently revoke the Offeror's Groundfish Reduction Permit and Reduction Permit(s); notify the National Vessel Documentation Center to permanently revoke the Reduction Privilege Vessel's fishery trade endorsement; notify the U.S. Maritime Administration to make the Reduction Privilege Vessel permanently ineligible for the approval of requests to place the vessel under foreign registry or operate the vessel under a foreign country's authority; record in the appropriate NMFS records that the Reduction Fishing History represented by any documented harvest fishing history accrued on, under, or as a result of the operation of the Reduction Privilege Vessel and/or Reduction Fishing Vessel (subject to and in accordance with the provisions of section 8 of this contract), the Groundfish Reduction Permit, and the Reduction Permit(s) which could ever qualify the Offeror for any future limited access fishing license, fishing permit, or other harvesting privilege of any kind shall never again be available to anyone for any fisheries purpose; and implement any other restrictions the applicable law or regulations impose.

35. *Material Disputes to be Identified.* Members of the public shall, up until NMFS receives the Offeror's written payment instructions, be able to advise NMFS in writing of any material dispute with regard to any aspect of any accepted Reduction Contract. Such a material dispute shall neither relieve the Offeror of any Reduction Contract duties or obligations nor affect NMFS' right to enforce performance of the Reduction Contract terms and conditions.

36. *Reduction Payment Disbursement.* Once NMFS receives the Offeror's written payment instructions and certification of compliance with the Reduction Contract, NMFS shall as soon as practicable disburse the reduction payment to the Offeror. Reduction payment disbursement shall be in strict accordance with the Offeror's written payment instructions. Unless the Offeror's written payment instructions direct NMFS to the contrary, NMFS shall disburse the whole of

the reduction payment to the Offeror. If the qualifying Offeror offers with a co-Offeror, both the qualifying Offeror and the co-Offeror must approve and sign the written payment instructions.

37. *Reduction Payment Withheld for Scrapping or for Other Reasons.* In the event that a Reduction Privilege Vessel which is not under Federal documentation must be scrapped, NMFS shall withhold from reduction payment disbursement an amount sufficient to scrap such vessel. NMFS shall withhold such sum until the vessel is completely scrapped before disbursing any amount withheld. NMFS may confirm, if NMFS so chooses, that the vessel has been scrapped before disbursing any amount withheld. If NMFS has reason to believe the Offeror has failed to comply with any of the Reduction Contract terms and conditions, NMFS shall also withhold reduction payment disbursement until such time as the Offeror performs in accordance with the Reduction Contract terms and conditions.

38. *Offeror Assistance with Restriction.* The Offeror shall, upon NMFS' request, furnish such additional documents, undertakings, assurances, or take such other actions as may be reasonably required to enable NMFS' revocation, restriction, invalidation, withdrawal, or extinguishment by other means (as NMFS deems appropriate) of all components of the Reduction Contract's Reduction Fishing Interest in accordance with the requirements of the Reduction Contract terms and conditions, applicable regulations and the applicable law.

39. *Recordation of Restrictions.* Upon the Reduction Fishing Privilege's revocation, the Offeror shall do everything reasonably necessary to ensure that such revocation is recorded on the Reduction Privilege Vessel's Federal documentation (which the National Vessel Documentation Center maintains in accordance with Federal maritime law and regulations) in such manner as is acceptable to NMFS and as shall prevent the Reduction Privilege Vessel, regardless of its subsequent ownership, from ever again being eligible for a fishery trade endorsement or ever again fishing. The term "fishing" includes the full range of activities defined in the Magnuson-Stevens Fishery Conservation and Management Act (16 U.S.C. 1802).

40. *Reduction Element Omission.* In the event NMFS accepts the offer and the Offeror has failed, for any reason, to specify in the Reduction Contract any Groundfish Reduction Permit, non-Groundfish Reduction Permit(s), Reduction Privilege Vessel, Reduction Fishing Vessel, Reduction Fishing History, or any other element of the Reduction Fishing Interest which the Offeror should under Reduction Contract, applicable regulations and the applicable law have specified in Reduction Contract, such omitted element shall nevertheless be deemed to be included

in the Reduction Contract and to be subject to the Reduction Contract's terms and conditions; and all Reduction Contract terms and conditions which should have applied to such omitted element had it not be omitted shall apply as if such element had not been omitted. Upon the Offeror discovering any such omission, the Offeror shall immediately and fully advise NMFS of such omission. Upon either NMFS or the Offeror discovering any such omission, the Offeror shall act in accordance with the Reduction Contract, applicable regulations and the applicable law.

41. *Remedy for Breach.* Because money damages are not a sufficient remedy for the Offeror breaching any one or more of the Reduction Contract terms and conditions, the Offeror explicitly agrees to and hereby authorizes specific performance of the Reduction Contract, in addition to any money damages, as a remedy for such breach. In the event of such breach, NMFS shall take any reasonable action, including requiring and enforcing specific performance of the Reduction Contract, NMFS deems necessary to carry out the Reduction Contract, applicable regulations and the applicable law.

42. *Waiver of Data Confidentiality.* The Offeror consents to the public release of any information provided in connection with the Reduction Contract or pursuant to Reduction Plan requirements, including any information provided in the Reduction Contract or by any other means associated with, or necessary for evaluation of, the Offeror's Reduction Contract if NMFS finds that the release of such information is necessary to achieve the Reduction Plan's authorized purpose. The Offeror hereby explicitly waives any claim of confidentiality otherwise afforded to catch, or harvest data and fishing histories otherwise protected from release under the Magnuson-Stevens Fishery Conservation and Management Act (16 U.S.C. 1881 a(b)) or any other law. In the event of such information release, the Offeror hereby forever fully and unconditionally releases and holds harmless the United States and its officers, agents, employees, representatives, of and from any and all claims, demands, debts, damages, duties, causes of action, actions and suits whatsoever, in law or equity, on account of any act, failure to act or event arising from, out of, or in any way related to, the release of any information associated with the Reduction Program.

43. *Oral Agreement Invalid.* The Reduction Contract, any addendums to section 46 of this contract, and enclosures of photocopies of licenses and permits required under section 46 of this contract, contain the final terms and conditions of the agreement between the Offeror and NMFS and represent the entire and exclusive agreement between them. NMFS and the Offeror forever waive all right to sue, or otherwise counterclaim against each other, based on any claim of

past, present, or future oral agreement between them.

44. *Severable Provisions.* The Reduction Contract provisions are severable; and, in the event that any portion of the Reduction Contract is held to be void, invalid, non-binding, or otherwise unenforceable, the remaining portion thereof shall remain fully valid, binding, and enforceable against the Offeror and NMFS.

45. *Disputes.* Any and all disputes involving the Reduction Contract, and any other Reduction Plan aspect affecting them shall in all respects be governed by the Federal laws of the United States; and the Offeror and all other parties claiming under the Offeror irrevocably submit themselves to the jurisdiction of the Federal courts of the United States and/or to any other Federal administrative body which the applicable law authorizes to adjudicate such disputes.

46. *Fishing Capacity Reduction Offer Submission Form and Reduction Fishing Interests Identification.*

a. *Completion and Submission.* The Offeror must fully, faithfully, and accurately complete this section 46 of this contract and thereafter submit the full and complete Reduction Contract to NMFS in accordance with the Reduction Contract. If completing this section requires inserting more information than the places provided for the insertion of such information allows, the Offeror should attach an addendum to the Reduction Contract that: Includes and identifies the additional information, states that the addendum is a part of the Reduction Fishing Interests Identification portion of the Reduction Contract, states (as a means of identifying the Reduction Contract to which the addendum relates) the NMFS license number designated on the Reduction Contract's Groundfish Reduction Permit, and is signed by all persons who signed the Reduction Contract as the Offeror.

b. *Offeror Information.*

(1) *Offeror name(s).* Insert in the table provided under this section 46.b(1) of this contract the name(s) of the qualifying Offeror and of the co-Offeror (if there is a co-Offeror), and check the appropriate box for each name listed.

Each name the Offeror inserts must be the full and exact legal name of record of each person, partnership, corporation or other business entity identified on the offer. If any Reduction Fishing Interest element is co-owned by more than one person, partnership, corporation or other business entity, the Offeror must insert each co-owner's name.

In each case, the Offeror is the holder of record, at the time of Offeror's execution of this Reduction Contract, of the Groundfish Reduction Permit and the Reduction Permit(s). A co-Offeror is not allowed for either the Groundfish Reduction Permit or the Reduction Permit(s). If the Offeror is also the

Fishery Conservation and Management

§ 600.1105

owner of record, at the time of offering, of the Reduction Privilege Vessel, the qualifying Offeror is the sole Offeror. If, however, the owner of record, at the time of execution of this Reduction Contract, of the Reduction

Privilege Vessel is not exactly the same as the Offeror, then the owner of record is the co-Offeror; and the Offeror and the co-Offeror jointly offer together as the Offeror.

OFFEROR NAME(S) If Offeror or co-Offeror consists of more than one owner, use one row of this column to name each co-Offeror. If not, use only one row for Offeror and one row for any co-Offeror	Check appropriate box for each name listed in the adjacent column	
	Offeror	Co-Offeror (if any)
(1)		
(2)		
(3)		
(4)		
(5)		

(2) *Offeror address(s) of record.* Insert in the table provided under this section 46.b(2) of this contract the Offeror's and the co-

Offeror's (if there is a co-Offeror) full and exact address(s) of record, and check the appropriate box for each address listed.

OFFEROR ADDRESS(S) If Offeror or co-Offeror consists of more than one owner, use one row of this column for address of each co-owner. If not, use only one row for Offeror and one row for any co-Offeror. Always use the same row order as is Offeror Name(s) table in section 46.b(1), i.e., address (1) is for name (1), address (2) is for name (2), address (3) is for name (3), etc.	Check appropriate box for each address listed in the adjacent column	
	Offeror	Co-Offeror (if any)
(1)		
(2)		
(3)		
(4)		
(5)		

(3) *Offeror business telephone number(s).* Insert in the table provided under this section 46.b(3) the Offeror's and the co-Offeror's (if

there is a co-Offeror) full and exact business telephone number(s), and check the appropriate box for each number listed.

OFFEROR BUSINESS TELEPHONE NUMBER(S) If Offeror or co-Offeror consists of more than one owner, use one row of this column for the telephone number of each co-owner. If not, use only one row for Offeror and one row for any co-Offeror. Always use the same row order as is Offeror Name(s) table in section 46.b(1), i.e., telephone number (1) is for name (1), telephone number (2) is for name (2), telephone number (3) is for name (3), etc.	Check appropriate box for each telephone number listed in the adjacent column

§ 600.1105

50 CFR Ch. VI (10–1–21 Edition)

(4) *Offeror electronic mail address(s) (if available).* Insert in the table printed under this section 46.b(4) the Offeror's and the co-

Offeror's (if there is a co-Offeror) full and exact electronic mail (e-mail) address(s), and check the appropriate box for each address.

OFFEROR E-MAIL ADDRESS(S) If Offeror or co-Offeror consists of more than one owner, use one row of this column for the e-mail address of each co-owner. If not, use only one row for Offeror and one row for any co-Offeror. Always use the same row order as is Offeror Name in section 46.b(1) of this contract, i.e., e-mail (1) is for name (1), e-mail (2) is for name (2), e-mail (3) is for name (3), etc	Check appropriate box for each e-mail address listed in the adjacent column	
	Offeror	Co-Offeror (if any)
(1)		
(2)		
(3)		
(4)		
(5)		

c. *LLP license number for Groundfish Reduction Permit.* Insert in the place this section 46.c provides the full and exact license number which NMFS designated on the LLP license which the Offeror specifies as the Groundfish Reduction Permit. Attach with the Reduction Contract an exact photocopy of such license.

LLP LICENSE NUMBER(S) AND FISHERY OF LICENSE(S) SPECIFIED AS REDUCTION PERMITS	
License number(s)	Fishery(s)

(3)	
(4)	
(5)	

e. *Reduction Fishing History.* For all Reduction Fishing History insert in the place provided in the table under this section 46.e the chronological and other information with each column heading therein requires. The information required does not include any actual landing data. Any Offeror whose Groundfish Reduction Permit whose issuance NMFS based on the fishing history of a lost or destroyed vessel plus a replacement vessel must insert information for both vessels and meet the requirements of the framework regulations, final rule and any other regulations promulgated pursuant to the Act. Any Offeror whose Groundfish Reduction Permit whose issuance NMFS in any part based on acquisition of fishing history from another party must insert information regarding such catch history.

NAMES(S) AND OFFICIAL NUMBER OF REDUCTION PRIVILEGE VESSEL AND NAME(S) AND OFFICIAL NUMBER(S) OF ANY VESSEL FROM WHICH FISHING HISTORY WAS ACQUIRED	FOR EACH REDUCTION PRIVILEGE VESSEL IN 1ST COLUMN PROVIDE FROM TO DATE OF EACH FISHING HISTORY OFFEROR POSSESSES	FOR EACH FISHING HISTORY IN 2ND COLUMN	
		License No. of each Groundfish Reduction Permit and Reduction Permit(s) associated with each vessel involved	If Reduction Privilege Vessel acquired fishing history from another party, provide name of party, manner in which acquired, and date acquired

		License No. of each Groundfish Reduction Permit and Reduction Permit(s) associated with each vessel involved	If Reduction Privilege Vessel acquired fishing history from another party, provide name of party, manner in which acquired, and date acquired
(4)			
(5)			

f. *Reduction Privilege Vessel.* Insert the full and exact name and official number which the National Vessel Documentation Center designated for the Reduction Privilege Vessel which the Offeror or the co-Offeror (if there is a co-Offeror) specifies in the Reduc-

tion Contract, and check the box appropriate for the vessel's ownership of record.

Enclose with the Reduction Contract an exact photocopy of such vessel's official certificate of documentation.

REDUCTION PRIVILEGE VESSEL		Check appropriate ownership box below	
Official name	Official No.	Offeror	Co-Offeror (if any)

g. *Offer Amount.* Insert in the place this section 46.g provides the Offeror's full and exact offer amount, both in words and in numbers.

OFFER AMOUNT [U.S. DOLLARS]	
In words	In numbers

h. *Reduction Contract Signature.* In compliance with the Reduction Contract, applicable regulations and the applicable law, the Offeror submits the Reduction Contract as the Offeror's irrevocable offer to NMFS for the permanent surrender and relinquishment and revocation, restriction, withdrawal, invalidation, or extinguishment by other means (as NMFS deems appropriate) of the Groundfish Reduction Permit, any Reduction Permit(s), the Reduction Fishing Privilege, and the Reduction Fishing History—all as identified in the Reduction Contract or as required under applicable regulations, or the applicable law.

The Offeror expressly acknowledges that NMFS' acceptance of the Offeror's offer hereunder and NMFS' tender, following a successful referendum, of a reduction payment in the same amount specified in section 46.g of this contract (less any sum withheld for scrapping any Reduction Privilege Vessel lacking Federal documentation or for any other purpose) to the Offeror shall, among other things, render the Reduction Privilege Vessel permanently ineligible or any fishing worldwide, including, but not limited to, fishing on the high seas or in the jurisdiction of any foreign country while operating under

United States flag, and shall impose or create other legal and contractual restrictions, impediments, limitations, obligations, or other provisions which restrict, revoke, withdraw, invalidate, or extinguish by other means (as NMFS deems appropriate) the complete Reduction Fishing Interest and any other fishery privileges or claims associated with the Groundfish Reduction Permit, any Reduction Permit(s), the Reduction Privilege Vessel, and the Reduction Fishing History—all as more fully set forth in the Reduction Contract, applicable regulations, and the applicable law.

By completing and signing the Reduction Contract, the Offeror expressly acknowledges that the Offeror has fully and completely read the entire Reduction Contract. The Offeror expressly states, declares, affirms, attests, warrants, and represents to NMFS that the Offeror is fully able to enter into the Reduction Contract and that the Offeror legally holds, owns, or retains, and is fully able under the Reduction Contract provisions to offer and dispose of, the full Reduction Fishing Interest which the Reduction Contract specifies and the applicable regulations, and the applicable law requires that any person or entity completing the Reduction Contract and/or signing the Reduction Contract on behalf of another person or entity, expressly attests, warrants, and represents to NMFS that such completing and/or signing person or entity has the express and written permission or other grant of authority to bind such other person or entity to the Reduction Contract's terms and conditions. The Offeror expressly attests, warrants, and represents to NMFS that every co-

§ 600.1106

50 CFR Ch. VI (10–1–21 Edition)

owner of the Offeror necessary to constitute the Offeror's full and complete execution of the Reduction Contract has signed the Reduction Contract. The Offeror expressly attests, warrants, and represents to NMFS that the Offeror: Fully understands the consequences of submitting the completed Reduction Contract of which it is a party to NMFS; pledges to abide by the terms and conditions of the Reduction Contract; and is aware of, understands, and consents to, any and all remedies available to NMFS for the Offeror's breach of the Reduction Contract or submission of an offer which fails to conform with the Reduction Contract, final rule, applicable regulations and the applicable law. The Offeror expressly attests, warrants, and represents to NMFS that all information which the Offeror inserted in the Reduction Contract is true, accurate, complete, and fully in accordance with the Reduction Contract, final rule, other applicable regulations and the applicable law.

In witness whereof, the Offeror has, in the place provided below, executed the Reduc-

tion Contract either as an Offeror offering alone or as an Offeror and co-Offeree (if there is a co-Offeree) jointly offering together, in accordance with the requirements specified above, and on the date written below. The Reduction Contract is effective as of the date NMFS accepts the Offeror's offer by signing the Reduction Contract.

The Offeror and co-Offeree (if there is a co-Offeree) must each sign the Reduction Contract exactly as instructed herein. Each co-owner (if there is a co-owner) of each Offeror and co-Offeree (if there is a co-Offeree) must also sign the Reduction Contract exactly as instructed herein. A notary public must, for each person or entity signing on behalf of the Offeror, complete and sign the acknowledgment and certification provision associated with each such person or entity's signature.

I. *Offeror and co-Offeree's (if there is a co-Offeree) signature(s) and notary's acknowledgment(s) and certification(s).*

OFFEROR'S SIGNATURE AND NOTARY'S ACKNOWLEDGMENT AND CERTIFICATION			
If Offeror or co-Offeree consists of more than one owner, use one row of column 1 for each co-owner's signature. If not, use only one row for Offeror and one row for co-Offeree (if any). Always use same Offeror row order as in Offeror Name in the table under section 46.b(1) of this contract (i.e., signature (1) is for name (1), signature (2) is for name (2) signature (3) is for name (3), etc.)			
OFFEROR SIGNATURE (1) Sign. (2) Print: the following: (a) signer's name, (b) signer's title (if signing for corporation or other business entity), and (c) signing date	Check appropriate column for each signature in 1st column		NOTARY SIGNATURE (1) Sign. (2) Print: the following: (a) name, (b) signing date, (3) date commission expires, and (4) State and county. Each notary signature attests to the following: "I certify that I know or have satisfactory evidence that the person who signed in the 1st column of this same row is the person who appeared before me and: (1) acknowledged his/her signature; (2) on oath, stated that he/she was authorized to sign; and (3) acknowledged that he/she did so freely and voluntarily."

Financial Services Division, National Marine Fisheries Service.

[71 FR 57701, Sept. 29, 2006]

§ 600.1106 Longline catcher processor subsector Bering Sea and Aleutian Islands (BSAI) non-pollock groundfish species fee payment and collection system.

(a) *Purpose.* As authorized by Public Law 108 447, this section's purpose is to:

(1) In accordance with § 600.1012, establish:

(i) The borrower's obligation to repay a reduction loan, and

Fishery Conservation and Management

§ 600.1107

(ii) The loan's principal amount, interest rate, and repayment term; and

(2) In accordance with §§600.1013 through 600.1016, implement an industry fee system for the reduction fishery.

(b) *Definitions.* Unless otherwise defined in this section, the terms defined in §600.1000 and §600.1105 expressly apply to this section. In addition, the following definition applies to this section:

Reduction fishery means the longline catcher processor subsector of the BSAI non-pollock groundfish fishery that §679.2 of this chapter defined as groundfish area/species endorsements.

(c) *Reduction loan amount.* The reduction loan's original principal amount is \$35,000,000.

(d) *Interest accrual from inception.* Interest began accruing on the reduction loan from May 29, 2007, the date on which NMFS disbursed such loan.

(e) *Interest rate.* The reduction loan's interest rate shall be the applicable rate which the U.S. Treasury determines at the end of fiscal year 2007 plus 2 percent.

(f) *Repayment term.* For the purpose of determining fee rates, the reduction loan's repayment term is 30 years from May 29, 2007, but fees shall continue indefinitely for as long as necessary to fully repay the loan.

(g) *Reduction loan repayment.* (1) The borrower shall, in accordance with §600.1012, repay the reduction loan;

(2) For the purpose of the fee collection, deposit, disbursement, and accounting requirements of this subpart, subsector members are deemed to be both the fish buyer and fish seller. In this case, all requirements and penalties of §600.1013 that are applicable to both a fish seller and a fish buyer shall equally apply to parties performing both functions;

(3) Subsector members in the reduction fishery shall pay and collect the fee amount in accordance with §600.1105;

(4) Subsector members in the reduction fishery shall, in accordance with §600.1014, deposit and disburse, as well as keep records for and submit reports about, the fees applicable to such fishery; except the requirements specified under paragraph (c) of this section con-

cerning the deposit principal disbursement shall be made to NMFS no later than fifteen (15) calendar days following the end of each calendar month; and the requirements specified under paragraph (e) of this section concerning annual reports which shall be submitted to NMFS by February 1 of each calendar year; and

(5) The reduction loan is, in all other respects, subject to the provisions of §§600.1012 through 600.1017.

[72 FR 54222, Sept. 24, 2007]

§ 600.1107 Southeast Alaska Purse Seine Salmon Fishery capacity reduction program, including fee payment and collection system.

(a) *Purpose.* This section implements the fishing capacity reduction program for the Southeast Alaska purse seine salmon fishery enacted by Section 209 of Public Law 108-447 and amended by Section 121 of Public Law 109-479, with appropriations authorized by Section 121 of Public Law 109-479 and Public Law 110-161. The intent of the program is to permanently reduce, through an industry-financed permit buyback, the most harvesting capacity in the Reduction Fishery at the least cost, increase harvesting productivity for post-reduction Permit Holders and improve flexibility in the conservation and management of the fishery. Fishery participants will finance this program through a federal loan that will be repaid over 40 years through a fee collection system. The intent of the fee collection system is to establish the post-reduction Permit Holders' obligation to repay the Reduction Loan's principal and accrued interest over the repayment term, and to ensure repayment of the loan.

(b) *Definitions.* Unless otherwise defined in this section, the terms defined in §600.1000 of subpart L of this part expressly apply to this section. The following terms have the following meanings for the purpose of this section:

Acceptance means SRA acceptance of a bid.

Act means Section 209 of Title II of Division B of Public Law 108-447, Consolidated Appropriations Act of 2005, as amended by Section 121 of Public Law 109-447, Magnuson-Stevens Reauthorization Act of 2006.

Authorized party means the individuals authorized by the Permit Holder on the application form to execute and submit Bids, protests and other documents and/or notices on behalf of the Permit Holder.

Bid means a bidder's irrevocable offer to relinquish a permit.

Bid amount means the dollar amount submitted by a bidder.

Bidder means a permit holder who submits a bid.

Commercial Fisheries Entry Commission (CFEC) means the Alaska state commission mandated to conserve and maintain the economic health of Alaska's commercial fisheries by limiting the number of participating fishers, by issuing permits and vessel licenses to qualified individuals in both limited and unlimited fisheries, and by providing due process hearings and appeals.

CFEC documents means any documents issued by the CFEC in connection with the Southeast Alaska purse seine salmon fishery.

Conditional notice means the CFEC form that any Bidder must sign and agree to abide by upon submission of a Bid Agreement (Appendix B to § 600.1107).

Conditional relinquishment means the CFEC form that any Permit Holder, agreeing to relinquish a permit, must sign and agree to abide by upon SRA acceptance of the bid (Appendix C to § 600.1107).

Fishery means the Southeast Alaska administrative area as defined under Title 5 Alaska Administrative Code Section 33.100 for salmon with purse seine gear.

Magnuson-Stevens Act means the Magnuson-Stevens Fishery Conservation and Management Act codified at 16 U.S.C. 1801 *et seq.*

Permit (Southeast Salmon Purse Seine Entry Permit) means a valid entry permit issued by CFEC to operate in the Southeast Alaska purse seine salmon fishery.

Permit holder means an individual who at the time of bidding is the holder of record of a permit.

Reduction fishery means the Southeast Alaska Purse Seine Salmon Fishery.

Reduction loan means the loan used to purchase the relinquished permits pursuant to the approved Reduction Plan.

Reduction loan amount means the Reduction Loan's original principal amount up to \$23,476,500.

Reduction plan means the aggregate of all Bids, Relinquishment Contracts, Conditional Notices, Conditional Relinquishments, and supporting documents and rationale, submitted to the Secretary for approval.

Relinquishment contract means the contract that any Permit Holder agreeing to relinquish a permit pursuant to Alaska Statute (A.S. 16.43.150(i)) must sign and agree to abide by upon acceptance of the Bid, and before payment of the bid amount (Appendix A to § 600.1107).

Secretary means the Secretary of Commerce or his/her designee.

Southeast Revitalization Association (SRA) means the qualified fishery association authorized to develop and implement this capacity reduction program under Alaska Statute 16.40.250 and Federal law.

(c) *Enrollment in the capacity reduction program*—(1) *Distribution*. The SRA shall mail a copy of the following four documents via certified mail to each Permit Holder: Bid; Fleet Consolidation Relinquishment Contract (Relinquishment Contract); Conditional Notice to CFEC and Request by Permit Holder; and (Conditional Relinquishment of Southeast Salmon Purse Seine Entry Permit. Such mailing shall include a closing date after which the SRA will not accept new bids.

(2) *Application*. Any Permit Holder, regardless of whether having received the mailing described in paragraph (c)(1) of this section, may participate in the Capacity Reduction Program by submitting all of the following documents to the SRA no later than the bid closing date:

(i) A fully executed Bid consistent with Appendix A to this section;

(ii) A photocopy of the permit evidencing the applicant's qualification as a participant in the fishery;

(iii) A fully executed Relinquishment Contract: Southeast Alaska Salmon Purse Seine Permit Holders consistent with the appendix B to this section;

(iv) A fully executed Conditional Notice to CFEC and Request by Permit Holder consistent with the appendix C to this section; and

(v) A fully executed Conditional Relinquishment of Southeast Salmon Purse Seine Entry Permit consistent with the appendix D to this section.

(A) The submitted Bid shall include the following information: Name, address, telephone number, social security number, and (if available) electronic mail address of the submitting Permit Holder, permit number, and whether any authorized party holds a security interest in the permit. Each application must be submitted to the SRA, c/o Elgee, Rehfeld, Mertz, LLC, Professional Plaza Building B, 9309 Glacier Highway, Suite B-200, Juneau, Alaska 99801. The initial determination that an application conforms to the prescribed requirements is made by this independent accounting firm and not the SRA.

(B) The SRA or the independent accounting firm will notify the Permit Holder if the Bid is non-conforming and, in such cases, the Permit Holder may submit a revised, conforming Bid within the prescribed period (*i.e.*, until the bid closing date).

(3) *Enrollment period.* Applications that meet all requirements will be accepted until the bid selection process is completed but no later than the bid closing date specified by the SRA. The SRA will have a period of 21 days after the bid closing date to consult with CFEC and examine bid results to complete the selection process.

(4) *Effective date.* The effective date of any Bid shall be when the SRA has completed the selection process and signed the Bid.

(5) *Notice.* The SRA will notify each Accepted Bidder, via certified mail, of the effective date of the Bid Agreement.

(6) *Conflicts.* Where terms and conditions in the Bid, Relinquishment Contract, Conditional Notice, and Conditional Relinquishment conflict with this regulation, the terms and conditions in the regulation are controlling.

(d) *Bid selection process.* The fishing capacity removed by the Reduction Plan shall be represented by the total number of valid CFEC permits, wheth-

er active or latent, that are voluntarily offered by Permit Holders and selected by the SRA up to an aggregate amount of \$23,476,500. Due to a rescission of funds, the underlying appropriations for this Reduction Program were reduced from \$250,000 to \$234,765, resulting in a loan ceiling of \$23,476,500.

(1) *Overview.* The Selection Process shall begin upon the receipt by the SRA of the first application and shall continue until: The bid closing date specified by the SRA (paragraph (c)(1) of this section); or the ranking of the next lowest bid would cause the total program costs to exceed \$23,476,500. The SRA will have a period of 21 days after the bid closing date to consult with CFEC and examine bid results to complete the selection process. When either one of these events is reached, the Selection Process shall be completed.

(i) During the selection process, the SRA in consultation with the CFEC shall examine each submitted Bid for consistency and the necessary elements, including the validity of the permit and whether any authorized party holds a security interest in the permit.

(ii) [Reserved]

(2) *Bids.* By submitting the Bid, the bidder expressly acknowledges that he makes an irrevocable offer to relinquish to CFEC a permit for a specific price, and once having submitted the Bid, the bidder is not entitled to withdraw or in any way amend the Bid. The permit will be relinquished for the price set forth in the Bid contingent on such Bid being accepted by the SRA at the closing of the Selection Process. Any attempted withdrawal by a bidder shall be invalid, and the Bid shall remain a binding, irrevocable offer, unaffected by the attempted withdrawal. Any bid that is submitted by a Permit Holder but is not accepted by the SRA shall be deemed terminated and both the Permit Holder and the SRA will have no further obligation with respect to the Bid.

(i) If a Permit Holder holds more than one permit, the Permit Holder must submit a separate Bid for each permit that he/she offers to relinquish.

(ii) By submitting a Bid, the Permit Holder warrants and represents that he/she has read and understands the

terms of the Program Regulations, Bid, Relinquishment Contract, Conditional Notice and Conditional Relinquishment, and has had the opportunity to seek independent legal counsel regarding such documents and the consequences of submitting the Bid Agreement.

(3) *Ranking.* The SRA shall rank all conforming bids by using a reverse auction in which the SRA ranks the Bid with the lowest dollar amount and successively ranks each additional Bid with the next lowest dollar amount until there are no more Bids or the ranking of the next lowest bid would cause the total program cost to exceed \$23,476,500. In the event of a tie with bids which results in the tied bids exceeding \$23,476,500, the SRA will select the tied bid first received, if known. If the receipt time cannot be determined, neither bid will be accepted.

(4) *Acceptance and post-acceptance restriction of renewals and transfers.* Upon expiration of the bid closing date, the SRA shall determine whether the number of ranked bids it is willing to accept is sufficient to achieve a substantial reduction in harvest capacity and increased economic efficiencies for those Permit Holders remaining in the fishery. If the SRA makes such a determination and thereafter accepts bids, the SRA shall send CFEC the Conditional Notice form restricting renewal and transfer of each permit for which a bid was accepted. The Bid, Relinquishment Contract, Conditional Notice and Conditional Relinquishment are terminated for any rejected bid and the applicant is no longer bound by the terms of these documents.

(e) *Plan submission and approval—(1) Submitting the reduction plan.* Within 30 days of concluding the selection process, the SRA shall submit the Reduction Plan, consisting of the aggregate of all Bid Agreements, Relinquishment Contracts, Conditional Notices and Conditional Relinquishments, together with supporting documents and rationale, to NMFS for final approval on behalf of the Secretary. The Reduction Plan shall include a listing of accepted bids arranged by bid amount from lowest to highest bid, attended by a statement from the SRA that all other bids

received were higher than the largest dollar amount of the last bid accepted.

(2) *Required findings.* In order to approve a Reduction Plan, the Assistant Administrator of NMFS, on behalf of the Secretary, must find that: The Reduction Plan is consistent with the amended Consolidated Appropriations Act of 2005 and applicable sections of the Magnuson-Stevens Act, particularly that it is cost-effective; the Reduction Plan will result in the maximum sustained reduction in fishing capacity at the least cost; and the Reduction Plan will increase harvesting productivity for post-reduction Permit Holders participating in the fishery.

(3) *The referendum.* If NMFS approves the Reduction Plan and subsequent to the publication of a final rule resulting from this rule, NMFS shall conduct a referendum to determine the industry's willingness to repay a fishing capacity reduction loan to purchase the permits identified in the Reduction Plan. NMFS shall publish a notice in the FEDERAL REGISTER requesting votes by Permit Holders on whether to accept or reject the Reduction Plan for implementation. The notice shall state the starting and ending dates and times of the voting period, which shall be not less than twenty one (21) nor more than thirty (30) calendar days from the date of such notice.

(i) Such notice shall state the name and address of record of each eligible voter, as well as the basis for having determined the eligibility of those voters. This shall constitute notice and opportunity to respond about adding eligible voters, deleting ineligible voters, and/or correcting any voter's name and address of record, and will provide a 15 day period to make these changes. If, in NMFS' discretion, the comments received in response to such notice warrants it, or for other good cause, NMFS may modify such list by publishing another notice in the FEDERAL REGISTER. NMFS shall issue ballots to eligible voters, tally votes, and notify voters whether the referendum was successful or unsuccessful in approving the Reduction Plan consistent with the provisions of § 600.1010.

(ii) A successful referendum by a majority of the Permit Holders in the Reduction Fishery shall bind all parties

and complete the reduction process. NMFS shall publish a notice in the FEDERAL REGISTER advising the public that the referendum was successful. Thereafter the Reduction Program shall be implemented.

(iii) The provisions of § 600.1010 and § 600.1017(a)(1)–(4) shall apply to any referendum on the Reduction Plan of this section to the extent that they do not conflict with this section or with subpart M of this part.

(f) *Implementation*—(1) *Reduction payments*. Within 60 days of a successful referendum, the CFEC will provide notice to NMFS of the permits retired from the Reduction Fishery. Upon receiving such notification, NMFS will then tender the accepted bid amounts to the Permit Holders. Reduction payments may not exceed \$23,476,500 and if the SRA accepts a total number of bids in an aggregate amount less than \$23,476,500, any remaining funds would be available for reduction payments as part of a later, separate Reduction Plan conforming to these regulations. Upon NMFS tendering the reduction program's payments to the selected Permit Holders, each such Permit Holder must permanently stop all fishing with the relinquished permit(s).

(2) *Repayment term*. As authorized by the Act, the Reduction Loan shall be amortized over a forty (40) year term. The Reduction Loan's original principal amount may not exceed \$23,476,500, but may be less if the ultimate reduction cost is less. The final Reduction Loan periodic payment amount will be determined by NMFS' analysis of the ability of the post-reduction fishery to service debt. The provisions of §§ 600.1012–600.1017 shall apply to any reduction loan, fee payment and collection under this section to the extent they do not conflict with this section or with subpart M of this part.

(3) *Loan repayment*. Permit Holders operating in the fishery shall be obligated to pay the fee in accordance with this section. In the event that payments made under the Reduction Plan are insufficient to pay the Reduction Loan within the 40-year term, NMFS shall extend the term of the repayment until the Reduction Loan is paid in full.

(i) *Interest*. The Reduction Loan's interest rate will be the U.S. Treasury's cost of borrowing equivalent maturity funds plus two percent. NMFS will determine the Reduction Loan's initial interest rate when NMFS borrows from the U.S. Treasury the funds with which to disburse reduction payments. Interest will begin accruing on the Reduction Loan from the date on which NMFS disburses such loan. The initial interest rate will change to a final interest rate at the end of the Federal fiscal year in which NMFS borrows the funds from the U.S. Treasury. The final interest rate will be two percent plus a weighted average, throughout that fiscal year, of the U.S. Treasury's cost of borrowing equivalent maturity funds. The final interest rate will be fixed and will not vary over the remainder of the reduction loan's 40-year term. The Reduction Loan will be subject to a level debt amortization. There is no prepayment penalty.

(ii) *Fees*. Post-reduction Permit Holders operating in the fishery shall be obligated to pay the fee in accordance with paragraph (f) of this section. The amount of such fee will be calculated by NMFS on an annual basis as the principal and interest payment amount necessary to amortize the loan over a 40-year term. The fee shall be expressed as a percentage of the ex-vessel value of all salmon harvested and landed in the fishery. In the event that payments made under the Reduction Plan are insufficient to repay the Reduction Loan within the 40-year term, NMFS shall extend the term of the repayment until the Reduction Loan is paid in full.

(A) Fees must be assessed and collected on all salmon harvested in the fishery. Although the fee could be up to three percent of the ex-vessel price of all post-reduction landings, the fee will be less than three percent if NMFS projects that a lesser rate can amortize the Reduction Loan over the 40-year term. To verify that the fees collected do not exceed three percent of the fishery revenues, NMFS will compare the annual total of principal and interest due with the latest available annual revenues in the fishery to ensure that it is equal to or less than three percent

of the total ex-vessel production revenues. In the event that any of the components necessary to calculate the next year's fee are not available, or postponed, the fee will remain at the previous year's amount until such time as new calculations are made and communicated to the post-reduction fishery participants.

(B) If the fishery does not open during a year, interest will continue to accrue on the principal balance even though no fee revenue will be generated. When this happens, if the fee is not already at the maximum three percent, NMFS shall increase the fee to the maximum three percent, apply all subsequent fee revenue first to the payment of accrued interest, and continue the maximum fee rates until the principal and interest payments become current. Once all principal and interest payments are current, NMFS will make a determination about adjusting the fee rate.

(iii) *Collection.* The buyer who first purchases the salmon landed in the fishery shall be responsible for collecting and submitting the repayment fees to NMFS monthly. The fees shall be submitted to NMFS no later than fifteen (15) calendar days following the end of each calendar month.

(iv) *Recordkeeping and reporting.* The dealer who first purchases the salmon landed in the fishery shall be responsible for compliance with the applicable recordkeeping and reporting requirements.

(A) All requirements and penalties set forth in the provisions of §§ 600.1013 (Fee payment and collection), 600.1014 (Fee collection deposits, disbursements, records, and reports), 600.1015 (Late charges), and 600.1017 (Prohibitions and penalties) shall apply to any dealer who purchases salmon in the fishery, and to any fee collection under this section, to the extent they do not conflict with this section or with subpart M of this part.

(B) [Reserved]

(g) *Specific performance under the relinquishment contract.* The parties to the Relinquishment Contract have agreed that the opportunity to develop and submit a capacity reduction program for the fishery under the terms of the Act is both unique and finite. The

failure of a Permit Holder, whose bid was accepted, to perform the obligations under the Relinquishment Contract will result in irreparable damage to the SRA and all the other Permit Holders. Accordingly, the parties to the Relinquishment Contract expressly acknowledge that money damages are an inadequate means of redress and agree, that upon failure of the Permit Holder to fulfill his/her obligations under the Relinquishment Contract, that specific performance of those obligations may be obtained by suit in equity brought by the SRA in any court of competent jurisdiction without obligation to arbitrate such action.

(h) *Enforcement for failure to pay fees.* The provisions and requirements of § 600.1016 (Enforcement) shall also apply to fish sellers and fish buyers subject to this fishery.

(i) *Prohibitions and penalties.* Fish buyers are prohibited from purchasing fish from fish sellers who do not pay the required landing fees. Fish sellers are prohibited from selling to fish buyers who do not pay the required landing fees.

APPENDIX A TO § 600.1107—Bid

This Bid (Bid) is entered between the individual named in section III, 11(a) of the Agreement and the Southeast Revitalization Association (SRA).

I. DEFINITIONS

Unless otherwise defined, the following terms have the following meanings for the purpose of this Agreement.

Acceptance means SRA acceptance of a Bid.

Act means Section 209 of Title II of Division B of Public Law 108–447, Consolidated Appropriations Act of 2005; as amended by Section 121 of Public Law 109–447, Magnuson-Stevens (MSA) Reauthorization Act of 2006.

Bid means a bidder's irrevocable offer to relinquish a permit.

Bid amount means the dollar amount submitted by a bidder.

Bidder means a permit holder who submits a bid.

Conditional notice means the Commercial Fisheries Entry Commission (CFEC) form that any Bidder must sign and agree to abide by upon submission of a Bid Agreement.

Conditional relinquishment means the CFEC form that any Permit Holder, agreeing to relinquish a permit, must sign and agree to abide by upon SRA acceptance of the bid.

Fishery means the Southeast Alaska administrative area as defined under Title 5

Fishery Conservation and Management

§ 600.1107

Alaska Administrative Code Section 33.100 for salmon with purse seine gear.

Permit means a valid entry permit issued by CFEC to operate in the Southeast Alaska purse seine salmon fishery.

Permit holder means an individual who at the time of bidding is the holder of record of a permit.

Reduction plan means the aggregate of all Bids, Relinquishment Contracts (Appendix B), Commercial Fisheries Entry Commission ("CFEC") Conditional Notice and Conditional Relinquishment (Appendices C & D), and supporting documents and rationale; submitted to the Secretary for approval.

Referendum means the voting procedure to determine the Permit Holder's willingness to repay a fishing capacity reduction loan to purchase the permits identified in the Plan.

Relinquishment contract means the contract that any bidder agreeing to relinquish a permit pursuant to Alaska Statute (A.S. 16.43.150(i)) must sign and agree to abide by upon acceptance of the Bid, and before payment of the bid amount.

Secretary means the Secretary of Commerce or his/her designee.

Southeast Revitalization Association (SRA) means the qualified fishery association authorized to develop and implement this capacity reduction program under Alaska Statute 16.40.250 and Federal law.

II. RECITALS

Whereas Alaska Statute 16.40.250 and the Act authorize a fishing capacity reduction program for the fishery;

Whereas, within 30 days of concluding the selection process, the SRA shall submit the Reduction Plan, together with supporting documents and rationale, to NMFS for final approval on behalf of the Secretary;

Whereas, the reduction Plan's express objective is to reduce fishing capacity by permanently revoking permits thereby promoting economic efficiency, improving flexibility in the conservation and management of the fishery and obtain the maximum reduction in permits at the least cost;

Whereas, the SRA can implement the Reduction Plan only after giving notice to all Permit Holders and subsequent approval of the reduction Plan by referendum.

Whereas, the Agreement submitted by the bidder and the SRA is an integral element of the Reduction Plan.

Now, therefore, for good and valuable consideration, the sufficiency of which is hereby acknowledged, the SRA and bidder agree as follows:

III. TERMS AND CONDITIONS

1. *Form.* By completing and submitting this Bid to the SRA the bidder hereby offers to permanently relinquish, and have the CFEC revoke, the permit. The SRA signing the Bid

and subsequent NMFS payment to bidder in the exact bid amount set forth in section III, 11(f) of the Bid is full and complete consideration.

2. *Irrevocable.* The bidder expressly acknowledges that by submitting the Bid he/she makes an irrevocable offer to relinquish the permit and once having submitted the Bid is not entitled to withdraw or in any manner amend the Bid. The receipt date that the SRA marks on the Bid constitutes the date of the bidder's submittal.

3. *Warranty.* The bidder warrants and represents that he/she is the holder of record of the permit, according to the CFEC records, and that he/she has read and understands the terms of the Program Regulations, Bid, Relinquishment Contract, Conditional Notice and the Conditional Relinquishment and has had the opportunity to seek independent legal counsel regarding such documents and the consequences of submitting the Bid.

4. *Validity.* The SRA, in consultation with the CFEC, shall examine each Bid for completeness and consistency. The SRA shall notify the bidder if the Bid is non-conforming. In such cases, the bidder may submit a revised, conforming Bid within the prescribed period (i.e., until the bid closing date).

5. *Ranking.* The SRA shall rank the bid amount entered in section III, 11(f) of this Bid by using a reverse auction in which the SRA ranks the Bid with the lowest dollar amount and successively ranks each additional Bid with the next lowest dollar amount until there are no more Bids or the ranking of the next lowest Bid would exceed the total program cost. In the event of a tie with bids which results in the tied bids exceeding \$23,476,500, the SRA will select the tied bid first received.

6. *Acceptance and Rejection.* If the Bid is accepted, the SRA shall formally notify the bidder in writing. If the SRA rejects the Bid, the SRA will formally notify the bidder in writing and the Bid shall terminate without further obligation.

7. *Restriction of Transfer of permit:* Upon acceptance, the SRA will send the CFEC the Conditional Notice, restricting transfer of the permit until such time as: The SRA notifies the bidder that the Plan is not in compliance with the Act and will not be approved; or NMFS notifies the bidder the referendum was unsuccessful.

8. *Payment.* Within 60 days from the close of the voting period of a successful referendum, the CFEC will provide notice to NMFS of the permits retired from the Reduction Fishery. Upon receiving such notice, NMFS will then tender the accepted bid amounts to the Permit Holders.

9. *Specific Performance.* The failure of a bidder whose Bid was accepted to comply with the terms of this Bid will result in irreparable damage to the SRA and its members because the Bid was part of the basis for the

§ 600.1107

50 CFR Ch. VI (10–1–21 Edition)

Plan submitted to the Secretary for approval. Accordingly, the SRA and bidder expressly acknowledge that money damages are an inadequate means of redress and agree that specific performance of those obligations may be obtained by suit in equity brought by the SRA in any court of competent jurisdiction without obligation to arbitrate such action.

10. *Submission.* This Bid must be submitted within the prescribed period to the SRA, c/o Elgee, Rehfeld, Mertz, LLC, Professional Plaza Building B, 9309 Glacier Highway, Suite B-200, Juneau, AK 99801.

11. *Complete Bid Information:* To fully and accurately complete this Bid, the bidder must fully complete the following questions and provide an exact photocopy of the permit. The Bidder must further sign this form, Appendices B, C, and D to § 600.1107, and acknowledge the signature before a notary public.

(a) **BIDDER'S NAME.** This must be the full and exact legal name of record of the person bidding. Insert the name of the bidder.

(b) **BIDDER'S ADDRESS OF RECORD.** Insert the full and exact address of record for the bidder.

(c) **BIDDER'S TELEPHONE NUMBER.** Insert the full and exact telephone number of the bidder.

(d) **BIDDER'S ELECTRONIC MAIL ADDRESS** (if available). Insert the full and exact e-mail address of the bidder.

(e) **PERMIT.** Insert the full and exact permit number(s) of the bidder. Enclose with this Bid an exact photocopy of the permit.

(f) **BID AMOUNT.** Insert, in U.S. dollars, the bid's full and exact amount, both in words and numbers.

In words	In numbers
	\$

(g) **SECURITY INTERESTS.** Insert the name of any authorized third party that may hold a security interest in the permit.

(h) **SOCIAL SECURITY NUMBER.** Insert the full and exact social security number of the bidder.

(i) **BID SIGNATURE.** In compliance with applicable law and this Bid, the bidder submits the above bid amount as an offer to the SRA for the permanent relinquishment of his/her permit. By completing the sections above and signing below, the bidder acknowledges that the bidder has completely reviewed this Bid and attachments. The bidder warrants that the bidder is fully able to enter into the Relinquishment Contract. The bidder expressly warrants and attests that all information included herein is accurate.

APPENDIX B TO § 600.1107—RELINQUISHMENT CONTRACT: SOUTHEAST ALASKA SALMON PURSE SEINE PERMIT HOLDERS

This Relinquishment Contract ("Contract") and agreement is entered into between the Southeast Revitalization Association ("SRA") and the bidder named in Section 11(a) of the Bid. The contract is effective when the bidder signs the Bid and this contract and, thereby, agrees to relinquish his/her permit, issued by the Alaska Commercial Fisheries Entry Commission ("CFEC") for the Southeast Alaska salmon purse seine fishery ("fishery").

Whereas Alaska Statute 16.40.250 and Federal law authorize a fishing capacity reduction program for the fishery;

Whereas, upon accepting and signing the Bid, the SRA shall submit a Reduction Plan to NMFS;

Whereas, the Reduction Plan's express objective is to reduce fishing capacity by permanently revoking permits thereby promoting economic efficiency, improving flexibility in the conservation and management of the fishery and obtain the maximum reduction in permits at the least cost;

Whereas, this contract is subject to the terms and conditions set forth herein, including the CFEC forms marked as Appendices C and D to § 600.1107;

Now, therefore, for valuable consideration and the covenants hereinafter set forth, the parties hereto agree as follows:

1. The foregoing, including the Bid and specifically the definitions under section 1, are expressly incorporated herein by this reference.

2. Under AS 16.43.150(i), the Bidder agrees to permanently relinquish and have the CFEC revoke the permit.

3. The Bidder represents that, as of the date of submitting the contract, he or she is

the holder of record of the permit according to the CFEC official permit records.

4. Upon notification by the SRA to the Bidder that the SRA accepted the bid; the SRA will submit to the CFEC the Permit Holder's executed notice form (Appendix C to § 600.1107) and executed relinquishment form (Appendix D to § 600.1107).

5. In the event an authorized third party holds a security interest in the permit, NMFS will not make payment until receiving notice of written consent by the third party to the SRA and the CFEC on a form provided by the CFEC.

6. NMFS' payment to the accepted bidder in the exact amount of the accepted bid amount is full and complete consideration for the CFEC revoking the permit.

7. The bidder shall, upon the SRA or the CFEC request, furnish such additional documents, information, or take such other actions as may be reasonably required to enable the CFEC to implement relinquishment of the permit.

8. The bidder consents to the public release of any information provided in connection with the contract or program requirements after completion of the plan.

9. The contract contains the final terms and conditions of this agreement between the parties and represents the entire and exclusive agreement between them.

10. The contract terms are severable, and, in the event that any portion of the contract is held to be unenforceable, the remaining portion shall remain fully enforceable against the parties.

11. Any and all disputes involving the contract shall be governed by laws of the State of Alaska. The bidder expressly acknowledges that by submitting the Bid, he/she makes an irrevocable offer to relinquish the permit, and once having submitted the Bid, is not entitled to withdraw or in any way amend the Bid.

12. The failure of a bidder to perform his/her obligations under the Bid will result in irreparable damage to the SRA and its members upon submittal of the Plan to the Secretary for approval. Accordingly, the SRA and the bidder expressly acknowledge that money damages are an inadequate means of redress and agree that upon failure of the bidder to fulfill his/her obligations under the Bid that specific performance of those obligations may be obtained by suit in equity brought by the SRA in any court of competent jurisdiction without obligation to arbitrate such action.

APPENDIX C TO § 600.1107—CONDITIONAL NOTICE TO CFEC AND REQUEST BY PERMIT HOLDER

In support of my Bid to the Southeast Revitalization Association (SRA), I have executed this Conditional Notice and request and authorize the Southeast Revitalization Association (SRA) to submit this executed document to the Alaska Commercial Fisheries Entry Commission (CFEC) in the event that the SRA accepts my bid to permanently relinquish my Southeast Salmon Purse Seine Entry Permit under AS 16.43.150(i).

I hereby notify the CFEC that the SRA has accepted my Bid to permanently relinquish my Southeast Salmon Purse Seine Entry Permit # _____.

I request the CFEC: (1) not to renew my above-identified entry permit; and (2) not to authorize any transfer of my entry permit.

DATED this _____ day of _____, 2011.

APPENDIX D TO § 600.1107—CONDITIONAL RELINQUISHMENT OF SOUTHEAST SALMON PURSE SEINE ENTRY PERMIT

[AS 16.43.150(i)]

Upon satisfaction of the conditions that the Southeast Revitalization Association (SRA) accepts my bid and that NMFS agrees to pay my full bid amount to me, the SRA may submit this executed Conditional Relinquishment of Southeast Salmon Purse Seine Entry Permit to the Commercial Fisheries Entry Commission.

I fully understand this relinquishment of my permanent entry permit # _____ under AS 16.43.150(i) is permanent, and I will not be able to reinstate the permit.

DATED this _____ day of _____, 2011.

[76 FR 61990, Oct. 6, 2011]

§ 600.1108 Longline catcher processor subsector of the Bering Sea and Aleutian Islands (BSAI) non-pollock groundfish fishery program.

(a) *Purpose.* This section implements the capacity reduction program that Title II, section 219(e) of Public Law 108–447 established for the longline catcher processor subsector of the Bering Sea and Aleutian Islands (BSAI) non-pollock groundfish fishery.

(b) *Definitions.* Unless otherwise defined in this section, the terms defined in § 600.1000 of subpart L and § 600.1105 of subpart M of this part expressly apply to this section. The following terms have the following meanings for the purpose of this section:

Reduction fishery means the Hook & Line, Catcher Processor (Longline Subsector); sometimes referred to as the "H&LCP Subsector" portion of the BSAI Pacific cod ITAC (in metric tons) set by the North Pacific Fishery Management Council (NPFMC) in December of each year multiplied by 2,205 (i.e., the rounded number of pounds in a metric ton) or the Longline Subsector of the BSAI non-pollock groundfish

fishery that § 679.2 of this chapter defined as groundfish area/species endorsement.

(c) *Capacity Reduction Program.* As a result of the completion of the Selection Process, written notification from the FLCC to NMFS identifying the selected offeror, and submission of the reduction plan, the capacity reduction program is implemented as follows:

(1) *Loan repayment*—(i) *Term.* As authorized by section 219(B)(2) of the Appropriations Act, the capacity reduction loan (the Reduction Loan) shall be amortized over a thirty (30) year term. The Reduction Loan's original principal amount may not exceed the amount approved by the subsector. The subsector has currently approved a loan of two million seven hundred thousand dollars (\$2,700,000). Subsector Members acknowledge that in the event payments made under the Reduction Plan are insufficient to repay the actual loan, the term of repayment shall be extended by NMFS until the loan is paid in full. Repayment calculations and records will be kept separately for each program.

(ii) *Interest.* The Reduction Loan's interest rate will be the U.S. Treasury's cost of borrowing equivalent maturity funds plus 2 percent. NMFS will determine the Reduction Loan's initial interest rate when NMFS borrows from the U.S. Treasury the funds with which to disburse reduction payments. The initial interest rate will change to a final interest rate at the end of the Federal fiscal year in which NMFS borrows the funds from the U.S. Treasury. The final interest rate will be 2 percent plus a weighted average, throughout that fiscal year, of the U.S. Treasury's cost of borrowing equivalent maturity funds. The final interest rate will be fixed, and will not vary over the remainder of the reduction loan's 30-year term. The Reduction loan will be subject to a level debt amortization. There is no prepayment penalty.

(iii) *Fees.* The Reduction Loan shall be repaid by fees collected from the Longline Subsector. The fee amount will be based upon: The principal and interest due over the next twelve months divided by the product of the Longline Subsector. In the event that the Longline Subsector portion for the

ensuing year is not available, the Longline Subsector portion forecast from the preceding year will be used to calculate the fee.

(A) The fee will be expressed in cents per pound rounded up to the next one-tenth of a cent. For example: If the principal and interest due equal \$2,900,000 and the Longline Subsector portion equals 100,000 metric tons, then the fee per round weight pound of Pacific cod will equal 1.4 cents per pound. $[2,900,000 / (100,000 \times 2,205) = .01315]$. The fee will be assessed and collected on Pacific cod to the extent possible and if not, will be assessed and collected as provided for in paragraph (c)(1)(iii)(B) of this section.

(B) Fees must be assessed and collected on Pacific cod used for bait or discarded. Although the fee could be up to 5 percent of the ex-vessel production value of all post-reduction Longline Subsector landings, the fee will be less than 5 percent if NMFS projects that a lesser rate can amortize the fishery's reduction loan over the reduction loan's 30-year term. In the event that the total principal and interest due exceeds 5 percent of the ex-vessel Pacific cod revenues, a standardized additional fee will be assessed. The additional fee shall be one cent per pound round weight, which is calculated based on the latest available revenue records and NMFS conversion factors for pollock, arrowtooth flounder, Greenland turbot, skate, yellowfin sole and rock sole.

(C) To verify that the fees collected do not exceed 5 percent of the fishery revenues, the annual total of principal and interest due will be compared to the latest available annual Longline Subsector revenues. In the event that any of the components necessary to calculate the next year's fee are not available, or for any other reason NMFS believes the calculation must be postponed, the fee will remain at the previous year's amount until such a time that new calculations are made and communicated to the post-reduction fishery participants.

(D) It is possible that the fishery may not open during some years and no Longline Subsector portion of the ITAC is granted. Consequently, the fishery will not produce fee revenue

with which to service the reduction loan during those years. However, interest will continue to accrue on the principal balance. When this happens, if the fee rate is not already at the maximum 5 percent, NMFS will increase the fishery's fee rate to the maximum 5 percent of revenue for Pacific cod, apply all subsequent fee revenue first to the payment of accrued interest, and continue the maximum fee rates until all principal and interest payments become current. Once all principal and interest payments are current, NMFS will make a determination about adjusting the fee rate.

(iv) *Reduction loan.* NMFS has promulgated framework regulations generally applicable to all fishing capacity reduction programs in subpart L of this part. The reduction loan shall be subject to the provisions of § 600.1012, except that: the subsector members' obligation to repay the reduction loan shall be discharged by the owner of the Longline Subsector license regardless of which vessel catches fish under this license and regardless of who processes the fish in the reduction fishery in accordance with § 600.1013. Longline Subsector license owners in the reduction fishery shall be obligated to collect the fee in accordance with § 600.1013.

(v) *Collection.* The LLP License holders of vessels harvesting in the post-capacity reduction plan Longline Subsector shall be responsible for self-collecting the repayment fees owed by the LLP License holder. Fees shall be submitted to NMFS monthly and shall be due no later than fifteen (15) calendar days following the end of each calendar month.

(vi) *Recordkeeping and reporting.* The holder of the LLP Licenses on which vessels harvesting in the post-capacity reduction plan Longline Subsector is designated shall be responsible for compliance with the applicable recordkeeping and reporting requirements.

(2) *Agreement with Secretary.* The Selected Offeror shall complete and deliver to the FLCC for inclusion in the Reduction Plan submitted to NMFS, designee for the Secretary, a completed and fully executed Reduction Contract. The LLP License set forth on the Selected Offer shall be included as Reduc-

tion Fishing Interests in such Reduction Contract.

(d) *Decisions of the Auditor and the FLCC.* Time was of the essence in developing and implementing a Reduction Plan and, accordingly, the Offeror is limited to, and bound by, the decisions of the Auditor and the FLCC.

(1) The Auditor's examination of submitted applications, Offers, Prequalification Offers and Rankings was solely ministerial in nature. That is, the Auditor verified whether the documents submitted by Subsector Members were, on their face, consistent with each other and the Database, in compliance with the requirements set forth in the Reduction Agreement, and signed by an Authorized Party. The Auditor presumed the validity of all signatures on documents submitted. The Auditor made no substantive decisions as to compliance (e.g., whether an interim LLP License satisfies the requirements of the Act, or whether a discrepancy in the name appearing on LLP Licenses and other documents was material).

(2) [Reserved]

(e) *Specific performance.* The parties to the Reduction Agreement have agreed that the opportunity to develop and submit a capacity reduction program for the Longline Subsector under the terms of the Appropriations Act is both unique and finite and that failure of the Selected Offeror to perform the obligations provided by the Reduction Agreement will result in irreparable damage to the FLCC and the Subsector Members. Accordingly, the parties to the Reduction Agreement expressly acknowledge that money damages are an inadequate means of redress and agree that upon the failure of the Selected Offeror to fulfill their obligations under the Reduction Agreement that specific performance of those obligations may be obtained by suit in equity brought by the FLCC in any court of competent jurisdiction without obligation to arbitrate such action.

(f) *Miscellaneous—* (1) *Termination.* The Reduction Agreement may be terminated at any time prior to approval of the Reduction Plan by NMFS, on behalf of the Secretary, by written notice from 50 percent of Subsector Members.

(2) *Choice of law/venue.* The Reduction Agreement shall be construed and enforced in accordance with the laws of the State of Washington without regard to its choice of law provisions. The parties submit to the exclusive personal jurisdiction of the United States District Court located in Seattle, Washington, with respect to any litigation arising out of or relating to the Reduction Agreement or out of the performance of services hereunder.

(3) *Incorporation.* All executed counterparts of the Reduction Agreement, Application Forms and Offers constitute the agreement between the parties with respect to the subject matter of the Reduction Agreement and are incorporated into the Reduction Agreement as if fully written.

(4) *Counterparts.* The Reduction Agreement may be executed in multiple counterparts and will be effective as to signatories on the Effective Date. The Reduction Agreement may be executed in duplicate originals, each of which shall be deemed to be an original instrument. All such counterparts and duplicate originals together shall constitute the same agreement, whether or not all parties execute each counterpart.

(i) The facsimile signature of any party to the Reduction Agreement shall constitute the duly authorized, irrevocable execution and delivery of the Reduction Agreement as fully as if the Reduction Agreement contained the original ink signatures of the party or parties supplying a facsimile signature.

(ii) [Reserved]

(g) *Amendment.* All Subsector Members acknowledge that the Reduction Agreement, the Reduction Contract, and the Reduction Plan may be subject to amendment to conform to the requirements for approval of the Reduction Plan by NMFS on behalf of the Secretary. The Auditor shall distribute to each Subsector Member in electronic format the amended form of the Reduction Agreement, the Reduction Contract, and the Reduction Plan, which amended documents in the form distributed by the Auditor and identified by the Auditor by date and version, the version of each such document then in effect at the time of any

dispute arising or action taken shall be deemed binding upon the parties with respect to such dispute and/or action.

(h) *Warranties.* The Offeror must expressly warrant and represent in the Reduction Agreement that:

(1) The Offeror has had an opportunity to consult with an attorney or other advisors with respect to the Reduction Agreement, the Reduction Contract, and the Act and the ramifications of the ratification of the Reduction Plan contemplated therein;

(2) The Offeror has full understanding and appreciation of the ramifications of executing and delivering the Reduction Agreement and, free from coercion of any kind by the FLCC or any of its members, officers, agents and/or employees, executes and delivers the Reduction Agreement as the free and voluntary act of the Offeror;

(3) The execution and delivery of the Reduction Agreement, does not and will not conflict with any provisions of the governing documents of the Offeror;

(4) The person executing the Reduction Agreement has been duly authorized by the Offeror to execute and deliver the Reduction Agreement and to undertake and perform the actions contemplated herein; and

(5) The Offeror has taken all actions necessary for the Reduction Agreement to constitute a valid and binding obligation, enforceable in accordance with its terms.

(i) *Approval of the Reduction Plan.* Acceptance of the Offer is at the sole discretion of NMFS on behalf of the Secretary of Commerce. To be approved by NMFS, on behalf of the Secretary, any Reduction Plan developed and submitted in accordance with this section and subpart M of this part must be found by the Assistant Administrator of NMFS, to:

(1) Be consistent with the requirements of section 219(e) of the FY 2005 Appropriations Act (Pub. L. 108-447);

(2) Be consistent with the requirements of section 312(b) of the Magnuson-Stevens Fishery Conservation and Management Act (16 U.S.C. 1861(a)) except for the requirement that a Council or Governor of a State request such a program (as set out in section 312(b)(1))

§ 600.1200

50 CFR Ch. VI (10–1–21 Edition)

and for the requirements of section 312(b)(4);

(3) Contain provisions for a fee system that provides for full and timely repayment of the capacity reduction loan by the Longline Subsector and that it provide for the assessment of such fees;

(4) Not require a bidding or auction process;

(5) Result in the maximum sustained reduction in fishing capacity at the least cost and in the minimum amount of time; and

(6) Permit vessels in the Longline Subsector to be upgraded to achieve efficiencies in fishing operations provided that such upgrades do not result in the vessel exceeding the applicable length, tonnage, or horsepower limitations set out in Federal law or regulation.

(j) *Referendum.* The following provisions apply to the Reduction Plan of this section to the extent that they do not conflict with subpart L of this part including §§ 600.1009, 600.1010, 600.1013, and 600.1014 or 16 U.S.C. 1861a; except where the referendum is successful if a majority of all permit holders within the fishery vote in favor of the Reduction Program is accordance with 18 U.S.C. 1861a(d)(1)(B).

(k)(1) *Fee payment and collection system.* Upon successful completion of the Referendum discussed above as authorized by Public Law 108–447 and in accordance with 16 U.S.C. 1861a and § 600.1012 this fee collection system establishes:

(i) The subsector members' obligation to repay the reduction loan, and

(ii) The loan's principal amount, interest rate, and repayment term; and

(iii) In accordance with §§ 600.1013 through 600.1016, implements an industry fee system for the reduction fishery.

(2) *Reduction loan amount.* The reduction loan's original principal amount is \$2,700,000.

(3) *Interest accrual from inception.* Interest begins accruing on the reduction loan from the date which NMFS disburses such loan.

(4) *Interest rate.* The reduction loan's interest rate shall be the applicable rate which the U.S. Treasury deter-

mines at the end of fiscal year in which loan is disbursed plus 2 percent.

(5) *Repayment terms.* For the purpose of determining fee rates, the reduction loan's repayment term is 30 years from the date NMFS disburses the loan. However, fee collections shall continue indefinitely until the loan is fully repaid.

(6) *Reduction loan repayment.* The subsector members shall repay the reduction loan in accordance with § 600.1012. Both fish buyers and fish sellers are considered subsector members for purposes of fee collection, deposit, disbursement, and accounting in accordance with § 600.1013.

(i) Subsector members in the reduction fishery shall collect and pay the fee amount in accordance with § 600.1105;

(ii) Subsector members in the reduction fishery shall deposit and disburse, as well as keep records for and submit reports about, the applicable fees in accordance with § 600.1014, except the requirements under paragraphs (c) and (e) of this section. All collected fee revenue a fish buyer collects to repay the loan identified in paragraph (c) of this section shall be made to NMFS no later than fifteen (15) calendar days following the end of each calendar month. The annual reports identified in paragraph (e) of this section shall be submitted to NMFS by February 1 of each calendar year.

(iii) The reduction loan is, in all other respects, subject to the provisions of §§ 600.1012 through 600.1017.

(1) *Enforcement for failure to pay fees.* The provisions and requirements of § 600.1016 (Enforcement) shall also apply to fish sellers and fish buyers subject to this fishery.

[77 FR 58779, Sept. 24, 2012]

Subpart N—Shark Fin Removal, Possession, Transfer and Landing

SOURCE: 81 FR 42289, June 29, 2016, unless otherwise noted.

§ 600.1200 Purpose and scope.

The regulations in this subpart implement the Shark Conservation Act of 2010.

Fishery Conservation and Management

§ 600.1310

§ 600.1201 Relation to other laws.

(a) Regulations pertaining to conservation and management (including record keeping and reporting) for certain shark fisheries are also set forth in parts 635 (for Federal Atlantic Ocean, Gulf of Mexico, and Caribbean shark fisheries), 648 (for spiny dogfish fisheries), 660 (for fisheries off West Coast states), and 665 (for fisheries in the western Pacific) of this chapter.

(b) This subpart does not apply to an individual engaged in commercial fishing for smooth dogfish (*Mustelus canis*) when the conditions in § 635.30(c)(5) have been met.

(c) This subpart does not supersede state laws or regulations governing conservation and management of state shark fisheries in state waters.

§ 600.1202 Definitions.

(a) In addition to the definitions in the Magnuson-Stevens Act and in § 600.10, the terms used in this subpart have the following meanings:

Fin means any of the fins of a shark (including the tail) or a portion thereof.

Land or landing means offloading fish, or causing fish to be offloaded, from a fishing vessel, either to another vessel or to a shore side location or facility, or arriving in port, or at a dock, berth, beach, seawall, or ramp to begin offloading fish.

Naturally attached, with respect to a shark fin, means attached to the corresponding shark carcass through some portion of uncut skin.

(b) If there is any difference between a definition in this section and in § 600.10, the definition in this section is the operative definition for the purposes of this subpart.

§ 600.1203 Prohibitions.

(a) It is unlawful for any person to do, or attempt to do, any of the following:

(1) Remove a fin at sea.

(2) To have custody, control, or possession of a fin, aboard a fishing vessel, unless the fin is naturally attached.

(3) Transfer a fin from one vessel to another vessel at sea unless the fin is naturally attached.

(4) Receive a fin in a transfer from one vessel to another vessel at sea unless the fin is naturally attached.

(5) Land a fin unless the fin is naturally attached.

(6) Land a shark carcass without all of its fins naturally attached.

(7) Possess, purchase, offer to sell, or sell fins or shark carcasses taken, transferred, landed, or possessed in violation of this section.

(8) When requested, fail to allow an authorized officer or any employee of NMFS designated by a Regional Administrator, or by the Director of the Office of Sustainable Fisheries in the case of the Atlantic Highly Migratory Species, access to or inspection or copying of any records pertaining to the landing, sale, transfer, purchase, or other disposition of fins or shark carcasses.

(b) For purposes of this section, it is a rebuttable presumption that:

(1) If a fin is found aboard a vessel, other than a fishing vessel, without being naturally attached, such fin was transferred in violation of this section.

(2) If, after landing, the total weight of fins landed from any vessel exceeds five percent of the total weight of shark carcasses landed, such fins were taken, held, or landed in violation of this section.

Subpart O—Limited Access Privilege Programs

AUTHORITY: 16 U.S.C. 1801 *et seq.*

SOURCE: 73 FR 75973, Dec. 15, 2008, unless otherwise noted.

§§ 600.1300–600.1309 [Reserved]

§ 600.1310 New England and Gulf of Mexico Individual Fishing Quota Referenda.

(a) *Purpose and scope.* This section establishes procedures and guidelines for referenda to be conducted on Individual Fishing Quota (IFQ) program proposals developed by the New England Fishery Management Council (NEFMC) and the Gulf of Mexico Fishery Management Council (GMFMC). These procedures and guidelines also apply to IFQ program proposals developed by NMFS for fisheries under the jurisdiction of the NEFMC or GMFMC, except for certain

provisions that only apply to a fishery management council. This section provides guidance on developing voter eligibility and vote weighting, and establishes general procedures to ensure referenda are conducted in a fair and equitable manner.

(b) *Initiating IFQ referenda.* (1) The NEFMC and the GMFMC shall not submit, and the Secretary shall not approve, an FMP or FMP amendment that would create an IFQ program until the IFQ program proposal, as ultimately developed, has been approved by a referendum of eligible voters. Paragraph (h) of this section provides criteria for determining the outcome of IFQ referenda.

(2) To initiate a referendum on a proposed IFQ program:

(i) The relevant Council must have held public hearings on the FMP or FMP amendment in which the IFQ program is proposed;

(ii) The relevant Council must have considered public comments on the proposed IFQ program;

(iii) The relevant Council must have selected preferred alternatives for the proposed IFQ program;

(iv) The chair of the Council with jurisdiction over such proposed IFQ fishery must request a referendum on the proposed IFQ program in a letter to the appropriate NMFS Regional Administrator;

(v) The letter requesting initiation of a referendum must recommend voter eligibility criteria that are consistent with the applicable requirements of paragraph (c)(1) of this section and may also include recommended criteria for vote weighting. The letter must provide the rationale supporting the Council's recommendation, as well as such additional information and analyses as needed, consistent with applicable law and provisions of this section. If a Council recommends vote weighting criteria, the letter should fully describe the rationale for and the expected effects of such weighting on the referendum;

(vi) NEFMC referenda initiation letters must recommend criteria that are consistent with paragraph (c)(2)(iii) of this section for NMFS to use in determining the eligibility of other fishery participants to vote in the referendum;

include the minimum percentage of a crew member's total income that must have been earned during the eligibility periods in the proposed IFQ fishery as discussed in paragraph (c)(2)(ii) of this section; and include criteria for "referendum eligible vessels" as described in paragraph (c)(2)(i) of this section; and

(vii) GMFMC letters initiating referenda of multispecies permit holders in the Gulf of Mexico must include recommended criteria to be used in identifying those permit holders who have substantially fished the species to be included in the proposed IFQ program, along with alternatives to the recommendation, and supporting analyses. Guidelines for developing such recommendations are provided at paragraph (c)(3) of this section.

(3) Following a referendum that has failed to approve the IFQ proposal, any request from a Council for a new referendum in the same fishery must include an explanation of the substantive changes to the proposed IFQ program or the changes of circumstances in the fishery that would warrant initiation of an additional referendum.

(c) *Referenda voter eligibility*—(1) *Permit holders and other fishery participants.*

(i) To be eligible to vote in IFQ referenda, permit holders and other fishery participants must meet voter eligibility criteria.

(ii) Holders of multispecies permits in the Gulf of Mexico must have substantially fished the species proposed to be included in the IFQ program to be eligible to vote in a referendum on the proposed program.

(iii) When developing eligibility criteria for permit holders in an IFQ program referendum, the relevant Council or Secretary must consider, but is not limited to considering:

(A) The full range of entities likely to be eligible to receive initial quota allocation under the proposed IFQ program;

(B) Current and historical harvest and participation in the fishery; and

(C) Other factors as may be determined by the Council with jurisdiction over the fishery for which an IFQ program is proposed to be relevant to the fishery and to the proposed IFQ program.

(2) *Crew member eligibility in NEFMC IFQ referenda.* (i) For the purposes of this section, “referendum-eligible vessel” means a vessel, the permit holder or owner of which has been determined to be eligible to vote in the referendum on the basis of such vessel’s history or other characteristics.

(ii) To be eligible to vote in an NEFMC IFQ referendum, crew members must meet the following requirements:

(A) The crew member must have worked aboard a referendum-eligible vessel at sea, during the qualifying period(s), while the vessel was engaged in fishing;

(B) If requested, the crew member must produce documentary proof of employment or service as a crew member and income during the qualifying periods. Documents that may be required include, but are not limited to, signed crew contracts, records of payment, settlement sheets, income tax records, a signed statement from the permit holder, and other documentary evidence of the period of employment and the vessel upon which the crew member worked;

(C) During the qualifying period(s), the crew member must have derived a percentage of his/her total income from the fishery under the proposed IFQ program that is equal to or greater than the percentage determined to be significant relative to the economic value and employment practices of the fishery; and

(D) Any additional eligibility criteria promulgated by the NMFS.

(iii) When developing criteria for determining whether other fishery participants, including crew members, may participate in a NEFMC IFQ referendum, the Council or Secretary must consider, but is not limited to considering:

(A) The full range of entities likely to be eligible to receive initial quota under the proposed IFQ program;

(B) A crew member’s current and historical participation in the fishery aboard a referendum-eligible vessel;

(C) The economic value of the proposed IFQ fishery, employment practices in the proposed IFQ fishery, and other economic and social factors that would bear on a determination of what

percentage of a crew member’s total income from the fishery should be considered significant for the purposes of this section;

(D) The availability of documentary proof of employment and income to validate eligibility; and

(E) Any other factors as may be determined by the Council to be relevant to the fishery and the proposed IFQ program.

(3) *GMFMC’s substantially fished criterion.* When developing criteria for identifying those multispecies permit holders who have substantially fished the species to be included in the IFQ program proposal, the Council or Secretary must consider, but is not limited to considering:

(i) Current and historical harvest and participation in the fishery;

(ii) The economic value of and employment practices in the fishery; and

(iii) Any other factors determined by the Council with jurisdiction over the fishery for which an IFQ program is proposed to be relevant to the fishery and the proposed IFQ program.

(d) Council-recommended criteria under paragraph (c) of this section may include, but are not limited to, levels of participation or reliance on the fishery as represented by landings, sales, expenditures, or other considerations. A Council may also apply the same criteria for weighting eligible referendum votes.

(e) *Actions by NMFS: Review of Council referendum criteria and Secretarial IFQ plans.* (1) NMFS shall determine whether Council recommended referendum criteria will provide for a fair and equitable referendum and will be consistent with national standards and other provisions of the Magnuson-Stevens Act, and other applicable legal standards. The Secretary’s considerations shall include, but shall not be limited to:

(i) Whether the criteria are rationally connected to or further the objectives of the proposed IFQ program;

(ii) Whether the criteria are designed in such a way to prevent any person or single entity from obtaining an excessive share of voting privileges;

(iii) Whether the criteria are reasonable relative to the availability of documentary evidence and the possibility

of validating a participant's eligibility; and

(iv) Whether the referendum can be administered and executed in a fair and equitable manner, in a reasonable time, and without subjecting industry members, the Council, or NMFS to administrative burdens, costs or other requirements that would be considered onerous.

(2) If NMFS determines that referendum criteria would not provide for a fair and equitable referendum; would not be consistent with national standards and other provisions of the Magnuson-Stevens Act, and other applicable legal standards; or, in the case of a referendum request subsequent to a failed referendum in the same fishery, that the Council has not substantively amended the IFQ proposal or circumstances have not changed sufficiently to warrant initiation of a new referendum, NMFS shall inform the Council of the Agency's decision to deny the referendum request and of the reasons for the decision.

(3) If NMFS determines that referendum criteria would provide for a fair and equitable referendum and would be consistent with national standards and other provisions of the Magnuson-Stevens Act, and other applicable legal standards; then NMFS shall conduct the referendum in accordance with procedures and guidelines provided in paragraph (f) of this section.

(4) In accordance with paragraphs (c)(2) and (3) of this section, NMFS may initiate a referendum and promulgate referendum criteria for any IFQ program proposal advanced through a Secretarial fishery management plan (FMP) or FMP amendment under the authority of section 304(c) of the Magnuson-Stevens Act for a New England or Gulf of Mexico fishery. Such criteria must provide for a fair and equitable referendum and NMFS shall conduct the referendum in accordance with procedures and guidelines provided in paragraph (f) of this section.

(f) *Conducting IFQ referenda.* (1) NMFS shall promulgate specific referenda procedural requirements, voter eligibility requirements, and any vote weighting criteria through appropriate rulemaking.

(i) *Proposed rule.* A proposed rule shall seek public comment on the specific schedule, procedures, and other requirements for the referendum process.

(A) For NEFMC IFQ program referenda, the proposed rule shall establish procedures for documenting or certifying that other fishery participants, including crew members, meet the proposed voter eligibility criteria.

(B) For GMFMC IFQ program referenda for multispecies permit holders, the proposed rule shall include criteria to be used in identifying those permit holders who have substantially fished the species that are the subject of the proposed IFQ program.

(ii) *Final rule.* (A) If NMFS decides to proceed with the referendum after reviewing public comments, NMFS shall publish implementing regulations through a final rule in the FEDERAL REGISTER as soon as practicable after the Council determines the IFQ program proposal and supporting analyses are complete and ready for Secretarial review. Otherwise, NMFS shall publish a notice in the FEDERAL REGISTER to inform the Council and the public of its decision not to conduct the referendum, as proposed, including reasons for the Agency's decision.

(B) Upon implementation of the referendum through a final rule, NMFS shall provide eligible voters referenda ballots and shall make available information about the schedule, procedures, and eligibility requirements for the referendum process and the proposed IFQ program.

(2) NMFS shall notify the public in the region of the subject fishery of the referendum eligibility criteria.

(3) Individuals who wish to vote as other fishery participants in a NEFMC IFQ referendum, based on criteria established by the NEFMC under (c)(2), must contact NMFS and produce all required documentation and certifications to receive a ballot. NMFS shall provide sufficient time in the referendum process to allow for crew members to request, receive, and submit referendum ballots.

(g) *Referenda ballots.* (1) Ballots shall be composed such that voters will indicate approval or disapproval of the preferred IFQ program proposal.

Fishery Conservation and Management

§ 600.1400

(2) NMFS may require voters to self-certify on referenda ballots that they meet voter eligibility criteria. To be considered valid, ballots must be signed by the eligible voter.

(3) Referenda ballots shall be numbered serially or otherwise designed to guard against submission of duplicate ballots.

(4) If votes are weighted, the value of weighted votes shall be indicated on the ballot. The weighted vote must be cast as a single unit. Its value may not be split. The full value must be applied to the selection made on the ballot.

(5) NMFS shall allow at least 30 days for eligible voters to receive and return their ballots and shall specify a deadline by which ballots must be received. Ballots received after the deadline shall not be considered valid.

(h) *Determining the outcome of an IFQ referendum.* (1) NMFS shall tally and announce the results of the referendum within 90 days of the deadline by which completed ballots must be received. NMFS may declare a referendum invalid if the Agency can demonstrate the referendum was not conducted in accordance with the procedures established in the final rule implementing the referendum.

(2) A NEFMC IFQ program referendum shall be considered approved only if more than $\frac{2}{3}$ of the votes submitted on valid ballots are in favor of the referendum question.

(3) A GMFMC IFQ program referendum shall be considered approved only if a majority of the votes submitted on valid ballots are in favor of the referendum question.

(i) *Council actions.* (1) If NMFS notifies a Council that an IFQ program proposal has been approved through a referendum, then the Council may submit the associated FMP or FMP amendment for Secretarial review and implementation.

(2) Any changes that would modify an IFQ program proposal that was reviewed by referenda voters may invalidate the results of the referendum and require the modified program proposal to be approved through a new referendum before it can be submitted to the Secretary for review and implementation.

(3) If NMFS notifies a Council that an IFQ referendum has failed, then the Council may modify its IFQ program proposal and request a new referendum pursuant to paragraph (b) of this section.

Subpart P—Marine Recreational Fisheries of the United States

SOURCE: 73 FR 79717, Dec. 30, 2008, unless otherwise noted.

§ 600.1400 Definitions.

In addition to the definitions in the Magnuson-Stevens Fishery Conservation and Management Act (Magnuson-Stevens Act) and in § 600.10 of this title, the terms used in this subpart have the following meanings. For purposes of this subpart, if applicable, the terms used in this subpart supersede those used in § 600.10.

Anadromous species means the following:

American shad: *Alosa sapidissima*
Blueback herring: *Alosa aestivalis*
Alewife: *Alosa pseudoharengus*
Hickory shad: *Alosa mediocris*
Alabama shad: *Alosa alabamiae*
Striped bass: *Morone saxatilis*
Rainbow smelt: *Osmerus mordax*
Atlantic salmon: *Salmo salar*
Chinook, or king, salmon: *Oncorhynchus tshawytscha*
Coho, or silver, salmon: *Oncorhynchus kisutch*
Pink salmon: *Oncorhynchus gorbuscha*
Sockeye salmon: *Oncorhynchus nerka*
Chum salmon: *Oncorhynchus keta*
Steelhead: *Oncorhynchus mykiss*
Coastal cutthroat trout: *Oncorhynchus clarki clarki*
Eulachon or candlefish: *Thaleichthys pacificus*
Dolly varden: *Salvelinus malma*
Sheefish or inconnu: *Stenodus leucichthys*
Atlantic sturgeon: *Acipenser oxyrinchus oxyrinchus*
Shortnose sturgeon: *Acipenser brevirostrum*
Gulf sturgeon: *Acipenser oxyrinchus desotoi*
White sturgeon: *Acipenser transmontanus*
Green sturgeon: *Acipenser medirostris*

Angler means a person who is angling (see 50 CFR 600.10) in tidal waters.

Authorized officer has the same meaning as in 50 CFR 600.10.

Combination license means either:

(1) A single state fishing license that permits fishing in fresh waters and tidal waters at one price; or

§ 600.1405

50 CFR Ch. VI (10–1–21 Edition)

(2) A single state license that permits a group of fishing and hunting activities, including fishing in tidal waters, at a price that is less than the sum of the cost of the individual licenses.

Commercial fishing has the same meaning as in 16 U.S.C. 1802.

Continental shelf fishery resources has the same meaning as in 16 U.S.C. 1802.

Exempted state means a state that has been designated as an exempted state by NMFS pursuant to § 600.1415.

For-hire fishing vessel means a vessel on which passengers are carried to engage in angling or spear fishing, from whom a consideration is contributed as a condition of such carriage, whether directly or indirectly flowing to the owner, charterer, operator, agent or any other person having an interest in the vessel.

Indigenous people means persons who are documented members of a federally recognized tribe or Alaskan Native Corporation or persons who reside in the western Pacific who are descended from the aboriginal people indigenous to the region who conducted commercial or subsistence fishing using traditional fishing methods, including angling.

Spearfishing means fishing for, attempting to fish for, catching or attempting to catch fish in tidal waters by any person with a spear or a powerhead (see 50 CFR 600.10).

State has the same meaning as in 16 U.S.C. 1802.

Tidal waters means waters that lie below mean high water and seaward of the first upstream obstruction or barrier to tidal action and that are subject to the ebb and flow of the astronomical tides under ordinary conditions.

[77 FR 42191, July 18, 2012]

§ 600.1405 Angler registration.

(a) Effective January 1, 2010, the requirements of this section apply to any person who does any of the following:

(1) Engages in angling or spearfishing for:

- (i) Fish in the EEZ;
- (ii) Anadromous species in any tidal waters; or
- (iii) Continental Shelf fishery resources beyond the EEZ.

(2) Operates a for-hire fishing vessel in the EEZ.

(3) Operates a for-hire fishing vessel that engages in angling or spearfishing for:

(i) Anadromous species in any tidal waters; or

(ii) Continental shelf fishery resources beyond the EEZ.

(4) Possesses equipment used for angling or spearfishing and also possesses:

(i) Fish in the EEZ;

(ii) Anadromous species in any tidal waters; or

(iii) Continental shelf fishery resources beyond the EEZ.

(b) No person may engage in the activities listed in paragraph (a) of this section unless that person:

(1) Has registered annually with NMFS in accordance with § 600.1410 of this part;

(2) Holds a valid fishing license issued by, or is registered by, an exempted state;

(3) Is a resident of an exempted state, but is not required to hold a fishing license, or to be registered to fish, under the laws of that state;

(4) Holds a permit issued by NMFS for for-hire fishing under 50 CFR 622.4(a)(1), 635.4(b), 648.4(a), or 660.707(a)(1);

(5) Is under the age of 16;

(6) Is angling aboard a for-hire fishing vessel that is in compliance with NMFS and state for-hire vessel permit, license or registration requirements;

(7) Holds a commercial fishing license or permit issued by NMFS or a state and is lawfully fishing or in possession of fish taken under the terms and conditions of such license or permit;

(8) Holds an HMS Angling permit under 50 CFR 635.4(c) or a MHI Non-commercial Bottomfish permit under 50 CFR 665.203(a)(2);

(9) Holds a subsistence fishing license or permit issued by NMFS or a state and is lawfully fishing or in possession of fish taken under the terms and conditions of such license or permit; or

(10) Is angling or spearfishing for, or operating a for-hire fishing vessel that engages in fishing for, anadromous species or Continental Shelf fishery resources, in waters under the control of a foreign nation.

Fishery Conservation and Management

§ 600.1416

(c) Any angler or spear fisher or operator of a for-hire vessel must, on request of an authorized officer, produce the NMFS registration number and certificate or evidence that such person or for-hire vessel operator is exempt from the registration requirement pursuant to § 600.1405(b)(2) through § 600.1405(b)(10).

[73 FR 79717, Dec. 30, 2008, as amended at 77 FR 42191, July 18, 2012]

§ 600.1410 Registry process.

(a) A person may register through the NMFS web site at *www.nmfs.noaa.gov* or by calling a toll-free telephone number available by contacting NMFS or at the NMFS website.

(b) Individuals must submit their name; address; telephone number; date of birth; region(s) of the country in which they intend to fish in the upcoming year; and additional information necessary for the issuance or administration of the registration.

(c) To register a for-hire fishing vessel, the vessel owner or operator must submit vessel owner name, address, date of birth, and telephone number; vessel operator (if different) name, address, date of birth and telephone number; vessel name; vessel's state registration or U.S. Coast Guard documentation number; home port or principal area of operation; and additional information necessary for the issuance or administration of the registration.

(d) NMFS will issue a registration number and certificate to registrants. A registration number and certificate will be valid for one year from the date on which it is issued.

(e) It shall be unlawful for any person to submit false, inaccurate or misleading information in connection with any registration request.

(f) *Fees.* Effective January 1, 2011, persons registering with NMFS must pay an annual fee. The annual schedule for such fees will be published in the FEDERAL REGISTER. Indigenous people engaging in angling or spear fishing must register, but are not required to pay a fee.

§ 600.1415 Procedures for designating exempted states-general provisions.

(a) States with an exempted state designation must:

(1) Submit state angler and for-hire vessel license holder data to NMFS for inclusion in a national or regional registry database; or

(2) Participate in regional surveys of recreational catch and effort and make the data from those surveys available to NMFS.

(b) Process for getting an exempted state designation:

(1) To apply for exempted state designation, a state must submit:

(i) A complete description of the data it intends to submit to NMFS;

(ii) An assessment of how the data conforms to the requirements of §§ 600.1416 or 600.1417;

(iii) A description of the database in which the data exists and will be transmitted; and

(iv) The proposed process, schedule and frequency of submission of the data.

(2) If NMFS determines the submitted material meets the requirements of §§ 600.1416 or 600.1417, NMFS will initiate negotiations with the state on a Memorandum of Agreement. The Memorandum of Agreement must include the terms and conditions of the data-sharing program. The Memorandum of Agreement and state designation may be limited to data-sharing related to only anglers or only for-hire fishing vessels.

(3) Following execution of a Memorandum of Agreement, NMFS will publish a notice of the exempted state designation in the FEDERAL REGISTER.

§ 600.1416 Requirements for exempted state designation based on submission of state license holder data.

(a) A state must annually update and submit to NMFS, in a format consistent with NMFS guidelines, the name, address and, to the extent available in the state's database, telephone number and date of birth, of all persons and for-hire vessel operators, and the name and state registration number or U.S. Coast Guard documentation number of for-hire vessels that are licensed to fish, or are registered as fishing, in the EEZ, in the tidal waters of the

§ 600.1417

state, or for anadromous species. The Memorandum of Agreement developed in accordance with § 600.1415(b)(2) will specify the timetable for a state to compile and submit complete information telephone numbers and dates of birth for its license holders/registrants. The waters of the state for which such license-holder data must be submitted will be specified in the Memorandum of Agreement.

(b) A state is eligible to be designated as an exempted state even if its licensing program excludes anglers who are:

(1) Under 17 years of age;

(2) Over age 59 (see § 600.1416(d)(1));

(3) Customers on licensed for-hire vessels;

(4) Customers on state-licensed fishing piers, provided that the pier license holder provides to the state complete angler contact information or angler effort information for users of the pier;

(5) On active military duty while on furlough; or

(6) Disabled or a disabled Veteran as defined by the state.

(7) Fishing on days designated as “free fishing days” by states. “*Free fishing days*” means fishing promotion programs by which states allow new anglers to fish for a specified day without a license or registration.

(c) Unless the state can demonstrate that a given category of anglers is so small it has no significant probability of biasing estimates of fishing effort if these anglers are not included in a representative sample, a state may not be designated as an exempted state if its licensing or registration program excludes anglers in any category other than those listed in paragraph (b) of this section.

(d) Required enhancements to exempted state license-holder data. An exempted state must submit the following angler identification data by Jan. 1, 2012, or within two years of the effective date of the Memorandum of Agreement, whichever is later, and thereafter in accordance with the Memorandum of Agreement. States that provide NMFS with notice that they are required to enact legislation or to enter into formal memoranda of agreement or contracts with other state agencies to comply with this requirement must submit the data with-

50 CFR Ch. VI (10–1–21 Edition)

in three years of the effective date of the Memorandum of Agreement:

(1) Name, address and telephone number, updated annually, of excluded anglers over age 59, unless the state can demonstrate that the number of anglers excluded from the license or registration requirement based on having a date of birth before June 1, 1940 is so small it has no significant probability of biasing estimates of fishing effort if these anglers are not included in a representative sample;

(2) Name, address and telephone number, updated annually, of holders of state lifetime and multi-year licenses;

(3) Name, address and telephone number of state combination license holders who fished in tidal waters in the prior year, or who intend to fish in tidal waters. The Memorandum of Agreement will define the boundaries of the state’s tidal waters for this purpose.

[73 FR 79717, Dec. 30, 2008, as amended at 77 FR 42191, July 18, 2012]

§ 600.1417 Requirements for exempted state designation based on submission of recreational survey data.

(a) To be designated as an exempted state based on the state’s participation in a regional survey of marine and anadromous recreational fishing catch and effort, a state may submit to NMFS a proposal that fully describes the state’s participation in a qualifying regional survey, and the survey’s sample design, data collection and availability.

(b) A qualifying regional survey must:

(1) Include all of the states within each region as follows:

(i) Maine, New Hampshire, Massachusetts, Rhode Island, Connecticut, New York, New Jersey, Pennsylvania, Delaware, Maryland, Virginia, North Carolina, South Carolina, Georgia and Florida (Atlantic coast);

(ii) Florida (Gulf of Mexico coast), Alabama, Mississippi, Louisiana, and Texas;

(iii) Puerto Rico;

(iv) U.S. Virgin Islands;

(v) California, Oregon and Washington;

(vi) Alaska;

(vii) Hawaii; or

Fishery Conservation and Management

§ 600.1500

(viii) American Samoa, Guam and the Commonwealth of the Northern Mariana Islands.

(2) Utilize angler registry data, or direct field counts to obtain angler effort, or other appropriate statistical means to obtain fishing effort;

(3) Utilize angler registry data to identify individuals to be surveyed by telephone, mail or Internet if such regional survey includes a telephone survey component; and

(4) Meet NMFS survey design and data collection standards.

[73 FR 79717, Dec. 30, 2008, as amended at 77 FR 42192, July 18, 2012]

Subpart Q—Vessel Monitoring System Type-Approval

SOURCE: 85 FR 40921, July 8, 2020, unless otherwise noted.

§ 600.1500 Definitions and acronyms.

In addition to the definitions in the Magnuson-Stevens Act and in § 600.10, and the acronyms in § 600.15, the terms and acronyms in this subpart have the following meanings:

Authorized entity means a person, defined at 16 U.S.C. 1802(36), authorized to receive data transmitted by a VMS unit.

Bench configuration means the configuration of a VMS unit after it has been customized to meet the Federal VMS requirements.

Bundle means a mobile communications service and VMS unit sold as a package and considered one product. If a bundle is type-approved, the requestor will be the type-approval holder for the bundled MCS and VMS unit.

Cellular communication means the wireless transmission of VMS data via a cellular network.

Communication class means the satellite or cellular communications operator from which communications services originate.

Electronic form means a pre-formatted message transmitted by a VMS unit that is required for the collection of data for a specific fishery program (e.g., declaration system, catch effort reporting).

Enhanced Mobile Transceiver Unit (EMTU) means a type of MTU that is

capable of supporting two-way communication, messaging, and electronic forms transmission via satellite. An EMTU is a transceiver or communications device, including an antenna, and dedicated message terminal and display which can support a dedicated input device such as a tablet or keyboard, installed on fishing vessels participating in fisheries with a VMS requirement.

Enhanced Mobile Transceiver Unit, Cellular Based (EMTU-C) means an EMTU that transmits and receives data via cellular communications, except that it may not need a dedicated message terminal and display component at the time of approval as explained at § 600.1502(a)(6). An EMTU-C only needs to be capable of transmission and reception when in the range of a cellular network.

Latency means the state of untimely delivery of Global Positioning System position reports and electronic forms to NMFS (i.e., information is not delivered to NMFS consistent with timing requirements of this subpart).

Mobile Communications Service (MCS) means the satellite and/or cellular communications services used with particular VMS units.

Mobile Communications Service Provider (MCSP) means an entity that sells VMS satellite and/or cellular communications services to end users.

Mobile Transmitter Unit (MTU) means a VMS unit capable of transmitting Global Positioning System position reports via satellite. (MTUs are no longer approved for new installations on VMS vessels).

Notification Letter means a letter issued by NMFS to a type-approval holder identifying an alleged failure of a VMS unit, MCS, or the type-approval holder to comply with the requirements of this subpart.

Position report means the unique global positioning system (GPS) report generated by a vessel's VMS unit, which identifies the vessel's latitude/longitude position at a point in time. Position reports are sent from the VMS unit via the MCS, to authorized entities.

Requestor means a vendor seeking type-approval.

Service life means the length of time during which a VMS unit remains fully operational with reasonable repairs.

Sniffing means the unauthorized and illegitimate monitoring and capture, through use of a computer program or device, of data being transmitted over a network.

Spoofing means the reporting of a false Global Positioning System position and/or vessel identity.

Time stamp means the time, in hours, minutes, and seconds in a position report. Each position report is time stamped.

Type-approval holder means an applicant whose type-approval request has been approved pursuant to this subpart.

Vendor means a commercial provider of VMS hardware, software, and/or mobile communications services.

Vessel Monitoring System (VMS) means, for purposes of this subpart, a satellite and/or cellular based system designed to monitor the location and movement of vessels using onboard VMS units that send Global Positioning System position reports to an authorized entity.

Vessel Monitoring System (VMS) data means the data transmitted to authorized entities from a VMS unit.

Vessel Monitoring System Program means the Federal program that manages the vessel monitoring system, data, and associated program-components, nationally and in each NMFS region; it is housed in the Department of Commerce, National Oceanic and Atmospheric Administration, National Marine Fisheries Service's Office of Law Enforcement.

Vessel Monitoring System (VMS) Unit means MTU, EMTU or EMTU-C, as well as the units that can operate as both an EMTU and an EMTU-C.

Vessel Monitoring System (VMS) Vessels means vessels that operate in federally managed fisheries with a requirement to carry and operate a VMS unit.

§ 600.1501 Vessel Monitoring System type-approval process.

(a) *Applicability.* Unless otherwise specified, this section applies to EMTUs, EMTU-Cs, units that operate as both an EMTU and EMTU-C, and MCSs. Units that can operate as both

an EMTU and EMTU-C must meet the requirements for both an EMTU and an EMTU-C in order to gain type-approval as both. MTUs are no longer eligible for type-approval.

(b) *Application submission.* A requestor must submit a written type-approval request and electronic copies of supporting materials that include the information required under this section to the NMFS Office of Law Enforcement (OLE) at: U.S. Department of Commerce; National Oceanic and Atmospheric Administration; National Marine Fisheries Service; Office of Law Enforcement; Attention: Vessel Monitoring System Office; 1315 East-West Highway, SSMC3, Suite 3301, Silver Spring, Maryland 20910.

(c) *Application requirements.* (1) EMTU, EMTU-C, and MCS Identifying Information: In a type-approval request, the requestor should indicate whether the requestor is seeking approval for an EMTU, EMTU-C, MCS, or bundle and must specify identifying characteristics, as applicable: Communication class; manufacturer; brand name; model name; model number; software version and date; firmware version number and date; hardware version number and date; antenna type; antenna model number and date; tablet, monitor or terminal model number and date; MCS to be used in conjunction with the EMTU/EMTU-C; entity providing MCS to the end user; and current global and regional coverage of the MCS.

(2) Requestor-approved third party business entities: The requestor must provide the business name, address, phone number, contact name(s), email address, specific services provided, and geographic region covered for the following third party business entities:

(i) Entities providing bench configuration for the EMTU/EMTU-C at the warehouse or point of supply.

(ii) Entities distributing/selling the EMTU/EMTU-C to end users.

(iii) Entities currently approved by the requestor to install the EMTU/EMTU-C onboard vessels.

(iv) Entities currently approved by the requestor to offer a limited warranty.

(v) Entities approved by the requestor to offer a maintenance service agreement.

(vi) Entities approved by the requestor to repair or install new software on the EMTU/EMTU-C.

(vii) Entities approved by the requestor to train end users.

(viii) Entities approved by the requestor to advertise the EMTU/EMTU-C.

(ix) Entities approved by the requestor to provide other customer services.

(3) **Regulatory Requirements and Documentation:** In a type-approval request, a requestor must:

(i) Identify the NMFS region(s) and/or Federal fisheries for which the requestor seeks type-approval.

(ii) Include copies of, or citation to, applicable VMS regulations and requirements in effect for the region(s) and Federal fisheries identified under paragraph (c)(3)(i) of this section that require use of VMS.

(iii) Provide a table with the type-approval request that lists in one column each requirement set out in §§ 600.1502 through 600.1509 and regulations described under paragraph (c)(3)(ii) of this section. NMFS OLE will provide a template for the table upon request. The requestor must indicate in subsequent columns in the table:

(A) Whether the requirement applies to the type-approval; and

(B) Whether the EMTU, EMTU-C, MCS, or bundle meets the requirement.

(iv) Certify that the features, components, configuration and services of the requestor's EMTU/EMTU-C, MCS, or bundle comply with each requirement set out in §§ 600.1502 through 600.1509 and the regulations described under paragraph (c)(3)(ii) of this section.

(v) Certify that, if the request is approved, the requestor agrees to be responsible for ensuring compliance with each requirement set out in §§ 600.1502 through 600.1509 and the regulations described under paragraph (c)(3)(ii) of this section over the course of the type-approval period.

(vi) Provide NMFS OLE with two EMTU/EMTU-Cs loaded with forms and software, if applicable, for each NMFS region or Federal fishery, with activated MCS, for which a type-approval

request is submitted for a minimum of 90 calendar days for testing and evaluation. For EMTU-Cs, the forms and software may be loaded onto a dedicated message terminal and display component to which the EMTU-C can connect. Copies of forms currently used by NMFS are available upon request. As part of its review, NMFS OLE may perform field tests and at-sea trials that involve demonstrating every aspect of EMTU/EMTU-C and communications operation. The requestor is responsible for all associated costs including paying for: Shipping of the EMTU/EMTU-C to the required NMFS regional offices and/or headquarters for testing; the MCS during the testing period; and shipping of the EMTU/EMTU-C back to the vendor.

(vii) Provide thorough documentation for the EMTU/EMTU-C and MCS, including: EMTU/EMTU-C fact sheets; installation guides; user manuals; any necessary interfacing software; MCS global and regional coverage; performance specifications; and technical support information.

(d) *Certification.* A requestor seeking type-approval of an EMTU/EMTU-C to operate with a class or type of communications, as opposed to type-approval for use with a specific MCS, shall certify that the EMTU/EMTU-C meets requirements under this subpart when using at least one MCSP within that class or type of communications.

(e) *Notification.* Unless additional time is required for EMTU/EMTU-C testing, NMFS OLE will notify the requestor within 90 days after receipt of a complete type-approval request as follows:

(1) If a request is approved or partially approved, NMFS OLE will provide notice as described under § 600.1510 and the type-approval letter will serve as official documentation and notice of type-approval. OLE will publish and maintain the list of type-approved units on their Vessel Monitoring System web page.

(2) If a request is disapproved or partially disapproved:

(i) OLE will send a letter to the requestor that explains the reason for the disapproval/partial disapproval.

(ii) The requestor may respond to NMFS OLE in writing with additional

§ 600.1502

information to address the reasons for disapproval identified in the NMFS OLE letter. The requestor must submit this response within 21 calendar days of the date of the OLE letter sent under paragraph (e)(2)(i) of this section.

(iii) If any additional information is submitted under paragraph (e)(2)(ii) of this section, NMFS OLE, after reviewing such information, may either take action under paragraph (e)(1) of this section or determine that the request should continue to be disapproved or partially disapproved. In the latter case, the NMFS OLE Director will send a letter to the requestor that explains the reasons for the continued disapproval/partial disapproval. The NMFS OLE Director's decision is final upon issuance of this letter and is not appealable.

§ 600.1502 Communications functionality.

(a) Unless otherwise specified, this subsection applies to all VMS units. Units that can operate as both an EMTU and EMTU-C must meet the requirements for both an EMTU and an EMTU-C in order to gain type-approval as both. The VMS unit must:

(1) Be able to transmit all automatically-generated position reports.

(2) Provide visible or audible alarms onboard the vessel to indicate malfunctioning of the VMS unit.

(3) Be able to disable non-essential alarms in non-Global Maritime Distress and Safety System (GMDSS) installations.

(4) EMTU/EMTU-Cs must be able to send communications that function uniformly throughout the geographic area(s) covered by the type-approval, except an EMTU-C only needs to be capable of transmission and reception when in the range of a cellular network.

(5) EMTU/EMTU-Cs must have two-way communications between the unit and authorized entities, via MCS, or be able to connect to a device that has two-way communications.

(6) EMTU/EMTU-Cs must be able to run or to connect to a dedicated message terminal and display component that can run software and/or applications that send and receive electronic forms and internet email messages for

50 CFR Ch. VI (10–1–21 Edition)

the purpose of complying with VMS reporting requirements in Federal fisheries. Depending on the reporting requirements for the fishery(s) in which the requester is seeking type-approval, an EMTU-C type-approval may not require the inclusion of a dedicated message terminal and display component at the time of approval, but the capability to support such a component must be shown.

(7) Have messaging and communications mechanisms that are completely compatible with NMFS vessel monitoring and surveillance software.

(b) In addition, messages and communications from a VMS unit must be able to be parsed out to enable clear billing of costs to the government and to the owner of a vessel or EMTU/EMTU-C, when necessary. Also, the costs associated with position reporting and the costs associated with other communications (for example, personal email or communications/reports to non-NMFS Office of Law Enforcement entities) must be parsed out and billed to separate parties, as appropriate.

§ 600.1503 Position report data formats and transmission.

Unless otherwise specified, this subsection applies to all VMS units, MCSs and bundles. Units that can operate as both an EMTU and EMTU-C must meet the requirements for both an EMTU and an EMTU-C in order to gain type-approval as both. To be type-approved in any given fishery, a VMS unit must also meet any additional positioning information as required by the applicable VMS regulations and requirements in effect for each fishery or region for which the type-approval applies. The VMS unit must meet the following requirements:

(a) Transmit all automatically-generated position reports, for vessels managed individually or grouped by fleet, that meet the latency requirement under § 600.1504.

(b) When powered up, must automatically re-establish its position reporting function without manual intervention.

(c) Position reports must contain all of the following:

(1) Unique identification of an EMTU/EMTU-C and clear indication if the unit is an EMTU-C.

Fishery Conservation and Management

§ 600.1505

(2) Date (year/month/day with century in the year) and time stamp (GMT) of the position fix.

(3) Date (year/month/day with century in the year) and time stamp (GMT) that the EMTU-C position report was sent from the EMTU-C.

(4) Position fixed latitude and longitude, including the hemisphere of each, which comply with the following requirements:

(i) The position fix precision must be to the decimal minute hundredths.

(ii) Accuracy of the reported position must be within 100 meters (328.1 ft).

(d) An EMTU/EMTU-C must have the ability to: (1) Store 1,000 position fixes in local, non-volatile memory.

(2) Allow for defining variable reporting intervals between 5 minutes and 24 hours.

(3) Allow for changes in reporting intervals remotely and only by authorized users.

(e) An EMTU/EMTU-C must generate specially identified position reports upon:

(1) Antenna disconnection.

(2) Loss of positioning reference signals.

(3) Security events, power-up, power down, and other status data.

(4) A request for EMTU/EMTU-C status information such as configuration of programming and reporting intervals.

(5) The EMTUs loss of the mobile communications signals.

(6) An EMTU must generate a specially identified position report upon the vessel crossing of a pre-defined geographic boundary.

§ 600.1504 Latency requirement.

(a) Ninety percent of all pre-programmed or requested Global Positioning System position reports during each 24-hour period must reach NMFS within 15 minutes or less of being sent from the VMS unit, for 10 out of 11 consecutive days (24-hour time periods).

(b) NMFS will continually examine latency by region and by type-approval holder.

(c) Exact dates for calculation of latency will be chosen by NMFS. Days in which isolated and documented system outages occur will not be used by

NMFS to calculate a type-approval holder's latency.

§ 600.1505 Messaging.

(a) Unless otherwise specified, this section applies to all VMS units, MCSs, and bundles. Units that can operate as both an EMTU and EMTU-C must meet the requirements for both an EMTU and an EMTU-C in order to gain type-approval as both. Depending on the reporting requirements for the fishery(s) in which the requester is seeking type-approval, an EMTU-C type-approval may not require the inclusion of a dedicated message terminal and display component at the time of approval, but the capability to support such a component must be shown. To be type-approved in any given fishery, a VMS unit must meet messaging information requirements under the applicable VMS regulations and requirements in effect for each fishery or region for which the type-approval applies. The VMS unit must also meet the following requirements:

(b) An EMTU must be able to run software and/or applications that send email messages for the purpose of complying with VMS reporting requirements in Federal fisheries that require email communication capability. An EMTU-C must be able to run or connect to a device that can run such software and/or applications. In such cases, the EMTU/EMTU-C messaging must provide for the following capabilities:

(1) Messaging from vessel to shore, and from shore to vessel by authorized entities, must have a minimum supported message length of 1 KB. For EMTU-Cs, this messaging capability need only be functional when in range of shore-based cellular communications.

(2) There must be a confirmation of delivery function that allows a user to ascertain whether a specific message was successfully transmitted to the MCS email server(s).

(3) Notification of failed delivery to the EMTU/EMTU-C must be sent to the sender of the message. The failed delivery notification must include sufficient information to identify the specific message that failed and the cause of failure (*e.g.*, invalid address, EMTU/EMTU-C switched off, *etc.*).

(4) The EMTU/EMTU-C must have an automatic retry feature in the event that a message fails to be delivered.

(5) The EMTU/EMTU-C user interface must:

(i) Support an “address book” capability and a function permitting a “reply” to a received message without re-entering the sender’s address.

(ii) Provide the ability to review by date order, or by recipient, messages that were previously sent. The EMTU/EMTU-C terminal must support a minimum message history of 50 sent messages—commonly referred to as an “Outbox” or “Sent” message display.

(iii) Provide the ability to review by date order, or by sender, all messages received. The EMTU/EMTU-C terminal must support a minimum message history of at least 50 messages in an inbox.

§ 600.1506 Electronic forms.

Unless otherwise specified, this subsection applies to all EMTUs, EMTU-Cs, MCSs, and bundles.

(a) *Forms.* An EMTU/EMTU-C must be able to run, or to connect to and transmit data from a device that can run electronic forms software. Depending on the reporting requirements for the fishery(s) in which the requester is seeking type-approval, an EMTU-C type-approval may not require the inclusion of a dedicated message terminal and display component at the time of approval, but the capability to support such a component must be shown. The EMTU/EMTU-C must be able to support forms software that can hold a minimum of 20 electronic forms, and it must also meet any additional forms requirements in effect for each fishery or region for which the type-approval applies. The EMTU/EMTU-C must meet the following requirements:

(1) *Form Validation:* Each field on a form must be capable of being defined as Optional, Mandatory, or Logic Driven. Mandatory fields are those fields that must be entered by the user before the form is complete. Optional fields are those fields that do not require data entry. Logic-driven fields have their attributes determined by earlier form selections. Specifically, a logic-driven field must allow for selection of options in that field to change the val-

ues available as menu selections on a subsequent field within the same form.

(2) A user must be able to select forms from a menu on the EMTU/EMTU-C.

(3) A user must be able to populate a form based on the last values used and “modify” or “update” a prior submission without unnecessary re-entry of data. A user must be able to review a minimum of 20 past form submissions and ascertain for each form when the form was transmitted and whether delivery was successfully sent to the type-approval holder’s VMS data processing center. In the case of a transmission failure, a user must be provided with details of the cause and have the opportunity to retry the form submission.

(4) *VMS Position Report:* Each form must include VMS position data, including latitude, longitude, date and time. Data to populate these fields must be automatically generated by the EMTU/EMTU-C and unable to be manually entered or altered.

(5) *Delivery and Format of Forms Data:* Delivery of form data to NMFS must employ the same transport security and reliability as set out in § 600.1507 of this subpart. The forms data and delivery must be completely compatible with NMFS vessel monitoring software.

(b) *Updates to Forms.* (1) The EMTU/EMTU-C and MCS must be capable of providing updates to forms or adding new form requirements via wireless transmission and without manual installation.

(2) From time to time, NMFS may provide type-approved applicants with requirements for new forms or modifications to existing forms. NMFS may also provide notice of forms and form changes through the NMFS Work Order System. Type-approved applicants will be given at least 60 calendar days to complete their implementation of new or changed forms. Applicants will be capable of, and responsible for translating the requirements into their EMTU/EMTU-C-specific forms definitions and wirelessly transmitting the same to all EMTU/EMTU-C terminals supplied to fishing vessels.

Fishery Conservation and Management

§ 600.1509

§ 600.1507 Communications security.

Communications between an EMTU/EMTU-C and MCS must be secure from tampering or interception, including the reading of passwords and data. The EMTU/EMTU-C and MCS must have mechanisms to prevent to the extent possible:

(a) Sniffing and/or interception during transmission from the EMTU/EMTU-C to MCS.

(b) Spoofing.

(c) False position reports sent from an EMTU/EMTU-C.

(d) Modification of EMTU/EMTU-C identification.

(e) Interference with Global Maritime Distress and Safety System (GMDSS) or other safety/distress functions.

(f) Introduction of malware, spyware, keyloggers, or other software that may corrupt, disturb, or disrupt messages, transmission, and the VMS system.

(g) The EMTU/EMTU-C terminal from communicating with, influencing, or interfering with the Global Positioning System antenna or its functionality, position reports, or sending of position reports. The position reports must not be altered, corrupted, degraded, or at all affected by the operation of the terminal or any of its peripherals or installed software.

(h) VMS data must be encrypted and sent securely through all associated cellular, satellite, and internet communication pathways and channels.

§ 600.1508 Field and technical services.

As a requirement of its type-approval, a type-approval holder must communicate with NMFS to resolve technical issues with a VMS Unit, MCS or bundle and ensure that field and technical services includes:

(a) Diagnostic and troubleshooting support to NMFS and fishers, which is available 24 hours a day, seven days per week, and year-round.

(b) Response times for customer service inquiries that shall not exceed 24 hours.

(c) Warranty and maintenance agreements.

(d) Escalation procedures for resolution of problems.

(e) Established facilities and procedures to assist fishers in maintaining

and repairing their EMTU, EMTU-C, or MTU.

(f) Assistance to fishers in the diagnosis of the cause of communications anomalies.

(g) Assistance in resolving communications anomalies that are traced to the EMTU, EMTU-C, or MTU.

(h) Assistance to NMFS Office of Law Enforcement and its contractors, upon request, in VMS system operation, resolving technical issues, and data analyses related to the VMS Program or system.

§ 600.1509 General.

(a) An EMTU/EMTU-C must have the durability and reliability necessary to meet all requirements of §§ 600.1502 through 600.1507 regardless of weather conditions, including when placed in a marine environment where the unit may be subjected to saltwater (spray) in smaller vessels, and in larger vessels where the unit may be maintained in a wheelhouse. The unit, cabling and antenna must be resistant to salt, moisture, and shock associated with sea-going vessels in the marine environment.

(b) PII and Other Protected Information. Personally identifying information (PII) and other protected information includes Magnuson-Stevens Act confidential information as provided at 16 U.S.C. 1881a and Business Identifiable Information (BII), as defined in the Department of Commerce Information Technology Privacy Policy. A type-approval holder is responsible for ensuring that:

(1) All PII and other protected information is handled in accordance with applicable state and Federal law.

(2) All PII and other protected information provided to the type-approval holder by vessel owners or other authorized personnel for the purchase or activation of an EMTU/EMTU-C or arising from participation in any Federal fishery are protected from disclosure not authorized by NMFS or the vessel owner or other authorized personnel.

(3) Any release of PII or other protected information beyond authorized entities must be requested and approved in writing, as appropriate, by

§ 600.1510

the submitter of the data in accordance with 16 U.S.C. 1881a, or by NMFS.

(4) Any PII or other protected information sent electronically by the type-approval holder to the NMFS Office of Law Enforcement must be transmitted by a secure means that prevents interception, spoofing, or viewing by unauthorized individuals.

§ 600.1510 Notification of type-approval.

(a) If a request made pursuant to § 600.1501 (type-approval) is approved or partially approved, NMFS will issue a type-approval letter to indicate the specific EMTU/EMTU-C model, MCSP, or bundle that is approved for use, the MCS or class of MCSs permitted for use with the type-approved EMTU, and the regions or fisheries in which the EMTU/EMTU-C, MCSP, or bundle is approved for use.

(b) The NMFS Office of Law Enforcement will maintain a list of type-approved EMTUs/EMTU-C, MCSPs, and bundles on a publicly available website and provide copies of the list upon request.

§ 600.1511 Changes or modifications to type-approvals.

Type-approval holders must notify NMFS Office of Law Enforcement (OLE) in writing no later than 2 days following modification to or replacement of any functional component or piece of their type-approved EMTU, EMTU-C, or MTU configuration, MCS, or bundle. If the changes are substantial, NMFS OLE will notify the type-approval holder in writing within 60 calendar days that an amended type-approval is required or that NMFS will initiate the type-approval revocation process.

§ 600.1512 Type-approval revocation process.

(a) If at any time, a type-approved EMTU/EMTU-C, MCS, or bundle fails to meet requirements at §§ 600.1502 through 600.1509 or applicable VMS regulations and requirements in effect for the region(s) and Federal fisheries for which the EMTU/EMTU-C or MCS is type-approved, or if an MTU fails to meet the requirements under which it was type-approved, OLE may issue a

50 CFR Ch. VI (10–1–21 Edition)

Notification Letter to the type-approval holder that:

(1) Identifies the MTU, EMTU, EMTU-C, MCS, or bundle that allegedly fails to comply with type-approval regulations and requirements;

(2) Identifies the alleged failure to comply with type-approval regulations and requirements, and the urgency and impact of the alleged failure;

(3) Cites relevant regulations and requirements under this subpart;

(4) Describes the indications and evidence of the alleged failure;

(5) Provides documentation and data demonstrating the alleged failure;

(6) Sets a response date by which the type-approval holder must submit to NMFS OLE a written response to the Notification Letter, including, if applicable, a proposed solution; and

(7) Explains the type-approval holder's options if the type-approval holder believes the Notification Letter is in error.

(b) NMFS will establish a response date between 30 and 120 calendar days from the date of the Notification Letter. The type-approval holder's response must be received in writing by NMFS on or before the response date. If the type-approval holder fails to respond by the response date, the type-approval will be revoked. At its discretion and for good cause, NMFS may extend the response date to a maximum of 150 calendar days from the date of the Notification Letter.

(c) A type-approval holder who has submitted a timely response may meet with NMFS within 21 calendar days of the date of that response to discuss a detailed and agreed-upon procedure for resolving the alleged failure. The meeting may be in person, conference call, or webcast.

(d) If the type-approval holder disagrees with the Notification Letter and believes that there is no failure to comply with the type-approval regulations and requirements, NMFS has incorrectly defined or described the failure or its urgency and impact, or NMFS is otherwise in error, the type-approval holder may submit a written objection letter to NMFS on or before the response date. Within 21 calendar days of the date of the objection letter, the type-approval holder may meet with

Fishery Conservation and Management

§ 600.1515

NMFS to discuss a resolution or redefinition of the issue. The meeting may be in person, conference call, or webcast. If modifications to any part of the Notification Letter are required, then NMFS will issue a revised Notification Letter to the type-approval holder. However, the response date or any other timeline in this process would not restart or be modified unless NMFS decides to do so, at its discretion.

(e) The total process from the date of the Notification Letter to the date of final resolution should not exceed 180 calendar days, and may require a shorter timeframe, to be determined by NMFS, depending on the urgency and impact of the alleged failure. In rare circumstances, NMFS, at its discretion, may extend the time for resolution of the alleged failure. In such a case, NMFS will provide a written notice to the type-approval holder informing him or her of the extension and the basis for the extension.

(f) If the failure to comply with type-approval regulations and requirements cannot be resolved through this process, the NMFS OLE Director will issue a Revocation Letter to the type-approval holder that:

(1) Identifies the MTU, EMTU, EMTU-C, MCS, or bundle for which type-approval is being revoked;

(2) Summarizes the failure to comply with type-approval regulations and requirements, including describing its urgency and impact;

(3) Summarizes any proposed plan, or attempts to produce such a plan, to resolve the failure;

(4) States that revocation of the MTU, EMTU, EMTU-C, MCS, or bundle's type-approval has occurred;

(5) States that no new installations of the revoked unit will be permitted in any NMFS-managed fishery requiring the use of VMS;

(6) Cites relevant regulations and requirements under this subpart;

(7) Explains why resolution was not achieved;

(8) Advises the type-approval holder that:

(i) The type-approval holder may reapply for a type-approval under the process set forth in § 600.1501, and

(ii) A revocation may be appealed pursuant to the process under § 600.1513.

§ 600.1513 Type-approval revocation appeals process.

(a) If a type-approval holder receives a Revocation Letter pursuant to § 600.1512, the type-approval holder may file an appeal of the revocation to the NMFS Assistant Administrator.

(b) An appeal must be filed within 14 calendar days of the date of the Revocation Letter. A type-approval holder may not request an extension of time to file an appeal.

(c) An appeal must include a complete copy of the Revocation Letter and its attachments and a written statement detailing any facts or circumstances explaining and refuting the failures summarized in the Revocation Letter.

(d) The NMFS Assistant Administrator may, at his or her discretion, affirm, vacate, or modify the Revocation Letter and send a letter to the type-approval holder explaining his or her determination, within 21 calendar days of receipt of the appeal. The NMFS Assistant Administrator's determination constitutes the final agency decision.

§ 600.1514 Revocation effective date and notification to vessel owners.

(a) Following issuance of a Revocation Letter pursuant to § 600.1512 and any appeal pursuant to § 600.1513, NMFS will provide notice to all vessel owners impacted by the type-approval revocation via letter and FEDERAL REGISTER notice. NMFS will provide information to impacted vessel owners on:

(1) The next steps vessel owners should take to remain in compliance with regional and/or national VMS requirements;

(2) The date, 60–90 calendar days from the notice date, on which the type-approval revocation will become effective;

(3) Reimbursement of the cost of a new type-approved EMTU/EMTU-C, should funding for reimbursement be available pursuant to § 600.1516.

§ 600.1515 Litigation support.

(a) All technical aspects of a type-approved EMTU, EMTU-C, MTU, MCS, or bundle are subject to being admitted as

§ 600.1516

evidence in a court of law, if needed. The reliability of all technologies utilized in the EMTU, EMTU-C, MTU, MCS, or bundle may be analyzed in court for, inter alia, testing procedures, error rates, peer review, technical processes and general industry acceptance.

(b) The type-approval holder must, as a requirement of the holder's type-approval, provide technical and expert support for litigation to substantiate the EMTU/EMTU-C, MCS, or bundle capabilities to establish NMFS Office of Law Enforcement cases against violators, as needed. If the technologies have previously been subject to such scrutiny in a court of law, the type-approval holder must provide NMFS with a brief summary of the litigation and any court findings on the reliability of the technology.

(c) The type-approval holder will be required to sign a non-disclosure agreement limiting the release of certain information that might compromise the effectiveness of the VMS operations.

§ 600.1516 Reimbursement opportunities for revoked Vessel Monitoring System type-approval products.

(a) Subject to the availability of funds, vessel owners may be eligible for reimbursement payments for a replacement EMTU/EMTU-C if:

(1) All eligibility and process requirements specified by NMFS are met as described in NMFS Policy Directive 06-102; and

(2) The replacement type-approved EMTU/EMTU-C is installed on the vessel, and reporting to NMFS Office of Law Enforcement; and

(3) The type-approval for the previously installed EMTU/EMTU-C has been revoked by NMFS; or

(4) NMFS requires the vessel owner to purchase a new EMTU/EMTU-C prior to the end of an existing unit's service life.

(b) The cap for individual reimbursement payments is subject to change. If this occurs, NMFS Office of Law Enforcement will publish a notice in the FEDERAL REGISTER announcing the change.

50 CFR Ch. VI (10-1-21 Edition)

Subpart R—Standardized Bycatch Reporting Methodology

SOURCE: 82 FR 6337, Jan. 19, 2017, unless otherwise noted.

§ 600.1600 Purpose and scope.

Section 303(a)(11) of the Magnuson-Stevens Act requires that any fishery management plan (FMP) with respect to any fishery shall establish a standardized reporting methodology to assess the amount and type of bycatch occurring in the fishery. 16 U.S.C. 1853(a)(11). The purpose of a standardized reporting methodology is to collect, record, and report bycatch data in a fishery that, in conjunction with other relevant sources of information, are used to assess the amount and type of bycatch occurring in the fishery and inform the development of conservation and management measures that, to the extent practicable, minimize bycatch and bycatch mortality. This subpart sets forth requirements for and guidance on establishing and reviewing a standardized reporting methodology.

§ 600.1605 Definitions and word usage.

(a) *Definitions.* In addition to the definitions in the Magnuson-Stevens Act and § 600.10, *standardized reporting methodology* means an established, consistent procedure or procedures used to collect, record, and report bycatch data in a fishery, which may vary from one fishery to another. Bycatch assessment is not part of the standardized reporting methodology, but must be considered as described in § 600.1610(a)(2)(iv).

(b) *Word usage.* The terms “bycatch” and “fishery” are used in the same manner as in 16 U.S.C. 1802. The terms “must”, “should”, “may”, “will”, “could”, and “can” are used in the same manner as in § 600.305(c). The term “Council” is used in the same manner as in § 600.305(d)(10), and includes the regional fishery management Councils and the Secretary of Commerce, as appropriate (16 U.S.C. 1854(c) and (g)).

§ 600.1610 Establishing and reviewing standardized bycatch reporting methodologies in fishery management plans.

(a) *Establishing a standardized reporting methodology*—(1) *Fishery management plan contents*. An FMP must identify the required procedure or procedures that constitute the standardized reporting methodology for the fishery. The required procedures may include, but are not limited to, one or more of the following: Observer programs, electronic monitoring and reporting technologies, and self-reported mechanisms (e.g., recreational sampling, industry-reported catch and discard data). The FMP, or a fishery research plan authorized under 16 U.S.C. 1862, must explain how the standardized reporting methodology meets the purpose described in § 600.1600, based on an analysis of the requirements under § 600.1610(a)(2). The FMP, or fishery research plan authorized under 16 U.S.C. 1862, may reference analyses and information in other FMPs, FMP amendments, Stock Assessment and Fishery Evaluation (SAFE) reports, or other documents. Councils should work together and collaborate on standardized reporting methodologies for fisheries that operate across multiple jurisdictions, as appropriate. In addition to proposing regulations necessary to implement the standardized reporting methodology, a Council should also provide in its FMP, or a fishery research plan authorized under 16 U.S.C. 1862, guidance to NMFS on how to adjust implementation of a standardized reporting methodology consistent with the FMP. See National Standard 6 guidelines, § 600.335.

(2) *Requirements for standardized reporting methodology*. The FMP must establish a standardized reporting methodology as provided under § 600.1610(a)(1) that meets the specific purpose described in § 600.1600. Due to the inherent diversity of fisheries, different standardized reporting methodologies may be appropriate for different fisheries. However, when establishing or reviewing a standardized reporting methodology, a Council must address the following:

(i) *Information about the characteristics of bycatch in the fishery*. A Council must

address information about the characteristics of bycatch in the fishery, when available, including, but not limited to: The amount and type of bycatch occurring in the fishery, which may vary based on different fishing activities and operations; the importance of bycatch in estimating the fishing mortality of fish stocks; and the effect of bycatch on ecosystems.

(ii) *Feasibility*. The implementation of a standardized reporting methodology must be feasible from cost, technical, and operational perspectives. However, feasibility concerns do not exempt an FMP from the requirement to establish a standardized reporting methodology. Recognizing that costs and funding may vary from year to year, a Council must also address how implementation of the standardized reporting methodology may be adjusted while continuing to meet the purpose described under § 600.1600.

(iii) *Data uncertainty*. A Council must address the uncertainty of the data resulting from the standardized reporting methodology. The standardized reporting methodology must be designed so that the uncertainty associated with the resulting bycatch data can be described, quantitatively or qualitatively. The Council should seek to minimize uncertainty in the resulting data, recognizing that different degrees of data uncertainty may be appropriate for different fisheries.

(iv) *Data use*. A Council must address how data resulting from the standardized reporting methodology are used to assess the amount and type of bycatch occurring in the fishery. A Council must consult with its scientific and statistical committee and/or the regional National Marine Fisheries Service science center on reporting methodology design considerations such as data elements, sampling designs, sample sizes, and reporting frequency. The Council must also consider the scientific methods and techniques available to collect, record, and report bycatch data that could improve the quality of bycatch estimates. Different standardized reporting methodology designs may be appropriate for different fisheries.

Pt. 622

50 CFR Ch. VI (10–1–21 Edition)

(b) *Review of FMPs.* All FMPs must be consistent with this subpart by February 21, 2022. Therefore, a Council, in coordination with NMFS, must conduct a review of its FMPs for consistency with this subpart. A Council does not need to amend an FMP if NMFS determines that it is consistent with this subpart. Thereafter, Councils, in coordination with NMFS, should conduct a review of standardized reporting methodologies at least once every 5 years in order to verify continued compliance with the MSA and this subpart.

PART 622—FISHERIES OF THE CARIBBEAN, GULF OF MEXICO, AND SOUTH ATLANTIC

Subpart A—General Provisions

- Sec.
- 622.1 Purpose and scope.
- 622.2 Definitions and acronyms.
- 622.3 Relation to other laws and regulations.
- 622.4 Permits and fees—general.
- 622.5 Recordkeeping and reporting—general.
- 622.6 Vessel identification.
- 622.7 Fishing years.
- 622.8 Quotas—general.
- 622.9 Prohibited gear and methods—general.
- 622.10 Landing fish intact—general.
- 622.11 Bag and possession limits—general applicability.
- 622.12 Annual catch limits (ACLs) and accountability measures (AMs) for Caribbean island management areas/Caribbean EEZ.
- 622.13 Prohibitions—general.
- 622.14 [Reserved]
- 622.15 Notice regarding area closures to protect corals.
- 622.16 Notice regarding South Atlantic special management zones (SMZs).
- 622.17 Notice regarding seasonal/area closures to protect Gulf reef fish.

Subpart B—Reef Fish Resources of the Gulf of Mexico

- 622.20 Permits and endorsements.
- 622.21 Individual fishing quota (IFQ) program for Gulf red snapper.
- 622.22 Individual fishing quota (IFQ) program for Gulf groupers and tilefishes.
- 622.23 State management of the red snapper recreational sector private angling component in the Gulf EEZ.
- 622.24 [Reserved]
- 622.25 Exemptions for Gulf groundfish trawling.
- 622.26 Recordkeeping and reporting.
- 622.27 At-sea observer coverage.

- 622.28 Vessel monitoring systems (VMSs).
- 622.29 Conservation measures for protected resources.
- 622.30 Required fishing gear.
- 622.31 Buoy gear identification.
- 622.32 Prohibited gear and methods.
- 622.33 Prohibited species.
- 622.34 Seasonal and area closures designed to protect Gulf reef fish.
- 622.35 Gear restricted areas.
- 622.36 Seasonal harvest limitations.
- 622.37 Size limits.
- 622.38 Bag and possession limits.
- 622.39 Quotas.
- 622.40 Restrictions on sale/purchase.
- 622.41 Annual catch limits (ACLs), annual catch targets (ACTs), and accountability measures (AMs).
- 622.42 Adjustment of management measures.
- 622.43 Commercial trip limits.

Subpart C—Shrimp Fishery of the Gulf of Mexico

- 622.50 Permits and fees.
- 622.51 Recordkeeping and reporting.
- 622.52 At-sea observer coverage.
- 622.53 Bycatch reduction device (BRD) requirements.
- 622.54 Prohibited gear and methods.
- 622.55 Closed areas.
- 622.56 Size limits.
- 622.57 [Reserved]
- 622.58 Annual catch limits (ACLs), annual catch targets (ACTs), and accountability measures (AMs).
- 622.59 Prevention of gear conflicts.
- 622.60 Adjustment of management measures.

Subpart D—Coral and Coral Reefs of the Gulf of Mexico

- 622.70 Permits.
- 622.71 Recordkeeping and reporting.
- 622.72 Prohibited gear and methods.
- 622.73 Prohibited species.
- 622.74 Area closures to protect Gulf corals.
- 622.75 Harvest limitations.
- 622.76 Restrictions on sale/purchase.
- 622.77 Adjustment of management measures.

Subpart E—Red Drum Fishery of the Gulf of Mexico

- 622.90 Permits.
- 622.91 Recordkeeping and reporting.
- 622.92 Prohibited species.
- 622.93 Adjustment of management measures.

Subpart F—Offshore Marine Aquaculture in the Gulf of Mexico

- 622.100 General.

Fishery Conservation and Management

Pt. 622

- 622.101 Permits.
- 622.102 Recordkeeping and reporting.
- 622.103 Aquaculture facilities.
- 622.104 Restricted access zones.
- 622.105 Allowable aquaculture systems and species.
- 622.106 Aquaculture operations.
- 622.107 Limitation on aquaculture production.
- 622.108 Remedial actions.
- 622.109 Adjustment of management measures.

Subparts G–H [Reserved]

Subpart I—Snapper-Grouper Fishery of the South Atlantic Region

- 622.170 Permits and endorsements.
- 622.171 South Atlantic snapper-grouper limited access.
- 622.172 Wreckfish individual transferable quota (ITQ) system.
- 622.173–622.175 [Reserved]
- 622.176 Recordkeeping and reporting.
- 622.177 Gear identification.
- 622.178 At-sea observer coverage.
- 622.179 Conservation measures for protected species.
- 622.180 Prohibited gear and methods.
- 622.181 Prohibited and limited-harvest species.
- 622.182 Gear-restricted areas.
- 622.183 Area and seasonal closures.
- 622.184 Seasonal harvest limitations.
- 622.185 Size limits.
- 622.186 Landing fish intact.
- 622.187 Bag and possession limits.
- 622.188 Required gear, authorized gear, and unauthorized gear.
- 622.189 Restrictions and requirements for sea bass pots.
- 622.190 Quotas.
- 622.191 Commercial trip limits.
- 622.192 Restrictions on sale/purchase.
- 622.193 Annual catch limits (ACLs), annual catch targets (ACTs), and accountability measures (AMs).
- 622.194 Adjustment of management measures.

Subpart J—Shrimp Fishery of the South Atlantic Region

- 622.200 Permits.
- 622.201 South Atlantic rock shrimp limited access.
- 622.202 [Reserved]
- 622.203 Recordkeeping reporting.
- 622.204 At-sea observer coverage.
- 622.205 Vessel monitoring systems (VMSs).
- 622.206 Area and seasonal closures.
- 622.207 Bycatch Reduction Device (BRD) requirements.
- 622.208 Minimum mesh size applicable to rock shrimp off Georgia and Florida.
- 622.209 Restrictions on sale/purchase.

- 622.210 Adjustment of management measures.

Subpart K—Coral, Coral Reefs, and Live/Hard Bottom Habitats of the South Atlantic Region

- 622.220 Permits.
- 622.221 Recordkeeping and reporting.
- 622.222 Prohibited gear and methods.
- 622.223 Prohibited species.
- 622.224 Area closures to protect South Atlantic corals.
- 622.225 Harvest limitations.
- 622.226 Restrictions on sale/purchase.
- 622.227 Adjustment of management measures.

Subpart L—Golden Crab Fishery of the South Atlantic Region

- 622.240 Permits.
- 622.241 South Atlantic golden crab controlled access.
- 622.242 Recordkeeping and reporting.
- 622.243 Gear identification.
- 622.244 At-sea observer coverage.
- 622.245 Prohibited species.
- 622.246 Area closures.
- 622.247 Landing golden crab intact.
- 622.248 Authorized gear.
- 622.249 Gear restrictions and requirements.
- 622.250 Restrictions on sale/purchase.
- 622.251 Annual catch limits (ACLs), annual catch targets (ACTs), and accountability measures (AMs).
- 622.252 Adjustment of management measures.

Subpart M—Dolphin and Wahoo Fishery of the Atlantic

- 622.270 Permits.
- 622.271 Recordkeeping and reporting.
- 622.272 Authorized gear.
- 622.273 Conservation measures for protected species.
- 622.274 Pelagic longline closed areas.
- 622.275 Size limits.
- 622.276 Landing fish intact.
- 622.277 Bag and possession limits.
- 622.278 Commercial trip limits.
- 622.279 Restrictions on sale/purchase.
- 622.280 Annual catch limits (ACLs) and accountability measures (AMs).
- 622.281 Adjustment of management measures.

Subpart N—Pelagic Sargassum Habitat of the South Atlantic Region

- 622.300 At-sea observer coverage.
- 622.301 Area and seasonal restrictions.
- 622.302 Minimum mesh size.
- 622.303 Quotas.

Subparts O–P [Reserved]**Subpart Q—Coastal Migratory Pelagic Resources (Gulf of Mexico, South Atlantic, and Mid-Atlantic)**

- 622.369 Description of zones.
- 622.370 Permits.
- 622.371 Limited access system for commercial vessel permits for king mackerel.
- 622.372 Limited access system for king mackerel gillnet permits applicable in the Gulf southern zone.
- 622.373 Limited access system for charter vessel/headboat permits for Gulf coastal migratory pelagic fish.
- 622.374 Recordkeeping and reporting.
- 622.375 Authorized and unauthorized gear.
- 622.376 Gear identification.
- 622.377 Gillnet restrictions.
- 622.378 Seasonal closures of the Gulf migratory group king mackerel gillnet fishery.
- 622.379 Incidental catch allowances.
- 622.380 Size limits.
- 622.381 Landing fish intact.
- 622.382 Bag and possession limits.
- 622.383 Limited harvest species.
- 622.384 Quotas.
- 622.385 Commercial trip limits.
- 622.386 Restrictions on sale/purchase.
- 622.387 [Reserved]
- 622.388 Annual catch limits (ACLs), annual catch targets (ACTs), and accountability measures (AMs).
- 622.389 Adjustment of management measures.

Subpart R—Spiny Lobster Fishery of the Gulf of Mexico and South Atlantic

- 622.400 Permits and fees.
- 622.401 Recordkeeping and reporting.
- 622.402 Vessel and gear identification.
- 622.403 Seasons.
- 622.404 Prohibited gear and methods.
- 622.405 Trap construction specifications and tending restrictions.
- 622.406 Areas closed to lobster trap gear.
- 622.407 Minimum size limits and other harvest limitations.
- 622.408 Bag/possession limits.
- 622.409 Spiny lobster import prohibitions.
- 622.410 Restrictions within Tortugas marine reserves.
- 622.411 Annual catch limits (ACLs), annual catch targets (ACTs), and accountability measures (AMs).
- 622.412 Adjustment of management measures.
- 622.413 Incorporation by reference.
- 622.414 [Reserved]
- 622.415 Limited exemption regarding harvest in waters of a foreign nation.
- 622.416 Restrictions on sale/purchase.

Subpart S—Reef Fish Fishery of Puerto Rico and the U.S. Virgin Islands

- 622.430 Gear identification.
- 622.431 Trap construction specifications and tending restrictions.
- 622.432 Anchoring restriction.
- 622.433 Prohibited gear and methods.
- 622.434 Prohibited species.
- 622.435 Seasonal and area closures.
- 622.436 Size limits.
- 622.437 Bag limits.
- 622.438 Restrictions on sale/purchase.
- 622.439 Annual catch limits (ACLs), annual catch targets (ACTs), and accountability measures (AMs).
- 622.440 Adjustment of management measures.

Subpart T—Spiny Lobster Fishery of Puerto Rico and the U.S. Virgin Islands

- 622.450 Gear identification.
- 622.451 Trap construction specifications and tending restrictions.
- 622.452 Prohibited gear and methods.
- 622.453 Prohibition on harvest of egg-bearing spiny lobster.
- 622.454 Minimum size limit.
- 622.455 Landing spiny lobster intact.
- 622.456 Bag limit.
- 622.457 Annual catch limits (ACLs), annual catch targets (ACTs), and accountability measures (AMs).
- 622.458 Caribbean spiny lobster import prohibitions.
- 622.459 Adjustment of management measures.

Subpart U—Corals and Reef Associated Plants and Invertebrates of Puerto Rico and the U.S. Virgin Islands

- 622.470 Permits.
- 622.471 Prohibited gear and methods.
- 622.472 Prohibited species.
- 622.473 Restrictions on sale/purchase.
- 622.474 Adjustment of management measures.

Subpart V—Queen Conch Resources of Puerto Rico and the U.S. Virgin Islands

- 622.490 Prohibited gear and methods.
- 622.491 Seasonal and area closures.
- 622.492 Minimum size limit.
- 622.493 Landing Caribbean queen conch intact.
- 622.494 Bag limit.
- 622.495 Commercial trip limit.
- 622.496 Annual catch limits (ACLs), annual catch targets (ACTs), and accountability measures (AMs).
- 622.497 Adjustment of management measures.

SOURCE: 78 FR 22952, Apr. 17, 2013, unless otherwise noted.

EDITORIAL NOTE: Nomenclature changes to part 622 appear at 79 FR 57837, Sept. 26, 2014 and at 81 FR 32253, May 23, 2016.

Subpart A—General Provisions

§ 622.1 Purpose and scope.

(a) The purpose of this part is to implement the FMPs prepared under the

Magnuson-Stevens Act by the CFMC, GMFMC, and/or SAFMC listed in Table 1 of this section.

(b) This part governs conservation and management of species included in the FMPs in or from the Caribbean, Gulf, Mid-Atlantic, South Atlantic, or Atlantic EEZ, unless otherwise specified, as indicated in Table 1 of this section. For the FMPs noted in the following table, conservation and management extends to adjoining state waters for the purposes of data collection and monitoring.

(c) This part also governs importation of Caribbean spiny lobster into Puerto Rico or the U.S. Virgin Islands.

(d) This part also governs importation of spiny lobster into any place subject to the jurisdiction of the United States.

TABLE 1 TO § 622.1—FMPs IMPLEMENTED UNDER PART 622

FMP title	Responsible fishery management council(s)	Geographical area
FMP for Coastal Migratory Pelagic Resources	GMFMC/SAFMC	Gulf ^{1 9} , Mid-Atlantic ^{1 9} , South Atlantic ^{1 9} .
FMP for Coral, Coral Reefs, and Live/Hard Bottom Habitats of the South Atlantic Region.	SAFMC	South Atlantic. ⁵
FMP for Coral and Coral reefs of the Gulf of Mexico	GMFMC	Gulf.
FMP for Corals and Reef Associated Plants and Invertebrates of Puerto Rico and the U.S. Virgin Islands.	CFMC	Caribbean.
FMP for the Dolphin and Wahoo Fishery of the Atlantic	SAFMC	Atlantic.
FMP for the Golden Crab Fishery of the South Atlantic Region ..	SAFMC	South Atlantic.
FMP for Pelagic Sargassum Habitat of the South Atlantic Region.	SAFMC	South Atlantic.
FMP for Queen Conch Resources of Puerto Rico and the U.S. Virgin Islands.	CFMC	Caribbean.
FMP for the Red Drum Fishery of the Gulf of Mexico	GMFMC	Gulf. ¹
FMP for the Reef Fish Fishery of Puerto Rico and the U.S. Virgin Islands.	CFMC	Caribbean.
FMP for the Reef Fish Resources of the Gulf of Mexico	GMFMC	Gulf. ^{1 3 4 7 10}
FMP for Regulating Offshore Marine Aquaculture in the Gulf	GMFMC	Gulf.
FMP for the Shrimp Fishery of the Gulf of Mexico	GMFMC	Gulf. ¹
FMP for the Shrimp Fishery of the South Atlantic Region	SAFMC	South Atlantic.
FMP for the Snapper-Grouper Fishery of the South Atlantic Region.	SAFMC	South Atlantic. ^{1 2 6 8}
FMP for the Spiny Lobster Fishery of Puerto Rico and the U.S. Virgin Islands.	CFMC	Caribbean.
FMP for the Spiny Lobster Fishery of the Gulf of Mexico and South Atlantic.	GMFMC/SAFMC	Gulf ¹ , South Atlantic. ¹

¹ Regulated area includes adjoining state waters for purposes of data collection and quota monitoring.

² Black sea bass and scup are not managed by the FMP or regulated by this part north of 35°15.19' N. lat., the latitude of Cape Hatteras Light, NC."

³ Regulated area includes adjoining state waters for Gulf red snapper harvested or possessed by a person aboard a vessel for which a Gulf red snapper IFQ vessel account has been established or possessed by a dealer with a Gulf IFQ dealer endorsement.

⁴ Regulated area includes adjoining state waters for Gulf groupers and tilefishes harvested or possessed by a person aboard a vessel for which an IFQ vessel account for Gulf groupers and tilefishes has been established or possessed by a dealer with a Gulf IFQ dealer endorsement.

⁵ Octocorals are managed by the FMP or regulated by this part only in the EEZ off North Carolina, South Carolina, and Georgia.

⁶ Nassau grouper in the South Atlantic EEZ and the Gulf EEZ are managed under the FMP.

⁷ Hogfish are managed by the FMP in the Gulf EEZ except south of 25°09' N. lat. off the west coast of Florida. Hogfish in the remainder of the Gulf EEZ south of 25°09' N. lat. off the west coast of Florida are managed under the FMP for the Snapper-Grouper Fishery of the South Atlantic Region.

⁸Hogfish in the Gulf EEZ are managed under the FMP from the South Atlantic and Gulf of Mexico intercouncil boundary specified in § 600.105(c) and south of 25°09' N. lat. off the west coast of Florida. Hogfish in the remainder of the Gulf EEZ are managed under the FMP for the Reef Fish Resources of the Gulf of Mexico.

⁹Cobia is managed by the FMP in the Gulf EEZ and in the South Atlantic EEZ south of a line extending due east from the Florida/Georgia border.

¹⁰Certain provisions for the management of the private angling component of recreational red snapper in the Gulf EEZ have been delegated to the Gulf states, as specified in § 622.23.

[78 FR 22952, Apr. 17, 2013, as amended at 78 FR 78775, Dec. 27, 2013; 81 FR 1792, Jan. 13, 2016; 82 FR 34580, 34594 July 25, 2017; 82 FR 40075, Aug. 24, 2017; 84 FR 4736, Feb. 19, 2019; 85 FR 6823, Feb. 6, 2020; 85 FR 10339, Feb. 24, 2020]

§ 622.2 Definitions and acronyms.

In addition to the definitions in the Magnuson Act and in § 600.10 of this chapter, and the acronyms in § 600.15 of this chapter, the terms and acronyms used in this part have the following meanings:

Accountability measure means a management control implemented such that overfishing is prevented, where possible, and mitigated if it occurs.

Actual ex-vessel price means the total monetary sale amount a fisherman receives per pound of fish for IFQ landings from a registered IFQ dealer before any deductions are made for transferred (leased) allocation and goods and services (e.g. bait, ice, fuel, repairs, machinery replacement, etc.).

Allowable chemical means a substance, generally used to immobilize marine life so that it can be captured alive, that, when introduced into the water, does not take Gulf and South Atlantic prohibited coral and is allowed by Florida for the harvest of tropical fish (e.g., quinaldine, quinaldine compounds, or similar substances).

Allowable octocoral means an erect, nonencrusting species of the subclass Octocorallia, except the seafans *Gorgonia flabellum* and *G. ventalina*, plus the attached substrate within 1 inch (2.54 cm) of an allowable octocoral. (NOTE: An erect, nonencrusting species of the subclass Octocorallia, except the seafans *Gorgonia flabellum* and *G. ventalina*, with attached substrate exceeding 1 inch (2.54 cm) is considered to be live rock and not allowable octocoral.)

Annual catch limit (ACL) means the level of catch that serves as the basis for invoking accountability measures.

Annual catch target (ACT) means an amount of annual catch of a stock or stock complex that is the management target of the fishery, and accounts for

management uncertainty in controlling the actual catch at or below the ACL.

Aquaculture means all activities, including the operation of an aquaculture facility, involved in the propagation or rearing, or attempted propagation or rearing, of allowable aquaculture species in the Gulf EEZ.

Aquaculture facility means an installation or structure, including any aquaculture system(s) (including moorings), hatcheries, equipment, and associated infrastructure used to hold, propagate, or rear allowable aquaculture species in the Gulf EEZ under authority of a Gulf aquaculture permit.

Aquaculture system means any cage, net pen, enclosure, structure, or gear deployed in waters of the Gulf EEZ for holding and producing allowable aquaculture species.

Aquacultured live rock means live rock that is harvested under a Federal aquacultured live rock permit, as required under § 622.70(a)(2).

Aquatic animal health expert means a licensed doctor of veterinary medicine or a person who is certified by the American Fisheries Society, Fish Health Section, as a “Fish Pathologist” or “Fish Health Inspector.”

Atlantic means the North Atlantic, Mid-Atlantic, and South Atlantic.

Authorized statistical reporting agent means:

(1) Any person so designated by the SRD; or

(2) Any person so designated by the head of any Federal or State agency that has entered into an agreement with the Assistant Administrator to collect fishery data.

Automatic reel means a reel that remains attached to a vessel when in use from which a line and attached hook(s) are deployed. The line is payed out from and retrieved on the reel electrically or hydraulically.

Bandit gear means a rod and reel that remain attached to a vessel when in use from which a line and attached hook(s) are deployed. The line is payed out from and retrieved on the reel manually, electrically, or hydraulically.

Bottom longline means a longline that is deployed, or in combination with gear aboard the vessel, *e.g.*, weights or anchors, is capable of being deployed to maintain contact with the ocean bottom.

BRD means bycatch reduction device.

Bully net means a circular frame attached at right angles to the end of a pole and supporting a conical bag of webbing. The webbing is usually held up by means of a cord which is released when the net is dropped over a lobster.

Buoy gear means fishing gear that fishes vertically in the water column that consists of a single drop line suspended from a float, from which no more than 10 hooks can be connected between the buoy and the terminal end, and the terminal end contains a weight that is no more than 10 lb (4.5 kg). The drop line can be rope (hemp, manila, cotton or other natural fibers; nylon, polypropylene, spectra or other synthetic material) or monofilament, but must not be cable or wire. The gear is free-floating and not connected to other gear or the vessel. The drop line must be no greater than 2 times the depth of the water being fished. All hooks must be attached to the drop line no more than 30 ft (9.1 m) from the weighted terminal end. These hooks may be attached directly to the drop line; attached as snoods (defined as an offshoot line that is directly spliced, tied or otherwise connected to the drop line), where each snood has a single terminal hook; or as gangions (defined as an offshoot line connected to the drop line with some type of detachable clip), where each gangion has a single terminal hook.

Carapace length means the measurement of the carapace (head, body, or front section) of a spiny lobster from the anteriormost edge (front) of the groove between the horns directly above the eyes, along the middorsal line (middle of the back), to the rear edge of the top part of the carapace, excluding any translucent membrane.

(See Figure 1 in Appendix C of this part.)

Caribbean means the Caribbean Sea and Atlantic Ocean seaward of Puerto Rico, the U.S. Virgin Islands, and possessions of the United States in the Caribbean Sea.

Caribbean coral reef resource means one or more of the species, or a part thereof, listed in Table 1 in Appendix A of this part, whether living or dead.

Caribbean prohibited coral means, in the Caribbean; a gorgonian, that is, a Caribbean coral reef resource of the Class Anthozoa, Subclass Octocorallia, Order Gorgonacea; a live rock; or a stony coral, that is, a Caribbean coral reef resource of the Class Hydrozoa (fire corals and hydrocorals) or of the Class Anthozoa, Subclass Hexacorallia, Orders Scleractinia (stony corals) and Antipatharia (black corals); or a part thereof.

Caribbean queen conch or *queen conch* means the species, *Strombus gigas*, or a part thereof.

Caribbean reef fish means one or more of the species, or a part thereof, listed in Table 2 in Appendix A of this part.

Caribbean spiny lobster or *spiny lobster* means the species *Panulirus argus*, or a part thereof.

CFMC means the Caribbean Fishery Management Council.

Charter vessel means a vessel less than 100 gross tons (90.8 mt) that is subject to the requirements of the USCG to carry six or fewer passengers for hire and that engages in charter fishing at any time during the calendar year. A charter vessel with a commercial permit, as required under this part, is considered to be operating as a charter vessel when it carries a passenger who pays a fee or when there are more than three persons aboard, including operator and crew, except for a charter vessel with a commercial vessel permit for Gulf reef fish or South Atlantic snapper-grouper. A charter vessel that has a charter vessel permit for Gulf reef fish and a commercial vessel permit for Gulf reef fish or a charter vessel permit for South Atlantic snapper-grouper and a commercial permit for South Atlantic snapper-grouper (either a South Atlantic snapper-grouper unlimited permit or a 225-lb (102.1-kg) trip limited permit for South

Atlantic snapper-grouper) is considered to be operating as a charter vessel when it carries a passenger who pays a fee or when there are more than four persons aboard, including operator and crew. A charter vessel that has a charter vessel permit for Gulf reef fish, a commercial vessel permit for Gulf reef fish, and a valid Certificate of Inspection (COI) issued by the USCG to carry passengers for hire will not be considered to be operating as a charter vessel provided—

(1) It is not carrying a passenger who pays a fee; and

(2) When underway for more than 12 hours, that vessel meets, but does not exceed the minimum manning requirements outlined in its COI for vessels underway over 12 hours; or when underway for not more than 12 hours, that vessel meets the minimum manning requirements outlined in its COI for vessels underway for not more than 12-hours (if any), and does not exceed the minimum manning requirements outlined in its COI for vessels that are underway for more than 12 hours.

Circle hook means a fishing hook designed and manufactured so that the point is turned perpendicularly back to the shank to form a generally circular, or oval, shape.

Coastal migratory pelagic fish means a whole fish, or a part thereof, of one or more of the following species:

(1) Cobia, *Rachycentron canadum*.

(2) King mackerel, *Scomberomorus cavalla*.

(3) Spanish mackerel, *Scomberomorus maculatus*.

Commercial fishing means, for the purpose of subpart R of this part only, any fishing or fishing activities which result in the harvest of any marine or freshwater organisms, one or more of which (or parts thereof) is sold, traded, or bartered.

Coral area means marine habitat in the Gulf or South Atlantic EEZ where coral growth abounds, including patch reefs, outer bank reefs, deep water banks, and hard bottoms.

Cultured animals means animals which are propagated and/or reared by humans.

Dealer, in addition to the definition specified in § 600.10 of this chapter, means the person who first receives

rock shrimp harvested from the EEZ or dolphin or wahoo harvested from the Atlantic EEZ upon transfer ashore.

Deep-water grouper (DWG) means, in the Gulf, yellowedge grouper, warsaw grouper, snowy grouper, and speckled hind. In addition, for the purposes of the IFQ program for Gulf groupers and tilefishes in § 622.22, scamp are also included as DWG as specified in § 622.22(a)(7).

Deep-water snapper-grouper (DWSG) means, in the South Atlantic, yellowedge grouper, misty grouper, warsaw grouper, snowy grouper, speckled hind, blueline tilefish, queen snapper, and silk snapper.

Dehooking device means a device intended to remove a hook embedded in a fish to release the fish with minimum damage.

Dolphin means a whole fish, or a part thereof, of the species *Coryphaena equiselis* or *C. hippurus*.

Drift gillnet, for the purposes of this part, means a gillnet, other than a long gillnet or a run-around gillnet, that is unattached to the ocean bottom, regardless of whether attached to a vessel.

Fish trap means—

(1) In the Caribbean EEZ, a trap and its component parts (including the lines and buoys), regardless of the construction material, used for or capable of taking finfish.

(2) In the Gulf EEZ, a trap and its component parts (including the lines and buoys), regardless of the construction material, used for or capable of taking finfish, except a trap historically used in the directed fishery for crustaceans (that is, blue crab, stone crab, and spiny lobster).

(3) In the South Atlantic EEZ, a trap and its component parts (including the lines and buoys), regardless of the construction material, used for or capable of taking fish, except a sea bass pot, a golden crab trap, or a crustacean trap (that is, a type of trap historically used in the directed fishery for blue crab, stone crab, red crab, jonah crab, or spiny lobster and that contains at any time not more than 25 percent, by number, of fish other than blue crab, stone crab, red crab, jonah crab, and spiny lobster).

Florida Keys/East Florida hogfish means hogfish occurring in the Gulf EEZ from 25°09' N. lat. off the west coast of Florida and south to the jurisdictional boundary between the Gulf and South Atlantic Councils, as defined at 50 CFR 600.105(c), and continuing in the South Atlantic EEZ from the jurisdictional boundary between the Gulf and South Atlantic Councils to the state boundary between Florida and Georgia.

Fork length means the straight-line distance from the tip of the head (snout) to the rear center edge of the tail (caudal fin). (See Figure 2 in Appendix C of this part.)

Genetically engineered animal means an animal modified by rDNA techniques, including the entire lineage of animals that contain the modification. The term genetically engineered animal can refer to both animals with heritable rDNA constructs and animals with non-heritable rDNA constructs (e.g., those modifications intended to be used as gene therapy).

Golden crab means the species *Chaceon fenneri*, or a part thereof.

Golden crab trap means any trap used or possessed in association with a directed fishery for golden crab in the South Atlantic EEZ, including any trap that contains a golden crab in or from the South Atlantic EEZ or any trap on board a vessel that possesses golden crab in or from the South Atlantic EEZ.

GMFMC means the Gulf of Mexico Fishery Management Council.

Gulf means the Gulf of Mexico. The line of demarcation between the Atlantic Ocean and the Gulf of Mexico is specified in § 600.105(c) of this chapter.

Gulf reef fish means one or more of the species, or a part thereof, listed in Table 3 in Appendix A of this part.

Gulf and South Atlantic prohibited coral means, in the Gulf and South Atlantic, one or more of the following, or a part thereof:

(1) Coral belonging to the Class Hydrozoa (fire corals and hydrocorals).

(2) Coral belonging to the Class Anthozoa, Subclass Hexacorallia, Orders Scleractinia (stony corals) and Antipatharia (black corals).

(3) A seafan, *Gorgonia flabellum* or *G. ventalina*.

(4) Coral in a coral reef, except for allowable octocoral.

(5) Coral in an HAPC, including allowable octocoral.

Handline means a line with attached hook(s) that is tended directly by hand.

HAPC means habitat area of particular concern.

Headboat means a vessel that holds a valid Certificate of Inspection (COI) issued by the USCG to carry more than six passengers for hire.

(1) A headboat with a commercial vessel permit, as required under this part, is considered to be operating as a headboat when it carries a passenger who pays a fee or—

(i) In the case of persons aboard fishing for or possessing South Atlantic snapper-grouper, when there are more persons aboard than the number of crew specified in the vessel's COI; or

(ii) In the case of persons aboard fishing for or possessing coastal migratory pelagic fish, when there are more than three persons aboard, including operator and crew.

(2) However a vessel that has a headboat permit for Gulf reef fish, a commercial vessel permit for Gulf reef fish, and a valid COI issued by the USCG to carry passengers for hire will not be considered to be operating as a headboat provided—

(i) It is not carrying a passenger who pays a fee; and

(ii) When underway for more than 12 hours, that vessel meets, but does not exceed the minimum manning requirements outlined in its COI for vessels underway over 12 hours; or when underway for not more than 12 hours, that vessel meets the minimum manning requirements outlined in its COI for vessels underway for not more than 12-hours (if any), and does not exceed the minimum manning requirements outlined in its COI for vessels that are underway for more than 12 hours.

Headrope length means the distance, measured along the forwardmost webbing of a trawl net, between the points at which the upper lip (top edge) of the mouth of the net are attached to sleds, doors, or other devices that spread the net.

Hook-and-line gear means automatic reel, bandit gear, buoy gear, handline, longline, and rod and reel.

§ 622.2

50 CFR Ch. VI (10–1–21 Edition)

Hoop net means a frame, circular or otherwise, supporting a shallow bag of webbing and suspended by a line and bridles. The net is baited and lowered to the ocean bottom, to be raised rapidly at a later time to prevent the escape of lobster.

IFQ means individual fishing quota.

Import means—

(1) For the purpose of § 622.1(c) and subpart T of this part only—To land on, bring into, or introduce into, or attempt to land on, bring into, or introduce into, Puerto Rico or the U.S. Virgin Islands, whether or not such landing, bringing, or introduction constitutes an importation within the meaning of the customs laws of the United States;

(2) For the purpose of § 622.1(d) and subpart R of this part only—To land on, bring into, or introduce into, or attempt to land on, bring into, or introduce into, any place subject to the jurisdiction of the United States, whether or not such landing, bringing, or introduction constitutes an importation within the meaning of the customs laws of the United States;

(3) But does not include any activity described in paragraph (1) or (2) of this definition with respect to fish caught in the U.S. exclusive economic zone by a vessel of the United States.

Live rock means living marine organisms, or an assemblage thereof, attached to a hard substrate, including dead coral or rock (excluding individual mollusk shells).

Live well means a shaded container used for holding live lobsters aboard a vessel in which aerated seawater is continuously circulated from the sea. Circulation of seawater at a rate that replaces the water at least every 8 minutes meets the requirement for aeration.

Long gillnet means a gillnet that has a float line that is more than 1,000 yd (914 m) in length.

Longline means a line that is deployed horizontally to which gangions and hooks are attached. A longline may be a bottom longline, *i.e.*, designed for use on the bottom, or a pelagic longline, *i.e.*, designed for use off the bottom. The longline hauler may be manually, electrically, or hydraulically operated.

MAFMC means the Mid-Atlantic Fishery Management Council.

Mid-Atlantic means the Atlantic Ocean off the Atlantic coastal states from the boundary between the New England Fishery Management Council and the MAFMC, as specified in § 600.105(a) of this chapter, to the boundary between the MAFMC and the SAFMC, as specified in § 600.105(b) of this chapter.

Migratory group, for king mackerel, Spanish mackerel, and cobia, means a group of fish that may or may not be a separate genetic stock, but that is treated as a separate stock for management purposes. King mackerel, Spanish mackerel, and cobia are divided into migratory groups—the boundaries between these groups are specified in § 622.369.

MPA means marine protected area.

North Atlantic means the Atlantic Ocean off the Atlantic coastal states from the boundary between the United States and Canada to the boundary between the New England Fishery Management Council and the MAFMC, as specified in § 600.105(a) of this chapter.

Off Alabama means the waters in the Gulf west of a rhumb line at 87°31.1' W long., which is a line directly south from the Alabama/Florida boundary, to a rhumb line at 88°23.1' W long., which is a line directly south from the Mississippi/Alabama boundary.

Off Florida means the waters in the Gulf and South Atlantic from 30°42'45.6" N. lat., which is a line directly east from the seaward terminus of the Georgia/Florida boundary, to 87°31'06" W. long., which is a line directly south from the Alabama/Florida boundary.

Off Georgia means the waters in the South Atlantic from a line extending in a direction of 104° from true north from the seaward terminus of the South Carolina/Georgia boundary to 30°42'45.6" N. lat., which is a line directly east from the seaward terminus of the Georgia/Florida boundary.

Off Louisiana means the waters in the Gulf west of a rhumb line at 89°10.0' W long., which is a line extending directly south from South Pass Light, to a rhumb line beginning at 29°32.1' N lat., 93°47.7' W long. and extending to 26°11.4' N lat., 92°53.0' W long., which line is an

Fishery Conservation and Management

§ 622.2

extension of the boundary between Louisiana and Texas.

Off Mississippi means the waters in the Gulf west of a rhumb line at 88°23.1' W long., which is a line directly south from the Mississippi/Alabama boundary, to a rhumb line at 89°10.0' W long., which is a line extending directly south from South Pass Light.

Off Monroe County, Florida means the area from the Florida coast to the outer limit of the EEZ between a line extending directly east from the Dade/Monroe County, Florida boundary (25°20.4' N. latitude) and a line extending directly west from the Monroe/Collier County, Florida boundary (25°48.0' N. latitude).

Off North Carolina means the waters in the South Atlantic from 36°34'55" N. lat., which is a line directly east from the Virginia/North Carolina boundary, to a line extending in a direction of 135°34'55" from true north from the North Carolina/South Carolina boundary, as marked by the border station on Bird Island at 33°51'07.9" N. lat., 78°32'32.6" W. long.

Off South Carolina means the waters in the South Atlantic from a line extending in a direction of 135°34'55" from true north from the North Carolina/South Carolina boundary, as marked by the border station on Bird Island at 33°51'07.9" N. lat., 78°32'32.6" W. long., to a line extending in a direction of 104° from true north from the seaward terminus of the South Carolina/Georgia boundary.

Off Texas means the waters in the Gulf west of a rhumb line from 29°32.1' N. lat., 93°47.7' W. long. to 26°11.4' N. lat., 92°53' W. long., which line is an extension of the boundary between Louisiana and Texas.

Off the Gulf states, other than Florida means the area from the coast to the outer limit of the EEZ between the Texas/Mexico border to the Alabama/Florida boundary (87°31'06" W. long.).

Off the southern Atlantic states, other than Florida means the area from the coast to the outer limit of the EEZ between the Virginia/North Carolina boundary (36°34'55" N. lat.) to the Georgia/Florida boundary (30°42'45.6" N. lat.).

Official sunrise or official sunset means the time of sunrise or sunset as deter-

mined for the date and location in *The Nautical Almanac*, prepared by the U.S. Naval Observatory.

Pelagic longline means a longline that is suspended by floats in the water column and that is not fixed to or in contact with the ocean bottom.

Pelagic sargassum means the species *Sargassum natans* or *S. fluitans*, or a part thereof.

Penaeid shrimp means one or more of the following species, or a part thereof:

- (1) Brown shrimp, *Farfantepenaeus aztecus*.
- (2) Pink shrimp, *Farfantepenaeus duorarum*.
- (3) White shrimp, *Litopenaeus setiferus*.

Penaeid shrimp trawler means any vessel that is equipped with one or more trawl nets whose on-board or landed catch of penaeid shrimp is more than 1 percent, by weight, of all fish comprising its on-board or landed catch.

Powerhead means any device with an explosive charge, usually attached to a speargun, spear, pole, or stick, that fires a projectile upon contact.

Processor means a person who processes fish or fish products, or parts thereof, for commercial use or consumption.

Purchase means the act or activity of buying, trading, or bartering, or attempting to buy, trade, or barter.

Recreational fishing means, for the purpose of subpart R of this part only, fishing or fishing activities which result in the harvest of fish, none of which (or parts thereof) is sold, traded, or bartered.

Red drum, also called redfish, means *Sciaenops ocellatus*, or a part thereof.

Red snapper means *Lutjanus campechanus*, or a part thereof, one of the Gulf reef fish species.

Regional Administrator (RA), for the purposes of this part, means the Administrator, Southeast Region, NMFS, 263 13th Avenue South, St. Petersburg, FL 33701, or a designee.

Reporting week means the period of time beginning at 12:01 a.m., local time, on Sunday and ending at 11:59 p.m., local time, the following Saturday.

Rod and reel means a rod and reel unit that is not attached to a vessel, or, if attached, is readily removable,

§ 622.2

from which a line and attached hook(s) are deployed. The line is payed out from and retrieved on the reel manually, electrically, or hydraulically.

Run-around gillnet means a gillnet, other than a long gillnet, that, when used, encloses an area of water.

SAFMC means the South Atlantic Fishery Management Council.

Sale or sell means the act or activity of transferring property for money or credit, trading, or bartering, or attempting to so transfer, trade, or barter.

Science and Research Director (SRD), for the purposes of this part, means the Science and Research Director, Southeast Fisheries Science Center, NMFS (see Table 1 of § 600.502 of this chapter).

Sea bass pot means a trap has six rectangular sides and does not exceed 25 inches (63.5 cm) in height, width, or depth.

Shallow-water grouper (SWG) means, in the Gulf, gag, red grouper, black grouper, scamp, yellowfin grouper, and yellowmouth grouper. Other shallow-water grouper (Other SWG) means, in the Gulf, SWG excluding gag and red grouper (i.e., black grouper, scamp, yellowfin grouper, and yellowmouth grouper). In addition, for the purposes of the IFQ program for Gulf groupers and tilefishes in § 622.22, speckled hind and warsaw grouper are also included as Other SWG as specified in § 622.22(a)(6).

Shrimp means one or more of the following species, or a part thereof:

(1) Brown shrimp, *Farfantepenaeus aztecus*.

(2) White shrimp, *Litopenaeus setiferus*.

(3) Pink shrimp, *Farfantepenaeus duorarum*.

(4) Royal red shrimp, *Hymenopenaeus robustus*.

(5) Rock shrimp, *Sicyonia brevirostris*.

Shrimp trawler means any vessel that is equipped with one or more trawl nets whose on-board or landed catch of shrimp is more than 1 percent, by weight, of all fish comprising its on-board or landed catch.

Significant risk means likely to adversely affect endangered or threatened species or their critical habitat; is likely to seriously injure or kill marine mammals; is likely to result in un-

50 CFR Ch. VI (10–1–21 Edition)

mitigated adverse effects on essential fish habitat; is likely to adversely affect wild fish stocks and cause them to become overfished or undergo overfishing; or otherwise may result in harm to public health or safety, as determined by the RA.

Smalltooth sawfish means the species *Pristis pectinata*, or a part thereof.

SMZ means special management zone.

South Atlantic means the Atlantic Ocean off the Atlantic coastal states from the boundary between the MAFMC and the SAFMC, as specified in § 600.105(b) of this chapter, to the line of demarcation between the Atlantic Ocean and the Gulf of Mexico, as specified in § 600.105(c) of this chapter.

South Atlantic shallow-water grouper (SASWG) means, in the South Atlantic, gag, black grouper, red grouper, scamp, red hind, rock hind, yellowmouth grouper, yellowfin grouper, graysby, and coney.

South Atlantic snapper-grouper means one or more of the species, or a part thereof, listed in Table 4 in Appendix A of this part.

Stab net means a gillnet, other than a long gillnet, or trammel net whose weight line sinks to the bottom and submerges the float line.

Tail length means the lengthwise measurement of the entire tail (segmented portion), not including any protruding muscle tissue, of a spiny lobster along the top middorsal line (middle of the back) to the rearmost extremity. The measurement is made with the tail in a flat, straight position with the tip of the tail closed.

Total length (TL), for the purposes of this part, means the straight-line distance from the tip of the snout to the tip of the tail (caudal fin), excluding any caudal filament, while the fish is lying on its side. The mouth of the fish may be closed and/or the tail may be squeezed together to give the greatest overall measurement. (See Figure 2 in appendix C of this part.)

Toxic chemical means any substance, other than an allowable chemical, that, when introduced into the water, can stun, immobilize, or take marine life.

Trammel net means two or more panels of netting, suspended vertically in the water by a common float line and

Fishery Conservation and Management

§ 622.4

a common weight line, with one panel having a larger mesh size than the other(s), to entrap fish in a pocket of netting.

Transgenic animal means an animal whose genome contains a nucleotide sequence that has been intentionally modified in vitro, and the progeny of such an animal.

Trip means a fishing trip, regardless of number of days duration, that begins with departure from a dock, berth, beach, seawall, or ramp and that terminates with return to a dock, berth, beach, seawall, or ramp.

Try net, also called test net, means a net pulled for brief periods by a shrimp trawler to test for shrimp concentrations or determine fishing conditions (e.g., presence or absence of bottom debris, jellyfish, bycatch, sea grasses).

Venting device means a device intended to deflate the abdominal cavity of a fish to release the fish with minimum damage.

Wahoo means the species *Acanthocybium solandri*, or a part thereof, in the Atlantic.

Wild fish means fish that are not propagated or reared by humans.

Wild live rock means live rock other than aquacultured live rock.

Wreckfish means the species *Polyprion americanus*, or a part thereof, one of the South Atlantic snapper-grouper species.

[78 FR 22952, Apr. 17, 2013, as amended at 78 FR 78775, Dec. 27, 2013; 79 FR 19493, Apr. 9, 2014; 80 FR 4218, Jan. 27, 2015; 81 FR 1792, Jan. 13, 2016; 82 FR 34580, July 25, 2017; 85 FR 6823, Feb. 6, 2020]

§ 622.3 Relation to other laws and regulations.

(a) The relation of this part to other laws is set forth in § 600.705 of this chapter and paragraphs (b) through (e) of this section.

(b) Except for regulations on allowable octocoral, Gulf and South Atlantic prohibited coral, and live rock, this part is intended to apply within the EEZ portions of applicable National Marine Sanctuaries and National Parks, unless the regulations governing such sanctuaries or parks prohibit their application. Regulations on allowable octocoral, Gulf and South Atlantic prohibited coral, and live rock

do not apply within the EEZ portions of the following National Marine Sanctuaries and National Parks:

(1) Florida Keys National Marine Sanctuary (15 CFR part 922, subpart P).

(2) Gray's Reef National Marine Sanctuary (15 CFR part 922, subpart I).

(3) Monitor National Marine Sanctuary (15 CFR part 922, subpart F).

(4) Everglades National Park (36 CFR 7.45).

(5) Biscayne National Park (16 U.S.C. 410gg).

(6) Fort Jefferson National Monument (36 CFR 7.27).

(c) For allowable octocoral, if a state has a catch, landing, or gear regulation that is more restrictive than a catch, landing, or gear regulation in this part, a person landing in such state allowable octocoral taken from the South Atlantic EEZ must comply with the more restrictive state regulation.

(d) General provisions on facilitation of enforcement, penalties, and enforcement policy applicable to all domestic fisheries are set forth in §§ 600.730, 600.735, and 600.740 of this chapter, respectively.

(e) An activity that is otherwise prohibited by this part may be conducted if authorized as scientific research activity, exempted fishing, or exempted educational activity, as specified in § 600.745 of this chapter.

(f) Alabama, Florida, Louisiana, Mississippi, and Texas are delegated the authority to specify certain management measures related to the harvest and possession of red snapper by the private angling component in the Gulf EEZ. See § 622.23 for the Gulf recreational red snapper management measures that have been delegated.

[78 FR 22952, Apr. 17, 2013, as amended at 85 FR 6823, Feb. 6, 2020]

§ 622.4 Permits and fees—general.

This section contains general information about procedures related to permits. See also §§ 622.70, 622.220, and 622.470 regarding certain permit procedures unique to coral permits in the Gulf of Mexico, South Atlantic Region, and Puerto Rico and the U.S. Virgin Islands, respectively. See subpart F of this part for permit requirements related to aquaculture of species other than live rock. Permit requirements

§ 622.4

50 CFR Ch. VI (10–1–21 Edition)

for specific fisheries, as applicable, are contained in subparts B through V of this part.

(a) *Applications for permits.* Application forms for all permits are available from the RA. Completed application forms and all required supporting documents must be submitted to the RA at least 30 days prior to the date on which the applicant desires to have the permit made effective. All vessel permits are mailed to owners, whether the applicant is an owner or an operator.

(1) *Vessel permits.* (i) The application for a commercial vessel permit, other than for wreckfish, or for a charter vessel/headboat permit must be submitted by the owner (in the case of a corporation, an officer or shareholder; in the case of a partnership, a general partner) or operator of the vessel. A commercial vessel permit that is issued based on the earned income qualification of an operator is valid only when that person is the operator of the vessel. The applicant for a commercial vessel permit for wreckfish must be a wreckfish shareholder.

(ii) An applicant must provide the following:

(A) A copy of the vessel's valid USCG certificate of documentation or, if not documented, a copy of its valid state registration certificate.

(B) Vessel name and official number.

(C) Name, address, telephone number, and other identifying information of the vessel owner and of the applicant, if other than the owner.

(D) Any other information concerning the vessel, gear characteristics, principal fisheries engaged in, or fishing areas, as specified on the application form.

(E) Any other information that may be necessary for the issuance or administration of the permit, as specified on the application form.

(F) If applying for a commercial vessel permit, documentation, as specified in the instructions accompanying each application form, showing that applicable eligibility requirements of this part have been met.

(G) If a sea bass pot will be used, the number, dimensions, and estimated cubic volume of the pots that will be used and the applicant's desired color code for use in identifying his or her

vessel and buoys (white is not an acceptable color code).

(2) *Operator permits.* An applicant for an operator permit must provide the following:

(i) Name, address, telephone number, and other identifying information specified on the application.

(ii) Two recent (no more than 1-yr old), color, passport-size photographs.

(iii) Any other information that may be necessary for the issuance or administration of the permit, as specified on the application form.

(3) *Dealer permits.* (i) The application for a dealer permit must be submitted by the owner (in the case of a corporation, an officer or shareholder; in the case of a partnership, a general partner).

(ii) An applicant must provide the following:

(A) A copy of each state wholesaler's license held by the dealer.

(B) Name, address, telephone number, date the business was formed, and other identifying information of the business.

(C) The address of each physical facility at a fixed location where the business receives fish.

(D) Name, address, telephone number, other identifying information, and official capacity in the business of the applicant.

(E) Any other information that may be necessary for the issuance or administration of the permit, as specified on the application form.

(b) *Change in application information.* The owner or operator of a vessel with a permit, a person with a coral permit, a person with an operator permit, or a dealer with a permit must notify the RA within 30 days after any change in the application information specified in paragraph (a) of this section or in §§ 622.70(b), 622.220(b), 622.400(b), or 622.470(b). The permit is void if any change in the information is not reported within 30 days.

(c) *Fees.* Unless specified otherwise, a fee is charged for each application for a permit, license, or endorsement submitted under this part, for each request for transfer or replacement of such permit, license, or endorsement, and for each sea bass pot identification tag required under § 622.177(a)(1). The

amount of each fee is calculated in accordance with the procedures of the NOAA Finance Handbook, available from the RA, for determining the administrative costs of each special product or service. The fee may not exceed such costs and is specified with each application form. The appropriate fee must accompany each application, request for transfer or replacement, or request for sea bass pot identification tags.

(d) *Initial issuance.* (1) The RA will issue an initial permit at any time to an applicant if the application is complete and the specific requirements for the requested permit have been met. An application is complete when all requested forms, information, and documentation have been received.

(2) Upon receipt of an incomplete application, the RA will notify the applicant of the deficiency. If the applicant fails to correct the deficiency within 30 days of the date of the RA's letter of notification, the application will be considered abandoned.

(e) *Duration.* A permit remains valid for the period specified on it unless it is revoked, suspended, or modified pursuant to subpart D of 15 CFR part 904 or, in the case of a vessel or dealer permit, the vessel or dealership is sold.

(f) *Transfer—(1) Vessel permits, licenses, and endorsements and dealer permits.* A vessel permit, license, or endorsement or a dealer permit or endorsement issued under this part 622 is not transferable or assignable, except as provided in the permits sections of subparts B through V of this part, where applicable. A person who acquires a vessel or dealership who desires to conduct activities for which a permit, license, or endorsement is required must apply for a permit, license, or endorsement in accordance with the provisions of this section and other applicable sections of this part. If the acquired vessel or dealership is currently permitted, the application must be accompanied by the original permit and a copy of a signed bill of sale or equivalent acquisition papers. In those cases where a permit, license, or endorsement is transferable, the seller must sign the back of the permit, license, or endorsement and have the signed transfer document notarized.

(2) *Operator permits.* An operator permit is not transferable.

(g) *Renewal—(1) Vessel permits, licenses, and endorsements, and dealer permits.* Unless specified otherwise, a vessel or dealer permit holder who has been issued a permit, license, or endorsement under this part must renew such permit, license, or endorsement on an annual basis. The RA will notify a vessel or dealer permit holder whose permit, license, or endorsement is expiring approximately 2 months prior to the expiration date. A vessel or dealer permit holder who does not receive a notification is still required to submit an application form as specified below. The applicant must submit a completed renewal application form and all required supporting documents to the RA prior to the applicable deadline for renewal of the permit, license, or endorsement, and at least 30 calendar days prior to the date on which the applicant desires to have the permit made effective. Application forms and instructions for renewal are available online at sero.nmfs.noaa.gov or from the RA (Southeast Permits Office) at 1-877-376-4877, Monday through Friday between 8 a.m. and 4:30 p.m., eastern time. If the RA receives an incomplete application, the RA will notify the applicant of the deficiency. If the applicant fails to correct the deficiency within 30 calendar days of the notification date by the RA, the application will be considered abandoned. A permit, license, or endorsement that is not renewed within the applicable deadline will not be reissued.

(2) *Operator permits.* An operator permit required by this part 622 is issued for a period not longer than 3 years. A permit not renewed immediately upon its expiration would expire at the end of the operator's birth month that is between 2 and 3 years after issuance. For renewal, a new application must be submitted in accordance with paragraph (a)(2) of this section.

(h) *Display.* A vessel permit, license, or endorsement issued under this part 622 must be carried on board the vessel. A dealer permit issued under this part 622, or a copy thereof, must be available on the dealer's premises. In addition, a copy of the dealer's permit must accompany each vehicle that is used to

§ 622.5

pick up from a fishing vessel fish harvested from the EEZ. A Gulf IFQ dealer endorsement must accompany each vehicle that is used to pick up Gulf IFQ red snapper and/or Gulf IFQ groupers and tilefishes. The operator of a vessel must present the vessel permit, license, or endorsement for inspection upon the request of an authorized officer. A dealer or a vehicle operator must present the permit or a copy for inspection upon the request of an authorized officer. An operator of a vessel in a fishery in which an operator permit is required must present his/her operator permit and one other form of personal identification that includes a picture (driver's license, passport, etc.) for inspection upon the request of an authorized officer.

(i) *Sanctions and denials.* (1) A permit, license, or endorsement issued pursuant to this part 622 may be revoked, suspended, or modified, and a permit, license, or endorsement application may be denied, in accordance with the procedures governing enforcement-related permit sanctions and denials found at subpart D of 15 CFR part 904.

(2) A person whose operator permit is suspended, revoked, or modified may not be aboard any fishing vessel subject to Federal fishing regulations in any capacity, if so sanctioned by NOAA, while the vessel is at sea or offloading. The vessel's owner and operator are responsible for compliance with this measure. A list of operators whose permits are revoked or suspended may be obtained from the RA.

(j) *Alteration.* A permit, license, or endorsement that is altered, erased, or mutilated is invalid.

(k) *Replacement.* A replacement permit, license, or endorsement may be issued. An application for a replacement permit, license, or endorsement is not considered a new application. An application for a replacement operator permit must include two new photographs, as specified in paragraph (a)(2)(ii) of this section.

[78 FR 22952, Apr. 17, 2013, as amended at 79 FR 19493, Apr. 9, 2014; 81 FR 1792, Jan. 13, 2016; 83 FR 64034, Dec. 13, 2018]

50 CFR Ch. VI (10–1–21 Edition)

§ 622.5 Recordkeeping and reporting—general.

This section contains recordkeeping and reporting requirements that are broadly applicable, as specified, to most or all fisheries governed by this part. Additional recordkeeping and reporting requirements specific to each fishery are contained in the respective subparts B through V of this part.

(a) *Collection of additional data and fish inspection.* In addition to data required to be reported as specified in subparts B through V of this part, additional data will be collected by authorized statistical reporting agents and by authorized officers. A person who fishes for or possesses species in or from the EEZ governed in this part is required to make the applicable fish or parts thereof available for inspection by the SRD or an authorized officer on request.

(b) *Commercial vessel, charter vessel, and headboat inventory.* The owner or operator of a commercial vessel, charter vessel, or headboat operating in a fishery governed in this part who is not selected to report by the SRD under the recordkeeping and reporting requirements in subparts B through V of this part must provide the following information when interviewed by the SRD:

(1) Name and official number of vessel and permit number, if applicable.

(2) Length and tonnage.

(3) Current home port.

(4) Fishing areas.

(5) Ports where fish were offloaded during the last year.

(6) Type and quantity of gear.

(7) Number of full- and part-time fishermen or crew members.

(c) *Dealers—(1) Permitted Gulf and South Atlantic dealers.* (i) A person issued a Gulf and South Atlantic dealer permit must submit a detailed electronic report of all fish first received for a commercial purpose within the time period specified in this paragraph via the dealer electronic trip ticket reporting system. These electronic reports must be submitted at weekly intervals via the dealer electronic trip ticket reporting system by 11:59 p.m., local time, the Tuesday following a reporting week. If no fish were received during a reporting week, an electronic

report so stating must be submitted for that reporting week. In addition, during the open season, dealers must submit daily reports for Gulf migratory group king mackerel harvested by the run-around gillnet component in the Florida west coast southern subzone via the port agents, telephone, internet, or other similar means determined by NMFS. From the beginning of the open season until the commercial ACL (commercial quota) for the run-around gillnet sector for Gulf migratory group king mackerel is reached, dealers must submit a daily report if no king mackerel were received during the previous day. NMFS will provide written notice to dealers that first receive Gulf king mackerel harvested by the run-around gillnet component prior to the beginning of each fishing year if the reporting methods or deadline change from the previous year.

(ii) Dealers must retain either the paper forms or electronic reports for at least 1 year after the submittal date and must provide such records for inspection upon the request of an authorized officer or the SRD.

(iii) During catastrophic conditions only, the ACL monitoring program provides for use of paper-based components for basic required functions as a backup. The RA will determine when catastrophic conditions exist, the duration of the catastrophic conditions, and which participants or geographic areas are deemed affected by the catastrophic conditions. The RA will provide timely notice to affected participants via publication of notification in the FEDERAL REGISTER, NOAA weather radio, fishery bulletins, and other appropriate means and will authorize the affected participants' use of paper-based components for the duration of the catastrophic conditions. The paper forms will be available from NMFS. During catastrophic conditions, the RA has the authority to waive or modify reporting time requirements.

(iv) Gulf and South Atlantic dealers are not authorized to first receive Gulf reef fish, Gulf red drum, South Atlantic golden crab, South Atlantic snapper-grouper, South Atlantic wreckfish, South Atlantic rock shrimp, coastal migratory pelagic fish, spiny lobster, or Atlantic dolphin or wahoo from a

federally permitted vessel if the required reports have not been submitted and received by NMFS according to the reporting requirements under this section. Delinquent reports automatically result in a Gulf and South Atlantic dealer becoming ineligible to first receive such fish, regardless of any notification to dealers by NMFS. Gulf and South Atlantic dealers who become ineligible to receive such fish due to delinquent reports are authorized to first receive such fish only after all required and delinquent reports have been submitted and received by NMFS according to the reporting requirements under this section.

(2) *Non-permitted dealers.* See § 622.51 for a person who purchases Gulf shrimp from a vessel, or person, that fishes for shrimp in the Gulf EEZ or in adjoining state waters, or that lands shrimp in an adjoining state.

[78 FR 22952, Apr. 17, 2013, as amended at 79 FR 19493, Apr. 9, 2014; 80 FR 78674, Dec. 17, 2015]

§ 622.6 Vessel identification.

This section does not apply to subpart R of this part, which has its own specific vessel identification requirements in § 622.402.

(a) *Applicability*—(1) *Official number.* A vessel for which a permit has been issued under subparts B through V of this part except for subpart R, and a vessel that fishes for or possesses pelagic sargassum in the South Atlantic EEZ, must display its official number—

(i) On the port and starboard sides of the deckhouse or hull and, for vessels over 25 ft (7.6 m) long, on an appropriate weather deck, so as to be clearly visible from an enforcement vessel or aircraft.

(ii) In block arabic numerals permanently affixed to or painted on the vessel in contrasting color to the background.

(iii) At least 18 inches (45.7 cm) in height for vessels over 65 ft (19.8 m) long; at least 10 inches (25.4 cm) in height for vessels over 25 ft (7.6 m) long; and at least 3 inches (7.6 cm) in height for vessels 25 ft (7.6 m) long or less.

(2) *Official number and color code.* The following vessels must display their official number as specified in paragraph

§ 622.7

50 CFR Ch. VI (10–1–21 Edition)

(a)(1) of this section and, in addition, must display their assigned color code: A vessel for which a permit has been issued to fish with a sea bass pot, as required under § 622.170(a)(1); a vessel in the commercial Caribbean reef fish fishery fishing with traps; and a vessel in the Caribbean spiny lobster fishery. Color codes required for the Caribbean reef fish fishery and Caribbean spiny lobster fishery are assigned by Puerto Rico or the U.S. Virgin Islands, whichever is applicable; color codes required in all other fisheries are assigned by the RA. The color code must be displayed—

(i) On the port and starboard sides of the deckhouse or hull and, for vessels over 25 ft (7.6 m) long, on an appropriate weather deck, so as to be clearly visible from an enforcement vessel or aircraft.

(ii) In the form of a circle permanently affixed to or painted on the vessel.

(iii) At least 18 inches (45.7 cm) in diameter for vessels over 65 ft (19.8 m) long; at least 10 inches (25.4 cm) in diameter for vessels over 25 ft (7.6 m) long; and at least 3 inches (7.6 cm) in diameter for vessels 25 ft (7.6 m) long or less.

(b) *Duties of operator.* The operator of a vessel specified in paragraph (a) of this section must keep the official number and the color code, if applicable, clearly legible and in good repair and must ensure that no part of the fishing vessel, its rigging, fishing gear, or any other material on board obstructs the view of the official number or the color code, if applicable, from an enforcement vessel or aircraft.

§ 622.7 Fishing years.

The fishing year for species or species groups governed in this part is January 1 through December 31 except for the following:

(a) *Allowable octocoral*—October 1 through September 30.

(b) *King and Spanish mackerel.* The fishing year for the king and Spanish mackerel bag limits specified in § 622.382 is January 1 through December 31. The following fishing years apply only for the king and Spanish mackerel quotas specified in § 622.384:

(1) *Gulf migratory group king mackerel*—(i) *Southern zone*—July 1 through June 30.

(ii) *Northern zone*—October 1 through September 30.

(iii) *Western zone*—July 1 through June 30.

(2) *Gulf migratory group Spanish mackerel*—April through March.

(3) *South Atlantic migratory group king and Spanish mackerel*—March through February.

(c) *Wreckfish*—April 16 through April 15.

(d) *South Atlantic greater amberjack*—March 1 through the end of February.

(e) *South Atlantic black sea bass recreational sector*—April 1 through March 31. (Note: The fishing year for the commercial sector for black sea bass is January 1 through December 31).

(f) *South Atlantic yellowtail snapper*—August 1 through July 31.

(g) *Gulf of Mexico yellowtail snapper*—August 1 through July 31.

(h) *Gulf of Mexico greater amberjack recreational sector*—August 1 through July 31. (Note: The fishing year for the commercial sector for greater amberjack is January 1 through December 31).

[78 FR 22952, Apr. 17, 2013, as amended at 79 FR 66322, Nov. 7, 2014; 80 FR 4218, Jan. 27, 2015; 81 FR 45248, July 13, 2016; 81 FR 10311, Feb. 10, 2017; 82 FR 17394, Apr. 11, 2017; 83 FR 13428, Mar. 29, 2018]

§ 622.8 Quotas—general.

(a) Quotas apply for the fishing year for each species, species group, sector or component, unless accountability measures are implemented during the fishing year pursuant to the applicable annual catch limits and accountability measures sections of subparts B through V of this part due to a quota overage occurring the previous year, in which case a reduced quota will be specified through notification in the FEDERAL REGISTER. Annual quota increases are contingent on the total allowable catch for the applicable species not being exceeded in the previous fishing year. If the total allowable catch is exceeded in the previous fishing year, the RA will file a notification with the

Office of the Federal Register to maintain the quota for the applicable species, sector or component from the previous fishing year for following fishing years, unless NMFS determines based upon the best scientific information available that maintaining the quota from the previous year is unnecessary. Except for the quotas for Gulf and South Atlantic coral, the quotas include species harvested from state waters adjoining the EEZ.

(b) *Quota closures.* When a quota specified in this part is reached, or is projected to be reached, the Assistant Administrator will file a notification to that effect with the Office of the Federal Register. On and after the effective date of such notification, for the remainder of the fishing year, the applicable closure restrictions for such a quota, as specified in this part apply. (See the applicable annual catch limits (ACLs), annual catch targets (ACTs), and accountability measures (AMs) sections of subparts B through V of this part for closure provisions when an applicable ACL or ACT is reached or projected to be reached).

(c) *Reopening.* When a species, sector or component has been closed based on a projection of the quota specified in this part, or the ACL specified in the applicable annual catch limits and accountability measures sections of subparts B through V of this part being reached and subsequent data indicate that the quota or ACL was not reached, the Assistant Administrator may file a notification to that effect with the Office of the Federal Register. Such notification may reopen the species, sector or component to provide an opportunity for the quota or ACL to be harvested.

[78 FR 22952, Apr. 17, 2013, as amended at 80 FR 22429, Apr. 22, 2015]

§ 622.9 Prohibited gear and methods—general.

This section contains prohibitions on use of gear and methods that are of general applicability, as specified. Additional prohibitions on use of gear and methods applicable to specific species or species groups are contained in subparts B through V of this part.

(a) *Explosives.* An explosive (except an explosive in a powerhead) may not be

used to fish in the Caribbean, Gulf, or South Atlantic EEZ. A vessel fishing in the EEZ for a species governed in this part, or a vessel for which a permit has been issued under this part, may not have on board any dynamite or similar explosive substance.

(b) *Chemicals and plants.* A toxic chemical may not be used or possessed in a coral area, and a chemical, plant, or plant-derived toxin may not be used to harvest a Caribbean coral reef resource in the Caribbean EEZ.

(c) *Fish traps.* A fish trap may not be used or possessed in the Gulf or South Atlantic EEZ. A fish trap deployed in the Gulf or South Atlantic EEZ may be disposed of in any appropriate manner by the Assistant Administrator or an authorized officer.

(d) *Weak link.* A bottom trawl that does not have a weak link in the tickler chain may not be used to fish in the Gulf EEZ. For the purposes of this paragraph, a weak link is defined as a length or section of the tickler chain that has a breaking strength less than the chain itself and is easily seen as such when visually inspected.

(e) *Use of Gulf reef fish as bait prohibited.* Gulf reef fish may not be used as bait in any fishery, except that, when purchased from a fish processor, the filleted carcasses and offal of Gulf reef fish may be used as bait in trap fisheries for blue crab, stone crab, deep-water crab, and spiny lobster.

§ 622.10 Landing fish intact—general.

This section contains requirements for landing fish intact that are broadly applicable to finfish in the Gulf EEZ and Caribbean EEZ, as specified. See subparts B through V, as applicable, for additional species specific requirements for landing fish intact.

(a) Finfish in or from the Gulf EEZ or Caribbean EEZ, except as specified in paragraphs (b) and (c) of this section, must be maintained with head and fins intact.

(b) Shark, swordfish, and tuna species are exempt from the requirements of paragraph (a) of this section.

(c) In the Gulf EEZ or Caribbean EEZ:

(1) Bait is exempt from the requirement to be maintained with head and fins intact.

§ 622.11

50 CFR Ch. VI (10–1–21 Edition)

(i) For the purpose of this paragraph (c)(1), “*bait*” means—

(A) Packaged, headless fish fillets that have the skin attached and are frozen or refrigerated;

(B) Headless fish fillets that have the skin attached and are held in brine; or

(C) Small pieces no larger than 3 in³ (7.6 cm³) or strips no larger than 3 inches by 9 inches (7.6 cm by 22.9 cm) that have the skin attached and are frozen, refrigerated, or held in brine.

(ii) Paragraph (c)(1)(i) of this section notwithstanding, a finfish or part thereof possessed in or landed from the Gulf EEZ or Caribbean EEZ that is subsequently sold or purchased as a finfish species, rather than as bait, is not bait.

(2) Legal-sized finfish possessed for consumption at sea on the harvesting vessel are exempt from the requirement to have head and fins intact, provided—

(i) Such finfish do not exceed any applicable bag limit;

(ii) Such finfish do not exceed 1.5 lb (680 g) of finfish parts per person aboard; and

(iii) The vessel is equipped to cook such finfish on board.

(d) The operator of a vessel that fishes in the EEZ is responsible for ensuring that fish on that vessel in the EEZ are maintained intact and, if taken from the EEZ, are maintained intact through offloading ashore, as specified in this section.

§ 622.11 Bag and possession limits—general applicability.

This section describes the general applicability provisions for bag and possession limits specified in subparts B through V of this part.

(a) *Applicability.* (1) The bag and possession limits apply for species/species groups in or from the EEZ. Unless specified otherwise, bag limits apply to a person on a daily basis, regardless of the number of trips in a day. Unless specified otherwise, a person is limited to a single bag limit for a trip lasting longer than one calendar day. Unless specified otherwise, possession limits apply to a person on a trip after the first 24 hours of that trip. The bag and possession limits apply to a person who fishes in the EEZ in any manner, except a person aboard a vessel in the

EEZ that has on board the commercial vessel permit required under this part for the appropriate species/species group. The possession of a commercial vessel permit notwithstanding, the bag and possession limits apply when the vessel is operating as a charter vessel or headboat. A person who fishes in the EEZ may not combine a bag limit specified in subparts B through V of this part with a bag or possession limit applicable to state waters. A species/species group subject to a bag limit specified in subparts B through V of this part taken in the EEZ by a person subject to the bag limits may not be transferred at sea, regardless of where such transfer takes place, and such fish may not be transferred in the EEZ. The operator of a vessel that fishes in the EEZ is responsible for ensuring that the bag and possession limits specified in subparts B through V of this part are not exceeded.

(2) [Reserved]

(b) [Reserved]

[78 FR 22952, Apr. 17, 2013, as amended at 79 FR 19494, Apr. 9, 2014]

§ 622.12 Annual catch limits (ACLs) and accountability measures (AMs) for Caribbean island management areas/Caribbean EEZ.

(a) *Puerto Rico management area.* See appendix E of this part for specification of the Puerto Rico management area.

(1) *Queen conch.* See § 622.491 regarding seasonal and area closure provisions and ACL closure provisions applicable to queen conch.

(i) *Commercial ACL.* For the EEZ only, 0 lb (0 kg), round weight.

(ii) *Recreational ACL.* For the EEZ only, 0 lb (0 kg), round weight.

(2) *Reef fish.* Landings will be evaluated relative to the applicable ACL based on a moving multi-year average of landings, as described in the FMP. With the exceptions of goliath grouper, Nassau grouper, midnight parrotfish, blue parrotfish, and rainbow parrotfish, ACLs are based on the combined Caribbean EEZ and territorial landings for the Puerto Rico management area. As described in the FMP, for each species or species group in this paragraph (a)(2), any fishing season reduction required under paragraph (a)(2)(i) or (ii)

Fishery Conservation and Management

§ 622.12

of this section will be applied from September 30 backward, toward the beginning of the fishing year. If the length of the required fishing season reduction exceeds the time period of January 1 through September 30, any additional fishing season reduction will be applied from October 1 forward, toward the end of the fishing year.

(i) *Commercial sector.* If commercial landings, as estimated by the SRD, have exceeded the applicable species or species group commercial ACL, as specified in this paragraph (a)(2)(i), and the combined commercial and recreational landings have exceeded the applicable combined commercial and recreational sector ACL (total ACL), as specified in paragraph (a)(2)(iii) of this section, the AA will file a notification with the Office of the Federal Register, at or near the beginning of the following fishing year, to reduce the length of the fishing season for the applicable species or species groups for the commercial sector that year by the amount necessary to ensure that commercial landings do not exceed the applicable commercial ACL for the species or species group. If NMFS determines that either the applicable commercial ACL or total ACL for a particular species or species group was exceeded because of enhanced data collection and monitoring efforts instead of an increase in catch of the species or species group, NMFS will not reduce the length of the commercial fishing season for the applicable species or species group the following fishing year. The commercial ACLs, in round weight, are as follows:

- (A) *Parrotfishes*—52,737 lb (23,915 kg).
- (B) *Snapper Unit 1*—284,685 lb (129,131 kg).
- (C) *Snapper Unit 2*—145,916 lb (66,186 kg).
- (D) *Snapper Unit 3*—345,775 lb (156,841 kg).
- (E) *Snapper Unit 4*—373,295 lb (169,324 kg).
- (F) *Groupers*—177,513 lb (80,519 kg).
- (G) *Angelfish*—8,984 lb (4,075 kg).
- (H) *Boxfish*—86,115 lb (39,061 kg).
- (I) *Goatfishes*—17,565 lb (7,967 kg).
- (J) *Grunts*—182,396 lb (82,733 kg).
- (K) *Wrasses*—54,147 lb (24,561 kg).
- (L) *Jacks*—86,059 lb (39,036 kg).

(M) *Scups and porgies, combined*—24,739 lb (11,221 kg).

(N) *Squirrelfish*—16,663 lb (7,558 kg).

(O) *Surgeonfish*—7,179 lb (3,256 kg).

(P) *Triggerfish and filefish, combined*—58,475 lb (26,524 kg).

(ii) *Recreational sector.* If recreational landings, as estimated by the SRD, have exceeded the applicable species or species group recreational ACL, as specified in this paragraph (a)(2)(ii), and the combined commercial and recreational landings have exceeded the applicable combined commercial and recreational sector ACL (total ACL), as specified in paragraph (a)(2)(iii) of this section, the AA will file a notification with the Office of the Federal Register, at or near the beginning of the following fishing year, to reduce the length of the fishing season for the applicable species or species groups for the recreational sector that year by the amount necessary to ensure that recreational landings do not exceed the applicable species or species group recreational ACL. If NMFS determines that either the applicable recreational ACL or total ACL for a particular species or species group was exceeded because of enhanced data collection and monitoring efforts instead of an increase in catch of the species or species group, NMFS will not reduce the length of the fishing season for the applicable species or species group the following fishing year. The recreational ACLs, in round weight, are as follows:

- (A) *Parrotfishes*—15,263 lb (6,921 kg).
- (B) *Snapper Unit 1*—95,526 lb (43,330 kg).
- (C) *Snapper Unit 2*—34,810 lb (15,790 kg).
- (D) *Snapper Unit 3*—83,158 lb (37,720 kg).
- (E) *Snapper Unit 4*—28,509 lb (12,931 kg).
- (F) *Groupers*—77,213 lb (35,023 kg).
- (G) *Angelfish*—4,492 lb (2,038 kg).
- (H) *Boxfish*—4,616 lb (2,094 kg).
- (I) *Goatfishes*—362 lb (164 kg).
- (J) *Grunts*—5,028 lb (2,281 kg).
- (K) *Wrasses*—5,050 lb (2,291 kg).
- (L) *Jacks*—51,001 lb (23,134 kg).
- (M) *Scups and porgies, combined*—2,577 lb (1,169 kg).
- (N) *Squirrelfish*—3,891 lb (1,765 kg).
- (O) *Surgeonfish*—3,590 lb (1,628 kg).

§ 622.12

50 CFR Ch. VI (10–1–21 Edition)

(P) *Triggerfish and filefish, combined*—21,929 lb (9,947 kg).

(iii) *Total ACLs.* The total ACLs (combined commercial and recreational ACL), in round weight, are as follows:

- (A) *Parrotfishes*—68,000 lb (30,844 kg).
- (B) *Snapper Unit 1*—380,211 lb (172,461 kg).
- (C) *Snapper Unit 2*—180,726 lb (81,976 kg).
- (D) *Snapper Unit 3*—428,933 lb (194,561 kg).
- (E) *Snapper Unit 4*—401,804 lb (182,255 kg).
- (F) *Grouper*—254,726 lb (115,542 kg).
- (G) *Angelfish*—13,476 lb (6,113 kg).
- (H) *Boxfish*—90,731 lb (41,155 kg).
- (I) *Goatfishes*—17,927 lb (8,132 kg).
- (J) *Grunts*—187,424 lb (85,014 kg).
- (K) *Wrasses*—59,197 lb (26,851 kg).
- (L) *Jacks*—137,060 lb (62,169 kg).
- (M) *Scups and porgies, combined*—27,316 lb (kg).
- (N) *Squirrelfish*—20,554 lb (9,323 kg).
- (O) *Surgeonfish*—10,769 lb (4,885 kg).
- (P) *Triggerfish and filefish, combined*—80,404 lb (36,471 kg).

(3) *Spiny lobster.* Landings will be evaluated relative to the ACL based on a moving multi-year average of landings, as described in the FMP. The ACL is based on the combined Caribbean EEZ and territorial landings for the Puerto Rico management area. If landings, as estimated by the SRD, have exceeded the ACL, as specified in this paragraph (a)(3), the AA will file a notification with the Office of the Federal Register, at or near the beginning of the following fishing year, to reduce the length of the fishing season for spiny lobster that year by the amount necessary to ensure landings do not exceed the ACL. If NMFS determines the ACL was exceeded because of enhanced data collection and monitoring efforts instead of an increase in total catch, NMFS will not reduce the length of the fishing season the following fishing year. As described in the FMP, any fishing season reduction required as a result of this paragraph (a)(3) will be applied from September 30 backward, toward the beginning of the fishing year. If the length of the required fishing season reduction exceeds the time period of January 1 through September 30, any additional fishing season reduc-

tion will be applied from October 1 forward, toward the end of the fishing year. The ACL is 327,920 lb (148,742 kg), round weight.

(b) *St. Croix management area.* See appendix E of this part for specification of the St. Croix management area.

(1) *Queen conch.* See § 622.491 regarding seasonal and area closure provisions and ACL closure provisions applicable to queen conch. The ACL is 50,000 lb (22,680 kg), round weight.

(2) *Reef fish.* Landings will be evaluated relative to the applicable ACL based on a moving multi-year average of landings, as described in the FMP. With the exception of goliath grouper, Nassau grouper, midnight parrotfish, blue parrotfish, and rainbow parrotfish, ACLs are based on the combined Caribbean EEZ and territorial landings for the St. Croix management area. If landings, as estimated by the SRD, have exceeded the applicable ACL for a species or species group, as specified in this paragraph (b)(2), the AA will file a notification with the Office of the Federal Register, at or near the beginning of the following fishing year, to reduce the length of the fishing season for the applicable species or species group that year by the amount necessary to ensure landings do not exceed the applicable ACL. If NMFS determines the ACL for a particular species or species group was exceeded because of enhanced data collection and monitoring efforts instead of an increase in total catch of the species or species group, NMFS will not reduce the length of the fishing season for the applicable species or species group the following fishing year. As described in the FMP, for each species or species group in this paragraph (b)(2), any fishing season reduction required as a result of this paragraph (b)(2) will be applied from September 30 backward, toward the beginning of the fishing year. If the length of the required fishing season reduction exceeds the time period of January 1 through September 30, any additional fishing season reduction will be applied from October 1 forward, toward the end of the fishing year. The ACLs, in round weight, are as follows:

- (i) *Parrotfishes*—240,000 lb (108,863 kg).
- (ii) *Snappers*—102,946 lb (46,696 kg).
- (iii) *Grouper*—30,435 lb (13,805 kg).

- (iv) *Angelfish*—305 lb (138 kg).
- (v) *Boxfish*—8,433 lb (3,825 kg).
- (vi) *Goatfishes*—3,766 lb (1,708 kg).
- (vii) *Grunts*—36,881 lb (16,729 kg).
- (viii) *Wrasses*—7 lb (3 kg).
- (ix) *Jacks*—15,489 lb (7,076 kg).
- (x) *Scups and porgies, combined*—4,638 lb (2,104 kg).
- (xi) *Squirrelfish*—121 lb (55 kg).
- (xii) *Surgeonfish*—33,603 lb (15,242 kg).
- (xiii) *Triggerfish and filefish, combined*—24,980 lb (11,331 kg).

(3) *Spiny lobster*. Landings will be evaluated relative to the ACL based on a moving multi-year average of landings, as described in the FMP. The ACL is based on the combined Caribbean EEZ and territorial landings for the St. Croix management area. If landings, as estimated by the SRD, have exceeded the ACL, as specified in this paragraph (b)(3), the AA will file a notification with the Office of the Federal Register, at or near the beginning of the following fishing year, to reduce the length of the fishing season that year by the amount necessary to ensure landings do not exceed the ACL. If NMFS determines the ACL was exceeded because of enhanced data collection and monitoring efforts instead of an increase in total catch, NMFS will not reduce the length of the fishing season for the following fishing year. As described in the FMP, any fishing season reduction required as a result of this paragraph (b)(3) will be applied from September 30 backward, toward the beginning of the fishing year. If the length of the required fishing season reduction exceeds the time period of January 1 through September 30, any additional fishing season reduction will be applied from October 1 forward, toward the end of the fishing year. The ACL is 107,307 lb (48,674 kg), round weight.

(c) *St. Thomas/St. John management area*. See appendix E of this part for specification of the St. Thomas/St. John management area.

(1) *Queen conch*. See § 622.491 regarding seasonal and area closure provisions and ACL closure provisions applicable to queen conch. The ACL is 0 lb (0 kg), round weight, for the EEZ only.

(2) *Reef fish*. Landings will be evaluated relative to the applicable ACL based on a moving multi-year average

of landings, as described in the FMP. With the exception of goliath grouper, Nassau grouper, midnight parrotfish, blue parrotfish, and rainbow parrotfish, ACLs are based on the combined Caribbean EEZ and territorial landings for St. Thomas/St. John management area. If landings, as estimated by the SRD, have exceeded the applicable ACL for a species or species group, as specified in this paragraph (c)(2), the AA will file a notification with the Office of the Federal Register, at or near the beginning of the following fishing year, to reduce the length of the fishing season for the applicable species or species group that year by the amount necessary to ensure landings do not exceed the applicable ACL. If NMFS determines the ACL for a particular species or species group was exceeded because of enhanced data collection and monitoring efforts instead of an increase in total catch of the species or species group, NMFS will not reduce the length of the fishing season for the applicable species or species group the following fishing year. As described in the FMP, for each species or species group in this paragraph (c)(2), any fishing season reduction required as a result of this paragraph (c)(2) will be applied from September 30 backward, toward the beginning of the fishing year. If the length of the required fishing season reduction exceeds the time period of January 1 through September 30, any additional fishing season reduction will be applied from October 1 forward, toward the end of the fishing year. The ACLs, in round weight, are as follows:

- (i) *Parrotfishes*—42,500 lb (19,278 kg).
- (ii) *Snappers*—133,775 lb (60,679 kg).
- (iii) *Groupers*—51,849 lb (23,518 kg).
- (iv) *Angelfish*—7,897 lb (3,582 kg).
- (v) *Boxfish*—27,880 lb (12,646 kg).
- (vi) *Goatfishes*—320 lb (145 kg).
- (vii) *Grunts*—37,617 lb (17,063 kg).
- (viii) *Wrasses*—585 lb (265 kg).
- (ix) *Jacks*—52,907 lb (23,998 kg).
- (x) *Scups and porgies, combined*—21,819 lb (9,897 kg).
- (xi) *Squirrelfish*—4,241 lb (1,924 kg).
- (xii) *Surgeonfish*—29,249 lb (13,267 kg).
- (xiii) *Triggerfish and filefish, combined*—74,447 lb (33,769 kg).

(3) *Spiny lobster*. Landings will be evaluated relative to the ACL based on

a moving multi-year average of landings, as described in the FMP. The ACL is based on the combined Caribbean EEZ and territorial landings for the St. Thomas/St. John management area. If landings, as estimated by the SRD, have exceeded the ACL, as specified in this paragraph (c)(3), the AA will file a notification with the Office of the Federal Register, at or near the beginning of the following fishing year, to reduce the length of the fishing season that year by the amount necessary to ensure landings do not exceed the ACL. If NMFS determines the ACL was exceeded because of enhanced data collection and monitoring efforts instead of an increase in total catch, NMFS will not reduce the length of the fishing season for the following fishing year. As described in the FMP, any fishing season reduction required as a result of this paragraph (c)(3) will be applied from September 30 backward, toward the beginning of the fishing year. If the length of the required fishing season reduction exceeds the time period of January 1 through September 30, any additional fishing season reduction will be applied from October 1 forward, toward the end of the fishing year. The ACL is 104,199 lb (47,264 kg), round weight.

(d) *Caribbean EEZ*. Landings will be evaluated relative to the applicable ACL based on a moving multi-year average of landings, as described in the FMPs. The ACLs are based on the combined Caribbean EEZ and territorial landings, throughout the Caribbean EEZ. If landings from the Caribbean EEZ for tilefish and aquarium trade species, as estimated by the SRD, have exceeded the applicable ACL, as specified in this paragraph (d), the AA will file a notification with the Office of the Federal Register, at or near the beginning of the following fishing year, to reduce the length of the fishing season for the applicable species or species groups that year by the amount necessary to ensure landings do not exceed the applicable ACL. If NMFS determines the applicable ACL was exceeded because of enhanced data collection and monitoring efforts instead of an increase in total catch, NMFS will not reduce the length of the fishing season for the following fishing year. As de-

scribed in the FMPs, for each species or species group in this paragraph (d), any fishing season reduction required as a result of this paragraph (d) will be applied from September 30 backward, toward the beginning of the fishing year. If the length of the required fishing season reduction exceeds the time period of January 1 through September 30, any additional fishing season reduction will be applied from October 1 forward, toward the end of the fishing year. The ACLs, in round weight, are as follows:

(1) *Tilefish*—14,642 lb (6,641 kg).

(2) *Aquarium trade species*—8,155 lb (3,699 kg).

(e) *Closure provisions*—(1) *Restrictions applicable after a Puerto Rico closure*. (i) Restrictions applicable after a Puerto Rico commercial closure for reef fish species or species groups. During the closure period announced in the notification filed pursuant to paragraph (a)(2)(i) of this section, the commercial sector for species or species groups included in the notification is closed and such species or species groups in or from the Puerto Rico management area may not be purchased or sold. Harvest or possession of such species or species groups in or from the Puerto Rico management area is limited to the recreational bag and possession limits unless the recreational sector for the species or species group is closed and the restrictions specified in paragraph (e)(1)(iii) of this section apply.

(ii) Restrictions applicable after a Puerto Rico recreational closure for reef fish species or species groups. During the closure period announced in the notification filed pursuant to paragraph (a)(2)(ii) of this section, the recreational sector for species or species groups included in the notification is closed and the recreational bag and possession limits for such species or species groups in or from the Puerto Rico management area are zero. If the seasons for both the commercial and recreational sectors for such species or species groups are closed, the restrictions specified in paragraph (e)(1)(iii) of this section apply.

(iii) Restrictions applicable when both Puerto Rico commercial and Puerto Rico recreational sectors for

Fishery Conservation and Management

§ 622.13

reef fish species or species groups are closed. If the seasons for both the commercial and recreational sectors for a species or species group are closed, such species or species groups in or from the Puerto Rico management area may not be harvested, possessed, purchased, or sold, and the bag and possession limits for such species or species groups in or from the Puerto Rico management area are zero.

(iv) Restrictions applicable after a spiny lobster closure in Puerto Rico. During the closure period announced in the notification filed pursuant to paragraph (a)(3) of this section, both the commercial and recreational sectors are closed. Spiny lobster in or from the Puerto Rico management area may not be harvested, possessed, purchased, or sold, and the bag and possession limits for spiny lobster in or from the Puerto Rico management area are zero.

(2) *Restrictions applicable after a St. Croix, St. Thomas/St. John, or Caribbean EEZ closure.* During the closure period announced in the notification filed pursuant to paragraph (b), (c), or (d) of this section, such species or species groups in or from the applicable management area of the Caribbean EEZ may not be harvested, possessed, purchased, or sold, and the bag and possession limits for such species or species groups in or from the applicable management area of the Caribbean EEZ are zero.

[82 FR 56918, Dec. 1, 2017]

§ 622.13 Prohibitions—general.

In addition to the general prohibitions in § 600.725 of this chapter, it is unlawful for any person to do any of the following:

(a) Engage in an activity for which a valid Federal permit, license, or endorsement is required under this part without such permit, license, or endorsement.

(b) Falsify information on an application for a permit, license, or endorsement or submitted in support of such application, as specified in this part.

(c) Fail to display a permit, license, or endorsement, or other required identification, as specified in this part.

(d) Falsify or fail to maintain, submit, or provide information or fail to comply with inspection requirements

or restrictions, as specified in this part.

(e) Fail to make a fish, or parts thereof, available for inspection, as specified in this part.

(f) Falsify or fail to display and maintain vessel and gear identification, as specified in this part.

(g) Harvest or possess fish if the required charter vessel or headboat reports have not been submitted in accordance with this part.

(h) First receive fish from federally permitted vessels if the required reports have not been submitted in accordance with § 622.5(c).

(i) Fail to comply with any requirement or restriction regarding ITQ coupons, as specified in § 622.172.

(j) Possess wreckfish as specified in § 622.172, receive wreckfish except as specified in § 622.172, or offload a wreckfish except as specified in § 622.172.

(k) Transfer—

(1) A wreckfish, as specified in § 622.172;

(2) A limited-harvest species, as specified in this part;

(3) A species/species group subject to a bag limit, as specified in this part;

(4) South Atlantic snapper-grouper from a vessel with unauthorized gear on board, as specified in § 622.188; or

(5) A species subject to a commercial trip limit, as specified in this part.

(l) Use or possess prohibited gear or methods or possess fish in association with possession or use of prohibited gear, as specified in this part.

(m) Fish for, harvest, or possess a prohibited species, or a limited-harvest species in excess of its limitation, sell or purchase such species, fail to comply with release requirements, molest or strip eggs from a lobster, or possess a lobster, or part thereof, from which eggs, swimmerettes, or pleopids have been removed or stripped, as specified in this part.

(n) Fish in violation of the prohibitions, restrictions, and requirements applicable to seasonal and/or area closures, including but not limited to: Prohibition of all fishing, gear restrictions, restrictions on take or retention of fish, fish release requirements, and restrictions on use of an anchor or

§ 622.13

50 CFR Ch. VI (10–1–21 Edition)

grapple, as specified in this part or as may be specified under this part.

(o) Harvest, possess, offload, sell, or purchase fish in excess of the seasonal harvest limitations, as specified in this part.

(p) Except as allowed for king and Spanish mackerel and Gulf of Mexico and South Atlantic spiny lobster, possess undersized fish, fail to release undersized fish, or sell or purchase undersized fish, as specified in this part.

(q) Fail to maintain a fish intact through offloading ashore, as specified in this part.

(r) Exceed a bag or possession limit, as specified in this part.

(s) Fail to comply with the limitations on traps and pots, including but not limited to: Tending requirements, constructions requirements, and area specific restrictions, as specified in this part.

(t) Fail to comply with the species-specific limitations, as specified in this part.

(u) Fail to comply with the restrictions that apply after closure of a fishery, sector, or component of a fishery, as specified in this part.

(v) Possess on board a vessel or land, purchase, or sell fish in excess of the commercial trip limits, as specified in this part.

(w) Fail to comply with the restrictions on sale/purchase, as specified in this part.

(x) Interfere with fishing or obstruct or damage fishing gear or the fishing vessel of another, as specified in this part.

(y) Fail to comply with the requirements for observer coverage as specified in this part.

(z) Assault, resist, oppose, impede, intimidate, or interfere with a NMFS-approved observer aboard a vessel.

(aa) Prohibit or bar by command, impediment, threat, coercion, or refusal of reasonable assistance, an observer from conducting his or her duties aboard a vessel.

(bb) Fish for or possess golden crab in or from a fishing zone or sub-zone of the South Atlantic EEZ other than the zone or sub-zone for which the vessel is permitted or authorized, as specified in § 622.241.

(cc) Falsify information submitted regarding an application for testing a BRD or regarding testing of a BRD, as specified in §§ 622.53 and 622.207.

(dd) Make a false statement, oral or written, to an authorized officer regarding the installation, use, operation, or maintenance of a vessel monitoring system (VMS) unit or communication service provider.

(ee) Operate or own a vessel that is required to have a permitted operator aboard when the vessel is at sea or offloading without such operator aboard, as specified in this part.

(ff) When a vessel that is subject to Federal fishing regulations is at sea or offloading, own or operate such vessel with a person aboard whose operator permit is revoked, suspended, or modified.

(gg) Fail to comply with any provision related to a vessel monitoring system (VMS) as specified in this part, including but not limited to, requirements for use, installation, activation, access to data, procedures related to interruption of VMS operation, and prohibitions on interference with the VMS.

(hh) Fail to comply with the protected species conservation measure as specified in this part.

(ii) Fail to comply with any provision related to the IFQ program for Gulf red snapper as specified in § 622.21, or the IFQ program for Gulf groupers and tilefishes as specified in § 622.22.

(jj) Falsify any information required to be submitted regarding the IFQ program for Gulf red snapper as specified in § 622.21, or the IFQ program for Gulf groupers and tilefishes as specified in § 622.22.

(kk) Fail to comply with the Caribbean, Gulf of Mexico, and South Atlantic spiny lobster import prohibitions, as specified in this part.

(ll) Possess a Gulf of Mexico or South Atlantic spiny lobster trap in the EEZ at a time not authorized, as specified in subpart R.

(mm) Harvest or attempt to harvest a Gulf of Mexico or South Atlantic spiny lobster by diving without having and using in the water a measuring device, as specified in subpart R.

(nn) Possess Gulf of Mexico or South Atlantic spiny lobsters aboard a vessel

that uses or has on board a net or trawl in an amount exceeding the limits, as specified in subpart R.

(oo) Operate a vessel that fishes for or possesses Gulf of Mexico or South Atlantic spiny lobster in or from the EEZ with spiny lobster aboard in an amount exceeding the cumulative bag and possession limit, as specified in subpart R.

(pp) Fail to comply with any provision related to the Offshore Marine Aquaculture program in the Gulf of Mexico as specified in this part.

(qq) Falsify any information required to be submitted regarding the Offshore Marine Aquaculture program in the Gulf of Mexico as specified in this part.

(rr) Land allowable aquaculture species cultured in the Gulf at non-U.S. ports, unless first landed at a U.S. port.

(ss) Fail to comply with any other requirement or restriction specified in this part or violate any provision(s) in this part.

[78 FR 57535, Sept. 19, 2013, as amended at 78 FR 78781, Dec. 27, 2013; 79 FR 6099, Feb. 3, 2014; 79 FR 19494, Apr. 9, 2014; 81 FR 1792, Jan. 13, 2016; 85 FR 10339, Feb. 24, 2020]

§ 622.14 [Reserved]

§ 622.15 Notice regarding area closures to protect corals.

See §§ 622.74 and 622.224, respectively, regarding coral protective restrictions in the Gulf EEZ and South Atlantic EEZ that apply broadly to multiple fisheries and gear types.

§ 622.16 Notice regarding South Atlantic special management zones (SMZs).

See §§ 622.182(a) and 622.382(a)(1)(v), respectively, regarding fishing and gear restrictions in South Atlantic SMZs that apply to snapper-grouper and coastal migratory pelagic fisheries and broadly to gear types of multiple fisheries.

§ 622.17 Notice regarding seasonal/area closures to protect Gulf reef fish.

See § 622.34, paragraphs (a)(1) and (a)(3) through (6), regarding Gulf reef fish protective restrictions in the Gulf EEZ that apply broadly to multiple Gulf fisheries and gear types.

Subpart B—Reef Fish Resources of the Gulf of Mexico

§ 622.20 Permits and endorsements.

(a) *Commercial vessels*—(1) *Commercial vessel permits*. For a person aboard a vessel to be eligible for exemption from the bag limits, to fish under a quota, as specified in § 622.39, or to sell Gulf reef fish or Florida Keys/East Florida hogfish in or from the Gulf EEZ, a commercial vessel permit for Gulf reef fish must have been issued to the vessel and must be on board. If Federal regulations for Gulf reef fish in subparts A or B of this part are more restrictive than state regulations, a person aboard a vessel for which a commercial vessel permit for Gulf reef fish has been issued must comply with such Federal regulations regardless of where the fish are harvested. See paragraph (a)(1)(i) of this section regarding a limited access system for commercial vessel permits for Gulf reef fish. See §§ 622.21(b)(1) and 622.22(b)(1), respectively, regarding an IFQ vessel account required to fish for, possess, or land Gulf red snapper or Gulf groupers and tilefishes, and paragraph (a)(2) of this section regarding an additional bottom longline endorsement required to fish for Gulf reef fish with bottom longline gear in a portion of the eastern Gulf.

(i) *Limited access system for commercial vessel permits for Gulf reef fish*. (A) No applications for additional commercial vessel permits for Gulf reef fish will be accepted. Existing vessel permits may be renewed, are subject to the restriction on transfer in paragraph (a)(1)(i)(B) of this section, and are subject to the requirement for timely renewal in paragraph (a)(1)(i)(C) of this section. An application for renewal or transfer of a commercial vessel permit for Gulf reef fish will not be considered complete until proof of purchase, installation, activation, and operational status of an approved VMS for the vessel receiving the permit has been verified by NMFS VMS personnel.

(B) An owner of a permitted vessel may transfer the commercial vessel permit for Gulf reef fish to another vessel owned by the same entity. A permit holder may also transfer the commercial vessel permit for Gulf reef fish to the owner of another vessel or to a new

vessel owner when he or she transfers ownership of the permitted vessel.

(C) A commercial vessel permit for Gulf reef fish that is not renewed or that is revoked will not be reissued. A permit is considered to be not renewed when an application for renewal is not received by the RA within 1 year of the expiration date of the permit.

(ii) *Option to consolidate commercial vessel permits for Gulf reef fish.* A person who has been issued multiple commercial vessel permits for Gulf reef fish and wants to consolidate some or all of those permits, and the landings histories associated with those permits, into one permit must submit a completed permit consolidation application to the RA. The permits consolidated must be valid, non-expired permits and must be issued to the same entity. The application form and instructions are available online at sero.nmfs.noaa.gov. After consolidation, such a person would have a single permit, and the permits that were consolidated into that permit will be permanently terminated.

(2) *Commercial vessel endorsements—(i) Eastern Gulf reef fish bottom longline endorsement.* For a person aboard a vessel, for which a valid commercial vessel permit for Gulf reef fish has been issued, to use a bottom longline for Gulf reef fish in the Gulf EEZ east of 85°30' W. long., a valid eastern Gulf reef fish bottom longline endorsement must have been issued to the vessel and must be on board. A permit or endorsement that has expired is not valid. This endorsement must be renewed annually and may only be renewed if the associated vessel has a valid commercial vessel permit for Gulf reef fish or if the endorsement and associated permit are being concurrently renewed. The RA will not reissue this endorsement if the endorsement is revoked or if the RA does not receive a complete application for renewal of the endorsement within 1 year after the endorsement's expiration date.

(A) *Transferability.* An owner of a vessel with a valid eastern Gulf reef fish bottom longline endorsement may transfer that endorsement to an owner of a vessel that has a valid commercial vessel permit for Gulf reef fish.

(B) *Fees.* A fee is charged for each renewal, transfer, or replacement of an eastern Gulf reef fish bottom longline endorsement. The amount of each fee is calculated in accordance with the procedures of the NOAA Finance Handbook, available from the RA, for determining the administrative costs of each special product or service. The fee may not exceed such costs and is specified with each application form. The appropriate fee must accompany each application for renewal, transfer, or replacement.

(ii) [Reserved]

(b) *Charter vessel/headboat permits.* For a person aboard a vessel that is operating as a charter vessel or headboat to fish for or possess Gulf reef fish, in or from the EEZ, a valid charter vessel/headboat permit for Gulf reef fish must have been issued to the vessel and must be on board. For a person aboard a vessel that is operating as a charter vessel or headboat to fish for or possess Florida Keys/East Florida hogfish in or from the Gulf EEZ, a valid charter vessel/headboat permit for Gulf reef fish must have been issued to the vessel and must be on board.

(1) *Limited access system for charter vessel/headboat permits for Gulf reef fish.* No applications for additional charter vessel/headboat permits for Gulf reef fish will be accepted. Existing permits may be renewed, are subject to the restrictions on transfer in paragraph (b)(1)(i) of this section, and are subject to the renewal requirements in paragraph (b)(1)(ii) of this section. An eligible charter vessel/headboat permit with a historical captain endorsement may be converted to a charter vessel/headboat permit without a historical captain endorsement, per the procedure in paragraph (b)(1)(v) of this section.

(i) *Transfer of permits—(A) Permits without a historical captain endorsement.* A charter vessel/headboat permit for Gulf reef fish that does not have a historical captain endorsement is fully transferable, with or without sale of the permitted vessel.

(B) *Permits with a historical captain endorsement.* A charter vessel/headboat permit for Gulf reef fish that has a historical captain endorsement may only be transferred to a vessel operated by

the historical captain and is not otherwise transferable.

(C) *Procedure for permit transfer.* To request that the RA transfer a charter vessel/headboat permit for Gulf reef fish, the owner of the vessel who is transferring the permit and the owner of the vessel that is to receive the transferred permit must complete the transfer information on the reverse side of the permit and return the permit and a completed application for transfer to the RA. See §622.4(f) for additional transfer-related requirements applicable to all permits issued under this part.

(ii) *Renewal.* (A) Renewal of a charter vessel/headboat permit for Gulf reef fish is contingent upon the permitted vessel and/or captain, as appropriate, being included in an active survey frame for, and, if selected to report, providing the information required in one of the approved fishing data surveys. Surveys include, but are not limited to—

(1) NMFS' Marine Recreational Fishing Vessel Directory Telephone Survey (conducted by the Gulf States Marine Fisheries Commission);

(2) Charter vessel and headboat recordkeeping and reporting requirements specified in §622.26(b);

(3) Texas Parks and Wildlife Marine Recreational Fishing Survey; or

(4) A data collection system that replaces one or more of the surveys in paragraph (b)(1)(ii)(A),(I),(2), or (3) of this section.

(B) A charter vessel/headboat permit for Gulf reef fish that is not renewed or that is revoked will not be reissued. A permit is considered to be not renewed when an application for renewal, as required, is not received by the RA within 1 year of the expiration date of the permit.

(iii) *Requirement to display a vessel decal.* Upon renewal or transfer of a charter vessel/headboat permit for Gulf reef fish, the RA will issue the owner of the permitted vessel a vessel decal for Gulf reef fish. The vessel decal must be displayed on the port side of the deckhouse or hull and must be maintained so that it is clearly visible.

(iv) *Passenger capacity compliance requirement.* A vessel operating as a charter vessel or headboat with a valid

charter vessel/headboat permit for Gulf reef fish, which is carrying more passengers on board the vessel than is specified on the permit, is prohibited from harvesting or possessing the species identified on the permit.

(v) *Procedure for conversion of permit with historical captain endorsement.* A charter vessel/headboat permit with a historical captain endorsement that was valid or renewable on October 25, 2018, may be converted to a charter vessel/headboat permit for Gulf reef fish without a historical captain endorsement. A charter vessel/headboat permit with a historical captain endorsement that is converted to a charter vessel/headboat permit without a historical captain endorsement will retain the same vessel permit maximum passenger capacity as the permit it replaces. To convert an eligible charter vessel/headboat permit with a historical captain endorsement, the permit holder must submit a permit application to the RA by May 23, 2022. If no application to convert an eligible charter vessel/headboat permit with a historical captain endorsement is submitted by May 23, 2022, the permit holder will retain a charter vessel/headboat permit with the historical captain endorsement that is subject to the restrictions described in paragraph (b)(1)(i)(B) of this section.

(2) A charter vessel or headboat may have both a charter vessel/headboat permit and a commercial vessel permit. However, when a vessel is operating as a charter vessel or headboat, a person aboard must adhere to the bag limits. See the definitions of "Charter vessel" and "Headboat" in § 622.2 for an explanation of when vessels are considered to be operating as a charter vessel or headboat, respectively.

(3) If Federal regulations for Gulf reef fish in subparts A or B of this part are more restrictive than state regulations, a person aboard a charter vessel or headboat for which a charter vessel/headboat permit for Gulf reef fish has been issued must comply with such Federal regulations regardless of where the fish are harvested.

(c) *Dealer permits and conditions—(1) Permits.* For a dealer to first receive Gulf reef fish harvested in or from the

§ 622.21

50 CFR Ch. VI (10–1–21 Edition)

EEZ, a Gulf and South Atlantic dealer permit must be issued to the dealer.

(2) *State license and facility requirements.* To obtain a dealer permit or endorsement, the applicant must have a valid state wholesaler's license in the state(s) where the dealer operates, if required by such state(s), and must have a physical facility at a fixed location in such state(s).

(d) *Permit procedures.* See § 622.4 for information regarding general permit procedures including, but not limited to application, fees, duration, transfer, renewal, display, sanctions and denials, and replacement.

[78 FR 22952, Apr. 17, 2013, as amended 78 FR 46293, July 31, 2013; 79 FR 19494, Apr. 9, 2014; 82 FR 34580, July 25, 2017; 85 FR 22045, Apr. 21, 2020; 85 FR 44017, July 21, 2020]

§ 622.21 Individual fishing quota (IFQ) program for Gulf red snapper.

(a) *General.* This section establishes an IFQ program for the commercial red snapper component of the Gulf reef fish fishery. Shares determine the amount of Gulf red snapper IFQ allocation, in pounds gutted weight, a shareholder is initially authorized to possess, land, or sell in a given calendar year. As of January 1, 2012, IFQ shares and allocation can only be transferred to U.S. citizens and permanent resident aliens. See paragraph (b)(11) of this section regarding eligibility to participate in the Gulf red snapper IFQ program as of January 1, 2012. Shares and annual IFQ allocation are transferable. See paragraph (b)(1) of this section regarding a requirement for a vessel landing red snapper subject to this IFQ program to have a Gulf red snapper IFQ vessel account. See paragraph (b)(2) of this section regarding a requirement for a Gulf IFQ dealer endorsement. Details regarding eligibility, applicable landings history, account setup and transaction requirements, constraints on transferability, and other provisions of this IFQ system are provided in the following paragraphs of this section.

(1) *Scope.* The provisions of this section regarding the harvest and possession of Gulf IFQ red snapper apply to Gulf red snapper in or from the Gulf EEZ and, for a person aboard a vessel with a Gulf red snapper IFQ vessel account as required by paragraph (b)(1) of

this section or for a person with a Gulf IFQ dealer endorsement as required by paragraph (b)(2) of this section, these provisions apply to Gulf red snapper regardless of where harvested or possessed.

(2) *Duration.* The IFQ program established by this section will remain in effect until it is modified or terminated; however, the program will be evaluated by the Gulf of Mexico Fishery Management Council every 5 years.

(3) *Electronic system requirements.* (i) The administrative functions associated with this IFQ program, *e.g.*, registration and account setup, landing transactions, and transfers, are designed to be accomplished online; therefore, a participant must have access to a computer and Internet access and must set up an appropriate IFQ account to participate. The computer must have browser software installed, *e.g.*, Internet Explorer or Mozilla Firefox; as well as the software Adobe Flash Player version 9.0 or greater, which may be downloaded from the Internet for free. Assistance with online functions is available from IFQ Customer Service by calling 1-866-425-7627 Monday through Friday between 8 a.m. and 4:30 p.m. eastern time.

(ii) The RA mailed initial shareholders and dealers with Gulf reef fish dealer permits information and instructions pertinent to setting up an IFQ account. Other eligible persons who desire to become IFQ participants by purchasing IFQ shares or allocation or by obtaining a Gulf red snapper IFQ dealer endorsement must first contact IFQ Customer Service at 1-866-425-7627 to obtain information necessary to set up the required IFQ account. As of January 1, 2012, all U.S. citizens and permanent resident aliens are eligible to establish an IFQ account. As of January 1, 2012, all current IFQ participants must complete and submit the application for an IFQ Account to certify their citizenship status and ensure their account information (*e.g.*, mailing address, corporate shareholdings, etc.) is up to date. See § 622.21(b)(11) regarding requirements for the application for an IFQ Account. Each IFQ participant must monitor his/her online account and all associated messages

and comply with all IFQ online reporting requirements.

(iii) During catastrophic conditions only, the IFQ program provides for use of paper-based components for basic required functions as a backup. The RA will determine when catastrophic conditions exist, the duration of the catastrophic conditions, and which participants or geographic areas are deemed affected by the catastrophic conditions. The RA will provide timely notice to affected participants via publication of notification in the FEDERAL REGISTER, NOAA weather radio, fishery bulletins, and other appropriate means and will authorize the affected participants' use of paper-based components for the duration of the catastrophic conditions. NMFS will provide each IFQ dealer the necessary paper forms and instructions for submission of the forms to the RA. The paper forms will also be available from the RA. The program functions available to participants or geographic areas deemed affected by catastrophic conditions will be limited under the paper-based system. There will be no mechanism for transfers of IFQ shares or allocation under the paper-based system in effect during catastrophic conditions. Assistance in complying with the requirements of the paper-based system will be available via IFQ Customer Service 1-866-425-7627 Monday through Friday between 8 a.m. and 4:30 p.m. eastern time.

(4) *IFQ allocation.* IFQ allocation is the amount of Gulf red snapper, in pounds gutted weight, an IFQ shareholder or allocation holder is authorized to possess, land, or sell during a given fishing year. IFQ allocation is derived at the beginning of each year by multiplying a shareholder's IFQ share times the annual commercial quota for Gulf red snapper. If the quota is increased after the beginning of the fishing year, then IFQ allocation is derived by multiplying a shareholder's IFQ share at the time of the quota increase by the amount the annual commercial quota for red snapper is increased. If a reduction in the commercial quota specified in § 622.39(a)(1)(i) is expected to occur after January 1, the beginning of the fishing year, but before June 1 in that same fishing year, NMFS will

withhold distribution of IFQ allocation on January 1 in the amount equal to that reduction. If a final rule to implement the commercial quota reduction is not published in the FEDERAL REGISTER and effective by June 1, NMFS will distribute withheld IFQ allocation of red snapper commercial quota to current shareholders based on shareholdings on the date the withheld IFQ allocation is distributed.

(5) *Closing an IFQ account.* IFQ account holders may close an IFQ account by completing and submitting a Close IFQ Account Request Form to NMFS. This form must be signed by an account holder named on the IFQ account. If the request to close an IFQ account is being made because the sole account holder is deceased, the person requesting the closure must sign the Close IFQ Account Request Form, indicating the relationship to the deceased, provide a death certificate, and provide any additional information NMFS determines is necessary to complete the request. IFQ shareholder accounts may not be closed until all shares and allocation have been transferred from the account to another IFQ account holder. Dealer accounts may not be closed until all cost recovery fees have been received by NMFS. NMFS' IFQ Customer Service staff may close an IFQ account if all shares and allocation have been transferred from the account, all cost recovery fees have been received by NMFS, and no landing transactions or IFQ transfers have been completed by the IFQ account holder in at least 1 year. If an account is closed by NMFS' IFQ Customer Service staff, it may be reopened at the request of the IFQ account holder by contacting IFQ Customer Service.

(6) *Returning IFQ shares.* Any shares contained in IFQ accounts that have never been activated since January 1, 2010, in the IFQ program are returned permanently to NMFS on July 12, 2018.

(b) *IFQ operations and requirements—*
(1) *IFQ vessel accounts for Gulf red snapper.* For a person aboard a vessel, for which a commercial vessel permit for Gulf reef fish has been issued, to fish for, possess, or land Gulf red snapper, regardless of where harvested or possessed, a Gulf IFQ vessel account for

§ 622.21

50 CFR Ch. VI (10–1–21 Edition)

Gulf red snapper must have been established. As a condition of the IFQ vessel account, a person aboard such vessel must comply with the requirements of this section, § 622.21, when fishing for red snapper regardless of where the fish are harvested or possessed. An owner of a vessel with a commercial vessel permit for Gulf reef fish, who has established an IFQ account for Gulf red snapper as specified in paragraph (a)(3)(i) of this section, online via the NMFS IFQ Web site <https://portal.southeast.fisheries.noaa.gov/cs/main.html>, may establish a vessel account through that IFQ account for that permitted vessel. If such owner does not have an online IFQ account, the owner must first contact IFQ Customer Service at 1-866-425-7627 to obtain information necessary to access the IFQ Web site and establish an online IFQ account. There is no fee to set-up an IFQ account or a vessel account. Only one vessel account may be established per vessel under each IFQ program. An owner with multiple vessels may establish multiple vessel accounts under each IFQ account. The purpose of the vessel account is to hold IFQ allocation that is required to land the applicable IFQ species. A vessel account, or its linked IFQ shareholder account, must hold sufficient IFQ allocation, at least equal to the pounds in gutted weight of the red snapper on board at the time of advance notice of landing. Allocation must be transferred to the vessel account, so that the vessel account holds sufficient IFQ allocation at the time of the landing transaction (except for any overage allowed as specified in paragraph (b)(3)(ii) of this section). The vessel account remains valid as long as the vessel permit remains valid; the vessel has not been sold or transferred; and the vessel owner is in compliance with all Gulf reef fish and IFQ reporting requirements, has paid all applicable IFQ fees, and is not subject to sanctions under 15 CFR part 904. The vessel account is not transferable to another vessel. The provisions of this paragraph do not apply to fishing for or possession of Gulf red snapper under the bag limit specified in § 622.38(b)(3).

(2) *Gulf IFQ dealer endorsements.* In addition to the requirement for a Gulf

and South Atlantic dealer permit as specified in § 622.20(c)(1), for a dealer to first receive red snapper subject to the IFQ program for Gulf red snapper, as specified in paragraph (a)(1) of this section, or for a person aboard a vessel with a Gulf IFQ vessel account to sell such red snapper directly to an entity other than a dealer, such persons must also have a Gulf IFQ dealer endorsement. A dealer with a Gulf and South Atlantic dealer permit can download a Gulf IFQ dealer endorsement from the NMFS IFQ Web site. If such persons do not have an IFQ account, they must first contact IFQ Customer Service at 1-866-425-7627 to obtain information necessary to access the IFQ Web site and establish an IFQ account. There is no fee for obtaining this endorsement. The endorsement remains valid as long as the Gulf and South Atlantic dealer permit remains valid and the dealer is in compliance with all Gulf reef fish and IFQ reporting requirements, has paid all IFQ fees required, and is not subject to any sanctions under 15 CFR part 904. The endorsement is not transferable.

(3) *IFQ Landing and transaction requirements.* (i) At the time of advance notice of landing, the IFQ vessel account, or its linked IFQ shareholder account, must contain allocation at least equal to the pounds in gutted weight of red snapper to be landed, except as provided in paragraph (b)(3)(ii) of this section. At the time of the landing transaction, the IFQ vessel account must contain allocation at least equal to the pounds in gutted weight of red snapper to be landed, except as provided in paragraph (b)(3)(ii) of this section. Such red snapper must be sold and can be received only by a dealer who has a valid Gulf IFQ dealer endorsement and an active IFQ dealer account (*i.e.*, not in delinquent status). All IFQ landings and their actual ex-vessel prices must be reported via the IFQ Web site.

(ii) A person on board a vessel with an IFQ vessel account landing the shareholder's only remaining allocation, can legally exceed, by up to 10 percent, the shareholder's allocation remaining on that last fishing trip of the fishing year, *i.e.*, a one-time per fishing year overage. Any such overage will be deducted from the shareholder's

applicable allocation for the subsequent fishing year. From the time of the overage until January 1 of the subsequent fishing year, the IFQ shareholder must retain sufficient shares to account for the allocation that will be deducted the subsequent fishing year. Share transfers that would violate this requirement will be prohibited.

(iii) The dealer must complete a landing transaction report for each landing of Gulf red snapper via the IFQ Web site on the day of offload, except if the fish are being trailered for transport to a dealer as specified in paragraph (b)(5)(iv) of this section (in which case the landing transaction report may be completed prior to the day of offload), and within 96 hours from the time of landing reported on the most recent landing notification, in accordance with the reporting form(s) and instructions provided on the Web site. This report includes date, time, and location of transaction; weight and actual ex-vessel price of red snapper landed and sold (when calculating the weight of IFQ red snapper during a landing transaction, ice and water weight may not be deducted from the weight of the fish unless the actual weight of the ice and water can be determined); and information necessary to identify the fisherman, vessel, and dealer involved in the transaction. The fisherman must validate the dealer transaction report by entering his unique PIN when the transaction report is submitted. After the dealer submits the report and the information has been verified, the Web site will send a transaction approval code to the dealer and the allocation holder.

(iv) If there is a discrepancy regarding the landing transaction report after approval, the dealer or vessel account holder (or his or her authorized agent) must initiate a landing transaction correction form to correct the landing transaction. This form is available via the IFQ Web site. The dealer must then print out the form, both parties must sign it, and the form must be mailed to NMFS. The form must be received by NMFS no later than 15 days after the date of the initial landing transaction.

(4) *IFQ cost recovery fees.* As required by section 304(d)(2)(A)(i) of the Magnu-

son-Stevens Act, the RA will collect a fee to recover the actual costs directly related to the management and enforcement of the Gulf red snapper IFQ program. The fee cannot exceed 3 percent of the ex-vessel value of Gulf red snapper landed under the IFQ program as described in the Magnuson-Stevens Act. Such fees will be deposited in the Limited Access System Administration Fund (LASAF). Initially, the fee will be 3 percent of the actual ex-vessel price of Gulf red snapper landed per trip under the IFQ program, as documented in each landings transaction report. The RA will review the cost recovery fee annually to determine if adjustment is warranted. Factors considered in the review include the catch subject to the IFQ cost recovery, projected ex-vessel value of the catch, costs directly related to the management and enforcement of the IFQ program, the projected IFQ balance in the LASAF, and expected non-payment of fee liabilities. If the RA determines that a fee adjustment is warranted, the RA will publish a notification of the fee adjustment in the FEDERAL REGISTER.

(i) *Payment responsibility.* The IFQ allocation holder specified in the documented red snapper IFQ landing transaction report is responsible for payment of the applicable cost recovery fees.

(ii) *Collection and submission responsibility.* A dealer who receives Gulf red snapper subject to the IFQ program is responsible for collecting the applicable cost recovery fee for each IFQ landing from the IFQ allocation holder specified in the IFQ landing transaction report. Such dealer is responsible for submitting all applicable cost recovery fees to NMFS on a quarterly basis. The fees are due and must be submitted, using *pay.gov* via the IFQ system at the end of each calendar-year quarter, but no later than 30 days after the end of each calendar-year quarter. Fees not received by the deadline are delinquent.

(iii) *Fee payment procedure.* For each IFQ dealer, the IFQ system will post, on individual message boards, an end-of-quarter statement of cost recovery fees that are due. The dealer is responsible for submitting the cost recovery

fee payments using *pay.gov* via the IFQ system. Authorized payments methods are credit card, debit card, or automated clearing house (ACH). Payment by check will be authorized only if the RA has determined that the geographical area or an individual(s) is affected by catastrophic conditions.

(iv) *Fee reconciliation process—delinquent fees.* The following procedures apply to an IFQ dealer whose cost recovery fees are delinquent.

(A) On or about the 31st day after the end of each calendar-year quarter, the RA will send the dealer an electronic message via the IFQ Web site and official notice via mail indicating the applicable fees are delinquent, and the dealer's IFQ account has been suspended pending payment of the applicable fees.

(B) On or about the 91st day after the end of each calendar-year quarter, the RA will refer any delinquent IFQ dealer cost recovery fees to the appropriate authorities for collection of payment.

(5) *Measures to enhance IFQ program enforceability—(i) Advance notice of landing—(A) General requirement.* For the purpose of this paragraph, landing means to arrive at a dock, berth, beach, seawall, or ramp. The owner or operator of a vessel landing IFQ red snapper is responsible for ensuring that NMFS is contacted at least 3 hours, but no more than 24 hours, in advance of landing to report the time and location of landing, estimated red snapper landings in pounds gutted weight, vessel identification number (Coast Guard registration number or state registration number), and the name and address of the IFQ dealer(s) where the red snapper are to be received. The vessel must land within 1 hour after the time given in the landing notification except as provided in paragraph (b)(5)(i)(C) of this section. The vessel landing red snapper must have sufficient IFQ allocation in the IFQ vessel account, or its linked IFQ shareholder account, at least equal to the pounds in gutted weight of all red snapper on board (except for any overage up to the 10 percent allowed on the last fishing trip) at the time of the advance notice of landing.

(B) *Submitting an advanced landing notification.* Authorized methods for con-

tacting NMFS and submitting the report include calling IFQ Customer Service at 1-866-425-7627, completing and submitting to NMFS a landing notification provided through the VMS unit, or providing the required information to NMFS through the web-based form available on the IFQ Web site.

(C) *Landing prior to the notification time.* The owner or operator of a vessel that has completed a landing notification and submitted it to NMFS may land prior to the notification time, only if an authorized officer is present at the landing site, is available to meet the vessel, and has authorized the owner or operator of the vessel to land early.

(D) *Changes to a landing notification.* The owner or operator of a vessel who has submitted a landing notification to NMFS may make changes to the notification by submitting a superseding notification. If the initial superseding notification makes changes to one or more of the following: the time of landing (if landing more than 1 hour after the time on the notification), the dealer(s), or the estimated weights of fish to be landed, the vessel does not need to wait an additional 3 hours to land. If the initial superseding notification makes changes to the landing location, the time of landing is earlier than previously specified, or more than one superseding notification is submitted on a trip, the vessel must wait an additional 3 hours to land, except as provided in paragraph (b)(5)(i)(C) of this section.

(ii) *Time restriction on offloading.* For the purpose of this paragraph, offloading means to remove IFQ red snapper from a vessel. IFQ red snapper may be offloaded only between 6 a.m. and 6 p.m., local time, unless an authorized officer is present at the offloading at 6 p.m., is available to remain at the site while offloading continues, and authorizes the owner or operator of the vessel to continue offloading after 6 p.m., local time.

(iii) *Restrictions on transfer of IFQ red snapper.* At-sea or dockside transfer of IFQ red snapper from one vessel to another vessel is prohibited.

(iv) *Requirement for transaction approval code.* If IFQ red snapper are

offloaded to a vehicle for transport or are on a vessel that is trailered for transport, on-site capability to accurately weigh the fish and to connect electronically to the online IFQ system to complete the transaction and obtain the transaction approval code is required. After a landing transaction has been completed, a transaction approval code verifying a legal transaction of the amount of IFQ red snapper in possession and a copy of the dealer endorsement must accompany any IFQ red snapper from the landing location through possession by a dealer. This requirement also applies to IFQ red snapper possessed on a vessel that is trailered for transport. A dealer may only receive IFQ red snapper transported by a vehicle or a trailered vessel that has a corresponding transaction approval code.

(v) *Approved landing locations.* IFQ red snapper must be landed at an approved landing location. Landing locations must be approved by NMFS Office for Law Enforcement prior to a vessel landing IFQ red snapper at these sites. Proposed landing locations may be submitted online via the IFQ Web site, or by calling IFQ Customer Service at 1-866-425-7627, at any time; however, new landing locations will be approved only at the end of each calendar-year quarter. To have a landing location approved by the end of the calendar-year quarter, it must be submitted at least 45 days before the end of the calendar-year quarter. NMFS will evaluate the proposed sites based on, but not limited to, the following criteria:

(A) Landing locations must have a street address. If there is no street address on record for a particular landing location, global positioning system (GPS) coordinates for an identifiable geographic location must be provided.

(B) Landing locations must be publicly accessible by land and water, and must satisfy the following criteria:

(1) Vehicles must have access to the site via public roads;

(2) Vessels must have access to the site via navigable waters;

(3) No other condition may impede free and immediate access to the site by an authorized law enforcement officer. Examples of such conditions include, but are not limited to: A locked

gate, fence, wall, or other barrier preventing 24-hour access to the site; a gated community entry point; a guard animal; a posted sign restricting access to the site; or any other physical deterrent.

(6) *Transfer of IFQ shares and allocation.* Until January 1, 2012, IFQ shares and allocations can be transferred only to a person who holds a valid commercial vessel permit for Gulf reef fish; thereafter, IFQ shares and allocations can be transferred only to a U.S. citizen or permanent resident alien. However, a valid commercial permit for Gulf reef fish, a Gulf red snapper IFQ vessel account, and Gulf red snapper IFQ allocation are required to possess (at and after the time of the advance notice of landing), land or sell Gulf red snapper subject to this IFQ program.

(i) *Share transfers.* Share transfers are permanent, *i.e.*, they remain in effect until subsequently transferred. Transfer of shares will result in the corresponding allocation being automatically transferred to the person receiving the transferred share beginning with the fishing year following the year the transfer occurred. However, within the fishing year the share transfer occurs, transfer of shares and associated allocation are independent—unless the associated allocation is transferred separately, it remains with the transferor for the duration of that fishing year. A share transfer transaction that remains in pending status, *i.e.*, has not been completed and verified with a transaction approval code, after 30 days from the date the shareholder initiated the transfer will be cancelled, and the pending shares will be re-credited to the shareholder who initiated the transfer.

(ii) *Share transfer procedures.* Share transfers must be accomplished online via the IFQ Web site. An IFQ shareholder must initiate a share transfer request by logging onto the IFQ Web site. Following the instructions provided on the IFQ Web site, the shareholder must enter pertinent information regarding the transfer request including, but not limited to, amount of shares to be transferred, which must be a minimum of 0.000001 percent; name of the eligible transferee; and the value of

the transferred shares. An IFQ shareholder who is subject to a sanction under 15 CFR part 904 is prohibited from initiating a share transfer. An IFQ shareholder who is subject to a pending sanction under 15 CFR part 904 must disclose in writing to the prospective transferee the existence of any pending sanction at the time of the transfer. For the first 5 years this IFQ program is in effect, an eligible transferee is a person who has a valid commercial vessel permit for Gulf reef fish; is in compliance with all reporting requirements for the Gulf reef fish fishery and the red snapper IFQ program; is not subject to sanctions under 15 CFR part 904; and who would not be in violation of the share cap as specified in paragraph (b)(8) of this section. Thereafter, share transferee eligibility will only include U.S. citizens and permanent resident aliens who are otherwise in compliance with the provisions of this section. The online system will verify the transfer information entered. If the information is not accepted, the online system will send the shareholder an electronic message explaining the reason(s) why the transfer request cannot be completed. If the information is accepted, the online system will send the transferee an electronic message of the pending transfer. The transferee must approve the share transfer by electronic signature. If the transferee approves the share transfer, the online system will send a transaction approval code to both the transferor and transferee confirming the transaction. All share transfers must be completed and the transaction approval code received prior to December 31 at 6 p.m. eastern time each year.

(iii) *Allocation transfers.* An allocation transfer is valid only for the remainder of the fishing year in which it occurs; it does not carry over to the subsequent fishing year. Any allocation that is unused at the end of the fishing year is void. Allocation may be transferred to a vessel account from any IFQ account. Allocation held in a vessel account, however, may only be transferred back to the IFQ account through which the vessel account was established.

(iv) *Allocation transfer procedures.* Allocation transfers must be accom-

plished online via the IFQ Web site. An IFQ account holder must initiate an allocation transfer by logging onto the IFQ Web site, entering the required information, including but not limited to, name of an eligible transferee and amount of IFQ allocation to be transferred and price, and submitting the transfer electronically. An IFQ allocation holder who is subject to a sanction under 15 CFR part 904 is prohibited from initiating an allocation transfer. An IFQ allocation holder who is subject to a pending sanction under 15 CFR part 904 must disclose in writing to the prospective transferee the existence of any pending sanction at the time of the transfer. If the transfer is approved, the online system will provide a transaction approval code to the transferor and transferee confirming the transaction.

(7) *Restricted transactions during the 20-hour online maintenance window.* All electronic IFQ transactions must be completed by December 31 at 6 p.m. eastern time each year. Electronic IFQ functions will resume again on January 1 at 2 p.m. eastern time the following fishing year. The remaining 6 hours prior to the end of the fishing year, and the 14 hours at the beginning of the next fishing year, are necessary to provide NMFS time to reconcile IFQ accounts, adjust allocations for the upcoming year if the commercial quotas for Gulf red snapper have changed, and update shares and allocations for the upcoming fishing year. No electronic IFQ transactions will be available during these 20 hours. An advance notice of landing may still be submitted during the 20-hour maintenance window by using the vessel's VMS unit or calling IFQ Customer Service at 1-866-425-7627.

(8) *IFQ share cap.* No person, including a corporation or other entity, may individually or collectively hold IFQ shares in excess of 6.0203 percent of the total shares. For the purposes of considering the share cap, a corporation's total IFQ share is determined by adding the applicable IFQ shares held by the corporation and any other IFQ shares held by a corporation(s) owned by the original corporation prorated based on the level of ownership. An individual's total IFQ share is determined by adding the applicable IFQ

shares held by the individual and the applicable IFQ shares equivalent to the corporate share the individual holds in a corporation. Initially, a corporation must provide the RA the identity of the shareholders of the corporation and their percent of shares in the corporation, and provide updated information to the RA within 30 days of when changes occur. This information must also be provided to the RA any time a commercial vessel permit for Gulf reef fish is renewed or transferred and at the time of renewal of the application for an IFQ Account.

(9) *Redistribution of shares resulting from permanent revocation.* If a shareholder's IFQ shares have been permanently revoked, the RA will redistribute the IFQ shares held by that shareholder proportionately among remaining shareholders (subject to cap restrictions) based upon the amount of shares each held just prior to the redistribution. During December of each year, the RA will determine the amount of revoked shares, if any, to be redistributed, and the shares will be distributed at the beginning of the subsequent fishing year.

(10) *Annual recalculation and notification of IFQ shares and allocation.* On or about January 1 each year, IFQ shareholders will be notified, via the IFQ Web site, of their IFQ share and allocation for the upcoming fishing year. These updated share values will reflect the results of applicable share transfers and any redistribution of shares (subject to cap restrictions) resulting from permanent revocation of applicable shares. Updated allocation values will reflect any change in IFQ share, any change in the annual commercial quota for Gulf red snapper, and any debits required as a result of prior fishing year overages as specified in paragraph (b)(3)(ii) of this section. IFQ participants can monitor the status of their shares and allocation throughout the year via the IFQ Web site.

(11) *Eligibility to participate in the Gulf red snapper IFQ program as of January 1, 2012.* The provisions of paragraph (b)(11) of this section apply to all eligible participants for the Gulf red snapper IFQ program beginning January 1, 2012. In addition to eligible participants who already participate in the Gulf red

snapper IFQ program, as of January 1, 2012, all U.S. citizens and permanent resident aliens who are in compliance with the provisions of this section are eligible and may participate in the Gulf red snapper IFQ program as shareholders and allocation holders. The requirements to meet the definition of a U.S. citizen are described in the Immigration and Nationality Act of 1952, as amended, and permanent resident aliens are those individuals who have been lawfully accorded the privilege of residing permanently in the U.S. in accordance with U.S. immigration laws. In order to harvest and possess Gulf IFQ red snapper, the requirements for a Gulf red snapper IFQ vessel account, as specified in paragraph (b)(1) of this section, or a Gulf IFQ dealer endorsement, as specified in paragraph (b)(2) of this section apply.

(i) *Gulf red snapper IFQ program participation for current red snapper IFQ account holders.* A current participant in the red snapper IFQ program must complete and submit the application for an IFQ Account that is available on the Web site sero.nmfs.noaa.gov, to certify status as a U.S. citizen or permanent resident alien. The IFQ account holder must also complete and submit any other information on this form that may be necessary for the administration of the IFQ account. A person with an established IFQ account must update and confirm the account information every 2 years. IFQ accounts are updated through the submission of the application for an IFQ Account. Accounts must be updated prior to the account validity date (expiration date of the account) that is displayed on each account holder's IFQ account page. The RA will provide each participant who has established an online account, with an application approximately 2 months prior to the account validity date. A participant who is not provided an application at least 45 days prior to the account validity date must contact IFQ Customer Service at 1-866-425-7627 and request an application. Failure to submit a completed application prior to the account validity date will lead to the suspension of the participant's IFQ account until a completed application is submitted. After January 1, 2012, participants who certify that they

are either not U.S. citizens or permanent resident aliens will be ineligible to receive shares or allocation through transfer.

(ii) *Gulf red snapper IFQ program participation for entities that do not currently possess an IFQ account.* The following procedures apply to U.S. citizens or permanent resident aliens who are not otherwise described in either paragraphs (a) or (b)(11)(i) of this section.

(A) To establish an IFQ account, a person must first complete the application for an IFQ Account that is available on the Web site *sero.nmfs.noaa.gov*. An applicant for an IFQ account under this paragraph must provide the following:

(1) Name; address; telephone number; date of birth; tax identification number; certification of status as either a U.S. citizen or permanent resident alien; and if a corporation, a list of all officers, directors, shareholders, and registered agents of the business; and other identifying information as specified on the application.

(2) Any other information that may be necessary for the establishment or administration of the IFQ account.

(B) Completed applications and all required supporting documentation must be submitted to the RA. There is no fee to access the Web site or establish an IFQ account. An applicant that submits an incomplete application will be contacted by the RA to correct any deficiencies. If an applicant fails to correct the deficiency within 30 days of being notified of the deficient application, the application will be considered abandoned.

(C) After an applicant submits a completed application for an IFQ account, the RA will mail the applicant general instructions regarding procedures related to the IFQ online system, including how to set up an online account and a user identification number—the personal identification number (PIN) will be provided in a subsequent letter.

(D) A participant who has established an IFQ account must notify the RA within 30 days after there is any change in the information submitted through the application for an IFQ Account. The IFQ account is void if any change in the application information is not reported within 30 days.

(E) A person who has established an IFQ account must update and confirm the account information every 2 years. IFQ accounts are updated through the submission of the application for an IFQ Account. Accounts must be updated prior to the account validity date (expiration date of the account) that is displayed on each account holder's IFQ account page. The RA will mail each participant who has established an online account an application approximately 2 months prior to the Account Validity Date. A participant who does not receive an application at least 45 days prior to the Account Validity Date must contact IFQ Customer Service at 1-866-425-7627 and request an application. Failure to submit a completed application prior to the account validity date will lead to the suspension of the IFQ account until a completed application is submitted.

(F) For information regarding transfer of IFQ shares and allocation, the IFQ share cap, and the annual recalculation and notification of IFQ shares and allocation, see paragraphs (b)(6), (b)(8), and (b)(10) of this section, respectively.

(G) Participation in the Gulf red snapper IFQ program beyond transferring IFQ shares and allocation is explained in paragraphs (a) through (b)(10) of this section.

[78 FR 22952, Apr. 17, 2013, as amended at 79 FR 19494, Apr. 9, 2014; 79 FR 57834, Sept. 26, 2014; 80 FR 24834, May 1, 2015; 83 FR 27299, June 12, 2018; 86 FR 11154, Feb. 24, 2021]

§ 622.22 Individual fishing quota (IFQ) program for Gulf groupers and tilefishes.

(a) *General.* This section establishes an IFQ program for the commercial sectors of the Gulf reef fish fishery for groupers (including DWG, red grouper, gag, and Other SWG) and tilefishes (including goldface tilefish, blueline tilefish, and tilefish). For the purposes of this IFQ program, DWG includes yellowedge grouper, warsaw grouper, snowy grouper, speckled hind, and scamp, but only as specified in paragraph (a)(7) of this section. For the purposes of this IFQ program, Other SWG includes black grouper, scamp, yellowfin grouper, yellowmouth grouper, warsaw grouper, and speckled hind,

but only as specified in paragraph (a)(6) of this section. Under the IFQ program, the RA initially will assign eligible participants IFQ shares, in five share categories. These IFQ shares are equivalent to a percentage of the annual commercial quotas for DWG, red grouper, gag, Other SWG, and tilefishes, based on their applicable historical landings. Shares determine the amount of IFQ allocation for Gulf groupers and tilefishes, in pounds gutted weight, a shareholder is initially authorized to possess, land, or sell in a given calendar year. Shares and annual IFQ allocation are transferable. See paragraph (b)(1) of this section regarding a requirement for a vessel landing groupers or tilefishes subject to this IFQ program to have an IFQ vessel account for Gulf groupers and tilefishes. See paragraph (b)(2) of this section regarding a requirement for a Gulf IFQ dealer endorsement. Details regarding eligibility, applicable landings history, account setup and transaction requirements, constraints on transferability, and other provisions of this IFQ system are provided in the following paragraphs of this section.

(1) *Scope.* The provisions of this section apply to Gulf groupers and tilefishes in or from the Gulf EEZ and, for a person aboard a vessel with an IFQ vessel account for Gulf groupers and tilefishes as required by paragraph (b)(1) of this section or for a person with a Gulf IFQ dealer endorsement as required by paragraph (b)(2) of this section, these provisions apply to Gulf groupers and tilefishes regardless of where harvested or possessed.

(2) *Duration.* The IFQ program established by this section will remain in effect until it is modified or terminated; however, the program will be evaluated by the Gulf of Mexico Fishery Management Council every 5 years.

(3) *Electronic system requirements.* (i) The administrative functions associated with this IFQ program, *e.g.*, registration and account setup, landing transactions, and transfers, are designed to be accomplished online; therefore, a participant must have access to a computer and Internet access and must set up an appropriate IFQ account to participate. The computer must have browser software installed,

e.g. Internet Explorer or Mozilla Firefox; as well as the software Adobe Flash Player version 9.0 or greater, which may be downloaded from the Internet for free. Assistance with online functions is available from IFQ Customer Service by calling 1-866-425-7627 Monday through Friday between 8 a.m. and 4:30 p.m. eastern time.

(ii) The RA will mail initial shareholders and dealers with Gulf reef fish dealer permits information and instructions pertinent to setting up an IFQ account. Other eligible persons who desire to become IFQ participants by purchasing IFQ shares or allocation or by obtaining a Gulf IFQ dealer endorsement must first contact IFQ Customer Service at 1-866-425-7627 to obtain information necessary to set up the required IFQ account. All current IFQ participants must complete and submit the application for an IFQ Account to certify their citizenship status and ensure their account information (*e.g.*, mailing address, corporate shareholdings, etc.) is up to date. See paragraph (b)(11) of this section regarding requirements for the application for an IFQ Account. Each IFQ participant must monitor his/her online account and all associated messages and comply with all IFQ online reporting requirements.

(iii) During catastrophic conditions only, the IFQ program provides for use of paper-based components for basic required functions as a backup. The RA will determine when catastrophic conditions exist, the duration of the catastrophic conditions, and which participants or geographic areas are deemed affected by the catastrophic conditions. The RA will provide timely notice to affected participants via publication of notification in the FEDERAL REGISTER, NOAA weather radio, fishery bulletins, and other appropriate means and will authorize the affected participants' use of paper-based components for the duration of the catastrophic conditions. NMFS will provide each IFQ dealer the necessary paper forms and instructions for submission of the forms to the RA. The paper forms will also be available from the RA. The program functions available to participants or geographic areas deemed affected by catastrophic conditions will

§ 622.22

50 CFR Ch. VI (10–1–21 Edition)

be limited under the paper-based system. There will be no mechanism for transfers of IFQ shares or allocation under the paper-based system in effect during catastrophic conditions. Assistance in complying with the requirements of the paper-based system will be available via IFQ Customer Service 1-866-425-7627 Monday through Friday between 8 a.m. and 4:30 p.m. eastern time.

(4) *IFQ allocation.* IFQ allocation is the amount of Gulf groupers and tilefishes, in pounds gutted weight, an IFQ shareholder or allocation holder is authorized to possess, land, or sell during a given fishing year. IFQ allocation is derived at the beginning of each year by multiplying a shareholder's IFQ share times the annual commercial quota for Gulf groupers and tilefishes. If the quota is increased after the beginning of the fishing year, then IFQ allocation is derived by multiplying a shareholder's IFQ share at the time of the quota increase by the amount the annual commercial quota for groupers and tilefishes is increased. If a reduction in the applicable commercial quota specified in § 622.39(a)(1) is expected to occur after January 1, the beginning of the fishing year, but before June 1 in that same fishing year, NMFS will withhold distribution of IFQ allocation of the applicable groupers and tilefishes commercial quota on January 1 in the amount equal to that reduction. If a final rule to implement the commercial quota reduction is not published in the FEDERAL REGISTER and effective by June 1, NMFS will distribute withheld IFQ allocation of the applicable groupers and tilefishes commercial quota to current shareholders based on the date the withheld IFQ allocation is distributed.

(5) *Red grouper and gag multi-use allocation—(i) Red grouper multi-use allocation.* (A) At the time the commercial quota for red grouper is distributed to IFQ shareholders, a percentage of each shareholder's initial red grouper allocation will be converted to red grouper multi-use allocation. Red grouper multi-use allocation, determined annually, will be based on the following formula:

Red Grouper multi-use allocation (in percent) = $100 * [\text{Gag ACL} - \text{Gag}$

commercial quota]/Red grouper commercial quota

(B) Red grouper multi-use allocation may be used to possess, land, or sell either red grouper or gag under certain conditions. Red grouper multi-use allocation may be used to possess, land, or sell red grouper only after an IFQ account holder's (shareholder or allocation holder's) red grouper allocation has been landed and sold, or transferred; and to possess, land, or sell gag, only after both gag and gag multi-use allocation have been landed and sold, or transferred. However, if gag is under a rebuilding plan, the percentage of red grouper multi-use allocation is equal to zero.

(ii) *Gag multi-use allocation.* (A) At the time the commercial quota for gag is distributed to IFQ shareholders, a percentage of each shareholder's initial gag allocation will be converted to gag multi-use allocation. Gag multi-use allocation, determined annually, will be based on the following formula:

Gag multi-use allocation (in percent) = $100 * [\text{Red grouper ACL} - \text{Red grouper commercial quota}]/\text{Gag commercial quota}$

(B) Gag multi-use allocation may be used to possess, land, or sell either gag or red grouper under certain conditions. Gag multi-use allocation may be used to possess, land, or sell gag only after an IFQ account holder's (shareholder or allocation holder's) gag allocation has been landed and sold, or transferred; and to possess, land, or sell red grouper, only after both red grouper and red grouper multi-use allocation have been landed and sold, or transferred. Multi-use allocation transfer procedures and restrictions are specified in paragraph (b)(6)(iv) of this section. However, if red grouper is under a rebuilding plan, the percentage of gag multi-use allocation is equal to zero.

(6) *Warsaw grouper and speckled hind classification.* Warsaw grouper and speckled hind are considered DWG species and under certain circumstances SWG species. For the purposes of the IFQ program for Gulf groupers and tilefishes, after all of an IFQ account holder's DWG allocation has been landed and sold, or transferred, or if an IFQ account holder has no DWG allocation, then Other SWG allocation may be

used to land and sell warsaw grouper and speckled hind.

(7) *Scamp classification.* Scamp is considered a SWG species and under certain circumstances a DWG. For the purposes of the IFQ program for Gulf groupers and tilefishes, after all of an IFQ account holder's Other SWG allocation has been landed and sold, or transferred, or if an IFQ account holder has no SWG allocation, then DWG allocation may be used to land and sell scamp.

(8) *Closing an IFQ account.* IFQ account holders may close an IFQ account by completing and submitting a Close IFQ Account Request Form to NMFS. This form must be signed by an account holder named on the IFQ account. If the request to close an IFQ account is being made because the sole account holder is deceased, the person requesting the closure must sign the Close IFQ Account Request Form, indicating the relationship to the deceased, provide a death certificate, and provide any additional information NMFS determines is necessary to complete the request. IFQ shareholder accounts may not be closed until all shares and allocation have been transferred from the account to another IFQ account holder. Dealer accounts may not be closed until all cost recovery fees have been received by NMFS. NMFS' IFQ Customer Service staff may close an IFQ account if all shares and allocation have been transferred from the account, all cost recovery fees have been received by NMFS, and no landing transactions or IFQ transfers have been completed by the IFQ account holder in at least 1 year. If an account is closed by NMFS' IFQ Customer Service staff, it may be reopened at the request of the IFQ account holder by contacting IFQ Customer Service.

(9) *Returning IFQ shares.* Any shares contained in IFQ accounts that have never been activated since January 1, 2010, in the IFQ program are returned permanently to NMFS on July 12, 2018.

(b) *IFQ operations and requirements—*
(1) *IFQ vessel accounts for Gulf groupers and tilefishes.* For a person aboard a vessel, for which a commercial vessel permit for Gulf reef fish has been issued, to fish for, possess, or land Gulf groupers (including DWG and SWG, as

specified in paragraph (a) of this section or tilefishes (including goldface tilefish, blueline tilefish, and tilefish), regardless of where harvested or possessed, a Gulf IFQ vessel account for the applicable species or species groups must have been established. As a condition of the IFQ vessel account, a person aboard such vessel must comply with the requirements of this section, § 622.22, when fishing for groupers or tilefishes regardless of where the fish are harvested or possessed. An owner of a vessel with a commercial vessel permit for Gulf reef fish, who has established an IFQ account for the applicable species, as specified in paragraph (a)(3)(i) of this section, online via the NMFS IFQ Web site <https://portal.southeast.fisheries.noaa.gov/cs/main.html>, may establish a vessel account through that IFQ account for that permitted vessel. If such owner does not have an online IFQ account, the owner must first contact IFQ Customer Service at 1-866-425-7627 to obtain information necessary to access the IFQ Web site and establish an online IFQ account. There is no fee to set-up an IFQ account or a vessel account. Only one vessel account may be established per vessel under each IFQ program. An owner with multiple vessels may establish multiple vessel accounts under each IFQ account. The purpose of the vessel account is to hold IFQ allocation that is required to land the applicable IFQ species. A vessel account, or its linked IFQ shareholder account, must hold sufficient IFQ allocation in the appropriate share category, at least equal to the pounds in gutted weight of the groupers and tilefishes on board at the time of advance notice of landing. Allocation must be transferred to the vessel account, so that the vessel account holds sufficient IFQ allocation at the time of the landing transaction (except for any overage allowed as specified in paragraph (b)(3)(ii) for groupers and tilefishes). The vessel account remains valid as long as the vessel permit remains valid; the vessel has not been sold or transferred; and the vessel owner is in compliance with all Gulf reef fish and IFQ reporting requirements, has paid all applicable IFQ fees, and is not subject to sanctions

under 15 CFR part 904. The vessel account is not transferable to another vessel. The provisions of this paragraph do not apply to fishing for or possession of Gulf groupers and tilefishes under the bag limit specified in § 622.38(b)(2) and (5) respectively.

(2) *Gulf IFQ dealer endorsements.* In addition to the requirement for a Gulf and South Atlantic dealer permit as specified in § 622.20(c)(1), for a dealer to first receive groupers and tilefishes subject to the IFQ program for groupers and tilefishes, as specified in paragraph (a)(1) of this section, or for a person aboard a vessel with a Gulf IFQ vessel account to sell such groupers and tilefishes directly to an entity other than a dealer, such persons must also have a Gulf IFQ dealer endorsement. A dealer with a Gulf and South Atlantic dealer permit can download a Gulf IFQ dealer endorsement from the NMFS IFQ Web site. If such persons do not have an IFQ account, they must first contact IFQ Customer Service at 1-866-425-7627 to obtain information necessary to access the IFQ Web site and establish an IFQ account. There is no fee for obtaining this endorsement. The endorsement remains valid as long as the Gulf and South Atlantic dealer permit remains valid and the dealer is in compliance with all Gulf reef fish and IFQ reporting requirements, has paid all IFQ fees required, and is not subject to any sanctions under 15 CFR part 904. The endorsement is not transferable.

(3) *IFQ Landing and transaction requirements.* (i) At the time of advance notice of landing, the IFQ vessel account, or its linked IFQ shareholder account, must contain allocation at least equal to the pounds in gutted weight of grouper or tilefish species to be landed, except as provided in paragraph (b)(3)(ii) of this section. At the time of the landing transaction, the IFQ vessel account must contain allocation at least equal to the pounds in gutted weight of grouper or tilefish species to be landed, except as provided in paragraph (b)(3)(ii) of this section. Such groupers and tilefishes must be sold and can be received only by a dealer who has a valid Gulf IFQ dealer endorsement and an active IFQ dealer account (*i.e.*, not in delinquent status).

All IFQ landings and their actual ex-vessel prices must be reported via the IFQ Web site.

(ii) A person on board a vessel with an IFQ vessel account landing the shareholder's only remaining allocation from among any of the grouper or tilefish share categories, can legally exceed, by up to 10 percent, the shareholder's allocation remaining on that last fishing trip of the fishing year, *i.e.*, a one-time per fishing year overage. Any such overage will be deducted from the shareholder's applicable allocation for the subsequent fishing year. From the time of the overage until January 1 of the subsequent fishing year, the IFQ shareholder must retain sufficient shares to account for the allocation that will be deducted the subsequent fishing year. Share transfers that would violate this requirement will be prohibited.

(iii) The dealer must complete a landing transaction report for each landing of Gulf groupers or tilefishes via the IFQ Web site on the day of offload, except if the fish are being trailered for transport to a dealer as specified in paragraph (b)(5)(iv) of this section (in which case the landing transaction report may be completed prior to the day of offload), and within 96 hours from the time of landing reported on the most recent landing notification, in accordance with the reporting form(s) and instructions provided on the Web site. This report includes date, time, and location of transaction; weight and actual ex-vessel price of groupers and tilefishes landed and sold (when calculating the weight of IFQ groupers and tilefishes during a landing transaction, ice and water weight may not be deducted from the weight of the fish unless the actual weight of the ice and water can be determined); and information necessary to identify the fisherman, vessel, and dealer involved in the transaction. The fisherman must validate the dealer transaction report by entering the unique PIN for the vessel account when the transaction report is submitted. After the dealer submits the report and the information has been verified by NMFS, the online system will send a transaction approval code to the dealer and the allocation holder.

(iv) If there is a discrepancy regarding the landing transaction report after approval, the dealer or vessel account holder (or his or her authorized agent) must initiate a landing transaction correction form to correct the landing transaction. This form is available via the IFQ Web site. The dealer must then print out the form, both parties must sign it, and the form must be mailed to NMFS. The form must be received by NMFS no later than 15 days after the date of the initial landing transaction.

(4) *IFQ cost recovery fees.* As required by the Magnuson-Stevens Act, the RA will collect a fee to recover the actual costs directly related to the management and enforcement of the IFQ program for Gulf groupers and tilefishes. The fee cannot exceed 3 percent of the ex-vessel value of Gulf groupers and tilefishes landed under the IFQ program as described in the Magnuson-Stevens Act. Such fees will be deposited in the Limited Access System Administration Fund (LASAF). Initially, the fee will be 3 percent of the actual ex-vessel price of Gulf groupers and tilefishes landed per trip under the IFQ program, as documented in each landings transaction report. The RA will review the cost recovery fee annually to determine if adjustment is warranted. Factors considered in the review include the catch subject to the IFQ cost recovery, projected ex-vessel value of the catch, costs directly related to the management and enforcement of the IFQ program, the projected IFQ balance in the LASAF, and expected non-payment of fee liabilities. If the RA determines that a fee adjustment is warranted, the RA will publish a notification of the fee adjustment in the FEDERAL REGISTER.

(i) *Payment responsibility.* The IFQ account holder specified in the documented IFQ landing transaction report for Gulf groupers and tilefishes is responsible for payment of the applicable cost recovery fees.

(ii) *Collection and submission responsibility.* A dealer who receives Gulf groupers or tilefishes subject to the IFQ program is responsible for collecting the applicable cost recovery fee for each IFQ landing from the IFQ account holder specified in the IFQ land-

ing transaction report. Such dealer is responsible for submitting all applicable cost recovery fees to NMFS on a quarterly basis. The fees are due and must be submitted, using *pay.gov* via the IFQ system, at the end of each calendar-year quarter, but no later than 30 days after the end of each calendar-year quarter. Fees not received by the deadline are delinquent.

(iii) *Fee payment procedure.* For each IFQ dealer, the IFQ system will post, in individual IFQ dealer accounts, an end-of-quarter statement of cost recovery fees that are due. The dealer is responsible for submitting the cost recovery fee payments using *pay.gov* via the IFQ system. Authorized payment methods are credit card, debit card, or automated clearing house (ACH). Payment by check will be authorized only if the RA has determined that the geographical area or an individual(s) is affected by catastrophic conditions.

(iv) *Fee reconciliation process—delinquent fees.* The following procedures apply to an IFQ dealer whose cost recovery fees are delinquent.

(A) On or about the 31st day after the end of each calendar-year quarter, the RA will send the dealer an electronic message via the IFQ Web site and official notice via mail indicating the applicable fees are delinquent, and the dealer's IFQ account has been suspended pending payment of the applicable fees.

(B) On or about the 91st day after the end of each calendar-year quarter, the RA will refer any delinquent IFQ dealer cost recovery fees to the appropriate authorities for collection of payment.

(5) *Measures to enhance IFQ program enforceability—(i) Advance notice of landing—(A) General requirement.* For the purpose of this paragraph, landing means to arrive at a dock, berth, beach, seawall, or ramp. The owner or operator of a vessel landing IFQ groupers or tilefishes is responsible for ensuring that NMFS is contacted at least 3 hours, but no more than 24 hours, in advance of landing to report the time and location of landing, estimated grouper and tilefish landings in pounds gutted weight for each share category (gag, red grouper, DWG, Other SWG, tilefishes), vessel identification number (Coast Guard registration

number or state registration number), and the name and address of the IFQ dealer(s) where the groupers or tilefishes are to be received. The vessel must land within 1 hour after the time given in the landing notification except as provided in paragraph (b)(5)(i)(C) of this section. The vessel landing groupers or tilefishes must have sufficient IFQ allocation in the IFQ vessel account, or its linked IFQ shareholder account, and in the appropriate share category or categories, at least equal to the pounds in gutted weight of all groupers and tilefishes on board (except for any overage up to the 10 percent allowed on the last fishing trip) at the time of the advance notice of landing.

(B) *Submitting an advanced landing notification.* Authorized methods for contacting NMFS and submitting the report include calling IFQ Customer Service at 1-866-425-7627, completing and submitting to NMFS a landing notification provided through the VMS unit, or providing the required information to NMFS through the web-based form available on the IFQ Web site.

(C) *Landing prior to the notification time.* The owner or operator of a vessel that has completed a landing notification and submitted it to NMFS may land prior to the notification time, only if an authorized officer is present at the landing site, is available to meet the vessel, and has authorized the owner or operator of the vessel to land early.

(D) *Changes to a landing notification.* The owner or operator of a vessel who has submitted a landing notification to NMFS may make changes to the notification by submitting a superseding notification. If the initial superseding notification makes changes to one or more of the following: the time of landing (if landing more than 1 hour after the time on the notification), the dealer(s), or the estimated weights of fish to be landed, the vessel does not need to wait an additional 3 hours to land. If the initial superseding notification makes changes to the landing location, the time of landing is earlier than previously specified, or more than one superseding notification is submitted on a trip, the vessel must wait an addi-

tional 3 hours to land, except as provided in paragraph (b)(5)(i)(C) of this section.

(ii) *Time restriction on offloading.* For the purpose of this paragraph, offloading means to remove IFQ groupers and tilefishes from a vessel. IFQ groupers or tilefishes may be offloaded only between 6 a.m. and 6 p.m., local time, unless an authorized officer is present at the offloading at 6 p.m., is available to remain at the site while offloading continues, and authorizes the owner or operator of the vessel to continue offloading after 6 p.m.

(iii) *Restrictions on transfer of IFQ groupers and tilefishes.* At-sea or dock-side transfer of IFQ groupers or tilefishes from one vessel to another vessel is prohibited.

(iv) *Requirement for transaction approval code.* If IFQ groupers or tilefishes are offloaded to a vehicle for transport or are on a vessel that is trailered for transport, on-site capability to accurately weigh the fish and to connect electronically to the online IFQ system to complete the transaction and obtain the transaction approval code is required. After a landing transaction has been completed, a transaction approval code verifying a legal transaction of the amount of IFQ groupers and tilefishes in possession and a copy of the dealer endorsement must accompany any IFQ groupers or tilefishes from the landing location through possession by a dealer. This requirement also applies to IFQ groupers and tilefishes possessed on a vessel that is trailered for transport. A dealer may only receive IFQ groupers and tilefishes transported by a vehicle or a trailered vessel that has a corresponding transaction approval code.

(v) *Approved landing locations.* IFQ groupers and tilefishes must be landed at an approved landing location. Landing locations must be approved by NMFS Office for Law Enforcement prior to a vessel landing IFQ groupers or tilefishes at these sites. Proposed landing locations may be submitted online via the IFQ Web site, or by calling IFQ Customer Service at 1-866-425-7627, at any time; however, new landing locations will be approved only at the end of each calendar-year quarter. To have your landing location approved by

the end of the calendar-year quarter, it must be submitted at least 45 days before the end of the calendar-year quarter. NMFS will evaluate the proposed sites based on, but not limited to, the following criteria:

(A) Landing locations must have a street address. If there is no street address on record for a particular landing location, global positioning system (GPS) coordinates for an identifiable geographic location must be provided.

(B) Landing locations must be publicly accessible by land and water, and must satisfy the following criteria:

(1) Vehicles must have access to the site via public roads;

(2) Vessels must have access to the site via navigable water;

(3) No other condition may impede free and immediate access to the site by an authorized law enforcement officer. Examples of such conditions include, but are not limited to: A locked gate, fence, wall, or other barrier preventing 24-hour access to the site; a gated community entry point; a guard; animal; a posted sign restricting access to the site; or any other physical deterrent.

(6) *Transfer of IFQ shares and allocation.* Until January 1, 2015, IFQ shares and allocations can be transferred only to a person who holds a valid commercial vessel permit for Gulf reef fish; thereafter, IFQ shares and allocations can be transferred only to a U.S. citizen or permanent resident alien. However, a valid commercial permit for Gulf reef fish, an IFQ vessel account for Gulf groupers and tilefishes, and IFQ allocation for Gulf groupers or tilefishes are required to possess (at and after the time of the advance notice of landing), land or sell Gulf groupers or tilefishes subject to this IFQ program.

(i) *Share transfers.* Share transfers are permanent, *i.e.*, they remain in effect until subsequently transferred. Transfer of shares will result in the corresponding allocation being automatically transferred to the person receiving the transferred share beginning with the fishing year following the year the transfer occurred. However, within the fishing year the share transfer occurs, transfer of shares and associated allocation are independent—un-

less the associated allocation is transferred separately, it remains with the transferor for the duration of that fishing year. A share transfer transaction that remains in pending status, *i.e.*, has not been completed and verified with a transaction approval code, after 30 days from the date the shareholder initiated the transfer will be cancelled, and the pending shares will be re-credited to the shareholder who initiated the transfer.

(ii) *Share transfer procedures.* Share transfers must be accomplished online via the IFQ Web site. An IFQ shareholder must initiate a share transfer request by logging onto the IFQ Web site. An IFQ shareholder who is subject to a sanction under 15 CFR part 904 is prohibited from initiating a share transfer. An IFQ shareholder who is subject to a pending sanction under 15 CFR part 904 must disclose in writing to the prospective transferee the existence of any pending sanction at the time of the transfer. Following the instructions provided on the Web site, the shareholder must enter pertinent information regarding the transfer request including, but not limited to: amount of shares to be transferred, which must be a minimum of 0.000001 percent; name of the eligible transferee; and the value of the transferred shares. For the first 5 years this IFQ program is in effect, an eligible transferee is a person who has a valid commercial vessel permit for Gulf reef fish; is in compliance with all reporting requirements for the Gulf reef fish fishery and the IFQ program for Gulf groupers and tilefishes; is not subject to sanctions under 15 CFR part 904; and who would not be in violation of the share or allocation caps as specified in paragraph (b)(8) of this section. Thereafter, share transferee eligibility will only include U.S. citizens and permanent resident aliens who are otherwise in compliance with the provisions of this section. The online system will verify the information entered. If the information is not accepted, the online system will send the shareholder an electronic message explaining the reason(s). If the information is accepted, the online system will send the transferee an electronic message of the pending transfer. The transferee must

approve the share transfer by electronic signature. If the transferee approves the share transfer, the online system will send a transfer approval code to both the shareholder and transferee confirming the transaction. All share transfers must be completed and the transaction approval code received prior to December 31 at 6 p.m. eastern time each year.

(iii) *Allocation transfers.* An allocation transfer is valid only for the remainder of the fishing year in which it occurs; it does not carry over to the subsequent fishing year. Any allocation that is unused at the end of the fishing year is void. Allocation may be transferred to a vessel account from any IFQ account. Allocation held in a vessel account, however, may only be transferred back to the IFQ account through which the vessel account was established.

(iv) *Allocation transfer procedures and restrictions—(A) Allocation transfer procedures.* Allocation transfers must be accomplished online via the IFQ Web site. An IFQ account holder must initiate an allocation transfer by logging onto the IFQ Web site, entering the required information, including but not limited to, the name of an eligible transferee and amount of IFQ allocation to be transferred and price, and submitting the transfer electronically. An IFQ allocation holder who is subject to a sanction under 15 CFR part 904 is prohibited from initiating an allocation transfer. An IFQ allocation holder who is subject to a pending sanction under 15 CFR part 904 must disclose in writing to the prospective transferee the existence of any pending sanction at the time of the transfer. If the transfer is approved, the Web site will provide a transfer approval code to the transferor and transferee confirming the transaction.

(B) *Multi-use allocation transfer restrictions—(1) Red grouper multi-use allocation.* Red grouper multi-use allocation may only be transferred after all an IFQ account holder's red grouper allocation has been landed and sold, or transferred.

(2) *Gag multi-use allocation.* Gag multi-use allocation may only be transferred after all an IFQ account

holder's gag allocation has been landed and sold, or transferred.

(7) *Restricted transactions during the 20-hour online maintenance window.* All electronic IFQ transactions must be completed by December 31 at 6 p.m. eastern time each year. Electronic IFQ functions will resume again on January 1 at 2 p.m. eastern time the following fishing year. The remaining 6 hours prior to the end of the fishing year, and the 14 hours at the beginning of the next fishing year, are necessary to provide NMFS time to reconcile IFQ accounts, adjust allocations for the upcoming year if the commercial quotas or catch allowances for Gulf groupers and tilefishes have changed, and update shares and allocations for the upcoming fishing year. No electronic IFQ transactions will be available during these 20 hours. An advance notice of landing may still be submitted during the 20-hour maintenance window by using the vessel's VMS unit or calling IFQ Customer Service at 1-866-425-7627.

(8) *IFQ share and allocation caps.* A corporation's total IFQ share (or allocation) is determined by adding the applicable IFQ shares (or allocation) held by the corporation and any other IFQ shares (or allocation) held by a corporation(s) owned by the original corporation prorated based on the level of ownership. An individual's total IFQ share is determined by adding the applicable IFQ shares held by the individual and the applicable IFQ shares equivalent to the corporate share the individual holds in a corporation. An individual's total IFQ allocation is determined by adding the individual's total allocation to the allocation derived from the IFQ shares equivalent to the corporate share the individual holds in a corporation.

(i) *IFQ share cap for each share category.* No person, including a corporation or other entity, may individually or collectively hold IFQ shares in any share category (gag, red grouper, DWG, Other SWG, or tilefishes) in excess of the maximum share initially issued for the applicable share category to any person at the beginning of the IFQ program, as of the date appeals are resolved and shares are adjusted accordingly. A corporation must provide to the RA the identity of the shareholders

of the corporation and their percent of shares in the corporation for initial issuance of IFQ shares and allocation, and provide updated information to the RA within 30 days of when changes occur. This information must also be provided to the RA any time a commercial vessel permit for Gulf reef fish is renewed or transferred and at the time of renewal of the application for an IFQ Account.

(ii) *Total allocation cap.* No person, including a corporation or other entity, may individually or collectively hold, cumulatively during any fishing year, IFQ allocation in excess of the total allocation cap. The total allocation cap is the sum of the maximum allocations associated with the share caps for each individual share category and is calculated annually based on the applicable quotas or catch allowance associated with each share category.

(9) *Redistribution of shares resulting from permanent revocation.* If a shareholder's IFQ shares have been permanently revoked, the RA will redistribute the IFQ shares proportionately among remaining shareholders (subject to cap restrictions) based upon the amount of shares each held just prior to the redistribution. During December of each year, the RA will determine the amount of revoked shares, if any, to be redistributed, and the shares will be distributed at the beginning of the subsequent fishing year.

(10) *Annual recalculation and notification of IFQ shares and allocation.* On or about January 1 each year, IFQ shareholders will be notified, via the IFQ Web site, of their IFQ shares and allocations, for each of the five share categories, for the upcoming fishing year. These updated share values will reflect the results of applicable share transfers and any redistribution of shares (subject to cap restrictions) resulting from permanent revocation of IFQ shares. Allocation, for each share category, is calculated by multiplying IFQ share for that category times the annual commercial quota or commercial catch allowance for that share category. Updated allocation values will reflect any change in IFQ share for each share category, any change in the annual commercial quota or commercial catch allowance for the applicable categories;

and any debits required as a result of prior fishing year overages as specified in paragraph (b)(3)(ii) of this section. IFQ participants can monitor the status of their shares and allocation throughout the year via the IFQ Web site.

(11) *Gulf grouper and tilefish IFQ program participation for current grouper and tilefish IFQ account holders.* (i) A current participant in the Gulf grouper and tilefish IFQ program must complete and submit the application for an IFQ Account that is available on the Web site sero.nmfs.noaa.gov, to certify status as a U.S. citizen or permanent resident alien. The account holder must also complete and submit any other information on this form that may be necessary for the administration of the IFQ account.

(ii) A person with an established IFQ account must update and confirm the account information every 2 years. IFQ accounts are updated through the submission of the application for an IFQ Account. Accounts must be updated prior to the account validity date (expiration date of the account) that is displayed on each account holder's IFQ account page. The RA will provide each participant who has established an on-line account an application approximately 2 months prior to the account validity date. A participant who is not provided an application at least 45 days prior to the account validity date must contact IFQ Customer Service at 1-866-425-7627 and request an application. Failure to submit a completed application prior to the participant's account validity date will lead to the suspension of the participant's access to his IFQ account until a completed application is submitted. Participants who certify that they are either not a U.S. citizen or permanent resident alien will be ineligible to receive shares or allocation through transfer.

[78 FR 22952, Apr. 17, 2013, as amended at 79 FR 19494, Apr. 9, 2014; 79 FR 57835, Sept. 26, 2014; 80 FR 18553, Apr. 7, 2015; 80 FR 24834, May 1, 2015; 83 FR 27300, June 12, 2018; 86 FR 11154, Feb. 24, 2021]

§ 622.23

50 CFR Ch. VI (10–1–21 Edition)

§ 622.23 State management of the red snapper recreational sector private angling component in the Gulf EEZ.

(a) *Delegation.* Alabama, Florida, Louisiana, Mississippi, and Texas (Gulf states) are delegated the authority to manage certain aspects of recreational red snapper harvest by the private angling component in the Gulf EEZ (*i.e.*, delegation). All other management measures for recreational red snapper in the Gulf EEZ not specified in this section continue to apply during state management.

(1) *Delegation of authority.* As described in the FMP for the Reef Fish Resources of the Gulf of Mexico, each Gulf state must specify the red snapper private angling component fishing season start and end dates to maintain harvest levels within the state's ACL, as stated in paragraph (a)(1)(ii) of this section. Each state must also specify a recreational bag limit and a minimum size limit within the range of 14 to 18 inches (35.6 cm to 45.7 cm), total length. Each state may specify a maximum size limit. If NMFS determines that a state's red snapper private angling component regulations are inconsistent with the FMP and the state fails to correct the inconsistency after notice and an opportunity to do so, or a state does not specify the required management measures set forth above, *i.e.*, fishing season start and end dates, a recreational bag limit, and a minimum size limit, then NMFS will publish a notice in the FEDERAL REGISTER stating that the default management measures for the red snapper private angling component, as described in paragraph (a)(2) of this section, apply in the EEZ off that state.

(i) *State management areas.* For purposes of the delegation of the authority to establish certain management measures for the red snapper private angling component, five areas in the Gulf EEZ have been established; one off each of the five Gulf states: Alabama, Florida, Louisiana, Mississippi, and Texas. The boundaries off each state are described in § 622.2.

(ii) *State private angling component ACLs.* All ACLs specified below are in round weight.

(A) *Alabama regional management area*—1,122,662 lb (509,231 kg).

(B) *Florida regional management area*—1,913,451 lb (867,927 kg).

(C) *Louisiana regional management area*—816,233 lb (370,237 kg).

(D) *Mississippi regional management area*—151,550 lb (68,742 kg).

(E) *Texas regional management area*—265,105 lb (120,250 kg).

(2) *Default management measures.* If a state's delegation is suspended, the Federal management measures for the private angling season, recreational bag limit, and minimum size limit as described in §§ 622.34(b) (seasonal closure), 622.37(a)(1) (size limit), 622.38(b)(3) (bag limit), and 622.41(q)(2)(i) (season length) apply in the EEZ off that state. All other management measures not specified in this section remain in effect.

(b) *Post-season ACL adjustments for states with an active delegation.* If a state's red snapper private angling component landings exceed the applicable state's component ACL specified in paragraph (a)(1)(ii) of this section, the AA will file a notification with the Office of the Federal Register, at or near the beginning of the following fishing year, reducing that state's private angling ACL by the amount of the ACL overage in the prior fishing year, unless the best scientific information available determines that a greater, lesser, or no overage adjustment is necessary.

(c) *Area closures.* As described in the FMP, for the red snapper private angling component, a state with an active delegation may request that NMFS establish an area closure in the EEZ off that state that prohibits the private angling component from harvesting or possessing red snapper. If NMFS determines that the request is within the scope of the analysis in the FMP, NMFS will publish a notice in the FEDERAL REGISTER to implement the requested closure for the fishing year.

[85 FR 6823, Feb. 6, 2020]

§ 622.24 [Reserved]

§ 622.25 Exemptions for Gulf groundfish trawling.

Gulf groundfish trawling means fishing in the Gulf EEZ by a vessel that uses a bottom trawl, the unsorted

catch of which is ground up for animal feed or industrial products.

(a) Other provisions of this part notwithstanding, the owner or operator of a vessel trawling for Gulf groundfish is exempt from the following requirements and limitations for the vessel's unsorted catch of Gulf reef fish:

(1) The requirement for a valid commercial vessel permit for Gulf reef fish in order to sell Gulf reef fish.

(2) Minimum size limits for Gulf reef fish.

(3) Bag limits for Gulf reef fish.

(4) The prohibition on sale of Gulf reef fish after a quota or ACL closure.

(b) Other provisions of this part notwithstanding, a dealer in a Gulf state is exempt from the requirement for a Gulf and South Atlantic dealer permit to receive Gulf reef fish harvested from the Gulf EEZ by a vessel trawling for Gulf groundfish.

[79 FR 19494, Apr. 9, 2014]

§ 622.26 Recordkeeping and reporting.

(a) *Commercial vessel owners and operators.* (1) The owner or operator of a vessel for which a commercial permit for Gulf reef fish has been issued, as required under § 622.20(a)(1), or whose vessel fishes for or lands reef fish in or from state waters adjoining the Gulf EEZ, who is selected to report by the SRD must maintain a fishing record on a form available from the SRD. These completed fishing records must be submitted to the SRD postmarked no later than 7 days after the end of each fishing trip. If no fishing occurred during a calendar month, a report so stating must be submitted on one of the forms postmarked no later than 7 days after the end of that month. Information to be reported is indicated on the form and its accompanying instructions.

(2) *Advance notice of landing—(i) General requirement.* For the purpose of this paragraph (a)(2), landing means to arrive at a dock, berth, beach, seawall, or ramp. The owner or operator of a vessel landing Gulf reef fish not managed under an IFQ program or Florida Keys/East Florida hogfish harvested in the Gulf is responsible for ensuring that NMFS is contacted at least 3 hours, but no more than 24 hours, in advance of landing to report the time, date, and location of landing, and the vessel

identification number (e.g., Coast Guard registration number or state registration number). The vessel must land at an approved landing location and within 1 hour after the time given in the landing notification, except as provided in paragraph (a)(2)(iii) of this section. A vessel landing Gulf reef fish managed under an IFQ program must also comply with the requirements in §§ 622.21 and 622.22, as applicable.

(ii) *Submitting an advance landing notification.* Authorized methods for contacting NMFS and submitting a completed landing notification include the VMS unit, or another contact method approved by NMFS.

(iii) *Landing prior to the notification time.* The owner or operator of a vessel that has completed a landing notification and submitted it to NMFS may land prior to the notification time, only if an authorized officer is present at the landing site, is available to meet the vessel, and has authorized the owner or operator of the vessel to land prior to the notification time.

(iv) *Changes to a landing notification.* The owner or operator of a vessel who has submitted a landing notification to NMFS may make changes to the notification by submitting a superseding notification. If the initial superseding notification makes changes to the time of landing that is later than the original time in the notification, the vessel does not need to wait an additional 3 hours to land. If the initial superseding notification makes changes to the landing location, the time of landing is earlier than previously specified, or more than one superseding notification is submitted on a trip, the vessel must wait an additional 3 hours to land, except as provided in paragraph (a)(2)(iii) of this section.

(v) *Approved landing locations.* Gulf reef fish not managed under an IFQ program, and Florida Keys/East Florida hogfish harvested in the Gulf, must be landed at an approved landing location. Landing locations must be approved by the NOAA Office of Law Enforcement prior to a vessel landing these species at these sites. Proposed landing locations may be submitted to NMFS; however, new landing locations will be approved only at the end of each calendar-year quarter. To have a

landing location approved by the end of the calendar-year quarter, it must be submitted at least 45 days before the end of the calendar-year quarter. NMFS will evaluate the proposed sites based on, but not limited to, the criteria at §§ 622.21(b)(5)(v) and 622.22(b)(5)(v).

(b) *Charter vessel/headboat owners and operators*—(1) *General reporting requirement.* The owner or operator of a charter vessel or headboat for which a charter vessel/headboat permit for Gulf reef fish has been issued, as required under § 622.20(b), and whose vessel is operating as a charter vessel or headboat, regardless of fishing location, must submit an electronic fishing report of all fish harvested and discarded, and any other information requested by the SRD for each trip within the time period specified in paragraph (b)(2) of this section. The electronic fishing report must be submitted to the SRD via NMFS approved hardware and software, as posted on the NMFS Southeast Region website. If selected by the SRD, the owner or operator of a vessel for which a charter vessel/headboat permit for Gulf reef fish has been issued must report via the NMFS approved software for the Southeast Region Headboat Survey.

(2) *Reporting deadlines.* Completed electronic fishing reports required by paragraph (b)(1) of this section must be submitted to the SRD prior to removing any fish from the vessel. If no fish were retained by any person on the vessel during a trip, the completed electronic fishing report must be submitted to the SRD within 30 minutes of the completion of the trip, *e.g.*, arrival at the dock.

(3) *Catastrophic conditions.* During catastrophic conditions only, NMFS provides for use of paper forms for basic required functions as a backup to the electronic reports required by paragraph (b) of this section. The RA will determine when catastrophic conditions exist, the duration of the catastrophic conditions, and which participants or geographic areas are deemed affected by the catastrophic conditions. The RA will provide timely notice to affected participants via publication of notification in the FEDERAL REGISTER, and other appropriate

means, such as fishery bulletins or NOAA weather radio, and will authorize the affected participants' use of paper forms for the duration of the catastrophic conditions. The paper forms will be available from NMFS. During catastrophic conditions, the RA has the authority to waive or modify reporting time requirements.

(4) *Compliance requirement.* Electronic reports required by paragraph (b)(1) of this section must be submitted and received by NMFS according to the reporting requirements under this section. A report not received within the applicable time specified in paragraph (b)(2) of this section is delinquent. A delinquent report automatically results in the owner and operator of a charter vessel or headboat for which a charter vessel/headboat permit for Gulf reef fish has been issued being prohibited from harvesting or possessing such species, regardless of any additional notification to the delinquent owner and operator by NMFS. The owner and operator who are prohibited from harvesting or possessing such species due to delinquent reports are authorized to harvest or possess such species only after all required and delinquent reports have been submitted and received by NMFS according to the reporting requirements under this section.

(5) *Hardware and software requirements for vessel location tracking.* An owner or operator of a vessel for which a charter vessel/headboat permit for Gulf reef fish has been issued must ensure that the vessel is equipped with NMFS-approved hardware and software with a minimum capability of archiving GPS locations as posted on the NMFS Southeast Region website. The vessel location tracking device can be either a cellular or satellite VMS unit, and must be permanently affixed to the vessel and have uninterrupted operation.

(i) *Use of a NMFS-approved satellite VMS.* An owner or operator of a vessel for which a charter vessel/headboat permit for Gulf reef fish has been issued, and who uses a NMFS-approved satellite VMS to comply with the reporting and recordkeeping requirements of this section, must adhere to the VMS requirements specified in § 622.28, except for the trip declaration

requirements specified in § 622.28(e). For trip declaration requirements, see paragraph (b)(6) of this section.

(ii) *Use of NMFS-approved cellular VMS.* An owner or operator of a vessel for which a charter vessel/headboat permit for Gulf reef fish has been issued, and who uses NMFS-approved cellular VMS to comply with the reporting and recordkeeping requirements of this section must comply with the following—

(A) *Cellular VMS unit operation and replacement.* Ensure that such vessel has an operating cellular VMS unit approved by NMFS on board at all times whether or not the vessel is underway, unless exempted by NMFS under the power-down exemption specified in paragraph (b)(5)(ii)(D) of this section. An operating cellular VMS unit includes an operating mobile transmitting unit on the vessel and a functioning communication link between the unit and NMFS as provided by a NMFS-approved communication service provider. NMFS maintains a current list of approved cellular VMS units and communication providers, which is available at <https://www.fisheries.noaa.gov/southeast/about-us/sustainable-fisheries-division-gulf-mexico-branch>. If NMFS OLE removes a cellular VMS unit from the approved list, a vessel owner who purchased and installed such a unit prior to its removal from the approved list will still comply with the requirement to have an approved unit, unless otherwise notified by NMFS OLE. At the end of a cellular VMS unit's service life, it must be replaced with a currently approved unit.

(B) *Hourly position reporting requirement.* An owner or operator of a vessel using a NMFS-approved cellular VMS unit as specified in paragraph (b)(5)(ii)(A) of this section must ensure that the required cellular VMS unit archives the vessel's accurate position at least once per hour, 24 hours a day, every day of the year, unless exempted from this requirement under paragraphs (b)(5)(ii)(C) or (D) of this section.

(C) *In-port exemption.* While in port, an owner or operator of a vessel with a NMFS-approved cellular VMS unit configured with the 4-hour position reporting feature may utilize the 4-hour re-

porting feature rather than comply with the hourly position reporting requirement specified in paragraph (b)(5)(ii)(B) of this section. Once the vessel is no longer in port, the hourly position reporting requirement specified in paragraph (b)(5)(ii)(B) of this section applies. For the purposes of this section, "in port" means secured at a land-based facility, or moored or anchored after the return to a dock, berth, beach, seawall, or ramp.

(D) *Power-down exemption.* An owner or operator of a vessel subject to the requirement to have a cellular VMS unit operating at all times as specified in paragraph (b)(5)(ii)(A) of this section can be exempted from that requirement and may power down the required cellular VMS unit if—

(1) The vessel will be continuously out of the water or in port, as defined in paragraph (b)(5)(ii)(C) of this section, for more than 72 consecutive hours;

(2) The owner or operator of the vessel applies for and obtains a valid letter of exemption from NMFS. The letter of exemption must be maintained on board the vessel and remains valid for the period specified in the letter for all subsequent power-down requests conducted for the vessel consistent with the provisions of paragraphs (b)(5)(ii)(D)(3) and (4) of this section.

(3) Prior to each power down, the owner or operator of the vessel files a report using a NMFS-approved form that includes the name of the person filing the report, vessel name, U.S. Coast Guard vessel documentation number or state vessel registration number, charter vessel/headboat reef fish permit number, vessel port location during cellular VMS power down, estimated duration of the power-down exemption, and reason for power down; and

(4) Prior to powering down the cellular VMS unit, the owner or operator of the vessel receives a confirmation from NMFS that the information was successfully delivered.

(E) *Installation and activation of a cellular VMS unit.* Only a cellular VMS unit that has been approved by NMFS for the Gulf reef fish fishery may be used, and the cellular VMS unit must

§ 622.27

50 CFR Ch. VI (10–1–21 Edition)

be installed by a qualified marine electrician. When installing and activating or when reinstalling and reactivating the NMFS-approved cellular VMS unit, the vessel owner or operator must—

(1) Follow procedures indicated on the VMS installation and activation form, which is available from NMFS; and

(2) Submit a completed and signed VMS installation and activation form to NMFS as specified on the form.

(F) *Interference with the cellular VMS.* No person may interfere with, tamper with, alter, damage, disable, or impede the operation of the cellular VMS, or attempt any of the same.

(G) *Interruption of operation of the cellular VMS.* If a vessel's GPS is not operating properly, the vessel owner or operator must immediately contact NMFS and follow NMFS' instructions. If notified by NMFS that a vessel's cellular VMS is not operating properly, the vessel owner or operator must follow NMFS' instructions. In either event, such instructions may include, but are not limited to, manually communicating to a location designated by NMFS the vessel's positions, or returning to port until the cellular VMS is operable.

(iii) *Access to position data.* As a condition of authorized fishing for or possession of Gulf reef fish subject to the reporting and recordkeeping requirements in this section, a vessel owner or operator subject to the hardware and software requirements in this section must allow NMFS, the U.S. Coast Guard, and their authorized officers and designees access to the vessel's position data obtained from the cellular VMS.

(6) *Trip declaration requirements.* For purposes of this paragraph (b)(6), a trip begins anytime the vessel departs from a dock, berth, beach, seawall, or ramp, and terminates with return to a dock, berth, beach, seawall, or ramp, regardless of the duration or purpose, including non-fishing activities. Prior to departure for each trip, the owner or operator of a vessel for which a charter vessel/headboat permit for Gulf reef fish has been issued must notify NMFS and report the type of trip, the U.S. Coast Guard vessel documentation number or state vessel registration

number, and whether the vessel will be operating as a charter vessel or headboat, or is departing on another type of trip, such as a commercial trip. If the vessel will be operating as a charter vessel or headboat during the trip, the owner or operator must also report the expected trip completion date, time, and landing location.

(c) *Dealers.* (1) A dealer who first receives Gulf reef fish must maintain records and submit information as specified in § 622.5(c).

(2) The operator of a vehicle that is used to pick up from a fishing vessel Gulf reef fish must maintain a record containing the name of each fishing vessel from which reef fish on the vehicle have been received. The vehicle operator must provide such record for inspection upon the request of an authorized officer.

[78 FR 22952, Apr. 17, 2013, as amended at 79 FR 6099, Feb. 3, 2014; 79 FR 19494, Apr. 9, 2014; 83 FR 27300, June 12, 2018; 85 FR 44017, July 21, 2020]

EFFECTIVE DATE NOTE: 85 FR 44017, July 21, 2020, § 622.26 was amended by revising paragraph (b), effective Jan. 5, 2021, except for paragraph (b)(5), which was delayed indefinitely. At 86 FR 51014, Sept. 14, 2021, the amendment was given an effective date of Dec. 13, 2021.

§ 622.27 At-sea observer coverage.

(a) *Required coverage.* A vessel for which a Federal commercial vessel permit for Gulf reef fish or a charter vessel/headboat permit for Gulf reef fish has been issued must carry a NMFS-approved observer, if the vessel's trip is selected by the SRD for observer coverage. Vessel permit renewal is contingent upon compliance with this paragraph (a).

(b) *Notification to the SRD.* When observer coverage is required, an owner or operator must advise the SRD in writing not less than 5 days in advance of each trip of the following:

(1) Departure information (port, dock, date, and time).

(2) Expected landing information (port, dock, and date).

(c) *Observer accommodations and access.* An owner or operator of a vessel on which a NMFS-approved observer is embarked must:

(1) Provide accommodations and food that are equivalent to those provided to the crew.

(2) Allow the observer access to and use of the vessel's communications equipment and personnel upon request for the transmission and receipt of messages related to the observer's duties.

(3) Allow the observer access to and use of the vessel's navigation equipment and personnel upon request to determine the vessel's position.

(4) Allow the observer free and unobstructed access to the vessel's bridge, working decks, holding bins, weight scales, holds, and any other space used to hold, process, weigh, or store fish.

(5) Allow the observer to inspect and copy the vessel's log, communications logs, and any records associated with the catch and distribution of fish for that trip.

§ 622.28 Vessel monitoring systems (VMSs).

The VMS requirements of this section apply throughout the Gulf of Mexico and adjacent states.

(a) *General VMS requirement.* An owner or operator of a vessel that has been issued a commercial vessel permit for Gulf reef fish, including a charter vessel/headboat issued such a permit even when under charter, must ensure that such vessel has an operating VMS approved by NMFS for use in the Gulf reef fish fishery on board at all times whether or not the vessel is underway, unless exempted by NMFS under the power-down exemptions specified in paragraph (d) of this section and in the NOAA Enforcement Vessel Monitoring System Requirements for the Reef Fish Fishery of the Gulf of Mexico. This NOAA Enforcement Vessel Monitoring System Requirements document is available from NMFS Office for Law Enforcement (OLE), Southeast Region, 263 13th Avenue South, St. Petersburg, FL 33701; phone: 800-758-4833. An operating VMS includes an operating mobile transmitting unit on the vessel and a functioning communication link between the unit and NMFS as provided by a NMFS-approved communication service provider. NMFS OLE maintains a current list of approved VMS units and communication pro-

viders which is available from the VMS Support Center, NMFS OLE, 8484 Georgia Avenue, Suite 415, Silver Spring, MD 20910 or by calling toll free: 888-219-9228. If a VMS unit approved for the Gulf reef fish fishery is removed from the approved list by NMFS OLE, a vessel owner who purchased and installed such a VMS unit prior to its removal from the approved list will be considered to be in compliance with the requirement to have an approved unit, unless otherwise notified by NMFS OLE. At the end of a VMS unit's service life, it must be replaced with a currently approved unit for the fishery.

(b) *Hourly reporting requirement.* An owner or operator of a vessel subject to the requirements of paragraph (a) of this section must ensure that the required VMS unit transmits a signal indicating the vessel's accurate position at least once an hour, 24 hours a day every day unless exempted under paragraphs (c) or (d) of this section.

(c) *In-port exemption.* While in port, an owner or operator of a vessel with a type-approved VMS unit configured with the 4-hour reporting feature may utilize the 4-hour reporting feature rather than comply with the hourly reporting requirement specified in paragraph (b) of this section. Once the vessel is no longer in port, the hourly reporting requirement specified in paragraph (b) of this section applies. For the purposes of this section, "in port" means secured at a land-based facility, or moored or anchored after the return to a dock, berth, beach, seawall, or ramp.

(d) *Power-down exemptions.* An owner or operator of a vessel subject to the requirement to have a VMS operating at all times as specified in paragraph (a) of this section can be exempted from that requirement and may power down the required VMS unit if—

(1) The vessel will be continuously out of the water or in port, as defined in paragraph (c) of this section, for more than 72 consecutive hours;

(2) The owner or operator of the vessel applies for and obtains a valid letter of exemption from NMFS OLE VMS personnel as specified in the NOAA Enforcement Vessel Monitoring System Requirements for the Reef Fish Fishery of the Gulf of Mexico. This is a one-

time requirement. The letter of exemption must be maintained on board the vessel and remains valid for all subsequent power-down requests conducted consistent with the provisions of paragraphs (d)(3) and (4) of this section.

(3) Prior to each power-down, the owner or operator of the vessel files a report to NMFS OLE VMS program personnel, using the VMS unit's email, that includes the name of the person filing the report, vessel name, vessel U.S. Coast Guard documentation number or state registration number, commercial vessel reef fish permit number, vessel port location during VMS power down, estimated duration of the power down exemption, and reason for power down; and

(4) The owner or operator enters the power-down code through the use of the VMS Declaration form on the terminal and, prior to powering down the VMS, receives a confirmation, through the VMS terminal, that the form was successfully delivered.

(e) *Declaration of fishing trip and gear.* Prior to departure for each trip, a vessel owner or operator must report to NMFS any fishery the vessel will participate in on that trip and the specific type(s) of fishing gear, using NMFS-defined gear codes, that will be on board the vessel. This information may be reported to NMFS using the toll-free number, 888-219-9228, or via an attached VMS terminal.

(f) *Installation and activation of a VMS.* Only a VMS that has been approved by NMFS for the Gulf reef fish fishery may be used, and the VMS must be installed by a qualified marine electrician. When installing and activating the NMFS-approved VMS, or when reinstalling and reactivating such VMS, the vessel owner or operator must—

(1) Follow procedures indicated on a NMFS-approved installation and activation checklist for the applicable fishery, which is available from NMFS Office for Law Enforcement, Southeast Region, 263 13th Avenue South, St. Petersburg, FL 33701; phone: 800-758-4833; and

(2) Submit to NMFS Office for Law Enforcement, Southeast Region, 263 13th Avenue South, St. Petersburg, FL 33701, a statement certifying compli-

ance with the checklist, as prescribed on the checklist.

(3) Submit to NMFS Office for Law Enforcement, Southeast Region, 263 13th Avenue South, St. Petersburg, FL 33701, a vendor-completed installation certification checklist, which is available from NMFS Office for Law Enforcement, Southeast Region, 263 13th Avenue South, St. Petersburg, FL 33701; phone: 800-758-4833.

(g) *Interference with the VMS.* No person may interfere with, tamper with, alter, damage, disable, or impede the operation of the VMS, or attempt any of the same.

(h) *Interruption of operation of the VMS.* When a vessel's VMS is not operating properly, the owner or operator must immediately contact NMFS Office for Law Enforcement, Southeast Region, 263 13th Avenue South, St. Petersburg, FL 33701, phone: 800-758-4833, and follow instructions from that office. If notified by NMFS that a vessel's VMS is not operating properly, the owner and operator must follow instructions from that office. In either event, such instructions may include, but are not limited to, manually communicating to a location designated by NMFS the vessel's positions or returning to port until the VMS is operable.

(i) *Access to position data.* As a condition of authorized fishing for or possession of fish in a fishery subject to VMS requirements in this section, a vessel owner or operator subject to the requirements for a VMS in this section must allow NMFS, the USCG, and their authorized officers and designees access to the vessel's position data obtained from the VMS.

§ 622.29 Conservation measures for protected resources.

(a) *Gulf reef fish commercial vessels and charter vessels/headboats—*(1) *Sea turtle conservation measures.* (i) The owner or operator of a vessel for which a commercial vessel permit for Gulf reef fish or a charter vessel/headboat permit for Gulf reef fish has been issued, as required under § 622.20(a)(1) and (b), respectively, must have the 2019 version of the NMFS document titled, "Careful Release Protocols for Sea Turtle Release with Minimal Injury" available for reference on board electronically or

Fishery Conservation and Management

§ 622.30

have a paper copy on board inside the wheelhouse, or within a waterproof case if there is no wheelhouse. In addition, the NMFS sea turtle handling and release guidelines placard must be posted inside the wheelhouse or an easily viewable area on the vessel if there is no wheelhouse.

(ii) Such owner or operator must also comply with the sea turtle interaction mitigation measures, including the release gear and handling requirements specified in appendix F of this part.

(iii) Those permitted vessels with a freeboard height of 4 ft (1.2 m) or less must have on board a net or hoist, tire or other support device, short-handled dehooker(s) for internal and external hooks, long-nose or needle-nose pliers, bolt cutters, monofilament line cutters, and at least two types of mouth openers or mouth gags. This equipment must meet the specifications described in appendix F to this part.

(iv) Those permitted vessels with a freeboard height of greater than 4 ft (1.2 m) must have on board a net or hoist, tire or other support device, long-handled line clipper or cutter, short-handled dehooker(s) for internal and external hooks, long-handled dehooker(s) for internal and external hooks, a long-handled device to pull an inverted “V” in the fishing line, long-nose or needle-nose pliers, bolt cutters, monofilament line cutters, and at least two types of mouth openers or mouth gags. This equipment must meet the specifications described in appendix F to this part.

(2) *Smalltooth sawfish conservation measures.* The owner or operator of a vessel for which a commercial vessel permit for Gulf reef fish or a charter vessel/headboat permit for Gulf reef fish has been issued, as required under §§ 622.20(a)(1) and 622.20(b), respectively, that incidentally catches a smalltooth sawfish must—

(i) Keep the sawfish in the water at all times;

(ii) If it can be done safely, untangle the line if it is wrapped around the saw;

(iii) Cut the line as close to the hook as possible; and

(iv) Not handle the animal or attempt to remove any hooks on the saw,

except for with a long-handled dehooker.

(b) *Incorporation by reference.* The standards required in paragraph (a)(1) of this section are incorporated by reference into this section with the approval of the Director of the Federal Register under 5 U.S.C. 552(a) and 1 CFR part 51. All approved material is available for inspection at the National Marine Fisheries Service, Southeast Regional Office, 263 13th Ave. South, St. Petersburg, FL 33701, phone: 727-824-5301, website: <https://www.fisheries.noaa.gov/southeast/Endangered-species-conservation/sea-turtle-and-smalltooth-sawfish-release-gear-protocols.html>, and is available from the sources listed in paragraphs (b)(1) and (2) of this section. It is also available for inspection at the National Archives and Records Administration (NARA). For information on the availability of this material at NARA, call 202-741-6030 or go to www.archives.gov/federal-register/cfr/ibr-locations.html.

[78 FR 22952, Apr. 17, 2013, as amended at 84 FR 22385, May 17, 2019; 84 FR 67238, Dec. 9, 2019]

§ 622.30 Required fishing gear.

For a person on board a vessel to fish for Gulf reef fish in the Gulf EEZ, the vessel must possess on board and such person must use the gear as specified in paragraphs (a) and (b) of this section.

§ 622.31

(a) *Non-stainless steel circle hooks.* Non-stainless steel circle hooks are required when fishing with natural baits, except that other non-stainless steel hook types may be used when commercial fishing for yellowtail snapper with natural baits in an area south of a line extending due west from 25°09' N. lat. off the west coast of Monroe County, Florida, to the Gulf of Mexico and South Atlantic inter-council boundary, specified in § 600.105(c).

(b) *Dehooking device.* At least one dehooking device is required and must be used to remove hooks embedded in Gulf reef fish with minimum damage. The hook removal device must be constructed to allow the hook to be secured and the barb shielded without re-engaging during the removal process. The dehooking end must be blunt, and all edges rounded. The device must be of a size appropriate to secure the range of hook sizes and styles used in the Gulf reef fish fishery.

[78 FR 22952, Apr. 17, 2013, as amended at 78 FR 46822, Aug. 2, 2013; 81 FR 10311, Feb. 10, 2017]

§ 622.31 Buoy gear identification.

(a) *Buoy gear.* In the Gulf EEZ, if buoy gear is used or possessed, each buoy must display the official number of the vessel. See § 622.2 for the definition of buoy gear.

(b) [Reserved]

§ 622.32 Prohibited gear and methods.

Also see § 622.9 for additional prohibited gear and methods that apply more broadly to multiple fisheries or in some cases all fisheries.

(a) *Poisons.* A poison may not be used to take Gulf reef fish in the Gulf EEZ.

(b) [Reserved]

§ 622.33 Prohibited species.

(a) *General.* The harvest and possession restrictions of this section apply without regard to whether the species is harvested by a vessel operating under a commercial vessel permit. The operator of a vessel that fishes in the EEZ is responsible for the limit applicable to that vessel. (Note: Nassau grouper in the Gulf EEZ may not be harvested or possessed, as specified in § 622.181(b)(1).)

50 CFR Ch. VI (10–1–21 Edition)

(b) *Goliath grouper.* Goliath grouper may not be harvested or possessed in or from the Gulf EEZ.

(c) [Reserved]

(d) *Gulf reef fish exhibiting trap rash.* Possession of Gulf reef fish in or from the Gulf EEZ that exhibit trap rash is prima facie evidence of illegal trap use and is prohibited. For the purpose of this paragraph, trap rash is defined as physical damage to fish that characteristically results from contact with wire fish traps. Such damage includes, but is not limited to, broken fin spines, fin rays, or teeth; visually obvious loss of scales; and cuts or abrasions on the body of the fish, particularly on the head, snout, or mouth.

[78 FR 22952, Apr. 17, 2013, as amended at 78 FR 78775, Dec. 27, 2013]

§ 622.34 Seasonal and area closures designed to protect Gulf reef fish.

(a) *Closure provisions applicable to the Madison and Swanson sites, Steamboat Lumps, and the Edges.* For the purpose of this paragraph (a), fish means finfish, mollusks, crustaceans, and all other forms of marine animal and plant life other than marine mammals and birds. The provisions of this paragraph (a) do not apply to Atlantic highly migratory species, such as tunas, billfishes, and oceanic sharks. See 50 CFR part 635 for any provisions applicable to fishing for or possession of Atlantic highly migratory species in these areas.

(1) *Descriptions of Areas.* (i) The Madison and Swanson sites are bounded by rhumb lines connecting, in order, the following points:

Point	North lat.	West long.
A	29°17'	85°50'
B	29°17'	85°38'
C	29°06'	85°38'
D	29°06'	85°50'
A	29°17'	85°50'

(ii) Steamboat Lumps is bounded by rhumb lines connecting, in order, the following points:

Point	North lat.	West long.
B	28°14'	84°37'
C	28°03'	84°37'
D	28°03'	84°48'
A	28°14'	84°48'

Fishery Conservation and Management

§ 622.34

(iii) The Edges is bounded by rhumb lines connecting, in order, the following points:

Point	North lat.	West long.
A	28°51'	85°16'
B	28°51'	85°04'
C	28°14'	84°42'
D	28°14'	84°54'
A	28°51'	85°16'

(2) Within the Madison and Swanson sites and Steamboat Lumps: Fishing is prohibited year-round; possession of Gulf reef fish is prohibited year-round except when such possession is on a vessel that has been issued a valid Federal commercial permit for Gulf reef fish, has an operating satellite-based VMS unit, and is in transit with fishing gear stowed as specified in paragraph (a)(4) of this section; and possession of any non-Gulf reef fish species is prohibited year-round, except for such possession on a vessel in transit with fishing gear stowed as specified in paragraph (a)(4) of this section.

(3) Within the Edges during January through April each year, all fishing is prohibited and the possession of any fish species is prohibited, except for such possession on a vessel in transit with fishing gear appropriately stowed as specified in paragraph (a)(4) of this section.

(4) For the purpose of paragraph (a) of this section, transit means non-stop progression through the area; fishing gear appropriately stowed means—

(i) A longline may be left on the drum if all gangions and hooks are disconnected and stowed below deck. Hooks cannot be baited. All buoys must be disconnected from the gear; however, buoys may remain on deck.

(ii) A trawl net may remain on deck, but trawl doors must be disconnected from the trawl gear and must be secured.

(iii) A gillnet must be left on the drum. Any additional gillnets not attached to the drum must be stowed below deck.

(iv) A rod and reel must be removed from the rod holder and stowed securely on or below deck. Terminal gear (*i.e.*, hook, leader, sinker, flasher, or bait) must be disconnected and stowed separately from the rod and reel. Sink-

ers must be disconnected from the down rigger and stowed separately.

(b) *Seasonal closure of the recreational sector for red snapper.* The recreational sector for red snapper in or from the Gulf EEZ is closed from January 1 through May 31, each year. During the closure, the bag and possession limit for red snapper in or from the Gulf EEZ is zero. See §622.23(a)(1) regarding the fishing season for states with an active delegation of state management of the red snapper private angling component. A person subject to the private angling component bag limit under an active delegation of state management must be in compliance with the fishing license (permit) requirements of the state in which they intend to land the fish and may not possess red snapper in the Gulf EEZ when that state season is closed.

(c) *Seasonal closure of the recreational sector for greater amberjack.* The recreational sector for greater amberjack in or from the Gulf EEZ is closed from January 1 through April 30, June 1 through July 31, and November 1 through December 31, each year. During the closure, the bag and possession limit for greater amberjack in or from the Gulf EEZ is zero.

(d) *Seasonal closure of the recreational sector for shallow-water grouper (SWG).* The recreational sector for SWG in or from the Gulf EEZ is closed each year from February 1 through March 31 in the portion of the Gulf EEZ seaward of rhumb lines connecting the following points in order. During the closure, the bag and possession limits for SWG in or from the Gulf EEZ seaward of the following rhumb lines are zero.

(e) *Seasonal closure of the recreational sector for gag.* The recreational sector for gag, in or from the Gulf EEZ, is closed from January 1 through May 31. During the closure, the bag and possession limits for gag in or from the Gulf EEZ are zero.

(f) *Seasonal closures for gray triggerfish.* The recreational sector for gray triggerfish in or from the Gulf EEZ is closed from January 1 through the end of February, and from June 1 through July 31, each year. During a recreational closure, the bag and possession limits for gray triggerfish in or from the Gulf EEZ are zero. The commercial sector for gray triggerfish in or from the Gulf EEZ is closed from June 1 through July 31, each year. During the period of both the commercial and recreational closure, all harvest or possession in or from the Gulf EEZ of gray triggerfish is prohibited and the sale and purchase of gray triggerfish taken from the Gulf EEZ is prohibited.

(g) *Recreational sector for hogfish in the Gulf EEZ south of 25°09' N. lat. off the west coast of Florida.* See § 622.183(b)(4) for the applicable seasonal closures.

[78 FR 22952, Apr. 17, 2013, as amended at 78 FR 27087, May 9, 2013; 78 FR 33261, June 4, 2013; 81 FR 24039, Apr. 25, 2016; 82 FR 34580, July 25, 2017; 82 FR 59525, Dec. 15, 2017; 82 FR 61487, Dec. 28, 2017; 83 FR 13428, Mar. 29, 2018; 85 FR 6823, Feb. 6, 2020; 85 FR 20613, Apr. 14, 2020; 86 FR 38417, July 20, 2021]

§ 622.35 Gear restricted areas.

(a) *Reef fish stressed area.* The stressed area is that part of the Gulf EEZ shoreward of rhumb lines connecting, in order, the points listed in Table 2 in Appendix B of this part.

(1) A powerhead may not be used in the stressed area to take Gulf reef fish. Possession of a powerhead and a mutilated Gulf reef fish in the stressed area or after having fished in the stressed area constitutes *prima facie* evidence that such reef fish was taken with a powerhead in the stressed area.

(2) A roller trawl may not be used in the stressed area. Roller trawl means a trawl net equipped with a series of large, solid rollers separated by several smaller spacer rollers on a separate cable or line (sweep) connected to the footrope, which makes it possible to fish the gear over rough bottom, that is, in areas unsuitable for fishing conventional shrimp trawls. Rigid framed trawls adapted for shrimping over uneven bottom, in wide use along the west coast of Florida, and shrimp trawls with hollow plastic rollers for fishing on soft bottoms, are not considered roller trawls.

(b) *Seasonal prohibitions applicable to bottom longline fishing for Gulf reef fish.*

(1) From June through August each year, bottom longlining for Gulf reef fish is prohibited in the portion of the Gulf EEZ east of 85°30' W. long. that is shoreward of rhumb lines connecting, in order, the following points:

Point	North lat.	West long.
A	28°58.70'	85°30.00'
B	28°59.25'	85°26.70'
C	28°57.00'	85°13.80'
D	28°47.40'	85°3.90'
E	28°19.50'	84°43.00'
F	28°0.80'	84°20.00'
G	26°48.80'	83°40.00'
H	25°17.00'	83°19.00'
I	24°54.00'	83°21.00'
J	24°29.50'	83°12.30'
K	24°26.50'	83°00.00'

(2) Within the prohibited area and time period specified in paragraph (b)(1) of this section, a vessel with bottom longline gear on board may not possess Gulf reef fish unless the bottom longline gear is appropriately stowed, and a vessel that is using bottom longline gear to fish for species other than Gulf reef fish may not possess

Fishery Conservation and Management

§ 622.37

Gulf reef fish. For the purposes of paragraph (b) of this section, appropriately stowed means that a longline may be left on the drum if all gangions and hooks are disconnected and stowed below deck; hooks cannot be baited; and all buoys must be disconnected from the gear but may remain on deck.

(3) Within the Gulf EEZ east of 85°30' W long., a vessel for which a valid eastern Gulf reef fish bottom longline endorsement has been issued that is fishing bottom longline gear or has bottom longline gear on board cannot possess more than 750 hooks rigged for fishing at any given time. For the purpose of this paragraph, “hooks rigged for fishing” means hooks attached to a line or other device capable of attaching to the mainline of the longline.

(c) *Reef fish longline and buoy gear restricted area.* A person aboard a vessel that uses, on any trip, longline or buoy gear in the longline and buoy gear restricted area is limited on that trip to the bag limits for Gulf reef fish specified in § 622.38(b) and, for Gulf reef fish for which no bag limit is specified in § 622.38(b), the vessel is limited to 5 percent, by weight, of all fish on board or landed. The longline and buoy gear restricted area is that part of the Gulf EEZ shoreward of rhumb lines connecting, in order, the points listed in Table 1 in Appendix B of this part.

(d) *Alabama SMZ.* The Alabama SMZ consists of artificial reefs and surrounding areas. In the Alabama SMZ, fishing by a vessel that is operating as a charter vessel or headboat, a vessel that does not have a commercial permit for Gulf reef fish, as required under § 622.20(a)(1), or a vessel with such a permit fishing for Gulf reef fish is limited to hook-and-line gear with three or fewer hooks per line and spearfishing gear. A person aboard a vessel that uses on any trip gear other than hook-and-line gear with three or fewer hooks per line and spearfishing gear in the Alabama SMZ is limited on that trip to the bag limits for Gulf reef fish specified in § 622.38(b) and, for Gulf reef fish for which no bag limit is specified in § 622.38(b), the vessel is limited to 5 percent, by weight, of all fish on board or landed. The Alabama SMZ is bounded by rhumb lines connecting, in order, the following points:

Point	North lat.	West long.
A	30°02.5'	88°07.7'
B	30°02.6'	87°59.3'
C	29°55.0'	87°55.5'
D	29°54.5'	88°07.5'
A	30°02.5'	88°07.7'

[78 FR 22952, Apr. 17, 2013, as amended at 82 FR 34580, July 25, 2017; 83 FR 5212, Feb. 6, 2018]

§ 622.36 Seasonal harvest limitations.

(a) *Greater amberjack.* During March, April, and May, each year, the possession of greater amberjack in or from the Gulf EEZ and in the Gulf on board a vessel for which a commercial permit for Gulf reef fish has been issued, as required under § 622.20(a)(1), without regard to where such greater amberjack were harvested, is limited to the bag and possession limits, as specified in § 622.38(b)(1) and (c), respectively, and such greater amberjack are subject to the prohibition on sale or purchase of greater amberjack possessed under the bag limit, as specified in § 622.40(a). Also note that if commercial quantities of Gulf reef fish, *i.e.*, Gulf reef fish in excess of applicable bag/possession limits, are on board the vessel, no bag limit of Gulf reef fish may be possessed, as specified in § 622.38(a)(2).

(b) [Reserved]

§ 622.37 Size limits.

All size limits in this section are minimum size limits unless specified otherwise. A fish not in compliance with its size limit, as specified in this section, in or from the Gulf EEZ, may not be possessed, sold, or purchased. A fish not in compliance with its size limit must be released immediately with a minimum of harm. The operator of a vessel that fishes in the EEZ is responsible for ensuring that fish on board are in compliance with the size limits specified in this section. See § 622.10 regarding requirements for landing fish intact.

(a) *Snapper*—(1) *Red snapper*—16 inches (40.6 cm), TL, for a fish taken by a person subject to the bag limit specified in § 622.38(b)(3) and 13 inches (33.0 cm), TL, for a fish taken by a person not subject to the bag limit. See § 622.23(a)(1) regarding the minimum

§ 622.38

size limit for states with an active delegation of state management of the red snapper private angling component. A person subject to the private angling component bag limit under an active delegation of state management must be in compliance with the fishing license (permit) requirements of the state in which they intend to land the fish and may not possess red snapper in the Gulf EEZ that are smaller than may be possessed in that state. Additionally, fish taken by persons subject to the private angling component bag limit under state management may not be less than 14 inches (35.6 cm), TL, in the Gulf EEZ.

(2) *Lane snapper*—8 inches (20.3 cm), TL.

(3) *Vermilion snapper*—10 inches (25.4 cm), TL.

(4) *Cubera, gray, and yellowtail snappers*—12 inches (30.5 cm), TL.

(5) *Mutton snapper*—18 inches (45.7 cm), TL.

(b) *Grouper*—(1) *Gag*—24 inches (61.0 cm), TL.

(2) *Red grouper*—(i) For a person not subject to the bag limit specified in § 622.38 (b)(2)—18 inches (45.7 cm), TL.

(ii) For a person subject to the bag limit specified in § 622.38(b)(2)—20 inches (50.8 cm), TL.

(3) *Scamp*—16 inches (40.6 cm), TL.

(4) *Yellowfin grouper*—20 inches (50.8 cm), TL.

(5) *Black grouper*—(i) For a person not subject to the bag limit specified in § 622.38(b)(2)—24 inches (61.0 cm), TL.

(ii) For a person subject to the bag limit specified in § 622.38(b)(2)—24 inches (61.0 cm), TL.

(c) *Other Gulf reef fish species*—(1) *Gray triggerfish*. (i) For a person not subject to the bag limit specified in § 622.38(b)(5)—14 inches (35.6 cm), fork length.

(ii) For a person subject to the bag limit specified in § 622.38(b)(5)—15 inches (38.1 cm), fork length.

(2) *Hogfish in the Gulf EEZ except south of 25°09' N. lat. off the west coast of Florida*—14 inches (40.6 cm), fork length. See § 622.185(c)(3)(ii) for the hogfish size limit in the Gulf EEZ south of 25°09' N. lat. off the west coast of Florida.

(3) *Banded rudderfish and lesser amberjack*—14 inches (35.6 cm), fork

50 CFR Ch. VI (10–1–21 Edition)

length (minimum size); 22 inches (55.9 cm), fork length (maximum size).

(4) *Greater amberjack*—34 inches (86.4 cm), fork length, for a fish taken by a person subject to the bag limit specified in § 622.38(b)(1) and 36 inches (91.4 cm), fork length, for a fish taken by a person not subject to the bag limit.

(d) A person aboard a vessel that has a Federal commercial vessel permit for Gulf reef fish and commercial quantities of Gulf reef fish, *i.e.*, Gulf reef fish in excess of applicable bag/possession limits, may not possess any Gulf reef fish that do not comply with the applicable commercial minimum size limit.

[78 FR 22952, Apr. 17, 2013, as amended at 80 FR 75436, Dec. 2, 2015; 81 FR 24040, Apr. 25, 2016; 82 FR 34581, July 25, 2017; 82 FR 59526, Dec. 15, 2017; 83 FR 29044, June 22, 2018; 85 FR 6824, Feb. 6, 2020]

§ 622.38 Bag and possession limits.

(a) *Additional applicability provisions for Gulf reef fish*. (1) Section 622.11(a) provides the general applicability for bag and possession limits. However, § 622.11(a) notwithstanding, bag and possession limits also apply for Gulf reef fish in or from the EEZ to a person aboard a vessel that has on board a commercial permit for Gulf reef fish—

(i) When trawl gear or entangling net gear is on board. A vessel is considered to have trawl gear on board when trawl doors and a net are on board. Removal from the vessel of all trawl doors or all nets constitutes removal of trawl gear.

(ii) When a longline or buoy gear is on board and the vessel is fishing or has fished on a trip in the reef fish longline and buoy gear restricted area specified in § 622.35(c). A vessel is considered to have a longline on board when a power-operated longline hauler, a cable of diameter and length suitable for use in the longline fishery, and gangions are on board. Removal of any one of these three elements, in its entirety, constitutes removal of a longline.

(iii) For a species/species group when its quota has been reached and closure has been effected, provided that no commercial quantities of Gulf reef fish, *i.e.*, Gulf reef fish in excess of applicable bag/possession limits, are on board

Fishery Conservation and Management

§ 622.39

as specified in paragraph (a)(2) of this section.

(iv) When the vessel has on board or is tending any trap other than a stone crab trap or a spiny lobster trap.

(2) A person aboard a vessel that has a Federal commercial vessel permit for Gulf reef fish and commercial quantities of Gulf reef fish, *i.e.*, Gulf reef fish in excess of applicable bag/possession limits, may not possess Gulf reef fish caught under a bag limit.

(b) *Bag limits*—(1) *Greater amberjack*—1. However, no greater amberjack may be retained by the captain or crew of a vessel operating as a charter vessel or headboat. The bag limit for such captain and crew is zero.

(2) *Groupers, combined, excluding goliath grouper*—4 per person per day, but not to exceed 1 speckled hind or 1 warsaw grouper per vessel per day, or 2 gag or 2 red grouper per person per day. However, no grouper may be retained by the captain or crew of a vessel operating as a charter vessel or headboat. The bag limit for such captain and crew is zero. (Note: Nassau grouper in the Gulf EEZ may not be harvested or possessed, as specified in §622.181(b)(4).)

(3) *Red snapper*—2. However, no red snapper may be retained by the captain or crew of a vessel operating as a charter vessel or headboat. The bag limit for such captain and crew is zero. See §622.23(a)(1) regarding the bag limit applicability for states with an active delegation of state management of the red snapper private angling component. A person subject to the private angling component bag limit under an active delegation of state management must be in compliance with the fishing license (permit) requirements of the state in which they intend to land the fish and may not possess more red snapper in the Gulf EEZ than may be possessed in that state.

(4) *Snappers, combined, excluding red, lane, and vermilion snapper*—10. In addition, within the 10-fish aggregate snapper bag limit, no more than 5 fish may be mutton snapper.

(5) Gulf reef fish, combined, excluding those specified in paragraphs (b)(1) through (4) and paragraphs (b)(6) and (7) of this section—20. In addition, within the 20-fish aggregate reef fish bag limit, no more than 1 fish may be

gray triggerfish and no more than 10 fish may be vermilion snapper.

(6) *Banded rudderfish and lesser amberjack, combined*—5.

(7) *Hogfish in the Gulf EEZ except south of 25°09' N. lat. off the west coast of Florida*—5. See §622.187(b)(3)(ii) for the hogfish bag and possession limits in the Gulf EEZ south of 25°09' N. lat. off the west coast of Florida.

(c) *Possession limits for vessels with a valid Federal charter vessel/headboat permit for reef fish*. A person, or a vessel in the case of speckled hind or Warsaw grouper, on a trip that spans more than 30 hours may possess, at any time during the trip, no more than two daily bag limits, provided such trip is on a vessel that is operating as a charter vessel or headboat, the vessel has two licensed operators aboard, each passenger is issued and has in possession a receipt issued on behalf of the vessel that verifies the date and time of departure and length of the trip, and the entire trip occurs on days when the harvest and possession of the applicable reef fish species are allowed.

[78 FR 22952, Apr. 17, 2013, as amended at 78 FR 27087, May 9, 2013; 78 FR 46822, Aug. 2, 2013; 78 FR 78775, Dec. 27, 2013; 80 FR 18553, Apr. 7, 2015; 82 FR 34581, July 25, 2017; 82 FR 59526, Dec. 15, 2017; 83 FR 29044, June 22, 2018; 85 FR 6824, Feb. 6, 2020; 86 FR 11155, Feb. 24, 2021]

§ 622.39 Quotas.

See §622.8 for general provisions regarding quota applicability and closure and reopening procedures. This section, provides quotas and specific quota closure restrictions for Gulf reef fish.

(a) *Gulf reef fish*—(1) *Commercial quotas*. The following quotas apply to persons who fish under commercial vessel permits for Gulf reef fish, as required under §622.20(a)(1).

(i) Commercial quota for red snapper—7.701 million lb (3.493 million kg), round weight.

(ii) Deep-water groupers (DWG) have a combined quota, as specified in paragraphs (a)(1)(ii)(A) through (C) of this section. These quotas are specified in gutted weight, that is eviscerated, but otherwise whole.

(A) For fishing year 2014—1.110 million lb (0.503 million kg).

(B) For fishing year 2015—1.101 million lb (0.499 million kg).

(C) For fishing year 2016 and subsequent fishing years—1.024 million lb (0.464 million kg).

(iii) Shallow-water groupers (SWG) have separate quotas for gag and red grouper and a combined quota for other shallow-water grouper (Other SWG) species (including black grouper, scamp, yellowfin grouper, and yellowmouth grouper), as specified in paragraphs (a)(1)(iii)(A) through (C) of this section. These quotas are specified in gutted weight, that is, eviscerated but otherwise whole.

(A) *Other SWG combined.* (1) For fishing year 2014—523,000 lb (237,229 kg).

(2) For fishing year 2015 and subsequent fishing years—525,000 lb (238,136 kg).

(B) *Gag.* (1) For fishing year 2012—0.567 million lb (0.257 million kg).

(2) For fishing year 2013—0.708 million lb (0.321 million kg).

(3) For fishing year 2014—0.835 million lb (0.378 million kg).

(4) For fishing year 2015 and subsequent fishing years—0.939 million lb (0.426 million kg).

(C) *Red grouper*—3.00 million lb (1.36 million kg).

(iv) Tilefishes (including goldface tilefish, blueline tilefish, and tilefish)—582,000 lb (263,991 kg), gutted weight, that is, eviscerated but otherwise whole.

(v) Greater amberjack—(A) For fishing year 2018—277,651 lb (125,940.38 kg), round weight.

(B) For fishing year 2019—349,766 lb (158,651 kg), round weight.

(C) For fishing year 2020 and subsequent years—421,411 lb (191,149 kg), round weight.

(vi) Gray triggerfish—88,273 lb (40,040 kg), round weight.

(2) *Recreational quotas.* The following quotas apply to persons who fish for Gulf reef fish other than under commercial vessel permits for Gulf reef fish and the applicable commercial quotas specified in paragraph (a)(1) of this section.

(i) *Recreational quota for red snapper*—(A) *Total recreational.* The total recreational quota is 7.399 million lb (3.356 million kg), round weight.

(B) *Federal charter vessel/headboat component quota.* The Federal charter vessel/headboat component quota applies to vessels that have been issued a valid Federal charter vessel/headboat permit for Gulf reef fish any time during the fishing year. A person aboard a vessel that has been issued a charter vessel/headboat permit for Gulf reef fish any time during the fishing year may not harvest or possess red snapper in or from the Gulf EEZ when the Federal charter vessel/headboat component is closed. The Federal charter vessel/headboat component quota is 3.130 million lb (1.420 million kg), round weight.

(C) *Private angling component quota.* The private angling component quota applies to vessels that fish under the bag limit and have not been issued a Federal charter vessel/headboat permit for Gulf reef fish any time during the fishing year. The private angling component quota is 4.269 million lb (1.936 million kg), round weight.

(ii) *Recreational quota for greater amberjack.* (A) For the 2017–2018 fishing year—716,173 lb (324,851 kg).

(B) For the 2018–2019 fishing year—902,185 lb (409,224 kg).

(C) For the 2019–2020 fishing year and subsequent fishing years—1,086,985 lb (493,048 kg).

(b) *Restrictions applicable after a commercial quota closure.* (1) If the recreational fishery for the indicated species is open, the bag and possession limits specified in § 622.38(b) and (c) apply to all harvest or possession in or from the Gulf EEZ of the indicated species, and the sale or purchase of the indicated species taken from the Gulf EEZ is prohibited. In addition, the bag and possession limits for red snapper, when applicable, apply on board a vessel for which a commercial permit for Gulf reef fish has been issued, as required under § 622.20(a)(1), without regard to where such red snapper were harvested. The application of bag limits described in this paragraph (b)(1) notwithstanding, bag limits of Gulf reef fish may not be possessed on board a vessel with commercial quantities of Gulf reef fish, *i.e.*, Gulf reef fish in excess of applicable bag/possession limits, on board, as specified in § 622.38(a)(2).

Fishery Conservation and Management

§ 622.41

The prohibition on sale/purchase during a closure for Gulf reef fish does not apply to Gulf reef fish that were harvested, landed ashore, and sold prior to the effective date of the closure and were held in cold storage by a dealer or processor.

(2) If the recreational fishery for the indicated species is closed, all harvest or possession in or from the Gulf EEZ of the indicated species is prohibited.

(c) *Restrictions applicable after a recreational quota closure or recreational component quota closure.* The bag limit for the applicable species for the recreational sector or recreational sector component in or from the Gulf EEZ is zero. When the Federal charter vessel/headboat component is closed or the entire recreational sector is closed, this bag and possession limit applies in the Gulf on board a vessel for which a valid Federal charter vessel/headboat permit for Gulf reef fish has been issued, without regard to where such species were harvested, *i.e.*, in state or Federal waters.

[78 FR 22952, Apr. 17, 2013]

EDITORIAL NOTE: For FEDERAL REGISTER citations affecting § 622.39, see the List of CFR Sections Affected, which appears in the Finding Aids section of the printed volume and at www.govinfo.gov.

§ 622.40 Restrictions on sale/purchase.

The restrictions in this section are in addition to the restrictions on sale/purchase related to quota closures as specified in § 622.39(b) and (c).

(a) A Gulf reef fish harvested in the EEZ on board a vessel that does not have a valid commercial permit for Gulf reef fish, as required under § 622.20(a)(1), or a Gulf reef fish possessed under the bag limits specified in § 622.38(b), may not be sold or purchased.

(b) A Gulf reef fish harvested in or from the EEZ or adjoining state waters by a vessel that has a valid commercial vessel permit for Gulf reef fish may be sold or transferred only to a dealer who has a valid Gulf and South Atlantic dealer permit, as required under § 622.20(c)(1).

(c) A Gulf reef fish harvested in or from the EEZ may be first received by a dealer who has a valid Gulf and South Atlantic dealer permit, as re-

quired under § 622.20(c)(1), only from a vessel that has a valid commercial vessel permit for Gulf reef fish.

[78 FR 22952, Apr. 17, 2013, as amended at 79 FR 19494, Apr. 9, 2014]

§ 622.41 Annual catch limits (ACLs), annual catch targets (ACTs), and accountability measures (AMs).

(a) *Greater amberjack*—(1) *Commercial sector.* (i) If commercial landings, as estimated by the SRD, reach or are projected to reach the annual catch target (ACT) specified in § 622.39(a)(1)(v)(commercial quota), the Assistant Administrator for Fisheries, NOAA, (AA) will file a notification with the Office of the Federal Register to close the commercial sector for the remainder of the fishing year.

(ii) In addition to the measures specified in paragraph (a)(1)(i) of this section, if commercial landings, as estimated by the SRD, exceed the commercial ACL, as specified in (a)(1)(iii) of this section, the AA will file a notification with the Office of the Federal Register, at or near the beginning of the following fishing year to reduce the commercial ACT (commercial quota) and the commercial ACL for that following year by the amount of any commercial ACL overage in the prior fishing year.

(iii) The commercial ACL for greater amberjack, in round weight, is 319,140 lb (144,759 kg), for 2018, 402,030 lb (182,358 kg), for 2019, and 484,380 lb (219,711 kg), for 2020 and subsequent fishing years.

(2) *Recreational sector.* (i) If recreational landings, as estimated by the SRD, reach or are projected to reach the ACT specified in § 622.39(a)(2)(ii) (recreational quota), the AA will file a notification with the Office of the Federal Register to close the recreational sector for the remainder of the fishing year.

(ii) In addition to the measures specified in paragraph (a)(2)(i) of this section, if recreational landings, as estimated by the SRD, exceed the recreational ACL, as specified in paragraph (a)(2)(iii) of this section, the AA will file a notification with the Office of the Federal Register, at or near the beginning of the following fishing year

to reduce the recreational ACT (recreational quota) and the recreational ACL for that following year by the amount of any recreational overage in the prior fishing year.

(iii) The applicable recreational ACL for greater amberjack, in round weight, is 862,860 lb (391,387 kg) for the 2017–2018 fishing year, 1,086,970 lb (493,041 kg) for the 2018–2019 fishing year, and 1,309,620 lb (594,034 kg) for 2019–2020 fishing year and subsequent fishing years.

(b) *Gray triggerfish*—(1) *Commercial sector*. If commercial landings, as estimated by the SRD, reach or are projected to reach the commercial ACT (commercial quota) specified in § 622.39(a)(1)(vi), the AA will file a notification with the Office of the Federal Register to close the commercial sector for the remainder of the fishing year. In addition, if despite such closure, commercial landings exceed the commercial ACL, the AA will file a notification with the Office of the Federal Register, at or near the beginning of the following fishing year to reduce the commercial ACL and ACT (commercial quota) for that following year by the amount the prior-year ACL was exceeded. The commercial ACL is 95,949 lb (43,522 kg), round weight.

(2) *Recreational sector*. (i) Without regard to overfished status, if gray triggerfish recreational landings, as estimated by the SRD, reach or are projected to reach the applicable ACT specified in paragraph (b)(2)(iii) of this section, the AA will file a notification with the Office of the Federal Register, to close the recreational sector for the remainder of the fishing year. On and after the effective date of such a notification, the bag and possession limit of gray triggerfish in or from the Gulf EEZ is zero. This bag and possession limit applies in the Gulf on board a vessel for which a valid Federal charter vessel/headboat permit for Gulf reef fish has been issued, without regard to where such species were harvested, *i.e.* in state or Federal waters.

(ii) In addition to the measures specified in paragraphs (b)(2)(i) of this section, if gray triggerfish recreational landings, as estimated by the SRD, exceed the applicable ACL specified in paragraph (b)(2)(iii) of this section, and gray triggerfish are overfished, based

on the most recent Status of U.S. Fisheries Report to Congress, the AA will file a notification with the Office of the Federal Register, at or near the beginning of the following fishing year to reduce the ACL and the ACT for that following year by the amount of the ACL overage in the prior fishing year, unless the best scientific information available determines that a greater, lesser, or no overage adjustment is necessary.

(iii) The recreational ACL for gray triggerfish is 360,951 lb (163,725 kg), round weight. The recreational ACT for gray triggerfish is 274,323 lb (124,431 kg), round weight.

(c) *Other shallow-water grouper (Other SWG) combined (including black grouper, scamp, yellowfin grouper, and yellowmouth grouper)*—(1) *Commercial sector*. The IFQ program for groupers and tilefishes in the Gulf of Mexico serves as the accountability measure for commercial Other SWG. The commercial ACT for Other SWG is equal to the applicable quota specified in § 622.39(a)(1)(iii)(A). The commercial ACL for Other SWG, in gutted weight, is 545,000 lb (247,208 kg) for 2014, and 547,000 lb (248,115 kg) for 2015 and subsequent fishing years.

(2) *Recreational sector*. If the sum of the commercial and recreational landings, as estimated by the SRD, exceeds the stock complex ACL specified in paragraph (c)(3) of this section, then during the following fishing year, if the sum of the commercial and recreational landings reaches or is projected to reach the applicable ACL specified in paragraph (c)(3) of this section, the AA will file a notification with the Office of the Federal Register to close the recreational sector for the remainder of that fishing year.

(3) The stock complex ACLs for Other SWG, in gutted weight, are 688,000 lb (312,072 kg) for 2012, 700,000 lb (317,515 kg) for 2013, 707,000 lb (320,690 kg) for 2014, and 710,000 lb (322,051 kg) for 2015 and subsequent years.

(d) *Gag*—(1) *Commercial sector*. The IFQ program for groupers and tilefishes in the Gulf of Mexico serves as the accountability measure for commercial gag. The applicable commercial ACLs for gag, in gutted weight, are 0.788 million lb (0.357 million kg) for 2012, 0.956

million lb (0.434 million kg) for 2013, 1.100 million lb (0.499 million kg) for 2014, and 1.217 million lb (0.552 million kg) for 2015 and subsequent fishing years.

(2) *Recreational sector.* (i) Without regard to overfished status, if gag recreational landings, as estimated by the SRD, reach or are projected to reach the applicable ACLs specified in paragraph (d)(2)(iv) of this section, the AA will file a notification with the Office of the Federal Register, to close the recreational sector for the remainder of the fishing year. On and after the effective date of such a notification, the bag and possession limit of gag in or from the Gulf EEZ is zero. This bag and possession limit applies in the Gulf on board a vessel for which a valid Federal charter vessel/headboat permit for Gulf reef fish has been issued, without regard to where such species were harvested, *i.e.* in state or Federal waters.

(ii) Without regard to overfished status, and in addition to the measures specified in paragraph (d)(2)(i) of this section, if gag recreational landings, as estimated by the SRD, exceed the applicable ACLs specified in paragraph (d)(2)(iv) of this section, the AA will file a notification with the Office of the Federal Register to maintain the gag ACT, specified in paragraph (d)(2)(iv) of this section, for that following fishing year at the level of the prior year's ACT, unless the best scientific information available determines that maintaining the prior year's ACT is unnecessary. In addition, the notification will reduce the length of the recreational gag fishing season the following fishing year by the amount necessary to ensure gag recreational landings do not exceed the recreational ACT in the following fishing year.

(iii) If gag are overfished, based on the most recent status of U.S. Fisheries Report to Congress, and gag recreational landings, as estimated by the SRD, exceed the applicable ACL specified in paragraph (d)(2)(iv) of this section, the following measures will apply. In addition to the measures specified in paragraphs (d)(2)(i) and (ii) of this section, the AA will file a notification with the Office of the Federal Register, at or near the beginning of the following fishing year to reduce the ACL

for that following year by the amount of the ACL overage in the prior fishing year, and reduce the ACT, as determined in paragraph (d)(2)(ii) of this section, by the amount of the ACL overage in the prior fishing year, unless the best scientific information available determines that a greater, lesser, or no overage adjustment is necessary.

(iv) The applicable recreational ACLs for gag, in gutted weight, are 1.232 million lb (0.559 million kg) for 2012, 1.495 million lb (0.678 million kg) for 2013, 1.720 million lb (0.780 million kg) for 2014, and 1.903 million lb (0.863 million kg) for 2015 and subsequent fishing years. The recreational ACTs for gag, in gutted weight, are 1.031 million lb (0.468 million kg) for 2012, 1.287 million lb (0.584 million kg) for 2013, 1.519 million lb (0.689 million kg) for 2014, and 1.708 million lb (0.775 million kg) for 2015 and subsequent fishing years.

(e) *Red grouper*—(1) *Commercial sector.* The IFQ program for groupers and tilefishes in the Gulf of Mexico serves as the accountability measure for commercial red grouper. The commercial ACT for red grouper is equal to the applicable quota specified in § 622.39(a)(1)(iii)(C). The applicable commercial ACL for red grouper, in gutted weight, is 3.16 million lb (1.43 million kg).

(2) *Recreational sector.* (i) Without regard to overfished status, if red grouper recreational landings, as estimated by the SRD, reach or are projected to reach the applicable ACL specified in paragraph (e)(2)(iv) of this section, the AA will file a notification with the Office of the Federal Register, to close the recreational sector for the remainder of the fishing year. On and after the effective date of such a notification, the bag and possession limit of red grouper in or from the Gulf EEZ is zero. This bag and possession limit applies in the Gulf on board a vessel for which a valid Federal charter vessel/headboat permit for Gulf reef fish has been issued, without regard to where such species were harvested, *i.e.* in state or Federal waters.

(ii) Without regard to overfished status, and in addition to the measures specified in paragraph (e)(2)(i) of this section, if red grouper recreational

landings, as estimated by the SRD, exceed the applicable ACL specified in paragraph (e)(2)(iv) of this section, the AA will file a notification with the Office of the Federal Register to maintain the red grouper ACT, specified in paragraph (e)(2)(iv) of this section, for that following fishing year at the level of the prior year's ACT, unless the best scientific information available determines that maintaining the prior year's ACT is unnecessary. In addition, the notification will reduce the length of the recreational red grouper fishing season the following fishing year by the amount necessary to ensure red grouper recreational landings do not exceed the recreational ACT in the following fishing year.

(iii) If red grouper are overfished, based on the most recent Status of U.S. Fisheries Report to Congress, and red grouper recreational landings, as estimated by the SRD, exceed the applicable ACL specified in paragraph (e)(2)(iv) of this section, the following measures will apply. In addition to the measures specified in paragraphs (e)(2)(i) and (ii) of this section, the AA will file a notification with the Office of the Federal Register, at or near the beginning of the following fishing year to reduce the ACL for that following year by the amount of the ACL overage in the prior fishing year, and reduce the ACT, as determined in paragraph (e)(2)(ii) of this section, by the amount of the ACL overage in the prior fishing year, unless the best scientific information available determines that a greater, lesser, or no overage adjustment is necessary.

(iv) The recreational ACL for red grouper, in gutted weight, is 1.00 million lb (0.45 million kg). The recreational ACT for red grouper, in gutted weight, is 0.92 million lb (0.42 million kg).

(f) *Deep-water grouper (DWG) combined (including yellowedge grouper, warsaw grouper, snowy grouper, and speckled hind)*—(1) *Commercial sector*. The IFQ program for groupers and tilefishes in the Gulf of Mexico serves as the accountability measure for commercial DWG. The commercial ACT for DWG is equal to the applicable quota specified in § 622.39(a)(1)(ii). The commercial ACL for DWG, in gutted weight, is 1.160

million lb (0.526 million kg) for 2014, 1.150 million lb (0.522 million kg) for 2015, and 1.070 million lb (0.485 million kg) for 2016 and subsequent fishing years.

(2) *Recreational sector*. If the sum of the commercial and recreational landings, as estimated by the SRD, exceeds the stock complex ACL specified in paragraph (f)(3) of this section, then during the following fishing year, if the sum of commercial and recreational landings reaches or is projected to reach the applicable ACL specified in paragraph (f)(3) of this section, the AA will file a notification with the Office of the Federal Register to close the recreational sector for the remainder of that fishing year.

(3) The stock complex ACLs for DWG, in gutted weight, are 1.216 million lb (0.552 million kg) for 2012, 1.207 million lb (0.547 million kg) for 2013, 1.198 million lb (0.543 million kg) for 2014, 1.189 million lb (0.539 million kg) for 2015, and 1.105 million lb (0.501 million kg) for 2016 and subsequent years.

(g) *Tilefishes combined (including goldface tilefish, blueline tilefish, and tilefish)*—(1) *Commercial sector*. The IFQ program for groupers and tilefishes in the Gulf of Mexico serves as the accountability measure for commercial tilefishes. The commercial ACT for tilefishes is equal to the quota specified in § 622.39(a)(1)(iv). The commercial ACL for tilefishes, in gutted weight, is 606,000 lb (274,877 kg).

(2) *Recreational sector*. If the sum of the commercial and recreational landings, as estimated by the SRD, exceeds the stock complex ACL specified in paragraph (g)(3) of this section, then during the following fishing year, if the sum of commercial and recreational landings reaches or is projected to reach the applicable ACL specified in paragraph (g)(3) of this section, the AA will file a notification with the Office of the Federal Register to close the recreational sector for the remainder of that fishing year.

(3) The stock complex ACL for tilefishes is 608,000 lb (275,784 kg), gutted weight.

(h) *Lesser amberjack, almaco jack, and banded rudderfish, combined*. If the sum of the commercial and recreational

landings, as estimated by the SRD, exceeds the stock complex ACL, then during the following fishing year, if the sum of commercial and recreational landings reaches or is projected to reach the stock complex ACL, the AA will file a notification with the Office of the Federal Register to close the commercial and recreational sectors for the remainder of that fishing year. The stock complex ACL for lesser amberjack, almaco jack, and banded rudderfish, is 312,000 lb (141,521 kg), round weight.

(i) *Silk snapper, queen snapper, blackfin snapper, and wenchman, combined.* If the sum of the commercial and recreational landings, as estimated by the SRD, exceeds the stock complex ACL, then during the following fishing year, if the sum of commercial and recreational landings reaches or is projected to reach the stock complex ACL, the AA will file a notification with the Office of the Federal Register to close the commercial and recreational sectors for the remainder of that fishing year. The stock complex ACL for silk snapper, queen snapper, blackfin snapper, and wenchman, is 166,000 lb (75,296 kg), round weight.

(j) *Vermilion snapper.* If the sum of the commercial and recreational landings, as estimated by the SRD, reaches or is projected to reach the stock ACL, the AA will file a notification with the Office of the Federal Register to close the commercial and recreational sectors for the remainder of the fishing year. The stock ACL for vermillion snapper is 3.11 million lb (1.41 million kg), round weight.

(k) *Lane snapper.* If the sum of the commercial and recreational landings, as estimated by the SRD, exceeds the stock ACL, then during the following fishing year, if the sum of commercial and recreational landings reaches or is projected to reach the stock ACL, the AA will file a notification with the Office of the Federal Register to close the commercial and recreational sectors for the remainder of that fishing year. The stock ACL for lane snapper is 301,000 lb (136,531 kg), round weight.

(l) *Gray snapper.* If the sum of the commercial and recreational landings, as estimated by the SRD, exceeds the stock ACL, then during the following

fishing year, if the sum of commercial and recreational landings reaches or is projected to reach the stock ACL, the AA will file a notification with the Office of the Federal Register to close the commercial and recreational sectors for the remainder of that fishing year. The stock ACL for gray snapper, in round weight, is 2.24 million lb (1.02 million kg) for the 2020 fishing year, and 2.23 million lb (1.01 million kg) for the 2021 and subsequent fishing years.

(m) *Cubera snapper.* If the sum of the commercial and recreational landings, as estimated by the SRD, exceeds the stock ACL, then during the following fishing year, if the sum of commercial and recreational landings reaches or is projected to reach the stock ACL, the AA will file a notification with the Office of the Federal Register to close the commercial and recreational sectors for the remainder of that fishing year. The stock ACL for cubera snapper is 5,065 lb (2,297 kg), round weight.

(n) *Yellowtail snapper.* If the sum of the commercial and recreational landings, as estimated by the SRD, exceeds the stock ACL, then during the following fishing year, if the sum of commercial and recreational landings reaches or is projected to reach the stock ACL, the AA will file a notification with the Office of the Federal Register to close the commercial and recreational sectors for the remainder of that fishing year. The stock ACL for yellowtail snapper is 901,125 lb (408,743 kg), round weight.

(o) *Mutton snapper.* If the sum of the commercial and recreational landings, as estimated by the SRD, exceeds the stock ACL, then during the following fishing year, if the sum of commercial and recreational landings reaches or is projected to reach the stock ACL, the AA will file a notification with the Office of the Federal Register to close the commercial and recreational sectors for the remainder of that fishing year. The stock ACL for mutton snapper, in round weight, is 134,424 lb (60,974 kg) for 2018, 139,392 lb (63,227 kg) for 2019, and 143,694 lb (65,179 kg) for 2020 and subsequent fishing years.

(p) *Hogfish in the Gulf EEZ except south of 25°09' N lat. off the west coast of Florida.* If the sum of the commercial and recreational landings, as estimated

by the SRD, exceeds the stock ACL, then during the following fishing year, if the sum of commercial and recreational landings reaches or is projected to reach the stock ACL, the AA will file a notification with the Office of the Federal Register to close the commercial and recreational sectors for the remainder of that fishing year. The stock ACL for hogfish, in round weight, in the Gulf EEZ except south of 25°09' N lat. off the west coast of Florida, is 129,500 lb (58,740 kg), for the 2019 fishing year, 141,300 lb (64,093 kg), for the 2020 fishing year, and 150,400 lb (68,220 kg) for the 2021 fishing year and subsequent fishing years. See § 622.193(u)(2) for the ACLs, ACT, and AMs for hogfish in the Gulf EEZ south of 25°09' N lat. off the west coast of Florida.

(q) *Red snapper*—(1) *Commercial sector*. The IFQ program for red snapper in the Gulf of Mexico serves as the accountability measure for commercial red snapper. The commercial ACL for red snapper is equal to the applicable commercial quota specified in § 622.39(a)(1)(i).

(2) *Recreational sector*. (i) The recreational ACL is equal to the total recreational quota specified in § 622.39(a)(2)(i)(A). The AA will determine the length of the red snapper recreational fishing season, or recreational fishing seasons for the Federal charter vessel/headboat and private angling components, based on when recreational landings are projected to reach the recreational ACT, or respective recreational component ACT specified in paragraph (q)(2)(iii) of this section, and announce the closure date(s) in the FEDERAL REGISTER. These seasons will serve as in-season accountability measures. On and after the effective date of the recreational closure or recreational component closure notifications, the bag and possession limit for red snapper or for the respective component is zero. When the recreational sector or Federal charter vessel/headboat component is closed, this bag and possession limit applies in the Gulf on board a vessel for which a valid Federal charter vessel/headboat permit for Gulf reef fish has been issued, without regard to where such species were harvested, *i.e.*, in state or

Federal waters. See § 622.23 (a)(1) regarding the fishing season for the private angling component for states with an active delegation.

(ii) In addition to the measures specified in paragraph (q)(2)(i) of this section, if red snapper recreational landings, as estimated by the SRD, exceed the total recreational quota specified in § 622.39(a)(2)(i)(A), and red snapper are overfished, based on the most recent Status of U.S. Fisheries Report to Congress, the AA will file a notification with the Office of the Federal Register to reduce the total recreational quota by the amount of the quota overage in the prior fishing year, and reduce the applicable recreational component quota(s) specified in § 622.39(a)(2)(i)(B) and (C) and the applicable recreational component ACT(s) specified in paragraph (q)(2)(iii) of this section (based on the buffer between the total recreational ACT and the total recreational quota specified in the FMP), unless NMFS determines based upon the best scientific information available that a greater, lesser, or no overage adjustment is necessary.

(iii) *Recreational ACTs*.

(A) [Reserved]

(B) *Federal charter vessel/headboat component ACT*. The Federal charter vessel/headboat component ACT applies to vessels that have been issued a valid Federal charter vessel/headboat permit for Gulf reef fish any time during the fishing year. A person aboard a vessel that has been issued a charter vessel/headboat permit for Gulf reef fish any time during the fishing year may not harvest or possess red snapper in or from the Gulf EEZ when the Federal charter vessel/headboat component is closed. The component ACT is 2.848 million lb (1.292 million kg), round weight.

(C) *Private angling component ACT*. The private angling component ACT applies to vessels that fish under the bag limit and have not been issued a Federal charter vessel/headboat permit for Gulf reef fish any time during the fishing year. The component ACT is 3.415 million lb (1.549 million kg), round weight.

[78 FR 22952, Apr. 17, 2013]

EDITORIAL NOTE: For FEDERAL REGISTER citations affecting § 622.41, see the List of CFR

Fishery Conservation and Management

§ 622.50

Sections Affected, which appears in the Finding Aids section of the printed volume and at www.govinfo.gov.

§ 622.42 Adjustment of management measures.

In accordance with the framework procedures of the FMP for the Reef Fish Resources of the Gulf of Mexico, the RA may establish or modify the items specified in paragraph (a) of this section for Gulf reef fish, or paragraph (b) of this section for sea turtles and other protected species.

(a) For a species or species group: Reporting and monitoring requirements, permitting requirements, bag and possession limits (including a bag limit of zero), size limits, vessel trip limits, closed seasons or areas and reopenings, annual catch limits (ACLs), annual catch targets (ACTs), quotas (including a quota of zero), accountability measures (AMs), MSY (or proxy), OY, management parameters such as overfished and overfishing definitions, gear restrictions (ranging from regulation to complete prohibition), gear markings and identification, vessel markings and identification, acceptable biological catch (ABC) and ABC control rules, rebuilding plans, and restrictions relative to conditions of harvested fish (maintaining fish in whole condition, use as bait).

(b) Possession, specifications, and use of required release gear and handling requirements for sea turtles and other protected species.

[78 FR 22952, Apr. 17, 2013, as amended at 84 FR 22386, May 17, 2019]

§ 622.43 Commercial trip limits.

Commercial trip limits are limits on the amount of the applicable species that may be possessed on board or landed, purchased, or sold from a vessel per day. A person who fishes in the EEZ may not combine a trip limit specified in this section with any trip or possession limit applicable to state waters. A species subject to a trip limit specified in this section taken in the EEZ may not be transferred at sea, regardless of where such transfer takes place, and such species may not be transferred in the EEZ. Commercial trip limits apply as follows:

(a) *Gulf greater amberjack*. (1) Until 75 percent of the quota specified in § 622.39(a)(1)(v) is reached, 1,000 lb (454 kg), gutted weight; 1,040 lb (472 kg), round weight.

(2) After 75 percent of the quota is reached or projected to be reached, 250 lb (113 kg), gutted weight; 260 lb (118 kg), round weight. See § 622.39(b) for the limitations regarding greater amberjack after the quota is reached. When the conditions in this paragraph (a)(2) have been reached, the Assistant Administrator will implement this trip limit change by filing a notification with the Office of the Federal Register.

(b) *Gray triggerfish*. Until the commercial ACT (commercial quota) specified in § 622.39(a)(1)(vi) is reached—16 fish. See § 622.39(b) for the limitations regarding gray triggerfish after the commercial ACT (commercial quota) is reached.

(c) *Hogfish in the Gulf EEZ south of 25°09' N. lat. off the west coast of Florida*—see § 622.191(a)(12)(ii) for the commercial trip limit.

[78 FR 22952, Apr. 17, 2013, as amended at 78 FR 27087, May 9, 2013; 80 FR 75436, Dec. 2, 2015; 82 FR 34581, July 25, 2017; 82 FR 59526, Dec. 15, 2017; 85 FR 20614, Apr. 14, 2020]

Subpart C—Shrimp Fishery of the Gulf of Mexico

§ 622.50 Permits, permit moratorium, and endorsements.

(a) *Gulf shrimp permit*. For a person aboard a vessel to fish for shrimp in the Gulf EEZ or possess shrimp in or from the Gulf EEZ, a commercial vessel permit for Gulf shrimp must have been issued to the vessel and must be on board. See paragraph (b) of this section regarding a moratorium on commercial vessel permits for Gulf shrimp and the associated provisions. See paragraph (c) of this section, regarding an additional endorsement requirement related to royal red shrimp.

(b) *Moratorium on commercial vessel permits for Gulf shrimp*. The provisions of this paragraph (b) are applicable through October 26, 2026.

(1) *Moratorium permits are required*. The only valid commercial vessel permits for Gulf shrimp are commercial vessel moratorium permits for Gulf

§ 622.51

50 CFR Ch. VI (10–1–21 Edition)

shrimp. In accordance with the procedures specified in the Fishery Management Plan for the Shrimp Fishery of the Gulf of Mexico (Gulf Shrimp FMP), all commercial vessel moratorium permits for Gulf shrimp have been issued. No additional permits will be issued.

(2) *Permit transferability.* Commercial vessel moratorium permits for Gulf shrimp are fully transferable, with or without the sale of the vessel. To request that the RA transfer a commercial vessel moratorium permit for Gulf shrimp, the owner of a vessel that is to receive the transferred permit must complete the transfer information on the reverse of the permit and return the permit and a completed application for transfer to the RA. Transfer documents must be notarized as specified in § 622.4(f)(1).

(3) *Renewal.* (i) Renewal of a commercial vessel moratorium permit for Gulf shrimp is contingent upon compliance with the recordkeeping and reporting requirements for Gulf shrimp specified in § 622.51(a).

(ii) Except as provided for in paragraph (b)(3)(iii) of this section, a commercial vessel moratorium permit for Gulf shrimp that is not renewed will be terminated and will not be reissued during the moratorium. A permit is considered to be not renewed when an application for renewal, as required, is not received by the RA within 1 year of the expiration date of the permit.

(iii) When NMFS has determined that the number of commercial vessel moratorium permits for Gulf shrimp has reached the threshold number of permits as described in the FMP, then a commercial vessel moratorium permit for Gulf shrimp that is not renewed will be converted to a Gulf shrimp reserve pool permit and held by NMFS for possible reissuance. Gulf shrimp reserve pool permits will not be issued until eligibility requirements are developed and implemented through subsequent rulemaking.

(c) *Gulf royal red shrimp endorsement.* For a person aboard a vessel to fish for royal red shrimp in the Gulf EEZ or possess royal red shrimp in or from the Gulf EEZ, a commercial vessel permit for Gulf shrimp with a Gulf royal red shrimp endorsement must be issued to the vessel and must be on board.

(d) *Permit procedures.* See § 622.4 for information regarding general permit procedures including, but not limited to, application, fees, duration, transfer, renewal, display, sanctions and denials, and replacement.

(e) *Gulf shrimp transit provision.* A vessel that does not have a valid Gulf shrimp moratorium permit, as described in paragraphs (a) and (b) of this section, may possess Gulf shrimp when in transit in the Gulf EEZ provided that the shrimp fishing gear is appropriately stowed. For the purposes of this paragraph, transit means non-stop progression through the Gulf EEZ. Fishing gear appropriately stowed means trawl doors and nets must be out of the water and the bag straps must be removed from the net.

[78 FR 22952, Apr. 17, 2013, as amended at 81 FR 47735, July 22, 2016; 82 FR 60567, Dec. 21, 2017]

§ 622.51 Recordkeeping and reporting.

(a) *Commercial vessel owners and operators—(1) General reporting requirement.* The owner or operator of a vessel that fishes for shrimp in the Gulf EEZ or in adjoining state waters, or that lands shrimp in an adjoining state, must provide information for any fishing trip, as requested by the SRD, including, but not limited to, vessel identification, gear, effort, amount of shrimp caught by species, shrimp condition (heads on/heads off), fishing areas and depths, and person to whom sold.

(2) *Electronic logbook reporting.* The owner or operator of a vessel for which a Federal commercial vessel permit for Gulf shrimp has been issued and who is selected by the SRD must participate in the NMFS-sponsored electronic logbook reporting program as directed by the SRD. In addition, such owner or operator must provide information regarding the size and number of shrimp trawls deployed and the type of bycatch reduction device (BRD) and turtle excluder device used, as directed by the SRD. Compliance with the reporting requirements of this paragraph (a)(2) is required for permit renewal.

(3) *Vessel and Gear Characterization Form.* All owners or operators of vessels applying for or renewing a commercial vessel moratorium permit for Gulf shrimp must complete an annual Gulf

Fishery Conservation and Management

§ 622.53

Shrimp Vessel and Gear Characterization Form. The form will be provided by NMFS at the time of permit application and renewal. Compliance with this reporting requirement is required for permit issuance and renewal.

(4) *Landings report.* The owner or operator of a vessel for which a Federal commercial vessel permit for Gulf shrimp has been issued must annually report the permitted vessel's total annual landings of shrimp and value, by species, on a form provided by the SRD. Compliance with this reporting requirement is required for permit renewal.

(b) *Gulf shrimp dealers.* A person who purchases shrimp from a vessel, or person, that fishes for shrimp in the Gulf EEZ or in adjoining state waters, or that lands shrimp in an adjoining state, must provide the following information when requested by the SRD:

(1) Name and official number of the vessel from which shrimp were received or the name of the person from whom shrimp were received, if received from other than a vessel.

(2) Amount of shrimp received by species and size category for each receipt.

(3) Ex-vessel value, by species and size category, for each receipt.

§ 622.52 At-sea observer coverage.

(a) *Required coverage.* A vessel for which a Federal commercial vessel permit for Gulf shrimp has been issued must carry a NMFS-approved observer, if the vessel's trip is selected by the SRD for observer coverage. Vessel permit renewal is contingent upon compliance with this paragraph (a).

(b) *Notification to the SRD.* When observer coverage is required, an owner or operator must advise the SRD in writing not less than 5 days in advance of each trip of the following:

(1) Departure information (port, dock, date, and time).

(2) Expected landing information (port, dock, and date).

(c) *Observer accommodations and access.* An owner or operator of a vessel on which a NMFS-approved observer is embarked must:

(1) Provide accommodations and food that are equivalent to those provided to the crew.

(2) Allow the observer access to and use of the vessel's communications equipment and personnel upon request for the transmission and receipt of messages related to the observer's duties.

(3) Allow the observer access to and use of the vessel's navigation equipment and personnel upon request to determine the vessel's position.

(4) Allow the observer free and unobstructed access to the vessel's bridge, working decks, holding bins, weight scales, holds, and any other space used to hold, process, weigh, or store fish.

(5) Allow the observer to inspect and copy the vessel's log, communications logs, and any records associated with the catch and distribution of fish for that trip.

§ 622.53 Bycatch reduction device (BRD) requirements.

(a) *BRD requirement for Gulf shrimp.* On a shrimp trawler in the Gulf EEZ, each net that is rigged for fishing must have a BRD installed that is listed in paragraph (a)(3) of this section and is certified or provisionally certified for the area in which the shrimp trawler is located, unless exempted as specified in paragraphs (a)(1)(i) through (iv) of this section. A trawl net is rigged for fishing if it is in the water, or if it is shackled, tied, or otherwise connected to a sled, door, or other device that spreads the net, or to a tow rope, cable, pole, or extension, either on board or attached to a shrimp trawler.

(1) *Exemptions from BRD requirement—*

(i) *Royal red shrimp exemption.* A shrimp trawler is exempt from the requirement to have a certified or provisionally certified BRD installed in each net provided that at least 90 percent (by weight) of all shrimp on board or offloaded from such trawler are royal red shrimp.

(ii) *Try net exemption.* A shrimp trawler is exempt from the requirement to have a certified or provisionally certified BRD installed in a single try net with a headrope length of 16 ft (4.9 m) or less provided the single try net is either placed immediately in front of another net or is not connected to another net.

(iii) *Roller trawl exemption.* A shrimp trawler is exempt from the requirement to have a certified or provisionally certified BRD installed in up to two rigid-frame roller trawls that are 16 ft (4.9 m) or less in length used or possessed on board. A rigid-frame roller trawl is a trawl that has a mouth formed by a rigid frame and a grid of rigid vertical bars; has rollers on the lower horizontal part of the frame to allow the trawl to roll over the bottom and any obstruction while being towed; and has no doors, boards, or similar devices attached to keep the mouth of the trawl open.

(iv) *BRD certification testing exemption.* A shrimp trawler that is authorized by the RA to participate in the pre-certification testing phase or to test a BRD in the EEZ for possible certification, has such written authorization on board, and is conducting such test in accordance with the “Bycatch Reduction Device Testing Manual” is granted a limited exemption from the BRD requirement specified in this section. The exemption from the BRD requirement is limited to those trawls that are being used in the certification trials. All other trawls rigged for fishing must be equipped with certified or provisionally certified BRDs.

(2) *Procedures for certification and de-certification of BRDs.* The process for the certification of BRDs consists of two phases—an optional pre-certification phase and a required certification phase. The RA may also provisionally certify a BRD.

(i) *Pre-certification.* The pre-certification phase allows a person to test and evaluate a new BRD design for up to 60 days without being subject to the observer requirements and rigorous testing requirements specified for certification testing in the “Bycatch Reduction Device Testing Manual.”

(A) A person who wants to conduct pre-certification phase testing must submit an application to the RA, as specified in the “Bycatch Reduction Device Testing Manual.” The “Bycatch Reduction Device Testing Manual,” which is available from the RA, upon request, contains the application forms.

(B) After reviewing the application, the RA will determine whether to issue

a Gear Test Authorization (GTA) to conduct pre-certification trials upon the vessel specified in the application. If the RA authorizes pre-certification, the RA’s GTA must be on board the vessel during any trip involving the BRD testing.

(ii) *Certification.* A person who proposes a BRD for certification for use in the Gulf EEZ must submit an application to test such BRD, conduct the testing, and submit the results of the test in accordance with the “Bycatch Reduction Device Testing Manual.” The RA will issue a GTA to conduct certification trials upon the vessel specified in the application if the RA finds that: The operation plan submitted with the application meets the requirements of the “Bycatch Reduction Device Testing Manual”; the observer identified in the application is qualified; and the results of any pre-certification trials conducted have been reviewed and deemed to indicate a reasonable scientific basis for conducting certification testing. If an application for a GTA is denied, the RA will provide a letter of explanation to the applicant, together with relevant recommendations to address the deficiencies that resulted in the denial. To be certified for use in the fishery, the BRD candidate must successfully demonstrate a 30 percent reduction in total weight of finfish bycatch. In addition, the BRD candidate must satisfy the following conditions: There is at least a 50-percent probability the true reduction rate of the BRD candidate meets the bycatch reduction criterion and there is no more than a 10-percent probability the true reduction rate of the BRD candidate is more than 5 percentage points less than the bycatch reduction criterion. If a BRD meets both conditions, consistent with the “Bycatch Reduction Device Testing Manual,” NMFS, through appropriate rulemaking procedures, will add the BRD to the list of certified BRDs in paragraph (a)(3) of this section; and provide the specifications for the newly certified BRD, including any special conditions deemed appropriate based on the certification testing results.

(iii) *Provisional certification.* Based on data provided consistent with the “Bycatch Reduction Device Testing Manual,” the RA may provisionally certify a BRD if there is at least a 50-percent probability the true reduction rate of the BRD is no more than 5 percentage points less than the bycatch reduction criterion, *i.e.*, 25 percent reduction in total weight of finfish bycatch. Through appropriate rulemaking procedures, NMFS will add the BRD to the list of provisionally certified BRDs in paragraph (a)(3) of this section; and provide the specifications for the BRD, including any special conditions deemed appropriate based on the certification testing results. A provisional certification is effective for 2 years from the date of publication of the notification in the FEDERAL REGISTER announcing the provisional certification.

(iv) *Decertification.* The RA will decertify a BRD if NMFS determines the BRD does not meet the requirements for certification or provisional certification. Before determining whether to decertify a BRD, the RA will notify the Gulf of Mexico Fishery Management Council in writing, and the public will be provided an opportunity to comment on the advisability of any proposed decertification. The RA will consider any comments from the Council and public, and if the RA elects to decertify the BRD, the RA will proceed with decertification via appropriate rulemaking.

(3) *Certified and provisionally certified BRDs*—(i) *Certified BRDs.* The following BRDs are certified for use in the Gulf EEZ. Specifications of these certified BRDs are contained in Appendix D to this part.

(A) Fishery—see Appendix D to part 622 for separate specifications in the Gulf and South Atlantic EEZ.

(B) Jones-Davis.

(C) Modified Jones-Davis.

(D) Cone Fish Deflector Composite Panel.

(E) Square Mesh Panel (SMP) Composite Panel.

(ii) [Reserved]

(b) [Reserved]

[78 FR 22952, Apr. 17, 2013, as amended at 85 FR 6818, Feb. 6, 2020]

§ 622.54 Prohibited gear and methods.

Also see § 622.9 for additional prohibited gear and methods that apply more broadly to multiple fisheries or in some cases all fisheries.

(a) *Traps for royal red shrimp in the Gulf EEZ and transfer at sea.* A trap may not be used to fish for royal red shrimp in the Gulf EEZ. Possession of a trap and royal red shrimp on board a vessel is prohibited. A trap used to fish for royal red shrimp in the Gulf EEZ may be disposed of in any appropriate manner by the Assistant Administrator or an authorized officer. In addition, royal red shrimp cannot be transferred in the Gulf EEZ, and royal red shrimp taken in the Gulf EEZ cannot be transferred at sea regardless of where the transfer takes place.

(b) [Reserved]

§ 622.55 Closed areas.

(a) *Texas closure.* (1) From 30 minutes after official sunset on May 15 to 30 minutes after official sunset on July 15, trawling, except trawling for royal red shrimp beyond the 100-fathom (183-m) depth contour, is prohibited in the Gulf EEZ off Texas.

(2) In accordance with the procedures and restrictions of the Gulf Shrimp FMP, the RA may adjust the closing and/or opening date of the Texas closure to provide an earlier, later, shorter, or longer closure, but the duration of the closure may not exceed 90 days or be less than 45 days. Notification of the adjustment of the closing or opening date will be published in the FEDERAL REGISTER.

(b) *Southwest Florida seasonal trawl closure.* From January 1 to 1 hour after official sunset on May 20, each year, trawling, including trawling for live bait, is prohibited in that part of the Gulf EEZ shoreward of rhumb lines connecting, in order, the following points:

TABLE 1 TO PARAGRAPH (B)

P ⁴	24°35'00"	82°08'00"

¹ Coon Key Light.

² New Ground Shoals Light.

³ Rebecca Shoals Light.

⁴ Marquesas Keys.

(2) The provisions of paragraph (c)(1) of this section notwithstanding—

(i) Effective from April 11 through September 30, each year, that part of the Tortugas shrimp sanctuary seaward of rhumb lines connecting the following points is open to trawling: From point T at 24°47.8' N. lat., 82°01.0' W. long. to point U at 24°43.83' N. lat., 82°01.0' W. long. (on the line denoting the seaward limit of Florida's waters); thence along the seaward limit of Florida's waters, as shown on the current edition of NOAA chart 11439, to point V at 24°42.55' N. lat., 82°15.0' W. long.; thence north to point W at 24°43.6' N. lat., 82°15.0' W. long.

(ii) Effective from April 11 through July 31, each year, that part of the Tortugas shrimp sanctuary seaward of rhumb lines connecting the following points is open to trawling: From point W to point V, both points as specified in paragraph (c)(2)(i) of this section, to point G, as specified in paragraph (c)(1) of this section.

(iii) Effective from May 26 through July 31, each year, that part of the Tortugas shrimp sanctuary seaward of rhumb lines connecting the following points is open to trawling: From point F, as specified in paragraph (c)(1) of this section, to point Q at 24°46.7' N lat., 81°52.2' W long. (on the line denoting the seaward limit of Florida's waters); thence along the seaward limit of Florida's waters, as shown on the current edition of NOAA chart 11439, to point U and north to point T, both points as specified in paragraph (c)(2)(i) of this section.

(d) *Closures of the Gulf shrimp fishery to reduce red snapper bycatch.* During a closure implemented in accordance with this paragraph (d), trawling is prohibited within the specified closed area(s).

(1) Procedure for determining need for and extent of closures. Each year, in accordance with the applicable framework procedure established by the Gulf Shrimp FMP, the RA will, if necessary, establish a seasonal area closure for the shrimp fishery in all or a portion of the areas of the Gulf EEZ specified in paragraphs (d)(2) through (4) of this section. The RA's determination of the need for such closure and its geographical scope and duration will be based on an annual assessment, by the Southeast Fisheries Science Center, of the shrimp effort and associated shrimp trawl bycatch mortality on red snapper in the 10–30 fathom area of statistical zones 10–21, compared to the 60-percent target reduction of shrimp trawl bycatch mortality on red snapper from the benchmark years of 2001–2003 established in the FMP (which corresponds in terms of annual shrimp effort to 33,124 days fished). The framework procedure provides for adjustment of this target reduction level, consistent with the red snapper stock rebuilding plan and the findings of subsequent stock assessments, via appropriate rulemaking. The assessment will use shrimp effort data for the most recent 12-month period available and will include a recommendation regarding the geographical scope and duration of the closure. The Southeast Fisheries Science Center's assessment will be provided to the RA on or about March 1 of each year. If the RA determines that a closure is necessary, the closure falls within the scope of the potential closures evaluated in the Gulf Shrimp FMP, and good cause exists to waive notice and comment, NMFS will implement the closure by publication of a final rule in the FEDERAL REGISTER. If such good cause waiver is not justified, NMFS will implement the closure via appropriate notice and comment rulemaking. NMFS intends that any closure implemented consistent with this paragraph (d)(1) will begin on the same date and time as the Texas closure, as

Fishery Conservation and Management

§ 622.55

described in paragraph (a) of this section, unless circumstances dictate otherwise.

(2) *Eastern zone.* The eastern zone is bounded by rhumb lines connecting, in order, the following points:

TABLE 1 TO PARAGRAPH (D)

Point	North lat.	West long.
A	29°14'	88°57'
B	29°24'	88°34'

(e) *Shrimp/stone crab separation zones.* Five zones are established in the Gulf EEZ and Florida's waters off Citrus and Hernando Counties for the separation of shrimp trawling and stone crab trapping. Although Zone II is entirely within Florida's waters, it is included in this paragraph (e) for the conven-

ience of fishermen. Restrictions that apply to Zone II and those parts of the other zones that are in Florida's waters are contained in Rule 68B-38.001, Florida Administrative Code, in effect as of March 1, 2005 (incorporated by reference, see §622.413). Geographical coordinates of the points referred to in this paragraph (e) are as follows:

TABLE 1 TO PARAGRAPH (E)

¹ Crystal River Entrance Light 1A.

² Long Pt. (southwest tip).

³ Shoreline.

(1) *Zone I* is enclosed by rhumb lines connecting, in order, points A, B, C, D, T, E, F, G, H, I, and J, plus the shoreline between points A and J. It is unlawful to trawl in that part of Zone I that is in the EEZ from October 5 through May 20, each year.

(2) *Zone II* is enclosed by rhumb lines connecting, in order, points J, I, H, K, L, and M, plus the shoreline between points J and M. Restrictions that apply to Zone II and those parts of the other zones that are in Florida's waters are contained in Rule 68B-38.001, Florida Administrative Code, in effect as of March 1, 2005 (incorporated by reference, see §622.413).

(3) *Zone III* is enclosed by rhumb lines connecting, in order, points P, Q, R, U, S, and P. It is unlawful to trawl in that part of Zone III that is in the EEZ from October 5 through May 20, each year.

(4) *Zone IV* is enclosed by rhumb lines connecting, in order, points E, N, S, O, and E.

§ 622.56

(i) It is unlawful to place a stone crab trap in that part of Zone IV that is in the EEZ from October 5 through December 1 and from April 2 through May 20, each year.

(ii) It is unlawful to trawl in that part of Zone IV that is in the EEZ from December 2 through April 1, each year.

(5) *Zone V* is enclosed by rhumb lines connecting, in order, points F, G, K, L, and F.

(i) It is unlawful to place a stone crab trap in that part of Zone V that is in the EEZ from October 5 through November 30 and from March 16 through May 20, each year.

(ii) It is unlawful to trawl in that part of Zone V that is in the EEZ from December 1 through March 15, each year.

[78 FR 22952, Apr. 17, 2013, as amended at 82 FR 60567, Dec. 21, 2017; 83 FR 29046, June 22, 2018; 85 FR 6818, Feb. 6, 2020]

§ 622.56 Size limits.

Shrimp not in compliance with the applicable size limit as specified in this section may not be possessed, sold, or purchased and must be released immediately with a minimum of harm. The operator of a vessel that fishes in the EEZ is responsible for ensuring that shrimp on board are in compliance with the size limit specified in this section.

(a) *White shrimp*. White shrimp harvested in the Gulf EEZ are subject to the minimum-size landing and possession limits of Louisiana when possessed within the jurisdiction of that State.

(b) [Reserved]

§ 622.57 [Reserved]

§ 622.58 Annual catch limits (ACLs), annual catch targets (ACTs), and accountability measures (AMs).

(a) *Royal red shrimp in the Gulf*—(1) *Commercial sector*. If commercial landings, as estimated by the SRD, exceed the commercial ACL, then during the following fishing year, if commercial landings reach or are projected to reach the commercial ACL, the AA will file a notification with the Office of the Federal Register to close the commercial sector for the remainder of that fishing year. When the commercial sector is closed, royal red shrimp in or

50 CFR Ch. VI (10–1–21 Edition)

from the Gulf EEZ may not be retained, and the sale or purchase of royal red shrimp taken from the Gulf EEZ is prohibited. This prohibition on sale or purchase during a closure for royal red shrimp does not apply to royal red shrimp that were harvested, landed ashore, and sold prior to the date of the closure and were held in cold storage by a dealer or processor. The commercial ACL for royal red shrimp is 337,000 lb (152,861 kg), tail weight.

(2) [Reserved]

(b) [Reserved]

[78 FR 22952, Apr. 17, 2013, as amended at 80 FR 15692, Mar. 25, 2015]

§ 622.59 Prevention of gear conflicts.

(a) No person may knowingly place in the Gulf EEZ any article, including fishing gear, that interferes with fishing or obstructs or damages fishing gear or the fishing vessel of another; or knowingly use fishing gear in such a fashion that it obstructs or damages the fishing gear or fishing vessel of another.

(b) In accordance with the procedures and restrictions of the Gulf Shrimp FMP, the RA may modify or establish separation zones for shrimp trawling and the use of fixed gear to prevent gear conflicts. Necessary prohibitions or restrictions will be published in the FEDERAL REGISTER.

§ 622.60 Adjustment of management measures.

In accordance with the framework procedures of the Gulf Shrimp FMP, the RA may establish or modify the following:

(a) *Gulf penaeid shrimp*. For a species or species group: Reporting and monitoring requirements, permitting requirements, size limits, vessel trip limits, closed seasons or areas and reopenings, quotas (including a quota of zero), MSY (or proxy), OY, management parameters such as overfished and overfishing definitions, gear restrictions (ranging from regulation to complete prohibition), gear markings and identification, vessel markings and identification, acceptable biological catch (ABC) and ABC control rules, rebuilding plans, restrictions relative to

conditions of harvested shrimp (maintaining shrimp in whole condition, use as bait), target effort and fishing mortality reduction levels, bycatch reduction criteria, BRD certification and de-certification criteria, BRD testing protocol and certified BRD specifications, and target effort reduction for juvenile red snapper mortality.

(b) *Gulf royal red shrimp*. Reporting and monitoring requirements, permitting requirements, size limits, vessel trip limits, closed seasons or areas and reopenings, annual catch limits (ACLs), annual catch targets (ACTs), quotas (including a quota of zero), accountability measures (AMs), MSY (or proxy), OY, management parameters such as overfished and overfishing definitions, gear restrictions (ranging from regulation to complete prohibition), gear markings and identification, vessel markings and identification, ABC and ABC control rules, rebuilding plans, and restrictions relative to conditions of harvested shrimp (maintaining shrimp in whole condition, use as bait), and target effort reduction for juvenile red snapper mortality.

[78 FR 22952, Apr. 17, 2013, as amended at 80 FR 74712, Nov. 30, 2015; 85 FR 6819, Feb. 6, 2020]

Subpart D—Coral and Coral Reefs of the Gulf of Mexico

§ 622.70 Permits.

See § 622.4 for information regarding general permit procedures including, but not limited to fees, duration, transfer, renewal, display, sanctions and denials, and replacement.

(a) *Required permits*—(1) *Allowable chemical*. For an individual to take or possess fish or other marine organisms with an allowable chemical in a coral area, other than fish or other marine organisms that are landed in Florida, a Federal allowable chemical permit must have been issued to the individual. Such permit must be available when the permitted activity is being conducted and when such fish or other marine organisms are possessed, through landing ashore.

(2) *Aquacultured live rock*. For a person to take or possess aquacultured live rock in the Gulf EEZ, a Federal aquacultured live rock permit must

have been issued for the specific harvest site. Such permit, or a copy, must be on board a vessel depositing or possessing material on an aquacultured live rock site or harvesting or possessing live rock from an aquacultured live rock site.

(3) *Prohibited coral*. A Federal permit may be issued to take or possess Gulf prohibited coral only as scientific research activity, exempted fishing, or exempted educational activity. See § 600.745 of this chapter for the procedures and limitations for such activities and fishing.

(4) *Florida permits*. Appropriate Florida permits and endorsements are required for the following activities, without regard to whether they involve activities in the EEZ or Florida's waters:

(i) Landing in Florida fish or other marine organisms taken with an allowable chemical in a coral area.

(ii) Landing allowable octocoral in Florida.

(iii) Landing live rock in Florida.

(b) *Application*. (1) The applicant for a coral permit must be the individual who will be conducting the activity that requires the permit. In the case of a corporation or partnership that will be conducting live rock aquaculture activity, the applicant must be the principal shareholder or a general partner.

(2) An applicant must provide the following:

(i) Name, address, telephone number, and other identifying information of the applicant.

(ii) Name and address of any affiliated company, institution, or organization.

(iii) Information concerning vessels, harvesting gear/methods, or fishing areas, as specified on the application form.

(iv) Any other information that may be necessary for the issuance or administration of the permit.

(v) If applying for an aquacultured live rock permit, identification of each vessel that will be depositing material on or harvesting aquacultured live rock from the proposed aquacultured live rock site, specification of the port of landing of aquacultured live rock, and a site evaluation report prepared

§ 622.71

pursuant to generally accepted industry standards that—

(A) Provides accurate coordinates of the proposed harvesting site so that it can be located using LORAN or Global Positioning System equipment;

(B) Shows the site on a chart in sufficient detail to determine its size and allow for site inspection;

(C) Discusses possible hazards to safe navigation or hindrance to vessel traffic, traditional fishing operations, or other public access that may result from aquacultured live rock at the site;

(D) Describes the naturally occurring bottom habitat at the site; and

(E) Specifies the type and origin of material to be deposited on the site and how it will be distinguishable from the naturally occurring substrate.

§ 622.71 Recordkeeping and reporting.

(a) *Individuals with aquacultured live rock permits.* (1) A person with a Federal aquacultured live rock permit must report to the RA each deposition of material on a site. Such reports must be postmarked not later than 7 days after deposition and must contain the following information:

(i) Permit number of site and date of deposit.

(ii) Geological origin of material deposited.

(iii) Amount of material deposited.

(iv) Source of material deposited, that is, where obtained, if removed from another habitat, or from whom purchased.

(2) A person who takes aquacultured live rock must submit a report of harvest to the RA. Specific reporting requirements will be provided with the permit. This reporting requirement is waived for aquacultured live rock that is landed in Florida.

(b) [Reserved]

§ 622.72 Prohibited gear and methods.

Also see § 622.9 for additional prohibited gear and methods that apply more broadly to multiple fisheries or in some cases all fisheries.

(a) *Power-assisted tools.* A power-assisted tool may not be used in the Gulf EEZ to take prohibited coral or live rock.

(b) [Reserved]

50 CFR Ch. VI (10–1–21 Edition)

§ 622.73 Prohibited species.

(a) *General.* The harvest and possession restrictions of this section apply without regard to whether the species is harvested by a vessel operating under a commercial vessel permit. The operator of a vessel that fishes in the EEZ is responsible for the limit applicable to that vessel.

(b) *Prohibited coral.* Gulf prohibited coral taken as incidental catch in the Gulf EEZ must be returned immediately to the sea in the general area of fishing. In fisheries where the entire catch is landed unsorted, such as the scallop and groundfish fisheries, unsorted prohibited coral may be landed ashore; however, no person may sell or purchase such prohibited coral.

(c) Wild live rock may not be harvested or possessed in or from the Gulf EEZ.

[78 FR 22952, Apr. 17, 2013, as amended at 82 FR 60567, Dec. 21, 2017]

§ 622.74 Area closures to protect Gulf corals.

For the purposes of this section, fishing gear is deployed if any part of the gear is in contact with the water.

(a) *Florida Middle Grounds HAPC.* Deployment of a bottom longline, bottom trawl, dredge, pot, or trap is prohibited year-round in the area bounded by rhumb lines connecting the following points in order:

TABLE 1 TO PARAGRAPH (a)

Point	North lat.	West long.
A	28°42.500'	84°24.800'

[85 FR 65746, Oct. 16, 2020]

§ 622.75 Harvest limitations.

(a) *Aquacultured live rock*. In the Gulf EEZ:

(1) Aquacultured live rock may be harvested only under a permit, as required under § 622.70(a)(2), and aquacultured live rock on a site may be harvested only by the person, or his or her employee, contractor, or agent, who has been issued the aquacultured live rock permit for the site. A person harvesting aquacultured live rock is exempt from the prohibition on taking prohibited coral for such prohibited coral as attaches to aquacultured live rock.

§ 622.76

(2) The following restrictions apply to individual aquaculture activities:

(i) No aquaculture site may exceed 1 acre (0.4 ha) in size.

(ii) Material deposited on the aquaculture site—

(A) May not be placed over naturally occurring reef outcrops, limestone ledges, coral reefs, or vegetated areas.

(B) Must be free of contaminants.

(C) Must be nontoxic.

(D) Must be placed on the site by hand or lowered completely to the bottom under restraint, that is, not allowed to fall freely.

(E) Must be placed from a vessel that is anchored.

(F) Must be distinguishable, geologically or otherwise (for example, be indelibly marked or tagged), from the naturally occurring substrate.

(iii) A minimum setback of at least 50 ft (15.2 m) must be maintained from natural vegetated or hard bottom habitats.

(3) Mechanically dredging or drilling, or otherwise disturbing, aquacultured live rock is prohibited, and aquacultured live rock may be harvested only by hand.

(4) Not less than 24 hours prior to harvest of aquacultured live rock, the owner or operator of the harvesting vessel must provide the following information to the NMFS Office for Law Enforcement, Southeast Region, St. Petersburg, FL, by telephone (727-824-5344):

(i) Permit number of site to be harvested and date of harvest.

(ii) Name and official number of the vessel to be used in harvesting.

(iii) Date, port, and facility at which aquacultured live rock will be landed.

(b) [Reserved]

§ 622.76 Restrictions on sale/purchase.

(a) *Gulf wild live rock*. Wild live rock in or from the Gulf EEZ may not be sold or purchased. The prohibition on sale or purchase does not apply to wild live rock from the Gulf EEZ that was harvested and landed prior to January 1, 1997.

(b) [Reserved]

50 CFR Ch. VI (10–1–21 Edition)

§ 622.77 Adjustment of management measures.

In accordance with the framework procedures of the FMP for Coral and Coral Reefs of the Gulf of Mexico, the RA may establish or modify the following:

(a) *Gulf coral resources*. For a species or species group: reporting and monitoring requirements, permitting requirements, bag and possession limits (including a bag limit of zero), size limits, vessel trip limits, closed seasons or areas and reopenings, annual catch limits (ACLs), annual catch targets (ACTs), quotas (including a quota of zero), accountability measures (AMs), MSY (or proxy), OY, TAC, management parameters such as overfished and overfishing definitions, gear restrictions (ranging from regulation to complete prohibition), gear markings and identification, vessel markings and identification, acceptable biological catch (ABC) and ABC control rules, rebuilding plans, sale and purchase restrictions, transfer at sea provisions, and restrictions relative to conditions of harvested corals.

(b) [Reserved]

Subpart E—Red Drum Fishery of the Gulf of Mexico

SOURCE: 79 FR 19494, Apr. 9, 2014, unless otherwise noted.

§ 622.90 Permits.

(a) *Dealer permits and conditions*—(1) *Permits*. For a dealer to first receive Gulf red drum harvested in or from the EEZ, a Gulf and South Atlantic dealer permit must be issued to the dealer.

(2) *State license and facility requirements*. To obtain a dealer permit, the applicant must have a valid state wholesaler's license in the state(s) where the dealer operates, if required by such state(s), and must have a physical facility at a fixed location in such state(s).

(b) *Permit procedures*. See § 622.4 for information regarding general permit procedures including, but not limited to application, fees, duration, transfer, renewal, display, sanctions and denials, and replacement.

Fishery Conservation and Management

§ 622.100

§ 622.91 Recordkeeping and reporting.

(a) *Dealers.* A dealer who first receives Gulf red drum must maintain records and submit information as specified in § 622.5(c).

(b) [Reserved]

§ 622.92 Prohibited species.

(a) *General.* The harvest and possession restrictions of this section apply without regard to whether the species is harvested by a vessel operating under a commercial vessel permit. The operator of a vessel that fishes in the EEZ is responsible for the limit applicable to that vessel.

(b) *Red drum.* Red drum may not be harvested or possessed in or from the Gulf EEZ. Such fish caught in the Gulf EEZ must be released immediately with a minimum of harm.

§ 622.93 Adjustment of management measures.

In accordance with the framework procedures of the FMP for the Red Drum Fishery of the Gulf of Mexico, the RA may establish or modify the following items:

(a) Reporting and monitoring requirements, permitting requirements, bag and possession limits (including a bag limit of zero), size limits, vessel trip limits, closed seasons or areas and reopenings, annual catch limits (ACLs), annual catch targets (ACTs), quotas (including a quota of zero), accountability measures (AMs), MSY (or proxy), OY, TAC, management parameters such as overfished and overfishing definitions, gear restrictions (ranging from regulation to complete prohibition), gear markings and identification, vessel markings and identification, ABC and ABC control rules, rebuilding plans, sale and purchase restrictions, transfer at sea provisions, and restrictions relative to conditions of harvested fish (maintaining fish in whole condition, use as bait).

(b) [Reserved]

Subpart F—Offshore Marine Aquaculture in the Gulf of Mexico

SOURCE: 81 FR 1792, Jan. 13, 2016, unless otherwise noted.

§ 622.100 General.

This subpart provides the regulatory structure for enabling environmentally sound and economically sustainable aquaculture in the Gulf EEZ. Offshore marine aquaculture activities are authorized by a Gulf aquaculture permit or Gulf aquaculture dealer permit issued under § 622.101 and are conducted in compliance with the provisions of this subpart. Aquaculture of live rock is addressed elsewhere in this part and is exempt from the provisions of this subpart.

(a) *Electronic system requirements.* (1) The administrative functions associated with this aquaculture program, e.g., registration and account setup, landing transactions and most reporting requirements, are intended to be accomplished online via the Southeast Regional Office's Web site at http://sero.nmfs.noaa.gov/sustainable_fisheries/gulf_fisheries/aquaculture/ therefore, a participant must have access to a computer and Internet access and must set up an appropriate online aquaculture account to participate. Assistance with online functions is available from the Permits Office, Monday through Friday between 8 a.m. and 4:30 p.m. eastern time; telephone: 1 (877) 376-4877. If some online reporting functions are not available at the time of initial implementation of this aquaculture program, this will be indicated on the Web site and participants may comply by submitting the required information via email using the appropriate forms that are available on the Web site. Once online functions are available, participants must comply by using the online system unless alternative methods are specified.

(2) The RA will mail each person who is issued a Gulf aquaculture permit or a Gulf aquaculture dealer permit information and instructions pertinent to using the online system and setting up an online aquaculture account. The RA also will mail each permittee a user identification number and will provide each permittee a personal identification number (PIN) in a subsequent letter. Each permittee must monitor his/her online account and all associated messages and comply with all online reporting requirements.

(3) During catastrophic conditions only, the RA may authorize use of paper-based components for basic required functions as a backup to what would normally be reported electronically. The RA will determine when catastrophic conditions exist, the duration of the catastrophic conditions, and which participants or geographic areas are deemed affected by the catastrophic conditions. The RA will provide timely notice to affected participants via publication of notification in the FEDERAL REGISTER, NOAA weather radio, fishery bulletins, and other appropriate means and will authorize the affected participants' use of paper-based components for the duration of the catastrophic conditions. NMFS will provide each aquaculture permittee the necessary paper forms, sequentially coded, and instructions for submission of the forms to the RA. The paper forms also will be available from the RA. The program functions available to participants or geographic areas deemed affected by catastrophic conditions may be limited under the paper-based system. Assistance in complying with the requirements of the paper-based system will be available via the Permits Office, Monday through Friday between 8 a.m. and 4:30 p.m., eastern time; telephone: 1 (877) 376-4877.

(b) [Reserved]

§ 622.101 Permits.

(a) *Gulf aquaculture permit.* For a person to deploy or operate an aquaculture facility in the Gulf EEZ or sell or attempt to sell, at the first point of sale, an allowable aquaculture species cultured in the Gulf EEZ, a Gulf aquaculture permit must have been issued to that person for that aquaculture facility, and the permit must be prominently displayed and available for inspection at the aquaculture facility. The permit number should also be included on the buoys or other floating devices used to mark the restricted access zone of the operation as specified in § 622.104(c).

(1) *Eligibility requirement for a Gulf aquaculture permit.* Eligibility for a Gulf aquaculture permit is limited to U.S. citizens as defined in the Immigration and Nationality Act of 1952, as amended, and permanent resident

aliens lawfully accorded the privilege of residing permanently in the U.S. in accordance with U.S. immigration laws.

(2) *Application for a Gulf aquaculture permit.* Application forms are available from the RA. A completed application form and all required supporting documents must be submitted by the applicant (in the case of a corporation, an officer; in the case of a partnership, a general partner) to the RA at least 180 days prior to the date the applicant desires the permit to be effective. An applicant must provide all information indicated on the application form including:

(i) Applicant's name, address, and telephone number.

(ii) Business name, address, telephone number, date the business was formed, and, if the applicant is a corporation, corporate structure and shareholder information.

(iii) Information sufficient to document eligibility as a U.S. citizen or permanent resident alien.

(iv) Description of the exact location (*i.e.*, global positioning system (GPS) coordinates) and dimensions of the proposed aquaculture facility and proposed site, including a map of the site to scale.

(v) A baseline environmental survey of the proposed aquaculture site. The assessment must be conducted, and the data, analyses, and results must be summarized and presented, consistent with the guidelines specified by NMFS. NMFS' guidelines will include methods and procedures for conducting diver and video surveys, measuring hydrographic conditions, collecting and analyzing benthic sediments and infauna, and measuring water quality characteristics. The guidelines will be available on the Web site and from the RA upon request.

(vi) A list of allowable aquaculture species to be cultured; estimated start up production level by species; and the estimated maximum total annual poundage of each species to be harvested from the aquaculture facility.

(vii) Name and address or specific location of each hatchery that would provide juvenile animals for grow-out at the proposed aquaculture facility located within the Gulf EEZ and a copy

of all relevant, valid state or Federal aquaculture permits issued to the hatchery.

(viii) A description of the aquaculture system(s) to be used, including the number, size and dimensions of the aquaculture system(s), a description of the mooring system(s) used to secure the aquaculture system(s), and documentation of the aquaculture system's ability to withstand physical stress, such as hurricanes, wave energy, etc., including a copy of any available engineering analysis.

(ix) A description of the equipment and methods to be used for feeding, transporting, maintaining, and removing cultured species from aquaculture systems.

(x) A copy of the valid USCG certificate of documentation or, if not documented, a copy of the valid state registration certificate for each vessel involved in the aquaculture operation; and documentation or identification numbers for any aircraft or vehicles involved.

(xi) Documentation certifying that:

(A) the applicant agrees to immediately remove cultured animals remaining in approved aquaculture systems from the Gulf EEZ as ordered by the RA if it is discovered that the animals are genetically engineered or transgenic;

(B) the applicant agrees to immediately remove cultured animals remaining in approved aquaculture systems from the Gulf EEZ as ordered by the RA if fish are discovered to be infected with a World Organization of Animal Health (OIE) reportable pathogen that represents a new detection in the Gulf or a new detection for that cultured species in the U.S. is found at the facility, or additional pathogens that are subsequently identified as reportable pathogens in the National Aquatic Animal Health Plan (NAAHP), or any other pathogen determined by NMFS and APHIS to pose a significant threat to the health of wild aquatic organisms; and,

(C) the applicant agrees to immediately remove all components of the aquaculture system and cultured animals remaining in approved aquaculture systems from the Gulf EEZ as ordered by the RA if there are any

other violations of the permit conditions or regulations other than those listed in paragraphs (a)(2)(xi)(A) and (B) of this section which causes the RA to order such removal.

(xii) Documentation certifying the applicant has obtained an assurance bond sufficient to cover the costs of removal of all components of the aquaculture facility, including cultured animals remaining in approved aquaculture systems, from the Gulf EEZ. The assurance bond would not be required to cover the costs of removing an oil and gas platform. The RA will provide applicants a form and associated guidance for complying with the assurance bond requirement. The applicant must also provide documentation certifying the applicant has established a standby trust fund into which any payments made towards the assurance bond can be deposited. The trustee of the standby trust may not be the same entity as the permittee. The assurance bond is payable at the discretion of the RA to a designee as specified in the bond or to a standby trust. When the RA directs the payment into a standby trust, all amounts paid by the assurance bond provider must be deposited directly into the standby trust fund for distribution by the trustee in accordance with the RA's instructions. A permittee will be deemed to be without the required financial assurance in the event of bankruptcy of the trustee or issuing institution, or a suspension or revocation of the authority of the trustee institution to act as trustee or of the institution issuing the assurance bond. The permittee must establish other financial assurance within 60 days after such an event.

(xiii) Certification by the applicant that all broodstock, or progeny of such wild broodstock, used to provide juveniles to the aquaculture facility will be or were originally harvested from U.S. waters of the Gulf, and will be or were from the same population or subpopulation (based on the best scientific information available) where the facility is located, and that each individual broodstock was marked or tagged at the hatchery to allow for identification of those individuals used in spawning.

(xiv) Certification by the applicant that no genetically engineered or

transgenic animals are used or possessed for culture purposes at the aquaculture facility.

(xv) Copy of a contractual arrangement with an identified aquatic animal health expert to provide services to the aquaculture facility has been obtained. A copy of the license or certification also must be provided to NMFS.

(xvi) A copy of an emergency disaster plan, developed for and to be used by the operator of the aquaculture facility, that includes, procedures for preparing or if necessary removing aquaculture systems, aquaculture equipment, and cultured animals in the event of a disaster (*e.g.*, hurricane, tsunami, harmful algal bloom, chemical or oil spill, etc.);

(xvii) Any other information concerning the aquaculture facility or its operations or equipment, as specified on the application form.

(xviii) Any other information that may be necessary for the issuance or administration of the Gulf aquaculture permit, as specified on the application form.

(b) *Gulf aquaculture dealer permit.* For a dealer to receive fish cultured by an aquaculture facility in the Gulf EEZ, that dealer must first obtain a Gulf aquaculture dealer permit. However, an owner or operator of an aquaculture facility with a Gulf aquaculture permit may purchase juvenile fish for grow-out from a hatchery located in the Gulf EEZ without obtaining a dealer permit. To obtain a dealer permit, the applicant must have a valid state wholesaler's license in the state(s) where the dealer operates, if required by such state(s), and must have a physical facility at a fixed location in such state(s).

(1) *Application for a Gulf aquaculture dealer permit.* Application forms are available from the RA. The application must be submitted by the owner (in the case of a corporation, an officer; in the case of a partnership, a general partner). Completed application forms and all required supporting documents must be submitted to the RA at least 30 days prior to the date on which the applicant desires to have the permit made effective. An applicant must provide the following:

(i) A copy of each state wholesaler's license held by the dealer.

(ii) Name, address, telephone number, date the business was formed, and other identifying information of the business.

(iii) The address of each physical facility at a fixed location where the business receives fish from an aquaculture facility in the Gulf EEZ.

(iv) Name, address, telephone number, other identifying information, and official capacity in the business of the applicant.

(v) Any other information that may be necessary for the issuance or administration of the permit, as specified on the application form.

(2) [Reserved]

(c) *Permit requirements for other aquaculture-related activities.* For a person to do any of the following, such person must have in his/her possession and make available upon request by NMFS or an authorized officer, a copy of a valid Gulf aquaculture permit with an original (not copied) signature of the permit owner or owner's agent:

(1) Possess or transport fish in or from the Gulf EEZ to be cultured at an aquaculture facility (*e.g.*, brood stock, fingerlings) or possess or transport fish from an aquaculture facility for landing ashore and sale.

(2) Operate, in support of aquaculture related activities, any vessel, vehicle, or aircraft authorized for use in operations related to an aquaculture facility, *i.e.*, those registered for aquaculture operation use.

(3) Harvest and retain on board a vessel live wild broodstock for use in an aquaculture facility regardless of where the broodstock is harvested or possessed.

(d) *Permit-related procedures—(1) Fees.* A fee is charged for each application for a permit submitted under this section and for each request for renewal, transfer or replacement of such permit. The amount of each fee is calculated in accordance with the procedures of the NOAA Finance Handbook, available from the RA, for determining the administrative costs of each special product or service. The fee may not exceed such costs and is specified with each application form. The appropriate fee must accompany each application or

request for renewal, transfer or replacement.

(2) *Review and notifications regarding a Gulf aquaculture permit.* (i) The RA will review each application and make a preliminary determination whether the application is complete. An application is complete when all requested forms, information, and documentation have been received. If the RA determines that an application is complete, notification of receipt of the application will be published in the FEDERAL REGISTER with a brief description of the proposal and specifying the intent of NMFS to issue a Gulf aquaculture permit. The public will be given up to 45 days to comment, and comments will be requested during public testimony at a Council meeting. The RA will consult with other Federal agencies, as appropriate, and the Council concerning the permit application during the period in which public comments have been requested. The RA will notify the applicant in advance of any Council meeting at which the application will be considered, and offer the applicant the opportunity to appear in support of the application. The RA may consider revisions to the application made by the applicant in response to public comment before approving or denying it.

(ii) As soon as practicable after the opportunity for public comment ends, the RA will notify the applicant and the Council in writing of the decision to grant or deny the Gulf aquaculture permit. If the RA grants the permit, the RA will publish a notification of the permit approval in the FEDERAL REGISTER. If the RA denies the permit, the RA will advise the applicant, in writing, of the reasons for the denial and publish a notification in the FEDERAL REGISTER announcing the denial and the basis for it. Grounds for denial of a Gulf aquaculture permit include the following:

(A) The applicant has failed to disclose material information or has made false statements with respect to any material fact, in connection with the Gulf aquaculture permit application;

(B) Based on the best scientific information available, issuance of the permit would pose significant risk to wild fish stocks, marine mammals, threatened or endangered species, essential

fish habitat, public health, or safety; or,

(C) Activities proposed to be conducted under the Gulf aquaculture permit are inconsistent with aquaculture regulations in this section, the management objectives of the FMP, or the Magnuson-Stevens Act or other applicable law.

(D) Use of the proposed site is denied based on the criteria set forth in § 622.103(a)(4).

(3) *Initial issuance.* (i) Upon receipt of an incomplete application, the RA will notify the applicant of the deficiency. If the applicant fails to correct the deficiency within 60 days of the date of the RA's letter of notification or request an extension of time by contacting the NMFS Southeast Regional Office before the end of the 60-day timeframe, the application will be considered abandoned.

(ii) Prior to issuance of a Gulf aquaculture permit, a copy of currently valid Federal permits (*e.g.*, ACOE Section 10 permit, and Environmental Protection Agency (EPA) National Pollutant Discharge Elimination System (NPDES) permit) applicable to the proposed aquaculture site, facilities, or operations, must be submitted to NMFS.

(iii) The RA will issue an initial permit to an applicant after the review and notification procedures set forth in paragraph (d)(2)(i) of this section are complete and the decision to grant the permit is made under paragraph (d)(2)(ii) of this section. The initial permit will be issued 30 days after the RA notifies the applicant of the decision to grant the permit, unless NMFS receives a written request from the applicant before the end of the 30 day period to defer issuance of the permit. If the applicant requests a deferral, NMFS will include this information in the notification of permit approval published in the FEDERAL REGISTER as specified in paragraph (d)(2)(ii) of this section and will publish a FEDERAL REGISTER notice upon permit issuance. Permit issuance will be deferred for two years from the date of the RA notification unless the applicant sends a written request to NMFS to issue the permit at an earlier date. This written request must be received by NMFS at least 30

days prior to the date the applicant desires the permit to be effective.

(4) *Duration.* A Gulf aquaculture permit will initially be issued for a 10-year period and may be renewed in 5-year increments thereafter. An aquaculture dealer permit is an annual permit and must be renewed annually. A permit remains valid for the period specified on it unless it is revoked, suspended, or modified pursuant to subpart D of 15 CFR part 904 or the aquaculture facility is sold and the permit has not been transferred or the dealership is sold. Once the aquaculture permit is no longer valid, all components of the aquaculture facility, including cultured animals remaining in approved aquaculture systems, must be removed immediately from the Gulf EEZ.

(5) *Transfer.* (i) A Gulf aquaculture permit is transferable to an eligible person, *i.e.*, a U.S. citizen or permanent resident alien if the geographic location of the aquaculture site remains unchanged. An eligible person who acquires an aquaculture facility that is currently permitted and who desires to conduct activities for which a permit is required may request that the RA transfer the permit to him/her. At least 30 days prior to the desired effective date of the transfer, such a person must complete and submit to the RA or via the Web site a permit transfer request form that is available from the RA. The permit transfer request form must be accompanied by the original Gulf aquaculture permit, a copy of a signed bill of sale or equivalent acquisition papers, and a written agreement between the transferor and transferee specifying who is assuming the responsibilities and liabilities associated with the Gulf aquaculture permit and the aquaculture facility, including all the terms and conditions associated with the original issuance of the Gulf aquaculture permit. All applicable permit requirements and conditions must be satisfied prior to a permit transfer, including any necessary updates, *e.g.*, updates regarding required certifications, legal responsibility for assurance bond, other required permits, etc. The seller must sign the back of the Gulf aquaculture permit, and have the signed transfer document notarized. Final transfer of a Gulf aquaculture permit

will occur only after the RA provides official notice to both parties that the transferee is eligible to receive the permit and that the transfer is otherwise valid.

(ii) An aquaculture dealer permit is not transferable.

(6) *Renewal.* An aquaculture facility owner or aquaculture dealer who has been issued a permit under this subpart must renew such permit consistent with the applicable duration of the permit specified in paragraph (d)(4) of this section. The RA will mail an aquaculture facility owner or aquaculture dealer whose permit is expiring an application for renewal at least 6 months prior to the expiration date of a Gulf aquaculture facility permit and approximately 2 months prior to the expiration date of an aquaculture dealer permit. An aquaculture facility owner or aquaculture dealer who does not receive a renewal application from the RA within the time frames indicated in this paragraph must contact the RA and request a renewal application. The applicant must submit a completed renewal application form and all required supporting documents to the RA at least 120 days prior to the date on which the applicant desires to have a Gulf aquaculture permit made effective and at least 30 days prior to the date on which the applicant desires to have an aquaculture dealer permit made effective. If the RA receives an incomplete application, the RA will notify the applicant of the deficiency. If the applicant fails to correct the deficiency within 60 days of the date of the RA's letter of notification or request an extension of time by contacting the NMFS Southeast Regional Office before the end of the 60 day timeframe, the application will be considered abandoned.

(7) *Display.* A Gulf aquaculture permit issued under this section must be prominently displayed and available for inspection at the aquaculture facility. The permit number should also be included on the buoys or other floating devices used to mark the restricted access zone of the operation as specified in § 622.104(c). An aquaculture dealer permit issued under this section, or a copy thereof, must be prominently displayed and available on the dealer's

premises. In addition, a copy of the dealer's permit, or the aquaculture facility's permit (if the fish have not yet been purchased by a dealer), must accompany each vehicle that is used to receive fish harvested from an aquaculture facility in the Gulf EEZ. A vehicle operator must present the permit or a copy for inspection upon the request of an authorized officer.

(8) *Sanctions and denials.* A Gulf aquaculture permit or aquaculture dealer permit issued pursuant to this section may be revoked, suspended, or modified, and such permit applications may be denied, in accordance with the procedures governing enforcement-related permit sanctions and denials found at subpart D of 15 CFR part 904.

(9) *Alteration.* A Gulf aquaculture permit or aquaculture dealer permit that is altered, erased, or mutilated is invalid.

(10) *Replacement.* A replacement Gulf aquaculture permit or aquaculture dealer permit may be issued. An application for a replacement permit is not considered a new application.

(11) *Change in application information.* An aquaculture facility owner or aquaculture dealer who has been issued a permit under this subpart must notify the RA within 30 days after any change in the applicable application information specified in paragraphs (a) or (b) of this section. If any change in the information is not reported within 30 days aquaculture operations may no longer be conducted under the permit.

§ 622.102 Recordkeeping and reporting.

(a) Participants in Gulf aquaculture activities addressed in this subpart must keep records and report as specified in this section. Unless otherwise specified, required reporting must be accomplished electronically via the Web site. See § 622.100(a)(3) regarding provisions for paper-based reporting in lieu of electronic reporting during catastrophic conditions as determined by the RA. Recordkeeping (*i.e.*, maintaining records versus submitting reports) may, to the extent feasible, be maintained electronically; however, paper-based recordkeeping also is acceptable.

(1) *Aquaculture facility owners or operators.* An aquaculture facility owner or

operator must comply with the following requirements:

(i) *Reporting requirements—(A) Transport of fingerlings/juvenile fish to an aquaculture facility.* Report the time, date, species and number of cultured fingerlings or other juvenile animals that will be transported from a hatchery to an aquaculture facility at least 72 hours prior to transport. This information may be submitted electronically via the Web site or via phone. In addition, permittees are to maintain and make available to NMFS or an authorized officer upon request a written or electronic daily record of the number of cultured animals introduced into and the total pounds and average weight of fish removed from each approved aquaculture system, including mortalities, for the most recent 3 years.

(B) *Major escapement.* Report any major escapement or suspected major escapement within 24 hours of the event. Major escapement is defined as the escape, within a 24-hour period, of 10 percent of the fish from a single approved aquaculture system (*e.g.*, one cage or one net pen) or 5 percent or more of the fish from all approved aquaculture systems combined, or the escape, within any 30-day period, of 10 percent or more of the fish from all approved aquaculture systems combined. The report must include the items in paragraphs (a)(1)(i)(B)(I) through (6) of this section and may be submitted electronically via the Web site. If no major escapement occurs during a given year, an annual report must be submitted via the Web site on or before January 31 each year indicating no major escapement occurred.

(I) Gulf aquaculture permit number;

(2) Name and phone number of a contact person;

(3) Duration and specific location of escapement, including the number of cages or net pens involved;

(4) Cause(s) of escapement;

(5) Number, size, and percent of fish, by species, that escaped; and

(6) Actions being taken to address the escapement.

(C) *Pathogens.* Report, within 24 hours of diagnosis, all findings or suspected findings of any OIE-reportable pathogen episodes or pathogens that

are identified as reportable pathogens in the NAAHP, as implemented by the USDA and U.S. Departments of Commerce and Interior, that are known to infect the cultured species. The report must include the items in paragraphs (a)(1)(i)(C)(I) through (6) of this section and may be submitted electronically via the Web site. If no finding or suspected finding of an OIE-reportable pathogen episode occurs during a given year, an annual report must be submitted via the Web site on or before January 31 each year indicating no finding or suspected finding of an OIE-reportable pathogen episode occurred. See § 622.108(a)(1) regarding actions NMFS may take to address a pathogen episode.

- (1) OIE-reportable pathogen;
 - (2) Percent of cultured animals infected;
 - (3) Findings of the aquatic animal health expert;
 - (4) Plans for submission of specimens for confirmatory testing (as required by the USDA);
 - (5) Testing results (when available); and
 - (6) Actions being taken to address the reportable pathogen episode.
- (D) *Harvest notification.* Report the time, date, and weight of fish to be harvested from an aquaculture facility at least 72 hours prior to harvest. This information may be submitted electronically via the Web site or via phone.
- (E) *Landing information.* Report the intended time, date, and port of landing for any vessel landing fish harvested from an aquaculture facility at least 72 hours prior to landing. This information may be submitted electronically via the Web site or via phone. The person landing the cultured animals must validate the dealer transaction report required in paragraph (a)(2)(i) of this section by entering the unique PIN number of the Gulf aquaculture permit holder from whom the fish were received when the transaction report is submitted.

(F) *Change of hatchery.* Report any change in hatcheries used for obtaining fingerlings or other juvenile animals and provide updated names and addresses or specific locations (if no address is available) for the applicable hatcheries no later than 30 days after

any such change occurs. This information may be submitted electronically via the Web site.

(G) *Entanglements or interactions with marine mammals, endangered species, or migratory birds.* Report any entanglement or interaction with marine mammals, endangered species, or migratory birds within 24 hours of the event. The report must include the items included in paragraphs (a)(1)(i)(G)(I) through (5) of this section and may be submitted electronically via the Web site. If no entanglement or interaction with marine mammals, endangered species, or migratory birds occurs during a given year, an annual report must be submitted via the Web site on or before January 31 each year indicating no entanglement or interaction occurred.

- (1) Date, time, and location of entanglement or interaction.
 - (2) Species entangled or involved in interactions and number of individuals affected;
 - (3) Number of mortalities and acute injuries observed;
 - (4) Cause of entanglement or interaction; and
 - (5) Actions being taken to prevent future entanglements or interactions.
- (H) *Feed invoices.* The permittee must keep the original purchase invoices for feed or copies of purchase invoices for feed, make them available to NMFS or an authorized officer upon request, and be maintained for a period of 3 years.
- (I) Any other reporting requirements specified by the RA for evaluating and assessing the environmental impacts of an aquaculture operation.

(ii) *Other reporting requirements.* In addition to the reporting requirements in paragraph (a)(1)(i) of this section, an aquaculture facility owner or operator must comply with the following reporting requirements:

(A) Provide NMFS with current copies of all valid state and Federal permits (*e.g.*, ACOE Section 10 permit, EPA NPDES permit) required for conducting offshore aquaculture and report any changes applicable to those permits.

(B) Provide NMFS with current copies of all valid state and Federal aquaculture permits for each hatchery from which fingerlings or other juvenile animals are obtained and report any

changes applicable to those permits within 30 days.

(iii) *Recordkeeping requirements.* An aquaculture facility owner or operator must comply with the following recordkeeping requirements:

(A) Maintain for the most recent 3 years and make available to NMFS or an authorized officer, upon request, monitoring reports related to aquaculture activities required by all other state and Federal permits (*e.g.*, EPA NPDES permit) required for conducting offshore aquaculture.

(B) Maintain records of all sales of fish for the most recent 3 years and make that information available to NMFS or an authorized officer upon request. Sale records must include the species and quantity of fish sold in pounds round weight; estimated average weight of fish sold to the nearest tenth of a pound by species; date sold; and the name of the entity to whom fish were sold.

(2) *Aquaculture dealer recordkeeping and reporting requirements.* A dealer who purchases fish from an aquaculture facility in the Gulf EEZ must:

(i) Complete a landing transaction report for each landing and sale of cultured animals via the Web site at the time of the transaction in accordance with reporting form and instructions provided on the Web site. This report includes date, time, and location of transaction; information necessary to identify the Gulf aquaculture permit holder, vessel, and dealer involved in the transaction; quantity, in pounds round weight, and estimated average weight of each species landed to the nearest tenth of a pound; and average price paid for cultured animals landed and sold by market category. A dealer must maintain such record for at least 3 years after the receipt date and must make such record available for inspection upon request to NMFS or an authorized officer.

(ii) After the dealer submits the report and the information has been verified, the Web site will send a transaction approval code to the dealer and the aquaculture permit holder.

(b) [Reserved]

§ 622.103 Aquaculture facilities.

(a) *Siting requirements and conditions.*

(1) No aquaculture facility may be sited in the Gulf EEZ within a marine protected area, marine reserve, Habitat Area of Particular Concern, Special Management Zone, permitted artificial reef area specified in this part or a coral area as defined in § 622.2.

(2) No aquaculture facility may be sited within 1.6 nautical miles (3 km) of another aquaculture facility and all structures associated with the facility must remain within the sited boundaries.

(3) To allow fallowing and rotation of approved aquaculture systems within a site permitted by the ACOE and approved by NMFS, the permitted site for the aquaculture facility must be at least twice as large as the combined area of the aquaculture systems.

(4) The RA will evaluate siting criteria for proposed offshore aquaculture operations on a case-by-case basis. Criteria considered by the RA during case-by-case review include data, analyses, and results of the required baseline environmental survey as specified in § 622.101(a)(2)(v); depth of the site; the frequency of harmful algal blooms or hypoxia at the proposed site; marine mammal migratory pathways; the location of the site relative to commercial and recreational fishing grounds and important natural fishery habitats (*e.g.*, seagrasses). The RA may deny use of a proposed aquaculture site based on a determination by the RA that such a site poses significant risks to wild fish stocks, essential fish habitat, endangered or threatened species, marine mammals, will result in user conflicts with commercial or recreational fishermen or other marine resource users, will result in user conflicts with the OCS energy program, the depth of the site is not sufficient for the approved aquaculture system, substrate and currents at the site will inhibit the dispersal of wastes and effluents, the site is prone to low dissolved oxygen or harmful algal blooms, or other grounds inconsistent with FMP objectives or applicable Federal laws. The information used for siting a facility with regard to proximity to commercial and recreational fishing grounds includes electronic logbooks from the shrimp

fishery, logbook reported fishing locations, siting information from previously proposed or permitted aquaculture facilities, and other data that would provide information regarding how the site would interact with other fisheries. The RA's determination will be based on consultations with appropriate NMFS and NOAA offices and programs, public comment, as well as siting and other information submitted by the permit applicant. If a proposed site is denied, the RA will deny the Gulf Aquaculture Permit and provide this determination as required by § 622.101(d)(2)(ii).

(b) [Reserved]

§ 622.104 Restricted access zones.

(a) *Establishment of restricted access zones.* NMFS will establish a restricted access zone for each aquaculture facility. The boundaries of the restricted access zone will correspond with the coordinates listed on the approved ACOE Section 10 permit associated with the aquaculture facility.

(b) *Prohibited activities within a restricted access zone.* No recreational fishing or commercial fishing, other than aquaculture, may occur in the restricted access zone. No fishing vessel may operate in or transit through the restricted access zone unless the vessel has on board a copy of the aquaculture facility's permit with an original signature, *i.e.*, not a copy of the signature, of the permittee.

(c) *Marking requirement.* The permittee must mark the restricted access zone with a floating device such as a buoy at each corner of the zone, as authorized by the USCG. Each floating device must clearly display the aquaculture facility's permit number and the words "RESTRICTED ACCESS" in block characters at least 6 inches (15.2 cm) in height and in a color that contrasts with the color of the floating device.

§ 622.105 Allowable aquaculture systems and species.

(a) *Allowable aquaculture systems.* The RA will evaluate each proposed aquaculture system on a case-by-case basis and approve or deny use of the proposed system for offshore marine aquaculture in the Gulf EEZ. Proposed

aquaculture systems may consist of cages, net pens, enclosures or other structures and gear which are used to culture marine species. The RA will evaluate the structural integrity of a proposed aquaculture system based, in part, on the required documentation (*e.g.*, engineering analyses, computer and physical oceanographic model results) submitted by the applicant to assess the ability of the aquaculture system(s) (including moorings) to withstand physical stresses associated with major storm events, *e.g.* hurricanes, storm surge. The RA also will evaluate the proposed aquaculture system and its operations based on the potential to pose significant risks to essential fish habitat, endangered or threatened species, marine mammals, wild fish stocks, public health, or safety. The RA may deny use of a proposed aquaculture system or specify conditions for using an aquaculture system based on a determination of such significant risks. The RA's evaluation will be based on information provided by the applicant as well as consultations with appropriate NMFS and NOAA offices and programs. If the RA denies use of a proposed aquaculture system or specifies conditions for its use, the RA will deny the Gulf Aquaculture Permit and provide this determination as required by § 622.101(d)(2)(ii).

(b) *Allowable aquaculture species.* Only the following federally managed species that are native to the Gulf and are not genetically engineered or transgenic, may be cultured in an aquaculture facility in the Gulf EEZ:

- (1) Species of coastal migratory pelagic fish, as defined in § 622.2.
- (2) Species of Gulf reef fish, as listed in appendix A to this part.
- (3) Red drum, *Sciaenops ocellatus*.
- (4) Spiny lobster, *Panulirus argus*.

§ 622.106 Aquaculture operations.

(a) *Operational requirements and restrictions.* An owner or operator of an aquaculture facility for which a Gulf aquaculture permit has been issued must comply with the following operational requirements and restrictions.

(1) *Minimum start-up requirement.* At least 25 percent of aquaculture systems approved for use at a specific aquaculture facility at the time of permit

issuance must be placed in the water at the permitted aquaculture site within 2 years of issuance of the Gulf aquaculture permit, and allowable species for aquaculture must be placed in the aquaculture system(s) within 3 years of issuance of the permit. Failure to comply with these requirements will be grounds for revocation of the permit. A permittee may request a 1-year extension to the above time schedules in the event of a catastrophe (*e.g.*, hurricane). Requests must be made in writing and submitted to the RA. The RA will approve or deny the request after determining if catastrophic conditions directly caused or significantly contributed to the permittee's failure to meet the required time schedules. The RA will provide the determination and the basis for it, in writing, to the permittee.

(2) *Marking requirement.* The permittee must maintain a minimum of one properly functioning electronic locating device (*e.g.*, GPS device, pinger with radio signal) on each approved aquaculture system placed in the water at the aquaculture facility.

(3) *Restriction on allowable hatcheries.* A permittee may only obtain juvenile animals for grow-out at an aquaculture facility from a hatchery located in the U.S.

(4) *Hatchery certifications.* (i) The permittee must obtain and submit to NMFS a signed certification from the owner(s) of the hatchery, from which fingerlings or other juvenile animals are obtained, indicating the broodstock have been individually marked or tagged (*e.g.*, via a Passive Integrated Transponder (PIT), coded wire, dart, or internal anchor tag) to allow for identification of those individuals used in spawning.

(ii) The permittee also must obtain and submit to NMFS signed certification from the owner(s) of the hatchery indicating that fin clips or other genetic materials were collected and submitted for each individual brood animal in accordance with procedures specified by NMFS.

(iii) The certifications required in paragraphs (a)(4)(i) and (ii) of this section must be provided to NMFS by the permittee each time broodstock are ac-

quired by the hatchery or used for spawning.

(5) *Health certification.* Prior to stocking fish in an approved aquaculture system at an aquaculture facility in the Gulf EEZ, the permittee must provide NMFS a copy of a health certificate (suggested form is USDA/Animal and Plant Health Inspection Service (APHIS) VS 17-141, OMB 0579-0278) signed by an aquatic animal health expert, as defined in §622.101(a)(2)(xv), certifying that the fish have been inspected and are visibly healthy and the source population is test negative for OIE pathogens specific to the cultured species and pathogens identified as reportable pathogens in the NAAHP as implemented by the USDA and U.S. Departments of Commerce and Interior.

(6) *Use of drugs and other chemicals or agents.* Use of drugs, pesticides, and biologics must comply with all applicable Food and Drug Administration (FDA), EPA, and USDA requirements (*e.g.*, Federal Food, Drug and Cosmetic Act, 21 U.S.C. 301 *et seq.*; Clean Water Act, 40 CFR part 122; 9 CFR parts 101 through 124; 21 CFR parts 500 through 599; and 40 CFR parts 150 through 189).

(7) *Feed practices and monitoring.* The permittee must conduct feed monitoring and management practices in compliance with EPA regulations at 40 CFR 451.21, if applicable to the facility.

(8) *Monitoring and reporting compliance.* The permittee must monitor and report the environmental survey parameters at the aquaculture facility consistent with NMFS' guidelines that will be available on the Web site and from the RA upon request. The permittee also must comply with all applicable monitoring and reporting requirements specified in their valid ACOE Section 10 permit and valid EPA NPDES permit.

(9) *Inspection for protected species.* The permittee must regularly inspect approved aquaculture systems, including mooring and anchor lines, for entanglements or interactions with marine mammals, protected species, and migratory birds. The frequency of inspections will be specified by NMFS as a condition of the permit. If entanglements or interactions are observed,

they must be reported as specified in § 622.102(a)(1)(i)(G).

(10) *Fishing gear stowage requirement.* Any vessel transporting cultured animals to or from an aquaculture facility must stow fishing gear as follows:

(i) A longline may be left on the drum if all gangions and hooks are disconnected and stowed below deck. Hooks cannot be baited. All buoys must be disconnected from the gear; however, buoys may remain on deck.

(ii) A trawl net may remain on deck, but trawl doors must be disconnected from the trawl gear and must be secured.

(iii) A gillnet must be left on the drum. Any additional gillnets not attached to the drum must be stowed below deck.

(iv) A rod and reel must be removed from the rod holder and stowed securely on or below deck. Terminal gear (*i.e.*, hook, leader, sinker, flasher, or bait) must be disconnected and stowed separately from the rod and reel. Sinkers must be disconnected from the down rigger and stowed separately.

(v) All other fishing gear must be stored below deck or in an area where it is not normally used or readily available for fishing.

(11) *Prohibition of possession of wild fish in restricted access zone.* Except for broodstock, authorized pursuant to paragraph (a)(16) of this section, possession of any wild fish at or within the boundaries of an aquaculture facility's restricted access zone is prohibited.

(12) *Prohibition of possession of wild fish aboard vessels, vehicles, or aircraft associated with aquaculture operations.* Possession and transport of any wild fish aboard an aquaculture operation's transport or service vessels, vehicles, or aircraft is prohibited while engaged in aquaculture related activities, except when harvesting broodstock as authorized by NMFS.

(13) *Maintaining fish intact prior to landing.* Cultured finfish must be maintained whole with heads and fins intact until landed on shore. Such fish may be eviscerated, gilled, and scaled, but must otherwise be maintained in a whole condition. Spiny lobster must be maintained whole with the tail intact until landed on shore.

(14) *Restriction on offloading.* For the purpose of this paragraph, offload means to remove cultured animals from a vessel following harvest from an offshore aquaculture facility. Cultured animals may only be offloaded between 6 a.m. and 6 p.m., local time.

(15) *Bill of lading requirement.* Any cultured animals harvested from an aquaculture facility and being transported must be accompanied by the applicable bill of lading through landing ashore and the first point of sale. The bill of lading must include species name, quantity in numbers or pounds by species, date and location of landing, Gulf aquaculture permit number of the aquaculture facility from which the fish were harvested, and name and address of purchaser.

(16) *Request to harvest broodstock.* (i) At least 30 days prior to each time a permittee or their designee intends to harvest broodstock from the Gulf, including from state waters, that would be used to produce juvenile fish for an aquaculture facility in the Gulf EEZ, the permittee must submit a request to the RA via the Web site using a Web-based form. The information submitted on the form must include the number, species, and size of fish to be harvested; methods, gear, and vessels (including USCG documentation or state registration number) to be used for capturing, holding, and transporting broodstock; date and specific location of intended harvest; and the location to which broodstock would be delivered.

(ii) Allowable methods or gear used for broodstock capture in the EEZ include those identified for each respective fishery in § 600.725, except red drum, which may be harvested only with handline or rod and reel.

(iii) The RA may deny or modify a request for broodstock harvest if allowable methods or gear are not proposed for use, the number of fish harvested for broodstock is more than necessary for purposes of spawning and rearing activities, or the harvest will be inconsistent with FMP objectives or other Federal laws. If a broodstock collection request is denied or modified, the RA will provide the determination and the basis for it, in writing to the permittee. If a broodstock collection request is approved, the permittee must

submit a report to the RA including the number and species of broodstock harvested, their size (length and weight), and the geographic location where the broodstock were captured. The report must be submitted on a Web-based form available on the Web site no later than 15 days after the date of harvest.

(iv) Notwithstanding the requirements in § 622.106(a)(16), all proposed harvest of broodstock from state waters also must comply with all state laws applicable to the harvest of such species.

(17) *Authorized access to aquaculture facilities.* A permittee must provide NMFS employees and authorized officers access to an aquaculture facility to conduct inspections or sampling necessary to determine compliance with the applicable regulations relating to aquaculture in the Gulf EEZ. In conducting the inspections, NMFS may enter into cooperative agreements with States, may delegate the inspection authority to any State, or may contract with any non-Federal Government entities. As a condition of the permit, NMFS may also require the permittee to contract a non-Federal Government third party approved by the RA if the RA agrees to accept the third party inspection results. The non-Federal Government third party may not be the same entity as the permittee.

(b) [Reserved]

§ 622.107 Limitation on aquaculture production.

No individual, corporation, or other entity will be authorized to produce more than 12.8 million lb (5.8 million kg), round weight, of cultured species annually from permitted aquaculture facilities in the Gulf EEZ. Production of juvenile fish by a hatchery in the Gulf EEZ will not be counted toward this limitation because those fish would be accounted for subsequently via reported harvest at the aquaculture facility where grow out occurs.

§ 622.108 Remedial actions.

(a) *Potential remedial actions by NMFS.* In addition to potential permit sanctions and denials in accordance with subpart D of 15 CFR part 904, NMFS may take the following actions, as war-

ranted, to avoid or mitigate adverse impacts associated with aquaculture in the Gulf EEZ.

(1) *Actions to address pathogen episodes.* NMFS, in cooperation with USDA's APHIS, may order movement restrictions and/or the removal of all cultured animals from an approved aquaculture system upon confirmation by a USDA's APHIS reference laboratory that an OIE-reportable pathogen, or additional pathogens that are subsequently identified as reportable pathogens in the NAAHP exists and USDA's APHIS and NMFS determine the pathogen poses a significant threat to the health of wild or cultured aquatic organisms.

(2) *Actions to address genetic issues.* NMFS may sample cultured animals to determine genetic lineage and, upon a determination that genetically engineered or transgenic animals were used or possessed at an aquaculture facility, will order the removal of all cultured animals of the species for which such determination was made. In conducting the genetic testing to determine that all broodstock or progeny of such broodstock will be or were originally harvested from U.S. waters of the Gulf, will be or were from the same population or sub-population that occurs where the facility is located, and that juveniles stocked in offshore aquaculture systems are the progeny of wild broodstock, or other genetic testing necessary to carry out the requirements of the FMP, NMFS may enter into cooperative agreements with States, may delegate the testing authority to any State, or may contract with any non-Federal Government entities. As a condition of the permit, NMFS may also require the permittee to contract a non-Federal Government third party approved by the RA if the RA agrees to accept the third party testing results. The non-Federal Government third party may not be the same entity as the permittee.

(b) [Reserved]

§ 622.109 Adjustment of management measures.

In accordance with the framework procedures of the FMP for Regulating Offshore Marine Aquaculture in the Gulf of Mexico, the RA may establish

§ 622.170

50 CFR Ch. VI (10–1–21 Edition)

or modify the items in paragraph (a) of this section for offshore marine aquaculture.

(a) For the entire aquaculture fishery: MSY, OY, permit application requirements, operational requirements and restrictions, including monitoring requirements, aquaculture system requirements, siting requirements for aquaculture facilities, and record-keeping and reporting requirements.

(b) [Reserved]

Subparts G–H [Reserved]

Subpart I—Snapper-Grouper Fishery of the South Atlantic Region

§ 622.170 Permits and endorsements.

(a) *Commercial vessel permits*—(1) *South Atlantic snapper-grouper*. For a person aboard a vessel to be eligible for exemption from the bag limits for South Atlantic snapper-grouper in or from the South Atlantic EEZ, to sell South Atlantic snapper-grouper in or from the South Atlantic EEZ, to engage in the directed fishery for golden tilefish in the South Atlantic EEZ, to use a longline to fish for South Atlantic snapper-grouper in the South Atlantic EEZ, or to use a sea bass pot in the South Atlantic EEZ between 35°15.19' N. lat. (due east of Cape Hatteras Light, NC) and 28°35.1' N. lat. (due east of the NASA Vehicle Assembly Building, Cape Canaveral, FL), either a commercial vessel permit for South Atlantic Unlimited Snapper-Grouper Permit or a trip-limited permit for South Atlantic snapper-grouper must have been issued to the vessel and must be on board. A vessel with a trip-limited commercial permit is limited on any trip to 225 lb (102.1 kg) of snapper-grouper. See § 622.171 for limitations on the use, transfer, and renewal of a commercial vessel permit for South Atlantic snapper-grouper.

(2) *Wreckfish*. For a person aboard a vessel to be eligible for exemption from the bag limit for wreckfish in or from the South Atlantic EEZ, to fish under a quota for wreckfish in or from the South Atlantic EEZ, or to sell wreckfish in or from the South Atlantic EEZ, a commercial vessel permit

for wreckfish and a commercial permit for South Atlantic snapper-grouper must have been issued to the vessel and must be on board. To obtain a commercial vessel permit for wreckfish, the applicant must be a wreckfish shareholder; and either the shareholder must be the vessel owner or the owner or operator must be an employee, contractor, or agent of the shareholder. (See § 622.172 for information on wreckfish shareholders.)

(b) *Charter vessel/headboat permits*—(1) *South Atlantic snapper-grouper*. For a person aboard a vessel that is operating as a charter vessel or headboat to fish for or possess, in or from the EEZ, South Atlantic snapper-grouper, a valid charter vessel/headboat permit for South Atlantic snapper-grouper must have been issued to the vessel and must be on board. A charter vessel or headboat may have both a charter vessel/headboat permit and a commercial vessel permit. However, when a vessel is operating as a charter vessel or headboat, a person aboard must adhere to the bag limits. See the definitions of “Charter vessel” and “Headboat” in § 622.2 for an explanation of when vessels are considered to be operating as a charter vessel or headboat, respectively.

(2) [Reserved]

(c) *Dealer permits and conditions*—(1) *Permits*. For a dealer to first receive South Atlantic snapper-grouper (including wreckfish) harvested in or from the EEZ, a Gulf and South Atlantic dealer permit must be issued to the dealer.

(2) *State license and facility requirements*. To obtain a dealer permit or endorsement, the applicant must have a valid state wholesaler's license in the state(s) where the dealer operates, if required by such state(s), and must have a physical facility at a fixed location in such state(s).

(d) *Permit procedures*. See § 622.4 for information regarding general permit procedures including, but not limited to application, fees, duration, transfer, renewal, display, sanctions and denials, and replacement.

(e) *South Atlantic black sea bass pot endorsement*. For a person aboard a vessel, for which a valid commercial vessel permit for South Atlantic snapper-

grouper unlimited has been issued, to use a black sea bass pot in the South Atlantic EEZ, a valid South Atlantic black sea bass pot endorsement must have been issued to the vessel and must be on board. A permit or endorsement that has expired is not valid. This endorsement must be renewed annually and may only be renewed if the associated vessel has a valid commercial vessel permit for South Atlantic snapper-grouper unlimited or if the endorsement and associated permit are being concurrently renewed. The RA will not reissue this endorsement if the endorsement is revoked or if the RA does not receive a complete application for renewal of the endorsement within 1 year after the endorsement's expiration date.

(1) *Initial eligibility.* To be eligible for an initial South Atlantic black sea bass pot endorsement, a person must have been issued and must possess a valid or renewable commercial vessel permit for South Atlantic snapper-grouper that has black sea bass landings using black sea bass pot gear averaging at least 2,500 lb (1,134 kg), round weight, annually during the period January 1, 1999 through December 31, 2010. Excluded from this eligibility, are trip-limited permits (South Atlantic snapper-grouper permits that have a 225-lb (102.1-kg) limit of snapper-grouper) and valid or renewable commercial vessel permits for South Atlantic snapper-grouper unlimited that have no reported landings of black sea bass using black sea bass pots from January 1, 2008, through December 31, 2010. NMFS will attribute all applicable black sea bass landings associated with a current snapper-grouper permit for the applicable landings history, including those reported by a person(s) who held the permit prior to the current permit owner, to the current permit owner. Only legal landings reported in compliance with applicable state and Federal regulations are acceptable.

(2) *Initial issuance.* On or about June 1, 2012, the RA will mail each eligible permittee a black sea bass pot endorsement via certified mail, return receipt requested, to the permittee's address of record as listed in NMFS' permit files. An eligible permittee who does not receive an endorsement from the RA,

must contact the RA no later than July 1, 2012, to clarify his/her endorsement status. A permittee denied an endorsement based on the RA's initial determination of eligibility and who disagrees with that determination may appeal to the RA.

(3) *Procedure for appealing black sea bass pot endorsement eligibility and/or landings information.* The only items subject to appeal are initial eligibility for a black sea bass pot endorsement based on ownership of a qualifying snapper-grouper permit, the accuracy of the amount of landings, and correct assignment of landings to the permittee. Appeals based on hardship factors will not be considered. Appeals must be submitted to the RA postmarked no later than October 1, 2012, and must contain documentation supporting the basis for the appeal. The RA will review all appeals, render final decisions on the appeals, and advise the appellant of the final NMFS decision.

(i) *Eligibility appeals.* NMFS' records of snapper-grouper permits are the sole basis for determining ownership of such permits. A person who believes he/she meets the permit eligibility criteria based on ownership of a vessel under a different name, for example, as a result of ownership changes from individual to corporate or vice versa, must document his/her continuity of ownership.

(ii) *Landings appeals.* Determinations of appeals regarding landings data for 1999 through 2010 will be based on NMFS' logbook records. If NMFS' logbooks are not available, the RA may use state landings records or data for the period 1999 through 2010 that were submitted in compliance with applicable Federal and state regulations on or before December 31, 2011.

(4) *Transferability.* A valid or renewable black sea bass pot endorsement may be transferred between any two entities that hold, or simultaneously obtain, a valid South Atlantic snapper-grouper unlimited permit. Endorsements may be transferred independently from the South Atlantic snapper-grouper unlimited permit. NMFS will attribute black sea bass landings to the associated South Atlantic snapper-grouper unlimited permit regardless of whether the landings occurred before

or after the endorsement was issued. Only legal landings reported in compliance with applicable state and Federal regulations are acceptable.

(5) *Fees.* No fee applies to initial issuance of a black sea bass pot endorsement. NMFS charges a fee for each renewal or replacement of such endorsement and calculates the amount of each fee in accordance with the procedures of the NOAA Finance Handbook for determining the administrative costs of each special product or service. The fee may not exceed such costs and is specified with each application form. The handbook is available from the RA. The appropriate fee must accompany each application for renewal or replacement.

(f) *South Atlantic golden tilefish longline endorsement.* For a person aboard a vessel, for which a valid commercial vessel permit for South Atlantic snapper-grouper unlimited has been issued, to fish for or possess golden tilefish in the South Atlantic EEZ using longline gear, a South Atlantic golden tilefish longline endorsement must have been issued to the vessel and must be on board. A permit or endorsement that has expired is not valid. This endorsement must be renewed annually and may only be renewed if the associated vessel has a valid commercial vessel permit for South Atlantic snapper-grouper unlimited or if the endorsement and associated permit are being concurrently renewed. The RA will not reissue this endorsement if the endorsement is revoked or if the RA does not receive a complete application for renewal of the endorsement within 1 year after the endorsement's expiration date.

(1) *Initial eligibility.* To be eligible for an initial South Atlantic golden tilefish longline endorsement, a person must have been issued and must possess a valid or renewable commercial vessel permit for South Atlantic snapper-grouper that has golden tilefish landings using longline gear averaging at least 5,000 lb (2,268 kg), gutted weight, over the best 3 years within the period 2006–2011. NMFS will attribute all applicable golden tilefish landings associated with a current South Atlantic snapper-grouper permit for the applicable landings history, to the cur-

rent permit owner, including golden tilefish landings reported by a person(s) who held the permit prior to the current permit owner. Only legal landings reported in compliance with applicable state and Federal regulations are acceptable.

(2) *Initial issuance.* On or about April 23, 2013, the RA will mail each eligible permittee a golden tilefish longline endorsement via certified mail, return receipt requested, to the permittee's address of record as listed in NMFS' permit files. An eligible permittee who does not receive an endorsement from the RA, must contact the RA no later than May 23, 2013, to clarify his/her endorsement status. A permittee who is denied an endorsement based on the RA's initial determination of eligibility and who disagrees with that determination may appeal to the RA.

(3) *Procedure for appealing golden tilefish longline endorsement eligibility and/or landings information.* The only items subject to appeal are initial eligibility for a golden tilefish longline endorsement based on ownership of a qualifying snapper-grouper permit, the accuracy of the amount of landings, and the correct assignment of landings to the permittee. Appeals based on hardship factors will not be considered. Appeals must be submitted to the RA postmarked no later than August 21, 2013, and must contain documentation supporting the basis for the appeal. The National Appeals Office will review, evaluate, and render recommendations on appeals to the RA. The RA will then review each appeal, render a final decision on each appeal, and advise the appellant of the final NMFS decision.

(i) *Eligibility appeals.* NMFS' records of snapper-grouper permits are the sole basis for determining ownership of such permits. A person who believes he/she meets the permit eligibility criteria based on ownership of a vessel under a different name, for example, as a result of ownership changes from individual to corporate or vice versa, must document his or her continuity of ownership and must submit that information with their appeal.

(ii) *Landings appeals.* Determinations of appeals regarding landings data for 2006 through 2011 will be based on

NMFS' logbook records, submitted on or before October 31, 2012. If NMFS' logbooks are not available, the RA may use state landings records or data for the period 2006 through 2011 that were submitted in compliance with applicable Federal and state regulations on or before October 31, 2012.

(4) *Transferability.* A valid or renewable golden tilefish endorsement may be transferred between any two entities that hold, or simultaneously obtain, a valid South Atlantic snapper-grouper unlimited permit. An endorsement may be transferred independently from the South Atlantic snapper-grouper unlimited permit. NMFS will attribute golden tilefish landings to the associated South Atlantic Unlimited Snapper-Grouper Permit regardless of whether the landings occurred before or after the endorsement was issued. Only legal landings reported in compliance with applicable state and Federal regulations are acceptable.

(5) *Fees.* No fee applies to the initial issuance of a golden tilefish longline endorsement. NMFS charges a fee for each renewal or replacement or transfer of such endorsement and calculates the amount of each fee in accordance with the procedures of the NOAA Finance Handbook for determining the administrative costs of each special product or service. The handbook is available from the RA. The appropriate fee must accompany each application for renewal or replacement or transfer.

[78 FR 22952, Apr. 17, 2013, as amended at 78 FR 23862, Apr. 23, 2013; 79 FR 19495, Apr. 9, 2014]

§ 622.171 South Atlantic snapper-grouper limited access.

(a) *General.* The only valid commercial vessel permits for South Atlantic snapper-grouper are those that have been issued under the limited access criteria specified in the Fishery Management Plan for the Snapper-Grouper Fishery of the South Atlantic Region. A commercial vessel permit for South Atlantic snapper-grouper is either a transferable commercial permit or a trip-limited commercial permit.

(b) *Transfers of permits.* A snapper-grouper limited access permit is valid only for the vessel and owner named on the permit. To change either the vessel

or the owner, an application for transfer must be submitted to the RA.

(1) *Transferable permits.* (i) An owner of a vessel with a transferable permit may request that the RA transfer the permit to another vessel owned by the same entity.

(ii) A transferable permit may be transferred upon a change of ownership of a permitted vessel with such permit—

(A) From one to another of the following: husband, wife, son, daughter, brother, sister, mother, or father; or

(B) From an individual to a corporation whose shares are all held by the individual or by the individual and one or more of the following: husband, wife, son, daughter, brother, sister, mother, or father. The application for transfer of a permit under this paragraph (b)(1)(ii)(B) and each application for renewal of such permit must be accompanied by a current annual report of the corporation that specifies all shareholders of the corporation. A permit will not be renewed if the annual report shows a new shareholder other than a husband, wife, son, daughter, brother, sister, mother, or father.

(iii) Except as provided in paragraphs (b)(1)(i) and (ii) of this section, a person desiring to acquire a limited access, transferable permit for South Atlantic snapper-grouper must obtain and exchange two such permits for one new permit.

(iv) A transfer of a permit that is undertaken under paragraph (b)(1)(ii) of this section will constitute a transfer of the vessel's entire catch history to the new owner.

(2) *Trip-limited permits.* An owner of a vessel with a trip-limited permit may request that the RA transfer the permit to another vessel owned by the same entity.

(c) *Renewal.* NMFS will not reissue a commercial vessel permit for South Atlantic snapper-grouper if the permit is revoked or if the RA does not receive an application for renewal within one year of the permit's expiration date.

§ 622.172 Wreckfish individual transferable quota (ITQ) system.

The provisions of this section apply to wreckfish in or from the South Atlantic EEZ.

(a) *General*—(1) *Percentage shares*—(i) *Initial ITQ shares*. In accordance with the procedure specified in the Fishery Management Plan for the Snapper-Grouper Fishery of the South Atlantic Region, percentage shares of the quota for wreckfish were assigned at the beginning of the program. Each person was notified by the RA of his or her percentage share and shareholder certificate number.

(ii) *Reverted ITQ shares*. Any shares determined by NMFS to be inactive, will be redistributed proportionately among remaining shareholders (subject to cap restrictions) based on shareholder landings history. Inactive shares are, for purposes of this section, those shares held by ITQ shareholders who have not reported any wreckfish landings between April 16, 2006, and January 14, 2011.

(iii) *Percentage share set-aside to accommodate resolution of appeals*. During the 2012–2013 fishing year, the RA will reserve 1.401 percent of wreckfish ITQ shares prior to redistributing shares (see paragraph (a)(1)(ii) of this section) to accommodate resolution of appeals, if necessary. NMFS will distribute any portion of the 1.401-percent share remaining after the appeals process as soon as possible among the remaining shareholders.

(iv) *Procedure for appealing wreckfish quota share status and landings information*. Appeals must be submitted to the RA postmarked no later than January 24, 2013, and must contain documentation supporting the basis for the appeal. The only items subject to appeal are the status of wreckfish quota shares, as active or inactive, and the accuracy of the amount of landings. The RA will review and evaluate all appeals, render final decisions on the appeals, and advise the appellant of the final decision. Appeals based on hardship factors will not be considered. The RA will determine the outcome of appeals based on NMFS' logbooks. If NMFS' logbooks are not available, the RA may use state landings records. Appellants must submit NMFS' logbooks or state landings records, as appropriate, to support their appeal.

(2) *Share transfers*. All or a portion of a person's percentage shares are transferrable. Transfer of shares must

be reported on a form available from the RA. The RA will confirm, in writing, each transfer of shares. The effective date of each transfer is the confirmation date provided by the RA. NMFS charges a fee for each transfer of shares and calculates the amount in accordance with the procedures of the NOAA Finance Handbook. The handbook is available from the RA. The fee may not exceed such costs and is specified with each transfer form. The appropriate fee must accompany each transfer form.

(3) *ITQ share cap*. No person, including a corporation or other entity, may individually or collectively hold ITQ shares in excess of 49 percent of the total shares. For the purposes of considering the share cap, a corporation's total ITQ share is determined by adding the corporation's ITQ shares to any other ITQ shares the corporation owns in another corporation. If an individual ITQ shareholder is also a shareholder in a corporation that holds ITQ shares, an individual's total ITQ share is determined by adding the applicable ITQ shares held by the individual to the applicable ITQ shares equivalent to the corporate share the individual holds in a corporation. A corporation must provide the RA the identity of the shareholders of the corporation and their percent of shares in the corporation, and provide updated information to the RA within 30 days of when a change occurs. This information must also be provided to the RA any time a commercial vessel permit for wreckfish is renewed or transferred.

(b) *List of wreckfish shareholders*. Annually, on or about March 1, the RA will provide each wreckfish shareholder with a list of all wreckfish shareholders and their percentage shares, reflecting share transactions on forms received through February 15.

(c) *ITQs*. (1) Annually, as soon after March 1 as the TAC for wreckfish for the fishing year that commences April 16 is known, the RA will calculate each wreckfish shareholder's ITQ. Each ITQ is the product of the wreckfish TAC, in round weight, for the ensuing fishing year, the factor for converting round weight to eviscerated weight, and each wreckfish shareholder's percentage

share, reflecting share transactions reported on forms received by the RA through February 15. Thus, the ITQs will be in terms of eviscerated weight of wreckfish.

(2) The RA will provide each wreckfish shareholder with ITQ coupons in various denominations, the total of which equals his or her ITQ, and a copy of the calculations used in determining his or her ITQ. Each coupon will be coded to indicate the initial recipient.

(3) An ITQ coupon may be transferred from one wreckfish shareholder to another by completing the sale endorsement thereon (that is, the signature and shareholder certificate number of the buyer). An ITQ coupon may be possessed only by the shareholder to whom it has been issued, or by the shareholder's employee, contractor, or agent, unless the ITQ coupon has been transferred to another shareholder. An ITQ coupon that has been transferred to another shareholder may be possessed only by the shareholder whose signature appears on the coupon as the buyer, or by the shareholder's employee, contractor, or agent, and with all required sale endorsements properly completed.

(4) Wreckfish may not be possessed on board a fishing vessel that has been issued a commercial vessel permit for South Atlantic snapper-grouper and a commercial vessel permit for wreckfish—

(i) In an amount exceeding the total of the ITQ coupons on board the vessel; or

(ii) That does not have on board logbook forms for that fishing trip, as required under § 622.176(a)(3)(i).

(5) Prior to termination of a trip, a signature and date signed must be affixed in ink to the "Fisherman" part of ITQ coupons in denominations equal to the eviscerated weight of the wreckfish on board. The "Fisherman" part of each such coupon must be separated from the coupon and submitted with the logbook forms required by § 622.176(a)(3)(i) for that fishing trip.

(6) The "Fish House" part of each such coupon must be given to the dealer to whom the wreckfish are transferred in amounts totaling the eviscerated weight of the wreckfish trans-

ferred to that dealer. Wreckfish may be transferred only to a Gulf and South Atlantic dealer permit holder, as required under § 622.170(c)(1).

(7) A dealer may first receive wreckfish only from a vessel for which a commercial permit for wreckfish has been issued, as required under § 622.170(a)(2). A dealer must receive the "Fish House" part of ITQ coupons in amounts totaling the eviscerated weight of the wreckfish received; enter the permit number of the vessel from which the wreckfish were received, enter the date the wreckfish were received, enter the dealer's permit number, and sign each such "Fish House" part; and submit all such parts with the electronic dealer reports required by § 622.5(c).

(8) An owner or operator of a vessel and a dealer must make available to an authorized officer all ITQ coupons in his or her possession upon request.

(d) *Wreckfish limitations.* (1) A wreckfish taken in the South Atlantic EEZ may not be transferred at sea, regardless of where the transfer takes place; and a wreckfish may not be transferred in the South Atlantic EEZ.

(2) A wreckfish possessed by a fisherman or dealer shoreward of the outer boundary of the South Atlantic EEZ or in a South Atlantic coastal state will be presumed to have been harvested from the South Atlantic EEZ unless accompanied by documentation that it was harvested from other than the South Atlantic EEZ.

(3) A wreckfish harvested by a vessel that has been issued a commercial vessel permit for South Atlantic snapper-grouper and a commercial vessel permit for wreckfish may be offloaded from a fishing vessel only between 8 a.m. and 5 p.m., local time.

(4) If a wreckfish harvested by a vessel that has been issued a commercial vessel permit for South Atlantic snapper-grouper and a commercial vessel permit for wreckfish is to be offloaded at a location other than a fixed facility of a dealer who holds a Gulf and South Atlantic dealer permit, as required under § 622.170(c)(1), the wreckfish shareholder or the vessel operator must advise the NMFS Office for Law Enforcement, Southeast Region, St. Petersburg, FL, by telephone (727-824-

5344), of the location not less than 24 hours prior to offloading.

[78 FR 22952, Apr. 17, 2013, as amended at 79 FR 19495, Apr. 9, 2014]

§§ 622.173–622.175 [Reserved]

§ 622.176 Recordkeeping and reporting.

(a) *Commercial vessel owners and operators*—(1) *General reporting requirements.* The owner or operator of a vessel for which a commercial permit for South Atlantic snapper-grouper has been issued, as required under § 622.170(a)(1), or whose vessel fishes for or lands South Atlantic snapper-grouper in or from state waters adjoining the South Atlantic EEZ, who is selected to report by the SRD must maintain a fishing record on a form available from the SRD and must submit such record as specified in paragraph (a)(4) of this section.

(2) *Electronic logbook/video monitoring reporting.* The owner or operator of a vessel for which a commercial permit for South Atlantic snapper-grouper has been issued, as required under § 622.170(a)(1), who is selected to report by the SRD must participate in the NMFS-sponsored electronic logbook and/or video monitoring reporting program as directed by the SRD. Compliance with the reporting requirements of this paragraph (a)(2) is required for permit renewal.

(3) *Wreckfish reporting.* The wreckfish shareholder under § 622.172, or operator of a vessel for which a commercial permit for wreckfish has been issued, as required under § 622.170(a)(2), must—

(i) Maintain a fishing record on a form available from the SRD and must submit such record as specified in paragraph (a)(4) of this section.

(ii) Make available to an authorized officer upon request all records of commercial offloadings, purchases, or sales of wreckfish.

(4) *Reporting deadlines.* Completed fishing records required by this paragraph (a) must be submitted to the SRD postmarked not later than 7 days after the end of each fishing trip. If no fishing occurred during a calendar month, a report so stating must be submitted on one of the forms postmarked not later than 7 days after the end of

that month. Information to be reported is indicated on the form and its accompanying instructions.

(b) *Charter vessel/headboat owners and operators*—(1) *General reporting requirement*—(i) *Charter vessels.* The owner or operator of a charter vessel for which a charter vessel/headboat permit for South Atlantic snapper-grouper has been issued, as required under § 622.170(b)(1), and whose vessel is operating as a charter vessel, must record all fish harvested and discarded, and any other information requested by the SRD for each trip, and submit an electronic fishing report within the time period specified in paragraph (b)(2)(i) of this section. The electronic fishing report must be submitted to the SRD via NMFS-approved hardware and software, as specified in paragraph (b)(5) of this section. If the owner or operator subject to this paragraph (b)(1)(i) has been issued a Federal permit that requires more restrictive reporting requirements, as determined by NMFS and posted on the NMFS Southeast Region website, reporting under those more restrictive regulations will meet the requirements of this paragraph (b)(1)(i).

(ii) *Headboats.* The owner or operator of a headboat for which a charter vessel/headboat permit for South Atlantic snapper-grouper has been issued, as required under § 622.170(b)(1), and whose vessel is operating as a headboat in state or Federal waters, must record all fish harvested and discarded, and any other information requested by the SRD for each trip in state or Federal waters, and submit an electronic fishing report within the time period specified in paragraph (b)(2)(i) of this section. The electronic fishing report must be submitted to the SRD via NMFS-approved hardware and software, as specified in paragraph (b)(5) of this section.

(iii) *Electronic logbook/video monitoring reporting.* The owner or operator of a vessel for which a charter vessel/headboat permit for South Atlantic snapper-grouper has been issued, as required under § 622.170(b)(1), and whose vessel fishes for or lands such snapper-grouper in or from state or Federal waters, who is selected to report by the SRD must participate in the NMFS-

sponsored electronic logbook and/or video monitoring program as directed by the SRD. Compliance with the reporting requirements of paragraph (b)(2)(i) of this section is required for permit renewal.

(2) *Reporting deadlines for charter vessels and headboats.* (i) Completed electronic fishing reports required by paragraph (b)(1) of this section must be submitted to the SRD by the Tuesday following each previous reporting week of Monday through Sunday, or at shorter intervals if notified by the SRD. If no fishing activity as a charter vessel or headboat occurred during a reporting week, an electronic report so stating must be submitted by the Tuesday following that reporting week, or at a shorter interval if notified by the SRD.

(ii) Completed fishing reports required by paragraph (b)(1)(iii) of this section for charter vessels or headboats may be required weekly or daily, as directed by the SRD. Information to be reported is indicated on the form and its accompanying instructions.

(3) *Catastrophic conditions.* During catastrophic conditions only, NMFS provides for use of paper forms for basic required functions as a backup to the electronic reports required by paragraphs (b)(1)(i) and (ii) of this section. The RA will determine when catastrophic conditions exist, the duration of the catastrophic conditions, and which participants or geographic areas are deemed affected by the catastrophic conditions. The RA will provide timely notice to affected participants via publication of notification in the FEDERAL REGISTER, and other appropriate means such as fishery bulletins or NOAA weather radio, and will authorize the affected participants' use of paper forms for the duration of the catastrophic conditions. The paper forms will be available from NMFS. During catastrophic conditions, the RA has the authority to modify or waive reporting time requirements.

(4) *Compliance requirement.* Electronic reports required by paragraphs (b)(1)(i) and (ii) of this section must be submitted and received by NMFS according to the reporting requirements under this section. A report not received within the applicable time specified in paragraph (b)(2)(i) of this sec-

tion is delinquent. A delinquent report results in the owner and operator of a charter vessel or headboat for which a charter vessel/headboat permit for South Atlantic snapper-grouper has been issued being prohibited from harvesting or possessing such species automatically, with no additional requirement for NMFS to provide notice to the owner and operator of their delinquency. The owner and operator who are prohibited from harvesting or possessing such species due to delinquent reports are authorized to harvest or possess such species only after all required and delinquent reports have been submitted and received by NMFS according to the reporting requirements under this section.

(5) *Hardware and software requirements for electronic reporting.* Owners and operators must submit electronic reports using NMFS-approved hardware and software as posted on the NMFS Southeast Region website.

(c) *Dealers.* (1) A dealer who first receives South Atlantic snapper-grouper (including wreckfish) must maintain records and submit information as specified in § 622.5(c).

(2) On demand, a dealer who has been issued a Gulf and South Atlantic dealer permit, as required under § 622.170(c)(1), must make available to an authorized officer all records of offloadings, purchases, or sales of South Atlantic snapper-grouper (including wreckfish).

(d) *Private recreational vessels in the South Atlantic snapper-grouper fishery.* The owner or operator of a vessel that fishes for or lands South Atlantic snapper-grouper in or from the South Atlantic EEZ who is selected to report by the SRD must—

(1) Maintain a fishing record for each trip, or a portion of such trips as specified by the SRD, on forms provided by the SRD. Completed fishing records must be submitted to the SRD monthly and must either be made available to an authorized statistical reporting agent or be postmarked not later than 7 days after the end of each month. Information to be reported is indicated on the form and its accompanying instructions.

(2) Participate in the NMFS-sponsored electronic logbook and/or video

§ 622.177

50 CFR Ch. VI (10–1–21 Edition)

monitoring reporting program as directed by the SRD.

[78 FR 22952, Apr. 17, 2013, as amended at 78 FR 78781, Dec. 27, 2013; 79 FR 19495, Apr. 9, 2014; 85 FR 10339, Feb. 24, 2020]

§ 622.177 Gear identification.

(a) *Sea bass pots and associated buoys*—

(1) *Sea bass pots*. A sea bass pot used or possessed in the South Atlantic EEZ between 35°15.19' N. lat. (due east of Cape Hatteras Light, NC) and 28°35.1' N. lat. (due east of the NASA Vehicle Assembly Building, Cape Canaveral, FL), or a sea bass pot on board a vessel with a commercial permit for South Atlantic snapper-grouper, must have a valid identification tag issued by the RA attached.

(2) *Associated buoys*. In the South Atlantic EEZ, buoys are not required to be used, but, if used, each buoy must display the official number and color code assigned by the RA so as to be easily distinguished, located, and identified.

(3) *Presumption of ownership*. A sea bass pot in the EEZ will be presumed to be the property of the most recently documented owner. This presumption will not apply with respect to such pots that are lost or sold if the owner reports the loss or sale within 15 days to the RA.

(4) *Unmarked sea bass pots or buoys*. An unmarked sea bass pot or a buoy deployed in the EEZ where such pot or buoy is required to be marked is illegal and may be disposed of in any appropriate manner by the Assistant Administrator or an authorized officer.

(b) [Reserved]

§ 622.178 At-sea observer coverage.

(a) *Required coverage*. (1) A vessel for which a Federal commercial vessel permit for South Atlantic snapper-grouper or a charter vessel/headboat permit for South Atlantic snapper-grouper has been issued must carry a NMFS-approved observer, if the vessel's trip is selected by the SRD for observer coverage. Vessel permit renewal is contingent upon compliance with this paragraph (a)(1).

(2) Any other vessel that fishes for South Atlantic snapper-grouper in the South Atlantic EEZ must carry a NMFS-approved observer, if the ves-

sel's trip is selected by the SRD for observer coverage.

(b) *Notification to the SRD*. When observer coverage is required, an owner or operator must advise the SRD in writing not less than 5 days in advance of each trip of the following:

(1) Departure information (port, dock, date, and time).

(2) Expected landing information (port, dock, and date).

(c) *Observer accommodations and access*. An owner or operator of a vessel on which a NMFS-approved observer is embarked must:

(1) Provide accommodations and food that are equivalent to those provided to the crew.

(2) Allow the observer access to and use of the vessel's communications equipment and personnel upon request for the transmission and receipt of messages related to the observer's duties.

(3) Allow the observer access to and use of the vessel's navigation equipment and personnel upon request to determine the vessel's position.

(4) Allow the observer free and unobstructed access to the vessel's bridge, working decks, holding bins, weight scales, holds, and any other space used to hold, process, weigh, or store fish.

(5) Allow the observer to inspect and copy the vessel's log, communications logs, and any records associated with the catch and distribution of fish for that trip.

§ 622.179 Conservation measures for protected resources.

(a) *South Atlantic snapper-grouper commercial vessels and charter vessels/headboats*—

(1) *Sea turtle conservation measures*. (i) The owner or operator of a vessel for which a commercial vessel permit for South Atlantic snapper-grouper or a charter vessel/headboat permit for South Atlantic snapper-grouper has been issued, as required under § 622.170(a)(1) and (b)(1), respectively, and whose vessel has on board any hook-and-line gear, must have the 2019 version of the NMFS document titled, "Careful Release Protocols for Sea Turtle Release with Minimal Injury" available for reference on board electronically or have a paper copy on board inside the wheelhouse, or within

a waterproof case if there is no wheelhouse. In addition, the NMFS sea turtle handling and release guidelines placard must be posted inside the wheelhouse or an easily viewable area on the vessel if there is no wheelhouse.

(ii) Such owner or operator must also comply with the sea turtle interaction mitigation measures, including the release gear and handling requirements specified in appendix F of this part.

(iii) Those permitted vessels with a freeboard height of 4 ft (1.2 m) or less must have on board a net or hoist, tire or other support device, short-handled dehooker(s) for internal and external hooks, long-nose or needle-nose pliers, bolt cutters, monofilament line cutters, and at least two types of mouth openers or mouth gags. This equipment must meet the specifications described in appendix F of this part.

(iv) Those permitted vessels with a freeboard height of greater than 4 ft (1.2 m) must have on board a net or hoist, tire or other support device, long-handled line clipper or cutter, short-handled dehooker(s) for internal and external hooks, long-handled dehooker(s) for internal and external hooks, a long-handled device to pull an inverted “V” in the fishing line, long-nose or needle-nose pliers, bolt cutters, monofilament line cutters, and at least two types of mouth openers or mouth gags. This equipment must meet the specifications described in appendix F of this part.

(2) *Smalltooth sawfish conservation measures.* The owner or operator of a vessel for which a commercial vessel permit for South Atlantic snapper-grouper or a charter vessel/headboat permit for South Atlantic snapper-grouper has been issued, as required under §§ 622.170(a)(1) and 622.170(b)(1), respectively, that incidentally catches a smalltooth sawfish must—

(i) Keep the sawfish in the water at all times;

(ii) If it can be done safely, untangle the line if it is wrapped around the saw;

(iii) Cut the line as close to the hook as possible; and

(iv) Not handle the animal or attempt to remove any hooks on the saw, except with a long-handled dehooker.

(b) *Incorporation by reference.* The standards required in paragraph (a)(1) of this section are incorporated by reference into this section with the approval of the Director of the Federal Register under 5 U.S.C. 552(a) and 1 CFR part 51. All approved material is available for inspection at the National Marine Fisheries Service, Southeast Regional Office, 263 13th Ave. South, St. Petersburg, FL 33701, phone: 727-824-5301, website: <https://www.fisheries.noaa.gov/southeast/ endangered-species-conservation/sea-turtle-and-smalltooth-sawfish-release-gear-protocols>, and is available from the sources listed in paragraphs (b)(1) and (2) of this section. It is also available for inspection at the National Archives and Records Administration (NARA). For information on the availability of this material at NARA, email fedreg.legal@nara.gov or go to www.archives.gov/federal-register/cfr/ibr-locations.html.

(ii) [Reserved]

[78 FR 22952, Apr. 17, 2013, as amended at 84 FR 67238, Dec. 9, 2019]

§ 622.180 Prohibited gear and methods.

Also see § 622.9 for additional prohibited gear and methods that apply more broadly to multiple fisheries or in some cases all fisheries.

(a) *Poisons.* A poison may not be used to fish for South Atlantic snapper-grouper in the South Atlantic EEZ.

(b) *Rebreathers and spearfishing gear.* In the South Atlantic EEZ, a person using a rebreather may not harvest South Atlantic snapper-grouper with spearfishing gear. The possession of such snapper-grouper while in the water with a rebreather is *prima facie* evidence that such fish was harvested with spearfishing gear while using a rebreather.

(c) *Longlines for wreckfish.* A bottom longline may not be used to fish for wreckfish in the South Atlantic EEZ. A person aboard a vessel that has a longline on board may not retain a wreckfish in or from the South Atlantic EEZ. For the purposes of this paragraph, a vessel is considered to have a longline on board when a power-operated longline hauler, a cable of diameter suitable for use in the longline fishery longer than 1.5 mi (2.4 km) on any reel, and gangions are on board. Removal of any one of these three elements constitutes removal of a longline.

§ 622.181 Prohibited and limited-harvest species.

(a) *General.* The harvest and possession restrictions of this section apply without regard to whether the species is harvested by a vessel operating under a commercial vessel permit. The operator of a vessel that fishes in the EEZ is responsible for the limit applicable to that vessel.

(b) *Prohibited species.* (1) Goliath grouper may not be harvested or possessed in the South Atlantic EEZ. Goliath grouper taken in the South Atlantic EEZ incidentally by hook-and-line must be released immediately by cutting the line without removing the fish from the water.

(2) [Reserved]

(3) *Speckled hind and warsaw grouper.* Speckled hind and warsaw grouper may not be harvested or possessed in or from the South Atlantic EEZ. Such fish caught in the South Atlantic EEZ must be released immediately with a minimum of harm. These restrictions also apply in the South Atlantic on board a vessel for which a valid Federal commercial or charter vessel/headboat permit for South Atlantic snapper-grouper has been issued, *i.e.*, in state or Federal waters.

(4) Nassau grouper may not be harvested or possessed in the South Atlantic EEZ or the Gulf EEZ. Nassau grouper taken in the South Atlantic EEZ or the Gulf EEZ incidentally by hook-and-line must be released immediately by cutting the line without removing the fish from the water.

(c) *Limited-harvest species.* A person who fishes in the EEZ may not combine a harvest limitation specified in this paragraph (c) with a harvest limitation applicable to state waters. A species subject to a harvest limitation specified in this paragraph (c) taken in the EEZ may not be transferred at sea, regardless of where such transfer takes place, and such species may not be transferred in the EEZ.

(1) *Cubera snapper.* No person may harvest more than two cubera snapper measuring 30 inches (76.2 cm), TL, or larger, per day in the South Atlantic EEZ off Florida and no more than two such cubera snapper in or from the South Atlantic EEZ off Florida may be possessed on board a vessel at any time.

(2) *Red snapper.* Red snapper may only be harvested or possessed in or from the South Atlantic EEZ during the commercial and recreational seasons as specified in §§ 622.183(b)(5) and 622.193(y). Any red snapper caught in the South Atlantic EEZ during a time other than the specified commercial or recreational seasons specified in § 622.193(y) must be released immediately with a minimum of harm. In addition, for a person on board a vessel for which a valid Federal commercial or charter vessel/headboat permit for South Atlantic snapper-grouper has been issued, the prohibition on the harvest or possession of red snapper applies in the South Atlantic, regardless of where such fish are harvested or possessed, *i.e.*, in state or Federal waters.

[78 FR 22952, Apr. 17, 2013, as amended at 78 FR 44464, July 24, 2013; 78 FR 78775, Dec. 27, 2013; 83 FR 35434, July 26, 2018]

§ 622.182 Gear-restricted areas.

(a) *Special management zones (SMZs).* (1) The SMZs consist of artificial reefs and surrounding areas as follows:

(i) *Paradise Reef* is bounded on the north by 33°31.59' N. lat.; on the south by 33°30.51' N. lat.; on the east by

78°57.55' W. long.; and on the west by 78°58.85' W. long.

(ii) *Ten Mile Reef* is bounded on the north by 33°26.65' N. lat.; on the south by 33°24.80' N. lat.; on the east by 78°51.08' W. long.; and on the west by 78°52.97' W. long.

(iii) *Pawleys Island Reef* is bounded on the north by 33°26.58' N. lat.; on the south by 33°25.76' N. lat.; on the east by 79°00.29' W. long.; and on the west by 79°01.24' W. long.

(iv) *Georgetown Reef* is bounded on the north by 33°14.90' N. lat.; on the south by 33°13.85' N. lat.; on the east by 78°59.45' W. long.; and on the west by 79°00.65' W. long.

(v) *Capers Reef* is bounded on the north by 32°45.45' N. lat.; on the south by 32°43.91' N. lat.; on the east by 79°33.81' W. long.; and on the west by 79°35.10' W. long.

(vi) *Kiawah Reef* is bounded on the north by 32°29.78' N. lat.; on the south by 32°28.25' N. lat.; on the east by 79°59.00' W. long.; and on the west by 80°00.95' W. long.

(vii) *Edisto Offshore Reef* is bounded on the north by 32°15.30' N. lat.; on the south by 32°13.90' N. lat.; on the east by 79°50.25' W. long.; and on the west by 79°51.45' W. long.

(viii) *Hunting Island Reef* is bounded on the north by 32°13.72' N. lat.; on the south by 32°12.30' N. lat.; on the east by 80°19.23' W. long.; and on the west by 80°21.00' W. long.

(ix) *Fripp Island Reef* is bounded on the north by 32°15.92' N. lat.; on the south by 32°14.75' N. lat.; on the east by 80°21.62' W. long.; and on the west by 80°22.90' W. long.

(x) *Betsy Ross Reef* is bounded on the north by 32°03.60' N. lat.; on the south by 32°02.88' N. lat.; on the east by 80°24.57' W. long.; and on the west by 80°25.50' W. long.

(xi) *Hilton Head Reef/Artificial Reef—T* is bounded on the north by 32°00.71' N. lat.; on the south by 31°59.42' N. lat.; on the east by 80°35.23' W. long.; and on the west by 80°36.37' W. long.

(xii) *Artificial Reef—A* is bounded on the north by 30°57.4' N. lat.; on the south by 30°55.4' N. lat.; on the east by 81°13.9' W. long.; and on the west by 81°16.3' W. long.

(xiii) *Artificial Reef—C* is bounded on the north by 30°52.0' N. lat.; on the

south by 30°50.0' N. lat.; on the east by 81°08.5' W. long.; and on the west by 81°10.9' W. long.

(xiv) *Artificial Reef—G* is bounded on the north by 31°00.0' N. lat.; on the south by 30°58.0' N. lat.; on the east by 80°56.8' W. long.; and on the west by 80°59.2' W. long.

(xv) *Artificial Reef—F* is bounded on the north by 31°06.8' N. lat.; on the south by 31°04.8' N. lat.; on the east by 81°10.5' W. long.; and on the west by 81°13.4' W. long.

(xvi) *Artificial Reef—J* is bounded on the north by 31°36.7' N. lat.; on the south by 31°34.7' N. lat.; on the east by 80°47.3' W. long.; and on the west by 80°50.1' W. long.

(xvii) *Artificial Reef—L* is bounded on the north by 31°46.0' N. lat.; on the south by 31°44.0' N. lat.; on the east by 80°34.7' W. long.; and on the west by 80°37.1' W. long.

(xviii) *Artificial Reef—KC* is bounded on the north by 31°51.2' N. lat.; on the south by 31°49.2' N. lat.; on the east by 80°45.3' W. long.; and on the west by 80°47.7' W. long.

(xix) *Ft. Pierce Inshore Reef* is bounded on the north by 27°26.8' N. lat.; on the south by 27°25.8' N. lat.; on the east by 80°09.24' W. long.; and on the west by 80°10.36' W. long.

(xx) *Ft. Pierce Offshore Reef* is bounded by rhumb lines connecting, in order, the following points:

Point	North lat.	West long.
A	27°23.68'	80°03.95'
B	27°22.80'	80°03.60'
C	27°23.94'	80°00.02'
D	27°24.85'	80°00.33'
A	27°23.68'	80°03.95'

(xxi) *Key Biscayne/Artificial Reef—H* is bounded on the north by 25°42.82' N. lat.; on the south by 25°41.32' N. lat.; on the east by 80°04.22' W. long.; and on the west by 80°05.53' W. long.

(xxii) *Little River Offshore Reef* is bounded on the north by 33°42.10' N. lat.; on the south by 33°41.10' N. lat.; on the east by 78°26.40' W. long.; and on the west by 78°27.10' W. long.

(xxiii) *BP-25 Reef* is bounded on the north by 33°21.70' N. lat.; on the south by 33°20.70' N. lat.; on the east by 78°24.80' W. long.; and on the west by 78°25.60' W. long.

(xxiv) *Vermilion Reef* is bounded on the north by 32°57.80' N. lat.; on the south by 32°57.30' N. lat.; on the east by 78°39.30' W. long.; and on the west by 78°40.10' W. long.

(xxv) *Cape Romaine Reef* is bounded on the north by 33°00.00' N. lat.; on the south by 32°59.50' N. lat.; on the east by 79°02.01' W. long.; and on the west by 79°02.62' W. long.

(xxvi) *Y-73 Reef* is bounded on the north by 32°33.20' N. lat.; on the south by 32°32.70' N. lat.; on the east by 79°19.10' W. long.; and on the west by 79°19.70' W. long.

(xxvii) *Eagles Nest Reef* is bounded on the north by 32°01.48' N. lat.; on the south by 32°00.98' N. lat.; on the east by 80°30.00' W. long.; and on the west by 80°30.65' W. long.

(xxviii) *Bill Perry Jr. Reef* is bounded on the north by 33°26.20' N. lat.; on the south by 33°25.20' N. lat.; on the east by 78°32.70' W. long.; and on the west by 78°33.80' W. long.

(xxix) *Comanche Reef* is bounded on the north by 32°27.40' N. lat.; on the south by 32°26.90' N. lat.; on the east by 79°18.80' W. long.; and on the west by 79°19.60' W. long.

(xxx) *Murrel's Inlet 60 Foot Reef* is bounded on the north by 33°17.50' N. lat.; on the south by 33°16.50' N. lat.; on the east by 78°44.67' W. long.; and on the west by 78°45.98' W. long.

(xxxi) *Georgetown 95 Foot Reef* is bounded on the north by 33°11.75' N. lat.; on the south by 33°10.75' N. lat.; on the east by 78°24.10' W. long.; and on the west by 78°25.63' W. long.

(xxxii) *New Georgetown 60 Foot Reef* is bounded on the north by 33°09.25' N. lat.; on the south by 33°07.75' N. lat.; on the east by 78°49.95' W. long.; and on the west by 78°51.45' W. long.

(xxxiii) *North Inlet 45 Foot Reef* is bounded on the north by 33°21.03' N. lat.; on the south by 33°20.03' N. lat.; on the east by 79°00.31' W. long.; and on the west by 79°01.51' W. long.

(xxxiv) *CJ Davidson Reef* is bounded on the north by 33°06.48' N. lat.; on the south by 33°05.48' N. lat.; on the east by 79°00.27' W. long.; and on the west by 79°01.39' W. long.

(xxxv) *Greenville Reef* is bounded on the north by 32°57.25' N. lat.; on the south by 32°56.25' N. lat.; on the east by

78°54.25' W. long.; and on the west by 78°55.25' W. long.

(xxxvi) *Charleston 60 Foot Reef* is bounded on the north by 32°33.60' N. lat.; on the south by 32°32.60' N. lat.; on the east by 79°39.70' W. long.; and on the west by 79°40.90' W. long.

(xxxvii) *Edisto 60 Foot Reef* is bounded on the north by 32°21.75' N. lat.; on the south by 32°20.75' N. lat.; on the east by 80°04.10' W. longitude; and on the west by 80°05.70' W. long.

(xxxviii) *Edisto 40 Foot Reef* is bounded on the north by 32°25.78' N. lat.; on the south by 32°24.78' N. lat.; on the east by 80°11.24' W. long.; and on the west by 80°12.32' W. long.

(xxxix) *Beaufort 45 Foot Reef* is bounded on the north by 32°07.65' N. lat.; on the south by 32°06.65' N. lat.; on the east by 80°28.80' W. long.; and on the west by 80°29.80' W. long.

(xl) *Artificial Reef—ALT* is bounded on the north by 31°18.6' N. lat.; on the south by 31°16.6' N. lat.; on the east by 81°07.0' W. long.; and on the west by 81°09.4' W. long.

(xli) *Artificial Reef—CAT* is bounded on the north by 31°40.2' N. lat.; on the south by 31°38.2' N. lat.; on the east by 80°56.2' W. long.; and on the west by 80°58.6' W. long.

(xlii) *Artificial Reef—CCA* is bounded on the north by 31°43.7' N. lat.; on the south by 31°41.7' N. lat.; on the east by 80°40.0' W. long.; and on the west by 80°42.3' W. long.

(xliii) *Artificial Reef—DRH* is bounded on the north by 31°18.0' N. lat.; on the south by 31°16.0' N. lat.; on the east by 80°56.6' W. long.; and on the west by 80°59.0' W. long.

(xliv) *Artificial Reef—DUA* is bounded on the north by 31°47.8' N. lat.; on the south by 31°45.8' N. lat.; on the east by 80°52.1' W. long.; and on the west by 80°54.5' W. long.

(xlv) *Artificial Reef—DW* is bounded on the north by 31°22.8' N. lat.; on the south by 31°20.3' N. lat.; on the east by 79°49.8' W. long.; and on the west by 79°51.1' W. long.

(xlvi) *Artificial Reef—KBY* is bounded on the north by 30°48.6' N. lat.; on the south by 30°46.6' N. lat.; on the east by 81°15.0' W. long.; and on the west by 81°17.4' W. long.

(xlvii) *Artificial Reef—KTK* is bounded on the north by 31°31.3' N. lat.; on the

Fishery Conservation and Management

§ 622.182

south by 31°29.3' N. lat.; on the east by 80°59.1' W. long.; and on the west by 81°01.5' W. long.

(xlviii) *Artificial Reef—MRY* is bounded on the north by 30°47.5' N. lat.; on the south by 30°45.5' N. lat.; on the east by 81°05.5' W. long.; and on the west by 81°07.8' W. long.

(xlix) *Artificial Reef—SAV* is bounded on the north by 31°55.4' N. lat.; on the south by 31°53.4' N. lat.; on the east by 80°45.2' W. long.; and on the west by 80°47.6' W. long.

(1) *Artificial Reef—SFC* is bounded on the north by 31°00.8' N. lat.; on the south by 30°59.8' N. lat.; on the east by 81°02.2' W. long.; and on the west by 81°03.4' W. long.

(li) *Artificial Reef—WW* is bounded on the north by 31°43.5' N. lat.; on the south by 31°42.2' N. lat.; on the east by 79°57.7' W. long.; and on the west by 79°59.3' W. long.

(2) To determine what restrictions apply in the SMZs listed in paragraph (a)(1) of this section, follow this table:

In SMZs specified in the following paragraphs of this section	These restrictions apply
(a)(1)(i) through (x), (a)(1)(xx), and (a)(1)(xxii) through (xxxix) ..	Use of a powerhead to take South Atlantic snapper-grouper is prohibited. Possession of a powerhead and a mutilated South Atlantic snapper-grouper in, or after having fished in, one of these SMZs constitutes <i>prima facie</i> evidence that such fish was taken with a powerhead in the SMZ. Harvest and possession of a South Atlantic snapper-grouper is limited to the bag-limits specified § 622.187(b).
(a)(1)(i) through (xviii) and (a)(1)(xxii) through (li)	Fishing may only be conducted with handline, rod and reel, and spearfishing gear.
(a)(1)(i) through (li)	Use of a sea bass pot or bottom longline is prohibited.
(a)(1)(xii) through (xviii) and (a)(1)(xl) through (li)	Possession of South Atlantic snapper-grouper taken with a powerhead is limited to the bag limits specified in § 622.187(b).
(a)(1)(xix) and (a)(1)(xx)	A hydraulic or electric reel that is permanently affixed to the vessel is prohibited when fishing for South Atlantic snapper-grouper.
(a)(1)(xix) and (a)(1)(xxi)	Use of spearfishing gear is prohibited.

(b) *Longline prohibited areas.* A longline may not be used to fish in the EEZ for South Atlantic snapper-grouper south of 27°10' N. lat. (due east of the entrance to St. Lucie Inlet, FL); or north of 27°10' N. lat. where the charted depth is less than 50 fathoms (91.4 m), as shown on the latest edition of the largest scale NOAA chart of the location. A person aboard a vessel with a longline on board that fishes on a trip in the South Atlantic EEZ south of 27°10' N. lat., or north of 27°10' N. lat. where the charted depth is less than 50 fathoms (91.4 m), is limited on that trip to the bag limit for South Atlantic snapper-grouper for which a bag limit is specified in § 622.187(b), and to zero for all other South Atlantic snapper-grouper. For the purpose of this paragraph, a vessel is considered to have a longline on board when a power-operated longline hauler, a cable or monofilament of diameter and length suitable for use in the longline fishery, and gangions are on board. Removal of

any one of these three elements constitutes removal of a longline.

(c) [Reserved]

(d) *Sea bass pot prohibited area.* A sea bass pot may not be used in the South Atlantic EEZ south of 28°35.1' N. lat. (due east of the NASA Vehicle Assembly Building, Cape Canaveral, FL). A sea bass pot deployed in the EEZ south of 28°35.1' N. lat. may be disposed of in any appropriate manner by the Assistant Administrator or an authorized officer.

(d) [Reserved]

(e) *SMZs off North Carolina.* (1) The center of each SMZ in Table 3 to this paragraph (e) is located at the given point with a radius extending the applicable distance in every direction laterally from that point to form a circle around the center point.

(2) Harvest of South Atlantic snapper-grouper while in the SMZs in this paragraph (e) is permitted only by handline, rod and reel, and spearfishing gear. All harvest of South Atlantic snapper-grouper by spearfishing gear in

§ 622.183

the SMZs in this paragraph (e) is limited to the applicable recreational bag and possession limits in § 622.187.

TABLE 3 TO PARAGRAPH (e)

Reef name	North lat.	West long.	Radius in ft (m)
AR-130 ..	36°00.296'	75°31.957'	1,500 (457)

(f) *Additional SMZs off South Carolina.*

(1) The center of each SMZ in Table 4 to this paragraph (f) is located at the given point with a radius extending the applicable distance in every direction laterally from that point to form a circle around the center point.

(2) Harvest of South Atlantic snapper-grouper while in the SMZs in this paragraph (f) is permitted only by handline, rod and reel, and spearfishing gear (excludes a powerhead). All harvest of South Atlantic snapper-grouper by the allowable gear in the SMZs in this paragraph (f) is limited to the applicable recreational bag and possession limits in § 622.187.

(3) *PA-04—Ron McManus Memorial Reef.* This SMZ is bounded by lines connecting the following corner points: northwest corner point at 33°46.400' N, 78°36.200' W; northeast corner point at 33°46.400' N, 78°35.600' W; southeast corner point at 33°45.900' N, 78°35.600' W; and southwest corner point at 33°45.900' N, 78°36.200' W.

[78 FR 22952, Apr. 17, 2013, as amended at 85 FR 36171, June 15, 2020]

§ 622.183 Area and seasonal closures.

(a) *Area closures*—(1) *Marine protected areas (MPAs).* (i) No person may fish for a South Atlantic snapper-grouper in an MPA, and no person may possess a South Atlantic snapper-grouper in an MPA. However, the prohibition on possession does not apply to a person aboard a vessel that is in transit with fishing gear appropriately stowed as specified in paragraph (a)(1)(ii) of this section. In addition to these restrictions, see § 635.21(d)(1)(iii) of this chapter regarding restrictions applicable within these MPAs for any vessel issued a permit under part 635 of this chapter that has longline gear on board. MPAs consist of deepwater areas as follows:

(A) *Snowy Grouper Wreck MPA* is bounded by rhumb lines connecting, in order, the following points:

Point	North lat.	West long.
A	33°25'	77°04.75'
B	33°34.75'	76°51.3'
C	33°25.5'	76°46.5'
D	33°15.75'	77°00.0'
A	33°25'	77°04.75'

(B) *Northern South Carolina MPA* is bounded on the north by 32°53.5' N. lat.; on the south by 32°48.5' N. lat.; on the east by 78°04.75' W. long.; and on the west by 78°16.75' W. long.

(C) *Edisto MPA* is bounded on the north by 32°24' N. lat.; on the south by 32°18.5' N. lat.; on the east by 78°54.0' W. long.; and on the west by 79°06.0' W. long.

(D) *Charleston Deep Artificial Reef MPA* is bounded by rhumb lines connecting, in order, the following points:

Point	North lat.	West long.
A	32°05.04'	79°13.575'
B	32°09.65'	79°09.2'
C	32°07.155'	79°05.595'
D	32°02.36'	79°09.975'
A	32°05.04'	79°13.575'

(E) *Georgia MPA* is bounded by rhumb lines connecting, in order, the following points:

Point	North lat.	West long.
A	31°43'	79°31'
B	31°43'	79°21'
C	31°34'	79°29'
D	31°34'	79°39'
A	31°43'	79°31'

(F) *North Florida MPA* is bounded on the north by 30°29' N. lat.; on the south by 30°19' N. lat.; on the east by 80°02' W. long.; and on the west by 80°14' W. long.

(G) *St. Lucie Hump MPA* is bounded on the north by 27°08' N. lat.; on the south by 27°04' N. lat.; on the east by 79°58' W. long.; and on the west by 80°00' W. long.

(H) *East Hump MPA* is bounded by rhumb lines connecting, in order, the following points:

Point	North lat.	West long.
A	24°36.5'	80°45.5'
B	24°32'	80°36'
C	24°27.5'	80°38.5'
D	24°32.5'	80°48'
A	24°36.5'	80°45.5'

(ii) For the purpose of paragraph (a)(1)(i) of this section, transit means direct, non-stop progression through the MPA. Fishing gear appropriately stowed means—

(A) A longline may be left on the drum if all gangions and hooks are disconnected and stowed below deck. Hooks cannot be baited. All buoys must be disconnected from the gear; however, buoys may remain on deck.

(B) A trawl or try net may remain on deck, but trawl doors must be disconnected from such net and must be secured.

(C) A gillnet, stab net, or trammel net must be left on the drum. Any additional such nets not attached to the drum must be stowed below deck.

(D) Terminal gear (*i.e.*, hook, leader, sinker, flasher, or bait) used with an automatic reel, bandit gear, buoy gear, handline, or rod and reel must be disconnected and stowed separately from

such fishing gear. A rod and reel must be removed from the rod holder and stowed securely on or below deck.

(E) A crustacean trap, golden crab trap, or sea bass pot cannot be baited. All buoys must be disconnected from the gear; however, buoys may remain on deck.

(2) *Spawning SMZs*. (i) Any fishing vessel in a spawning SMZ is prohibited to fish for or harvest species in the snapper-grouper fishery management unit year-round. For a fishing vessel to possess snapper-grouper species on board while in a spawning SMZ, the vessel must be in transit and fishing gear must be appropriately stowed, as specified in paragraph (a)(2)(vii) of this section. Except for spawning SMZs of Area 51 and Area 53, the spawning SMZs in this paragraph are effective until August 2, 2027. A person on board a fishing vessel may not anchor, use an anchor and chain, or use a grapple and chain while in the spawning SMZs specified in paragraph (a)(2) of this section. The anchoring prohibition does not apply to fishing vessels in the spawning SMZs of Area 51 and Area 53.

(ii) *South Cape Lookout Spawning SMZ* is bounded by rhumb lines connecting, in order, the following points:

Point	North lat.	West long.
A	33°53.040'	76°28.617'
B	33°52.019'	76°27.798'
C	33°49.946'	76°30.627'
D	33°51.041'	76°31.424'
A	33°53.040'	76°28.617'

(iii) *Devil's Hole/Georgetown Hole Spawning SMZ* is bounded by rhumb lines connecting, in order, the following points:

Point	North lat.	West long.
A	32°34.311'	78°34.996'
B	32°34.311'	78°33.220'
C	32°32.748'	78°33.220'
D	32°32.748'	78°34.996'
A	32°34.311'	78°34.996'

(iv) *Area 51 Spawning SMZ* is bounded by rhumb lines connecting, in order, the following points:

Point	North lat.	West long.
A	32°35.25'	79°28.6'
B	32°35.25'	79°27'
C	32°33.75'	79°27'
D	32°33.75'	79°28.6'

§ 622.183

Point	North lat.	West long.
A	32°35.25'	79°28.6'

(v) *Area 53 Spawning SMZ* is bounded by rhumb lines connecting, in order, the following points:

Point	North lat.	West long.
A	32°22.65'	79°22.25'
B	32°22.65'	79°20.5'
C	32°21.15'	79°20.5'
D	32°21.15'	79°22.25'
A	32°22.65'	79°22.25'

(vi) *Warsaw Hole/50 Fathom Hole Spawning SMZ* is bounded by rhumb lines connecting, in order, the following points:

Point	North lat.	West long.
A	24°22.277'	82°20.417'
B	24°22.277'	82°18.215'
C	24°20.932'	82°18.215'
D	24°20.932'	82°20.417'
A	24°22.277'	82°20.417'

(vii) For the purpose of paragraph (a)(2)(i) of this section, transit means direct, non-stop progression through the spawning SMZ. Fishing gear appropriately stowed means—

(A) A longline may be left on the drum if all gangions and hooks are disconnected and stowed below deck. Hooks cannot be baited. All buoys must be disconnected from the gear; however, buoys may remain on deck.

(B) Trawl doors and nets must be out of the water, but the doors are not required to be on deck or secured on or below deck.

(C) A gillnet, stab net, or trammel net must be left on the drum. Any additional such nets not attached to the drum must be stowed below deck.

(D) Terminal gear (*i.e.*, hook, leader, sinker, flasher, or bait) used with an automatic reel, bandit gear, buoy gear, handline, or rod and reel must be disconnected and stowed separately from such fishing gear. Sinkers must be disconnected from the down rigger and stowed separately.

(E) A crustacean trap, golden crab trap, or sea bass pot cannot be baited. All buoys must be disconnected from the gear; however, buoys may remain on deck.

(b) *Seasonal closures*—(1) *Seasonal closure of the commercial and recreational sectors for gag and associated grouper*

50 CFR Ch. VI (10–1–21 Edition)

species. During January through April each year, no person may fish for, harvest, or possess in or from the South Atlantic EEZ any South Atlantic shallow-water grouper (SASWG): Gag, black grouper, red grouper, scamp, red hind, rock hind, yellowmouth grouper, yellowfin grouper, graysby, and coney. For a person on board a vessel for which a valid Federal commercial or charter vessel/headboat permit for South Atlantic snapper-grouper has been issued, these prohibitions against fishing, harvesting, or possessing apply in the South Atlantic, *i.e.*, in state or Federal waters. Additionally, in the month of May, no person may fish for, harvest, or possess any South Atlantic red grouper in or from the South Atlantic EEZ off North Carolina or off South Carolina. For a person on board a vessel for which a valid Federal commercial or charter vessel/headboat permit for South Atlantic snapper-grouper has been issued, these prohibitions against fishing, harvesting, or possessing red grouper in May apply in state waters off North Carolina and off South Carolina.

(2) *Wreckfish spawning-season closure*. From January 15 through April 15, each year, no person may harvest or possess on a fishing vessel wreckfish in or from the EEZ; offload wreckfish from the EEZ; or sell or purchase wreckfish in or from the EEZ. The prohibition on sale or purchase of wreckfish does not apply to trade in wreckfish that were harvested, offloaded, and sold or purchased prior to January 15 and were held in cold storage by a dealer or processor.

(3) *Wreckfish recreational sector closures*. The recreational sector for wreckfish in or from the South Atlantic EEZ is closed from January 1 through June 30, and September 1 through December 31, each year. During a closure, the bag and possession limit for wreckfish in or from the South Atlantic EEZ is zero.

(4) *Hogfish recreational sector off the Florida Keys and east coast of Florida*. From January through April and from November through December each year, the recreational harvest or possession of hogfish in or from the South Atlantic EEZ off the Florida Keys and east coast of Florida, and in the Gulf

EEZ south of 25°09' N. lat. off the west coast of Florida is prohibited, and the bag and possession limits are zero.

(5) *Closures of the commercial and recreational sectors for red snapper*—(i) The commercial and recreational sectors for red snapper are closed (*i.e.*, red snapper may not be harvested or possessed, or sold or purchased) in or from the South Atlantic EEZ, except as specified in § 622.193(y). Each year, NMFS will announce the season opening dates in the FEDERAL REGISTER. The commercial season will begin on the second Monday in July, unless otherwise specified. The recreational season, which consists of weekends only (Fridays, Saturdays, and Sundays) begins on the second Friday in July, unless otherwise specified. NMFS will project the length of the recreational fishing season and announce the recreational fishing season end date in the FEDERAL REGISTER. See § 622.193(y), for establishing the end date of the commercial fishing season.

(ii) If the RA determines tropical storm or hurricane conditions exist, or are projected to exist, in the South Atlantic, during a commercial or recreational fishing season, the RA may modify the opening and closing dates of the fishing season by filing a notification to that effect with the Office of the Federal Register, and announcing via NOAA Weather Radio and a Fishery Bulletin any change in the dates of the red snapper commercial or recreational fishing season.

(6) *Seasonal closure of the commercial black sea bass pot component of the snapper-grouper fishery*. The closed area is that area and time period described in paragraphs (b)(6)(i) and (b)(6)(ii) of this section, respectively. During the applicable closure, no person may harvest or possess black sea bass in or from the closed area within the South Atlantic EEZ either with sea bass pots or from a vessel with sea bass pots on board, except that a vessel with a valid commercial permit for snapper-grouper with a sea bass pot endorsement that is in transit and with black sea bass pot gear appropriately stowed as described in paragraph (b)(6)(iii) of this section may possess black sea bass. In addition, sea bass pots must be removed from the water in the applicable closed

area within the South Atlantic EEZ before the applicable time period, and may not be on board a vessel in the closed area within the South Atlantic EEZ during the applicable closure, except for such sea bass pot gear appropriately stowed on board a vessel in transit through the closed area. See paragraph (b)(6)(iii) of this section for black sea bass pot transit and gear stowage requirements through the closed areas.

(i) From November 1 through November 30 and from April 1 through April 30, no person may harvest or possess black sea bass in or from the closed area within the South Atlantic EEZ either with sea bass pots or from a vessel with sea bass pots on board in the South Atlantic EEZ inshore of the rhumb lines connecting, in order, the following points:

Point	North lat.	West long.
1	35°15'	State/EEZ boundary.
2	35°15'	75°09'.
3	35°06'	75°22'.
4	35°06'	75°39'.
5	35°01'	75°47'.
6	34°54'	75°46'.
7	34°52'	76°04'.
8	34°33'	76°22'.
9	34°23'	76°18'.
10	34°21'	76°27'.
11	34°25'	76°51'.
12	34°09'	77°19'.
13	33°44'	77°38'.
14	33°25'	77°27'.
15	33°22'	77°40'.
16	33°28'	77°41'.
17	33°32'	77°53'.
18	33°22'	78°26'.
19	33°06'	78°31'.
20	33°05'	78°40'.
21	33°01'	78°43'.
22	32°56'	78°57'.
23	32°44'	79°04'.
24	32°42'	79°13'.
25	32°34'	79°23'.
26	32°25'	79°25'.
27	32°23'	79°37'.
28	31°53'	80°09'.
29	31°31'	80°33'.
30	30°43'	80°49'.
31	30°30'	81°01'.
32	29°45'	81°01'.
33	29°31'	80°58'.
34	29°13'	80°52'.
35	29°13'	State/EEZ boundary.

(ii) From December 1 through March 31, no person may harvest or possess black sea bass in or from the closed area within the South Atlantic EEZ either with sea bass pots or from a vessel

§ 622.184

with sea bass pots on board in the South Atlantic EEZ inshore of the rhumb lines connecting, in order, the following points:

Point	North lat.	West long.
1	35°15'	State/EEZ boundary.
2	35°15'	75°08'.
3	34°58'	75°41'.
4	34°49'	75°50'.
5	34°47'	76°05'.
6	34°31'	76°18'.
7	34°20'	76°13'.
8	34°12'	77°00'.
9	33°43'	77°30'.
10	33°21'	77°21'.
11	33°18'	77°41'.
12	33°22'	77°56'.
13	33°12'	78°20'.
14	33°05'	78°22'.
15	33°01'	78°38'.
16	32°40'	79°01'.
17	32°36'	79°18'.
18	32°19'	79°22'.
19	32°16'	79°37'.
20	32°03'	79°48'.
21	31°39'	80°27'.
22	30°58'	80°47'.
23	30°13'	81°01'.
24	29°32'	80°39'.
25	29°22'	80°44'.
26	28°50'	80°22'.
27	28°21'	80°18'.
28	28°21'	State/EEZ boundary.

(iii) For the purpose of paragraph (b)(6) of this section, transit means non-stop progression through the area; fishing gear appropriately stowed means all black sea bass pot gear must be out of the water and on board the deck of the vessel. All buoys must either be disconnected from the gear or stowed within the sea bass pot. Disconnected buoys may remain on deck.

(7) *Blueline tilefish recreational sector closure.* The recreational sector for blueline tilefish in or from the South Atlantic EEZ is closed from January 1 through April 30, and September 1 through December 31, each year. During a closure, the bag and possession limit for blueline tilefish in or from the South Atlantic EEZ is zero.

(8) *Snowy grouper recreational sector closure.* The recreational sector for snowy grouper in or from the South Atlantic EEZ is closed from January 1 through April 30, and September 1 through December 31, each year. During a closure, the bag and possession

50 CFR Ch. VI (10–1–21 Edition)

limit for snowy grouper in or from the South Atlantic EEZ is zero.

[78 FR 22952, Apr. 17, 2013, as amended at 78 FR 44464, July 24, 2013; 78 FR 47579, Aug. 6, 2013; 78 FR 49184, Aug. 13, 2013; 78 FR 58253, Sept. 23, 2013; 80 FR 16587, Mar. 30, 2015; 80 FR 43038, July 21, 2015; 81 FR 95902, Dec. 29, 2016; 82 FR 29775, June 30, 2017; 82 FR 34594, July 25, 2017; 83 FR 35435, July 26, 2018; 85 FR 6827, Feb. 6, 2020; 85 FR 64980, Oct. 14, 2020]

§ 622.184 Seasonal harvest limitations.

(a) *Greater amberjack spawning season.* During April, each year, the possession of greater amberjack in or from the South Atlantic EEZ and in the South Atlantic on board a vessel for which a valid Federal commercial or charter vessel/headboat permit for South Atlantic snapper-grouper has been issued, without regard to where such greater amberjack were harvested, is limited to one per person per day or one per person per trip, whichever is more restrictive. Such greater amberjack are subject to the prohibition on sale or purchase, as specified in § 622.192(g).

(b) [Reserved]

[78 FR 22952, Apr. 17, 2013, as amended at 83 FR 1309, Jan. 11, 2018; 85 FR 4594, Jan. 27, 2020]

§ 622.185 Size limits.

All size limits in this section are minimum size limits unless specified otherwise. A fish not in compliance with its size limit, as specified in this section, in or from the South Atlantic EEZ, may not be possessed, sold, or purchased. A fish not in compliance with its size limit must be released immediately with a minimum of harm. The operator of a vessel that fishes in the EEZ is responsible for ensuring that fish on board are in compliance with the size limits specified in this section.

(a) *Snapper*—(1) [Reserved]

(2) *Vermilion snapper*—12 inches (30.5 cm), TL.

(3) *Cubera, gray, and yellowtail snappers*—12 inches (30.5 cm), TL.

(4) *Mutton snapper*—18 inches (45.7 cm), TL.

(5) *Lane snapper*—8 inches (20.3 cm), TL.

(b) *Grouper*—(1) *Red, yellowfin, and yellowmouth grouper; and scamp*—20 inches (50.8 cm), TL.

(2) *Black grouper and gag*—24 inches (61.0 cm), TL.

(c) *Other snapper-grouper species*—(1) *Black sea bass*.

(i) For a fish taken by a person subject to the bag limit specified in § 622.187(b)(7)—13 inches (33 cm), TL.

(ii) For a fish taken by a person not subject to the bag limit specified in § 622.187(b)(7)—11 inches (28 cm), TL.

(2) *Gray triggerfish*—12 inches (30.5 cm), FL.

(3) *Hogfish*. (i) In the South Atlantic EEZ off Georgia, South Carolina, and North Carolina—17 inches (43.2 cm), fork length.

(ii) In the South Atlantic EEZ off the Florida Keys and east coast of Florida, and in the Gulf EEZ south of 25°09' N. lat. off the west coast of Florida—16 inches (40.6 cm), fork length.

(4) *Red porgy*—14 inches (35.6 cm), TL.

(5) *Greater amberjack*—28 inches (71.1 cm), fork length, for a fish taken by a person subject to the bag limit specified in § 622.187(b)(1) and 36 inches (91.4 cm), fork length, for a fish taken by a person not subject to the bag limit.

(6) *Almaco jack*. For a fish taken by a person not subject to the bag limit specified in § 622.187(b)(8)—20 inches (50.8 cm), FL.

[78 FR 22952, Apr. 17, 2013, as amended at 78 FR 44465, July 24, 2013; 80 FR 30952, June 1, 2015; 81 FR 32253, May 23, 2016; 82 FR 34594, July 25, 2017; 83 FR 1309, Jan. 11, 2018; 85 FR 4594, Jan. 27, 2020; 85 FR 11309, Feb. 27, 2020]

§ 622.186 Landing fish intact.

(a) South Atlantic snapper-grouper in or from the South Atlantic EEZ must be maintained with head and fins intact, except as specified in paragraph (b) of this section. Such fish may be eviscerated, gilled, and scaled, but must otherwise be maintained in a whole condition. The operator of a vessel that fishes in the EEZ is responsible for ensuring that fish on that vessel in the EEZ are maintained intact and, if taken from the EEZ, are maintained intact through offloading ashore, as specified in this section.

(b) In the South Atlantic EEZ, snapper-grouper lawfully harvested in Bahamian waters are exempt from the requirement that they be maintained with head and fins intact, provided that the skin remains intact on the en-

tire fillet of any snapper-grouper carcasses, valid Bahamian fishing and cruising permits are on board the vessel, each person on the vessel has a valid government passport with current stamps and dates from The Bahamas, and the vessel is in transit through the South Atlantic EEZ with fishing gear appropriately stowed. For the purpose of this paragraph, a vessel is in transit through the South Atlantic EEZ when it is on a direct and continuous course through the South Atlantic EEZ and no one aboard the vessel fishes in the EEZ. For the purpose of this paragraph, fishing gear appropriately stowed means that terminal gear (*i.e.*, hook, leader, sinker, flasher, or bait) used with an automatic reel, bandit gear, buoy gear, handline, or rod and reel must be disconnected and stowed separately from such fishing gear. Sinkers must be disconnected from the down rigger and stowed separately. See § 622.187(a)(3) for the limit of snapper-grouper fillets lawfully harvested from Bahamian waters that may transit through the South Atlantic EEZ.

[78 FR 22952, Apr. 17, 2013, as amended at 80 FR 80688, Dec. 28, 2015]

§ 622.187 Bag and possession limits.

(a) *Additional applicability provisions for South Atlantic snapper-grouper*. Section 622.11(a) provides the general applicability for bag and possession limits. However, § 622.11(a) notwithstanding:

(1) The bag and other limits specified in § 622.182(b) apply for South Atlantic snapper-grouper in or from the EEZ to a person aboard a vessel for which a commercial permit for South Atlantic snapper-grouper has been issued that has on board a longline in the longline closed area.

(2) A person aboard a vessel for which a commercial permit for South Atlantic snapper-grouper has been issued must comply with the bag limits specified in paragraph (b)(1) of this section for South Atlantic snapper-grouper taken with a powerhead, regardless of where taken, when such snapper-grouper are possessed in an SMZ specified in § 622.182(a)(1)(xii) through (a)(1)(xviii) or (a)(1)(xl) through (a)(1)(li).

(3) In the South Atlantic EEZ, a vessel that lawfully harvests snapper-grouper in Bahamian waters, as per § 622.186 (b), must comply with the bag and possession limits specified in this section. For determining how many snapper-grouper are on board a vessel in fillet form when harvested lawfully in Bahamian waters, two fillets of snapper-grouper, regardless of the length of each fillet, is equivalent to one snapper-grouper. The skin must remain intact on the entire fillet of any snapper-grouper carcass.

(b) *Bag limits*—(1) *Greater amberjack*—1.

(2) *Grouper and tilefish, combined*—3. Within the 3-fish aggregate bag limit:

(i) No more than one fish may be gag or black grouper, combined;

(ii) No more than one fish per vessel may be a snowy grouper;

(iii) No more than one fish may be a golden tilefish; and

(iv) [Reserved]

(v) No goliath grouper or Nassau grouper may be retained.

(3) *Hogfish*. (i) In the South Atlantic EEZ off Georgia, South Carolina, and North Carolina—2.

(ii) In the South Atlantic EEZ off the Florida Keys and east coast of Florida, and in the Gulf EEZ south of 25°09' N. lat. off the west coast of Florida—1.

(4) *Snappers, combined*—10.

(i) Within the 10-fish bag limit, no more than 5 fish may be mutton snapper.

(ii) Excluded from this 10-fish bag limit are cubera snapper, measuring 30 inches (76.2 cm), TL, or larger, in the South Atlantic off Florida, and red snapper and vermillion snapper. (See § 622.181(b)(2) for the prohibitions on harvest or possession of red snapper, except during a limited recreational fishing season, and § 622.181(c)(1) for limitations on cubera snapper measuring 30 inches (76.2 cm), TL, or larger, in or from the South Atlantic EEZ off Florida.)

(5) *Vermilion snapper*—5.

(6) *Red porgy*—3.

(7) *Black sea bass*—7.

(8) *South Atlantic snapper-grouper* (*whitebone porgy, jolthead porgy, knobbed porgy, saucereye porgy, scup, almaco jack, banded rudderfish, lesser*

amberjack, white grunt, margate, sailor's choice, Atlantic spadefish, gray triggerfish, bar jack), combined—20. However, excluded from this 20-fish bag limit are tomtate, South Atlantic snapper-grouper ecosystem component species (specified in table 4 of appendix A to part 622), and those specified in paragraphs (b)(1) through (7) and paragraphs (b)(9) and (10) of this section. Within the 20-fish bag limit, no more than 10 fish can be of any one of these single snapper-grouper species.

(9) *Red snapper*—1.

(10) No more than one fish per vessel may be a wreckfish.

(11) *Longline bag limits*. Other provisions of this paragraph (b) notwithstanding, a person on a trip aboard a vessel for which the bag limits apply that has a longline on board is limited on that trip to the bag limit for South Atlantic snapper-grouper for which a bag limit is specified in this paragraph (b), and to zero for all other South Atlantic snapper-grouper. For the purposes of this paragraph (b)(11), a vessel is considered to have a longline on board when a power-operated longline hauler, a cable or monofilament of diameter and length suitable for use in the longline fishery, and gangions are on board. Removal of any one of these elements constitutes removal of a longline.

(c) *Possession limits*. (1) Provided each passenger is issued and has in possession a receipt issued on behalf of the vessel that verifies the duration of the trip—

(i) A person aboard a charter vessel or headboat on a trip that spans more than 24 hours may possess no more than two daily bag limits of species other than red porgy.

(ii) A person aboard a headboat on a trip that spans more than 48 hours and who can document that fishing was conducted on at least 3 days may possess no more than three daily bag limits of species other than red porgy.

(2) A person aboard a vessel may not possess red porgy in or from the EEZ in

excess of three per day or three per trip, whichever is more restrictive.

[78 FR 22952, Apr. 17, 2013, as amended at 78 FR 44465, July 24, 2013; 78 FR 78775, Dec. 27, 2013; 80 FR 16587, Mar. 30, 2015; 80 FR 80688, Dec. 28, 2015; 81 FR 45248, July 13, 2016; 82 FR 34594, July 25, 2017; 83 FR 1309, Jan. 11, 2018; 83 FR 35435, July 26, 2018; 85 FR 11309, Feb. 27, 2020]

§ 622.188 Required gear, authorized gear, and unauthorized gear.

(a) *Required gear.* For a person on board a vessel to harvest or possess South Atlantic snapper-grouper in or from the South Atlantic EEZ, the vessel must possess on board and such person must use the gear as specified in paragraphs (a)(1) and (a)(2) of this section.

(1) *Dehooking device.* At least one dehooking device is required and must be used as needed to remove hooks embedded in South Atlantic snapper-grouper with minimum damage. The hook removal device must be constructed to allow the hook to be secured and the barb shielded without re-engaging during the removal process. The dehooking end must be blunt, and all edges rounded. The device must be of a size appropriate to secure the range of hook sizes and styles used in the South Atlantic snapper-grouper fishery.

(2) *Non-offset, non-stainless steel circle hooks.* Non-offset, non-stainless steel circle hooks are required to be used when fishing for South Atlantic snapper-grouper with hook-and-line gear and natural baits north of 28° N lat.

(3) *Non-stainless steel hooks.* Non-stainless steel hooks are required to be used when fishing for South Atlantic snapper-grouper with hook-and-line gear and natural baits south of 28° N lat.

(4) *Descending device.* At least one descending device is required to be on board a vessel and be ready for use while fishing for or possessing South Atlantic snapper-grouper. Descending device means an instrument capable of releasing the fish at the depth from which the fish was caught, and to which is attached a minimum of a 16-ounce (454-gram) weight and a minimum of a 60-ft (15.2-m) length of line. The descending device may either at-

tach to the fish's mouth or be a container that will retain the fish while it is lowered to depth. The device must be capable of releasing the fish automatically, by actions of the operator of the device, or by allowing the fish to escape on its own when at depth.

(b) *Authorized gear.* Subject to the gear restrictions specified in § 622.180, the following are the only gear types authorized in a directed fishery for snapper-grouper in the South Atlantic EEZ: Bandit gear, bottom longline, buoy gear, handline, rod and reel, sea bass pot, and spearfishing gear.

(c) *Unauthorized gear.* All gear types other than those specified in paragraph (b) of this section are unauthorized gear and the following possession and transfer limitations apply.

(1) A vessel with trawl gear on board that fishes in the EEZ on a trip may possess no more than 200 lb (90.7 kg) of South Atlantic snapper-grouper, excluding wreckfish, in or from the EEZ on that trip. It is a rebuttable presumption that a vessel with more than 200 lb (90.7 kg) of South Atlantic snapper-grouper, excluding wreckfish, on board harvested such fish in the EEZ.

(2) Except as specified in paragraphs (d) through (f) of this section, a person aboard a vessel with unauthorized gear on board, other than trawl gear, that fishes in the EEZ on a trip is limited on that trip to:

(i) South Atlantic snapper-grouper species for which a bag limit is specified in § 622.187—the bag limit.

(ii) All other South Atlantic snapper-grouper—zero.

(3) South Atlantic snapper-grouper on board a vessel with unauthorized gear on board may not be transferred at sea, regardless of where such transfer takes place, and such snapper-grouper may not be transferred in the EEZ.

(4) No vessel may receive at sea any South Atlantic snapper-grouper from a vessel with unauthorized gear on board, as specified in paragraph (c)(3) of this section.

(d) *Possession allowance regarding sink nets off North Carolina.* A vessel that has on board a commercial permit for South Atlantic snapper-grouper, excluding wreckfish, that fishes in the EEZ off North Carolina with a sink net

on board, may retain, without regard to the limits specified in paragraph (c)(2) of this section, otherwise legal South Atlantic snapper-grouper taken with bandit gear, buoy gear, handline, rod and reel, or sea bass pot. For the purpose of this paragraph (d), a sink net is a gillnet with stretched mesh measurements of 3 to 4.75 inches (7.6 to 12.1 cm) that is attached to the vessel when deployed.

(e) *Possession allowance regarding bait nets.* A vessel that has on board a commercial permit for South Atlantic snapper-grouper, excluding wreckfish, that fishes in the South Atlantic EEZ with no more than one bait net on board, may retain, without regard to the limits specified in paragraph (c)(2) of this section, otherwise legal South Atlantic snapper-grouper taken with bandit gear, buoy gear, handline, rod and reel, or sea bass pot. For the purpose of this paragraph (e), a bait net is a gillnet not exceeding 50 ft (15.2 m) in length or 10 ft (3.1 m) in height with stretched mesh measurements of 1.5 inches (3.8 cm) or smaller that is attached to the vessel when deployed.

(f) *Possession allowance regarding cast nets.* A vessel that has on board a commercial permit for South Atlantic snapper-grouper, excluding wreckfish, that fishes in the South Atlantic EEZ with a cast net on board, may retain, without regard to the limits specified in paragraph (c)(2) of this section, otherwise legal South Atlantic snapper-grouper taken with bandit gear, buoy gear, handline, rod and reel, or sea bass pot. For the purpose of this paragraph (f), a cast net is a cone-shaped net thrown by hand and designed to spread out and capture fish as the weighted circumference sinks to the bottom and comes together when pulled by a line.

(g) *Longline species limitation.* A vessel that has on board a valid Federal commercial permit for South Atlantic snapper-grouper, excluding wreckfish, that fishes in the EEZ on a trip with a longline on board, may possess only the following South Atlantic snapper-grouper: snowy grouper, yellowedge grouper, misty grouper, golden tilefish, bluefin tilefish, and sand tilefish. See § 622.170(f) for the requirement to possess a valid South Atlantic golden tilefish longline endorsement to fish

for golden tilefish in the South Atlantic EEZ using longline gear. For the purpose of this paragraph, a vessel is considered to have a longline on board when a power-operated longline hauler, a cable of diameter suitable for use in the longline fishery on any reel, and gangions are on board. Removal of any one of these three elements constitutes removal of a longline.

[78 FR 22952, Apr. 17, 2013, as amended at 78 FR 23863 Apr. 23, 2013; 85 FR 36171, June 15, 2020]

§ 622.189 Restrictions and requirements for sea bass pots.

(a) *Tending restriction.* A sea bass pot in the South Atlantic EEZ may be pulled or tended only by a person (other than an authorized officer) aboard the vessel permitted to fish such pot or aboard another vessel if such vessel has on board written consent of the owner or operator of the vessel so permitted.

(b) *Configuration restriction.* In the South Atlantic EEZ, sea bass pots may not be used or possessed in multiple configurations, that is, two or more pots may not be attached one to another so that their overall dimensions exceed those allowed for an individual sea bass pot. This does not preclude connecting individual pots to a line, such as a “trawl” or trot line.

(c) *Requirement for escape mechanisms.* (1) A sea bass pot that is used or possessed in the South Atlantic EEZ between 35°15.19' N. lat. (due east of Cape Hatteras Light, NC) and 28°35.1' N. lat. (due east of the NASA Vehicle Assembly Building, Cape Canaveral, FL) is required to have—

(i) On at least one side, excluding top and bottom, a panel or door with an opening equal to or larger than the interior end of the trap's throat (funnel). The hinges and fasteners of each panel or door must be made of one of the following degradable materials:

(A) Ungalvanized or uncoated iron wire with a diameter not exceeding 0.041 inches (1.0 mm), that is, 19 gauge wire.

(B) Galvanic timed-release mechanisms with a letter grade designation (degradability index) no higher than J.

(ii) An unobstructed escape vent opening on at least two opposite

vertical sides, excluding top and bottom. The minimum dimensions of an escape vent opening (based on inside measurement) are:

(A) 1½ by 5¾ inches (2.9 by 14.6 cm) for a rectangular vent.

(B) 1.75 by 1.75 inches (4.5 by 4.5 cm) for a square vent.

(C) 2.0-inch (5.1-cm) diameter for a round vent.

(2) [Reserved]

(d) *Construction requirements and mesh sizes.* (1) A sea bass pot used or possessed in the South Atlantic EEZ must have mesh sizes as follows (based on centerline measurements between opposite, parallel wires or netting strands):

(i) For sides of the pot other than the back panel:

(A) Hexagonal mesh (chicken wire)—at least 1.5 inches (3.8 cm) between the wrapped sides;

(B) Square mesh—at least 1.5 inches (3.8 cm) between sides; or

(C) Rectangular mesh—at least 1 inch (2.5 cm) between the longer sides and 2 inches (5.1 cm) between the shorter sides.

(ii) For the entire back panel, *i.e.*, the side of the pot opposite the side that contains the pot entrance, mesh that is at least 2 inches (5.1 cm) between sides.

(2) [Reserved]

(e) *Requirements for pot removal.* (1) A sea bass pot must be removed from the water in the South Atlantic EEZ and the vessel must be returned to a dock, berth, beach, seawall, or ramp at the conclusion of each trip. Sea bass pots may remain on the vessel at the conclusion of each trip.

(2) A sea bass pot must be removed from the water in the South Atlantic EEZ when the applicable quota specified in § 622.190(a)(5) is reached. After a closure is in effect, a black sea bass may not be retained by a vessel that has a sea bass pot on board.

(f) *Restriction on number of pots.* A vessel that has on board a valid Federal commercial permit for South Atlantic snapper-grouper and a South Atlantic black sea bass pot endorsement that fishes in the South Atlantic EEZ on a trip with black sea bass pots, may possess only 35 black sea bass pots per vessel per permit year. Each black sea bass pot in the water or onboard a ves-

sel in the South Atlantic EEZ, must have a valid identification tag attached. Endorsement holders must apply for new tags each permit year through NMFS to replace tags from the previous year.

(g) *Sea bass pot buoy line marking requirement.* In addition to the gear marking requirements specified in 50 CFR 229.32(b), from November 15 through April 15, each year, in the Southeast U.S. Restricted Area North as described in 50 CFR 229.32(f) and from September 1 through May 31, each year in the Offshore Trap/Pot Waters Area and the Southern Nearshore Trap/Pot Waters Area, as described in 50 CFR 229.32(c)(6) and (9), respectively, the buoy line must be marked with a purple color band. The colored band must be clearly visible when the gear is hauled or removed from the water, including if the color of the rope is the same as, or similar, to the colored band. The purple band must be marked directly onto the line and adjacent to the buoy line markings specified in 50 CFR 229.32(b), that is, at the top, middle, and bottom of each buoy line deployed by, or on board, the vessel. Each of the three purple bands must be a 12-inch (30.5 cm) color mark. In marking or affixing the purple band, the line may be dyed, painted, or marked with thin colored whipping line, thin colored plastic, or heat-shrink tubing, or other material.

[81 FR 1792, Jan. 13, 2016, as amended at 81 FR 95902, Dec. 29, 2016]

§ 622.190 Quotas.

See § 622.8 for general provisions regarding quota applicability and closure and reopening procedures. This section provides quotas and specific quota closure restrictions for South Atlantic snapper-grouper.

(a) *South Atlantic snapper-grouper, excluding wreckfish.* The quotas apply to persons who are not subject to the bag limits. (See § 622.11 for applicability of the bag limits.) The quotas are in gutted weight, that is eviscerated but otherwise whole, except for the quotas in paragraphs (a)(4) through (7) of this section which are in both gutted weight and round weight.

(1) *Snowy grouper*—(i) For the period January 1 through June 30 each year—107,754 lb (48,876 kg).

(ii) For the period July 1 through December 31 each year—46,181 lb (20,947 kg).

(iii) Any unused portion of the quota specified in paragraph (a)(1)(i) of this section will be added to the quota specified in paragraph (a)(1)(ii) of this section. Any unused portion of the quota specified in paragraph (a)(1)(ii) of this section, including any addition of quota specified in paragraph (a)(1)(i) of this section that was unused, will become void and will not be added to any subsequent quota.

(2) *Golden tilefish*. (i) *Commercial sector (hook-and-line and longline components combined)*—331,740 lb (150,475 kg).

(ii) *Hook-and-line component*—82,935 lb (37,619 kg).

(iii) *Longline component*—248,805 lb (112,856 kg).

(3) *Greater amberjack*—(i) For the period March 1 through August 31 each year—461,633 lb (209,393 kg).

(ii) For the period September 1 through the end of February each year—307,755 lb (139,595 kg).

(iii) Any unused portion of the quota specified in paragraph (a)(3)(i) of this section will be added to the quota specified in paragraph (a)(3)(ii) of this section. Any unused portion of the quota specified in paragraph (a)(3)(ii) of this section, including any addition of quota specified in paragraph (a)(3)(i) of this section that was unused, will become void and will not be added to any subsequent quota.

(4) *Vermilion snapper*. (i) For the period January through June each year.

(A) For the 2019 fishing year—483,658 lb (219,384 kg), gutted weight; 536,860 lb (243,516 kg), round weight.

(B) For the 2020 fishing year—452,721 lb (205,351 kg), gutted weight; 502,520 lb (227,939 kg), round weight.

(C) For the 2021 fishing year—431,279 lb (195,625 kg), gutted weight; 478,720 lb (217,144 kg), round weight.

(D) For the 2022 fishing year—417,189 lb (189,234 kg), gutted weight; 463,080 lb (210,050 kg), round weight.

(E) For the 2023 and subsequent fishing years—409,225 lb (185,621 kg), gutted weight; 454,240 lb (206,040 kg), round weight.

(ii) For the period July through December each year.

(A) For the 2019 fishing year—483,658 lb (219,384 kg), gutted weight; 536,860 lb (243,516 kg), round weight.

(B) For the 2020 fishing year—452,721 lb (205,351 kg), gutted weight; 502,520 lb (227,939 kg), round weight.

(C) For the 2021 fishing year—431,279 lb (195,625 kg), gutted weight; 478,720 lb (217,144 kg), round weight.

(D) For the 2022 fishing year—417,189 lb (417,189 kg), gutted weight; 463,080 lb (210,050 kg), round weight.

(E) For the 2023 and subsequent fishing years—409,225 lb (185,621 kg), gutted weight; 454,240 lb (206,040 kg), round weight.

(iii) Any unused portion of the quota specified in paragraph (a)(4)(i) of this section will be added to the quota specified in paragraph (a)(4)(ii) of this section. Any unused portion of the quota specified in paragraph (a)(4)(ii) of this section, including any addition of quota specified in paragraph (a)(4)(i) of this section that was unused, will become void and will not be added to any subsequent quota.

(5) *Black sea bass*. (i) For the 2019 fishing year—276,949 lb (125,622 kg), gutted weight; 326,800 lb (148,234 kg), round weight.

(ii) For the 2020 fishing year—243,788 lb (110,580 kg), gutted weight; 287,670 lb (130,485 kg), round weight.

(iii) For the 2021 fishing year and subsequent fishing years—234,314 lb (106,283 kg), gutted weight; 276,490 lb (125,414 kg), round weight.

(6) *Red porgy*—(i) For the period January 1 through April 30 each year—47,308 lb (21,458 kg), gutted weight; 49,200 lb (22,317 kg), round weight.

(ii) For the period May 1 through December 31 each year—110,384 lb (50,069 kg), gutted weight; 114,800 lb (52,072 kg), round weight.

(iii) Any unused portion of the quota specified in paragraph (a)(6)(i) of this section will be added to the quota specified in paragraph (a)(6)(ii) of this section. Any unused portion of the quota specified in paragraph (a)(6)(ii) of this section, including any addition of quota specified in paragraph (a)(6)(i) of this section that was unused, will become void and will not be added to any subsequent quota.

(7) *Gag*—(i) For the 2015 fishing year—295,459 lb (134,018 kg), gutted weight; 348,642 lb (158,141 kg), round weight.

(ii) For the 2016 fishing year—297,882 lb (135,117 kg), gutted weight; 351,501 lb (159,438 kg), round weight.

(iii) For the 2017 fishing year—318,231 lb (144,347 kg), gutted weight; 375,513 lb (170,330 kg), round weight.

(iv) For the 2018 fishing year—335,188 lb (152,039 kg), gutted weight; 395,522 lb (179,406 kg), round weight.

(v) For the 2019 and subsequent fishing years—347,301 lb (157,533 kg), gutted weight; 409,816 lb (185,889 kg), round weight.

(8) *Gray triggerfish*. (i) For the period January through June each year—156,162 lb (70,834 kg), round weight.

(ii) For the period July through December each year—156,162 lb (70,834 kg), round weight.

(iii) Any unused portion of the quota specified in paragraph (a)(8)(i) of this section will be added to the quota specified in paragraph (a)(8)(ii) of this section. Any unused portion of the quota specified in paragraph (a)(8)(ii) of this section, including any addition of quota specified in paragraph (a)(8)(i) of this section that was unused, will become void and will not be added to any subsequent quota.

(b) *Wreckfish*. (1) The quotas for wreckfish apply to wreckfish shareholders, or their employees, contractors, or agents. The quotas are given round weight. See § 622.172 for information on the wreckfish shareholder under the ITQ system.

(i) For the 2015 fishing year—411,350 lb (186,585 kg).

(ii) For the 2016 fishing year—402,515 lb (182,578 kg).

(iii) For the 2017 fishing year—393,490 lb (178,484 kg).

(iv) For the 2018 fishing year—385,985 lb (175,080 kg).

(v) For the 2019 fishing year—376,960 lb (170,986 kg).

(vi) For the 2020 and subsequent fishing years—369,645 lb (167,668 kg).

(2) [Reserved]

(c) *Restrictions applicable after a commercial quota closure*—(1) *South Atlantic gag, greater amberjack, snowy grouper, golden tilefish, vermilion snapper, black sea bass, red porgy, wreckfish, and gray*

triggerfish. (i) The appropriate bag limits specified in § 622.187(b) and the possession limits specified in § 622.187(c) apply to all harvest or possession of the applicable species in or from the South Atlantic EEZ, and the sale or purchase of the applicable species taken from or possessed in the EEZ is prohibited. The prohibition on sale/purchase during a closure for the applicable species does not apply to fish that were harvested, landed ashore, and sold prior to the effective date of the closure and were held in cold storage by a dealer or processor.

(ii) The bag and possession limits for the applicable species and the prohibition on sale/purchase apply in the South Atlantic on board a vessel for which a valid Federal commercial or charter vessel/headboat permit for South Atlantic snapper-grouper has been issued, without regard to where such species were harvested, *i.e.*, in state or Federal waters.

(2) [Reserved]

[78 FR 22952, Apr. 17, 2013, as amended at 78 FR 23863 Apr. 23, 2013; 78 FR 47579, Aug. 6, 2013; 78 FR 49195, Aug. 13, 2013]; 78 FR 58253, Sept. 23, 2013; 79 FR 66322, Nov. 7, 2014; 80 FR 30953, June 1, 2015; 80 FR 43038, July 21, 2015; 80 FR 48278, Aug. 12, 2015; 81 FR 3738, Jan. 22, 2016; 83 FR 62512, Dec. 4, 2018; 83 FR 14024, Apr. 9, 2019; 85 FR 4594, Jan. 27, 2020]

§ 622.191 Commercial trip limits.

Commercial trip limits are limits on the amount of the applicable species that may be possessed on board or landed, purchased, or sold from a vessel per day. A person who fishes in the EEZ may not combine a trip limit specified in this section with any trip or possession limit applicable to state waters. A species subject to a trip limit specified in this section taken in the EEZ may not be transferred at sea, regardless of where such transfer takes place, and such species may not be transferred in the EEZ. Commercial trip limits apply as follows (all weights are round or eviscerated weights unless specified otherwise):

(a) When a vessel fishes on a trip in the South Atlantic EEZ, the vessel trip limits specified in this paragraph (a) apply, provided persons aboard the vessel are not subject to the bag limits.

§ 622.191

50 CFR Ch. VI (10–1–21 Edition)

See § 622.11 and § 622.187(a) for applicability of the bag limits.

(1) *Trip-limited permits.* A vessel for which a trip-limited permit for South Atlantic snapper-grouper has been issued is limited to 225 lb (102.1 kg) of snapper-grouper.

(2) *Golden tilefish*—(i) *South Atlantic snapper-grouper unlimited permit holders, with a longline endorsement, using longline gear.* Until the quota specified in § 622.190(a)(2)(iii) is reached, 4,000 lb (1,814 kg), gutted weight; 4,480 lb (2,032 kg), round weight.

(ii) *South Atlantic snapper-grouper unlimited permit holders, without a longline endorsement, using hook-and-line gear.* Until the quota specified in § 622.190(a)(2)(ii) is reached, the trip limit for golden tilefish is 500 lb (227 kg), gutted weight; 560 lb (254 kg), round weight. Vessels that have valid or renewable golden tilefish longline endorsements any time during the fishing year, are not eligible to fish for golden tilefish using hook-and-line gear under this 500-lb (227-kg), gutted weight, trip limit.

(iii) See § 622.190(c)(1) for the limitations regarding golden tilefish after the applicable commercial quota is reached.

(3) *Snowy grouper.* Until the quota specified in § 622.190(a)(1) is reached—200 lb (91 kg), gutted weight; 236 lb (107 kg), round weight. See § 622.190(c)(1) for the limitations regarding snowy grouper after the fishing year quota is reached.

(4) *Red porgy.* The following commercial trip limits apply until the applicable commercial quota specified in § 622.190(a)(6) is reached. See § 622.190(c)(1) for the limitations regarding red porgy after the applicable commercial quota is reached.

(i) From January 1 through April 30—60 fish.

(ii) From May 1 through December 31—120 fish.

(5) *Greater amberjack.* The following commercial trip limits apply until the applicable commercial quota specified in § 622.190(a)(3) is reached. See § 622.190(c)(1) for the limitations regarding greater amberjack after the applicable commercial quota is reached.

(i) From March 1 through August 31—1,200 lb (544 kg).

(ii) From September 1 through the end of February—1,000 lb (454 kg).

(6) *Vermilion snapper.* Until the applicable commercial quota specified in § 622.190(a)(4) is reached—1,000 lb (454 kg), gutted weight. See § 622.190(c)(1) for the limitations regarding vermillion snapper after the applicable commercial quota is reached.

(7) *Gag.* (i) Until 75 percent of the quota specified in § 622.190(a)(7) is reached—1,000 lb (454 kg), gutted weight, 1,180 lb (535 kg), round weight.

(ii) After 75 percent of the quota specified in § 622.190(a)(7) is reached or projected to be reached—500 lb (227 kg), gutted weight, 590 lb (268 kg), round weight. When the conditions in this paragraph (a)(7)(ii) have been met, the Assistant Administrator will implement this trip limit change by filing a notification with the Office of the Federal Register.

(iii) See § 622.190(c)(1) for the limitations regarding gag after the quota is reached.

(8) *Black sea bass*— (i) *Hook-and-line component.* (A) From January 1 through April 30, until the applicable quota specified in § 622.190(a)(5) is reached—300 lb (136 kg), gutted weight; 354 lb (161 kg), round weight.

(B) From May 1 through December 31, until the applicable quota specified in § 622.190(a)(5) is reached—1,000 lb (454 kg), gutted weight; 1,180 lb (535 kg), round weight.

(ii) *Sea bass pot component.* Until the applicable quota specified in § 622.190(a)(5) is reached—1,000 lb (454 kg), gutted weight; 1,180 lb (535 kg), round weight.

(iii) See § 622.190(c)(1) for the limitations regarding black sea bass after the applicable quota is reached.

(9) *Red snapper.* Until the commercial ACL specified in § 622.193(y)(1) is reached, 75 lb (34 kg), gutted weight.

(10) *Blueline tilefish.* The following commercial trip limits apply until the commercial ACL specified in § 622.193(z)(1)(i) is reached. See § 622.193(z)(1)(i) for the limitations regarding blueline tilefish after the commercial ACL is reached.

(i) From January 1 through April 30—100 lb (45 kg), gutted weight; 106 lb (48 kg), round weight.

(ii) From May 1 through December 31—300 lb (136 kg), gutted weight; 318 lb (144 kg), round weight.

(11) *Gray triggerfish*. Until the applicable quota specified in either § 622.190(a)(8)(i) or (ii) is reached, 1,000 lb (454 kg), round weight. See § 622.190(c)(1) for the limitations regarding gray triggerfish after either quota specified in § 622.190(a)(8)(i) or (ii) is reached or projected to be reached.

(12) *Hogfish*. (i) Until the commercial ACL specified in § 622.193(u)(1)(iii)(A) is reached or is projected to be reached off Georgia, South Carolina, and North Carolina, 500 lb (227 kg), round weight.

(ii) Until the commercial ACL specified in § 622.193(u)(2)(iii)(A) is reached or is projected to be reached off the Florida Keys and east coast of Florida, and south of 25°09' N. lat. off the west coast of Florida, 25 lb (11 kg), round weight.

(iii) See § 622.193(u)(1)(i) or (u)(2)(i) for the limitations regarding hogfish after a commercial ACL is reached.

(13) *Mutton snapper*. The following commercial trip limits apply until the applicable commercial ACL in § 622.193(o)(1)(iii) is reached. See § 622.193(o)(1) for the limitations regarding mutton snapper after the commercial ACL is reached.

(i) From January 1 through March 31, and July 1 through December 31—500 lb (227 kg), round weight.

(ii) From April 1 through June 30—5 fish per person per day or 5 fish per person per trip, whichever is more restrictive.

(14) *Other jacks complex (lesser amberjack, almaco jack, and banded rudderfish)*. Until the commercial ACL specified in § 622.193(l)(1)(i) is reached—500 lb (227 kg), gutted weight; 520 lb (236 kg), round weight. See § 622.193(l)(1)(i) for the limitations regarding the other jacks complex after the commercial ACL is reached.

(15) *Red grouper*. Until the commercial ACL specified in § 622.193(d)(1)(iii) is reached—200 lb (91 kg), gutted weight; 236 lb (107 kg), round weight. See § 622.193(d)(1) for the limitations regarding red grouper after the commercial ACL is reached.

(b) When a vessel fishes for hogfish on a trip in the Gulf EEZ south of 25°09' N. lat. off the west coast of Florida, the

vessel trip limit specified in paragraph (a)(12)(ii) of this section applies, provided persons aboard are not subject to the bag limit. See § 622.11(a) and § 622.187(a) for applicability of the bag limit.

[78 FR 22952, Apr. 17, 2013, as amended at 78 FR 23863 Apr. 23, 2013; 78 FR 44465, July 24, 2013; 78 FR 47579, Aug. 6, 2013; 79 FR 66322, Nov. 7, 2014; 80 FR 16587, Mar. 30, 2015; 80 FR 30953, June 1, 2015; 80 FR 43038, July 21, 2015; 81 FR 32253, May 23, 2016; 81 FR 45248, July 13, 2016; 82 FR 11157, Feb. 21, 2017; 82 FR 34594, July 25, 2017; 83 FR 1309, Jan. 11, 2018; 83 FR 35435, July 26, 2018; 85 FR 4594, Jan. 27, 2020; 85 FR 6828, Feb. 6, 2020]

§ 622.192 Restrictions on sale/purchase.

The restrictions in this section are in addition to the restrictions on sale/purchase related to quota closures as specified in § 622.190(c).

(a) A South Atlantic snapper-grouper harvested or possessed in the EEZ on board a vessel that does not have a valid commercial permit for South Atlantic snapper-grouper, as required under § 622.170(a), or a South Atlantic snapper-grouper harvested in the EEZ and possessed under the bag limits specified in § 622.187(b), may not be sold or purchased. In addition, a South Atlantic snapper-grouper harvested or possessed by a vessel that is operating as a charter vessel or headboat with a Federal charter vessel/headboat permit for South Atlantic snapper-grouper may not be sold or purchased regardless of where harvested, *i.e.*, in state or Federal waters.

(b) South Atlantic snapper-grouper harvested in or from the EEZ or adjoining state waters by a vessel that has a valid commercial vessel permit for South Atlantic snapper-grouper may be sold or transferred only to a dealer who has a valid Gulf and South Atlantic dealer permit, as required under § 622.170(c)(1).

(c) South Atlantic snapper-grouper harvested in or from the EEZ may be first received by a dealer who has a valid Gulf and South Atlantic dealer permit, as required under § 622.170(a), only from a vessel that has a valid commercial permit for South Atlantic snapper-grouper.

(d) A warsaw grouper or speckled hind in or from the South Atlantic EEZ may not be sold or purchased.

(e) No person may sell or purchase a snowy grouper, gag, golden tilefish, greater amberjack, vermilion snapper, black sea bass, or red porgy harvested from or possessed in the South Atlantic, *i.e.*, in state or Federal waters, by a vessel for which a valid Federal commercial permit for South Atlantic snapper-grouper has been issued for the remainder of the fishing year after the applicable commercial quota for that species specified in § 622.190(a) has been reached. The prohibition on sale/purchase during these periods does not apply to such of the applicable species that were harvested, landed ashore, and sold prior to the applicable commercial quota being reached and were held in cold storage by a dealer or processor.

(f) [Reserved]

(g) During April, no person may sell or purchase a greater amberjack harvested from the South Atlantic EEZ or, if harvested by a vessel for which a valid Federal commercial permit for South Atlantic snapper-grouper has been issued, harvested from the South Atlantic, *i.e.*, in state or Federal waters. The prohibition on sale/purchase during April does not apply to greater amberjack that were harvested, landed ashore, and sold prior to April 1 and were held in cold storage by a dealer or processor. This prohibition also does not apply to a dealer's purchase or sale of greater amberjack harvested from an area other than the South Atlantic, provided such fish is accompanied by documentation of harvest outside the South Atlantic. The requirements for such documentation are specified in paragraph (i) of this section.

(h) During January through April, no person may sell or purchase a gag, black grouper, red grouper, scamp, red hind, rock hind, yellowmouth grouper, yellowfin grouper, graysby, or coney harvested from or possessed in the South Atlantic EEZ or, if harvested or possessed by a vessel for which a valid Federal commercial permit for South Atlantic snapper-grouper has been issued, harvested from the South Atlantic, *i.e.*, in state or Federal waters. Additionally, in the month of May, no

person may sell or purchase South Atlantic red grouper harvested from or possessed in the South Atlantic EEZ off North Carolina or off South Carolina, or, if harvested or possessed by a vessel for which a valid Federal commercial permit for South Atlantic snapper-grouper has been issued, harvested in or from the EEZ or state waters off North Carolina or off South Carolina. The prohibitions on sale and purchase during January through May do not apply to such species that were harvested, landed ashore, and sold prior to January 1 and were held in cold storage by a dealer or processor. These prohibitions also do not apply to a dealer's purchase or sale of such species harvested from an area other than the South Atlantic, provided such fish are accompanied by documentation of harvest outside the South Atlantic. The requirements for such documentation are specified in paragraph (i) of this section.

(i) The documentation supporting a dealer's purchase or sale of applicable species during the times specified in paragraphs (f) through (h) of this section must contain:

(1) The information specified in part 300, subpart K, of this title for marking containers or packages of fish or wildlife that are imported, exported, or transported in interstate commerce;

(2) The official number, name, and home port of the vessel harvesting the applicable species;

(3) The port and date of offloading from the vessel harvesting the applicable species; and

(4) A statement signed by the dealer attesting that the applicable species was harvested from an area other than the South Atlantic.

(j) No person may sell or purchase a red snapper harvested from or possessed in the South Atlantic, *i.e.*, state or Federal waters, by a vessel for which a Federal commercial vessel permit for South Atlantic snapper-grouper has been issued, except if NMFS determines a limited commercial fishing season for red snapper is allowable, as specified in § 622.183(b)(5).

(k) Snapper-grouper possessed pursuant to the bag and possession limits

Fishery Conservation and Management

§ 622.193

specified in § 622.187(a)(3) may not be sold or purchased.

[78 FR 22952, Apr. 17, 2013, as amended at 78 FR 44465, July 24, 2013; 79 FR 19495, Apr. 9, 2014; 80 FR 80689, Dec. 28, 2015; 85 FR 6828, Feb. 6, 2020; 85 FR 73643, Nov. 19, 2020]

§ 622.193 Annual catch limits (ACLs), annual catch targets (ACTs), and accountability measures (AMs).

(a) *Golden tilefish*—(1) *Commercial sector*—(i) *Hook-and-line component*. If commercial hook-and-line landings for golden tilefish, as estimated by the SRD, reach or are projected to reach the commercial ACL (commercial quota) specified in § 622.190(a)(2)(ii), the AA will file a notification with the Office of the Federal Register to close the hook-and-line component of the commercial sector for the remainder of the fishing year. Applicable restrictions after a commercial quota closure are specified in § 622.190(c).

(ii) *Longline component*. If commercial longline landings for golden tilefish, as estimated by the SRD, reach or are projected to reach the longline commercial ACL (commercial quota) specified in § 622.190(a)(2)(iii), the AA will file a notification with the Office of the Federal Register to close the longline component of the commercial sector for the remainder of the fishing year. After the commercial ACL for the longline component is reached or projected to be reached, golden tilefish may not be fished for or possessed by a vessel with a golden tilefish longline endorsement. Applicable restrictions after a commercial quota closure are specified in § 622.190(c).

(iii) If all commercial landings of golden tilefish, as estimated by the SRD, exceed the commercial ACL (including both the hook-and-line and longline component quotas) specified in § 622.190(a)(2)(i), and the combined commercial and recreational ACL of 342,000 lb (155,129 kg) is exceeded during the same fishing year, and golden tilefish are overfished based on the most recent Status of U.S. Fisheries Report to Congress, the AA will file a notification with the Office of the Federal Register to reduce the commercial ACL for that following fishing year by the amount of the commercial ACL overage in the prior fishing year.

(2) *Recreational sector*. (i) If recreational landings of golden tilefish, as estimated by the SRD, reach or are projected to reach the recreational ACL of 2,316 fish, the AA will file a notification with the Office of the Federal Register to close the recreational sector for the remainder of the fishing year regardless if the stock is overfished, unless NMFS determines that no closure is necessary based on the best scientific information available. On and after the effective date of such a notification, the bag and possession limits for golden tilefish in or from the South Atlantic EEZ are zero.

(ii) If recreational landings of golden tilefish, as estimated by the SRD, exceed the recreational ACL specified of 2,316 fish, then during the following fishing year, recreational landings will be monitored for a persistence in increased landings, and if necessary, the AA will file a notification with the Office of the Federal Register to reduce the length of the recreational fishing season and the recreational ACL by the amount of the recreational ACL overage, if the species is overfished based on the most recent Status of U.S. Fisheries Report to Congress, and if the combined commercial and recreational ACL of 342,000 lb (155,129 kg) is exceeded during the same fishing year. The AA will use the best scientific information available to determine if reducing the length of the recreational fishing season and recreational ACL is necessary. When the recreational sector is closed as a result of NMFS reducing the length of the recreational fishing season and ACL, the bag and possession limits for golden tilefish in or from the South Atlantic EEZ are zero.

(b) *Snowy grouper*—(1) *Commercial sector*. (i) If commercial landings for snowy grouper, as estimated by the SRD, reach or are projected to reach the commercial ACL (commercial quota) specified in § 622.190(a)(1), the AA will file a notification with the Office of the Federal Register to close the commercial sector for the remainder of the fishing year. Applicable restrictions after a commercial quota closure are specified in § 622.190(c).

(ii) If commercial landings for snowy grouper, as estimated by the SRD, exceed the commercial ACL, and the

combined commercial and recreational ACL specified in § 622.193(b)(1)(iii) is exceeded, and snowy grouper are overfished based on the most recent Status of U.S. Fisheries Report to Congress, the AA will file a notification with the Office of the Federal Register to reduce the commercial ACL for that following fishing year by the amount of the commercial ACL overage in the prior fishing year.

(iii) The combined commercial and recreational ACL for snowy grouper is 139,098 lb (63,094 kg), gutted weight, 164,136 lb (74,451 kg), round weight, for 2015; 151,518 lb (68,727 kg), gutted weight, 178,791 lb (81,098 kg), round weight, for 2016; 163,109 lb (73,985 kg), gutted weight, 192,469 lb (87,302 kg), round weight, for 2017; 173,873 lb (78,867 kg), gutted weight, 205,170 lb (93,064 kg), round weight, for 2018; 185,464 lb (84,125 kg), gutted weight, 218,848 lb (99,268 kg), round weight, for 2019 and subsequent years.

(2) *Recreational sector.* (i) If recreational landings for snowy grouper, as estimated by the SRD, reach or are projected to reach the recreational ACL, the AA will file a notification with the Office of the Federal Register to close the recreational sector for the remainder of the fishing year regardless if the stock is overfished, unless NMFS determines that no closure is necessary based on the best scientific information available. On and after the effective date of such notification, the bag and possession limits for snowy grouper in or from the South Atlantic EEZ are zero. The recreational ACL for snowy grouper is 4,152 fish for 2015; 4,483 fish for 2016; 4,819 fish for 2017; 4,983 fish for 2018; 5,315 fish for 2019 and subsequent fishing years.

(ii) If recreational landings for snowy grouper, as estimated by the SRD, exceed the recreational ACL, then during the following fishing year recreational landings will be monitored for a persistence in increased landings, and if necessary, the AA will file a notification with the Office of the Federal Register to reduce the length of the recreational fishing season and the recreational ACL by the amount of the recreational ACL overage, if snowy grouper are overfished based on the most recent Status of U.S. Fisheries

Report to Congress, and if the combined commercial and recreational ACL specified in § 622.193(b)(1)(iii) is exceeded during the same fishing year. NMFS will use the best scientific information available to determine if reducing the length of the recreational fishing season and recreational ACL is necessary. When the recreational sector is closed as a result of NMFS reducing the length of the recreational fishing season and ACL, the bag and possession limits for snowy grouper in or from the South Atlantic EEZ are zero.

(c) *Gag*—(1) *Commercial sector.* (i) If commercial landings for gag, as estimated by the SRD, reach or are projected to reach the commercial quota specified in § 622.190(a)(7), the AA will file a notification with the Office of the Federal Register to close the commercial sector for gag for the remainder of the fishing year. Applicable restrictions after a commercial quota closure are specified in § 622.190(c).

(ii) If the commercial landings for gag, as estimated by the SRD, exceed the commercial ACL specified in § 622.193(c)(1)(iii), and the combined commercial and recreational ACL specified in § 622.193(c)(1)(iv), is exceeded during the same fishing year, and gag are overfished based on the most recent Status of U.S. Fisheries Report to Congress, the AA will file a notification with the Office of the Federal Register to reduce the commercial ACL for that following fishing year by the amount of the commercial ACL overage in the prior fishing year.

(iii) The commercial ACL for gag is 322,677 lb (146,364 kg), gutted weight, 380,759 lb (172,709 kg), round weight, for 2015; 325,100 lb (147,463 kg), gutted weight, 383,618 lb (174,006 kg), round weight, for 2016; 345,449 lb (157,516 kg), gutted weight, 407,630 lb (184,898 kg), round weight, for 2017; 362,406 lb (164,385 kg), gutted weight, 427,639 lb (193,974 kg), round weight, for 2018; and 374,519 lb (169,879 kg), gutted weight, 441,932 lb (200,457 kg), round weight, for 2019 and subsequent fishing years.

(iv) The combined commercial and recreational ACL for gag is 632,700 lb (286,988 kg), gutted weight, 746,586 lb (338,646 kg), round weight, for 2015; 637,451 lb (289,143 kg), gutted weight, 752,192 lb (341,189 kg), round weight, for

2016; 677,351 lb (307,241 kg), gutted weight, 799,274 lb (362,545 kg), round weight, for 2017; 710,600 lb (322,323 kg), gutted weight, 838,508 lb (380,341 kg), round weight, for 2018; and 734,351 lb (333,096 kg), gutted weight, 866,534 lb (393,053 kg), round weight, for 2019 and subsequent fishing years.

(2) *Recreational sector.* (i) If recreational landings for gag, as estimated by the SRD, reach or are projected to reach the recreational ACL, the AA will file a notification with the Office of the Federal Register to close the recreational sector for the remainder of the fishing year regardless if the stock is overfished, unless NMFS determines that no closure is necessary based on the best scientific information available. On and after the effective date of such notification, the bag and possession limits for gag in or from the South Atlantic EEZ are zero. The recreational ACL for gag is 310,023 lb (148,025 kg), gutted weight, 365,827 lb (165,936 kg), round weight, for 2015; 312,351 lb (149,137 kg), gutted weight, 368,574 lb (175,981 kg), round weight, for 2016; 331,902 lb (158,472 kg), gutted weight, 391,644 lb (186,997 kg), round weight, for 2017; 348,194 lb (166,251 kg), gutted weight, 410,869 lb (196,176 kg), round weight, for 2018; and 359,832 lb (171,807 kg), gutted weight, 424,602 lb (202,733 kg), round weight, for 2019 and subsequent fishing years.

(ii) If recreational landings for gag, as estimated by the SRD, exceed the recreational ACL, then during the following fishing year recreational landings will be monitored for a persistence in increased landings, and if necessary, the AA will file a notification with the Office of the Federal Register to reduce the length of the recreational fishing season and the recreational ACL by the amount of the recreational ACL overage, if the species is overfished based on the most recent Status of U.S. Fisheries Report to Congress, and if the combined commercial and recreational ACL specified in § 622.193(c)(1)(iv) is exceeded during the same fishing year. NMFS will use the best scientific information available to determine if reducing the length of the recreational fishing season and recreational ACL is necessary. When the recreational sector is closed as a result of NMFS reducing

the length of the recreational fishing season and ACL, the bag and possession limits for gag in or from the South Atlantic EEZ are zero.

(d) *Red grouper*—(1) *Commercial sector.*

(i) If commercial landings for red grouper, as estimated by the SRD, reach or are projected to reach the commercial ACL, specified in paragraph (d)(1)(iii) of this section, the AA will file a notification with the Office of the Federal Register to close the commercial sector for the remainder of the fishing year. On and after the effective date of such a notification, all sale or purchase of red grouper is prohibited and harvest or possession of red grouper in or from the South Atlantic EEZ is limited to the bag and possession limits. These bag and possession limits apply in the South Atlantic on board a vessel for which a valid Federal commercial or charter vessel/headboat permit for South Atlantic snapper-grouper has been issued, without regard to where such species were harvested, *i.e.*, in state or Federal waters.

(ii) If the commercial landings for red grouper, as estimated by the SRD, exceed the commercial ACL, specified in paragraph (d)(1)(iii) of this section, and the combined commercial and recreational ACL, specified in paragraph (d)(3) of this section, is exceeded during the same fishing year, and the species is overfished based on the most recent Status of U.S. Fisheries Report to Congress, the AA will file a notification with the Office of the Federal Register to reduce the commercial ACL in the following fishing year by the amount of the commercial ACL overage in the prior fishing year.

(iii) The commercial ACL for red grouper is 61,160 lb (27,742 kg), round weight, for 2018; 66,000 lb (29,937 kg), round weight, for 2019; and 71,280 lb (32,332 kg), round weight, for 2020 and subsequent fishing years.

(2) *Recreational sector.* (i) If recreational landings for red grouper, as estimated by the SRD, are projected to reach the recreational ACL, the AA will file a notification with the Office of the Federal Register to close the recreational sector for the remainder of the fishing year regardless if the stock is overfished, unless NMFS determines that no closure is necessary

based on the best scientific information available. On and after the effective date of such a notification, the bag and possession limits for red grouper in or from the South Atlantic EEZ are zero.

(ii) The recreational ACL for red grouper is 77,840 lb (35,308 kg), round weight, for 2018; 84,000 lb (38,102 kg), round weight, for 2019; and 90,720 lb (41,150 kg), round weight, for 2020 and subsequent fishing years.

(iii) If recreational landings for red grouper, as estimated by the SRD, exceed the recreational ACL, specified in paragraph (d)(2)(ii) of this section, then during the following fishing year recreational landings will be monitored for a persistence in increased landings, and if necessary, the AA will file a notification with the Office of the Federal Register to reduce the length of the recreational fishing season and the recreational ACL by the amount of the recreational ACL overage, if the species is overfished based on the most recent Status of U.S. Fisheries Report to Congress, and if the combined commercial and recreational ACL, specified in paragraph (d)(3) of this section, is exceeded during the same fishing year. The AA will use the best scientific information available to determine if reducing the length of the recreational season and recreational ACL is necessary. When the recreational sector is closed as a result of NMFS reducing the length of the recreational fishing season and ACL, the bag and possession limits for red grouper in or from the South Atlantic EEZ are zero.

(3) The combined commercial and recreational ACL for red grouper is 139,000 lb (63,049 kg), round weight, for 2018; 150,000 lb (68,039 kg), round weight, for 2019; and 162,000 lb (73,482 kg), round weight, for 2020 and subsequent fishing years.

(e) *Black sea bass*—(1) *Commercial sector*. (i) If commercial landings, as estimated by the SRD, reach or are projected to reach the quota specified in § 622.190(a)(5), the AA will file a notification with the Office of the Federal Register to close the commercial sector for the remainder of the fishing year.

(ii) If commercial landings exceed the quota specified in § 622.190(a)(5), the AA

will file a notification with the Office of the Federal Register, at or near the beginning of the following fishing year to reduce the ACL for that following year by the amount of the overage in the prior fishing year, unless the SRD determines that no overage is necessary based on the best scientific information available.

(2) *Recreational sector*. The recreational ACL for black sea bass is 848,455 lb (384,853 kg), gutted weight, 1,001,177 lb (454,126 kg), round weight for the 2018–2019 fishing year; 367,119 lb (166,522 kg), gutted weight, 433,200 lb (196,496 kg), round weight for the 2019–2020 fishing year; 323,161 lb (146,583 kg), gutted weight, 381,330 lb (172,968 kg), round weight, for the 2020–2021 fishing year; and 310,602 lb (140,887 kg), gutted weight, 366,510 lb (166,246 kg), round weight, for the 2021–2022 and subsequent fishing years. NMFS will project the length of the recreational fishing season based on when NMFS projects the recreational ACL specified in this paragraph is expected to be met and announce the recreational fishing season end date in the FEDERAL REGISTER prior to the start of the recreational fishing year on April 1. On and after the effective date of the recreational closure notification, the bag and possession limit for black sea bass in or from the South Atlantic EEZ is zero. This bag and possession limit applies in the South Atlantic on board a vessel for which a valid Federal charter vessel/headboat permit for South Atlantic snapper-grouper has been issued, without regard to where such species were harvested, *i.e.* in state or Federal waters.

(f) *Vermilion snapper*—(1) *Commercial sector*. If commercial landings, as estimated by the SRD, reach or are projected to reach the applicable commercial ACL (commercial quota) specified in § 622.190(a)(4)(i) or (ii), the AA will file a notification with the Office of the Federal Register to close the commercial sector for that portion of the fishing year applicable to the respective quota.

(2) *Recreational sector*. (i) If recreational landings, as estimated by the SRD, reach or are projected to reach

the applicable recreational ACL specified in paragraph (f)(2)(iv) of this section the AA will file a notification with the Office of the Federal Register to close the recreational sector for vermilion snapper for the remainder of the fishing year. On and after the effective date of such notification, the bag and possession limit for vermilion snapper in or from the South Atlantic EEZ is zero. This bag and possession limit also applies in the South Atlantic on board a vessel for which a valid Federal commercial or charter vessel/headboat permit for South Atlantic snapper-grouper has been issued, without regard to where such species were harvested, *i.e.*, in state or Federal waters.

(ii) If the combined vermilion snapper commercial and recreational landings exceed the combined vermilion snapper ACLs specified in paragraphs (f)(1) and (f)(2)(iv) of this section, and vermilion snapper are overfished, based on the most recent Status of U.S. Fisheries Report to Congress, the AA will file a notification with the Office of the Federal Register, at or near the beginning of the following fishing year to reduce the recreational ACL for that following year by the amount of the recreational overage in the prior fishing year.

(iii) Recreational landings will be evaluated relative to the ACL based on a moving multi-year average of landings, as described in the FMP.

(iv) The recreational ACL for vermilion snapper is 455,207 lb (206,478 kg), gutted weight, 505,280 lb (229,191 kg), round weight, for the 2019 fishing year; 426,090 lb (193,271 kg), gutted weight, 472,960 lb (214,531 kg), round weight, for the 2020 fishing year; 405,910 lb (184,118 kg), gutted weight, 450,560 lb (204,552 kg), round weight, for the 2021 fishing year; 392,649 lb (178,103 kg), gutted weight, 435,840 lb (197,694 kg), round weight, for the 2022 fishing year; and 385,520 lb (174,869 kg), gutted weight, 427,520 lb (193,920 kg), round weight, for the 2023 and subsequent fishing years.

(g) *Black grouper*—(1) *Commercial sector*. (i) If commercial landings for black grouper, as estimated by the SRD, reach or are projected to reach the commercial ACL of 96,844 lb (43,928 kg), round weight, the AA will file a notification

with the Office of the Federal Register to close the commercial sector for the remainder of the fishing year. On and after the effective date of such a notification, all sale or purchase of black grouper is prohibited and harvest or possession of black grouper in or from the South Atlantic EEZ is limited to the bag and possession limits. These bag and possession limits apply in the South Atlantic on board a vessel for which a valid Federal commercial or charter vessel/headboat permit for South Atlantic snapper-grouper has been issued, without regard to where such species were harvested, *i.e.*, in state or Federal waters.

(ii) If commercial landings for black grouper, as estimated by the SRD, exceed the commercial ACL, and the combined commercial and recreational ACL of 262,594 lb (119,111 kg), round weight, is exceeded during the same fishing year, and the species is overfished based on the most recent Status of U.S. Fisheries Report to Congress, the AA will file a notification with the Office of the Federal Register to reduce the commercial ACL for that following fishing year by the amount of the commercial ACL overage in the prior fishing year.

(2) *Recreational sector*. (i) If recreational landings for black grouper, as estimated by the SRD, reach or are projected to reach the recreational ACL of 165,750 lb (75,183 kg), round weight, and the AA determines that a closure is necessary by using the best scientific information available, the AA will file a notification with the Office of the Federal Register to close the recreational sector for the remainder of the fishing year regardless if the stock is overfished, unless NMFS determines that no closure is necessary based on the best scientific information available. On and after the effective date of such a notification, the bag and possession limits for black grouper in or from the South Atlantic EEZ are zero.

(ii) If recreational landings for black grouper, as estimated by the SRD, exceed the recreational ACL, then during the following fishing year recreational landings will be monitored for a persistence in increased landings, and if

necessary, the AA will file a notification with the Office of the Federal Register to reduce the length of the recreational fishing season and the recreational ACL by the amount of the recreational ACL overage, if black grouper are overfished based on the most recent Status of U.S. Fisheries Report to Congress, and if the combined commercial and recreational ACL of 262,594 lb (119,111 kg), round weight, is exceeded during the same fishing year. NMFS will use the best scientific information available to determine if reducing the length of the recreational fishing season and recreational ACL is necessary. When the recreational sector is closed as a result of NMFS reducing the length of the recreational fishing season and ACL, the bag and possession limits for black grouper in or from the South Atlantic EEZ are zero.

(h) *Deep-water complex (including yellowedge grouper, silk snapper, misty grouper, queen snapper, sand tilefish, and blackfin snapper)*—(1) *Commercial sector*—(i) If commercial landings for the deep-water complex, as estimated by the SRD, reach or are projected to reach the commercial ACL of 131,268 lb (59,542 kg), round weight, the AA will file a notification with the Office of the Federal Register to close the commercial sector for the remainder of the fishing year. On and after the effective date of such a notification, all sale or purchase of deep-water complex species is prohibited and harvest or possession of these species in or from the South Atlantic EEZ is limited to the bag and possession limits. These bag and possession limits apply in the South Atlantic on board a vessel for which a valid Federal commercial or charter vessel/headboat permit for South Atlantic snapper-grouper has been issued, without regard to where such species were harvested, *i.e.*, in state or Federal waters.

(ii) If commercial landings exceed the ACL, and the combined commercial and recreational ACL of 169,896 lb (77,064 kg), round weight, is exceeded, and at least one of the species in the deep-water complex is overfished, based on the most recent Status of U.S. Fisheries Report to Congress, the AA will file a notification with the Office

of the Federal Register, at or near the beginning of the following fishing year to reduce the commercial ACL for that following year by the amount of the commercial ACL overage in the prior fishing year.

(2) *Recreational sector*. (i) If recreational landings for the deep-water complex, as estimated by the SRD, are projected to reach the recreational ACL of 38,628 lb (17,521 kg), round weight, the AA will file a notification with the Office of the Federal Register to close the recreational sector for the remainder of the fishing year, unless the RA determines that no closure is necessary based on the best scientific information available. On and after the effective date of such a notification, the bag and possession limits are zero.

(ii) If recreational landings for the deep-water complex, exceed the applicable recreational ACL, and the combined commercial and recreational ACL of 169,896 lb (77,064 kg), round weight, is exceeded, and at least one of the species in the deep-water complex is overfished, based on the most recent Status of U.S. Fisheries Report to Congress, the AA will file a notification with the Office of the Federal Register, to reduce the length of the recreational fishing season in the following fishing year to ensure recreational landings do not exceed the recreational ACL the following fishing year. When NMFS reduces the length of the following recreational fishing season and closes the recreational sector, the following closure provisions apply: The bag and possession limits for the deep-water complex in or from the South Atlantic EEZ are zero. Additionally, the recreational ACL will be reduced by the amount of the recreational ACL overage in the prior fishing year. The fishing season and recreational ACL will not be reduced if the RA determines, using the best scientific information available that no reduction is necessary.

(i) *Scamp*—(1) *Commercial sector*. (i) If commercial landings for scamp, as estimated by the SRD, reach or are projected to reach the commercial ACL of 219,375 lb (99,507 kg), round weight, the AA will file a notification with the Office of the Federal Register to close the commercial sector for the remainder of

the fishing year. On and after the effective date of such a notification, all sale or purchase of scamp is prohibited and harvest or possession of scamp in or from the South Atlantic EEZ is limited to the bag and possession limits. These bag and possession limits apply in the South Atlantic on board a vessel for which a valid Federal commercial or charter vessel/headboat permit for South Atlantic snapper-grouper has been issued, without regard to where such species were harvested, *i.e.*, in state or Federal waters.

(ii) If commercial landings for scamp, as estimated by the SRD, exceed the commercial ACL, and the combined commercial and recreational ACL of 335,744 lb (152,291 kg), round weight, is exceeded, and scamp are overfished based on the most recent Status of U.S. Fisheries Report to Congress, the AA will file a notification with the Office of the Federal Register to reduce the commercial ACL for that following fishing year by the amount of the commercial ACL overage in the prior fishing year.

(2) *Recreational sector.* (i) If recreational landings for scamp, as estimated by the SRD, reach or are projected to reach the recreational ACL of 116,369 lb (52,784 kg), round weight, the AA will file a notification with the Office of the Federal Register to close the recreational sector for the remainder of the fishing year regardless if the stock is overfished, unless NMFS determines that no closure is necessary based on the best scientific information available. On and after the effective date of such a notification, the bag and possession limits for scamp in or from the South Atlantic EEZ are zero.

(ii) If recreational landings for scamp, as estimated by the SRD, exceed the recreational ACL, then during the following fishing year recreational landings will be monitored for a persistence in increased landings, and if necessary, the AA will file a notification with the Office of the Federal Register to reduce the length of the recreational fishing season and the recreational ACL by the amount of the recreational ACL overage, if scamp are overfished based on the most recent Status of U.S. Fisheries Report to Congress, and if the combined commercial

and recreational ACL of 335,744 lb (152,291 kg), round weight, is exceeded during the same fishing year. NMFS will use the best scientific information available to determine if reducing the length of the recreational fishing season and recreational ACL is necessary. When the recreational sector is closed as a result of NMFS reducing the length of the recreational fishing season and ACL, the bag and possession limits for scamp in or from the South Atlantic EEZ are zero.

(j) *Other SASWG combined (including red hind, rock hind, yellowmouth grouper, yellowfin grouper, coney, and graysby)*—(1) *Commercial sector.* (i) If commercial landings for other SASWG combined, as estimated by the SRD, reach or are projected to reach the commercial ACL of 55,542 lb (25,193 kg), round weight, the AA will file a notification with the Office of the Federal Register to close the commercial sector for this complex for the remainder of the fishing year. On and after the effective date of such a notification, all sale or purchase of red hind, rock hind, yellowmouth grouper, yellowfin grouper, coney, and graysby is prohibited, and harvest or possession of any of these species in or from the South Atlantic EEZ is limited to the bag and possession limits. These bag and possession limits apply in the South Atlantic on board a vessel for which a valid Federal commercial or charter vessel/headboat permit for South Atlantic snapper-grouper has been issued, without regard to where such species were harvested, *i.e.*, in state or Federal waters.

(ii) If commercial landings for other SASWG combined, as estimated by the SRD, exceed the commercial ACL, and the combined commercial and recreational ACL of 104,190 lb (47,260 kg), round weight, is exceeded, and at least one of the species in other SASWG combined is overfished based on the most recent status of U.S. Fisheries Report to Congress, the AA will file a notification with the Office of the Federal Register to reduce the commercial ACL for that following fishing year by the amount of the commercial ACL overage in the prior fishing year.

(2) *Recreational sector.* (i) If recreational landings for other SASWG

combined, as estimated by the SRD, reach or are projected to reach the recreational ACL of 48,648 lb (22,066 kg), round weight, the AA will file a notification with the Office of the Federal Register to close the recreational sector for the remainder of the fishing year regardless if any stock in other SASWG combined is overfished, unless NMFS determines that no closure is necessary based on the best scientific information available. On and after the effective date of such a notification, the bag and possession limits for any species in the other SASWG combined in or from the South Atlantic EEZ are zero.

(ii) If recreational landings for other SASWG combined, as estimated by the SRD, exceed the recreational ACL, then during the following fishing year recreational landings will be monitored for a persistence in increased landings, and if necessary, the AA will file a notification with the Office of the Federal Register to reduce the length of the recreational fishing season and the recreational ACL by the amount of the recreational ACL overage, if at least one of the species in other SASWG combined is overfished based on the most recent Status of U.S. Fisheries Report to Congress, and if the combined commercial and recreational ACL of 104,190 lb (47,260 kg) is exceeded during the same fishing year. NMFS will use the best scientific information available to determine if reducing the length of the recreational fishing season and recreational ACL is necessary. When the recreational sector is closed as a result of NMFS reducing the length of the recreational fishing season and ACL, the bag and possession limits for any species in the other SASWG combined in or from the South Atlantic EEZ are zero.

(k) *Greater amberjack*—(1) *Commercial sector*. (i) If commercial landings for greater amberjack, as estimated by the SRD, reach or are projected to reach the commercial ACL (commercial quota) specified in § 622.190(a)(3), the AA will file a notification with the Office of the Federal Register to close the commercial sector for the remainder of the fishing year. Applicable restrictions after a commercial quota closure are specified in § 622.190(c).

(ii) If commercial landings for greater amberjack, as estimated by the SRD, exceed the commercial ACL, and the combined commercial and recreational ACL of 1,968,001 lb (892,670 kg), round weight, is exceeded during the same fishing year, and the species is overfished based on the most recent Status of U.S. Fisheries Report to Congress, the AA will file a notification with the Office of the Federal Register to reduce the commercial ACL in the following fishing year by the amount of the commercial ACL overage in the prior fishing year.

(2) *Recreational sector*. (i) If recreational landings for greater amberjack, as estimated by the SRD, reach or are projected to reach the recreational ACL of 1,167,837 lb (529,722 kg), round weight, the AA will file a notification with the Office of the Federal Register to close the recreational sector for the remainder of the fishing year regardless if the stock is overfished, unless NMFS determines that no closure is necessary based on the best scientific information available. On and after the effective date of such a notification, the bag and possession limits for greater amberjack in or from the South Atlantic EEZ are zero.

(ii) If recreational landings for greater amberjack, as estimated by the SRD, exceed the recreational ACL, then during the following fishing year recreational landings will be monitored for a persistence in increased landings, and if necessary, the AA will file a notification with the Office of the Federal Register to reduce the length of the recreational fishing season and recreational ACL by the amount of the recreational ACL overage, if the species is overfished based on the most recent Status of U.S. Fisheries Report to Congress, and if the combined commercial and recreational ACL of 1,968,001 lb (892,670 kg), round weight, is exceeded during the same fishing year. The AA will use the best scientific information available to determine if reducing the length of the recreational season and recreational ACL is necessary. When the recreational sector is closed as a result of NMFS reducing the length of the recreational fishing season and ACL, the bag and possession limits for

greater amberjack in or from the South Atlantic EEZ are zero.

(1) *Other jacks complex (including lesser amberjack, almaco jack, and banded rudderfish, combined)*—(1) *Commercial sector.* (i) If commercial landings for the other jacks complex, as estimated by the SRD, reach or are projected to reach the commercial ACL of 189,422 lb (85,920 kg), round weight, the AA will file a notification with the Office of the Federal Register to close the commercial sector for the other jacks complex for the remainder of the fishing year. On and after the effective date of such a notification, all sale or purchase of lesser amberjack, almaco jack, and banded rudderfish is prohibited, and harvest or possession of any of these species in or from the South Atlantic EEZ is limited to the bag and possession limits. These bag and possession limits apply in the South Atlantic on board a vessel for which a valid Federal commercial or charter vessel/headboat permit for South Atlantic snapper-grouper has been issued, without regard to where such species were harvested, *i.e.*, in state or Federal waters.

(ii) If commercial landings for the other jacks complex, as estimated by the SRD, exceed the commercial ACL, and the combined commercial and recreational ACL of 457,221 lb (207,392 kg), round weight, is exceeded, and at least one of the species in the other jacks complex is overfished based on the most recent Status of U.S. Fisheries Report to Congress, the AA will file a notification with the Office of the Federal Register to reduce the commercial ACL for that following fishing year by the amount of the commercial ACL overage in the prior fishing year.

(2) *Recreational sector.* (i) If recreational landings for the other jacks complex, as estimated by the SRD, reach or are projected to reach the recreational ACL of 267,799 lb (121,472 kg), round weight, the AA will file a notification with the Office of the Federal Register to close the recreational sector for the remainder of the fishing year regardless if any stock in the other jacks complex is overfished, unless NMFS determines that no closure is necessary based on the best scientific information available. On and after the effective date of such a notification,

the bag and possession limits for any species in the other jacks complex in or from the South Atlantic EEZ are zero.

(ii) If recreational landings for the other jacks complex, as estimated by the SRD, exceed the recreational ACL, then during the following fishing year recreational landings will be monitored for a persistence in increased landings, and if necessary, the AA will file a notification with the Office of the Federal Register to reduce the length of the recreational fishing season and the recreational ACL by the amount of the recreational ACL overage, if at least one of the species in the other jacks complex is overfished based on the most recent Status of U.S. Fisheries Report to Congress, and if the combined commercial and recreational ACL of 457,221 lb (207,392 kg), round weight, is exceeded during the same fishing year. NMFS will use the best scientific information available to determine if reducing the length of the recreational fishing season and recreational ACL is necessary. When the recreational sector is closed as a result of NMFS reducing the length of the recreational fishing season and ACL, the bag and possession limits for any species in the other jacks complex in or from the South Atlantic EEZ are zero.

(m) *Bar jack*—(1) *Commercial sector.* (i) If commercial landings for bar jack, as estimated by the SRD, reach or are projected to reach the commercial ACL of 13,228 lb (6,000 kg), round weight, the AA will file a notification with the Office of the Federal Register to close the commercial sector for the remainder of the fishing year. On and after the effective date of such a notification, all sale or purchase of bar jack is prohibited and harvest or possession of bar jack in or from the South Atlantic EEZ is limited to the bag and possession limits. These bag and possession limits apply in the South Atlantic on board a vessel for which a valid Federal commercial or charter vessel/headboat permit for South Atlantic snapper-grouper has been issued, without regard to where such species were harvested, *i.e.*, in state or Federal waters.

(ii) If commercial landings for bar jack, as estimated by the SRD, exceed

the commercial ACL, and the combined commercial and recreational ACL of 62,249 lb (28,236 kg), round weight, is exceeded, and bar jack are overfished based on the most recent Status of U.S. Fisheries Report to Congress, the AA will file a notification with the Office of the Federal Register to reduce the commercial ACL for that following fishing year by the amount of the commercial ACL overage in the prior fishing year.

(2) *Recreational sector.* (i) If recreational landings for bar jack, as estimated by the SRD, reach or are projected to reach the recreational ACL of 49,021 lb (22,236 kg), round weight, the AA will file a notification with the Office of the Federal Register to close the recreational sector for the remainder of the fishing year regardless if the stock is overfished, unless NMFS determines that no closure is necessary based on the best scientific information available. On and after the effective date of such a notification, the bag and possession limits for bar jack in or from the South Atlantic EEZ are zero.

(ii) If recreational landings for bar jack, as estimated by the SRD, exceed the recreational ACL, then during the following fishing year recreational landings will be monitored for a persistence in increased landings, and if necessary, the AA will file a notification with the Office of the Federal Register to reduce the length of the recreational fishing season and the recreational ACL by the amount of the recreational ACL overage, if bar jack are overfished based on the most recent Status of U.S. Fisheries Report to Congress, and if the combined commercial and recreational ACL of 62,249 lb (28,236 kg), round weight, is exceeded during the same fishing year. NMFS will use the best scientific information available to determine if reducing the length of the recreational fishing season and recreational ACL is necessary. When the recreational sector is closed as a result of NMFS reducing the length of the recreational fishing season and ACL, the bag and possession limits for bar jack in or from the South Atlantic EEZ are zero.

(n) *Yellowtail snapper*—(1) *Commercial sector.* (i) If commercial landings for yellowtail snapper, as estimated by the

SRD, reach or are projected to reach the commercial ACL of 1,596,510 lb (724,165 kg), round weight, the AA will file a notification with the Office of the Federal Register to close the commercial sector for the remainder of the fishing year. On and after the effective date of such a notification, all sale or purchase of yellowtail snapper is prohibited and harvest or possession of yellowtail snapper in or from the South Atlantic EEZ is limited to the bag and possession limits. These bag and possession limits apply in the South Atlantic on board a vessel for which a valid Federal commercial or charter vessel/headboat permit for South Atlantic snapper-grouper has been issued, without regard to where such species were harvested, *i.e.*, in state or Federal waters.

(ii) If commercial landings for yellowtail snapper, as estimated by the SRD, exceed the commercial ACL, and the combined commercial and recreational ACL of 3,037,500 lb (1,377,787 kg), round weight, is exceeded during the same fishing year, and yellowtail snapper are overfished based on the most recent Status of U.S. Fisheries Report to Congress, the AA will file a notification with the Office of the Federal Register to reduce the commercial ACL for that following fishing year by the amount of the commercial ACL overage in the prior fishing year.

(2) *Recreational sector.* (i) If recreational landings for yellowtail snapper, as estimated by the SRD, reach or are projected to reach the recreational ACL of 1,440,990 lb (653,622 kg), round weight, the AA will file a notification with the Office of the Federal Register to close the recreational sector for the remainder of the fishing year regardless if the stock is overfished, unless NMFS determines that no closure is necessary based on the best scientific information available. On and after the effective date of such a notification, the bag and possession limits for yellowtail snapper in or from the South Atlantic EEZ are zero.

(ii) If recreational landings for yellowtail snapper, as estimated by the SRD, exceed the recreational ACL, then during the following fishing year recreational landings will be monitored for a persistence in increased landings,

and if necessary, the AA will file a notification with the Office of the Federal Register to reduce the length of the recreational fishing season and the recreational ACL by the amount of the recreational ACL overage, if the species is overfished based on the most recent Status of U.S. Fisheries Report to Congress, and if the combined commercial and recreational ACL of 3,037,500 lb (1,377,787 kg), round weight, is exceeded during the same fishing year. The AA will use the best scientific information available to determine if reducing the length of the recreational fishing season and recreational ACL is necessary. When the recreational sector is closed as a result of NMFS reducing the length of the recreational fishing season and ACL, the bag and possession limits for yellowtail snapper in or from the South Atlantic EEZ are zero.

(o) *Mutton snapper*—(1) *Commercial sector*. (i) If commercial landings for mutton snapper, as estimated by the SRD, reach or are projected to reach the applicable commercial ACL specified in paragraph (o)(1)(iii) of this section, the AA will file a notification with the Office of the Federal Register to close the commercial sector for the remainder of the fishing year. On and after the effective date of such a notification, all sale or purchase of mutton snapper is prohibited and harvest or possession of mutton snapper in or from the South Atlantic EEZ is limited to the bag and possession limits. These bag and possession limits apply in the South Atlantic on board a vessel for which a valid Federal commercial or charter vessel/headboat permit for South Atlantic snapper-grouper has been issued, without regard to where such species were harvested, *i.e.*, in state or Federal waters.

(ii) If commercial landings for mutton snapper, as estimated by the SRD, exceed the applicable commercial ACL specified in paragraph (o)(1)(iii) of this section, and the applicable combined commercial and recreational ACL specified in paragraph (o)(3) of this section is exceeded during the same fishing year, and the species is overfished based on the most recent Status of U.S. Fisheries Report to Congress, the AA will file a notification with the Office of the Federal Register to reduce the

commercial ACL in the following fishing year by the amount of the commercial ACL overage in the prior fishing year.

(iii) The commercial ACLs for the following fishing years are given in round weight. For 2017—100,015 lb (45,366 kg); for 2018—104,231 lb (47,278 kg); for 2019—107,981 lb (48,979 kg); for 2020 and subsequent fishing years—111,354 lb (50,509 kg).

(2) *Recreational sector*. (i) If recreational landings for mutton snapper, as estimated by the SRD, reach or are projected to reach the applicable recreational ACL specified in paragraph (o)(2)(iii) of this section, the AA will file a notification with the Office of the Federal Register to close the recreational sector for the remainder of the fishing year regardless if the stock is overfished, unless NMFS determines that no closure is necessary based on the best scientific information available. On and after the effective date of such a notification, the bag and possession limits for mutton snapper in or from the South Atlantic EEZ are zero.

(ii) If recreational landings for mutton snapper, as estimated by the SRD, exceed the applicable recreational ACL specified in paragraph (o)(2)(iii) of this section, then during the following fishing year recreational landings will be monitored for a persistence in increased landings, and if necessary, the AA will file a notification with the Office of the Federal Register to reduce the length of the recreational fishing season and the recreational ACL by the amount of the recreational ACL overage, if the species is overfished based on the most recent Status of U.S. Fisheries Report to Congress, and if the applicable combined commercial and recreational ACL specified in paragraph (o)(3) of this section is exceeded during the same fishing year. NMFS will use the best scientific information available to determine if reducing the length of the recreational fishing season and recreational ACL is necessary. When the recreational sector is closed as a result of NMFS reducing the length of the recreational fishing season and ACL, the bag and possession limits for mutton snapper in or from the South Atlantic EEZ are zero.

(iii) The recreational ACLs for the following fishing years are given in numbers of fish. For 2017—116,127; for 2018—121,318; for 2019—124,766; for 2020 and subsequent fishing years—127,115.

(3) *Combined commercial and recreational ACL.* The combined commercial and recreational ACLs for the following fishing years are given in round weight. For 2017—587,633 lb (266,546 kg); for 2018—612,401 lb (277,780 kg); for 2019—634,435 lb (287,775 kg); for 2020 and subsequent fishing years—654,257 lb (296,766 kg).

(p) *Other snappers complex (including cubera snapper, gray snapper, and lane snapper)*—(1) *Commercial sector*—(i) If commercial landings for the other snappers complex, as estimated by the SRD, reach or are projected to reach the complex commercial ACL of 344,575 lb (156,297 kg), round weight, the AA will file a notification with the Office of the Federal Register, to close the commercial sector for this complex for the remainder of the fishing year. On and after the effective date of such a notification, all sale or purchase of cubera snapper, gray snapper, and lane snapper is prohibited, and harvest or possession of any of these species in or from the South Atlantic EEZ is limited to the bag and possession limits. These bag and possession limits apply in the South Atlantic on board a vessel for which a valid Federal commercial or charter vessel/headboat permit for South Atlantic snapper-grouper has been issued, without regard to where such species were harvested, *i.e.*, in state or Federal waters.

(ii) If commercial landings for the other snappers complex, as estimated by the SRD, exceed the commercial ACL, and the combined commercial and recreational ACL of 1,513,883 lb (686,686 kg), round weight, is exceeded, and at least one of the species in the other snappers complex is overfished, based on the most recent Status of U.S. Fisheries Report to Congress, the AA will file a notification with the Office of the Federal Register to reduce the commercial ACL for that following year by the amount of the commercial ACL overage in the prior fishing year.

(2) *Recreational sector*—(i) If recreational landings for the other snappers complex, as estimated by the SRD,

reach or are projected to reach the recreational ACL of 1,169,308 lb (530,391 kg), round weight, the AA will file a notification with the Office of the Federal Register to close the recreational sector for the remainder of the fishing year regardless if any stock in the other snappers complex is overfished, unless NMFS determines that no closure is necessary based on the best scientific information available. On and after the effective date of such a notification, the bag and possession limits for any species in the other snappers complex in or from the South Atlantic EEZ are zero.

(ii) If recreational landings for the other snappers complex, as estimated by the SRD, exceed the recreational ACL, then during the following fishing year, recreational landings will be monitored for a persistence in increased landings, and if necessary, the AA will file a notification with the Office of the Federal Register, to reduce the length of the recreational fishing season and the recreational ACL by the amount of the recreational ACL overage, if at least one of the species in the other snappers complex is overfished based on the most recent Status of U.S. Fisheries Report to Congress, and the combined commercial and recreational ACL of 1,513,883 lb (686,686 kg), round weight, is exceeded during the same fishing year. NMFS will use the best scientific information available to determine if reducing the length of the recreational fishing season and recreational ACL is necessary. When the recreational sector is closed as a result of NMFS reducing the length of the recreational fishing season and the ACL, the bag and possession limits for any species in the other snappers complex in or from the South Atlantic EEZ are zero.

(q) *Gray triggerfish*—(1) *Commercial sector.* (i) If commercial landings for gray triggerfish, as estimated by the SRD, reach or are projected to reach the commercial ACL (commercial quota) specified in § 622.190(a)(8)(i) or (ii), the AA will file a notification with the Office of the Federal Register to close the commercial sector for the remainder of the fishing year. Applicable restrictions after a commercial quota closure are specified in § 622.190(c).

(ii) If commercial landings for gray triggerfish, as estimated by the SRD, exceed the commercial ACL, and the combined commercial and recreational ACL of 716,999 lb (325,225 kg), round weight, is exceeded, and gray triggerfish are overfished based on the most recent Status of U.S. Fisheries Report to Congress, the AA will file a notification with the Office of the Federal Register to reduce the commercial ACL for that following fishing year by the amount of the commercial ACL overage in the prior fishing year.

(2) *Recreational sector.* (i) If recreational landings for gray triggerfish, as estimated by the SRD, reach or are projected to reach the recreational ACL of 404,675 lb (183,557 kg), round weight, the AA will file a notification with the Office of the Federal Register to close the recreational sector for the remainder of the fishing year regardless if the stock is overfished, unless NMFS determines that no closure is necessary based on the best scientific information available. On and after the effective date of such a notification, the bag and possession limits for gray triggerfish in or from the South Atlantic EEZ are zero.

(ii) If recreational landings for gray triggerfish, as estimated by the SRD, exceed the recreational ACL, then during the following fishing year recreational landings will be monitored for a persistence in increased landings, and if necessary, the AA will file a notification with the Office of the Federal Register to reduce the length of the recreational fishing season and the recreational ACL by the amount of the recreational ACL overage, if gray triggerfish are overfished based on the most recent Status of U.S. Fisheries Report to Congress, and if the combined commercial and recreational ACL of 716,999 lb (325,225 kg), round weight, is exceeded during the same fishing year. NMFS will use the best scientific information available to determine if reducing the length of the recreational fishing season and recreational ACL is necessary. When the recreational sector is closed as a result of NMFS reducing the length of the recreational fishing season and ACL, the bag and possession limits for gray

triggerfish in or from the South Atlantic EEZ are zero.

(r) *Wreckfish*—(1) *Commercial sector.* (i) The ITQ program for wreckfish in the South Atlantic serves as the accountability measures for commercial wreckfish. The commercial ACL for wreckfish is equal to the commercial quota specified in § 622.190(b). Applicable restrictions after a commercial quota closure are specified in § 622.190(c).

(ii) The combined commercial and recreational ACL for wreckfish is 433,000 lb (196,405 kg), round weight, for 2015; 423,700 lb (192,187 kg), round weight, for 2016; 414,200 lb (187,878 kg), round weight, for 2017; 406,300 lb (184,295 kg), round weight, for 2018; 396,800 lb (179,985 kg), round weight, for 2019; and 389,100 lb (176,493 kg), round weight, for 2020 and subsequent fishing years.

(2) *Recreational sector.* (i) If recreational landings for wreckfish, as estimated by the SRD, reach or are projected to reach the recreational ACL specified in § 622.193(r)(2)(iii), the AA will file a notification with the Office of the Federal Register to close the recreational sector for the remainder of the fishing year regardless if the stock is overfished, unless NMFS determines that no closure is necessary based on the best scientific information available. On and after the effective date of such a notification, the bag and possession limits for wreckfish in or from the South Atlantic EEZ are zero.

(ii) If recreational landings for wreckfish, as estimated by the SRD, exceed the recreational ACL, then during the following fishing year recreational landings will be monitored for a persistence in increased landings, and if necessary, the AA will file a notification with the Office of the Federal Register to reduce the length of the recreational fishing season and the recreational ACL by the amount of the recreational ACL overage, if the species is overfished based on the most recent Status of U.S. Fisheries Report to Congress, and if the combined commercial and recreational ACL specified in § 622.193(r)(1)(ii) is exceeded during the same fishing year. The AA will use the best scientific information available to determine if reducing the length of the

recreational fishing season and recreational ACL is necessary. When the recreational sector is closed as a result of NMFS reducing the length of the recreational fishing season and ACL, the bag and possession limits for wreckfish in or from the South Atlantic EEZ are zero.

(iii) The recreational ACL for wreckfish is 21,650 lb (9,820 kg), round weight, for 2015; 21,185 lb (9,609 kg), round weight, for 2016; 20,710 lb (9,394 kg), round weight, for 2017; 20,315 lb (9,215 kg), round weight, for 2018; 19,840 lb (8,999 kg), round weight, for 2019; and 19,455 lb (8,825 kg), round weight, for 2020 and subsequent fishing years.

(s) [Reserved]

(t) *Atlantic spadefish*—(1) *Commercial sector*. (i) If commercial landings for Atlantic spadefish, as estimated by the SRD, reach or are projected to reach the commercial ACL of 150,552 lb (68,289 kg), round weight, the AA will file a notification with the Office of the Federal Register to close the commercial sector for the remainder of the fishing year. On and after the effective date of such a notification, all sale or purchase of Atlantic spadefish is prohibited and harvest or possession of Atlantic spadefish in or from the South Atlantic EEZ is limited to the bag and possession limits. These bag and possession limits apply in the South Atlantic on board a vessel for which a valid Federal commercial or charter vessel/headboat permit for South Atlantic snapper-grouper has been issued, without regard to where such species were harvested, *i.e.*, in state or Federal waters.

(ii) If commercial landings for Atlantic spadefish, as estimated by the SRD, exceed the ACL, and the combined commercial and recreational ACL of 812,478 lb (368,534 kg), round weight, is exceeded, and Atlantic spadefish are overfished based on the most recent Status of U.S. Fisheries Report to Congress, the AA will file a notification with the Office of the Federal Register to reduce the commercial ACL for that following fishing year by the amount of the commercial ACL overage in the prior fishing year.

(2) *Recreational sector*. (i) If recreational landings for Atlantic spadefish, as estimated by the SRD, reach or are projected to reach the rec-

reational ACL of 661,926 lb (300,245 kg), round weight, the AA will file a notification with the Office of the Federal Register to close the recreational sector for the remainder of the fishing year regardless if the stock is overfished, unless NMFS determines that no closure is necessary based on the best scientific information available. On and after the effective date of such a notification, the bag and possession limits for Atlantic spadefish in or from the South Atlantic EEZ are zero.

(ii) If recreational landings for Atlantic spadefish, as estimated by the SRD, exceed the recreational ACL, then during the following fishing year recreational landings will be monitored for a persistence in increased landings, and if necessary, the AA will file a notification with the Office of the Federal Register to reduce the length of the recreational fishing season and the recreational ACL by the amount of the recreational ACL overage, if Atlantic spadefish are overfished based on the most recent Status of U.S. Fisheries Report to Congress, and if the combined commercial and recreational ACL of 812,478 lb (368,534 kg), round weight, is exceeded during the same fishing year. NMFS will use the best scientific information available to determine if reducing the length of the recreational fishing season and recreational ACL is necessary. When the recreational sector is closed as a result of NMFS reducing the length of the recreational fishing season and ACL, the bag and possession limits for Atlantic spadefish in or from the South Atlantic EEZ are zero.

(u) *Hogfish*—(1) *Hogfish off Georgia, South Carolina, and North Carolina (Georgia-North Carolina)*—(i) *Commercial sector*. (A) If commercial landings for the Georgia-North Carolina hogfish stock, as estimated by the SRD, reach or are projected to reach the commercial ACL specified in paragraph (u)(1)(iii)(A) of this section, the AA will file a notification with the Office of the Federal Register to close the commercial sector for the remainder of the fishing year. On and after the effective date of such a notification, all sale or purchase of hogfish in or from the South Atlantic EEZ off Georgia, South

Carolina, and North Carolina is prohibited, and harvest or possession of this species is limited to the bag and possession limits. These bag and possession limits apply to the Georgia-North Carolina hogfish stock on board a vessel for which a valid Federal commercial or charter vessel/headboat permit for South Atlantic snapper-grouper has been issued, without regard to where such species were harvested, *i.e.*, in state or Federal waters.

(B) If commercial landings for the Georgia-North Carolina hogfish stock, as estimated by the SRD, exceed the commercial ACL specified in paragraph (u)(1)(iii)(A) of this section, and the combined commercial and recreational ACL specified in paragraph (u)(1)(iii)(C) of this section is exceeded during the same fishing year, and the Georgia-North Carolina hogfish stock is overfished based on the most recent Status of U.S. Fisheries Report to Congress, the AA will file a notification with the Office of the Federal Register to reduce the commercial ACL for the stock in the following fishing year by the amount of the commercial ACL overage in the prior fishing year.

(ii) *Recreational sector.* (A) If recreational landings for the Georgia-North Carolina hogfish stock, as estimated by the SRD, reach or are projected to reach the recreational ACL specified in paragraph (u)(1)(iii)(B) of this section, the AA will file a notification with the Office of the Federal Register to close the recreational sector for the remainder of the fishing year regardless if the stock is overfished, unless NMFS determines that no closure is necessary based on the best scientific information available. On and after the effective date of such a notification, the bag and possession limits for hogfish in or from the South Atlantic EEZ off Georgia, South Carolina, and North Carolina are zero.

(B) If recreational landings for the Georgia-North Carolina hogfish stock, as estimated by the SRD, exceed the recreational ACL specified in paragraph (u)(1)(iii)(B) of this section, then during the following fishing year recreational landings will be monitored for a persistence in increased landings. If necessary, the AA will file a notification with the Office of the Federal Reg-

ister to reduce the length of the following recreational fishing season and recreational ACL in the following fishing year by the amount of the recreational ACL overage if the Georgia-North Carolina hogfish stock is overfished, based on the most recent Status of U.S. Fisheries Report to Congress, and the combined commercial and recreational ACL is exceeded during the same fishing year to ensure recreational landings do not exceed the recreational ACL in the following fishing year. NMFS will use the best scientific information available to determine if reducing the length of the recreational fishing season and recreational ACL is necessary. When a recreational sector is closed as a result of NMFS reducing the length of the following recreational fishing season and ACL, the bag and possession limits for hogfish in or from the South Atlantic EEZ off Georgia, South Carolina, and North Carolina are zero.

(iii) *ACLs for the Georgia-North Carolina stock.* This stock includes hogfish off Georgia, South Carolina, and North Carolina. All weights are given in round weight.

(A) *Commercial ACL*—23,456 lb (10,639 kg).

(B) *Recreational ACL*—988 fish.

(C) The combined commercial and recreational ACL for the Georgia-North Carolina hogfish stock is 33,930 lb (15,390 kg).

(2) *Hogfish off the Florida Keys and east coast of Florida, and south of 25°09' N. lat. off the west coast of Florida (Florida Keys-East Florida)*—(i) *Commercial sector.* (A) If commercial landings for the Florida Keys-East Florida hogfish stock, as estimated by the SRD, reach or are projected to reach the applicable commercial ACL specified in paragraph (u)(2)(iii)(A) of this section, the AA will file a notification with the Office of the Federal Register to close the commercial sector for the remainder of the fishing year. On and after the effective date of such a notification, all sale or purchase of hogfish in or from the EEZ off the Florida Keys and east coast of Florida, and south of 25°09' N. lat. off the west coast of Florida is prohibited, and harvest or possession of this species is limited to the bag and possession limits. These bag and possession

limits apply for this hogfish stock on board a vessel for which a valid Federal commercial or charter vessel/headboat permit for South Atlantic snapper-grouper has been issued, without regard to where such species were harvested, *i.e.*, in state or Federal waters.

(B) If commercial landings for the Florida Keys-East Florida hogfish stock, as estimated by the SRD, exceed the applicable commercial ACL specified in paragraph (u)(2)(iii)(A) of this section, and the applicable combined commercial and recreational ACL specified in paragraph (u)(2)(iii)(C) of this section is exceeded during the same fishing year, and the stock is overfished based on the most recent Status of U.S. Fisheries Report to Congress, the AA will file a notification with the Office of the Federal Register to reduce the commercial ACL for the stock in the following fishing year by the amount of the applicable commercial ACL overage in the prior fishing year.

(ii) *Recreational sector.* (A) If recreational landings for the Florida Keys-East Florida hogfish stock, as estimated by the SRD, reach or are projected to reach the applicable recreational ACL specified in paragraph (u)(2)(iii)(B) of this section, the AA will file a notification with the Office of the Federal Register to close the recreational sector for the remainder of the fishing year regardless if the stock is overfished, unless NMFS determines that no closure is necessary based on the best scientific information available. On and after the effective date of such a notification, the bag and possession limits for hogfish in or from the EEZ off the Florida Keys and east coast of Florida, and south of 25°09' N. lat. off the west coast of Florida are zero.

(B) If recreational landings for the Florida Keys-East Florida hogfish stock, as estimated by the SRD, exceed the applicable recreational ACL specified in paragraph (u)(2)(iii)(B) of this section, then during the following fishing year recreational landings will be monitored for a persistence in increased landings. If necessary, the AA will file a notification with the Office of the Federal Register to reduce the length of the following applicable recreational fishing season and rec-

reational ACL in the following fishing year by the amount of the recreational ACL overage if the Florida Keys-East Florida hogfish stock is overfished, based on the most recent Status of U.S. Fisheries Report to Congress, and the applicable combined commercial and recreational ACL is exceeded during the same fishing year to ensure recreational landings do not exceed the recreational ACL in the following fishing year. NMFS will use the best scientific information available to determine if reducing the length of the recreational fishing season and recreational ACL is necessary. When a recreational sector is closed as a result of NMFS reducing the length of the following recreational fishing season and ACL, the bag and possession limits for hogfish in or from the EEZ off the Florida Keys and east coast of Florida, and south of 25°09' N. lat. off the west coast of Florida are zero.

(iii) *ACLs for the Florida Keys-East Florida stock.* This stock includes hogfish off the Florida Keys and east coast of Florida, and south of 25°09' N. lat. off the west coast of Florida.

(A) *Commercial ACL.* See the following table. All weights are given in round weight.

Year	Commercial ACL
2017	3,510 lb (1,592 kg).
2018	4,524 lb (2,052 kg).
2019	5,670 lb (2,572 kg).
2020	6,926 lb (3,142 kg).
2021	8,277 lb (3,754 kg).
2022	9,703 lb (4,401 kg).
2023	11,179 lb (5,071 kg).
2024	12,677 lb (5,750 kg).
2025	14,167 lb (6,426 kg).
2026	15,621 lb (7,086 kg).
2027	17,018 lb (7,719 kg).

(B) *Recreational ACL.* See the following table. The recreational ACL is in numbers of fish.

Year	Recreational ACL
2017	15,689
2018	18,617
2019	21,574
2020	25,086
2021	29,096
2022	33,358
2023	37,671
2024	41,934
2025	46,046
2026	49,949
2027	53,610

Fishery Conservation and Management

§ 622.193

(C) *Combined commercial and recreational ACL.* See the following table. The combined commercial and recreational ACL is in numbers of fish.

Year	Combined commercial and recreational ACL
2017	17,034
2018	20,350
2019	23,746
2020	27,740
2021	32,267
2022	37,076
2023	41,954
2024	46,791
2025	51,474
2026	55,934
2027	60,130

(v) *Red porgy—(1) Commercial sector.*

(i) If commercial landings for red porgy, as estimated by the SRD, reach or are projected to reach the commercial ACL (commercial quota) specified in § 622.190(a)(6), the AA will file a notification with the Office of the Federal Register to close the commercial sector for the remainder of the fishing year. Applicable restrictions after a commercial quota closure are specified in § 622.190(c).

(ii) If commercial landings for red porgy, as estimated by the SRD, exceed the commercial ACL, and the combined commercial and recreational ACL of 315,384 lb (143,056 kg), gutted weight, 328,000 lb (148,778 kg), round weight, is exceeded during the same fishing year, and red porgy are overfished based on the most recent Status of U.S. Fisheries Report to Congress, the AA will file a notification with the Office of the Federal Register to reduce the commercial ACL in the following fishing year by the amount of the commercial ACL overage in the prior fishing year.

(2) *Recreational sector.* (i) If recreational landings for red porgy, as estimated by the SRD, reach or are projected to reach the recreational ACL of 157,692 lb (71,528 kg), gutted weight, 164,000 lb (74,389 kg), round weight, the AA will file a notification with the Office of the Federal Register to close the recreational sector for the remainder of the fishing year regardless if the stock is overfished, unless NMFS determines that no closure is necessary based on the best scientific information available. On and after the effective

date of such a notification, the bag and possession limits for red porgy in or from the South Atlantic EEZ are zero.

(ii) If recreational landings for red porgy, as estimated by the SRD, exceed the recreational ACL, then during the following fishing year recreational landings will be monitored for a persistence in increased landings, and if necessary, the AA will file a notification with the Office of the Federal Register to reduce the length of the recreational fishing season and the recreational ACL by the amount of the recreational ACL overage, if the species is overfished based on the most recent Status of U.S. Fisheries Report to Congress, and if the combined commercial and recreational ACL of 315,384 lb (143,056 kg), gutted weight, 328,000 lb (148,778 kg), round weight, is exceeded during the same fishing year. The AA will use the best scientific information available to determine if reducing the length of the recreational fishing season and recreational ACL is necessary. When the recreational sector is closed as a result of NMFS reducing the length of the recreational fishing season and ACL, the bag and possession limits for red porgy in or from the South Atlantic EEZ are zero.

(w) *Other porgies complex (including jolthead porgy, knobbed porgy, whitebone porgy, scup, and saucereye porgy)—(1) Commercial sector.* (i) If commercial landings for the other porgies complex, as estimated by the SRD, reach or are projected to reach the commercial ACL of 36,348 lb (16,487 kg), round weight, the AA will file a notification with the Office of the Federal Register to close the commercial sector for the other porgies complex for the remainder of the fishing year. On and after the effective date of such a notification, all sale or purchase of jolthead porgy, knobbed porgy, whitebone porgy, scup, and saucereye porgy is prohibited, and harvest or possession of any of these species in or from the South Atlantic EEZ is limited to the bag and possession limits. These bag and possession limits apply in the South Atlantic on board a vessel for which a valid Federal commercial or charter vessel/headboat permit for South Atlantic snapper-grouper has been issued, without regard to

where such species were harvested, *i.e.*, in state or Federal waters.

(ii) If commercial landings for the other porgies complex, as estimated by the SRD, exceed the commercial ACL, and the combined commercial and recreational ACL of 143,262 lb (64,983 kg), round weight, is exceeded, and at least one of the species in the complex is overfished based on the most recent Status of U.S. Fisheries Report to Congress, the AA will file a notification with the Office of the Federal Register to reduce the commercial ACL for that following fishing year by the amount of the commercial ACL overage in the prior fishing year.

(2) *Recreational sector.* (i) If recreational landings for the other porgies complex, as estimated by the SRD, reach or are projected to reach the recreational ACL of 106,914 lb (48,495 kg), round weight, the AA will file a notification with the Office of the Federal Register to close the recreational sector for the remainder of the fishing year regardless if any stock in the other porgies complex is overfished, unless NMFS determines that no closure is necessary based on the best scientific information available. On and after the effective date of such a notification, the bag and possession limits for any species in the other porgies complex in or from the South Atlantic EEZ are zero.

(ii) If recreational landings for the other porgies complex, as estimated by the SRD, exceed the recreational ACL, then during the following fishing year recreational landings will be monitored for a persistence in increased landings, and if necessary, the AA will file a notification with the Office of the Federal Register to reduce the length of the recreational fishing season and the recreational ACL by the amount of the recreational ACL overage, if one of the species in the complex is overfished based on the most recent Status of U.S. Fisheries Report to Congress, and if the combined commercial and recreational ACL of 143,262 lb (64,983 kg), round weight, is exceeded during the same fishing year. NMFS will use the best scientific information available to determine if reducing the length of the recreational fishing season and recreational ACL is necessary. When the

recreational sector is closed as a result of NMFS reducing the length of the recreational fishing season and ACL, the bag and possession limits for any species in the other porgies complex in or from the South Atlantic EEZ are zero.

(x) *Grunts complex (including white grunt, sailor's choice, tomtate, and margate)*—(1) *Commercial sector.* (i) If commercial landings for the grunts complex, as estimated by the SRD, reach or are projected to reach the commercial ACL of 217,903 lb (98,839 kg), round weight, the AA will file a notification with the Office of the Federal Register to close the commercial sector for this complex for the remainder of the fishing year. On and after the effective date of such a notification, all sale or purchase of white grunt, sailor's choice, tomtate, and margate is prohibited, and harvest or possession of these species in or from the South Atlantic EEZ is limited to the bag and possession limits. These bag and possession limits apply in the South Atlantic on board a vessel for which a valid Federal commercial or charter vessel/headboat permit for South Atlantic snapper-grouper has been issued, without regard to where such species were harvested, *i.e.*, in state or Federal waters.

(ii) If commercial landings for the grunts complex, as estimated by the SRD, exceed the commercial ACL, and the combined commercial and recreational ACL of 836,025 lb (379,215 kg), round weight, and at least one of the species in the complex is overfished based on the most recent Status of U.S. Fisheries Report to Congress, the AA will file a notification with the Office of the Federal Register, at or near the beginning of the following fishing year to reduce the commercial ACL for that following fishing year by the amount of the commercial ACL overage in the prior fishing year.

(2) *Recreational sector.* (i) If recreational landings for the grunts complex, as estimated by the SRD, reach or are projected to reach the recreational ACL of 618,122 lb (280,375 kg), round weight, the AA will file a notification with the Office of the Federal Register to close the recreational sector for the

remainder of the fishing year regardless if any stock in the grunts complex is overfished, unless NMFS determines that no closure is necessary based on the best scientific information available. On and after the effective date of such a notification, the bag and possession limits for any species in the grunts complex in or from the South Atlantic EEZ are zero.

(ii) If recreational landings for the grunts complex, as estimated by the SRD, exceed the recreational ACL, then during the following fishing year recreational landings will be monitored for a persistence in increased landings, and if necessary, the AA will file a notification with the Office of the Federal Register to reduce the length of the recreational fishing season and the recreational ACL by the amount of the recreational ACL overage, if at least one of the species in the grunts complex is overfished based on the most recent Status of U.S. Fisheries Report to Congress, and if the combined commercial and recreational ACL of 836,025 lb (379,215 kg), round weight, is exceeded during the same fishing year. NMFS will use the best scientific information available to determine if reducing the length of the recreational fishing season and recreational ACL is necessary. When the recreational sector is closed as a result of NMFS reducing the length of the recreational fishing season and ACL, the bag and possession limits for any species in the grunts complex in or from the South Atlantic EEZ are zero.

(y) *Red snapper*—(1) *Commercial sector*. The commercial ACL for red snapper is 124,815 lb (56,615 kg), round weight. See § 622.183(b)(5) for details on the commercial fishing season. NMFS will monitor commercial landings during the season, and if commercial landings, as estimated by the SRD, reach or are projected to reach the commercial ACL, the AA will file a notification with the Office of the Federal Register to close the commercial sector for red snapper for the remainder of the year. On and after the effective date of the closure notification, all sale or purchase of red snapper is prohibited and harvest or possession of red snapper is limited to the recreational bag and possession limits and only during such

time as harvest by the recreational sector is allowed as described in § 622.183(b)(5). This bag and possession limit and the prohibition on sale/purchase apply in the South Atlantic on board a vessel for which a valid Federal commercial or charter vessel/headboat permit for South Atlantic snapper-grouper has been issued, without regard to where such species were harvested or possessed, *i.e.*, in state or Federal waters.

(2) *Recreational sector*. The recreational ACL for red snapper is 29,656 fish. The AA will file a notification with the Office of the Federal Register to announce the length of the recreational fishing season for the current fishing year. The length of the recreational fishing season for red snapper serves as the in-season accountability measure. See § 622.183(b)(5) for details on the recreational fishing season. On and after the effective date of the recreational closure notification, the bag and possession limits for red snapper are zero.

(z) *Blueline tilefish*—(1) *Commercial sector*. (i) If commercial landings for blueline tilefish, as estimated by the SRD, reach or are projected to reach the commercial ACL of 117,148 lb (53,137 kg), round weight, the AA will file a notification with the Office of the Federal Register to close the commercial sector for the remainder of the fishing year. On and after the effective date of such a notification, all sale or purchase of blueline tilefish is prohibited and harvest or possession of blueline tilefish in or from the South Atlantic EEZ is limited to the bag and possession limits. These bag and possession limits apply in the South Atlantic on board a vessel for which a valid Federal commercial or charter vessel/headboat permit for South Atlantic snapper-grouper has been issued, without regard to where such species were harvested, *i.e.*, in state or Federal waters.

(ii) If commercial landings exceed the ACL, and the combined commercial and recreational ACL (total ACL) specified in paragraph (z)(3) of this section, is exceeded, and blueline tilefish is overfished, based on the most recent Status of U.S. Fisheries Report to Congress, the AA will file a notification with the Office of the Federal Register,

at or near the beginning of the following fishing year to reduce the commercial ACL for that following year by the amount of the commercial ACL overage in the prior fishing year.

(2) *Recreational sector.* (i) If recreational landings for blueline tilefish, as estimated by the SRD, reach or are projected to reach the recreational ACL of 116,820 lb (52,989 kg), round weight, the AA will file a notification with the Office of the Federal Register to close the recreational sector for the remainder of the fishing year, unless the RA determines that no closure is necessary based on the best scientific information available. On and after the effective date of such a notification, the bag and possession limits are zero.

(ii) If recreational landings for blueline tilefish, exceed the applicable recreational ACL, and the combined commercial and recreational ACL (total ACL) specified in paragraph (z)(3) of this section is exceeded, and blueline tilefish is overfished, based on the most recent Status of U.S. Fisheries Report to Congress, the AA will file a notification with the Office of the Federal Register, to reduce the length of the recreational fishing season in the following fishing year to ensure recreational landings do not exceed the recreational ACL the following fishing year. When NMFS reduces the length of the following recreational fishing season and closes the recreational sector, the following closure provisions apply: The bag and possession limits for blueline tilefish in or from the South Atlantic EEZ are zero. Additionally, the recreational ACL will be reduced by the amount of the recreational ACL overage in the prior fishing year. The fishing season and recreational ACL will not be reduced if the RA determines, using the best scientific information available, that no reduction is necessary.

(3) The combined commercial and recreational sector ACL (total ACL) is 233,968 lb (106,126 kg), round weight.

[78 FR 22952, Apr. 17, 2013]

EDITORIAL NOTE: For FEDERAL REGISTER citations affecting § 622.193, see the List of CFR Sections Affected, which appears in the Finding Aids section of the printed volume and at www.govinfo.gov.

§ 622.194 Adjustment of management measures.

In accordance with the framework procedures of the FMP for the Snapper-Grouper Fishery of the South Atlantic Region, the RA may establish or modify the items specified in paragraph (a) of this section for South Atlantic snapper-grouper and wreckfish, or paragraph (b) of this section for sea turtles and other protected species.

(a) Biomass levels, age-structured analyses, target dates for rebuilding overfished species, MSY (or proxy), OY, ABC, TAC, quotas (including a quota of zero), annual catch limits (ACLs), annual catch targets (ACTs), AMs, maximum fishing mortality threshold (MFMT), minimum stock size threshold (MSST), trip limits, bag limits, size limits, gear restrictions (ranging from regulation to complete prohibition), seasonal or area closures, fishing year, rebuilding plans, definitions of essential fish habitat, essential fish habitat, essential fish habitat HAPCs or Coral HAPCs, restrictions on gear and fishing activities applicable in essential fish habitat and essential fish habitat HAPCs, and establish or modify spawning SMZs.

(b) Possession, specifications, and use of required release gear and handling requirements for sea turtles and other protected species.

[78 FR 22952, Apr. 17, 2013, as amended at 78 FR 23863 Apr. 23, 2013; 82 FR 29776, June 30, 2017; 84 FR 67238, Dec. 9, 2019]

Subpart J—Shrimp Fishery of the South Atlantic Region

§ 622.200 Permits.

(a) *Commercial vessel permits*—(1) *South Atlantic penaeid shrimp.* For a person aboard a trawler to fish for penaeid shrimp in the South Atlantic EEZ or possess penaeid shrimp in or from the South Atlantic EEZ, a valid commercial vessel permit for South Atlantic penaeid shrimp must have been issued to the vessel and must be on board.

(2) *South Atlantic rock shrimp.* (i) For a person aboard a vessel to fish for rock shrimp in the South Atlantic EEZ off North Carolina or off South Carolina or possess rock shrimp in or from the South Atlantic EEZ off those

states, a Commercial Vessel Permit for Rock Shrimp (Carolinas Zone) or a Commercial Vessel Permit for Rock Shrimp (South Atlantic EEZ) must be issued to the vessel and must be on board.

(ii) For a person aboard a vessel to fish for rock shrimp in the South Atlantic EEZ off Georgia or off Florida or possess rock shrimp in or from the South Atlantic EEZ off those states, a Commercial Vessel Permit for Rock Shrimp (South Atlantic EEZ) must be issued to the vessel and must be on board. A Commercial Vessel Permit for Rock Shrimp (South Atlantic EEZ) is a limited access permit. See § 622.201 for limitations on the issuance, transfer, or renewal of a Commercial Vessel Permit for Rock Shrimp (South Atlantic EEZ).

(b) *Operator permits.* (1) An operator of a vessel that has or is required to have a Commercial Vessel Permit for Rock Shrimp (Carolinas Zone) or a Commercial Vessel Permit for Rock Shrimp (South Atlantic EEZ) issued under this section is required to have an operator permit.

(2) A person required to have an operator permit under paragraph (b)(1) of this section must carry on board such permit and one other form of personal identification that includes a picture (driver's license, passport, etc.).

(3) An owner of a vessel that is required to have a permitted operator under paragraph (b)(1) of this section must ensure that at least one person with a valid operator permit is aboard while the vessel is at sea or offloading.

(4) An owner of a vessel that is required to have a permitted operator under paragraph (b)(1) of this section and the operator of such vessel are responsible for ensuring that a person whose operator permit is suspended, revoked, or modified pursuant to subpart D of 15 CFR part 904 is not aboard that vessel.

(c) *Dealer permits and conditions—(1) Permits.* For a dealer to first receive South Atlantic rock shrimp harvested in or from the EEZ, a Gulf and South Atlantic dealer permit must be issued to the dealer.

(2) *State license and facility requirements.* To obtain a dealer permit, the applicant must have a valid state

wholesaler's license in the state(s) where the dealer operates, if required by such state(s), and must have a physical facility at a fixed location in such state(s).

(d) *Permit procedures.* See § 622.4 for information regarding general permit procedures including, but not limited to application, fees, duration, transfer, renewal, display, sanctions and denials, and replacement.

[78 FR 22952, Apr. 17, 2013, as amended at 79 FR 19495, Apr. 9, 2014]

§ 622.201 South Atlantic rock shrimp limited access.

(a) *Commercial Vessel Permits for Rock Shrimp (South Atlantic EEZ).* For a person aboard a vessel to fish for rock shrimp in the South Atlantic EEZ off Georgia or off Florida or possess rock shrimp in or from the South Atlantic EEZ off those states, a Commercial Permit for Rock Shrimp (South Atlantic EEZ) must be issued to the vessel and must be on board. No applications for additional Commercial Vessel Permits for Rock Shrimp (South Atlantic EEZ) will be accepted.

(b) *Transfer of an existing permit.* A Commercial Vessel Permit for Rock Shrimp (South Atlantic EEZ) is valid only for the vessel and owner named on the permit. To change either the vessel or the owner, a complete application for transfer must be submitted to the RA. An owner of a vessel with a permit may request that the RA transfer a valid permit to another vessel owned by the same entity, to the same vessel owned by another entity, or to another vessel with another owner. A transfer of a permit under this paragraph will include the transfer of the vessel's entire catch history of South Atlantic rock shrimp to a new owner; no partial transfers are allowed.

(c) *Renewal.* The RA will not reissue a Commercial Vessel Permit for Rock Shrimp (South Atlantic EEZ) if the permit is revoked or if the RA does not receive an application for renewal of the permit within 1 year after the expiration date of the permit.

(d) *Limitation on permits.* A vessel for which a permit for South Atlantic rock shrimp is required may be issued either a Commercial Vessel Permit for Rock

§ 622.202

Shrimp (Carolinas Zone) or a Commercial Vessel Permit for Rock Shrimp (South Atlantic EEZ), depending on its eligibility. However, no such vessel may be issued both permits for the same period of effectiveness.

§ 622.202 [Reserved]

§ 622.203 Recordkeeping and reporting.

(a) *Commercial vessel owners and operators*—(1) *Reporting requirement.* The owner or operator of a vessel that fishes for shrimp in the South Atlantic EEZ or in adjoining state waters, or that lands shrimp in an adjoining state, must provide information for any fishing trip, as requested by the SRD, including, but not limited to, vessel identification, gear, effort, amount of shrimp caught by species, shrimp condition (heads on/heads off), fishing areas and depths, and person to whom sold.

(2) *Reporting deadline.* Completed fishing records required by paragraphs (a)(1) of this section must be submitted to the SRD postmarked not later than 7 days after the end of each fishing trip. If no fishing occurred during a calendar month, a report so stating must be submitted on one of the forms postmarked not later than 7 days after the end of that month. Information to be reported is indicated on the form and its accompanying instructions.

(b) *South Atlantic rock shrimp dealers.* (1) A dealer who first receives South Atlantic rock shrimp must maintain records and submit information as specified in § 622.5(c).

(2) On demand, a dealer who has been issued a Gulf and South Atlantic dealer permit, as required under § 622.200(c)(1), must make available to an authorized officer all records of offloadings, purchases, or sales of rock shrimp.

[78 FR 22952, Apr. 17, 2013, as amended at 79 FR 19495, Apr. 9, 2014]

§ 622.204 At-sea observer coverage.

(a) *Required coverage.* A vessel for which a Federal commercial permit for South Atlantic rock shrimp or South Atlantic penaeid shrimp has been issued must carry a NMFS-approved observer, if the vessel's trip is selected by the SRD for observer coverage.

50 CFR Ch. VI (10–1–21 Edition)

(b) *Notification to the SRD.* When observer coverage is required, an owner or operator must advise the SRD in writing not less than 5 days in advance of each trip of the following:

(1) Departure information (port, dock, date, and time).

(2) Expected landing information (port, dock, and date).

(c) *Observer accommodations and access.* An owner or operator of a vessel on which a NMFS-approved observer is embarked must:

(1) Provide accommodations and food that are equivalent to those provided to the crew.

(2) Allow the observer access to and use of the vessel's communications equipment and personnel upon request for the transmission and receipt of messages related to the observer's duties.

(3) Allow the observer access to and use of the vessel's navigation equipment and personnel upon request to determine the vessel's position.

(4) Allow the observer free and unobstructed access to the vessel's bridge, working decks, holding bins, weight scales, holds, and any other space used to hold, process, weigh, or store fish.

(5) Allow the observer to inspect and copy the vessel's log, communications logs, and any records associated with the catch and distribution of fish for that trip.

§ 622.205 Vessel monitoring systems (VMSs).

(a) *VMS requirement for South Atlantic rock shrimp.* An owner or operator of a vessel that has been issued a limited access endorsement for South Atlantic rock shrimp (until January 27, 2010) or a Commercial Vessel Permit for Rock Shrimp (South Atlantic EEZ) must ensure that such vessel has an operating VMS approved by NMFS for use in the South Atlantic rock shrimp fishery on board when on a trip in the South Atlantic. An operating VMS includes an operating mobile transmitting unit on the vessel and a functioning communication link between the unit and NMFS as provided by a NMFS-approved communication service provider.

(b) *Installation and activation of a VMS.* Only a VMS that has been approved by NMFS for the South Atlantic rock shrimp fishery may be used, and the VMS must be installed by a qualified marine electrician. When installing and activating the NMFS-approved VMS, or when reinstalling and reactivating such VMS, the vessel owner or operator must—

(1) Follow procedures indicated on a NMFS-approved installation and activation checklist for the applicable fishery, which is available from NMFS Office for Law Enforcement, Southeast Region, 263 13th Avenue South, St. Petersburg, FL 33701; phone: 800-758-4833; and

(2) Submit to NMFS Office for Law Enforcement, Southeast Region, 263 13th Avenue South, St. Petersburg, FL 33701, a statement certifying compliance with the checklist, as prescribed on the checklist.

(3) Submit to NMFS Office for Law Enforcement, Southeast Region, 263 13th Avenue South, St. Petersburg, FL 33701, a vendor-completed installation certification checklist, which is available from NMFS Office for Law Enforcement, Southeast Region, 263 13th Avenue South, St. Petersburg, FL 33701; phone: 800-758-4833.

(c) *Interference with the VMS.* No person may interfere with, tamper with, alter, damage, disable, or impede the operation of the VMS, or attempt any of the same.

(d) *Interruption of operation of the VMS.* When a vessel's VMS is not operating properly, the owner or operator must immediately contact NMFS Office for Law Enforcement, Southeast Region, 263 13th Avenue South, St. Petersburg, FL 33701, phone: 800-758-4833, and follow instructions from that office. If notified by NMFS that a vessel's VMS is not operating properly, the owner and operator must follow instructions from that office. In either event, such instructions may include, but are not limited to, manually communicating to a location designated by NMFS the vessel's positions or returning to port until the VMS is operable.

(e) *Access to position data.* As a condition of authorized fishing for or possession of fish in a fishery subject to VMS requirements in this section, a vessel

owner or operator subject to the requirements for a VMS in this section must allow NMFS, the USCG, and their authorized officers and designees access to the vessel's position data obtained from the VMS.

§ 622.206 Area and seasonal closures.

(a) *South Atlantic shrimp cold weather closure.* (1) Pursuant to the procedures and criteria established in the FMP for the Shrimp Fishery of the South Atlantic Region, when Florida, Georgia, North Carolina, or South Carolina closes all or a portion of its waters of the South Atlantic to the harvest of brown, pink, and white shrimp, the Assistant Administrator may concurrently close the South Atlantic EEZ adjacent to the closed state waters by filing a notification of closure with the Office of the Federal Register. Closure of the adjacent EEZ will be effective until the ending date of the closure in state waters, but may be ended earlier based on the state's request. In the latter case, the Assistant Administrator will terminate a closure of the EEZ by filing a notification to that effect with the Office of the Federal Register.

(2) During a closure, as specified in paragraph (a)(1) of this section—

(i) No person may trawl for brown shrimp, pink shrimp, or white shrimp in the closed portion of the EEZ (closed area); and no person may possess on board a fishing vessel brown shrimp, pink shrimp, or white shrimp in or from a closed area, except as authorized in paragraph (a)(2)(iii) of this section.

(ii) No person aboard a vessel trawling in that part of a closed area that is within 25 nm of the baseline from which the territorial sea is measured may use or have on board a trawl net with a mesh size less than 4 inches (10.2 cm), as measured between the centers of opposite knots when pulled taut.

(iii) Brown shrimp, pink shrimp, or white shrimp may be possessed on board a fishing vessel in a closed area, provided the vessel is in transit and that the shrimp fishing gear with trawl nets having a mesh size less than 4 inches (10.2 cm), as measured between the centers of opposite knots when pulled taut, is appropriately stowed. For the purposes of this paragraph (a),

transit means a non-stop progression through a closed area and appropriately stowed means trawl doors out of the water and in the rack/cradle on deck, the nets must be out of the water and in the rigging and tied down, and any try net must be on deck.

(b) [Reserved]

[78 FR 22952, Apr. 17, 2013, as amended at 85 FR 67310, Oct. 22, 2020]

§ 622.207 Bycatch Reduction Device (BRD) requirements.

(a) *BRD requirement for South Atlantic shrimp.* On a shrimp trawler in the South Atlantic EEZ, each net that is rigged for fishing must have a BRD installed that is listed in paragraph (a)(3) of this section and is certified or provisionally certified for the area in which the shrimp trawler is located, unless exempted as specified in paragraphs (a)(1)(i) through (iii) of this section. A trawl net is rigged for fishing if it is in the water, or if it is shackled, tied, or otherwise connected to a sled, door, or other device that spreads the net, or to a tow rope, cable, pole, or extension, either on board or attached to a shrimp trawler.

(1) *Exemptions from BRD requirement—*

(i) *Try net exemption.* A shrimp trawler is exempt from the requirement to have a certified or provisionally certified BRD installed in a single try net with a headrope length of 16 ft (4.9 m) or less provided the single try net is either placed immediately in front of another net or is not connected to another net.

(ii) *Roller trawl exemption.* A shrimp trawler is exempt from the requirement to have a certified or provisionally certified BRD installed in up to two rigid-frame roller trawls that are 16 ft (4.9 m) or less in length used or possessed on board. A rigid-frame roller trawl is a trawl that has a mouth formed by a rigid frame and a grid of rigid vertical bars; has rollers on the lower horizontal part of the frame to allow the trawl to roll over the bottom and any obstruction while being towed; and has no doors, boards, or similar devices attached to keep the mouth of the trawl open.

(iii) *BRD certification testing exemption.* A shrimp trawler that is authorized by the RA to participate in the

pre-certification testing phase or to test a BRD in the EEZ for possible certification, has such written authorization on board, and is conducting such test in accordance with the “Bycatch Reduction Device Testing Manual” is granted a limited exemption from the BRD requirement specified in this section. The exemption from the BRD requirement is limited to those trawls that are being used in the certification trials. All other trawls rigged for fishing must be equipped with certified or provisionally certified BRDs.

(2) *Procedures for certification and de-certification of BRDs.* The process for the certification of BRDs consists of two phases—an optional pre-certification phase and a required certification phase. The RA may also provisionally certify a BRD.

(i) *Pre-certification.* The pre-certification phase allows a person to test and evaluate a new BRD design for up to 60 days without being subject to the observer requirements and rigorous testing requirements specified for certification testing in the “Bycatch Reduction Device Testing Manual.”

(A) A person who wants to conduct pre-certification phase testing must submit an application to the RA, as specified in the “Bycatch Reduction Device Testing Manual.” The “Bycatch Reduction Device Testing Manual”, which is available from the RA, upon request, contains the application forms.

(B) After reviewing the application, the RA will determine whether to issue a letter of authorization (LOA) to conduct pre-certification trials upon the vessel specified in the application. If the RA authorizes pre-certification, the RA’s LOA must be on board the vessel during any trip involving the BRD testing.

(ii) *Certification.* A person who proposes a BRD for certification for use in the South Atlantic EEZ must submit an application to test such BRD, conduct the testing, and submit the results of the test in accordance with the “Bycatch Reduction Device Testing Manual.” The RA will issue a LOA to conduct certification trials upon the vessel specified in the application if the RA finds that: The operation plan submitted with the application meets

the requirements of the “Bycatch Reduction Device Testing Manual”; the observer identified in the application is qualified; and the results of any pre-certification trials conducted have been reviewed and deemed to indicate a reasonable scientific basis for conducting certification testing. If authorization to conduct certification trials is denied, the RA will provide a letter of explanation to the applicant, together with relevant recommendations to address the deficiencies resulting in the denial. To be certified for use in the fishery, the BRD candidate must successfully demonstrate a 30-percent reduction in total weight of finfish bycatch. In addition, the BRD candidate must satisfy the following conditions: There is at least a 50-percent probability the true reduction rate of the BRD candidate meets the bycatch reduction criterion and there is no more than a 10-percent probability the true reduction rate of the BRD candidate is more than 5 percentage points less than the bycatch reduction criterion. If a BRD meets both conditions, consistent with the “Bycatch Reduction Device Testing Manual”, NMFS, through appropriate rulemaking procedures, will add the BRD to the list of certified BRDs in paragraph (a)(3) of this section; and provide the specifications for the newly certified BRD, including any special conditions deemed appropriate based on the certification testing results.

(iii) *Provisional certification.* Based on data provided consistent with the “Bycatch Reduction Device Testing Manual”, the RA may provisionally certify a BRD if there is at least a 50-percent probability the true reduction rate of the BRD is no more than 5 percentage points less than the bycatch reduction criterion, *i.e.* 25 percent reduction in total weight of finfish bycatch. Through appropriate rulemaking procedures, NMFS will add the BRD to the list of provisionally certified BRDs in paragraph (a)(3) of this section; and provide the specifications for the BRD, including any special conditions deemed appropriate based on the certification testing results. A provisional certification is effective for 2 years from the date of publication of the no-

tification in the FEDERAL REGISTER announcing the provisional certification.

(iv) *Decertification.* The RA will decertify a BRD if NMFS determines the BRD does not meet the requirements for certification or provisional certification. Before determining whether to decertify a BRD, the RA will notify the South Atlantic Fishery Management Council in writing, and the public will be provided an opportunity to comment on the advisability of any proposed decertification. The RA will consider any comments from the Council and public, and if the RA elects to decertify the BRD, the RA will proceed with decertification via appropriate rulemaking.

(3) *Certified and provisionally certified BRDs*—(i) *Certified BRDs.* The following BRDs are certified for use in the South Atlantic EEZ. Specifications of these certified BRDs are contained in Appendix D to this part.

(A) Fisheye—see Appendix D to part 622 for separate specifications in the Gulf and South Atlantic EEZ.

(B) Gulf fisheye.

(C) Jones-Davis.

(D) Modified Jones-Davis.

(E) Expanded mesh.

(F) Extended funnel.

(G) Cone Fish Deflector Composite Panel.

(H) Square Mesh Panel (SMP) Composite Panel.

(ii) [Reserved]

(b) [Reserved]

§ 622.208 Minimum mesh size applicable to rock shrimp off Georgia and Florida.

(a) The minimum mesh size for the cod end of a rock shrimp trawl net in the South Atlantic EEZ off Georgia and Florida is 1½ inches (4.8 cm), stretched mesh. This minimum mesh size is required in at least the last 40 meshes forward of the cod end drawstring (tie-off rings), and smaller-mesh bag liners are not allowed. A vessel that has a trawl net on board that does not meet these requirements may not possess a rock shrimp in or from the South Atlantic EEZ off Georgia and Florida.

(b) [Reserved]

§ 622.209

50 CFR Ch. VI (10–1–21 Edition)

§ 622.209 Restrictions on sale/purchase.

(a) *South Atlantic rock shrimp.* (1) Rock shrimp harvested in the South Atlantic EEZ on board a vessel that does not have a valid commercial permit for rock shrimp, as required under § 622.200(a)(2), may not be transferred, received, sold, or purchased.

(2) Rock shrimp harvested in or from the EEZ or adjoining state waters by a vessel that has a valid commercial vessel permit for South Atlantic rock shrimp may be sold or transferred only to a dealer who has a valid Gulf and South Atlantic dealer permit, as required under § 622.200(c)(1).

(3) Rock shrimp harvested in or from the EEZ may be first received by a dealer who has a valid Gulf and South Atlantic dealer permit, as required under § 622.200(c)(1), only from a vessel that has a valid commercial vessel permit for rock shrimp.

(b) [Reserved]

[78 FR 22952, Apr. 17, 2013, as amended at 79 FR 19496, Apr. 9, 2014]

§ 622.210 Adjustment of management measures.

In accordance with the framework procedures of the FMP for the Shrimp Fishery of the South Atlantic Region, the RA may establish or modify the items specified in paragraph (a) of this section for South Atlantic shrimp.

(a) Biomass levels, age-structured analyses, BRD certification criteria, BRD specifications, BRD testing protocol, certified BRDs, nets required to use BRDs, times and locations when the use of BRDs is required, definitions of essential fish habitat, and essential fish habitat HAPCs or Coral HAPCs.

(b) [Reserved]

Subpart K—Coral, Coral Reefs, and Live/Hard Bottom Habitats of the South Atlantic Region

§ 622.220 Permits.

See § 622.4 for information regarding general permit procedures including, but not limited to fees, duration, transfer, renewal, display, sanctions and denials, and replacement.

(a) *Required permits*—(1) *Allowable chemical.* For an individual to take or possess fish or other marine organisms with an allowable chemical in a coral area, other than fish or other marine organisms that are landed in Florida, a Federal allowable chemical permit must have been issued to the individual. Such permit must be available when the permitted activity is being conducted and when such fish or other marine organisms are possessed, through landing ashore.

(2) *Allowable octocoral.* For an individual to take or possess allowable octocoral in the South Atlantic EEZ, other than allowable octocoral that is landed in Florida, a Federal allowable octocoral permit must have been issued to the individual. Such permit must be available for inspection when the permitted activity is being conducted and when allowable octocoral is possessed, through landing ashore.

(3) *Aquacultured live rock.* For a person to take or possess aquacultured live rock in the South Atlantic EEZ, a Federal aquacultured live rock permit must have been issued for the specific harvest site. Such permit, or a copy, must be on board a vessel depositing or possessing material on an aquacultured live rock site or harvesting or possessing live rock from an aquacultured live rock site.

(4) *Prohibited coral.* A Federal permit may be issued to take or possess South Atlantic prohibited coral only as scientific research activity, exempted fishing, or exempted educational activity. See § 600.745 of this chapter for the procedures and limitations for such activities and fishing.

(5) *Florida permits.* Appropriate Florida permits and endorsements are required for the following activities, without regard to whether they involve activities in the EEZ or Florida's waters:

(i) Landing in Florida fish or other marine organisms taken with an allowable chemical in a coral area.

(ii) Landing allowable octocoral in Florida.

(iii) Landing live rock in Florida.

(b) *Application.* (1) The applicant for a coral permit must be the individual who will be conducting the activity that requires the permit. In the case of

Fishery Conservation and Management

§ 622.223

a corporation or partnership that will be conducting live rock aquaculture activity, the applicant must be the principal shareholder or a general partner.

(2) An applicant must provide the following:

(i) Name, address, telephone number, and other identifying information of the applicant.

(ii) Name and address of any affiliated company, institution, or organization.

(iii) Information concerning vessels, harvesting gear/methods, or fishing areas, as specified on the application form.

(iv) Any other information that may be necessary for the issuance or administration of the permit.

(v) If applying for an aquacultured live rock permit, identification of each vessel that will be depositing material on or harvesting aquacultured live rock from the proposed aquacultured live rock site, specification of the port of landing of aquacultured live rock, and a site evaluation report prepared pursuant to generally accepted industry standards that—

(A) Provides accurate coordinates of the proposed harvesting site so that it can be located using LORAN or Global Positioning System equipment;

(B) Shows the site on a chart in sufficient detail to determine its size and allow for site inspection;

(C) Discusses possible hazards to safe navigation or hindrance to vessel traffic, traditional fishing operations, or other public access that may result from aquacultured live rock at the site;

(D) Describes the naturally occurring bottom habitat at the site; and

(E) Specifies the type and origin of material to be deposited on the site and how it will be distinguishable from the naturally occurring substrate.

§ 622.221 Recordkeeping and reporting.

(a) *Individuals with coral or live rock permits.* (1) An individual with a Federal allowable octocoral permit must submit a report of harvest to the SRD. Specific reporting requirements will be provided with the permit.

(2) A person with a Federal aquacultured live rock permit must re-

port to the RA each deposition of material on a site. Such reports must be postmarked not later than 7 days after deposition and must contain the following information:

(i) Permit number of site and date of deposit.

(ii) Geological origin of material deposited.

(iii) Amount of material deposited.

(iv) Source of material deposited, that is, where obtained, if removed from another habitat, or from whom purchased.

(3) A person who takes aquacultured live rock must submit a report of harvest to the RA. Specific reporting requirements will be provided with the permit. This reporting requirement is waived for aquacultured live rock that is landed in Florida.

(b) [Reserved]

§ 622.222 Prohibited gear and methods.

Also see § 622.9 for additional prohibited gear and methods that apply more broadly to multiple fisheries or in some cases all fisheries.

(a) *Power-assisted tools.* A power-assisted tool may not be used in the South Atlantic EEZ to take allowable octocoral, prohibited coral, or live rock.

(b) [Reserved]

§ 622.223 Prohibited species.

(a) *General.* The harvest and possession restrictions of this section apply without regard to whether the species is harvested by a vessel operating under a commercial vessel permit. The operator of a vessel that fishes in the EEZ is responsible for the limit applicable to that vessel.

(b) *Prohibited coral.* South Atlantic prohibited coral taken as incidental catch in the South Atlantic EEZ must be returned immediately to the sea in the general area of fishing. In fisheries where the entire catch is landed unsorted, such as the scallop and groundfish fisheries, unsorted prohibited coral may be landed ashore; however, no person may sell or purchase such prohibited coral.

(c) *Wild live rock.* Wild live rock may not be harvested or possessed in the South Atlantic EEZ.

§ 622.224

50 CFR Ch. VI (10–1–21 Edition)

(d) *Octocoral*. Octocoral may not be harvested or possessed in or from the portion of the South Atlantic EEZ managed under the FMP. Octocoral collected in the portion of the South Atlantic EEZ managed under the FMP must be released immediately with a minimum of harm.

§ 622.224 Area closures to protect South Atlantic corals.

(a) *Allowable octocoral closed area*. No person may harvest or possess allowable octocoral in the South Atlantic EEZ north of 28°35.1' N. lat. (due east of the NASA Vehicle Assembly Building, Cape Canaveral, FL).

(b) *Oculina Bank*—(1) *HAPC*. The Oculina Bank HAPC is bounded by rhumb lines connecting, in order, the following points:

Point	North lat.	West long.

(i) In the Oculina Bank HAPC, no person may:

(A) Use a bottom longline, bottom trawl, dredge, pot, or trap.

(B) If aboard a fishing vessel, anchor, use an anchor and chain, or use a grapple and chain.

(C) Fish for or possess rock shrimp in or from the Oculina Bank HAPC, except a shrimp vessel with a valid commercial vessel permit for rock shrimp

that possesses rock shrimp may transit through the Oculina Bank HAPC if fishing gear is appropriately stowed. For the purpose of this paragraph, transit means a direct and non-stop continuous course through the area, maintaining a minimum speed of five knots as determined by an operating VMS and a VMS minimum ping rate of

Fishery Conservation and Management

§ 622.224

1 ping per 5 minutes; fishing gear appropriately stowed means that doors and nets are out of the water.

(ii) [Reserved]

(2) *Experimental closed area.* Within the Oculina Bank HAPC, the experimental closed area is bounded on the north by 27°53' N. lat., on the south by 27°30' N. lat., on the east by 79°56' W. long., and on the west by 80°00' W. long. No person may fish for South Atlantic snapper-grouper in the experimental closed area, and no person may retain South Atlantic snapper-grouper in or from the area. In the experimental closed area, any South Atlantic snapper-grouper taken incidentally by hook-and-line gear must be released immediately by cutting the line without removing the fish from the water.

(c) *Deepwater Coral HAPCs*—(1) *Locations.* The following areas are designated Deepwater Coral HAPCs:

(i) *Cape Lookout Lophelia Banks* is bounded by rhumb lines connecting, in order, the following points:

Point	North lat.	West long.
Origin	34°24'37"	75°45'11"
1	34°10'26"	75°58'44"
2	34°05'47"	75°54'54"
3	34°21'02"	75°41'25"
4	34°23'28.998"	75°43'58.002"

8	24°10'55"	80°58'11"

(B) The outer boundary of the EEZ in a northerly direction from Point 8 to the Origin.

(v) *Blake Ridge Diapir* is bounded by rhumb lines connecting, in order, the following points:

Point	North lat.	West long.
Origin	32°32'28"	76°13'16"
1	32°30'44"	76°13'24"
2	32°30'37"	76°11'21"
3	32°32'21"	76°11'13"
Origin	32°32'28"	76°13'16"

(2) *Restrictions.* In the Deepwater Coral HAPCs specified in paragraph (c)(1) of this section, no person may:

(i) Use a bottom longline, trawl (mid-water or bottom), dredge, pot, or trap.

Fishery Conservation and Management

§ 622.224

(ii) If aboard a fishing vessel, anchor, use an anchor and chain, or use a grapple and chain.

(iii) Fish for coral or possess coral in or from the Deepwater Coral HAPC on board a fishing vessel.

(3) *Shrimp fishery access areas.* The provisions of paragraph (c)(2)(i) of this section notwithstanding, an owner or operator of a vessel for which a valid commercial vessel permit for rock shrimp (South Atlantic EEZ) has been issued may trawl for shrimp in the following portions of the Stetson-Miami Terrace Deepwater Coral HAPC:

(i) *Shrimp access area 1* is bounded by rhumb lines connecting, in order, the following points:

Point	North lat.	West long.

21	26°49'58"	79°45'13"
Origin	26°49'58"	79°46'54"

(4) *Golden crab fishery access areas.* The provisions of paragraphs (c)(2)(i) and (ii) of this section notwithstanding, an owner or operator of a vessel for which a valid commercial permit for South Atlantic golden crab has been issued may use a trap to fish for golden crab and use a grapple and chain while engaged in such fishing in the following portions of the Stetson-Miami Terrace and the Pourtales Terrace Deepwater Coral HAPCs. Access to an area specified in paragraph (c)(4)(i) through (v) of this section is contingent on that zone being authorized on the vessel's permit for South Atlantic golden crab. See §622.241(b) for specification of zones.

(i) *Golden crab northern zone access area* is bounded by rhumb lines connecting, in order, the following points:

Origin	25°49'10"	80°00'38"

(iv) *Golden crab middle zone access area C* is bounded by—

(A) Rhumb lines connecting, in order, the following points:

Point	North lat.	West long.
Origin	25°33'32"	79°42'18"
1	25°33'32"	79°47'14"
2	25°21'04"	79°53'45"
3	25°21'04"	79°42'04"

(B) The outer boundary of the EEZ in a northerly direction from Point 3 to the Origin.

(v) *Golden crab southern zone access area* is bounded by—

(A) Rhumb lines connecting, in order, the following points:

Point	North lat.	West long.
Origin	24°14'07"	80°53'27"
1	24°13'46"	81°04'54"
2	24°10'55"	80°58'11"

(B) The outer boundary of the EEZ in a northerly direction from Point 2 to the Origin.

[78 FR 22952, Apr. 17, 2013, as amended at 80 FR 42431, July 17, 2015; 80 FR 46205, Aug. 4, 2015; 80 FR 60566, Oct. 7, 2015; 81 FR 7715, Feb. 16, 2016]

§ 622.225 Harvest limitations.

(a) *Aquacultured live rock*. In the South Atlantic EEZ:

(1) Aquacultured live rock may be harvested only under a permit, as required under § 622.220(a)(3), and aquacultured live rock on a site may be harvested only by the person, or his or her employee, contractor, or agent, who has been issued the aquacultured live rock permit for the site. A person harvesting aquacultured live rock is exempt from the prohibition on taking prohibited coral for such prohibited coral as attaches to aquacultured live rock.

(2) The following restrictions apply to individual aquaculture activities:

(i) No aquaculture site may exceed 1 acre (0.4 ha) in size.

(ii) Material deposited on the aquaculture site—

(A) May not be placed over naturally occurring reef outcrops, limestone ledges, coral reefs, or vegetated areas.

(B) Must be free of contaminants.

(C) Must be nontoxic.

(D) Must be placed on the site by hand or lowered completely to the bottom under restraint, that is, not allowed to fall freely.

(E) Must be placed from a vessel that is anchored.

(F) Must be geologically distinguishable from the naturally occurring substrate and, in addition, may be indelibly marked or tagged.

(iii) A minimum setback of at least 50 ft (15.2 m) must be maintained from

§ 622.226

natural vegetated or hard bottom habitats.

(3) Mechanically dredging or drilling, or otherwise disturbing, aquacultured live rock is prohibited, and aquacultured live rock may be harvested only by hand.

(4) The following activities are also prohibited: Chipping of aquacultured live rock in the EEZ, possession of chipped aquacultured live rock in or from the EEZ, removal of allowable octocoral or prohibited coral from aquacultured live rock in or from the EEZ, and possession of prohibited coral not attached to aquacultured live rock or allowable octocoral, while aquacultured live rock is in possession. See the definition of “Allowable octocoral” for clarification of the distinction between allowable octocoral and live rock. For the purposes of this paragraph (a)(4), chipping means breaking up reefs, ledges, or rocks into fragments, usually by means of a chisel and hammer.

(5) Not less than 24 hours prior to harvest of aquacultured live rock, the owner or operator of the harvesting vessel must provide the following information to the NMFS Office for Law Enforcement, Southeast Region, St. Petersburg, FL, by telephone (727-824-5344):

(i) Permit number of site to be harvested and date of harvest.

(ii) Name and official number of the vessel to be used in harvesting.

(iii) Date, port, and facility at which aquacultured live rock will be landed.

(b) [Reserved]

§ 622.226 Restrictions on sale/purchase.

(a) *South Atlantic wild live rock.* Wild live rock in or from the South Atlantic EEZ may not be sold or purchased. The prohibition on sale or purchase does not apply to wild live rock from the South Atlantic EEZ that was harvested and landed prior to January 1, 1996.

(b) [Reserved]

§ 622.227 Adjustment of management measures.

In accordance with the framework procedures of the FMP for Coral, Coral Reefs, and Live/Hard Bottom Habitats

50 CFR Ch. VI (10–1–21 Edition)

of the South Atlantic Region, the RA may establish or modify the following:

(a) *South Atlantic coral, coral reefs, and live/hard bottom habitats.* Definitions of essential fish habitat and essential fish habitat HAPCs or Coral HAPCs.

(b) [Reserved]

Subpart L—Golden Crab Fishery of the South Atlantic Region

§ 622.240 Permits.

(a) *Commercial vessel permits.* For a person aboard a vessel to fish for golden crab in the South Atlantic EEZ, possess golden crab in or from the South Atlantic EEZ, off-load golden crab from the South Atlantic EEZ, or sell golden crab in or from the South Atlantic EEZ, a commercial vessel permit for golden crab must be issued to the vessel and must be on board. It is a rebuttable presumption that a golden crab on board a vessel in the South Atlantic or off-loaded from a vessel in a port adjoining the South Atlantic was harvested from the South Atlantic EEZ. See § 622.241 for limitations on the use, transfer, and renewal of a commercial vessel permit for golden crab.

(b) *Dealer permits and conditions—(1) Permits.* For a dealer to first receive South Atlantic golden crab harvested in or from the EEZ, a Gulf and South Atlantic dealer permit must be issued to the dealer.

(2) *State license and facility requirements.* To obtain a dealer permit, the applicant must have a valid state wholesaler’s license in the state(s) where the dealer operates, if required by such state(s), and must have a physical facility at a fixed location in such state(s).

(c) *Permit procedures.* See § 622.4 for information regarding general permit procedures including, but not limited to application, fees, duration, transfer, renewal, display, sanctions and denials, and replacement.

[78 FR 22952, Apr. 17, 2013, as amended at 79 FR 19496, Apr. 9, 2014]

§ 622.241 South Atlantic golden crab controlled access.

(a) *General.* In accordance with the procedures specified in the Fishery

Management Plan for the Golden Crab Fishery of the South Atlantic Region, initial commercial vessel permits have been issued for the fishery. All permits in the fishery are issued on a fishing-year (calendar-year) basis. No additional permits may be issued except for the northern zone as follows:

(1) The RA will issue up to two new vessel permits for the northern zone. Selection will be made from the list of historical participants in the South Atlantic golden crab fishery. Such list was used at the October 1995 meeting of the South Atlantic Fishery Management Council and was prioritized based on pounds of golden crab landed, without reference to a specific zone. Individuals on the list who originally received permits will be deleted from the list.

(2) The RA will offer in writing an opportunity to apply for a permit for the northern zone to the individuals highest on the list until two individuals accept and apply in a timely manner. An offer that is not accepted within 30 days after it is received will no longer be valid.

(3) An application for a permit from an individual who accepts the RA's offer must be received by the RA no later than 30 days after the date of the individual's acceptance. Application forms are available from the RA.

(4) A vessel permit for the northern zone issued under paragraph (a)(1) of this section, and any successor permit, may not be changed to another zone. A successor permit includes a permit issued to that vessel for a subsequent owner and a permit issued via transfer from that vessel to another vessel.

(b) *Fishing zones*—(1) *Designation of fishing zones*. The South Atlantic EEZ is divided into three fishing zones for golden crab as follows:

(i) Northern zone—the South Atlantic EEZ north of 28° N. lat.

(ii) Middle zone—the South Atlantic EEZ from 28° N. lat. to 25° N. lat.

(iii) Southern zone—the South Atlantic EEZ south of 25° N. lat.

(2) *Authorization to fish in zones*. Each vessel permit indicates one of the zones specified in paragraph (b)(1) of this section. A vessel with a permit to fish for golden crab in the northern zone or the middle zone may fish only in that zone.

A vessel with a documented length overall greater than 65 ft (19.8 m) with a permit to fish for golden crab in the southern zone may fish in that zone, consistent with the provisions of paragraph (b)(3) of this section. A vessel may possess golden crab only in a zone in which it is authorized to fish, except that other zones may be transited if the vessel notifies NMFS Office for Law Enforcement, Southeast Region, St. Petersburg, FL, by telephone (727-824-5344) in advance and does not fish in a zone in which it is not authorized to fish.

(3) *Small-vessel sub-zone*. Within the southern zone, a small-vessel sub-zone is established bounded on the north by 24°15' N. lat., on the south by 24°07' N. lat., on the east by 81°22' W. long., and on the west by 81°56' W. long. No vessel with a documented length overall greater than 65 ft (19.8 m) may fish for golden crab in this sub-zone, and a vessel with a documented length overall of 65 ft (19.8 m) or less that is permitted for the southern zone may fish for golden crab only in this sub-zone.

(4) *Procedure for changing zones*. Upon request from an owner of a permitted vessel, the RA will change the zone specified on a permit from the middle or southern zone to the northern zone. No other changes in the zone specified on a permit are allowed. An owner of a permitted vessel who desires a change to the northern zone must submit his/her request with the existing permit to the RA.

(c) *Transferring permits between vessels*—(1) *Procedure for transferring*. An owner of a vessel who desires a golden crab permit may request that NMFS transfer an existing permit or permits to his or her vessel by returning an existing permit or permits to the RA with an application for a permit for the replacement vessel.

(2) *Vessel size limitations on transferring*. (i) To obtain a permit for the middle or southern zone via transfer, the documented length overall of the replacement vessel may not exceed the documented length overall, or aggregate documented lengths overall, of the replaced vessel(s) by more than 20 percent. The owner of a vessel permitted for the middle or southern zone who has requested that NMFS transfer that

§ 622.242

50 CFR Ch. VI (10–1–21 Edition)

permit to a smaller vessel (*i.e.*, downsized) may subsequently request NMFS transfer that permit to a vessel of a length calculated from the length of the permitted vessel immediately prior to downsizing.

(ii) There are no vessel size limitations to obtain a permit for the northern zone via transfer.

(d) *Permit renewal.* NMFS will not renew a commercial vessel permit for South Atlantic golden crab if the permit is revoked or if the RA does not receive a required application for renewal within 6 months after the permit's expiration. See § 622.4(g) for the applicable general procedures and requirements for permit renewals.

§ 622.242 Recordkeeping and reporting.

(a) *Commercial vessel owners and operators.* (1) The owner or operator of a vessel for which a commercial permit for golden crab has been issued, as required under § 622.240(a), who is selected to report by the SRD must maintain a fishing record on a form available from the SRD.

(2) Reporting forms required in paragraph (a)(1) of this section must be submitted to the SRD postmarked not later than 30 days after sale of the golden crab offloaded from a trip. If no fishing occurred during a calendar month, a report so stating must be submitted on one of the forms postmarked not later than 7 days after the end of that month. Information to be reported is indicated on the form and its accompanying instructions.

(b) *Dealers.* A dealer who first receives South Atlantic golden crab must maintain records and submit information as specified in § 622.5(c).

[78 FR 22952, Apr. 17, 2013, as amended at 79 FR 19496, Apr. 9, 2014]

§ 622.243 Gear identification.

(a) *Golden crab traps and associated buoys*—(1) *Golden crab traps.* A golden crab trap used or possessed in the South Atlantic EEZ or on board a vessel with a commercial permit for golden crab must have the commercial vessel permit number permanently affixed so as to be easily distinguished, located, and identified; an identification

tag issued by the RA may be used for this purpose but is not required.

(2) *Associated buoys.* In the South Atlantic EEZ, buoys are not required to be used, but, if used, each buoy must display the official number assigned by the RA so as to be easily distinguished, located, and identified.

(3) *Presumption of ownership.* A golden crab trap in the EEZ will be presumed to be the property of the most recently documented owner. This presumption will not apply with respect to such traps that are lost or sold if the owner reports the loss or sale within 15 days to the RA.

(4) *Unmarked golden crab traps.* An unmarked golden crab trap or a buoy deployed in the EEZ where such trap or buoy is required to be marked is illegal and may be disposed of in any appropriate manner by the Assistant Administrator or an authorized officer.

(b) [Reserved]

§ 622.244 At-sea observer coverage.

(a) *Required coverage.* A vessel for which a Federal commercial permit for golden crab has been issued must carry a NMFS-approved observer, if the vessel's trip is selected by the SRD for observer coverage.

(b) *Notification to the SRD.* When observer coverage is required, an owner or operator must advise the SRD in writing not less than 5 days in advance of each trip of the following:

(1) Departure information (port, dock, date, and time).

(2) Expected landing information (port, dock, and date).

(c) *Observer accommodations and access.* An owner or operator of a vessel on which a NMFS-approved observer is embarked must:

(1) Provide accommodations and food that are equivalent to those provided to the crew.

(2) Allow the observer access to and use of the vessel's communications equipment and personnel upon request for the transmission and receipt of messages related to the observer's duties.

(3) Allow the observer access to and use of the vessel's navigation equipment and personnel upon request to determine the vessel's position.

(4) Allow the observer free and unobstructed access to the vessel's bridge, working decks, holding bins, weight scales, holds, and any other space used to hold, process, weigh, or store fish.

(5) Allow the observer to inspect and copy the vessel's log, communications logs, and any records associated with the catch and distribution of fish for that trip.

§ 622.245 Prohibited species.

(a) *General.* The harvest and possession restrictions of this section apply without regard to whether the species is harvested by a vessel operating under a commercial vessel permit. The operator of a vessel that fishes in the EEZ is responsible for the limit applicable to that vessel.

(b) *Female golden crabs.* It is intended that no female golden crabs in or from the South Atlantic EEZ be retained on board a vessel and that any female golden crab in or from the South Atlantic EEZ be released in a manner that will ensure maximum probability of survival. However, to accommodate legitimate incidental catch and retention, the number of female golden crabs in or from the South Atlantic EEZ retained on board a vessel may not exceed 0.5 percent, by number, of all golden crabs on board. See § 622.250(a) regarding the prohibition of sale of female golden crabs.

(c) *Snapper-grouper aboard a golden crab vessel.* South Atlantic snapper-grouper may not be possessed in whole, gutted, or filleted form by a person aboard a vessel fishing for or possessing golden crab in or from the South Atlantic EEZ or possessing a golden crab trap in the South Atlantic. Only the head, fins, and backbone (collectively the "rack") of South Atlantic snapper-grouper may be possessed for use as bait.

§ 622.246 Area closures.

(a) *Golden crab trap closed areas.* In the golden crab northern zone, a golden crab trap may not be deployed in waters less than 900 ft (274 m) deep. In the golden crab middle and southern zones, a golden crab trap may not be deployed in waters less than 700 ft (213 m) deep. See § 622.241(b)(1) for specification of the golden crab zones.

(b) [Reserved]

§ 622.247 Landing golden crab intact.

The operator of a vessel that fishes in the EEZ is responsible for ensuring that golden crab on that vessel in the EEZ are maintained intact and, if taken from the EEZ, are maintained intact through offloading ashore.

(a) A golden crab in or from the South Atlantic EEZ must be maintained in whole condition through landing ashore. For the purposes of this paragraph, whole means a crab that is in its natural condition and that has not been gutted or separated into component pieces, *e.g.*, clusters.

(b) [Reserved]

§ 622.248 Authorized gear.

(a) *Traps.* Traps are the only fishing gear authorized in directed fishing for golden crab in the South Atlantic EEZ. Golden crab in or from the South Atlantic EEZ may not be retained on board a vessel possessing or using unauthorized gear.

(b) *Buoy line or mainline.* Rope is the only material allowed to be used for a buoy line or mainline attached to a golden crab trap.

§ 622.249 Gear restrictions and requirements.

(a) *Maximum trap sizes.* A golden crab trap deployed or possessed in the South Atlantic EEZ may not exceed 64 ft³ (1.8 m³) in volume in the northern zone or 48 ft³ (1.4 m³) in volume in the middle and southern zones. See § 622.241(b)(1) for specification of the golden crab zones.

(b) *Required escape mechanisms for traps.* (1) A golden crab trap that is used or possessed in the South Atlantic EEZ must have at least one escape gap or escape ring on each of two opposite vertical sides. The minimum allowable inside dimensions of an escape gap are 2.75 by 3.75 inches (7.0 by 9.5 cm); the minimum allowable inside diameter of an escape ring is 4.5 inches (11.4 cm). In addition to the escape gaps—

(i) A golden crab trap constructed of webbing must have an opening (slit) at least 1 ft (30.5 cm) long that may be closed (relaced) only with untreated cotton string no larger than 3/16 inch (0.48 cm) in diameter.

§ 622.250

(ii) A golden crab trap constructed of material other than webbing must have an escape panel or door measuring at least 11 $\frac{7}{8}$ by 11 $\frac{7}{8}$ inches (30.2 by 30.2 cm), located on at least one side, excluding top and bottom. The hinges or fasteners of such door or panel must be made of either ungalvanized or uncoated iron wire no larger than 19 gauge (0.04 inch (1.0 mm) in diameter) or untreated cotton string no larger than $\frac{3}{16}$ inch (4.8 mm) in diameter.

(2) [Reserved]

(c) *Restriction on tending traps.* A golden crab trap in the South Atlantic EEZ may be pulled or tended only by a person (other than an authorized officer) aboard the vessel permitted to fish such pot or trap or aboard another vessel if such vessel has on board written consent of the owner or operator of the vessel so permitted. A vessel with written consent on board must also possess a valid commercial vessel permit for golden crab.

§ 622.250 Restrictions on sale/purchase.

(a) A female golden crab in or from the South Atlantic EEZ may not be sold or purchased.

(b) A golden crab harvested in the South Atlantic EEZ on board a vessel that does not have a valid commercial permit for golden crab, as required under § 622.240(a), may not be sold or purchased.

(c) A golden crab harvested in or from the EEZ or adjoining state waters by a vessel that has a valid commercial vessel permit for South Atlantic golden crab may be sold or transferred only to a dealer who has a valid Gulf and South Atlantic dealer permit, as required under § 622.240(b)(1).

(d) A golden crab harvested in or from the EEZ may be first received by a dealer who has a valid Gulf and South Atlantic dealer permit, as required under § 622.240(b)(1), only from a vessel that has a valid commercial vessel permit for golden crab.

[78 FR 22952, Apr. 17, 2013, as amended at 79 FR 19496, Apr. 9, 2014]

50 CFR Ch. VI (10–1–21 Edition)

§ 622.251 Annual catch limits (ACLs), annual catch targets (ACTs), and accountability measures (AMs).

(a) *Commercial sector.* (1) If commercial landings for golden crab, as estimated by the SRD, reach or are projected to reach the ACL of 2 million lb (907,185 kg), round weight, the AA will file a notification with the Office of the Federal Register to close the golden crab fishery for the remainder of the fishing year. On and after the effective date of such a notification, all harvest, possession, sale, or purchase of golden crab in or from the South Atlantic EEZ is prohibited.

(2) If commercial landings for golden crab, as estimated by the SRD, exceed the ACL, and the species is overfished based on the most recent Status of U.S. Fisheries Report to Congress, the AA will file a notification with the Office of the Federal Register to reduce the ACL in the following fishing year by the amount of the ACL overage in the prior fishing year.

(b) [Reserved]

[78 FR 22952, Apr. 17, 2013, as amended at 81 FR 3746, Jan. 22, 2016]

§ 622.252 Adjustment of management measures.

In accordance with the framework procedures of the FMP for the Golden Crab Fishery of the South Atlantic Region, the RA may establish or modify the following:

(a) *South Atlantic golden crab.* Biomass levels, age-structured analyses, MSY, ABC, TAC, quotas (including quotas equal to zero), trip limits, minimum sizes, gear regulations and restrictions, permit requirements, seasonal or area closures, sub-zones and their management measures, time frame for recovery of golden crab if overfished, fishing year (adjustment not to exceed 2 months), observer requirements, authority for the RA to close the fishery when a quota is reached or is projected to be reached, definitions of essential fish habitat, and essential fish habitat HAPCs or Coral HAPCs.

(b) [Reserved]

Subpart M—Dolphin and Wahoo Fishery of the Atlantic

§ 622.270 Permits.

(a) *Commercial vessel permits.* (1) For a person aboard a vessel to be eligible for exemption from the bag and possession limits for dolphin or wahoo in or from the Atlantic EEZ or to sell such dolphin or wahoo, a commercial vessel permit for Atlantic dolphin and wahoo must be issued to the vessel and must be on board, except as provided in paragraph (a)(2) of this section. (See paragraph (c)(1) of this section for the requirements for operator permits in the Atlantic dolphin and wahoo fishery).

(2) The provisions of paragraph (a)(1) of this section notwithstanding, a fishing vessel, except a vessel operating as a charter vessel or headboat, that does not have a commercial vessel permit for Atlantic dolphin and wahoo but has a Federal commercial vessel permit in any other fishery, is exempt from the bag and possession limits for dolphin and wahoo and may sell dolphin and wahoo, subject to the trip and geographical limits specified in § 622.278(a)(2). (A charter vessel/headboat permit is not a commercial vessel permit.)

(b) *Charter vessel/headboat permits.* (1) For a person aboard a vessel that is operating as a charter vessel or headboat to fish for or possess Atlantic dolphin or wahoo, in or from the Atlantic EEZ, a valid charter vessel/headboat permit for Atlantic dolphin and wahoo must have been issued to the vessel and must be on board. (See paragraph (c)(1) of this section for the requirements for operator permits in the dolphin and wahoo fishery.)

(2) A charter vessel or headboat may have both a charter vessel/headboat permit and a commercial vessel permit. However, when a vessel is operating as a charter vessel or headboat, a person aboard must adhere to the bag limits. See the definitions of “Charter vessel” and “Headboat” in § 622.2 for an explanation of when vessels are considered to be operating as a charter vessel or headboat, respectively.

(c) *Operator permits.* (1) An operator of a vessel that has or is required to have a charter vessel/headboat or commercial permit for Atlantic dolphin and

wahoo issued under this section is required to have an operator permit.

(2) A person required to have an operator permit under paragraph (c)(1) of this section must carry on board such permit and one other form of personal identification that includes a picture (driver's license, passport, etc.).

(3) An owner of a vessel that is required to have a permitted operator under paragraph (c)(1) of this section must ensure that at least one person with a valid operator permit is aboard while the vessel is at sea or offloading.

(4) An owner of a vessel that is required to have a permitted operator under paragraph (c)(1) of this section and the operator of such vessel are responsible for ensuring that a person whose operator permit is suspended, revoked, or modified pursuant to subpart D of 15 CFR part 904 is not aboard that vessel.

(d) *Dealer permits and conditions.*—(1) *Permits.* For a dealer to first receive Atlantic dolphin or wahoo harvested in or from the EEZ, a Gulf and South Atlantic dealer permit must be issued to the dealer.

(2) *State license and facility requirements.* To obtain a dealer permit, the applicant must have a valid state wholesaler's license in the state(s) where the dealer operates, if required by such state(s), and must have a physical facility at a fixed location in such state(s).

(e) *Permit procedures.* See § 622.4 for information regarding general permit procedures including, but not limited to application, fees, duration, transfer, renewal, display, sanctions and denials, and replacement.

[78 FR 22952, Apr. 17, 2013, as amended at 79 FR 19496, Apr. 9, 2014]

§ 622.271 Recordkeeping and reporting.

(a) *Commercial vessel owners and operators.*—(1) *Reporting requirement.* The owner or operator of a vessel for which a commercial permit for Atlantic dolphin and wahoo has been issued, as required under § 622.270(a)(1), or whose vessel fishes for or lands Atlantic dolphin or wahoo in or from state waters adjoining the Atlantic EEZ, who is selected to report by the SRD must maintain a fishing record on a form

available from the SRD and must submit such record as specified in paragraph (a)(2) of this section.

(2) *Reporting deadlines.* Completed fishing records required by paragraph (a)(1) of this section must be submitted to the SRD postmarked not later than 7 days after the end of each fishing trip. If no fishing occurred during a calendar month, a report so stating must be submitted on one of the forms postmarked not later than 7 days after the end of that month. Information to be reported is indicated on the form and its accompanying instructions.

(b) *Charter vessel/headboat owners and operators*—(1) *General reporting requirement*—(i) *Charter vessels.* The owner or operator of a charter vessel for which a charter vessel/headboat permit for Atlantic dolphin and wahoo has been issued, as required under § 622.270(b)(1), and whose vessel is operating as a charter vessel, must record all fish harvested and discarded, and any other information requested by the SRD for each trip, and submit an electronic fishing report within the time period specified in paragraph (b)(2) of this section. The electronic fishing report must be submitted to the SRD via NMFS-approved hardware and software, as specified in paragraph (b)(5) of this section. If the owner or operator subject to this paragraph (b)(1)(i) has been issued a Federal permit that requires more restrictive reporting requirements, as determined by NMFS and posted on the NMFS Southeast Region website, reporting under those more restrictive regulations will meet the requirements of this paragraph (b)(1)(i).

(ii) *Headboats.* The owner or operator of a headboat for which a charter vessel/headboat permit for Atlantic dolphin and wahoo has been issued, as required under § 622.270(b)(1), and whose vessel is operating as a headboat in state or Federal waters, must record all fish harvested and discarded, and any other information requested by the SRD for each trip in state or Federal waters, and submit an electronic fishing report within the time period specified in paragraph (b)(2) of this section. The electronic fishing report must be submitted to the SRD via NMFS-ap-

proved hardware and software, as specified in paragraph (b)(5) of this section.

(2) *Reporting deadlines for charter vessels and headboats.* Completed electronic fishing reports required by paragraph (b)(1) of this section must be submitted to the SRD by the Tuesday following each previous reporting week of Monday through Sunday, or at shorter intervals if notified by the SRD. If no fishing activity as a charter vessel or headboat occurred during a reporting week, an electronic report so stating must be submitted by the Tuesday following that reporting week, or at a shorter interval if notified by the SRD.

(3) *Catastrophic conditions.* During catastrophic conditions only, NMFS provides for use of paper forms for basic required functions as a backup to the electronic reports required by paragraph (b)(1) of this section. The RA will determine when catastrophic conditions exist, the duration of the catastrophic conditions, and which participants or geographic areas are deemed affected by the catastrophic conditions. The RA will provide timely notice to affected participants via publication of notification in the FEDERAL REGISTER, and other appropriate means such as fishery bulletins or NOAA weather radio, and will authorize the affected participants' use of paper forms for the duration of the catastrophic conditions. The paper forms will be available from NMFS. During catastrophic conditions, the RA has the authority to waive or modify reporting time requirements.

(4) *Compliance requirements.* Electronic reports required by paragraph (b)(1) of this section must be submitted and received by NMFS according to the reporting requirements under this section. A report not received within the applicable time specified in paragraph (b)(2) of this section is delinquent. A delinquent report results in the owner and operator of a charter vessel or headboat for which a charter vessel/headboat permit for Atlantic dolphin and wahoo has been issued being prohibited from harvesting or possessing such species automatically, with no additional requirement for NMFS to provide notice to the owner and operator of their delinquency. The owner and

operator who are prohibited from harvesting or possessing such species due to delinquent reports are authorized to harvest or possess such species only after all required and delinquent reports have been submitted and received by NMFS according to the reporting requirements under this section.

(5) *Hardware and software requirements for electronic reporting.* Owners and operators must submit electronic reports using NMFS-approved hardware and software as posted on the NMFS Southeast Region website.

(c) *Dealers.* (1) A dealer who first receives Atlantic dolphin or wahoo must maintain records and submit information as specified in § 622.5(c).

(2) *Alternate SRD.* For the purpose of § 622.5(c), in the states from Maine through Virginia, or in the waters off those states, “SRD” means the Science and Research Director, Northeast Fisheries Science Center, NMFS, or a designee.

(3) On demand, a dealer who has been issued a Gulf and South Atlantic dealer permit, as required under § 622.270(d)(1), must make available to an authorized officer all records of offloadings, purchases, or sales of Atlantic dolphin or wahoo.

[78 FR 22952, Apr. 17, 2013, as amended at 78 FR 78781, Dec. 27, 2013; 79 FR 19496, Apr. 9, 2014; 85 FR 10340, Feb. 24, 2020]

§ 622.272 Authorized gear.

(a) *Atlantic dolphin and wahoo*—(1) *Authorized gear.* The following are the only authorized gear types in the fisheries for dolphin and wahoo in the Atlantic EEZ: Automatic reel, bandit gear, handline, pelagic longline, rod and reel, and spearfishing gear (including powerheads). A person aboard a vessel in the Atlantic EEZ that has on board gear types other than authorized gear types may not possess a dolphin or wahoo.

(2) [Reserved]

(b) [Reserved]

§ 622.273 Conservation measures for protected species.

(a) *Atlantic dolphin and wahoo pelagic longliners.* The owner or operator of a vessel for which a commercial permit for Atlantic dolphin and wahoo has been issued, as required under

§ 622.270(a)(1), and that has on board a pelagic longline must post inside the wheelhouse the sea turtle handling and release guidelines provided by NMFS. Such owner or operator must also comply with the sea turtle bycatch mitigation measures, including gear requirements and sea turtle handling requirements, as specified in § 635.21(c)(5)(i) and (ii) of this chapter, respectively. For the purpose of this paragraph, a vessel is considered to have pelagic longline gear on board when a power-operated longline hauler, a mainline, floats capable of supporting the mainline, and leaders (gangions) with hooks are on board. Removal of any one of these elements constitutes removal of pelagic longline gear.

(b) [Reserved]

§ 622.274 Pelagic longline closed areas.

(a) If pelagic longline gear is on board a vessel, a person aboard such vessel may not fish for or retain a dolphin or wahoo—

(1) In the Northeastern United States closed area from June 1 through June 30 each year. The Northeastern United States closed area is that portion of the EEZ between 40° N. lat. and 39° N. lat. from 68° W. long. to 74° W. long.

(2) In the Charleston Bump closed area from February 1 through April 30 each year. The Charleston Bump closed area is that portion of the EEZ off North Carolina, South Carolina, and Georgia between 34° N. lat. and 31° N. lat. and west of 76° W. long.

(3) In the East Florida Coast closed area year round. The East Florida Coast closed area is that portion of the EEZ off Georgia and the east coast of Florida from the inner boundary of the EEZ at 31° N. lat.; thence due east to 78° W. long.; thence by a rhumb line to 28°17' N. lat., 79°12' W. long.; thence proceeding in a southerly direction along the outer boundary of the EEZ to 24° N. lat.; thence due west to 24° N. lat., 81°47' W. long.; thence due north to the innermost boundary of the EEZ at 81°47' W. long.

(b) A vessel is considered to have pelagic longline gear on board when a power-operated longline hauler, a mainline, floats capable of supporting the mainline, and gangions with hooks are on board. Removal of any one of

§ 622.275

these elements constitutes removal of pelagic longline gear.

(c) If a vessel is in a closed area during a time specified in paragraph (a) of this section with pelagic longline gear on board, it is a rebuttable presumption that fish on board such vessel were taken with pelagic longline gear in the closed area.

§ 622.275 Size limits.

All size limits in this section are minimum size limits unless specified otherwise. A fish not in compliance with its size limit, as specified in this section, in or from the Atlantic EEZ, may not be possessed, sold, or purchased. A fish not in compliance with its size limit must be released immediately with a minimum of harm. The operator of a vessel that fishes in the EEZ is responsible for ensuring that fish on board are in compliance with the size limits specified in this section.

(a) *Dolphin in the Atlantic off Florida, Georgia, and South Carolina*—20 inches (50.8 cm), fork length.

(b) [Reserved]

§ 622.276 Landing fish intact.

(a) Dolphin or wahoo in or from the Atlantic EEZ must be maintained with head and fins intact, except as specified in paragraph (b) of this section. Such fish may be eviscerated, gilled, and scaled, but must otherwise be maintained in a whole condition. The operator of a vessel that fishes in the EEZ is responsible for ensuring that fish on that vessel in the EEZ are maintained intact and, if taken from the EEZ, are maintained intact through offloading ashore, as specified in this section.

(b) In the Atlantic EEZ, dolphin or wahoo lawfully harvested in Bahamian waters are exempt from the requirement that they be maintained with head and fins intact, provided that the skin remains intact on the entire fillet of any dolphin or wahoo carcasses, valid Bahamian fishing and cruising permits are on board the vessel, each person on the vessel has a valid government passport with current stamps and dates from The Bahamas, and the vessel is in transit through the Atlantic EEZ with fishing gear appropriately stowed. For the purpose of this para-

50 CFR Ch. VI (10–1–21 Edition)

graph, a vessel is in transit through the Atlantic EEZ when it is on a direct and continuous course through the Atlantic EEZ and no one aboard the vessel fishes in the EEZ. For the purpose of this paragraph, fishing gear appropriately stowed means that terminal gear (*i.e.*, hook, leader, sinker, flasher, or bait) used with an automatic reel, bandit gear, buoy gear, handline, or rod and reel must be disconnected and stowed separately from such fishing gear. Sinkers must be disconnected from the down rigger and stowed separately.

[80 FR 80689, Dec. 23, 2015]

§ 622.277 Bag and possession limits.

Section 622.11(a) provides the general applicability for bag and possession limits.

(a) *Atlantic dolphin and wahoo*. Bag and possession limits are as follows:

(1) *Dolphin*. (i) In the Atlantic EEZ—10, not to exceed 60 per vessel, whichever is less, except on board a headboat, 10 per paying passenger.

(ii) In the Atlantic EEZ and lawfully harvested in Bahamian waters (as per § 622.276(b))—10, not to exceed 60 per vessel, whichever is less, except on board a headboat, 10 per paying passenger. For the purposes of this paragraph, for determining how many dolphin are on board a vessel in fillet form when harvested lawfully in Bahamian waters, two fillets of dolphin, regardless of the length of each fillet, is equivalent to one dolphin. The skin must remain intact on the entire fillet of any dolphin carcass.

(2) *Wahoo*. (i) In the Atlantic EEZ—2.

(ii) In the Atlantic EEZ and lawfully harvested in Bahamian waters (as per § 622.276(b))—2. For the purposes of this paragraph, for determining how many wahoo are on board a vessel in fillet form when harvested lawfully in Bahamian waters, two fillets of wahoo, regardless of the length of each fillet, is equivalent to one wahoo. The skin must remain intact on the entire fillet of any wahoo carcass.

(b) [Reserved]

[78 FR 22952, Apr. 17, 2013, as amended at 80 FR 80689, Dec. 23, 2015]

Fishery Conservation and Management

§ 622.280

§ 622.278 Commercial trip limits.

Commercial trip limits are limits on the amount of Atlantic dolphin and wahoo that may be possessed on board or landed, purchased, or sold from a vessel per day. A person who fishes in the EEZ may not combine a trip limit specified in this section with any trip or possession limit applicable to state waters. A species subject to a trip limit specified in this section taken in the EEZ may not be transferred at sea, regardless of where such transfer takes place, and such species may not be transferred in the EEZ. Commercial trip limits apply as follows (all weights are round or eviscerated weights unless specified otherwise):

(a) *Trip-limited permits*—(1) *Atlantic wahoo*. (i) The trip limit for wahoo in or from the Atlantic EEZ is 500 lb (227 kg). This trip limit applies to a vessel that has a Federal commercial permit for Atlantic dolphin and wahoo, provided that the vessel is not operating as a charter vessel or headboat.

(ii) See § 622.280(b)(1) for the limitations regarding wahoo after the ACL is reached.

(2) The trip limit for a vessel that does not have a Federal commercial vessel permit for Atlantic dolphin and wahoo but has a Federal commercial vessel permit in any other fishery is 200 lb (91 kg) of dolphin and wahoo, combined, provided that all fishing on and landings from that trip are north of 39° N. lat. (A charter vessel/headboat permit is not a commercial vessel permit.)

(3) *Atlantic dolphin*. (i) Once 75 percent of the ACL specified in § 622.280(a)(1)(i) is reached, the trip limit is 4,000 lb (1,814 kg), round weight. When the conditions in this paragraph (a)(3)(i) have been met, the Assistant Administrator will implement this trip limit by filing a notification with the Office of the Federal Register. This trip limit applies to a vessel that has a Federal commercial permit for Atlantic dolphin and wahoo, provided that the vessel is not operating as a charter vessel or headboat.

(ii) See § 622.280(a)(1) for the limitations regarding dolphin after the ACL is reached.

(b) [Reserved]

[78 FR 22952, Apr. 17, 2013, as amended at 81 FR 96930, Dec. 30, 2016]

§ 622.279 Restrictions on sale/purchase.

(a) Dolphin or wahoo harvested in or from the Atlantic EEZ or adjoining state waters by a vessel that has a valid commercial vessel permit for Atlantic dolphin and wahoo, as required under § 622.270(a)(1), or by a vessel authorized a 200-lb (91-kg) trip limit for dolphin or wahoo, as specified in § 622.278(a)(2), may be sold or transferred only to a dealer who has a valid Gulf and South Atlantic dealer permit, as required under § 622.270(d)(1).

(b) In addition to the provisions of paragraph (a)(1) of this section, a person may not sell dolphin or wahoo possessed under the recreational bag limit harvested in the Atlantic EEZ or adjoining state waters by a vessel while it is operating as a charter vessel or headboat. A dolphin or wahoo harvested or possessed by a vessel that is operating as a charter vessel or headboat with a Federal charter vessel/headboat permit for Atlantic dolphin and wahoo may not be purchased or sold if harvested in or from the Atlantic EEZ or adjoining state waters.

(c) Dolphin or wahoo harvested in or from the Atlantic EEZ may be first received only by a dealer who has a valid Gulf and South Atlantic dealer permit, as required under § 622.270(d)(1), and only from a vessel authorized to sell dolphin and wahoo under paragraph (a)(1) of this section.

(d) Dolphin or wahoo possessed pursuant to the bag and possession limits specified in § 622.277(a)(1)(ii) and (a)(2)(ii) may not be sold or purchased.

[79 FR 19496, Apr. 9, 2014, as amended at 80 FR 80689, Dec. 28, 2015]

§ 622.280 Annual catch limits (ACLs) and accountability measures (AMs).

(a) *Atlantic dolphin*—(1) *Commercial sector*. (i) If commercial landings for Atlantic dolphin, as estimated by the SRD, reach or are projected to reach the commercial ACL of 1,534,485 lb (696,031 kg), round weight, the AA will file a notification with the Office of the Federal Register to close the commercial sector for the remainder of the

fishing year. On and after the effective date of such a notification, all sale or purchase of Atlantic dolphin is prohibited and harvest or possession of Atlantic dolphin in or from the Atlantic EEZ is limited to the bag and possession limits. These bag and possession limits apply in the Atlantic on board a vessel for which a valid Federal commercial or charter vessel/headboat permit for Atlantic dolphin and wahoo has been issued, without regard to where such species were harvested, *i.e.*, in state or Federal waters.

(ii) In addition to the measures specified in paragraph (a)(1)(i) of this section, if the combined Atlantic dolphin commercial and recreational landings exceed the combined commercial and recreational ACLs specified in paragraphs (a)(1)(i) and (a)(2)(i) of this section, and Atlantic dolphin are overfished, based on the most recent Status of U.S. Fisheries Report to Congress, the AA will file a notification with the Office of the Federal Register, at or near the beginning of the following fishing year, to reduce the commercial ACL for that following year by the amount of the commercial overage in the prior fishing year.

(2) *Recreational sector.* (i) If recreational landings for Atlantic dolphin, as estimated by the SRD, exceed the recreational ACL of 13,810,361 lb (6,264,274 kg), round weight, then during the following fishing year recreational landings will be monitored for a persistence in increased landings.

(ii) If the combined Atlantic dolphin commercial and recreational landings exceed the combined commercial and recreational ACLs specified in paragraphs (a)(1)(i) and (a)(2)(i) of this section, and Atlantic dolphin are overfished, based on the most recent Status of U.S. Fisheries Report to Congress, the AA will file a notification with the Office of the Federal Register, at or near the beginning of the following fishing year, to reduce the recreational ACL for that following year by the amount of the recreational overage in the prior fishing year, and reduce the recreational fishing season by the amount necessary to ensure recreational landings do not exceed the reduced ACL. However, the recreational ACL and the length of the recreational

fishing season will not be reduced during the following fishing year if the RA determines, using the best scientific information available, that a reduced recreational ACL and a reduction in the length of the following fishing season is unnecessary.

(b) *Atlantic wahoo*—(1) *Commercial sector.* (i) If commercial landings for Atlantic wahoo, as estimated by the SRD, reach or are projected to reach the commercial ACL of 70,542 lb (31,997 kg), round weight, the AA will file a notification with the Office of the Federal Register to close the commercial sector for the remainder of the fishing year. On and after the effective date of such a notification, all sale or purchase of Atlantic wahoo is prohibited and harvest or possession of Atlantic wahoo in or from the Atlantic EEZ is limited to the bag and possession limits. These bag and possession limits apply in the Atlantic on board a vessel for which a valid Federal commercial or charter vessel/headboat permit for Atlantic dolphin and wahoo has been issued, without regard to where such species were harvested, *i.e.*, in state or Federal waters.

(ii) In addition to the measures specified in paragraph (b)(1)(i) of this section, if the combined Atlantic wahoo commercial and recreational landings exceed the combined commercial and recreational ACLs specified in paragraphs (b)(1)(i) and (b)(2)(i) of this section, and Atlantic wahoo are overfished, based on the most recent Status of U.S. Fisheries Report to Congress, the AA will file a notification with the Office of the Federal Register, at or near the beginning of the following fishing year, to reduce the commercial ACL for that following year by the amount of the commercial overage in the prior fishing year.

(2) *Recreational sector.* (i) If recreational landings for Atlantic wahoo, as estimated by the SRD, exceed the recreational ACL of 1,724,418 lb (782,183 kg), round weight, then during the following fishing year, recreational landings will be monitored for a persistence in increased landings.

(ii) If the combined Atlantic wahoo commercial and recreational landings exceed the combined commercial and

Fishery Conservation and Management

§ 622.301

recreational ACLs specified in paragraphs (b)(1)(i) and (b)(2)(i) of this section, and Atlantic wahoo are overfished, based on the most recent Status of U.S. Fisheries Report to Congress, the AA will file a notification with the Office of the Federal Register, at or near the beginning of the following fishing year, to reduce the recreational ACL for that following year by the amount necessary to ensure recreational landings do not exceed the reduced ACL. However, the recreational ACL and the length of the recreational fishing season will not be reduced during the following year if the RA determines, using the best scientific information available, that a reduced recreational ACL and a reduction in the length of the following fishing season is unnecessary.

[79 FR 32879, June 9, 2014, as amended at 81 FR 3746, Jan. 22, 2016]

§ 622.281 Adjustment of management measures.

In accordance with the framework procedures of the FMP for the Dolphin and Wahoo Fishery of the Atlantic, the RA may establish or modify the following items specified in paragraph (a) of this section for Atlantic dolphin and wahoo.

(a) *Atlantic dolphin and wahoo.* Biomass levels, age-structured analyses, MSY, OY, OFL, TAC, ABC, ABC Control Rule, ACLs, ACTs, AMs, trip limits, minimum sizes, gear regulations and restrictions, permit requirements, seasonal or area closures, sub-zones and their management measures, overfishing definitions and other status determination criteria, time frame for recovery of Atlantic dolphin or wahoo if overfished, fishing year (adjustment not to exceed 2 months), authority for the RA to close a fishery when a quota is reached or is projected to be reached or reopen a fishery when additional quota becomes available, definitions of essential fish habitat, and essential fish habitat HAPCs or Coral HAPCs.

(b) [Reserved]

[78 FR 22952, Apr. 17, 2013, as amended at 79 FR 32880, June 9, 2014; 85 FR 10340, Feb. 24, 2020]

Subpart N—Pelagic Sargassum Habitat of the South Atlantic Region

§ 622.300 At-sea observer coverage.

(a) *Required coverage.* (1) A vessel that harvests or possesses pelagic sargassum on any trip in the South Atlantic EEZ must carry a NMFS-approved observer.

(2) [Reserved]

(b) *Notification to the SRD.* When observer coverage is required, an owner or operator must advise the SRD in writing not less than 5 days in advance of each trip of the following:

(1) Departure information (port, dock, date, and time).

(2) Expected landing information (port, dock, and date).

(c) *Observer accommodations and access.* An owner or operator of a vessel on which a NMFS-approved observer is embarked must:

(1) Provide accommodations and food that are equivalent to those provided to the crew.

(2) Allow the observer access to and use of the vessel's communications equipment and personnel upon request for the transmission and receipt of messages related to the observer's duties.

(3) Allow the observer access to and use of the vessel's navigation equipment and personnel upon request to determine the vessel's position.

(4) Allow the observer free and unobstructed access to the vessel's bridge, working decks, holding bins, weight scales, holds, and any other space used to hold, process, weigh, or store fish.

(5) Allow the observer to inspect and copy the vessel's log, communications logs, and any records associated with the catch and distribution of fish for that trip.

§ 622.301 Area and seasonal restrictions.

(a) *Pelagic sargassum area and seasonal restrictions.*—(1) *Area restrictions.* (i) No person may harvest pelagic sargassum in the South Atlantic EEZ between 36°33'01.0" N. lat. (directly east from the Virginia/North Carolina boundary) and 34° N. lat., within 100 nautical miles east of the North Carolina coast.

§ 622.302

(ii) No person may harvest or possess pelagic sargassum in or from the South Atlantic EEZ south of 34° N. lat.

(2) *Seasonal restriction.* No person may harvest or possess pelagic sargassum in or from the South Atlantic EEZ during the months of July through October. This prohibition on possession does not apply to pelagic sargassum that was harvested and landed ashore prior to the closed period.

(b) [Reserved]

§ 622.302 Minimum mesh size.

(a) The minimum allowable mesh size for a net used to fish for pelagic sargassum in the South Atlantic EEZ is 4.0 inches (10.2 cm), stretched mesh, and such net must be attached to a frame no larger than 4 ft by 6 ft (1.2 m by 1.8 m). A vessel in the South Atlantic EEZ with a net on board that does not meet these requirements may not possess any pelagic sargassum.

(b) [Reserved]

§ 622.303 Quotas.

See § 622.8 for general provisions regarding quota applicability and closure and reopening procedures. This section provides quotas and specific quota closure restrictions for South Atlantic pelagic sargassum.

(a) *Quota.* The quota for all persons who harvest pelagic sargassum in the South Atlantic EEZ is 5,000 lb (2,268 kg), wet, landed weight. See § 622.301(a) for area and seasonal limitations on the harvest of pelagic sargassum.

(b) *Restrictions applicable after a quota closure.* Pelagic sargassum may not be fished for or possessed in the South Atlantic EEZ and the sale or purchase of pelagic sargassum in or from the South Atlantic EEZ is prohibited. The prohibition on sale/purchase during a closure for pelagic sargassum does not apply to pelagic sargassum that was harvested and landed ashore prior to the effective date of the closure.

Subparts O–P [Reserved]

50 CFR Ch. VI (10–1–21 Edition)

Subpart Q—Coastal Migratory Pelagic Resources (Gulf of Mexico, South Atlantic, and Mid-Atlantic)

§ 622.369 Description of zones.

(a) *Migratory groups of king mackerel.* In the EEZ, king mackerel are divided into the Gulf migratory group and the Atlantic migratory group. The Gulf migratory group is bound by a line extending east of the U.S./Mexico border and a line extending east of the Miami-Dade/Monroe County, FL, boundary. The Atlantic migratory group is bound by a line extending east of the Miami-Dade/Monroe County, FL, boundary and a line from the intersection point of Connecticut, Rhode Island, and New York (as described in § 600.105(a) of this chapter). The zone boundaries remain in place year round. See Table 1 of this section for the boundary coordinates. See Figure 1 in Appendix G of this part for illustration.

(1) *Gulf migratory group.* The Gulf migratory group is divided into western, northern, and southern zones. See Table 1 of this section for the boundary coordinates. See Figure 1 in Appendix G of this part for illustration.

(i) *Western zone.* The western zone encompasses an area of the EEZ north of a line extending east of the US/Mexico border, and west of a line extending due south of the Alabama/Florida border, including the EEZ off Texas, Louisiana, Mississippi, and Alabama.

(ii) *Northern zone.* The northern zone encompasses an area of the EEZ east of a line extending due south of the Florida/Alabama border, and north of a line extending due west of the Lee/Collier County, FL, boundary.

(iii) *Southern zone.* The southern zone encompasses an area of the EEZ south of a line extending due west of the Lee/Collier County, FL, boundary on the FL west coast, and south of a line extending due east of the Monroe/Miami-Dade County, FL, boundary on the FL east coast, which includes the EEZ off Collier and Monroe Counties, FL.

(2) *Atlantic migratory group.* The Atlantic migratory group is divided into the northern and southern zones separated by a line extending from the North Carolina/South Carolina border, as specified in § 622.2. See Table 1 of

Fishery Conservation and Management

§ 622.369

this section for the boundary coordinates. See Figure 1 in Appendix G of this part for illustration. See § 622.385(a)(1) for a description of the areas for Atlantic migratory group king mackerel commercial trip limits.

(i) *Northern zone.* The northern zone encompasses an area of the EEZ south of a line extending from the intersection point of New York, Connecticut, and Rhode Island (as described in § 600.105(a) of this chapter), and north of a line extending from the North

Carolina/South Carolina border, as specified in § 622.2, including the EEZ off each state from North Carolina to New York. This zone remains the same year round.

(ii) *Southern zone.* The southern zone encompasses an area of the EEZ south of a line extending from the North Carolina/South Carolina border, as specified in § 622.2, and north of a line extending due east of the Monroe/Miami-Dade County, FL, boundary.

TABLE 1 TO § 622.369—KING MACKEREL DESCRIPTION OF ZONES

[For illustration, see Figure 1 in Appendix G of this part]

Area	Boundary 1	Boundary 2
Gulf Migratory Group—Western Zone.	U.S./Mexico, A line east of the intersection of 25°58'30.57" N. lat. and 96°55'27.37" W. long.	AL/FL, 87°31'6" W. long.
Gulf Migratory Group—Northern Zone.	AL/FL, 87°31'6" W. long	Lee/Collier, 26°19'48" N. lat.
Gulf Migratory Group—Southern Zone.	Lee/Collier, 26°19'48" N. lat	Monroe/Miami-Dade, 25°20'24" N. lat.
Atlantic Migratory Group—Northern Zone.	NY/CT/RI, 41°18'16.249" N. lat. and 71°54'28.477" W. long. southeast to 37°22'32.75" N. lat. and the intersection point with the outward boundary of the EEZ.	NC/SC, a line extending in a direction of 135°34'55" from true north beginning at 33°51'07.9" N. lat. and 78°32'32.6" W. long. to the intersection point with the outward boundary of the EEZ.
Atlantic Migratory Group—Southern Zone.	NC/SC, a line extending in a direction of 135°34'55" from true north beginning at 33°51'07.9" N. lat. and 78°32'32.6" W. long. to the intersection point with the outward boundary of the EEZ.	Monroe/Miami-Dade, 25°20'24" N. lat.

(b) *Migratory groups of Spanish mackerel*—(1) *Gulf migratory group.* In the EEZ, the Gulf migratory group is bounded by a line extending east of the U.S./Mexico border and a line extending due east of the Monroe/Miami-Dade County, FL, boundary. See Table 2 of this section for the boundary coordinates. See Figure 2 in Appendix G of this part for illustration.

(2) *Atlantic migratory group.* In the EEZ, the Atlantic migratory group is bounded by a line extending due east of the Monroe/Miami-Dade County, FL, boundary and a line extending from the intersection point of New York, Connecticut, and Rhode Island (as described in § 600.105(a) of this chapter). The Atlantic migratory group is divided into the northern and southern zones. See Table 2 of this section for the boundary coordinates. See Figure 2 in Appendix G of this part for illustration. See § 622.385(b)(1) for a description of the areas for Atlantic migratory

group Spanish mackerel commercial trip limits.

(i) *Northern zone.* The northern zone encompasses an area of the EEZ south of a line extending from the intersection point of New York, Connecticut, and Rhode Island (as described in § 600.105(a) of this chapter), and north of a line extending from the North Carolina/South Carolina border, as specified in § 622.2, including the EEZ off each state from North Carolina to New York.

(ii) *Southern zone.* The southern zone encompasses an area of the EEZ south of a line extending from the North Carolina/South Carolina border, as specified in § 622.2, and north of a line extending due east of the Monroe/Miami-Dade County, FL, boundary, including the EEZ off South Carolina, Georgia, and Florida.

TABLE 2 TO § 622.369—SPANISH MACKEREL DESCRIPTION OF ZONES

[For illustration, see Figure 2 in Appendix G of this part]

Area	Boundary 1	Boundary 2
Gulf Migratory Group	US/Mexico, A line east of the intersection of 25°58'30.57" N. lat. and 96°55'27.37" W. long.	Monroe/Miami-Dade, 25°20'24" N. lat.
Atlantic Migratory Group—Northern Zone.	NY/CT/RI, 41°18'16.249" N. lat. and 71°54'28.477" W. long. southeast to 37°22'32.75" N. lat. and the intersection point with the outward boundary of the EEZ.	NC/SC, a line extending in a direction of 135°34'55" from true north beginning at 33°51'07.9" N. lat. and 78°32'32.6" W. long. to the intersection point with the outward boundary of the EEZ.
Atlantic Migratory Group—Southern Zone.	NC/SC, a line extending in a direction of 135°34'55" from true north beginning at 33°51'07.9" N. lat. and 78°32'32.6" W. long. to the intersection point with the outward boundary of the EEZ.	Monroe/Miami-Dade, 25°20'24" N. lat.

(c) *Migratory groups of cobia*—(1) *Gulf migratory group*. In the EEZ, the Gulf migratory group is bounded by a line extending east from the United States/Mexico border and a line extending due east from the Florida/Georgia border. See Table 3 of this section for the boundary coordinates. (See Figure 3 in Appendix G of this part for illustration.)

(i) *Gulf zone*. The Gulf zone encompasses an area of the EEZ north of a line extending east of the United States/Mexico border, and north and west of the line of demarcation between the Atlantic Ocean and the Gulf of Mexico (the Council boundary, as described in § 600.105(c) of this chapter).

(ii) *Florida east coast zone*. The Florida east coast zone encompasses an area of the EEZ south and east of the line of demarcation between the Atlantic Ocean and the Gulf of Mexico (as described in § 600.105(c) of this chapter), and south of a line extending due east from the Florida/Georgia border.

(2) *Atlantic migratory group*. In the EEZ, the Atlantic migratory group is bounded by a line extending from the intersection point of New York, Connecticut, and Rhode Island (as described in § 600.105(a) of this chapter) and a line extending due east of the Florida/Georgia border. See Table 3 of this section for the boundary coordinates. (See Figure 3 in Appendix G of this part for illustration.)

TABLE 3 TO § 622.369—COBIA DESCRIPTION OF ZONES

[For illustration, see Figure 3 in Appendix G of this part]

Area	Boundary 1	Boundary 2
Gulf Migratory Group—Gulf Zone.	US/Mexico, A line east of the intersection of 25°58'30.57" N. lat. and 96°55'27.37" W. long.	Council Boundary—the intersection of the outer boundary of the EEZ and 83°00' W. long., north to 24°35' N. lat., (near the Dry Tortugas Islands), then east to the mainland.
Gulf Migratory Group—Florida East Coast Zone.	Council Boundary—the intersection of the outer boundary of the EEZ and 83°00' W. long., north to 24°35' N. lat., (near the Dry Tortugas Islands), then east to the mainland.	FL/GA, 30°42'45.6" N. lat.
Atlantic Migratory Group	NY/CT/RI, 41°18'16.249" N. lat. and 71°54'28.477" W. long. southeast to 37°22'32.75" N. lat. and the intersection point with the outward boundary of the EEZ.	FL/GA, 30°42'45.6" N. lat.

[82 FR 17394, Apr. 11, 2017]

§ 622.370 Permits.

(a) *Commercial vessel permits*—(1) *King mackerel*. For a person aboard a vessel to be eligible for exemption from the bag limits, to fish under a quota, or to

sell king mackerel in or from the Gulf, Mid-Atlantic, or South Atlantic EEZ, a commercial vessel permit for king mackerel must have been issued to the vessel and must be on board. See § 622.371 regarding a limited access system applicable to commercial vessel

permits for king mackerel and transfers of permits under the limited access system.

(2) *Gillnets for king mackerel in the Gulf southern zone.* For a person aboard a vessel to use a run-around gillnet for king mackerel in the southern zone (see § 622.369(a)(1)(iii)), a commercial vessel permit for king mackerel and a king mackerel gillnet permit must have been issued to the vessel and must be on board. See § 622.372 regarding a limited access system applicable to king mackerel gillnet permits in the southern zone and restrictions on transferability of king mackerel gillnet permits.

(3) *Spanish mackerel.* For a person aboard a vessel to be eligible for exemption from the bag limits, to fish under a quota, or to sell Spanish mackerel in or from the Gulf, Mid-Atlantic, or South Atlantic EEZ, a commercial vessel permit for Spanish mackerel must have been issued to the vessel and must be on board.

(b) *Charter vessel/headboat permits.* (1) For a person aboard a vessel that is operating as a charter vessel or headboat to fish for or possess, in or from the EEZ, Gulf coastal migratory pelagic fish or Atlantic coastal migratory pelagic fish, a valid charter vessel/headboat permit for Gulf coastal migratory pelagic fish or Atlantic coastal migratory pelagic fish, respectively, must have been issued to the vessel and must be on board.

(i) See § 622.373 regarding a limited access system for charter vessel/headboat permits for Gulf coastal migratory pelagic fish.

(ii) A charter vessel or headboat may have both a charter vessel/headboat permit and a commercial vessel permit. However, when a vessel is operating as a charter vessel or headboat, a person aboard must adhere to the bag limits. See the definitions of “Charter vessel” and “Headboat” in § 622.2 for an explanation of when vessels are considered to be operating as a charter vessel or headboat, respectively.

(2) [Reserved]

(c) *Dealer permits and conditions—*(1) *Permits.* For a dealer to first receive Gulf or Atlantic coastal migratory pelagic fish harvested in or from the

EEZ, a Gulf and South Atlantic dealer permit must be issued to the dealer.

(2) *State license and facility requirements.* To obtain a dealer permit, the applicant must have a valid state wholesaler’s license in the state(s) where the dealer operates, if required by such state(s), and must have a physical facility at a fixed location in such state(s).

(d) *Permit procedures.* See § 622.4 for information regarding general permit procedures including, but not limited to application, fees, duration, transfer, renewal, display, sanctions and denials, and replacement.

[78 FR 22952, Apr. 17, 2013, as amended at 79 FR 19496, Apr. 9, 2014; 79 FR 34250, June 16, 2014; 82 FR 17396, Apr. 11, 2017]

§ 622.371 Limited access system for commercial vessel permits for king mackerel.

(a) No applications for additional commercial vessel permits for king mackerel will be accepted. Existing vessel permits may be renewed, are subject to the restrictions on transfer or change in paragraph (b) of this section, and are subject to the requirement for timely renewal in paragraph (c) of this section.

(b) An owner of a permitted vessel may transfer the commercial vessel permit for king mackerel issued under this limited access system to another vessel owned by the same entity. A permit holder may also transfer the commercial vessel permit for king mackerel to the owner of another vessel or to a new vessel owner when he or she transfers ownership of the permitted vessel.

(c) NMFS will not reissue a commercial vessel permit for king mackerel if the permit is revoked or if the RA does not receive an application for renewal within one year of the permit’s expiration date.

[78 FR 22952, Apr. 17, 2013, as amended at 79 FR 34250, June 16, 2014; 80 FR 78674, Dec. 17, 2015; 85 FR 22045, Apr. 21, 2020]

§ 622.372 Limited access system for king mackerel gillnet permits applicable in the Gulf southern zone.

(a) Except for applications for renewals of king mackerel gillnet permits, no applications for king mackerel

gillnet permits will be accepted. Application forms for permit renewal are available from the RA.

(b) An owner of a vessel with a king mackerel gillnet permit issued under this limited access system may transfer that permit upon a change of ownership of a permitted vessel with such permit from one to another of the following: Husband, wife, son, daughter, brother, sister, mother, or father. Such permit also may be transferred to another vessel owned by the same entity.

(c) A king mackerel gillnet permit that is not renewed or that is revoked will not be reissued. A permit is considered to be not renewed when an application for renewal is not received by the RA within one year after the expiration date of the permit.

(d) *Renewal criteria for a king mackerel gillnet permit.* A king mackerel gillnet permit may be renewed only if NMFS determines at least 1 year of landings from 2006 to 2015 associated with that permit was greater than 1 lb (0.45 kg), round or gutted weight.

(1) *Initial determination.* On or about December 24, 2015, the RA will mail each king mackerel gillnet permittee a letter via certified mail, return receipt requested, to the permittee's address of record as listed in NMFS' permit files, advising the permittee whether the permit is eligible for renewal. A permittee who does not receive a letter from the RA, must contact the RA no later than December 31, 2015, to clarify the renewal status of the permit. A permittee who is advised that the permit is not renewable based on the RA's determination of eligibility and who disagrees with that determination may appeal that determination.

(2) *Procedure for appealing landings information.* The only item subject to appeal is the landings used to determine whether the permit is eligible for renewal. Appeals based on hardship factors will not be considered. Any appeal under this regulation will be processed by the NMFS National Appeals Office. Appeals will be governed by the regulations and policy of the National Appeals Office at 15 CFR part 906. Appeals must be submitted to the National Appeals Office no later than 90 days after the date the initial determination is issued. Determinations of appeals re-

garding landings data for 2006 to 2015 will be based on NMFS' logbook records, submitted on or before February 16, 2016. If NMFS' logbooks are not available, state landings records or data for 2006 to 2015 that were submitted in compliance with applicable Federal and state regulations on or before February 16, 2016, may be used.

[78 FR 22952, Apr. 17, 2013, as amended at 80 FR 78674, Dec. 17, 2015; 80 FR 80686, Dec. 28, 2015]

§ 622.373 Limited access system for charter vessel/headboat permits for Gulf coastal migratory pelagic fish.

(a) *General.* No applications for additional charter vessel/headboat permits for Gulf coastal migratory pelagic fish will be accepted. Existing permits may be renewed, are subject to the restrictions on transfer in paragraph (b) of this section, and are subject to the renewal requirements in paragraph (c) of this section. An eligible charter vessel/headboat permit with a historical captain endorsement may be converted to a charter vessel/headboat permit without a historical captain endorsement, per procedures at paragraph (f) of this section.

(b) *Transfer of permits—(1) Permits without a historical captain endorsement.* A charter vessel/headboat permit for Gulf coastal migratory pelagic fish that does not have a historical captain endorsement is fully transferable, with or without sale of the permitted vessel.

(2) *Permits with a historical captain endorsement.* A charter vessel/headboat permit for Gulf coastal migratory pelagic fish that has a historical captain endorsement may only be transferred to a vessel operated by the historical captain and is not otherwise transferable.

(3) *Procedure for permit transfer.* To request that the RA transfer a charter vessel/headboat permit for Gulf coastal migratory pelagic fish, the owner of the vessel who is transferring the permit and the owner of the vessel that is to receive the transferred permit must complete the transfer information on the reverse side of the permit and return the permit and a completed application for transfer to the RA. See § 622.4(f) for additional transfer-related

requirements applicable to all permits issued under this section.

(c) *Renewal.* (1) Renewal of a charter vessel/headboat permit for Gulf coastal migratory pelagic fish is contingent upon compliance with the record-keeping and reporting requirements specified in § 622.374(b).

(2) A charter vessel/headboat permit for Gulf coastal migratory pelagic fish that is not renewed or that is revoked will not be reissued. A permit is considered to be not renewed when an application for renewal, as required, is not received by the RA within 1 year of the expiration date of the permit.

(d) *Requirement to display a vessel decal.* Upon renewal or transfer of a charter vessel/headboat permit for Gulf coastal migratory pelagic fish, the RA will issue the owner of the permitted vessel a vessel decal for that fishery. The vessel decal must be displayed on the port side of the deckhouse or hull and must be maintained so that it is clearly visible.

(e) *Passenger capacity compliance requirement.* A vessel operating as a charter vessel or headboat with a valid charter vessel/headboat permit for Gulf coastal migratory pelagic fish, which is carrying more passengers on board the vessel than is specified on the permit, is prohibited from harvesting or possessing the species identified on the permit.

(f) *Procedure for conversion of permit with historical captain endorsement.* A charter vessel headboat permit with a historical captain endorsement that was valid or renewable on October 25, 2018, may be converted to a charter vessel/headboat permit for Gulf coastal migratory pelagic fish without a historical captain endorsement as described in paragraph (b)(1) of this section. A charter vessel/headboat permit with a historical captain endorsement that is converted to a charter vessel/headboat permit without a historical captain endorsement will retain the same vessel permit maximum passenger capacity as the permit it replaces. To convert an eligible charter vessel/headboat permit with a historical captain endorsement, the permit holder must submit a permit application to the RA by May 23, 2022. If no application to convert an eligible charter

vessel/headboat permit with a historical captain endorsement is submitted by May 23, 2022, the permit holder will retain a charter vessel/headboat permit with the historical captain endorsement that is subject to the restrictions described in paragraph (b)(2) of this section.

[78 FR 22952, Apr. 17, 2013, as amended 78 FR 46293, July 31, 2013; 85 FR 22045, Apr. 21, 2020; 85 FR 44019, July 21, 2020]

§ 622.374 Recordkeeping and reporting.

(a) *Commercial vessel owners and operators.* The owner or operator of a vessel that fishes for or lands coastal migratory pelagic fish for sale in or from the Gulf, Mid-Atlantic, or South Atlantic EEZ or adjoining state waters, or whose vessel is issued a commercial permit for king or Spanish mackerel, as required under § 622.370(a)(1) or (3), respectively, who is selected to report by the SRD, must maintain a fishing record on a form available from the SRD. These completed fishing records must be submitted to the SRD postmarked not later than 7 days after the end of each fishing trip. If no fishing occurred during a calendar month, a report so stating must be submitted on one of the forms postmarked not later than 7 days after the end of that month. Information to be reported is indicated on the form and its accompanying instructions.

(b) *Charter vessel/headboat owners and operators—(1) General reporting requirement—(i) Gulf of Mexico.* The owner or operator of a charter vessel or headboat for which a charter vessel/headboat permit for Gulf coastal migratory pelagic fish has been issued, as required under § 622.370(b)(1), and whose vessel is operating as a charter vessel or headboat, regardless of fishing location, must submit an electronic fishing report of all fish harvested and discarded, and any other information requested by the SRD for each trip within the time period specified in paragraph (b)(2)(i) of this section. An electronic fishing report must be submitted to the SRD via NMFS approved hardware and software, as specified in

paragraph (b)(5)(i) of this section. If selected by the SRD, the owner or operator of a vessel for which a charter vessel/headboat permit for Gulf coastal migratory pelagic fish has been issued must report via the NMFS approved software for the Southeast Region Headboat Survey.

(ii) *Atlantic—(A) Charter vessels.* The owner or operator of a charter vessel for which a charter vessel/headboat permit for Atlantic coastal migratory pelagic fish has been issued, as required under § 622.370(b)(1), and whose vessel is operating as a charter vessel, must record all fish harvested and discarded, and any other information requested by the SRD for each trip, and submit an electronic fishing report within the time period specified in paragraph (b)(2)(ii) of this section. The electronic fishing report must be submitted to the SRD via NMFS-approved hardware and software, as specified in paragraph (b)(5) of this section. If the owner or operator subject to this paragraph (b)(1)(ii)(A) has been issued a Federal permit that requires more restrictive reporting requirements, as determined by NMFS and posted on the NMFS Southeast Region website, reporting under those more restrictive regulations will meet the requirements of this paragraph (b)(1)(ii)(A).

(B) *Headboats.* The owner or operator of a headboat for which a charter vessel/headboat permit for Atlantic coastal migratory pelagic fish has been issued, as required under § 622.370(b)(1), and whose vessel is operating as a headboat in state or Federal waters, must record all fish harvested and discarded, and any other information requested by the SRD for each trip in state or Federal waters, and submit an electronic fishing report within the time period specified in paragraph (b)(2)(ii) of this section. The electronic fishing report must be submitted to the SRD via NMFS-approved hardware and software, as specified in paragraph (b)(5) of this section.

(2) *Reporting deadlines—(i) Gulf of Mexico.* Completed electronic fishing reports required by paragraph (b)(1)(i) of this section must be submitted to the SRD prior to removing any fish from the vessel. If no fish were retained by any person on the vessel during a

trip, the completed electronic fishing report must be submitted to the SRD within 30 minutes of the completion of the trip, *e.g.*, arrival at the dock.

(ii) *Atlantic.* Completed electronic fishing reports required by paragraph (b)(1)(ii) of this section must be submitted to the SRD by the Tuesday following each previous reporting week of Monday through Sunday, or at shorter intervals if notified by the SRD. If no fishing activity as a charter vessel or headboat occurred during a reporting week, an electronic report so stating must be submitted by the Tuesday following that reporting week, or at a shorter interval if notified by the SRD.

(3) *Catastrophic conditions.* During catastrophic conditions only, NMFS provides for use of paper forms for basic required functions as a backup to the electronic reports required by paragraphs (b)(1)(i) and (ii) of this section. The RA will determine when catastrophic conditions exist, the duration of the catastrophic conditions, and which participants or geographic areas are deemed affected by the catastrophic conditions. The RA will provide timely notice to affected participants via publication of notification in the FEDERAL REGISTER, and other appropriate means, such as fishery bulletins or NOAA weather radio, and will authorize the affected participants' use of paper-based components for the duration of the catastrophic conditions. The paper forms will be available from NMFS. During catastrophic conditions, the RA has the authority to waive or modify reporting time requirements.

(4) *Compliance requirement.* Electronic reports required by paragraphs (b)(1)(i) and (ii) of this section must be submitted and received by NMFS according to the reporting requirements under this section. A report not received within the applicable time specified in paragraphs (b)(2)(i) or (ii) of this section is delinquent. A delinquent report automatically results in the owner and operator of a charter vessel or headboat for which a charter vessel/headboat permit for Gulf or Atlantic coastal migratory pelagic fish has been issued, as required under § 622.370(b)(1), being prohibited from harvesting or possessing such species, regardless of

any additional notification to the delinquent owner and operator by NMFS. The owner and operator who are prohibited from harvesting or possessing such species due to delinquent reports are authorized to harvest or possess such species only after all required and delinquent reports have been submitted and received by NMFS according to the reporting requirements under this section.

(5) *Hardware and software requirements for electronic reporting*—(i) *Owner or operator applicability.* An owner or operator of a vessel for which a charter vessel/headboat permit for Gulf or Atlantic coastal migratory pelagic fish has been issued must submit electronic reports using NMFS-approved hardware and software as posted on the NMFS Southeast Region website.

(ii) *Vessel applicability.* For a vessel for which a charter vessel/headboat permit for Gulf coastal migratory pelagic fish has been issued, the NMFS-approved hardware and software must have a minimum capability of archiving GPS locations, and the cellular or satellite VMS must be permanently affixed to the vessel and have uninterrupted operation.

(iii) *Use of a NMFS-approved satellite VMS.* An owner or operator of a vessel for which a charter vessel/headboat permit for Gulf coastal migratory pelagic fish has been issued, and who uses a NMFS-approved satellite VMS to comply with the reporting and recordkeeping requirements of this section, must adhere to the VMS requirements for the Gulf reef fish fishery specified in § 622.28, except for the trip declaration requirements specified in § 622.28(e). For trip declaration requirements, see paragraph (b)(6) of this section.

(iv) *Use of NMFS-approved cellular VMS.* An owner or operator of a vessel for which a charter vessel/headboat permit for Gulf coastal migratory pelagic fish has been issued, and who uses NMFS-approved cellular VMS to comply with reporting and recordkeeping requirements of this section must comply with the following—

(A) *Cellular VMS unit operation and replacement.* Ensure that such vessel has an operating cellular VMS unit approved by NMFS on board at all times

whether or not the vessel is underway, unless exempted by NMFS under the power-down exemption specified in paragraph (b)(5)(iv)(D) of this section. An operating cellular VMS unit includes an operating mobile transmitting unit on the vessel and a functioning communication link between the unit and NMFS as provided by a NMFS-approved communication service provider. NMFS maintains a current list of approved cellular VMS units and communication providers, which is available at <https://www.fisheries.noaa.gov/southeast/about-us/sustainable-fisheries-division-gulf-mexico-branch>. If NMFS OLE removes a cellular VMS unit from the approved list, a vessel owner who purchased and installed such a unit prior to its removal from the approved list will still comply with the requirement to have an approved unit, unless otherwise notified by NMFS. At the end of a cellular VMS unit's service life, it must be replaced with a currently approved unit.

(B) *Hourly position reporting requirement.* An owner or operator of a vessel using a NMFS-approved cellular VMS unit as specified in paragraph (b)(5)(iv)(A) of this section must ensure that the required cellular VMS unit archives the vessel's accurate position at least once per hour, 24 hours a day, every day of the year, unless exempted from this requirement under paragraphs (b)(5)(iv)(C) or (D) of this section.

(C) *In-port exemption.* While in port, an owner or operator of a vessel with a NMFS-approved cellular VMS unit configured with the 4-hour position reporting feature may utilize the 4-hour reporting feature rather than comply with the hourly position reporting requirement specified in paragraph (b)(5)(iv)(B) of this section. Once the vessel is no longer in port, the hourly position reporting requirement specified in paragraph (b)(5)(iv)(B) of this section applies. For the purposes of this section, "in port" means secured at a land-based facility, or moored or anchored after the return to a dock, berth, beach, seawall, or ramp.

(D) *Power-down exemption.* An owner or operator of a vessel subject to the requirement to have a cellular VMS unit operating at all times as specified

in paragraph (b)(5)(iv)(A) of this section can be exempted from that requirement and may power down the required cellular VMS unit if—

(1) The vessel will be continuously out of the water or in port, as defined in paragraph (b)(5)(iv)(C) of this section, for more than 72 consecutive hours; and

(2) The owner or operator of the vessel applies for and obtains a valid letter of exemption from NMFS. The letter of exemption must be maintained on board the vessel and remains valid for the period specified in the letter for all subsequent power-down requests conducted for the vessel consistent with the provisions of paragraphs (b)(5)(iv)(D)(3) and (4) of this section.

(3) Prior to each power down, the owner or operator of the vessel files a report using a NMFS-approved form that includes the name of the person filing the report, vessel name, U.S. Coast Guard vessel documentation number or state vessel registration number, permit number of the Gulf coastal migratory pelagic charter vessel/headboat permit, vessel port location during cellular VMS power down, estimated duration of the power-down exemption, and reason for power down; and

(4) Prior to powering down the cellular VMS unit, the owner or operator of the vessel receives a confirmation from NMFS that the information was successfully delivered.

(E) *Installation and activation of a cellular VMS unit.* Only a cellular VMS unit that has been approved by NMFS for the Gulf coastal migratory pelagic fishery may be used, and the cellular VMS unit must be installed by a qualified marine electrician. When installing and activating or when reinstalling and reactivating the NMFS-approved cellular VMS unit, the vessel owner or operator must—

(1) Follow procedures indicated on the VMS installation and activation form, which is available from NMFS; and

(2) Submit a completed and signed VMS installation and activation form to NMFS as specified on the form.

(F) *Interference with the cellular VMS.* No person may interfere with, tamper with, alter, damage, disable, or impede

the operation of the cellular VMS, or attempt any of the same.

(G) *Interruption of operation of the cellular VMS.* If a vessel's cellular VMS is not operating properly, the vessel owner or operator must immediately contact NMFS and follow NMFS' instructions. If notified by NMFS that a vessel's cellular VMS is not operating properly, the vessel owner or operator must follow NMFS' instructions. In either event, such instructions may include, but are not limited to, manually communicating to a location designated by NMFS the vessel's positions or returning to port until the cellular VMS is operable.

(v) *Access to position data.* As a condition of authorized fishing for or possession of Gulf coastal migratory pelagic fish subject to the reporting and recordkeeping requirements in this section, a vessel owner or operator subject to the hardware and software requirements in this section must allow NMFS, the U.S. Coast Guard, and their authorized officers and designees access to the vessel's position data obtained from the cellular VMS.

(6) *Trip declaration requirements in the Gulf.* For purposes of this paragraph (b)(6), a trip begins anytime the vessel departs from a dock, berth, beach, seawall, or ramp, and terminates with return to a dock, berth, beach, seawall, or ramp, regardless of the duration or purpose, including non-fishing activities. Prior to departure for each trip, the owner or operator of a vessel for which a charter vessel/headboat permit for Gulf coastal migratory pelagic fish has been issued must notify NMFS and report the type of trip, the U.S. Coast Guard vessel documentation number or state vessel registration number, and whether the vessel will be operating as a charter vessel or headboat, or is departing on another type of trip, such as a commercial trip. If the vessel will be operating as a charter vessel or headboat during the trip, the owner or operator must also report the expected trip completion date, time, and landing location.

(c) *Dealers.* (1) A dealer who first receives Gulf or Atlantic coastal migratory pelagic fish must maintain records and submit information as specified in § 622.5(c).

(2) *Alternate SRD*. For the purpose of § 622.5(c), in the states from New York through Virginia, or in the waters off those states, “SRD” means the Science and Research Director, Northeast Fisheries Science Center, NMFS, or a designee.

[78 FR 22952, Apr. 17, 2013, as amended at 79 FR 6100, Feb. 3, 2014; 79 FR 19496, Apr. 9, 2014; 82 FR 17396, Apr. 11, 2017; 85 FR 10339, Feb. 24, 2020; 85 FR 44017, July 21, 2020]

EFFECTIVE DATE NOTE: At 85 FR 44017, July 21, 2020, § 622.374 was amended by revising paragraph (b), effective Jan. 5, 2021, except for (b)(5)(ii) through (v), which were delayed indefinitely. At 86 FR 51014, Sept. 14, 2021, these amendments were given an effective date of Dec. 13, 2021.

§ 622.375 Authorized and unauthorized gear.

(a) *Authorized gear*—(1) *King and Spanish mackerel*. Subject to the prohibitions on gear/methods specified in § 622.9, the following are the only fishing gears that may be used in the Gulf, Mid-Atlantic, and South Atlantic EEZ in directed fisheries for king and Spanish mackerel:

(i) *King mackerel, Atlantic migratory group*—(A) North of 34°37.3' N. lat., the latitude of Cape Lookout Light, NC—all gear except drift gillnet and long gillnet.

(B) South of 34°37.3' N. lat.—automatic reel, bandit gear, handline, and rod and reel.

(ii) *King mackerel, Gulf migratory group*—hook-and-line gear and, in the southern zone only, run-around gillnet. (See § 622.369(a)(1)(iii) for a description of the southern zone.)

(iii) *Spanish mackerel, Atlantic migratory group*—automatic reel, bandit gear, handline, rod and reel, cast net, run-around gillnet, and stab net.

(iv) *Spanish mackerel, Gulf migratory group*—all gear except drift gillnet, long gillnet, and purse seine.

(2) *Cobia, Gulf migratory group*. Subject to the prohibitions on gear/methods specified in § 622.9, the following are the only fishing gears that may be used in the Gulf EEZ, and in the South Atlantic EEZ south of a line extending due east from the Florida/Georgia border for cobia—all gear except drift gillnet and long gillnet.

(b) *Unauthorized gear*. Gear types other than those specified in paragraph (a) of this section are unauthorized gear and the following possession limitations apply:

(1) *Long gillnets*. A vessel with a long gillnet on board in, or that has fished on a trip in, the Gulf, Mid-Atlantic, or South Atlantic EEZ may not have on board on that trip a coastal migratory pelagic fish.

(2) *Drift gillnets*. A vessel with a drift gillnet on board in, or that has fished on a trip in, the Gulf EEZ may not have on board on that trip a coastal migratory pelagic fish.

(3) *Other unauthorized gear*. Except as specified in paragraph (b)(4) of this section, a person aboard a vessel with unauthorized gear other than a drift gillnet in the Gulf EEZ or a long gillnet on board in, or that has fished in, the EEZ where such gear is not authorized in paragraph (a) of this section, is subject to the bag limits for king and Spanish mackerel specified in § 622.382(a)(1)(ii) and (iv), respectively, and to the limit on cobia specified in § 622.383(b).

(4) *Exception for king mackerel in the Gulf EEZ*. The provisions of this paragraph (b)(4) apply to king mackerel taken in the Gulf EEZ and to such king mackerel possessed in the Gulf. Paragraph (b)(3) of this section notwithstanding, a person aboard a vessel that has a valid commercial permit for king mackerel is not subject to the bag limit for king mackerel when the vessel has on board on a trip unauthorized gear other than a drift gillnet in the Gulf EEZ, a long gillnet, or a run-around gillnet in an area other than the southern zone. Thus, the following applies to a vessel that has a commercial permit for king mackerel:

(i) Such vessel may not use unauthorized gear in a directed fishery for king mackerel in the Gulf EEZ.

(ii) If such a vessel has a drift gillnet or a long gillnet on board or a run-around gillnet in an area other than the southern zone, no king mackerel may be possessed.

(iii) If such a vessel has unauthorized gear on board other than a drift gillnet in the Gulf EEZ, a long gillnet, or a run-around gillnet in an area other than the southern zone, the possession

§ 622.376

of king mackerel taken incidentally is restricted only by the closure provisions of § 622.384(e) and the trip limits specified in § 622.385(a). See also § 622.379 regarding the purse seine catch allowances of king mackerel.

[78 FR 22952, Apr. 17, 2013, as amended at 80 FR 4221, Jan. 27, 2015; 82 FR 17396, Apr. 11, 2017; 84 FR 4736, Feb. 19, 2019]

§ 622.376 Gear identification.

(a) *Spanish mackerel gillnet buoys.* On board a vessel with a valid Spanish mackerel permit that is fishing for Spanish mackerel in, or that possesses Spanish mackerel in or from, the South Atlantic EEZ off Florida north of 25°20.4' N. lat., which is a line directly east from the Miami-Dade/Monroe County, FL, boundary, the float line of each gillnet possessed, including any net in use, must have a maximum of nine distinctive floats, *i.e.*, different from the usual net buoys, spaced uniformly at a distance of 100 yd (91.4 m) or less. Each such distinctive float must display the official number of the vessel.

(b) [Reserved]

§ 622.377 Gillnet restrictions.

(a) *Gillnets for king mackerel.* The minimum allowable mesh size for a gillnet used to fish in the Gulf, Mid-Atlantic, or South Atlantic EEZ for king mackerel is 4.75 inches (12.1 cm), stretched mesh. A vessel in such EEZ, or having fished on a trip in such EEZ, with a gillnet on board that has a mesh size less than 4.75 (12.1 cm) inches, stretched mesh, may not possess on that trip an incidental catch of king mackerel that exceeds 10 percent, by number, of the total lawfully possessed Spanish mackerel on board.

(b) *Gillnets for Spanish mackerel.* (1) The minimum allowable mesh size for a gillnet used to fish for Spanish mackerel in the Gulf, Mid-Atlantic, or South Atlantic EEZ is 3.5 inches (8.9 cm), stretched mesh.

(i) A vessel in the Gulf EEZ, or having fished on a trip in the Gulf EEZ, with a gillnet on board that has a mesh size less than 3.5 inches (8.9 cm), stretched mesh, may not possess on that trip any Spanish mackerel.

(ii) A vessel in the South Atlantic or Mid-Atlantic EEZ, or having fished on

50 CFR Ch. VI (10–1–21 Edition)

a trip in such EEZ, with a gillnet on board that has a mesh size less than 3.5 inches (8.9 cm), stretched mesh, may possess or land on the day of that trip no more than 500 lb (227 kg) of incidentally caught Spanish mackerel.

(2) On board a vessel with a valid Spanish mackerel permit that is fishing for Spanish mackerel in, or that possesses Spanish mackerel in or from, the South Atlantic EEZ off Florida north of 25°20.4' N. lat., which is a line directly east from the Miami-Dade/Monroe County, FL, boundary—

(i) No person may fish with, set, place in the water, or have on board a gillnet with a float line longer than 800 yd (732 m).

(ii) No person may fish with, set, or place in the water more than one gillnet at any one time.

(iii) No more than two gillnets, including any net in use, may be possessed at any one time, except for a vessel with a valid commercial vessel permit for Spanish mackerel engaged in a transfer as specified in paragraph (b)(2)(vi) of this section. If two gillnets, including any net in use, are possessed at any one time, they must have stretched mesh sizes (as allowed under the regulations) that differ by at least .25 inch (.64 cm), except for a vessel with a valid commercial vessel permit for Spanish mackerel engaged in a transfer as specified in paragraph (b)(2)(vi) of this section, in which case the vessel may possess two gillnets of the same mesh size provided that one of the nets is transferred to that vessel.

(iv) No person may soak a gillnet for more than 1 hour. The soak period begins when the first mesh is placed in the water and ends either when the first mesh is retrieved back on board the vessel or the gathering of the gillnet is begun to facilitate retrieval on board the vessel, whichever occurs first; providing that, once the first mesh is retrieved or the gathering is begun, the retrieval is continuous until the gillnet is completely removed from the water.

(v) The float line of each gillnet possessed, including any net in use, must have the distinctive floats specified in § 622.376(a).

(vi) A portion of a gillnet may be transferred at sea only in the EEZ and

only from a vessel with a valid commercial vessel permit for Spanish mackerel that has exceeded a trip limit specified in § 622.385 (b) to another vessel with a valid commercial vessel permit for Spanish mackerel that has not yet reached the trip limit (the receiving vessel). Only one such transfer is allowed per vessel per day. In addition, to complete a legal transfer at sea, all of the following must apply:

(A) All fish exceeding the applicable commercial trip limit may not be removed from the gillnet until the transfer is complete (*i.e.*, the gillnet is on-board the receiving vessel). The fish transferred to the receiving vessel may not exceed the applicable commercial trip limit.

(B) The receiving vessel may possess no more than three gillnets on board after the transfer is complete.

(C) Prior to cutting the gillnet and prior to any transfer of Spanish mackerel from one vessel to another, the owner or operator of both vessels must contact NMFS Office for Law Enforcement, St Petersburg, Florida, phone: 1-727-824-5344.

[78 FR 22952, Apr. 17, 2013, as amended at 79 FR 68805, Nov. 19, 2014; 84 FR 47904, Sept. 11, 2019]

§ 622.378 Seasonal closures of the Gulf migratory group king mackerel gillnet fishery.

(a) *Seasonal closures of the gillnet component for Gulf migratory group king mackerel.* The gillnet component for Gulf migratory group king mackerel in or from the southern zone is closed each fishing year from July 1 until 6 a.m. on the day after the Martin Luther King Jr. Federal holiday. The gillnet component is open on the first weekend following the Martin Luther King Jr. holiday, provided a notification of closure has not been filed under § 622.8(b). The gillnet component is closed all subsequent weekends and observed Federal holidays. Weekend closures are effective from 6 a.m. Saturday to 6 a.m. Monday. Holiday closures are effective from 6 a.m. on the observed Federal holiday to 6 a.m. the following day. All times are eastern standard time. During these closures, a person aboard a vessel using or possessing a gillnet with a stretched-mesh

size of 4.75 inches (12.1 cm) or larger in the southern zone may not fish for or possess Gulf migratory group king mackerel. (See § 622.369(a)(1)(iii) for a description of the southern zone.)

(b) [Reserved]

[80 FR 4221, Jan. 27, 2015, as amended at 82 FR 17396, Apr. 11, 2017]

§ 622.379 Incidental catch allowances.

(a) *Purse seine incidental catch allowance.* A vessel in the EEZ, or having fished in the EEZ, with a purse seine on board will not be considered as fishing, or having fished, for king or Spanish mackerel in violation of a prohibition of purse seines under § 622.375(b), in violation of the possession limits under § 622.375(b)(3), or, in the case of king mackerel from the Atlantic migratory group, in violation of a closure effected in accordance with § 622.8(b), provided the king mackerel on board does not exceed 1 percent, or the Spanish mackerel on board does not exceed 10 percent, of all fish on board the vessel. Incidental catch will be calculated by number and/or weight of fish. Neither calculation may exceed the allowable percentage. Incidentally caught king or Spanish mackerel are counted toward the quotas provided for under § 622.384 and are subject to the prohibition of sale under § 622.384(e)(2).

(b) *Shark gillnet incidental catch allowance.* A vessel in the Atlantic EEZ with a valid Federal Atlantic commercial shark directed permit and a valid Federal king mackerel commercial permit that is engaged in directed shark fishing with gillnets that are not an authorized gear for Atlantic migratory group king mackerel (See § 622.375(a)(1)(i)), may retain and sell a limited number of king mackerel. Any king mackerel retained must be sold to a dealer with a valid Federal Gulf and South Atlantic dealer permit.

(1) *Northern zone.* No more than three king mackerel per crew member may be retained or sold per trip (See § 622.385(a)(1)(i) for the commercial trip limit for directed king mackerel trips using authorized gillnets (in the Atlantic EEZ north of 34°37.3' N. lat., the latitude of Cape Lookout, NC)).

§ 622.380

(2) *Southern zone*. No more than two king mackerel per crew member may be retained or sold per trip.

[82 FR 17397, Apr. 11, 2017, as amended at 82 FR 35660, Aug. 1, 2017]

§ 622.380 Size limits.

All size limits in this section are minimum size limits unless specified otherwise. A fish not in compliance with its size limit, as specified in this section, in or from the Gulf, South Atlantic, or Mid-Atlantic EEZ, as appropriate, may not be possessed, sold, or purchased. A fish not in compliance with its size limit must be released immediately with a minimum of harm. The operator of a vessel that fishes in the EEZ is responsible for ensuring that fish on board are in compliance with the size limits specified in this section.

(a) *Cobia*—(1) *Gulf migratory group*. (i) *Gulf zone*—36 inches (91.4 cm), fork length.

(ii) *Florida east coast zone*—33 inches (83.8 cm), fork length.

(2) [Reserved]

(b) King mackerel in the Gulf, South Atlantic, or Mid-Atlantic—24 inches (61.0 cm), fork length, except that a vessel fishing under a quota for king mackerel specified in § 622.384(b) may possess undersized king mackerel in quantities not exceeding 5 percent, by weight, of the king mackerel on board.

(c) Spanish mackerel in the Gulf, South Atlantic, or Mid-Atlantic—12 inches (30.5 cm), fork length, except that a vessel fishing under a quota for Spanish mackerel specified in § 622.384(c) may possess undersized Spanish mackerel in quantities not exceeding 5 percent, by weight, of the Spanish mackerel on board.

[78 FR 22952, Apr. 17, 2013, as amended at 82 FR 36347, Aug. 4, 2017; 84 FR 4736, Feb. 19, 2019; 85 FR 10331, Feb. 24, 2020]

§ 622.381 Landing fish intact.

(a) Cobia in or from the Gulf and in the South Atlantic EEZ south of a line extending due east from the Florida/Georgia border, and king mackerel and Spanish mackerel in or from the Gulf, Mid-Atlantic, or South Atlantic EEZ, except as specified for king mackerel and Spanish mackerel in paragraph (b)

50 CFR Ch. VI (10–1–21 Edition)

of this section, must be maintained with head and fins intact. Such fish may be eviscerated, gilled, and scaled, but must otherwise be maintained in a whole condition. The operator of a vessel that fishes in the EEZ is responsible for ensuring that fish on that vessel in the EEZ are maintained intact and, if taken from the EEZ, are maintained intact through offloading ashore, as specified in this section.

(b) Cut-off (damaged) king or Spanish mackerel that comply with the minimum size limits in § 622.380(b) and (c), respectively, and the trip limits in § 622.385(a) and (b), respectively, may be possessed in the Gulf, Mid-Atlantic, or South Atlantic EEZ on, and offloaded ashore from, a vessel that is operating under the respective trip limits. Such cut-off fish also may be sold. A maximum of five additional cut-off (damaged) king mackerel, not subject to the size limits or trip limits, may be possessed or offloaded ashore but may not be sold or purchased and are not counted against the trip limit.

[78 FR 22952, Apr. 17, 2013, as amended at 84 FR 4736, Feb. 19, 2019]

§ 622.382 Bag and possession limits.

Section 622.11(a) provides the general applicability for bag and possession limits.

(a) *King mackerel and Spanish mackerel*—(1) *Bag limits*. (i) Atlantic migratory group king mackerel—

(A) Mid-Atlantic and South Atlantic, other than off Florida—3.

(B) Off Florida—2, which is the daily bag limit specified by Florida for its waters (Rule 68B-12.004(1), Florida Administrative Code, in effect as of July 15, 1996 (incorporated by reference, see § 622.413). If Florida changes its limit, the bag limit specified in this paragraph (a)(1)(i)(B) will be changed to conform to Florida's limit, provided such limit does not exceed 5.

(ii) Gulf migratory group king mackerel—3.

(iii) Atlantic migratory group Spanish mackerel—15.

(iv) Gulf migratory group Spanish mackerel—15.

(v) Coastal migratory pelagic fish within certain South Atlantic SMZs—§ 622.11(a) notwithstanding, all harvest

and possession of coastal migratory pelagic fish within the South Atlantic SMZs specified in § 622.182(a)(1)(i) through (xi), (a)(1)(xx), and (a)(1)(xxii) through (xxxix) is limited to the bag limits specified in paragraphs (a)(1)(i) through (iv) of this section.

(2) *Possession limits*—(i) *Possession limits for vessels with a valid Federal charter vessel/headboat permit for Atlantic coastal migratory pelagic fish.* A person who is on a trip that spans more than 24 hours may possess no more than two daily bag limits, provided such trip is on a vessel that is operating as a charter vessel or headboat, the vessel has two licensed operators aboard, and each passenger is issued and has in possession a receipt issued on behalf of the vessel that verifies the length of the trip.

(ii) *Possession limits for vessels with a valid Federal charter vessel/headboat permit for Gulf coastal migratory pelagic fish.* A person who is on a trip that spans more than 30 hours may possess, at any time during the trip, no more than two daily bag limits of Gulf king and Spanish mackerel, provided such trip is on a vessel that is operating as a charter vessel or headboat, the vessel has two licensed operators aboard, each passenger is issued and has in possession a receipt issued on behalf of the vessel that verifies the date and time of departure and length of the trip, and the entire trip occurs on days when the harvest and possession of the applicable coastal migratory pelagic species are allowed.

(b) [Reserved]

[78 FR 22952, Apr. 17, 2013, as amended at 82 FR 17397, Apr. 11, 2017; 82 FR 36347, Aug. 4, 2017; 84 FR 4736, Feb. 19, 2019; 86 FR 11155, Feb. 24, 2021]

§ 622.383 Limited harvest species.

(a) *General.* (1) The harvest and possession restrictions of this section apply without regard to whether the species is harvested by a vessel operating under a commercial vessel permit. The operator of a vessel that fishes in the EEZ is responsible for the limit applicable to that vessel.

(2) A person who fishes in the EEZ may not combine a harvest limitation specified in this section with a harvest limitation applicable to state waters. A

species subject to a harvest limitation specified in this section taken in the EEZ may not be transferred at sea, regardless of where such transfer takes place, and such species may not be transferred in the EEZ.

(b) *Gulf migratory group cobia.* No person may possess more than two Gulf migratory group cobia per day in or from the EEZ, regardless of the number of trips or duration of a trip.

[78 FR 22952, Apr. 17, 2013, as amended at 82 FR 36347, Aug. 4, 2017]

§ 622.384 Quotas.

See § 622.8 for general provisions regarding quota applicability and closure and reopening procedures. See § 622.369 for the descriptions of the zones. This section provides quotas and specific quota closure restrictions for coastal migratory pelagic fish. All weights are in round and eviscerated weight combined, unless specified otherwise.

(a) King and Spanish mackerel quotas apply to persons who fish under commercial vessel permits for king or Spanish mackerel, as required under § 622.370(a)(1) or (3). A fish is counted against the quota for the area where it is caught, not where it is landed.

(b) *King mackerel*—(1) *Gulf migratory group.* The Gulf migratory group is divided into zones. The description of the zones is specified in § 622.369(a). Quotas for the western, northern, and southern zones are as follows:

(i) *Western zone.* The quota is 1,180,000 lb (535,239 kg) for the 2016–2017 fishing year, 1,136,000 lb (515,281 kg) for the 2017–2018 fishing year, 1,116,000 lb (506,209 kg) for the 2018–2019 fishing year, and 1,096,000 lb (497,137 kg) for the 2019–2020 fishing year and subsequent fishing years.

(ii) *Northern zone.* The quota is 531,000 lb (240,858 kg) for the 2016–2017 fishing year, 511,200 lb (231,876 kg) for the 2017–2018 fishing year, 502,200 lb (227,794 kg) for the 2018–2019 fishing year, and 493,200 lb (223,712 kg) for the 2019–2020 fishing year and subsequent fishing years.

(iii) *Southern zone.* (A) The hook-and-line quota is 619,500 lb (281,000 kg) for the 2016–2017 fishing year, 596,400 lb (270,522 kg) for the 2017–2018 fishing year, 585,900 lb (265,760 kg) for the 2018–2019 fishing year, and 575,400 lb (260,997

kg) for the 2019–2020 fishing year and subsequent fishing years.

(B) The run-around gillnet quota is 619,500 lb (281,000 kg) for the 2016–2017 fishing year, 596,400 lb (270,522 kg) for the 2017–2018 fishing year, 585,900 lb (265,760 kg) for the 2018–2019 fishing year, and 575,400 lb (260,997 kg) for the 2019–2020 fishing year and subsequent fishing years.

(2) *Atlantic migratory group.* The Atlantic migratory group is divided into northern and southern zones. The descriptions of the zones are specified in § 622.369(a). Quotas for the northern and southern zones for the 2016–2017 fishing year and subsequent years are as follows:

(i) *Northern zone.* The quota is 1,497,600 lb (679,300 kg) for the 2016–2017 fishing year, 1,359,360 lb (616,595 kg) for the 2017–2018 fishing year, 1,198,080 lb (543,440 kg) for the 2018–2019 fishing year and 1,082,880 lb (491,186 kg) for the 2019–2020 fishing year and subsequent fishing years. No more than 0.40 million lb (0.18 million kg) may be harvested by purse seine gear.

(ii) *Southern zone.* The annual quota is 5,002,400 lb (2,269,050 kg) for the 2016–2017 fishing year, 4,540,640 lb (2,059,600 kg) for the 2017–2018 fishing year, 4,001,920 lb (1,815,240 kg) for the 2018–2019 fishing year and 3,617,120 lb (1,640,698 kg) for the 2019–2020 fishing year and subsequent fishing years.

(A) For the period March 1 through September 30, each year, the seasonal quota is 3,001,440 lb (1,361,430 kg) for the 2016–2017 fishing year, 2,724,384 lb (1,235,760 kg) for the 2017–2018 fishing year, 2,401,152 lb (1,089,144 kg) for the 2018–2019 fishing year and 2,170,272 lb (984,419 kg) for the 2019–2020 fishing year and subsequent fishing years.

(B) For the period October 1 through the end of February each year, the seasonal quota is 2,000,960 lb (907,620 kg) for the 2016–2017 fishing year, 1,816,256 lb (823,840 kg) for the 2017–2018 fishing year, 1,600,768 lb (726,096 kg) for the 2018–2019 fishing year and 1,446,848 lb (656,279 kg) for the 2019–2020 fishing year and subsequent fishing years.

(C) Any unused portion of the quota specified in paragraph (b)(2)(ii)(A) of this section will be added to the quota specified in paragraph (b)(2)(ii)(B) of this section. Any unused portion of the

quota specified in paragraph (b)(2)(ii)(B) of this section, including any addition of quota specified in paragraph (b)(2)(ii)(A) of this section that was unused, will become void at the end of the fishing year and will not be added to any subsequent quota.

(iii) *Quota transfers.* North Carolina or Florida, in consultation with the other states in their respective zones, may request approval from the RA to transfer part or all of their respective zone's annual commercial quota to the other zone. Requests for transfer of commercial quota for king mackerel must be made by a letter signed by the principal state official with marine fishery management responsibility and expertise of the state requesting the transfer, or his/her previously named designee. The letter must certify that all pertinent state requirements have been met and identify the states involved and the amount of quota to be transferred. For the purposes of quota closures as described in § 622.8, the receiving zone's quota will be the original quota plus any transferred amount, for that fishing season only. Landings associated with any transferred quota will be included in the total landings for the Atlantic migratory group, which will be evaluated relative to the total ACL.

(A) Within 10 working days following the receipt of the letter from the state requesting the transfer, the RA shall notify the appropriate state officials of the disposition of the request. In evaluating requests to transfer a quota, the RA shall consider whether:

(1) The transfer would allow the overall annual quota to be fully harvested; and

(2) The transfer is consistent with the objectives of the FMP and the Magnuson-Stevens Act.

(B) The transfer of quota will be valid only for the fishing year for which the request was made and does not permanently alter the quotas specified in paragraphs (b)(2)(i) and (ii) of this section.

(3) *Transit provisions applicable in areas closed due to a quota closure for king mackerel.* A vessel with a valid commercial vessel permit for king mackerel that has onboard king mackerel harvested in an open area of the

EEZ may transit through areas closed to the harvest of king mackerel due to a quota closure, if fishing gear is appropriately stowed. For the purpose of paragraph (b) of this section, transit means direct and non-stop continuous course through the area. To be appropriately stowed fishing gear means—

(i) A gillnet must be left on the drum. Any additional gillnets not attached to the drum must be stowed below deck.

(ii) A rod and reel must be removed from the rod holder and stowed securely on or below deck. Terminal gear (*i.e.*, hook, leader, sinker, flasher, or bait) must be disconnected and stowed separately from the rod and reel. Sinkers must be disconnected from the down rigger and stowed separately.

(c) *Spanish mackerel*—(1) *Gulf migratory group*. [Reserved]

(2) *Atlantic migratory group*. The Atlantic migratory group is divided into northern and southern zones. The descriptions of the zones are specified in § 622.369(b). The quota for the Atlantic migratory group of Spanish mackerel is 3.33 million lb (1.51 million kg). Quotas for the northern and southern zones are as follows:

(i) *Northern zone*—662,670 lb (300,582 kg).

(ii) *Southern zone*—2,667,330 lb (1,209,881 kg).

(iii) *Quota transfers*. North Carolina or Florida, in consultation with the other states in their respective zones, may request approval from the RA to transfer part or all of their respective zone's annual commercial quota to the other zone. Requests for transfer of commercial quota for Spanish mackerel must be made by a letter signed by the principal state official with marine fishery management responsibility and expertise, or his/her previously named designee, for each state involved. The letter must certify that all pertinent state requirements have been met and identify the states involved and the amount of quota to be transferred. For the purposes of quota closures as described in § 622.8, the receiving zone's quota will be the original quota plus any transferred amount, for that fishing season only. Landings associated with any transferred quota will be included in the total landings for the At-

lantic migratory group, which will be evaluated relative to the total ACL.

(A) Within 10 working days following the receipt of the letter from the states involved, the RA shall notify the appropriate state officials of the disposition of the request. In evaluating requests to transfer a quota, the RA shall consider whether:

(1) The transfer would allow the overall annual quota to be fully harvested; and

(2) The transfer is consistent with the objectives of the FMP and the Magnuson-Stevens Act.

(B) The transfer of quota will be valid only for the fishing year for which the request was made and does not permanently alter any zone's quota specified in paragraph (c)(2)(i) or (c)(2)(ii) of this section.

(d) *Cobia*—(1) *Gulf migratory group*—(i) *Gulf zone*. For the 2014 fishing year, the stock quota for the Gulf migratory group of cobia in the Gulf zone is 1,420,000 lb (644,101 kg). For the 2015 fishing year, the stock quota is 1,450,000 lb (657,709 kg). For the 2016 fishing year and subsequent fishing years, the stock quota is 1,500,000 lb (680,389 kg).

(ii) *Florida east coast zone*. The following quota applies to persons who fish for cobia and sell their catch. The quota for the Gulf migratory group of cobia in the Florida east coast zone is 70,000 lb (31,751 kg).

(2) [Reserved]

(e) *Restrictions applicable after a quota closure*. (1) If the recreational sector for the applicable species, migratory group, zone, or gear is open, the bag and possession limits for king and Spanish mackerel specified in § 622.382(a) apply to all harvest or possession for the closed species, migratory group, zone, or gear in or from the EEZ. If the recreational sector for the applicable species, migratory group, zone, or gear is closed, all applicable harvest or possession in or from the EEZ is prohibited.

(2) The sale or purchase of king mackerel, Spanish mackerel, or cobia of the closed species, migratory group, zone, or gear type is prohibited, including any king or Spanish mackerel taken under the bag and possession limits specified in § 622.382(a), or cobia

§ 622.385

taken under the limited-harvest species possession limit specified in § 622.383(b). The prohibition on the sale or purchase during a closure for coastal migratory pelagic fish does not apply to coastal migratory pelagic fish that were harvested, landed ashore, and sold prior to the effective date of the closure and were held in cold storage by a dealer or processor.

[78 FR 22952, Apr. 17, 2013, as amended at 79 FR 69060, Nov. 20, 2014; 80 FR 4221, Jan. 27, 2015; 82 FR 17397, Apr. 11, 2017; 82 FR 35660, Aug. 1, 2017; 84 FR 4736, Feb. 19, 2019]

§ 622.385 Commercial trip limits.

Commercial trip limits are limits on the amount of the applicable species that may be possessed on board or landed, purchased, or sold from a vessel per day. A person who fishes in the EEZ may not combine a trip limit specified in this section with any trip or possession limit applicable to state waters. Except for Atlantic migratory group Spanish mackerel harvested by gillnet, as specified in § 622.377(b)(2)(vi), a species subject to a trip limit specified in this section taken in the EEZ may not be transferred at sea, regardless of where such transfer takes place, and such species may not be transferred in the EEZ. Commercial trip limits apply as follows (all weights are round or eviscerated weights unless specified otherwise):

(a) *King mackerel*—(1) *Atlantic migratory group*. The following trip limits apply to vessels for which commercial permits for king mackerel have been issued, as required under § 622.370(a)(1):

(i) North of 29°25' N. lat., which is a line directly east from the Flagler/Volusia County, FL, boundary, king mackerel in or from the EEZ may not be possessed on board or landed from a vessel in a day in amounts exceeding 3,500 lb (1,588 kg).

(ii) In the area between 29°25' N lat., which is a line directly east from the Flagler/Volusia County, FL, boundary, and 28°47'48'' N lat., which is a line directly east from the Volusia/Brevard County, FL, boundary, king mackerel in or from the EEZ may not be possessed on board or landed from a vessel in a day in amounts not to exceed:

(A) From March 1 through March 31—75 fish.

50 CFR Ch. VI (10–1–21 Edition)

(B) From April 1 through September 30—3,500 lb (1,588 kg).

(C) From October 1 through the end of February—100 fish.

(iii) In the area between 28°47'48'' N lat., which is a line directly east from the Volusia/Brevard County, FL, boundary, and 25°20'24'' N lat., which is a line directly east from the Miami-Dade/Monroe County, FL, boundary, king mackerel in or from the EEZ may not be possessed on board or landed from a vessel in a day in amounts not to exceed:

(A) From March 1 through March 31—75 fish.

(B) From April 1 through September 30—75 fish, unless NMFS determines that 75 percent or more of the quota specified in § 622.384(b)(2)(ii)(A) has been landed, then, 50 fish.

(C) From October 1 through the end of February—100 fish.

(2) *Gulf migratory group*. Commercial trip limits are established in the southern, northern, and western zones as follows. (See § 622.369(a) for descriptions of the southern, northern, and western zones.)

(i) *Southern zone*—(A) *Gillnet gear*. (1) King mackerel in or from the EEZ may be possessed on board or landed from a vessel for which a commercial vessel permit for king mackerel and a king mackerel gillnet permit have been issued, as required under § 622.370(a)(2), in amounts not exceeding 45,000 lb (20,411 kg) per day.

(2) King mackerel in or from the EEZ may be possessed on board or landed from a vessel that uses or has on board a run-around gillnet on a trip only when such vessel has on board a commercial vessel permit for king mackerel and a king mackerel gillnet permit.

(3) King mackerel from the southern zone landed by a vessel for which a commercial vessel permit for king mackerel and a king mackerel gillnet permit have been issued will be counted against the run-around gillnet quota specified in § 622.384(b)(1)(iii)(B).

(4) King mackerel in or from the EEZ harvested with gear other than run-around gillnet may not be retained on board a vessel for which a commercial vessel permit for king mackerel and a

king mackerel gillnet permit have been issued.

(B) *Hook-and-line gear.* King mackerel in or from the EEZ may be possessed on board or landed from a vessel with a commercial permit for king mackerel, as required by § 622.370(a)(1), and operating under the hook-and-line gear quotas in § 622.384(b)(1)(iii)(A) in amounts not exceeding 1,250 lb (567 kg) per day.

(ii) *Northern zone.* King mackerel in or from the EEZ may be possessed on board or landed from a vessel for which a commercial permit for king mackerel has been issued, as required under § 622.370(a)(1), in amounts not exceeding 1,250 lb (567 kg) per day.

(iii) *Western zone.* King mackerel in or from the EEZ may be possessed on board or landed from a vessel for which a commercial permit for king mackerel has been issued, as required under § 622.370(a)(1), in amounts not exceeding 3,000 lb (1,361 kg) per day.

(b) *Spanish mackerel*—(1) *Atlantic migratory group.* The following trip limits apply to vessels for which commercial permits for Spanish mackerel have been issued, as required under § 622.370(a)(3).

(i) *Northern zone.* Spanish mackerel in or from the EEZ may not be possessed on board or landed in a day from a vessel for which a permit for Spanish mackerel has been issued, as required under § 622.370(a)(3), in amounts exceeding 3,500 lb (1,588 kg).

(ii) *Southern zone.* Spanish mackerel in or from the EEZ may not be possessed on board or landed in a day from a vessel for which a permit for Spanish mackerel has been issued, as required under § 622.370(a)(3)—

(A) From March 1 until 75 percent of the adjusted quota for the southern zone has been reached or is projected to be reached, in amounts exceeding 3,500 lb (1,588 kg).

(B) After 75 percent of the adjusted quota for the southern zone has been reached or is projected to be reached, in amounts exceeding 1,500 lb (680 kg).

(C) After 100 percent of the adjusted quota for the southern zone has been reached or is projected to be reached, and until the end of the fishing year or the southern zone's quota has been reached or is projected to be reached,

in amounts exceeding 500 lb (227 kg). See § 622.384(e) for limitations regarding Atlantic migratory group Spanish mackerel after the southern zone's quota is reached.

(2) For the purpose of paragraph (b)(1)(ii) of this section, the adjusted quota for the southern zone is 2,417,330 lb (1,096,482 kg). The adjusted quota for the southern zone is the quota for the Atlantic migratory group Spanish mackerel southern zone reduced by an amount calculated to allow continued harvest of Atlantic migratory group Spanish mackerel at the rate of 500 lb (227 kg) per vessel per day for the remainder of the fishing year after the adjusted quota is reached. Total commercial harvest in the southern zone is still subject to the southern zone quota and accountability measures. By filing a notification with the Office of the Federal Register, the Assistant Administrator will announce when 75 percent and 100 percent of the adjusted quota are reached or are projected to be reached.

(3) For the purpose of paragraph (b)(1)(ii) of this section, a day starts at 6 a.m., local time, and extends for 24 hours. If a vessel terminates a trip prior to 6 a.m., but retains Spanish mackerel on board after that time, the Spanish mackerel retained on board will not be considered in possession during the succeeding day, provided the vessel is not underway between 6 a.m. and the time such Spanish mackerel are unloaded, and provided such Spanish mackerel are unloaded prior to 6 p.m.

[78 FR 22952, Apr. 17, 2013, as amended at 79 FR 68805, Nov. 19, 2014; 79 FR 69090, Nov. 20, 2014; 80 FR 4222, Jan. 27, 2014; 80 FR 40937, July 14, 2015; 80 FR 78675, Dec. 17, 2015; 82 FR 36347, Aug. 4, 2017; 84 FR 4736, Feb. 19, 2019; 84 FR 47904, Sept. 11, 2019; 84 FR 51438, Sept. 30, 2019; 85 FR 55594, Sept. 9, 2020]

§ 622.386 Restrictions on sale/purchase.

The restrictions in this section are in addition to the restrictions on the sale or purchase related to commercial quota closures as specified in § 622.384(e)(2).

(a) *King and Spanish mackerel.* A king or Spanish mackerel harvested or possessed in the EEZ on board a vessel

that does not have a valid commercial vessel permit for king mackerel, as required under § 622.370(a)(1), or a valid commercial vessel permit for Spanish mackerel, as required under § 622.370(a)(3), or a king or Spanish mackerel harvested in the EEZ or possessed under the bag limits specified in § 622.382, may not be sold or purchased, except when harvested under the bag limits on board a vessel operating in the Gulf as a charter vessel or headboat and that vessel has both a valid Federal charter vessel/headboat permit for Gulf coastal migratory pelagic fish, as required under § 622.370(b)(1), and a valid commercial vessel permit for king mackerel or Spanish mackerel, as required under § 622.370(a)(1), as appropriate to the species harvested or possessed.

(b) Coastal migratory pelagic fish harvested in or from the EEZ or adjoining state waters by a vessel that has a valid Federal commercial vessel permit or a charter vessel/headboat permit may be sold or transferred only to a dealer who has a valid Gulf and South Atlantic dealer permit, as required under § 622.370(c)(1).

(c) Coastal migratory pelagic fish harvested in or from the Gulf or South Atlantic EEZ may be first received by a dealer who has a valid Gulf and South Atlantic dealer permit, as required under § 622.370(c)(1), only from a vessel that has a valid Federal commercial vessel permit, as required under § 622.370(a), or a charter vessel/headboat permit for coastal migratory pelagic fish, as required under § 622.370(b).

(d) *Cut-off (damaged) king or Spanish mackerel.* A person may not sell or purchase a cut-off (damaged) king or Spanish mackerel that does not comply with the minimum size limits specified in § 622.380(b) or (c), respectively, or that is in excess of the trip limits specified in § 622.385(a) or (b), respectively.

(e) *State-permitted tournaments.* King or Spanish mackerel harvested in a state-permitted tournament in the South Atlantic, Mid-Atlantic, or the Gulf may not be sold for profit but may be donated to a state dealer or Federal dealer. Dealers accepting these tournament-caught king or Spanish mackerel must be permitted and must com-

ply with all transfer and reporting requirements. Federally permitted dealers who accept donated king or Spanish mackerel under this section are exempt from the restrictions in paragraph (c) of this section, and can first receive these fish from non-federally permitted vessels. Dealers must donate the monetary value (sale price or cash equivalent of value received for the landings) from the sale of tournament-caught fish to a charitable organization, as determined by the state. The monetary value received from the sale of tournament-caught fish may not be used to pay for tournament expenses. In addition, the fish must be handled and iced according to the Hazard Analysis Critical Control Point (HACCP) standards, and dealers must report tournament caught king and Spanish mackerel as “tournament catch” and comply with all Federal and state reporting requirements.

[78 FR 22952, Apr. 17, 2013, as amended at 79 FR 34250, June 16, 2014; 79 FR 19496, Apr. 9, 2014; 80 FR 4222, Jan. 27, 2015; 82 FR 35660, Aug. 1, 2017]

§ 622.387 [Reserved]

§ 622.388 Annual catch limits (ACLs), annual catch targets (ACTs), and accountability measures (AMs).

All weights are in round and eviscerated weight combined, unless specified otherwise.

(a) *Gulf migratory group king mackerel—(1) Commercial sector.* (i) If commercial landings, as estimated by the SRD, reach or are projected to reach the applicable quota specified in § 622.384(b)(1), the AA will file a notification with the Office of the Federal Register to close the commercial sector for that zone, or gear type for the remainder of the fishing year.

(ii) The commercial ACL for the Gulf migratory group of king mackerel is 2.95 million lb (1.34 million kg) for the 2016–2017 fishing year, 2.84 million lb (1.29 million kg) for the 2017–2018 fishing year, 2.79 million lb (1.27 million kg) for the 2018–2019 fishing year, and 2.74 million lb (1.24 million kg) for the 2019–2020 and subsequent fishing years. This ACL is further divided into a commercial ACL for vessels fishing with hook-and-line and a commercial ACL

for vessels fishing with run-around gillnets. The hook-and-line ACL (which applies to the entire Gulf) is 2,330,500 lb (1,057,097 kg) for 2016–2017 fishing year, 2,243,600 lb (1,017,680 kg) for the 2017–2018 fishing year, 2,204,100 lb (999,763 kg) for the 2018–2019 fishing year, and 2,164,600 lb (981,846 kg) for the 2019–2020 and subsequent fishing years. The run-around gillnet ACL (which applies to the southern zone) is 619,500 lb (281,000 kg) for the 2016–2017 fishing year, 596,400 lb (270,522 kg) for the 2017–2018 fishing year, 585,900 lb (265,760 kg) for the 2018–2019 fishing year, and 575,400 lb (260,997 kg) for 2019–2020 and subsequent fishing years.

(iii) If commercial landings of Gulf migratory group king mackerel caught by run-around gillnet in the southern zone, as estimated by the SRD, exceed the commercial ACL, the AA will file a notification with the Office of the Federal Register to reduce the commercial ACL for king mackerel harvested by run-around gillnet in the southern zone in the following fishing year by the amount of the commercial ACL overage in the prior fishing year.

(2) *Recreational sector.* If recreational landings, as estimated by the SRD, reach or are projected to reach the recreational ACL of 6.26 million lb (2.84 million kg) for the 2016–2017 fishing year, 6.04 million lb (2.74 million kg) for the 2017–2018 fishing year, 5.92 million lb (2.69 million kg) for the 2018–2019 fishing year, and 5.81 million lb (2.64 million kg) for the 2019–2020 and subsequent fishing years, the AA will file a notification with the Office of the Federal Register to implement bag and possession limits for Gulf migratory group king mackerel of zero, unless the best scientific information available determines that a bag limit reduction is unnecessary.

(3) For purposes of tracking the ACL, recreational landings will be monitored based on the commercial fishing year.

(b) *Atlantic migratory group king mackerel*—(1) *Commercial sector.* (i) If commercial landings, as estimated by the SRD, reach or are projected to reach the applicable quota for the zone or season specified in § 622.384(b)(2), the AA will file a notification with the Office of the Federal Register to close the commercial sector for that zone for the

remainder of the applicable fishing season or fishing year.

(ii) In addition to the measures specified in paragraph (b)(1)(i) of this section, if the sum of the commercial and recreational landings, as estimated by the SRD, exceeds the stock ACL, as specified in paragraph (b)(3) of this section, and Atlantic migratory group king mackerel are overfished, based on the most recent status of U.S. Fisheries Report to Congress, the AA will file a notification with the Office of the Federal Register, at or near the beginning of the following fishing year to reduce the commercial quota for that zone for that following year by the amount of any commercial sector overage in the prior fishing year for that zone.

(iii) The commercial ACL for the Atlantic migratory group of king mackerel is 6.5 million lb (2.9 million kg) for the 2016–2017 fishing year, 5.9 million lb (2.7 million kg) for the 2017–2018 fishing year, 5.2 million lb (2.4 million kg) for the 2018–2019 fishing year, and 4.7 million lb (2.1 million kg) for the 2019–2020 fishing year and subsequent fishing years.

(2) *Recreational sector.* (i) If the recreational landings exceed the recreational ACL as specified in this paragraph and the sum of the commercial and recreational landings, as estimated by the SRD, exceeds the stock ACL, as specified in paragraph (b)(3) of this section, the AA will file a notification with the Office of the Federal Register, at or near the beginning of the following fishing year to reduce the bag limit by the amount necessary to ensure recreational landings may achieve the recreational ACT, but do not exceed the recreational ACL, in the following fishing year. The recreational ACT is 10.1 million lb (4.6 million kg) for the 2016–2017 fishing year, 9.2 million lb (4.2 million kg) for the 2017–2018 fishing year, 8.3 million lb (3.8 million kg) for the 2018–2019 fishing year, and 7.4 million lb (3.4 million kg) for the 2019–2020 fishing year and subsequent fishing years. The recreational ACL is 10.9 million lb (4.9 million kg) for the 2016–2017 fishing year, 9.9 million lb (4.5 million kg) for the 2017–2018 fishing year, 8.9 million lb (4.0 million kg) for

the 2018–2019 fishing year, and 8.0 million lb (3.6 million kg) for the 2019–2020 fishing year and subsequent fishing years.

(ii) In addition to the measures specified in paragraph (b)(2)(i) of this section, if the sum of the commercial and recreational landings, as estimated by the SRD, exceeds the stock ACL, as specified in paragraph (b)(3) of this section, and Atlantic migratory group king mackerel are overfished, based on the most recent status of U.S. Fisheries Report to Congress, the AA will file a notification with the Office of the Federal Register, at or near the beginning of the following fishing year to reduce the recreational ACL and ACT for that following year by the amount of any recreational sector overage in the prior fishing year.

(iii) For purposes of tracking the ACL, recreational landings will be evaluated based on the commercial fishing year, March through February. Recreational landings will be evaluated relative to the ACL based on a moving multi-year average of landings, as described in the FMP.

(3) The stock ACL for Atlantic migratory group king mackerel is 17.4 million lb (7.9 million kg) for the 2016–2017 fishing year, 15.8 million lb (7.2 million kg) for the 2017–2018 fishing year, 14.1 million lb (6.4 million kg) for the 2018–2019 fishing year, and 12.7 million lb (5.8 million kg) for the 2019–2020 fishing year and subsequent fishing years.

(c) *Gulf migratory group Spanish mackerel.* (1) If the sum of the commercial and recreational landings, as estimated by the SRD, reaches or is projected to reach the stock ACL, as specified in paragraph (c)(3) of this section, the AA will file a notification with the Office of the Federal Register to close the commercial and recreational sectors for the remainder of the fishing year. On and after the effective date of such a notification, all sale and purchase of Gulf migratory group Spanish mackerel is prohibited and the harvest and possession limit of this species in or from the Gulf EEZ is zero.

(2) For purposes of tracking the ACL, recreational landings will be evaluated based on the commercial fishing year, April through March.

(3) The stock ACL for Gulf migratory group Spanish mackerel is 12.7 million lb (5.76 million kg) for the 2014–2015 fishing year, 11.8 million lb (5.35 million kg) for the 2015–2016 fishing year, and 11.3 million lb (5.13 million kg) for the 2016–2017 fishing year and subsequent fishing years.

(d) *Atlantic migratory group Spanish mackerel*—(1) *Commercial sector.* (i) If commercial landings, as estimated by the SRD, reach or are projected to reach the applicable quota specified in § 622.384(c)(2), the AA will file a notification with the Office of the Federal Register to close the commercial sector for that zone for the remainder of the fishing year.

(ii) In addition to the measures specified in paragraph (d)(1)(i) of this section, if the sum of the commercial and recreational landings, as estimated by the SRD, exceeds the stock ACL, as specified in paragraph (d)(3) of this section, and Atlantic migratory group Spanish mackerel are overfished, based on the most recent status of U.S. Fisheries Report to Congress, the AA will file a notification with the Office of the Federal Register, at or near the beginning of the following fishing year to reduce the commercial quota for that zone for that following year by the amount of any commercial sector overage in the prior fishing year for that zone.

(iii) The commercial ACL for the Atlantic migratory group Spanish mackerel is 3.33 million lb (1.51 million kg).

(2) *Recreational sector.* (i) If the recreational landings exceed the recreational ACL as specified in this paragraph and the sum of the commercial and recreational landings, as estimated by the SRD, exceeds the stock ACL, as specified in paragraph (d)(3) of this section, the AA will file a notification with the Office of the Federal Register, at or near the beginning of the following fishing year to reduce the bag limit by the amount necessary to ensure recreational landings may achieve the recreational ACT, but do not exceed the recreational ACL, in the following fishing year. The recreational ACT for the Atlantic migratory group is 2.364 million lb (1.072 million kg). The recreational ACL for the Atlantic

migratory group is 2.727 million lb (1.236 million kg).

(ii) In addition to the measures specified in paragraph (d)(2)(i) of this section, if the sum of the commercial and recreational landings, as estimated by the SRD, exceeds the stock ACL, as specified in paragraph (d)(3) of this section, and Atlantic migratory group Spanish mackerel are overfished, based on the most recent status of U.S. Fisheries Report to Congress, the AA will file a notification with the Office of the Federal Register, at or near the beginning of the following fishing year to reduce the recreational ACT for that following year by the amount of any recreational sector overage in the prior fishing year.

(iii) For purposes of tracking the ACL and ACT, recreational landings will be evaluated based on the commercial fishing year, March through February. Recreational landings will be evaluated relative to the ACL based on a moving multi-year average of landings, as described in the FMP.

(3) The stock ACL for Atlantic migratory group Spanish mackerel is 6.063 million lb (2.76 million kg).

(e) *Gulf migratory group cobia*—(1) *Gulf zone*. (i) If the sum of all cobia landings, as estimated by the SRD, reaches or is projected to reach the stock quota (stock ACT), specified in § 622.384(d)(1), the AA will file a notification with the Office of the Federal Register to prohibit the harvest of Gulf migratory group cobia in the Gulf zone for the remainder of the fishing year. On and after the effective date of such a notification, all sale and purchase of Gulf migratory group cobia in the Gulf zone is prohibited and the possession limit of this species in or from the Gulf EEZ is zero.

(ii) The stock ACLs for Gulf migratory group cobia in the Gulf zone are 1,570,000 lb (712,140 kg) for 2014, 1,610,000 lb (730,284 kg) for 2015, and 1,660,000 lb (752,963 kg) for 2016 and subsequent fishing years.

(2) *Florida east coast zone*—(i) *The following ACLs and AMs apply to cobia that are sold*. (A) If the sum of cobia landings that are sold, as estimated by the SRD, reach or are projected to reach the quota specified in § 622.384(d)(1)(ii) (ACL), the AA will file a notification

with the Office of the Federal Register to prohibit the sale and purchase of cobia in or from the Florida east coast zone for the remainder of the fishing year.

(B) In addition to the measures specified in paragraph (e)(2)(i)(A) of this section, if the sum of cobia landings that are sold and not sold in or from the Florida east coast zone, as estimated by the SRD, exceeds the stock ACL for the Florida east coast zone, as specified in paragraph (e)(2)(iii) of this section, and Gulf migratory group cobia are overfished, based on the most recent status of U.S. Fisheries Report to Congress, the AA will file a notification with the Office of the Federal Register, at or near the beginning of the following fishing year to reduce the quota (ACL) for the Florida east coast zone cobia that are sold for that following year by the amount of any overage in the prior fishing year.

(ii) *The following ACLs and AMs apply to cobia that are not sold*. (A) If the sum of cobia landings that are sold and not sold, as estimated by the SRD, exceeds the stock ACL, as specified in paragraph (e)(2)(iii) of this section, the AA will file a notification with the Office of the Federal Register, at or near the beginning of the following fishing year to reduce the length of the following fishing season by the amount necessary to ensure landings may achieve the applicable ACT, but do not exceed the applicable ACL in the following fishing year. Further, during that following year, if necessary, the AA may file additional notification with the Office of the Federal Register to readjust the reduced fishing season to ensure harvest achieves the ACT but does not exceed the ACL. The applicable ACTs for the Florida east coast zone of cobia are 670,000 lb (303,907 kg) for 2014, 680,000 lb (308,443 kg) for 2015, and 710,000 lb (322,051 kg) for 2016 and subsequent fishing years. The applicable ACLs for the Florida east coast zone of cobia are 810,000 lb (367,410 kg) for 2014, 830,000 lb (376,482 kg) for 2015, and 860,000 lb (390,089 kg) for 2016 and subsequent fishing years.

(B) In addition to the measures specified in paragraph (e)(2)(ii)(A) of this section, if the sum of the cobia landings that are sold and not sold in or

§ 622.389

from the Florida east coast zone, as estimated by the SRD, exceeds the stock ACL, as specified in paragraph (e)(2)(iii) of this section, and Gulf migratory group cobia are overfished, based on the most recent status of U.S. Fisheries Report to Congress, the AA will file a notification with the Office of the Federal Register, at or near the beginning of the following fishing year to reduce the applicable ACL and applicable ACT for the Florida east coast zone for that following year by the amount of any ACL overage in the prior fishing year.

(C) Landings will be evaluated relative to the ACL based on a moving multi-year average of landings, as described in the FMP.

(iii) The stock ACLs for Florida east coast zone cobia are 880,000 lb (399,161 kg) for 2014, 900,000 lb (408,233 kg) for 2015, and 930,000 lb (421,841 kg) for 2016 and subsequent fishing years.

[78 FR 22952, Apr. 17, 2013, as amended at 79 FR 69060, Nov. 20, 2014; 80 FR 4222, Jan. 27, 2015; 80 FR 10007, Feb. 25, 2015; 80 FR 78675, Dec. 17, 2015; 82 FR 17399, Apr. 11, 2017; 82 FR 36347, Aug. 4, 2017; 84 FR 4737, Feb. 19, 2019]

§ 622.389 Adjustment of management measures.

In accordance with the framework procedures of the FMP for Coastal Migratory Pelagic Resources, the RA may establish or modify, and the applicable council is required to approve, the following items specified in paragraph (a) of this section for coastal migratory pelagic fish. (Note: The applicable council refers to the council whose jurisdiction applies to the management measures.)

(a) For a species or species group: Reporting and monitoring requirements, permitting requirements, bag and possession limits (including a bag limit of zero), size limits, vessel trip limits, closed seasons or areas and reopenings, acceptable biological catches (ABCs) and ABC control rules, annual catch limits (ACLs) and ACL control rules, accountability measures (AMs), annual catch targets (ACTs), quotas (including a quota of zero), MSY (or proxy), OY, management parameters such as overfished and overfishing definitions, gear restrictions (ranging from regulation to complete prohibition), gear mark-

50 CFR Ch. VI (10–1–21 Edition)

ings and identification, vessel markings and identification, rebuilding plans, and restrictions relative to conditions of harvested fish (maintaining fish in whole condition, use as bait).

(b) [Reserved]

[80 FR 4224, Jan. 27, 2015]

Subpart R—Spiny Lobster Fishery of the Gulf of Mexico and South Atlantic

§ 622.400 Permits and fees.

(a) *Applicability*—(1) *Licenses, certificates, and permits*—(i) *EEZ off Florida and spiny lobster landed in Florida*. For a person to sell, trade, or barter, or attempt to sell, trade, or barter, a spiny lobster harvested or possessed in the EEZ off Florida, or harvested in the EEZ other than off Florida and landed from a fishing vessel in Florida, or for a person to be exempt from the daily bag and possession limit specified in § 622.408(b)(1) for such spiny lobster, such person must have the licenses and certificates specified to be a “commercial harvester,” as defined in Rule 68B–24.002(4), Florida Administrative Code, in effect as of May 1, 2017 (incorporated by reference, see § 622.413).

(ii) *EEZ other than off Florida*. For a person to sell, trade, or barter, or attempt to sell, trade, or barter, a spiny lobster harvested in the EEZ other than off Florida or for a person to be exempt from the daily bag and possession limit specified in § 622.408(b)(1) for such spiny lobster, a Federal vessel permit must be issued to the harvesting vessel and must be on board. However, see paragraph (a)(1)(i) of this section for the licenses and certificates required for a person to possess or land spiny lobster harvested in the EEZ other than off Florida and subsequently possessed in the EEZ off Florida or landed from a fishing vessel in Florida.

(2) *Tail-separation permits*. For a person to possess aboard a fishing vessel a separated spiny lobster tail in or from the EEZ, a valid Federal tail-separation permit must be issued to the vessel and must be on board. Permitting prerequisites for the tail-separation permit are either a valid Federal vessel

permit for spiny lobster or a valid Florida Saltwater Products License with a valid Florida Restricted Species Endorsement and a valid Crawfish Endorsement.

(3) *Corporation/partnership-owned vessels.* For a vessel owned by a corporation or partnership to be eligible for a Federal vessel permit specified in paragraph (a)(1)(ii) of this section, the earned income qualification specified in paragraph (b)(2)(vi) of this section must be met by, and the statement required by that paragraph must be submitted by, an officer or shareholder of the corporation, a general partner of the partnership, or the vessel operator.

(4) *Operator-qualified permits.* A vessel permit issued upon the qualification of an operator is valid only when that person is the operator of the vessel.

(5) *Dealer permits and conditions—(i) Permits.* For a dealer to first receive Gulf or South Atlantic spiny lobster harvested in or from the EEZ, a Gulf and South Atlantic dealer permit must be issued to the dealer.

(ii) *State license and facility requirements.* To obtain a dealer permit, the applicant must have a valid state wholesaler's license in the state(s) where the dealer operates, if required by such state(s), and must have a physical facility at a fixed location in such state(s).

(b) *Applications for permits.* (1) An application for a Federal vessel and/or tail-separation permit must be submitted and signed by the owner (in the case of a corporation, a qualifying officer or shareholder; in the case of a partnership, a qualifying general partner) or operator of the vessel. The application must be submitted to the RA at least 30 days prior to the date on which the applicant desires to have the permit made effective.

(2) An applicant must provide the following information:

(i) A copy of the vessel's U.S. Coast Guard certificate of documentation or, if not documented, a copy of its state registration certificate.

(ii) The vessel's name and official number.

(iii) Name, mailing address including zip code, telephone number, social security number, and date of birth of the owner (if the owner is a corporation/

partnership, in lieu of the social security number, provide the employer identification number, if one has been assigned by the Internal Revenue Service, and, in lieu of the date of birth, provide the date the corporation/partnership was formed).

(iv) If the owner does not meet the earned income qualification specified in paragraph (b)(2)(vi) of this section and the operator does meet that qualification, the name, mailing address including zip code, telephone number, social security number, and date of birth of the operator.

(v) Information concerning vessel, gear used, fishing areas, and fisheries vessel is used in, as requested by the RA and included on the application form.

(vi) A sworn statement by the applicant for a vessel permit certifying that at least 10 percent of his or her earned income was derived from commercial fishing, that is, sale of the catch, during the calendar year preceding the application.

(vii) Documentation supporting the statement of income, if required under paragraph (b)(3) of this section.

(viii) If a tail-separation permit is desired, a sworn statement by the applicant certifying that his or her fishing activity—

(A) Is routinely conducted in the EEZ on trips of 48 hours or more; and

(B) Necessitates the separation of carapace and tail to maintain a quality product.

(ix) Any other information that may be necessary for the issuance or administration of the permit.

(3) The RA may require the applicant to provide documentation supporting the sworn statement under paragraph (b)(2)(vi) of this section before a permit is issued or to substantiate why such permit should not be revoked or otherwise sanctioned under paragraph (i) of this section. Such required documentation may include copies of appropriate forms and schedules from the applicant's income tax return. Copies of income tax forms and schedules are treated as confidential.

(c) *Change in application information.* The owner or operator of a vessel with a permit must notify the RA within 30

§ 622.401

days after any change in the application information specified in paragraph (b) of this section. The permit is void if any change in the information is not reported within 30 days.

(d) *Fees.* A fee is charged for each permit application submitted under paragraph (b) of this section. The amount of the fee is calculated in accordance with the procedures of the NOAA Finance Handbook for determining the administrative costs of each special product or service. The fee may not exceed such costs and is specified with each application form. The appropriate fee must accompany each application.

(e) *Issuance.* (1) The RA will issue a permit at any time to an applicant if the application is complete and the applicant meets the earned income requirement specified in paragraph (b)(2)(vi) of this section. An application is complete when all requested forms, information, and documentation have been received.

(2) Upon receipt of an incomplete application, the RA will notify the applicant of the deficiency. If the applicant fails to correct the deficiency within 30 days of the date of the RA's letter of notification, the application will be considered abandoned.

(f) *Duration.* A permit remains valid for the period specified on it unless the vessel is sold or the permit is revoked, suspended, or modified pursuant to subpart D of 15 CFR part 904.

(g) *Transfer.* A permit issued pursuant to this section is not transferable or assignable. A person purchasing a permitted vessel who desires to conduct activities for which a permit is required must apply for a permit in accordance with the provisions of paragraph (b) of this section. The application must be accompanied by a copy of a signed bill of sale.

(h) *Display.* A permit issued pursuant to this section must be carried on board the vessel, and such vessel must be identified as required by § 622.402. The operator of a vessel must present the permit for inspection upon the request of an authorized officer.

(i) *Sanctions and denials.* A permit issued pursuant to this section may be revoked, suspended, or modified, and a permit application may be denied, in accordance with the procedures gov-

50 CFR Ch. VI (10–1–21 Edition)

erning enforcement-related permit sanctions and denials found at subpart D of 15 CFR part 904.

(j) *Alteration.* A permit that is altered, erased, or mutilated is invalid.

(k) *Replacement.* A replacement permit may be issued. An application for a replacement permit will not be considered a new application. A fee, the amount of which is stated with the application form, must accompany each request for a replacement permit.

[78 FR 22952, Apr. 17, 2013, as amended at 79 FR 19497, Apr. 9, 2014; 84 FR 37151, July 31, 2019]

§ 622.401 Recordkeeping and reporting.

(a) *Dealers.* A dealer who first receives Gulf or South Atlantic spiny lobster must maintain records and submit information as specified in § 622.5(c).

(b) [Reserved]

[79 FR 19497, Apr. 9, 2014]

§ 622.402 Vessel and gear identification.

(a) *EEZ off Florida.* (1) An owner or operator of a vessel that is used to harvest spiny lobster by traps in the EEZ off Florida must comply with the vessel and gear identification requirements specified in Rule 68B–24.006(3), (4), and (5), Florida Administrative Code, in effect as of May 1, 2017 (incorporated by reference, see § 622.413).

(2) An owner or operator of a vessel that is used to harvest spiny lobster by diving in the EEZ off Florida must comply with the vessel identification requirements applicable to the harvesting of spiny lobsters by diving in Florida's waters in Rule 68B–24.006(6), Florida Administrative Code, in effect as of May 1, 2017 (incorporated by reference, see § 622.413).

(3) An owner or operator of a vessel that is used to harvest spiny lobster by bully net in the EEZ off Florida must comply with the vessel identification requirements applicable to the harvesting of spiny lobsters by bully net in Florida's waters in Rule 68B–24.006(7), Florida Administrative Code, in effect as of May 1, 2017 (incorporated by reference, see § 622.413).

(b) *EEZ other than off Florida.* (1) The owner or operator of a vessel that is

used to harvest spiny lobsters in the EEZ other than off Florida, must meet the following vessel and gear identification requirements:

(i) The vessel's Florida crawfish license or trap number or, if not licensed by Florida, the vessel's Federal vessel permit number must be permanently and conspicuously displayed horizontally on the uppermost structural portion of the vessel in numbers at least 10 inches (25.4 cm) high so as to be readily identifiable from the air and water;

(ii) If the vessel uses spiny lobster traps in the EEZ, other than off Florida—

(A) The vessel's color code, as assigned by Florida or, if a color code has not been assigned by Florida, as assigned by the RA, must be permanently and conspicuously displayed above the number specified in paragraph (b)(1)(i) of this section so as to be readily identifiable from the air and water, such color code being in the form of a circle at least 20 inches (50.8 cm) in diameter on a background of colors contrasting to those contained in the assigned color code;

(B) A buoy or timed-release buoy of such strength and buoyancy to float must be attached to each spiny lobster trap or at each end of a string of traps;

(C) A buoy used to mark spiny lobster traps must bear the vessel's assigned color code and be of such color, hue, and brilliancy as to be easily distinguished, seen, and located;

(D) A buoy used to mark spiny lobster traps must bear the vessel's Florida crawfish license or trap number or, if not licensed by Florida, the vessel's Federal vessel permit number in numbers at least 2 inches (5.08 cm) high; and

(E) A spiny lobster trap must bear the vessel's Florida crawfish license or trap number or, if not licensed by Florida, the vessel's Federal vessel permit number permanently and legibly affixed.

(2) A spiny lobster trap in the EEZ, other than off Florida, will be presumed to be the property of the most recently documented owner. Upon the sale or transfer of a spiny lobster trap used in the EEZ, other than off Florida, within 5 days of acquiring owner-

ship, the person acquiring ownership must notify the Florida Division of Law Enforcement of the Department of Environmental Protection for a trap that bears a Florida crawfish license or trap number, or the RA, for a trap that bears a Federal vessel permit number, as to the number of traps purchased, the vendor, and the crawfish license or trap number, or Federal vessel permit number, currently displayed on the traps, and must request issuance of a crawfish license or trap number, or Federal vessel permit, if the acquiring owner does not possess such license or trap number or permit.

(c) *Unmarked traps and buoys.* An unmarked spiny lobster trap or buoy in the EEZ is illegal gear.

(1) *EEZ off Florida.* Such trap or buoy, and any connecting lines will be considered derelict and may be disposed of in accordance with Rules 68B-55.002 and 68B-55.004 of the Florida Administrative Code, in effect as of October 15, 2007 (incorporated by reference, see § 622.413). An owner of such trap or buoy remains subject to appropriate civil penalties.

(2) *EEZ other than off Florida.* Such trap or buoy, and any connecting lines, will be considered unclaimed or abandoned property and may be disposed of in any manner considered appropriate by the Assistant Administrator or an authorized officer. An owner of such trap or buoy remains subject to appropriate civil penalties.

[78 FR 22952, Apr. 17, 2013, as amended at 84 FR 37151, July 31, 2019]

§ 622.403 Seasons.

(a) *EEZ off the southern Atlantic states, other than Florida.* In the EEZ off the southern Atlantic states, other than Florida, there are no seasonal restrictions on the harvest of spiny lobster or on the possession of traps.

(b) *EEZ off Florida and off the Gulf states, other than Florida—*(1) *Commercial and recreational fishing season.* The commercial and recreational fishing season for spiny lobster in the EEZ off Florida and the EEZ off the Gulf states, other than Florida, begins on August 6 and ends on March 31.

(2) *Special recreational fishing seasons—*(i) *EEZ off Florida.* There is a 2-day special recreational fishing season

in the EEZ off Florida on the last Wednesday and successive Thursday of July each year during which fishing for spiny lobster is limited to diving or use of a bully net or hoop net. (See § 622.404 for general prohibitions on gear and methods.) In the EEZ off Monroe County, Florida, no person may harvest spiny lobster by diving at night, that is, from 1 hour after official sunset to 1 hour before official sunrise, during this 2-day special recreational fishing season.

(ii) *EEZ off the Gulf states, other than Florida.* There is a 2-day special recreational fishing season in the EEZ off the Gulf states, other than Florida, during the last Saturday and successive Sunday of July each year during which fishing for spiny lobster may be conducted by authorized gear and methods other than traps. (See § 622.404 for prohibitions on gear and methods.)

(3) *Possession of traps.* (i) In the EEZ off Florida, the rules and regulations applicable to the possession of spiny lobster traps in Florida's waters in Rule 68B–24.005(3), (4), and (5), Florida Administrative Code, in effect as of November 1, 2018 (incorporated by reference, see § 622.413), apply in their entirety to the possession of spiny lobster traps in the EEZ off Florida. A spiny lobster trap, buoy, or rope in the EEZ off Florida, during periods not authorized will be considered derelict and may be disposed of in accordance with Rules 68B–55.002 and 68B–55.004 of the Florida Administrative Code, in effect as of October 15, 2007 (incorporated by reference, see § 622.413). An owner of such trap, buoy, or rope remains subject to appropriate civil penalties.

(ii) In the EEZ off the Gulf states, other than Florida, a spiny lobster trap may be placed in the water prior to the commercial and recreational fishing season, which is specified in paragraph (b)(1) of this section, beginning on August 1 and must be removed from the water after such season not later than April 5. A spiny lobster trap, buoy, or rope in the EEZ off the Gulf states, other than Florida, during periods not authorized in this paragraph will be considered unclaimed or abandoned property and may be disposed of in any manner considered appropriate by the Assistant Administrator or an author-

ized officer. An owner of such trap, buoy, or rope remains subject to appropriate civil penalties.

(4) *Possession of spiny lobsters.* In the EEZ off Florida and the Gulf states, a whole or a part of a spiny lobster subject to these regulations may only be possessed during the commercial and recreational fishing season and the special recreational fishing season specified in § 622.403, unless accompanied by proof of lawful harvest in the waters of a foreign nation. Consistent with the provisions of paragraphs (b)(3)(i) and (ii) of this section, a spiny lobster in a trap in this area will not be deemed to be possessed provided such spiny lobster is returned immediately to the water unharmed when a trap is removed from the water between March 31 and April 15.

(c) *Primacy of seasonal restrictions in the EEZ off Florida.* The seasonal restrictions applicable in the EEZ off Florida apply to all spiny lobsters and traps in the EEZ off Florida, without regard to harvest or use elsewhere, unless accompanied by proof of lawful harvest elsewhere.

[78 FR 22952, Apr. 17, 2013, as amended at 84 FR 37151, July 31, 2019]

§ 622.404 Prohibited gear and methods.

Also see § 622.9 for additional prohibited gear and methods that apply more broadly to multiple fisheries or in some cases all fisheries.

(a) A spiny lobster may not be taken in the EEZ with a spear, hook, or similar device, or gear containing such devices. In the EEZ, the possession of a speared, pierced, or punctured spiny lobster is *prima facie* evidence that prohibited gear was used to take such lobster. Hook, as used in this paragraph (a), does not include a hook in a hook-and-line fishery for species other than spiny lobster; and possession of a spiny lobster that has been speared, pierced, or punctured by such hook is not considered evidence that prohibited gear was used to take the spiny lobster, provided no prohibited gear is on board the vessel.

(b) A spiny lobster may not be taken in a directed fishery by the use of a net or trawl. See § 622.408(b)(4) for the by-catch limits applicable to a vessel that uses or has on board a net or trawl.

(c) Poisons and explosives may not be used to take a spiny lobster in the EEZ. For the purposes of this paragraph (c), chlorine, bleach, and similar substances, which are used to flush a spiny lobster out of rocks or coral, are poisons. A vessel in the spiny lobster fishery may not possess on board in the EEZ any dynamite or similar explosive substance.

(d) Except for black sea bass pots and golden crab traps as allowed in § 622.188 and § 622.248, respectively, the possession of all other traps is prohibited on-board a vessel in the South Atlantic EEZ when spiny lobster subject to the recreational bag and possession limits specified in § 622.408 is also onboard the vessel. The recreational harvest of spiny lobster using a trap is prohibited in the South Atlantic EEZ.

(e) In the EEZ off Florida, simultaneous possession of a bully net and any underwater breathing apparatus, not including dive masks or snorkels, on-board a vessel used to harvest or transport spiny lobster for commercial purposes is prohibited in accordance with Rule 68B-24.007(5), Florida Administrative Code, in effect as of May 1, 2017 (incorporated by reference, see § 622.413). For the purpose of this paragraph, an “underwater breathing apparatus” is any apparatus, whether self-contained or connected to a distant source of air or other gas, whereby a person wholly or partially submerged in water is able to obtain or reuse air or any other gas or gasses for breathing without returning to the surface of the water.

(f) In the EEZ off Florida, vessels that are or are required to be marked with or have identification associated with a bully net permit for the harvest of spiny lobster are prohibited from having trap pullers aboard, in accordance with Rule 68B-24.006(8), the Florida Administrative Code, in effect as of May 1, 2017 (incorporated by reference, see § 622.413).

[78 FR 22952, Apr. 17, 2013, as amended at 83 FR 29047, June 22, 2018; 84 FR 37152, July 31, 2019]

§ 622.405 Trap construction specifications and tending restrictions.

(a) *Construction specifications.* In the EEZ, a spiny lobster trap may be no

larger in dimension than 3 feet by 2 feet by 2 feet (91.4 cm by 61.0 cm by 61.0 cm), or the volume equivalent. A trap constructed of material other than wood must have a panel constructed of wood, cotton, or other material that will degrade at the same rate as a wooden trap. Such panel must be located in the upper half of the sides or on top of the trap, so that, when removed, there will be an opening in the trap no smaller than the diameter found at the throat or entrance of the trap.

(b) *Tending restrictions.* (1) A spiny lobster trap in the EEZ may be pulled or tended during daylight hours only, that is, from 1 hour before official sunrise to 1 hour after official sunset.

(2) A spiny lobster trap in the EEZ may be pulled or tended only by the owner's vessel, except that permission to pull or work traps belonging to another person may be granted—

(i) For traps in the EEZ off Florida, by the Division of Law Enforcement, Florida Fish and Wildlife Conservation Commission, in accordance with the procedures in Rule 68B-24.006(9), Florida Administrative Code, in effect as of May 1, 2017 (incorporated by reference, see § 622.413).

(ii) For traps in the EEZ, other than off Florida, by the RA, as may be arranged upon written request.

[78 FR 22952, Apr. 17, 2013, as amended at 84 FR 37152, July 31, 2019]

§ 622.406 Areas closed to lobster trap gear.

(a) Fishing with spiny lobster trap gear is prohibited year-round in the following areas bounded by rhumb lines connecting, in order, the points listed.

(1) Lobster Trap Gear Closed Area 1.

Point	North lat.	West long.
A	24°31'15.002"	81°31'00.000"
B	24°31'15.002"	81°31'19.994"
C	24°31'29.999"	81°31'19.994"
D	24°31'29.999"	81°31'00.000"
A	24°31'15.002"	81°31'00.000"

(2) Lobster Trap Gear Closed Area 2.

(b) [Reserved]

50 CFR Ch. VI (10–1–21 Edition)

§ 622.407 Minimum size limits and other harvest limitations.

(a) *Minimum size limits.* (1) Except as provided in paragraph (c) of this section—

(i) No person may possess a spiny lobster in or from the EEZ with a carapace length of 3.0 inches (7.62 cm) or less; and

(ii) A spiny lobster, harvested in the EEZ by means other than diving, with a carapace length of 3.0 inches (7.62 cm) or less must be returned immediately to the water unharmed.

(2) No person may harvest or attempt to harvest a spiny lobster by diving in the EEZ unless he or she possesses, while in the water, a measuring device capable of measuring the carapace length. A spiny lobster captured by a diver must be measured in the water using such measuring device and, if the spiny lobster has a carapace length of 3.0 inches (7.62 cm) or less, it must be released unharmed immediately without removal from the water.

(3) Aboard a vessel authorized under paragraph (d) of this section to possess a separated spiny lobster tail, no person may possess in or from the EEZ a separated spiny lobster tail with a tail length less than 5.5 inches (13.97 cm).

(b) *Berried lobsters.* A berried (egg-bearing) spiny lobster in or from the EEZ must be returned immediately to the water unharmed. If found in a trap in the EEZ, a berried spiny lobster may not be retained in the trap. A berried spiny lobster in or from the EEZ may not be stripped of its eggs or otherwise molested. The possession of a spiny lobster, or part thereof, in or from the EEZ from which eggs, swimmerettes, or pleopods have been removed or stripped is prohibited.

(c) *Undersized attractants.* A live spiny lobster under the minimum size limit specified in paragraph (a)(1) of this section that is harvested in the EEZ by a trap may be retained aboard the harvesting vessel for future use as an attractant in a trap provided it is held in a live well aboard the vessel. The live well must provide a minimum of ¾ gallons (1.7 liters) of seawater per spiny lobster. An undersized spiny lobster so retained must be released to the water alive and unharmed immediately upon leaving the trap lines and prior to 1

hour after official sunset each day. No more than 50 undersized spiny lobsters plus 1 per trap aboard the vessel may be retained aboard for use as attractants.

(d) *Tail separation.* (1) The possession aboard a fishing vessel of a separated spiny lobster tail in or from the EEZ, is authorized only when the possession is incidental to fishing exclusively in the EEZ on a trip of 48 hours or more and a valid Federal tail-separation permit, and either a valid Federal vessel permit for spiny lobster or a valid Florida Saltwater Products License with a valid Florida Restricted Species Endorsement and a valid Crawfish Endorsement, as specified in § 622.400(a)(2), has been issued to and are on board the vessel.

(2) Spiny lobster must be landed either all whole or all tailed on a single fishing trip.

[78 FR 22952, Apr. 17, 2013, as amended at 83 FR 29047, June 22, 2018]

§ 622.408 Bag/possession limits.

(a) *EEZ off the southern Atlantic states, other than Florida.* The daily bag or possession limit for spiny lobster in or from the EEZ off the southern Atlantic states, other than Florida, is two per person for commercial and recreational fishing, year-round.

(b) *EEZ off Florida and off the Gulf states, other than Florida—*(1) *Commercial and recreational fishing season.* Except as specified in paragraphs (b)(3) and (4) of this section, during the commercial and recreational fishing season specified in § 622.403(b)(1), the daily bag or possession limit of spiny lobster in or from the EEZ off Florida and off the Gulf states, other than Florida, is six per person.

(2) *Special recreational fishing seasons.* During the special recreational fishing seasons specified in § 622.403(b)(2), the daily bag or possession limit of spiny lobster—

(i) In or from the EEZ off the Gulf states, other than Florida, is six per person;

(ii) In or from the EEZ off Florida other than off Monroe County, Florida, is twelve per person; and

(iii) In or from the EEZ off Monroe County, Florida, is six per person.

(3) *Exemption from the bag/possession limit.* During the commercial and recreational fishing season specified in § 622.403(b)(1), a person is exempt from the bag and possession limit specified in paragraph (b)(1) of this section, provided—

(i) The harvest of spiny lobsters is by diving, or by the use of a bully net, hoop net, or spiny lobster trap; and

(ii) The vessel from which the person is operating has on board the required licenses, certificates, or permits, as specified in § 622.400(a)(1).

(4) *Harvest by net or trawl.* During the commercial and recreational fishing season specified in § 622.403(b)(1), aboard a vessel with the required licenses, certificates, or permits specified in § 622.400(a)(1) that harvests spiny lobster by net or trawl or has on board a net or trawl, the possession of spiny lobster in or from the EEZ off Florida and off the Gulf states, other than Florida, may not exceed at any time 5 percent, whole weight, of the total whole weight of all fish lawfully in possession on board such vessel. If such vessel lawfully possesses a separated spiny lobster tail, the possession of spiny lobster in or from the EEZ may not exceed at any time 1.6 percent, by weight of the spiny lobster or parts thereof, of the total whole weight of all fish lawfully in possession on board such vessel. For the purposes of this paragraph (b)(4), the term “net or trawl” does not include a hand-held net, a loading or dip net, a bully net, or a hoop net.

(5) *Harvest by diving.* (i) The commercial daily harvest and possession limit of spiny lobster harvested by diving in or from the EEZ off Broward, Miami-Dade, Monroe, Collier, and Lee Counties, Florida, is 250 spiny lobster per vessel.

(ii) *Diving at night.* The provisions of paragraph (b)(3) of this section notwithstanding, a person who harvests spiny lobster in the EEZ by diving at night, that is, from 1 hour after official sunset to 1 hour before official sunrise, is limited to the bag limit specified in paragraph (b)(1) of this section, whether or not a Federal vessel permit specified in § 622.400(a)(1) has been issued to and is on board the vessel from which the diver is operating.

(6) *Harvest by bully nets in the EEZ off Florida.* The commercial daily harvest and possession limit of spiny lobster harvested by bully net in the EEZ off Florida is 250 spiny lobsters per vessel.

(c) *Combination of bag/possession limits.* A person who fishes for or possesses spiny lobster in or from the EEZ under a bag or possession limit specified in paragraph (a) or (b) of this section may not combine the bag or possession limits of those paragraphs or combine such bag or possession limit with a bag or possession limit applicable to state waters.

(d) *Responsibility for bag/possession limits.* The operator of a vessel that fishes for or possesses spiny lobster in or from the EEZ is responsible for the cumulative bag or possession limit specified in paragraphs (a) and (b) of this section applicable to that vessel, based on the number of persons aboard.

(e) *Transfer at sea.* A person who fishes for or possesses spiny lobster in or from the EEZ under a bag or possession limit specified in paragraph (a) or (b) of this section may not transfer a spiny lobster at sea from a fishing vessel to any other vessel, and no person may receive at sea such spiny lobster.

[78 FR 22952, Apr. 17, 2013, as amended at 84 FR 37152, July 31, 2019]

§ 622.409 Spiny lobster import prohibitions.

(a) *Minimum size limits for imported spiny lobster.* There are two minimum size limits that apply to importation of spiny lobster into the United States—one that applies any place subject to the jurisdiction of the United States other than Puerto Rico or the U.S. Virgin Islands, and a more restrictive minimum size limit that applies to Puerto Rico and the U.S. Virgin Islands.

(1) No person may import a spiny lobster with less than a 5-ounce (142-gram) tail weight into any place subject to the jurisdiction of the United States excluding Puerto Rico and the U.S. Virgin Islands. For the purposes of paragraph (a) of this section, a 5-ounce (142-gram) tail weight is defined as a tail that weighs 4.2–5.4 ounces (119–153 grams). If the documentation accompanying an imported spiny lobster (including but not limited to product packaging, customs entry forms, bills

of lading, brokerage forms, or commercial invoices) indicates that the product does not satisfy the minimum tail-weight requirement, the person importing such spiny lobster has the burden to prove that such spiny lobster actually does satisfy the minimum tail-weight requirement or that such spiny lobster has a tail length of 5.5 inches (13.97 cm) or greater or that such spiny lobster has or had a carapace length of greater than 3.0 inches (7.62 cm). If the imported product itself does not satisfy the minimum tail-weight requirement, the person importing such spiny lobster has the burden to prove that such spiny lobster has a tail length of 5.5 inches (13.97 cm) or greater or that such spiny lobster has or had a carapace length of greater than 3.0 inches (7.62 cm). If the burden is satisfied, such spiny lobster will be considered to be in compliance with the minimum 5-ounce (142-gram) tail-weight requirement.

(2) See § 622.458 regarding a more restrictive minimum size limit that applies to spiny lobster imported into Puerto Rico or the U.S. Virgin Islands.

(b) *Additional spiny lobster import prohibitions—*(1) *Prohibition related to tail meat.* No person may import into any place subject to the jurisdiction of the United States spiny lobster tail meat that is not in whole tail form with the exoskeleton attached.

(2) *Prohibitions related to egg-bearing spiny lobster.* No person may import into any place subject to the jurisdiction of the United States spiny lobster with eggs attached or spiny lobster from which eggs or pleopods (swimmerets) have been removed or stripped. Pleopods (swimmerets) are the first five pairs of abdominal appendages.

§ 622.410 Restrictions within the Tortugas marine reserves.

The following activities are prohibited within the Tortugas marine reserves: Fishing for any species and anchoring by fishing vessels.

(a) *EEZ portion of Tortugas North.* The area is bounded by rhumb lines connecting the following points: From point A at 24°40'00" N. lat., 83°06'00" W. long. to point B at 24°46'00" N. lat., 83°06'00" W. long. to point C at 24°46'00"

Fishery Conservation and Management

§ 622.413

N. lat., 83°00'00" W. long.; thence along the line denoting the seaward limit of Florida's waters, as shown on the current edition of NOAA chart 11438, to point A at 24°40'00" N. lat., 83°06'00" W. long.

(b) *Tortugas South*. The area is bounded by rhumb lines connecting, in order, the following points:

Point	North lat.	West long.
A	24°33'00"	83°09'00"
B	24°33'00"	83°05'00"
C	24°18'00"	83°05'00"
D	24°18'00"	83°09'00"
A	24°33'00"	83°09'00"

§ 622.411 Annual catch limits (ACLs), annual catch targets (ACTs), and accountability measures (AMs).

For recreational and commercial spiny lobster landings combined, the ACL is 9.60 million lb (4.35 million kg), whole weight. The ACT is 8.64 million lb, (3.92 million kg) whole weight.

[83 FR 29047, June 22, 2018]

§ 622.412 Adjustment of management measures.

In accordance with the framework procedures of the Fishery Management Plan for the Spiny Lobster Fishery of the Gulf of Mexico and South Atlantic, the RA may establish or modify the following items:

(a) Reporting and monitoring requirements, permitting requirements, bag and possession limits, size limits, vessel trip limits, closed seasons, closed areas, reopening of sectors that have been prematurely closed, annual catch limits (ACLs), annual catch targets (ACTs), quotas, accountability measures (AMs), maximum sustainable yield (or proxy), optimum yield, total allowable catch (TAC), management parameters such as overfished and overfishing definitions, gear restrictions, gear markings and identification, vessel identification requirements, acceptable biological catch (ABC) and ABC control rule, rebuilding plans, and restrictions relative to conditions of harvested fish (such as tailing lobster, undersized attractants, and use as bait).

(b) [Reserved]

[78 FR 22952, Apr. 17, 2013, as amended at 84 FR 37152, July 31, 2019]

§ 622.413 Incorporation by reference.

(a) Certain material is incorporated by reference into this subpart with the approval of the Director of the Federal Register under U.S.C. 552(a) and 1 CFR part 51. These materials are incorporated as they exist on the date of approval and a notice of any change in these materials will be published in the FEDERAL REGISTER. This incorporation by reference was approved by the Director of the Office of the Federal Register in accordance with 5 U.S.C. 552(a) and 1 CFR part 51. These materials are incorporated as they exist on the date of approval and a notice of any change in these materials will be published in the FEDERAL REGISTER. All material incorporated by reference is available for inspection at the NMFS, Office of Sustainable Fisheries, Office of the RA, 1315 East-West Highway, Silver Spring, MD; and the National Archives and Records Administration (NARA), Office of the Federal Register, 800 North Capitol Street NW., Suite 700, Washington, DC. For more information on the availability of this material at NARA, call 202-741-6030 or go to <http://www.archives.gov/federal-register/cfr/ibr-locations.html>.

§ 622.414 [Reserved]

§ 622.415 Limited exemption regarding harvest in waters of a foreign nation.

(a) An owner or operator of a vessel that has legally harvested spiny lobsters in the waters of a foreign nation and possesses spiny lobster, or separated tails, in the EEZ incidental to such foreign harvesting is exempt from the requirements of this subpart, except for § 622.409 with which such an owner or operator must comply, provided proof of lawful harvest in the waters of a foreign nation accompanies such lobsters or tails.

(b) [Reserved]

[84 FR 37153, July 31, 2019]

50 CFR Ch. VI (10–1–21 Edition)

§ 622.416 Restrictions on sale/purchase.

(a) Spiny lobster harvested in or from the EEZ or adjoining state waters by a vessel that has a valid Federal commercial vessel permit for spiny lobster, as required under § 622.400(a)(1), or a valid Federal tail-separation permit for spiny lobster, as required under § 622.400(a)(2), may be sold or transferred only to a dealer who has a valid Gulf and South Atlantic dealer permit, as required under § 622.400(a)(5).

(b) Spiny lobster harvested in or from the EEZ may be first received by a dealer who has a valid Gulf and South Atlantic dealer permit, as required under § 622.400(a)(5), only from a vessel that has a valid Federal commercial vessel permit for spiny lobster or a valid Federal tail-separation permit for spiny lobster.

[79 FR 19497, Apr. 9, 2014]

Subpart S—Reef Fish Fishery of Puerto Rico and the U.S. Virgin Islands

§ 622.430 Gear identification.

(a) *Fish traps and associated buoys.* A fish trap used or possessed in the Caribbean EEZ must display the official number specified for the vessel by Puerto Rico or the U.S. Virgin Islands so as to be easily identified. Traps used in the Caribbean reef fish fishery that are fished individually, rather than tied together in a trap line, must have at least one buoy attached that floats on the surface. Traps used in the Caribbean reef fish fishery that are tied together in a trap line must have at least one buoy that floats at the surface attached at each end of the trap line. Each buoy must display the official number and color code assigned to the vessel by Puerto Rico or the U.S. Virgin Islands, whichever is applicable, so as to be easily distinguished, located, and identified.

(b) *Presumption of ownership of fish traps.* A fish trap in the EEZ will be presumed to be the property of the most recently documented owner. This presumption will not apply with respect to such traps that are lost or sold if the owner reports the loss or sale within 15 days to the RA.

(c) *Disposition of unmarked fish traps or buoys.* An unmarked fish trap or a buoy deployed in the EEZ where such trap or buoy is required to be marked is illegal and may be disposed of in any appropriate manner by the Assistant Administrator or an authorized officer.

§ 622.431 Trap construction specifications and tending restrictions.

(a) *Construction specifications*—(1) *Minimum mesh size.* A bare-wire fish trap used or possessed in the EEZ that has hexagonal mesh openings must have a minimum mesh size of 1.5 inches (3.8 cm) in the smallest dimension measured between centers of opposite strands. A bare-wire fish trap used or possessed in the EEZ that has other than hexagonal mesh openings or a fish trap of other than bare wire, such as coated wire or plastic, used or possessed in the EEZ, must have a minimum mesh size of 2.0 inches (5.1 cm) in the smallest dimension measured between centers of opposite strands.

(2) *Escape mechanisms.* A fish trap used or possessed in the Caribbean EEZ must have a panel located on one side of the trap, excluding the top, bottom, and side containing the trap entrance. The opening covered by the panel must measure not less than 8 by 8 inches (20.3 by 20.3 cm). The mesh size of the panel may not be smaller than the mesh size of the trap. The panel must be attached to the trap with untreated jute twine with a diameter not exceeding $\frac{1}{8}$ inch (3.2 mm). An access door may serve as the panel, provided it is on an appropriate side, it is hinged only at its bottom, its only other fastening is untreated jute twine with a diameter not exceeding $\frac{1}{8}$ inch (3.2 mm), and such fastening is at the top of the door so that the door will fall open when such twine degrades. Jute twine used to secure a panel may not be wrapped or overlapped.

(b) *Tending restrictions.* A fish trap in the Caribbean EEZ may be pulled or tended only by a person (other than an authorized officer) aboard the fish trap owner's vessel, or aboard another vessel if such vessel has on board written consent of the trap owner, or if the trap owner is aboard and has documentation verifying his identification number and color code. An owner's

written consent must specify the time period such consent is effective and the trap owner's gear identification number and color code.

§ 622.432 Anchoring restriction.

(a) The owner or operator of any fishing vessel, recreational or commercial, that fishes for or possesses Caribbean reef fish in or from the Caribbean EEZ must ensure that the vessel uses only an anchor retrieval system that recovers the anchor by its crown, thereby preventing the anchor from dragging along the bottom during recovery. For a grapnel hook, this could include an incorporated anchor rode reversal bar that runs parallel along the shank, which allows the rode to reverse and slip back toward the crown. For a fluke- or plow-type anchor, a trip line consisting of a line from the crown of the anchor to a surface buoy would be required.

(b) [Reserved]

§ 622.433 Prohibited gear and methods.

Also see § 622.9 for additional prohibited gear and methods that apply more broadly to multiple fisheries or in some cases all fisheries.

(a) *Poisons.* A poison, drug, or other chemical may not be used to fish for Caribbean reef fish in the Caribbean EEZ.

(b) *Powerheads.* A powerhead may not be used in the Caribbean EEZ to harvest Caribbean reef fish. The possession of a mutilated Caribbean reef fish in or from the Caribbean EEZ and a powerhead is *prima facie* evidence that such fish was harvested by a powerhead.

(c) *Gillnets and trammel nets in the Caribbean EEZ.* A gillnet or trammel net may not be used in the Caribbean EEZ to fish for Caribbean reef fish. Possession of a gillnet or trammel net and any Caribbean reef fish in or from the Caribbean EEZ is *prima facie* evidence of violation of this paragraph (c). A gillnet or trammel net used in the Caribbean EEZ to fish for any other species must be tended at all times.

§ 622.434 Prohibited species.

(a) *General.* The harvest and possession restrictions of this section apply without regard to whether the species

§ 622.435

is harvested by a vessel operating under a commercial vessel permit. The operator of a vessel that fishes in the EEZ is responsible for the limit applicable to that vessel.

(b) No person may fish for or possess goliath grouper and Nassau grouper in or from the Caribbean EEZ. Such fish caught in the Caribbean EEZ must be released immediately with a minimum of harm.

(c) No person may fish for or possess midnight parrotfish, blue parrotfish, or rainbow parrotfish in or from the Caribbean EEZ. Such fish caught in the Caribbean EEZ must be released with a minimum of harm.

§ 622.435 Seasonal and area closures.

(a) *Seasonal closures—(1) Seasonal closures applicable to specific species only—*

(i) *Red, black, tiger, yellowfin, or yellowedge grouper closure.* From February 1 through April 30, each year, no person may fish for or possess red, black, tiger, yellowfin, or yellowedge grouper in or from the Caribbean EEZ. This prohibition on possession does not apply to such grouper harvested and landed ashore prior to the closure.

(ii) *Red hind closure.* From December 1 through the last day of February, each year, no person may fish for or possess red hind in or from the Caribbean EEZ west of 67°10' W. longitude. This prohibition on possession does not apply to red hind harvested and landed ashore prior to the closure.

(iii) *Vermilion, black, silk, or blackfin snapper closure.* From October 1 through December 31, each year, no person may fish for or possess vermillion, black, silk, or blackfin snapper in or from the Caribbean EEZ. This prohibition on possession does not apply to such snapper harvested and landed ashore prior to the closure.

(iv) *Lane or mutton snapper closure.* From April 1 through June 30, each year, no person may fish for or possess lane or mutton snapper in or from the Caribbean EEZ. This prohibition on possession does not apply to such snapper harvested and landed ashore prior to the closure.

(2) *Seasonal closures applicable to broad categories of fish or to all fishing—(i) Mutton snapper spawning aggregation area.* From March 1 through June 30,

50 CFR Ch. VI (10–1–21 Edition)

each year, fishing is prohibited in that part of the following area that is in the EEZ. The area is bounded by rhumb lines connecting, in order, the points listed.

Point	North lat.	West long.
A	17°37.8'	64°53.0'
B	17°39.0'	64°53.0'
C	17°39.0'	64°50.5'
D	17°38.1'	64°50.5'
E	17°37.8'	64°52.5'
A	17°37.8'	64°53.0'

(ii) *Red hind spawning aggregation areas.* From December 1 through February 28, each year, fishing is prohibited in those parts of the following areas that are in the EEZ. Each area is bounded by rhumb lines connecting, in order, the points listed.

(A) *East of St. Croix.*

Point	North lat.	West long.
A	17°50.2'	64°27.9'
B	17°50.1'	64°26.1'
C	17°49.2'	64°25.8'
D	17°48.6'	64°25.8'
E	17°48.1'	64°26.1'
F	17°47.5'	64°26.9'
A	17°50.2'	64°27.9'

(B) *West of Puerto Rico—(1) [Reserved]*

(2) *Tourmaline Bank.*

Point	North lat.	West long.
A	18°11.2'	67°22.4'
B	18°11.2'	67°19.2'

D	18°08.2'	67°22.4'
A	18°11.2'	67°22.4'

(3) *Abrir La Sierra Bank.*

Point	North lat.	West long.
A	18°06.5'	67°26.9'
B	18°06.5'	67°23.9'
C	18°03.5'	67°23.9'
D	18°03.5'	67°26.9'
A	18°06.5'	67°26.9'

(iii) *Grammanik Bank closed area.* (A) The Grammanik Bank closed area is bounded by rhumb lines connecting, in order, the following points:

Point	North lat.	West long.
A	18°11.898'	64°56.328'
B	18°11.645'	64°56.225'
C	18°11.058'	64°57.810'
D	18°11.311'	64°57.913'
A	18°11.898'	64°56.328'

(B) From February 1 through April 30, each year, no person may fish for or

Fishery Conservation and Management

§ 622.437

possess any species of fish, except highly migratory species, in or from the Grammanik Bank closed area. This prohibition on possession does not apply to such fish harvested and landed ashore prior to the closure. For the purpose of this paragraph, “fish” means finfish, mollusks, crustaceans, and all other forms of marine animal and plant life other than marine mammals and birds. “Highly migratory species” means bluefin, bigeye, yellowfin, albacore, and skipjack tunas; swordfish; sharks (listed in Appendix A to part 635 of this title); and white marlin, blue marlin, sailfish, and longbill spearfish.

(iv) *Bajo de Sico closed area.* (A) The Bajo de Sico closed area is bounded by rhumb lines connecting, in order the following points:

Point A	North lat.	West long.
A	18°15.7'	67°26.4'
B	18°15.7'	67°23.2'
C	18°12.7'	67°23.2'
D	18°12.7'	67°26.4'
A	18°15.7'	67°26.4'

(B) From October 1 through March 31, each year, no person may fish for or possess any Caribbean reef fish, as listed in Table 2 of Appendix A to part 622, in or from those parts of the Bajo de Sico closed area that are in the EEZ. The prohibition on possession does not apply to such Caribbean reef fish harvested and landed ashore prior to the closure.

(b) *Year-round closures*—(1) *Hind Bank Marine Conservation District (MCD).* The following activities are prohibited within the Hind Bank MCD: Fishing for any species and anchoring by fishing vessels. The Hind Bank MCD is bounded by rhumb lines connecting, in order, the points listed.

Point	North lat.	West long.
A	18°13.2'	65°06.0'
B	18°13.2'	64°59.0'
C	18°11.8'	64°59.0'
D	18°10.7'	65°06.0'
A	18°13.2'	65°06.0'

(2) *Areas closed year-round to certain fishing gear.* Fishing with pots, traps, bottom longlines, gillnets or trammel nets is prohibited year-round in the closed areas specified in paragraphs

(a)(2)(i), (ii), (iii), and (iv) of this section.

(3) *Anchoring prohibition year-round in Bajo de Sico.* Anchoring, by fishing vessels, is prohibited year-round in those parts of the Bajo de Sico closed area, described in paragraph (a)(2)(iv) of this section, that are in the EEZ.

§ 622.436 Size limits.

All size limits in this section are minimum size limits unless specified otherwise. A fish not in compliance with its size limit, as specified in this section, in or from the Caribbean EEZ, may not be possessed, sold, or purchased. A fish not in compliance with its size limit must be released immediately with a minimum of harm. The operator of a vessel that fishes in the EEZ is responsible for ensuring that fish on board are in compliance with the size limits specified in this section. See § 622.10 regarding requirements for landing fish intact.

(a) *Yellowtail snapper.* The minimum size limit for yellowtail snapper is 12 inches (30.5 cm), TL.

(b) *Parrotfishes.* The minimum size limit for parrotfishes, except for redband parrotfish, in the St. Croix Management Area only (as defined in table 2 of appendix E to part 622) is 9 inches (22.9 cm), fork length. See § 622.434(c) for the current prohibition on the harvest and possession of mid-night parrotfish, blue parrotfish, or rainbow parrotfish.

(c) *Redband parrotfish.* The minimum size limit for red band parrotfish in the St. Croix Management Area only (as defined in table 2 of appendix E to part 622) is 8 inches (20.3 cm), fork length.

[78 FR 22952, Apr. 17, 2013, as amended at 78 FR 45896, July 30, 2013]

§ 622.437 Bag limits.

(a) *Applicability.* Section 622.11(a) provides the general applicability for bag and possession limits. However, § 622.11(a)(1) notwithstanding, the bag limits of paragraph (b) of this section do not apply to a person who has a valid commercial fishing license issued by Puerto Rico or the U.S. Virgin Islands.

(b) *Bag limits.* (1) Groupers, snappers, and parrotfishes combined—5 per person per day or, if 3 or more persons are

§ 622.438

50 CFR Ch. VI (10–1–21 Edition)

aboard, 15 per vessel per day; but not to exceed 2 parrotfish per person per day or 6 parrotfish per vessel per day.

(2) Other reef fish species combined—5 per person per day or, if 3 or more persons are aboard, 15 per vessel per day, but not to exceed 1 surgeonfish per person per day or 4 surgeonfish per vessel per day.

§ 622.438 Restrictions on sale/purchase.

(a) *Live red hind or live mutton snapper.* A live red hind or live mutton snapper in or from the Caribbean EEZ may not be sold or purchased and used in the marine aquarium trade.

(b) [Reserved]

§ 622.439 Annual catch limits (ACLs), annual catch targets (ACTs), and accountability measures (AMs).

See § 622.12 for applicable ACLs and AMs.

§ 622.440 Adjustment of management measures.

In accordance with the framework procedure of the Fishery Management Plan for the Reef Fish Fishery of Puerto Rico and the U.S. Virgin Islands, the RA may establish or modify the following items:

(a) Fishery management units (FMUs), quotas, trip limits, bag limits, size limits, closed seasons or areas, gear restrictions, fishing years, MSY, OY, TAC, maximum fishing mortality threshold (MFMT), minimum stock size threshold (MSST), overfishing limit (OFL), acceptable biological catch (ABC) control rules, ACLs, AMs, ACTs, and actions to minimize the interaction of fishing gear with endangered species or marine mammals.

(b) [Reserved]

Subpart T—Spiny Lobster Fishery of Puerto Rico and the U.S. Virgin Islands

§ 622.450 Gear identification.

(a) *Caribbean spiny lobster traps and associated buoys.* A Caribbean spiny lobster trap used or possessed in the Caribbean EEZ must display the official number specified for the vessel by Puerto Rico or the U.S. Virgin Islands so as to be easily identified. Traps used

in the Caribbean spiny lobster fishery that are fished individually, rather than tied together in a trap line, must have at least one buoy attached that floats on the surface. Traps used in the Caribbean spiny lobster fishery that are tied together in a trap line must have at least one buoy that floats at the surface attached at each end of the trap line. Each buoy must display the official number and color code assigned to the vessel by Puerto Rico or the U.S. Virgin Islands, whichever is applicable, so as to be easily distinguished, located, and identified.

(b) *Presumption of ownership of Caribbean spiny lobster traps.* A Caribbean spiny lobster trap in the EEZ will be presumed to be the property of the most recently documented owner. This presumption will not apply with respect to such traps that are lost or sold if the owner reports the loss or sale within 15 days to the RA.

(c) *Disposition of unmarked Caribbean spiny lobster traps or buoys.* An unmarked Caribbean spiny lobster trap or a buoy deployed in the EEZ where such trap or buoy is required to be marked is illegal and may be disposed of in any appropriate manner by the Assistant Administrator or an authorized officer. In the EEZ off Florida, during times other than the authorized fishing season, a Caribbean spiny lobster trap, buoy, or any connecting lines will be considered derelict and may be disposed of in accordance with Rules 68B–55.002 and 68B–55.004 of the Florida Administrative Code, in effect as of October 15, 2007 (incorporated by reference, see § 622.413).

§ 622.451 Trap construction specifications and tending restrictions.

(a) *Construction specifications—(1) Escape mechanisms.* A spiny lobster trap used or possessed in the Caribbean EEZ must contain on any vertical side or on the top a panel no smaller in diameter than the throat or entrance of the trap. The panel must be made of or attached to the trap by one of the following degradable materials:

(i) Untreated fiber of biological origin with a diameter not exceeding $\frac{1}{8}$ inch (3.2 mm). This includes, but is not limited to tyre palm, hemp, jute, cotton, wool, or silk.

(ii) Ungalvanized or uncoated iron wire with a diameter not exceeding $\frac{1}{16}$ inch (1.6 mm), that is, 16 gauge wire.

(2) [Reserved]

(b) *Tending restrictions.* A Caribbean spiny lobster trap in the Caribbean EEZ may be pulled or tended only by a person (other than an authorized officer) aboard the spiny lobster trap owner's vessel, or aboard another vessel if such vessel has on board written consent of the trap owner, or if the trap owner is aboard and has documentation verifying his identification number and color code. An owner's written consent must specify the time period such consent is effective and the trap owner's gear identification number and color code.

§ 622.452 Prohibited gear and methods.

Also see § 622.9 for additional prohibited gear and methods that apply more broadly to multiple fisheries or in some cases all fisheries.

(a) *Spears and hooks.* A spear, hook, or similar device may not be used in the Caribbean EEZ to harvest a Caribbean spiny lobster. The possession of a speared, pierced, or punctured Caribbean spiny lobster in or from the Caribbean EEZ is *prima facie* evidence of violation of this section.

(b) *Gillnets and trammel nets in the Caribbean EEZ.* A gillnet or trammel net may not be used in the Caribbean EEZ to fish for Caribbean spiny lobster. Possession of a gillnet or trammel net and any Caribbean spiny lobster in or from the Caribbean EEZ is *prima facie* evidence of violation of this paragraph (b). A gillnet or trammel net used in the Caribbean EEZ to fish for any other species must be tended at all times.

§ 622.453 Prohibition on harvest of egg-bearing spiny lobster.

(a) Egg-bearing spiny lobster in the Caribbean EEZ must be returned to the water unharmed. An egg-bearing spiny lobster may be retained in a trap, provided the trap is returned immediately to the water. An egg-bearing spiny lobster may not be stripped, scraped, shaved, clipped, or in any other manner molested, in order to remove the eggs.

(b) [Reserved]

§ 622.454 Minimum size limit.

(a) The minimum size limit for Caribbean spiny lobster is 3.5 inches (8.9 cm), carapace length.

(b) A spiny lobster not in compliance with its size limit, as specified in this section, in or from the Caribbean EEZ, may not be possessed, sold, or purchased and must be released immediately with a minimum of harm. The operator of a vessel that fishes in the EEZ is responsible for ensuring that spiny lobster on board are in compliance with the size limit specified in this section.

§ 622.455 Landing spiny lobster intact.

(a) A Caribbean spiny lobster in or from the Caribbean EEZ must be maintained with head and carapace intact.

(b) The operator of a vessel that fishes in the EEZ is responsible for ensuring that spiny lobster on that vessel in the EEZ are maintained intact and, if taken from the EEZ, are maintained intact through offloading ashore, as specified in this section.

§ 622.456 Bag limits.

(a) *Applicability.* Section 622.11(a) provides the general applicability for bag and possession limits. However, § 622.11(a)(1) notwithstanding, the bag limit of paragraph (b) of this section does not apply to a person who has a valid commercial fishing license issued by Puerto Rico or the U.S. Virgin Islands.

(b) *Bag limit.* The bag limit for spiny lobster in or from the Caribbean EEZ is 3 per person per day, not to exceed 10 per vessel per day, whichever is less.

§ 622.457 Annual catch limits (ACLs), annual catch targets (ACTs), and accountability measures (AMs).

See § 622.12 for applicable ACLs and AMs.

§ 622.458 Caribbean spiny lobster import prohibitions.

(a) *Minimum size limits for imported spiny lobster.* There are two minimum size limits that apply to importation of spiny lobster into the United States—one that applies any place subject to the jurisdiction of the United States

other than Puerto Rico or the U.S. Virgin Islands, and a more restrictive minimum size limit that applies to Puerto Rico and the U.S. Virgin Islands.

(1) No person may import a Caribbean spiny lobster with less than a 6-ounce (170-gram) tail weight into Puerto Rico or the U.S. Virgin Islands. For the purposes of paragraph (a) of this section, a 6-ounce (170-gram) tail weight is defined as a tail that weighs 5.9–6.4 ounces (167–181 grams). If the documentation accompanying an imported Caribbean spiny lobster (including but not limited to product packaging, customs entry forms, bills of lading, brokerage forms, or commercial invoices) indicates that the product does not satisfy the minimum tail-weight, the person importing such Caribbean spiny lobster has the burden to prove that such Caribbean spiny lobster actually does satisfy the minimum tail-weight requirement or that such Caribbean spiny lobster has a tail length of 6.2 inches (15.75 cm) or greater or that such Caribbean spiny lobster has or had a carapace length of 3.5 inches (8.89 cm) or greater. If the imported product itself does not satisfy the minimum tail-weight requirement, the person importing such Caribbean spiny lobster has the burden to prove that such Caribbean spiny lobster has a tail length of 6.2 inches (15.75 cm) or greater or that such Caribbean spiny lobster has or had a carapace length of 3.5 inches (8.89 cm) or greater. If the burden is satisfied such Caribbean spiny lobster will be considered to be in compliance with the minimum 6-ounce (170-gram) tail-weight requirement.

(2) See § 622.409 regarding the minimum size limit that applies to spiny lobster imported into any place subject to the jurisdiction of the United States other than Puerto Rico or the U.S. Virgin Islands.

(b) *Additional Caribbean spiny lobster import prohibitions*—(1) *Prohibition related to tail meat*. No person may import into any place subject to the jurisdiction of the United States Caribbean spiny lobster tail meat that is not in whole tail form with the exoskeleton attached.

(2) *Prohibitions related to egg-bearing spiny lobster*. No person may import into any place subject to the jurisdiction

of the United States Caribbean spiny lobster with eggs attached or Caribbean spiny lobster from which eggs or pleopods (swimmerets) have been removed or stripped. Pleopods (swimmerets) are the first five pairs of abdominal appendages.

§ 622.459 Adjustment of management measures.

In accordance with the framework procedure of the Fishery Management Plan for the Spiny Lobster Fishery of Puerto Rico and the U.S. Virgin Islands, the RA may establish or modify the following items:

(a) Fishery management unit (FMU), quotas, trip limits, bag limits, size limits, closed seasons or areas, gear restrictions, fishing years, MSY, OY, TAC, maximum fishing mortality threshold (MFMT), minimum stock size threshold (MSST), overfishing limit (OFL), acceptable biological catch (ABC) control rules, ACLs, AMS, ACTs, and actions to minimize the interaction of fishing gear with endangered species or marine mammals.

(b) [Reserved]

Subpart U—Corals and Reef Associated Plants and Invertebrates of Puerto Rico and the U.S. Virgin Islands

§ 622.470 Permits.

See § 622.4 of this part for information regarding general permit procedures including, but not limited to fees, duration, transfer, renewal, display, sanctions and denials, and replacement.

(a) *Required permits*—(1) *Prohibited coral*. A Federal permit may be issued to take or possess Caribbean prohibited coral only as scientific research activity, exempted fishing, or exempted educational activity. See § 600.745 of this chapter for the procedures and limitations for such activities and fishing.

(2) [Reserved]

(b) *Application*. (1) The applicant for a coral permit must be the individual who will be conducting the activity that requires the permit.

(2) An applicant must provide the following:

(i) Name, address, telephone number, and other identifying information of the applicant.

Fishery Conservation and Management

§ 622.491

(ii) Name and address of any affiliated company, institution, or organization.

(iii) Information concerning vessels, harvesting gear/methods, or fishing areas, as specified on the application form.

(iv) Any other information that may be necessary for the issuance or administration of the permit.

§ 622.471 Prohibited gear and methods.

Also see § 622.9 for additional prohibited gear and methods that apply more broadly to multiple fisheries or in some cases all fisheries.

(a) *Power-assisted tools.* A power-assisted tool may not be used in the Caribbean EEZ to take a Caribbean coral reef resource.

(b) [Reserved]

§ 622.472 Prohibited species.

(a) *General.* The harvest and possession restrictions of this section apply without regard to whether the species is harvested by a vessel operating under a commercial vessel permit. The operator of a vessel that fishes in the EEZ is responsible for the limit applicable to that vessel.

(b) *Caribbean prohibited coral.* Caribbean prohibited coral may not be fished for or possessed in or from the Caribbean EEZ. The taking of Caribbean prohibited coral in the Caribbean EEZ is not considered unlawful possession provided it is returned immediately to the sea in the general area of fishing.

§ 622.473 Restrictions on sale/purchase.

(a) *Caribbean prohibited coral.* (1) No person may sell or purchase a Caribbean prohibited coral harvested in the Caribbean EEZ.

(2) A Caribbean prohibited coral that is sold in Puerto Rico or the U.S. Virgin Islands will be presumed to have been harvested in the Caribbean EEZ, unless it is accompanied by documentation showing that it was harvested elsewhere. Such documentation must contain:

(i) The information specified in subpart K of part 300 of this title for marking containers or packages of fish or wildlife that are imported, exported, or transported in interstate commerce.

(ii) The name and home port of the vessel, or the name and address of the individual, harvesting the Caribbean prohibited coral.

(iii) The port and date of landing the Caribbean prohibited coral.

(iv) A statement signed by the person selling the Caribbean prohibited coral attesting that, to the best of his or her knowledge, information, and belief, such Caribbean prohibited coral was harvested other than in the Caribbean EEZ or the waters of Puerto Rico or the U.S. Virgin Islands.

(b) [Reserved]

§ 622.474 Adjustment of management measures.

In accordance with the framework procedure of the Fishery Management Plan for Corals and Reef Associated Plants and Invertebrates of Puerto Rico and the U.S. Virgin Islands, the RA may establish or modify the following items:

(a) Fishery management units (FMUs), quotas, trip limits, bag limits, size limits, closed seasons or areas, gear restrictions, fishing years, MSY, OY, TAC, MFMT, MSST, OFL, ABC control rules, ACLs, AMs, ACTs, and actions to minimize the interaction of fishing gear with endangered species or marine mammals.

(b) [Reserved]

Subpart V—Queen Conch Resources of Puerto Rico and the U.S. Virgin Islands

§ 622.490 Prohibited gear and methods.

Also see § 622.9 for additional prohibited gear and methods that apply more broadly to multiple fisheries or in some cases all fisheries.

(a) In the Caribbean EEZ, no person may harvest queen conch by diving while using a device that provides a continuous air supply from the surface.

(b) [Reserved]

§ 622.491 Seasonal and area closures.

(a) No person may fish for or possess on board a fishing vessel a Caribbean queen conch in or from the Caribbean EEZ, except from November 1 through May 31 in the area east of 64°34' W. longitude which includes Lang Bank east of St. Croix, U.S. Virgin Islands.

§ 622.492

(b) Pursuant to the procedures and criteria established in the FMP for Queen Conch Resources in Puerto Rico and the U.S. Virgin Islands, when the ACL, as specified in § 622.12(b)(1), is reached or projected to be reached, the Regional Administrator will close the Caribbean EEZ to the harvest and possession of queen conch, in the area east of 64°34' W. longitude which includes Lang Bank, east of St. Croix, U.S. Virgin Islands, by filing a notification of closure with the Office of the Federal Register. During the closure, no person may fish for or possess on board a fishing vessel, a Caribbean queen conch, in or from the Caribbean EEZ, in the area east of 64°34' W. longitude which includes Lang Bank, east of St. Croix, U.S. Virgin Islands.

[78 FR 22952, Apr. 17, 2013, as amended at 78 FR 56173, Sept. 12, 2013; 82 FR 56921, Dec. 1, 2017]

§ 622.492 Minimum size limit.

(a) The minimum size limit for Caribbean queen conch is either 9 inches (22.9 cm) in length, that is, from the tip of the spire to the distal end of the shell, or 3/8 inch (9.5 mm) in lip width at its widest point.

(b) A Caribbean queen conch not in compliance with its size limit, as specified in this section, in or from the Caribbean EEZ, may not be possessed, sold, or purchased and must be released immediately with a minimum of harm. The operator of a vessel that fishes in the EEZ is responsible for ensuring that Caribbean queen conch on board are in compliance with the size limit specified in this section.

[78 FR 22952, Apr. 17, 2013, as amended at 81 FR 29168, May 11, 2016]

§ 622.493 Landing Caribbean queen conch intact.

(a) A Caribbean queen conch in or from the Caribbean EEZ must be maintained with meat and shell intact.

(b) The operator of a vessel that fishes in the EEZ is responsible for ensuring that Caribbean queen conch on that vessel in the EEZ are maintained intact and, if taken from the EEZ, are maintained intact through offloading ashore, as specified in this section.

50 CFR Ch. VI (10–1–21 Edition)

§ 622.494 Bag limit.

(a) *Applicability.* Section 622.11(a) provides the general applicability for bag and possession limits. However, § 622.11(a)(1) notwithstanding, the bag limit of paragraph (b) of this section does not apply to a person who has a valid commercial fishing license issued by Puerto Rico or the U.S. Virgin Islands.

(b) *Bag limit.* The bag limit for queen conch in or from the Caribbean EEZ is 3 per person or, if more than 4 persons are aboard, 12 per boat.

§ 622.495 Commercial trip limit.

Commercial trip limits are limits on the amount of the applicable species that may be possessed on board or landed, purchased, or sold from a vessel per day. A person who fishes in the EEZ may not combine a trip limit specified in this section with any trip or possession limit applicable to state waters. A species subject to a trip limit specified in this section taken in the EEZ may not be transferred at sea, regardless of where such transfer takes place, and such species may not be transferred in the EEZ.

(a) *Applicability.* The trip limit of paragraph (b) of this section applies to a vessel that has at least one person on board with a valid commercial fishing license issued by Puerto Rico or the U.S. Virgin Islands. If no person on board the vessel has a valid commercial fishing license issued by Puerto Rico or the U.S. Virgin Islands, the bag limit specified in § 622.494(b) applies.

(b) *Trip limit.* The trip limit for queen conch in or from the Caribbean EEZ is 200 queen conch per day.

[78 FR 22952, Apr. 17, 2013, as amended at 78 FR 56173, Sept. 12, 2013]

§ 622.496 Annual catch limits (ACLs), annual catch targets (ACTs), and accountability measures (AMs).

See § 622.12 for applicable ACLs and AMs.

§ 622.497 Adjustment of management measures.

In accordance with the framework procedure of the Fishery Management Plan for Queen Conch Resources of

Fishery Conservation and Management

Pt. 622, App. A

Puerto Rico and the U.S. Virgin Islands, the RA may establish or modify the following items:

(a) Quotas, trip limits, bag limits, size limits, closed seasons or areas, gear restrictions, fishing year, MSY, OY, TAC, MFMT, MSST, OFL, ABC control rules, ACLs, AMs, ACTs, and actions to minimize the interaction of fishing gear with endangered species or marine mammals.

(b) [Reserved]

APPENDIX A TO PART 622—SPECIES TABLES

TABLE 1 OF APPENDIX A TO PART 622—CARIBBEAN CORAL REEF RESOURCES

I. Coelenterates—Phylum Coelenterata

A. Hydrocorals—Class Hydrozoa

1. Hydroids—Order Anthoathecata

Family Milleporidae

Millepora spp., Fire corals

Family Stylasteridae

Stylaster roseus, Rose lace corals

B. Anthozoans—Class Anthozoa

1. Soft corals—Order Alcyonacea

Family Anthothelidae

Erythropodium caribaeorum, Encrusting gorgonian

Iciligorgia schrammi, Deepwater sea fan

Family Briareidae

Briareum asbestinum, Corky sea finger

Family Clavulariidae

Carijoa riisei

Telesto spp.

2. Gorgonian corals—Order Gorgonacea

Family Ellisellidae

Ellisella spp., Sea whips

Family Gorgoniidae

Gorgonia flabellum, Venus sea fan

G. mariae, Wide-mesh sea fan

G. ventalina, Common sea fan

Pseudopterogorgia acerosa, Sea plume

P. albatrossae

P. americana, Slimy sea plume

P. bipinnata, Bipinnate plume

P. rigida

Pterogorgia anceps, Angular sea whip

P. citrina, Yellow sea whip

Family Plexauridae

Eunicea calyculata, Warty sea rod

E. clavigera

E. fusca, Doughnut sea rod

E. knighti

E. laciniata

E. laxispica

E. mammosa, Swollen-knob

E. succinea, Shelf-knob sea rod

E. touneforti

Muricea atlantica

M. elongata, Orange spiny rod

M. laxa, Delicate spiny rod

M. muricata, Spiny sea fan

M. pinnata, Long spine sea fan

Muriceopsis spp.

M. flavida, Rough sea plume

M. sulphurea

Plexaura flexuosa, Bent sea rod

P. homomalla, Black sea rod

Plexaurella dichotoma, Slit-pore sea rod

P. fusifera

P. grandiflora

P. grisea

P. nutans, Giant slit-pore

Pseudoplexaura crucis

P. flagellosa

P. porosa, Porous sea rod

P. wagenarii

3. Hard Corals—Order Scleractinia

Family Acroporidae

Acropora cervicornis, Staghorn coral

A. palmata, Elkhorn coral

A. prolifera, Fused staghorn

Family Agaricidae

Agaricia agaricites, Lettuce leaf coral

A. fragilis, Fragile saucer

A. lamarcki, Lamarck's sheet

A. tenuifolia, Thin leaf lettuce

Leptoseris cucullata, Sunray lettuce

Family Astrocoeniidae

Stephanocoenia michelinii, Blushing star

Family Caryophylliidae

Eusmilia fastigiata, Flower coral

Tubastrea aurea, Cup coral

Family Faviidae

Cladocora arbuscula, Tube coral

Colpophyllia natans, Boulder coral

Diploria clivosa, Knobby brain coral

D. labyrinthiformis, Grooved brain

D. strigosa, Symmetrical brain

Favia fragum, Golfball coral

Manicina areolata, Rose coral

M. mayori, Tortugas rose coral

Montastrea annularis, Boulder star coral

M. cavernosa, Great star coral

Solenastrea bournoni, Smooth star coral

Family Meandrinidae

Dendrogyra cylindrus, Pillar coral

Dichocoenia stelleris, Pancake star

D. stokesi, Elliptical star

Meandrina meandrites, Maze coral

Family Mussidae

Isophyllastrea rigida, Rough star coral

Isophyllia sinuosa, Sinuous cactus

Mussa angulosa, Large flower coral

Mycetophyllia aliciae, Thin fungus coral

M. danae, Fat fungus coral

M. ferox, Grooved fungus

M. lamarckiana, Fungus coral

Scolymia cubensis, Artichoke coral

S. lacera, Solitary disk

Family Oculinidae

Oculina diffusa, Ivory bush coral

Family Pocilloporidae

Madracis decactis, Ten-ray star coral

M. mirabilis, Yellow pencil

Family Poritidae

Porites astreoides, Mustard hill coral

Pt. 622, App. A

50 CFR Ch. VI (10–1–21 Edition)

P. branneri, Blue crust coral
P. divaricata, Small finger coral
P. porites, Finger coral
 Family Rhizangiidae
Astrangia solitaria, Dwarf cup coral
Phyllangia americana, Hidden cup coral
 Family Siderastreidae
Siderastrea radians, Lesser starlet
S. siderea, Massive starlet
 4. Black Corals—Order Antipatharia
Antipathes spp., Bushy black coral
Stichopathes spp., Wire coral
 II. [Reserved]
 Aquarium Trade Species in the Caribbean Coral FMP
 I. Sponges—Phylum Porifera
 A. Demosponges—Class Demospongiae
Amphimedon compressa, Erect rope sponge
Chondrilla nucula, Chicken liver sponge
Cinachyrella alloclada
Geodia neptuni, Potato sponge
Haliclona spp., Finger sponge
Myriastrea spp.
Niphates digitalis, Pink vase sponge
N. erecta, Lavender rope sponge
Spinosella plicifera
S. vaginalis
Tethya crypta
 II. Coelenterates—Phylum Coelenterata
 A. Anthozoans—Class Anthozoa
 1. Anemones—Order Actiniaria
Aiptasia tagetes, Pale anemone
Bartholomea annulata, Corkscrew anemone
Condylactis gigantea, Giant pink-tipped anemone
Heteractis lucida, Knobby anemone
Lebrunia spp., Staghorn anemone
Stichodactyla helianthus, Sun anemone
 2. Colonial Anemones—Order Zoanthidea
Zoanthus spp., Sea mat
 3. False Corals—Order Corallimorpharia
Discosoma spp. (formerly *Rhodactis*), False coral
Ricordea florida, Florida false coral
 III. Annelid Worms—Phylum Annelida
 A. Polychaetes—Class Polychaeta
 Family Sabellidae, Feather duster worms
Sabellastarte spp., Tube worms
S. magnifica, Magnificent duster
 Family Serpulidae
Spirobranchus giganteus, Christmas tree worm
 IV. Mollusks—Phylum Mollusca
 A. Gastropods—Class Gastropoda
 Family Elysidae
Tridachna crispata, Lettuce sea slug
 Family Olividae
Oliva reticularis, Netted olive
 Family Ovulidae
Cyphoma gibbosum, Flamingo tongue
 B. Bivalves—Class Bivalvia
 Family Limidae
Lima spp., Fileclams
L. scabra, Rough fileclam
 Family Spondylidae
Spondylus americanus, Atlantic thorny oyster

C. Cephalopods—Class Cephalopoda
 1. Octopuses—Order Octopoda
 Family Octopodidae
Octopus spp. (except the Common octopus, *O. vulgaris*)
 V. Arthropods—Phylum Arthropoda
 A. Crustaceans—Subphylum Crustacea
 1. Decapods—Order Decapoda
 Family Alpheidae
Alpheus armatus, Snapping shrimp
 Family Diogenidae
Paguristes spp., Hermit crabs
P. cadenati, Red reef hermit
 Family Grapsidae
Percnon gibbesi, Nimble spray crab
 Family Hippolytidae
Lysmata spp., Peppermint shrimp
Thor amboinensis, Anemone shrimp
 Family Majidae, Coral crabs
Mithrax spp., Clinging crabs
M. cinctimanus, Banded clinging
M. sculptus, Green clinging
Stenorhynchus seticornis, Yellowline arrow
 Family Palaemonida
Periclimenes spp., Cleaner shrimp
 Family Squillidae, Mantis crabs
Gonodactylus spp.
Lysiosquilla spp.
 Family Stenopodidae, Coral shrimp
Stenopus hispidus, Banded shrimp
S. scutellatus, Golden shrimp
 VI. Echinoderms—Phylum Echinodermata
 A. Feather stars—Class Crinoidea
Analcidometra armata, Swimming crinoid
Davidaster spp., Crinoids
Nemaster spp., Crinoids
 B. Sea stars—Class Asteroidea
Astropecten spp., Sand stars
Linckia guildingii, Common comet star
Ophidiaster guildingii, Comet star
Oreaster reticulatus, Cushion sea star
 C. Brittle and basket stars—Class Ophiuroidea
Astrophyton muricatum, Giant basket star
Ophiocoma spp., Brittlestars
Ophioderma spp., Brittlestars
O. rubicundum, Ruby brittlestar
 D. Sea Urchins—Class Echinoidea
Diadema antillarum, Long-spined urchin
Echinometra spp., Purple urchin
Eucidaris tribuloides, Pencil urchin
Lytechinus spp., Pin cushion urchin
Tripeustes ventricosus, Sea egg
 E. Sea Cucumbers—Class Holothuroidea
Holothuria spp., Sea cucumbers
 VII. Chordates—Phylum Chordata
 A. Tunicates—Subphylum Urochordata
 TABLE 2 OF APPENDIX A TO PART 622—
 CARIBBEAN REEF FISH
 Lutjanidae—Snappers
 Unit 1
 Black snapper, *Apsilus dentatus*
 Blackfin snapper, *Lutjanus buccanella*
 Silk snapper, *Lutjanus vivanus*
 Vermilion snapper, *Rhomboplites aurorubens*
 Wenchman, *Pristipomoides aquilonaris*

Fishery Conservation and Management

Pt. 622, App. A

- Unit 2
Cardinal, *Pristipomoides macrophthalmus*
Queen snapper, *Etelis oculatus*
- Unit 3
Gray snapper, *Lutjanus griseus*
Lane snapper, *Lutjanus synagris*
Mutton snapper, *Lutjanus analis*
Dog snapper, *Lutjanus jocu*
Schoolmaster, *Lutjanus apodus*
Mahogany snapper, *Lutjanus mahogoni*
- Unit 4
Yellowtail snapper, *Ocyurus chrysurus*
- Serranidae—Sea basses and Groupers
- Unit 1
Nassau Grouper, *Epinephelus striatus*
- Unit 2
Goliath grouper, *Epinephelus itajara*
- Unit 3
Coney, *Epinephelus fulvus*
Graysby, *Epinephelus cruentatus*
Red hind, *Epinephelus guttatus*
Rock hind, *Epinephelus adscensionis*
- Unit 4
Black grouper, *Mycteroperca bonaci*
Red grouper, *Epinephelus morio*
Tiger grouper, *Mycteroperca tigris*
Yellowfin grouper, *Mycteroperca venenosa*
- Unit 5
Misty grouper, *Epinephelus mystacinus*
Yellowedge grouper, *Epinephelus flavolimbatus*
- Haemulidae—Grunts
White grunt, *Haemulon plumieri*
Margate, *Haemulon album*
Tomtate, *Haemulon aurolineatum*
Bluestriped grunt, *Haemulon sciurus*
French grunt, *Haemulon flavolineatum*
Porkfish, *Anisotremus virginicus*
- Mullidae—Goatfishes
Spotted goatfish, *Pseudupeneus maculatus*
Yellow goatfish, *Mulloidichthys martinicus*
- Sparidae—Porgies
Jolthead porgy, *Calamus bajonado*
Sea bream, *Archosargus rhomboidalis*
Sheepshead porgy, *Calamus penna*
Pluma, *Calamus pennatula*
- Holocentridae—Squirrelfishes
Blackbar soldierfish, *Myripristis jacobus*
Bigeye, *Priacanthus arenatus*
Longspine squirrelfish, *Holocentrus rufus*
Squirrelfish, *Holocentrus adscensionis*
- Malacanthidae—Tilefishes
Blackline tilefish, *Caulolatilus cyanops*
Sand tilefish, *Malacanthus plumieri*
- Carangidae—Jacks
Blue runner, *Caranx crysos*
Horse-eye jack, *Caranx latus*
Black jack, *Caranx lugubris*
Almaco jack, *Seriola rivoliana*
Bar jack, *Caranx ruber*
Greater amberjack, *Seriola dumerili*
Yellow jack, *Caranx bartholomaei*
- Scaridae—Parrotfishes
Blue parrotfish, *Scarus coeruleus*
Midnight parrotfish, *Scarus coelestinus*
Princess parrotfish, *Scarus taeniopterus*
Queen parrotfish, *Scarus vetula*
Rainbow parrotfish, *Scarus guacamaia*
Redfin parrotfish, *Sparisoma rubripinne*
Redtail parrotfish, *Sparisoma chrysopteron*
Stoplight parrotfish, *Sparisoma viride*
Redband parrotfish, *Sparisoma aurofrenatum*
Striped parrotfish, *Scarus croicensis*
- Acanthuridae—Surgeonfishes
Blue tang, *Acanthurus coeruleus*
Ocean surgeonfish, *Acanthurus bahianus*
Doctorfish, *Acanthurus chirurgus*
- Balistidae—Triggerfishes
Ocean triggerfish, *Canthidermis sufflamen*
Queen triggerfish, *Balistes vetula*
Sargassum triggerfish, *Xanthichthys ringens*
- Monacanthidae—Filefishes
Scrawled filefish, *Aluterus scriptus*
Whitespotted filefish, *Cantherhines macrocerus*
Black durgon, *Melichthys niger*
- Ostraciidae—Boxfishes
Honeycomb cowfish, *Lactophrys polygona*
Scrawled cowfish, *Lactophrys quadricornis*
Trunkfish, *Lactophrys trigonus*
Spotted trunkfish, *Lactophrys bicaudalis*
Smooth trunkfish, *Lactophrys triqueter*
- Labridae—Wrasses
Hogfish, *Lachnolaimus maximus*
Puddingwife, *Halichoeres radiatus*
Spanish hogfish, *Bodianus rufus*
- Pomacanthidae—Angelfishes
Queen angelfish, *Holacanthus ciliaris*
Gray angelfish, *Pomacanthus arcuatus*
French angelfish, *Pomacanthus paru*
Aquarium Trade Species in the Caribbean Reef Fish FMP:
Frogfish, *Antennarius* spp.
Flamefish, *Apogon maculatus*
Conchfish, *Astrapogon stellatus*
Redlip blenny, *Ophioblennius atlanticus*
Peacock flounder, *Bothus lunatus*
Longsnout butterflyfish, *Chaetodon aculeatus*
Four-eye butterflyfish, *Chaetodon capistratus*
Spotfin butterflyfish, *Chaetodon ocellatus*
Banded butterflyfish, *Chaetodon striatus*
Redspotted hawkfish, *Amblycirrhitus pinos*
Flying gurnard, *Dactylopterus volitans*
Atlantic spadefish, *Chaetodipterus faber*
Neon goby, *Gobiosoma oceanops*
Rusty goby, *Priolepis hipoliti*
Royal gramma, *Gramma loreto*
Creole wrasse, *Clepticus parrae*
Yellowcheek wrasse, *Halichoeres cyanocephalus*
Yellowhead wrasse, *Halichoeres garnoti*
Clown wrasse, *Halichoeres maculipinna*
Pearly razorfish, *Hemipteronotus novacula*
Green razorfish, *Hemipteronotus splendens*
Bluehead wrasse, *Thalassoma bifasciatum*
Chain moray, *Echidna catenata*
Green moray, *Gymnothorax funebris*
Goldentail moray, *Gymnothorax miliaris*
Batfish, *Ogcocephalus* spp.
Goldspotted eel, *Myrichthys ocellatus*

Pt. 622, App. A

Yellowhead jawfish, *Opistognathus aurifrons*
 Dusky jawfish, *Opistognathus whitehursti*
 Cherubfish, *Centropyge argi*
 Rock beauty, *Holacanthus tricolor*
 Sergeant major, *Abudefduf saxatilis*
 Blue chromis, *Chromis cyanea*
 Sunshinefish, *Chromis insolata*
 Yellowtail damselfish, *Microspathodon chrysurus*
 Dusky damselfish, *Pomacentrus fuscus*
 Beaugregory, *Pomacentrus leucostictus*
 Bicolor damselfish, *Pomacentrus partitus*
 Threespot damselfish, *Pomacentrus planifrons*
 Glasseye snapper, *Priacanthus cruentatus*
 High-hat, *Equetus acuminatus*
 Jackknife-fish, *Equetus lanceolatus*
 Spotted drum, *Equetus punctatus*
Scorpaenidae—Scorpionfishes
 Butter hamlet, *Hypoplectrus unicolor*
 Swissguard basslet, *Liopropoma rubre*
 Greater soapfish, *Rypticus saponaceus*
 Orangeback bass, *Serranus annularis*
 Lantern bass, *Serranus baldwini*
 Tobaccofish, *Serranus tabacarius*
 Harlequin bass, *Serranus tigrinus*
 Chalk bass, *Serranus tortugarum*
 Caribbean tonguefish, *Symphurus arawak*
 Seahorses, *Hippocampus* spp.
 Pipefishes, *Syngnathus* spp.
 Sand diver, *Synodus intermedius*
 Sharpnose puffer, *Canthigaster rostrata*
 Porcupinefish, *Diodon hystrix*

TABLE 3 OF APPENDIX A TO PART 622—GULF REEF FISH

Balistidae—Triggerfishes
 Gray triggerfish, *Balistes caprisus*
Carangidae—Jacks
 Greater amberjack, *Seriola dumerili*
 Lesser amberjack, *Seriola fasciata*
 Almaco jack, *Seriola rivoliana*
 Banded rudderfish, *Seriola zonata*
Labridae—Wrasses
 Hogfish, *Lachnolaimus maximus*
Lutjanidae—Snappers
 Queen snapper, *Etelis oculatus*
 Mutton snapper, *Lutjanus analis*
 Blackfin snapper, *Lutjanus buccanella*
 Red snapper, *Lutjanus campechanus*
 Cubera snapper, *Lutjanus cyanopterus*
 Gray (mangrove) snapper, *Lutjanus griseus*
 Lane snapper, *Lutjanus synagris*
 Silk snapper, *Lutjanus vivanus*
 Yellowtail snapper, *Ocyurus chrysurus*
 Wenchman, *Pristipomoides aquilonaris*
 Vermilion snapper, *Rhomboplites aurorubens*
Malacanthidae—Tilefishes
 Goldface tilefish, *Caulolatilus chrysops*
 Blueline tilefish, *Caulolatilus microps*
 Tilefish, *Lopholatilus chamaeleonticeps*
Serranidae—Groupers
 Speckled hind, *Epinephelus drummondhayi*
 Yellowedge grouper, *Epinephelus flavolimbatus*
 Goliath grouper, *Epinephelus itajara*

50 CFR Ch. VI (10–1–21 Edition)

Red grouper, *Epinephelus morio*
 Warsaw grouper, *Epinephelus nigritus*
 Snowy grouper, *Epinephelus niveatus*
 Black grouper, *Mycteroperca bonaci*
 Yellowmouth grouper, *Mycteroperca interstitialis*
 Gag, *Mycteroperca microlepis*
 Scamp, *Mycteroperca phenax*
 Yellowfin grouper, *Mycteroperca venenosa*

TABLE 4 OF APPENDIX A TO PART 622—SOUTH ATLANTIC SNAPPER-GROUPER

Balistidae—Triggerfishes
 Gray triggerfish, *Balistes caprisus*
Carangidae—Jacks
 Bar jack, *Caranx ruber*
 Greater amberjack, *Seriola dumerili*
 Lesser amberjack, *Seriola fasciata*
 Almaco jack, *Seriola rivoliana*
 Banded rudderfish, *Seriola zonata*
Ephippidae—Spadefishes
 Spadefish, *Chaetodipterus faber*
Haemulidae—Grunts
 Margate, *Haemulon album*
 Tomtate, *Haemulon aurolineatum*
 Sailor's choice, *Haemulon parrai*
 White grunt, *Haemulon plumieri*
Labridae—Wrasses
 Hogfish, *Lachnolaimus maximus*
Lutjanidae—Snappers
 Queen snapper, *Etelis oculatus*
 Mutton snapper, *Lutjanus analis*
 Blackfin snapper, *Lutjanus buccanella*
 Red snapper, *Lutjanus campechanus*
 Cubera snapper, *Lutjanus cyanopterus*
 Gray snapper, *Lutjanus griseus*
 Lane snapper, *Lutjanus synagris*
 Silk snapper, *Lutjanus vivanus*
 Yellowtail snapper, *Ocyurus chrysurus*
 Vermilion snapper, *Rhomboplites aurorubens*
Malacanthidae—Tilefishes
 Blueline tilefish, *Caulolatilus microps*
 Golden tilefish, *Lopholatilus chamaeleonticeps*
 Sand tilefish, *Malacanthus plumieri*
Percichthyidae—Temperate basses
 Wreckfish, *Polyprion americanus*
Serranidae—Groupers
 Rock hind, *Epinephelus adscensionis*
 Graysby, *Epinephelus cruentatus*
 Speckled hind, *Epinephelus drummondhayi*
 Yellowedge grouper, *Epinephelus flavolimbatus*
 Coney, *Epinephelus fulvus*
 Red hind, *Epinephelus guttatus*
 Goliath grouper, *Epinephelus itajara*
 Red grouper, *Epinephelus morio*
 Misty grouper, *Epinephelus mystacinus*
 Warsaw grouper, *Epinephelus nigritus*
 Snowy grouper, *Epinephelus niveatus*
 Nassau grouper, *Epinephelus striatus*
 Black grouper, *Mycteroperca bonaci*
 Yellowmouth grouper, *Mycteroperca interstitialis*
 Gag, *Mycteroperca microlepis*
 Scamp, *Mycteroperca phenax*
 Yellowfin grouper, *Mycteroperca venenosa*

Fishery Conservation and Management

Pt. 622, App. B

Serranidae—Sea Basses:

Black sea bass, *Centropristis striata*

Sparidae—Porgies

Jolthead porgy, *Calamus bajonado*

Saucereye porgy, *Calamus calamus*

Whitebone porgy, *Calamus leucosteus*

Knobbed porgy, *Calamus nodosus*

Red porgy, *Pagrus pagrus*

Scup, *Stenotomus chrysops*

The following species are designated as ecosystem component species:

Cottonwick, *Haemulon melanurum*

Bank sea bass, *Centropristis ocyurus*

Rock sea bass, *Centropristis philadelphica*

Longspine porgy, *Stenotomus caprinus*

Ocean triggerfish, *Canthidermis sufflamen*

TABLE 5 OF APPENDIX A TO PART 622— CARIBBEAN CONCH RESOURCES

Queen conch, *Strombus gigas*

TABLE 6 OF APPENDIX A TO PART 622— ATLANTIC DOLPHIN AND WAHOO

Dolphin, *Coryphaena equiselis* or *Coryphaena hippurus* Wahoo, *Acanthocybium solandri*

The following species are designated as ecosystem component species:

Bullet mackerel, *Auxis rochei*

Frigate mackerel, *Auxis thazard*

APPENDIX B TO PART 622—GULF AREAS

TABLE 1 OF APPENDIX B TO PART 622—SEAWARD COORDINATES OF THE LONGLINE AND BUOY GEAR RESTRICTED AREA

Point number and reference location ¹	North lat.	West long.
1 Seaward limit of State and Federal Reef Fish Management Boundary north of Dry Tortugas.	24°48.0'	82°48.0'
2 North of Rebecca Shoal	25°07.5'	82°34.0'
3 Off Sanibel Island—Offshore	26°26.0'	82°59.0'
4 West of Egmont Key	27°30.0'	83°21.5'
5 Off Anclote Keys—Offshore	28°10.0'	83°45.0'
6 Southeast corner of Florida Middle Ground	28°11.0'	84°00.0'
7 Southwest corner of Florida Middle Ground	28°11.0'	84°07.0'
8 West corner of Florida Middle Ground	28°26.6'	84°24.8'
9 Northwest corner of Florida Middle Ground	28°42.5'	84°24.8'
10 South of Carrabelle	29°05.0'	84°47.0'
11 South of Cape St. George	29°02.5'	85°09.0'
12 South of Cape San Blas lighted bell buoy—20 fathoms	29°21.0'	85°30.0'
13 South of Cape San Blas lighted bell buoy—50 fathoms	28°58.7'	85°30.0'
14 De Soto Canyon	30°06.0'	86°55.0'
15 South of Pensacola	29°46.0'	87°19.0'
16 South of Perdido Bay	29°29.0'	87°27.5'
17 East of North Pass of Mississippi River	29°14.5'	88°28.0'
18 East of South Pass of Mississippi River	29°04.0'	88°49.7' at State and Federal Reef Fish Management Boundary
Then westerly along the seaward limit of the State and Federal Reef Fish Management Boundary to:		
19 South of Southwest Pass of Mississippi River	28°45.8'	89°29.5'
20 Northwest tip of Mississippi Canyon	28°38.5'	90°08.5'
21 West side of Mississippi Canyon	28°34.5'	89°59.5'
22 South of Timbalier Bay	28°22.5'	90°02.5'
23 South of Terrebonne Bay	28°10.5'	90°31.5'
24 South of Freeport	27°58.0'	95°00.0'
25 Off Matagorda Island	27°43.0'	96°02.0'
26 Off Aransas Pass	27°30.0'	96°23.5'
27 Northeast of Port Mansfield	27°00.0'	96°39.0'
28 East of Port Mansfield	26°44.0'	96°37.5'
29 Northeast of Port Isabel	26°22.0'	96°21.0'
30 U.S. and Mexico EEZ boundary	26°00.5'	96°24.5'
Then westerly along U.S. and Mexico EEZ boundary to seaward limit of the State and Federal Reef Fish Management Boundary		

¹ Nearest identifiable landfall, boundary, navigational aid, or submarine area.

TABLE 2 OF APPENDIX B TO PART 622—SEAWARD COORDINATES OF THE STRESSED AREA

Point number and reference location ¹	North lat.	West long.
1 Seaward limit of State and Federal Reef Fish Management Boundary northeast of Dry Tortugas.	24°45.5'	82°41.5'
2 North of Marquesas Keys	24°48.0'	82°06.5'
3 Off Cape Sable	25°15.0'	82°02.0'
4 Off Sanibel Island—Inshore	26°26.0'	82°29.0'
5 Off Sanibel Island—Offshore	26°26.0'	82°59.0'
6 West of Egmont Key	27°30.0'	83°21.5'
7 Off Anclote Keys—Offshore	28°10.0'	83°45.0'
8 Off Anclote Keys—Inshore	28°10.0'	83°14.0'
9 Off Deadman Bay	29°38.0'	84°00.0'
10 Seaward limit of State and Federal Reef Fish Management Boundary east of Cape St. George.	29°35.5'	84°38.6'
Then westerly along the seaward limit of State and Federal Reef Fish Management Boundary to:		
11 Seaward limit of State and Federal Reef Fish Management Boundary south of Cape San Blas.	29°32.2'	85°27.1'
12 Southwest of Cape San Blas	29°30.5'	85°52.0'
13 Off St. Andrew Bay	29°53.0'	86°10.0'
14 De Soto Canyon	30°06.0'	86°55.0'
15 South of Florida and Alabama border	29°34.5'	87°38.0'
16 Off Mobile Bay	29°41.0'	88°00.0'
17 South of Alabama and Mississippi border	30°01.5'	88°23.7'
18 Horn and Chandeleur Islands	30°01.5'	88°39.8' at State and Federal Reef Fish Management Boundary
Then southerly along the seaward limit of State and Federal Reef Fish Management Boundary to:		
19 Seaward limit of State and Federal Reef Fish Management Boundary off Chandeleur Islands.	29°50.8'	88°39.07' at State and Federal Reef Fish Management Boundary
20 Chandeleur Islands	29°35.5'	88°37.0'
21 Seaward limit of State and Federal Reef Fish Management Boundary off North Pass of Mississippi River.	29°21.0'	88°54.43' at State and Federal Reef Fish Management Boundary
Then southerly and westerly along the seaward limit of State and Federal Reef Fish Management Boundary to:		
22 Seaward limit of State and Federal Reef Fish Management Boundary off Southwest Pass of Mississippi River.	29°01.3'	89°34.67' at State and Federal Reef Fish Management Boundary
23 Seaward limit of the State and Federal Reef Fish Management Boundary west of Mississippi River.	29°5.24' at State and Federal Reef Fish Management Boundary.	89°41.0'
Then westerly along the seaward limit of the State and Federal Reef Fish Management Boundary to:		
24 Seaward limit of State and Federal Reef Fish Management Boundary south of Grand Isle.	29°3.03' at State and Federal Reef Fish Management Boundary.	89°56.0'
25 Quick flashing horn buoy south of Isles Dernieres	28°32.5'	90°42.0'
26 Southeast of Calcasieu Pass	29°10.0'	92°37.0'
27 South of Sabine Pass—10 fathoms	29°09.0'	93°41.0'
28 South of Sabine Pass—30 fathoms	28°21.5'	93°28.0'
29 East of Aransas Pass	27°49.0'	96°19.5'
30 East of Baffin Bay	27°12.0'	96°51.0'
31 Northeast of Port Mansfield	26°46.5'	96°52.0'
32 Northeast of Port Isabel	26°21.5'	96°35.0'
33 U.S. and Mexico EEZ boundary	26°00.5'	96°36.0'
Then westerly along U.S. and Mexico EEZ boundary to seaward limit of the State and Federal Reef Fish Management Boundary		

¹ Nearest identifiable landfall, boundary, navigational aid, or submarine area.

APPENDIX C TO PART 622—FISH LENGTH MEASUREMENTS

Figure 1 of Appendix C to Part 622--Carapace Length

Figure 2. Appendix C to Part 622—
Illustration of length measurements.

APPENDIX D TO PART 622— SPECIFICATIONS FOR CERTIFIED BRDS

A. *Extended Funnel.*

1. *Description.* The extended funnel BRD consists of an extension with large-mesh webbing in the center (the large-mesh escape section) and small-mesh webbing on each end held open by a semi-rigid hoop. A funnel of small-mesh webbing is placed inside the extension to form a passage for shrimp to the cod end. It also creates an area of reduced water flow to allow for fish escapement

through the large mesh. One side of the funnel is extended vertically to form a lead panel and area of reduced water flow. There are two sizes of extended funnel BRDs, a standard size and an inshore size for small trawls.

2. *Minimum Construction and Installation Requirements for Standard Size.*

(a) *Extension Material.* The small-mesh sections used on both sides of the large-mesh escape section are constructed of 1½ inch (4.13 cm), No. 30 stretched mesh, nylon webbing. The front section is 120 meshes around by 6½

meshes deep. The back section is 120 meshes around by 23 meshes deep.

(b) *Large-Mesh Escape Section.* The large-mesh escape section is constructed of 8 to 10 inch (20.3 to 25.4 cm), stretched mesh, webbing. This section is cut on the bar to form a section that is 15 inches (38.1 cm) in length by 95 inches (241.3 cm) in circumference. The leading edge is attached to the 6½-mesh extension section and the rear edge is attached to the 23-mesh extension section.

(c) *Funnel.* The funnel is constructed of 1½ inch (3.81 cm), stretched mesh, No. 30 depth-stretched and heat-set polyethylene webbing. The circumference of the leading edge is 120 meshes and the back edge is 78 meshes. The short side of the funnel is 34 to 36 inches (86.4 to 91.4 cm) long and the opposite side of the funnel extends an additional 22 to 24 inches (55.9 to 61.0 cm). The circumference of the leading edge of the funnel is attached to the forward small-mesh section three meshes forward of the large-mesh escape section and is evenly sewn, mesh for mesh, to the small-mesh section. The after edge of the funnel is attached to the after small-mesh section at its top and bottom eight meshes back from the large-mesh escape panel. Seven meshes of the top and seven meshes of the bottom of the funnel are attached to eight meshes at the top and bottom of the small-mesh section, such eight meshes being located immediately adjacent to the top and bottom centers of the small-mesh section on the side of the funnel's extended side. The extended side of the funnel is sewn at its top and bottom to the top and bottom of the small-mesh section, extending at an angle toward the top and bottom centers of the small-mesh section.

(d) *Semi-Rigid Hoop.* A 30-inch (76.2-cm) diameter hoop constructed of plastic-coated trawl cable, swaged together with a ¾-inch (9.53-mm) micropress sleeve, is installed five meshes behind the trailing edge of the large-mesh escape section. The extension webbing must be laced to the ring around the entire circumference and must be equally distributed on the hoop, that is, 30 meshes must be evenly attached to each quadrant.

(e) *Installation.* The extended funnel BRD is attached 8 inches (20.3 cm) behind the posterior edge of the TED. If it is attached behind a soft TED, a second semi-rigid hoop, as prescribed in paragraph A.2.(d), must be installed in the front section of the BRD extension webbing at the leading edge of the funnel. The cod end of the trawl net is attached to the trailing edge of the BRD.

3. Minimum Construction and Installation Requirements for Inshore Size.

(a) *Extension Material.* The small-mesh sections used on both sides of the large-mesh escape section are constructed of 1¾ inch (3.5 cm), No. 18 stretched mesh, nylon webbing. The front section is 120 meshes around by 6½

meshes deep. The back section is 120 meshes around by 23 meshes deep.

(b) *Large-Mesh Escape Section.* The large-mesh escape section is constructed of 8 to 10 inch (20.3 to 25.4 cm), stretched mesh, webbing. This section is cut on the bar to form a section that is 15 inches (38.1 cm) by 75 inches (190.5 cm) in circumference. The leading edge is attached to the 6½-mesh extension section and the rear edge is attached to the 23-mesh extension section.

(c) *Funnel.* The funnel is constructed of 1¾ inch (3.5 cm), stretched mesh, No. 18 depth-stretched and heat-set polyethylene webbing. The circumference of the leading edge is 120 meshes and the back edge is 78 meshes. The short side of the funnel is 30 to 32 inches (76.2 to 81.3 cm) long and the opposite side of the funnel extends an additional 20 to 22 inches (50.8 to 55.9 cm). The circumference of the leading edge of the funnel is attached to the forward small-mesh section three meshes forward of the large-mesh escape section and is evenly sewn, mesh for mesh, to the small-mesh section. The after edge of the funnel is attached to the after small-mesh section at its top and bottom eight meshes back from the large-mesh escape panel. Seven meshes of the top and seven meshes of the bottom of the funnel are attached to eight meshes at the top and bottom of the small-mesh section, such eight meshes being located immediately adjacent to the top and bottom centers of the small-mesh section on the side of the funnel's extended side. The extended side of the funnel is sewn at its top and bottom to the top and bottom of the small-mesh section, extending at an angle toward the top and bottom centers of the small-mesh section.

(d) *Semi-Rigid Hoop.* A 24-inch (61.0-cm) diameter hoop constructed of plastic-coated trawl cable, swaged together with a ¾-inch (9.53-mm) micropress sleeve, is installed five meshes behind the trailing edge of the large mesh section. The extension webbing must be laced to the ring around the entire circumference and must be equally distributed on the hoop, that is, 30 meshes must be evenly attached to each quadrant.

(e) *Installation.* The extended funnel BRD is attached 8 inches (20.3 cm) behind the posterior edge of the TED. If it is attached behind a soft TED, a second semi-rigid hoop, as prescribed in paragraph A.3.(d), must be installed in the front section of the BRD extension webbing at the leading edge of the funnel. The cod end of the trawl net is attached to the trailing edge of the BRD.

B. *Expanded Mesh.* The expanded mesh BRD is constructed and installed exactly the same as the standard size extended funnel BRD, except that one side of the funnel is not extended to form a lead panel.

C. *Fisheye.*

1. *Description.* The fisheye BRD is a cone-shaped rigid frame constructed from aluminum or steel rod of at least ¼ inch (6.35-mm) diameter, which is inserted into the cod end to form an escape opening.

2. *Minimum Construction and Installation Requirements.* The fisheye has a minimum escape opening dimension of 5 inches (12.7 cm) and a minimum total escape opening area of 36 in² (91.4 cm²). When the fisheye BRD is installed, no part of the lazy line attachment system (*i.e.*, any mechanism, such as elephant ears or choker straps, used to attach the lazy line to the cod end) may overlap the fisheye escape opening when the fisheye is installed aft of the attachment point of the cod end retrieval system.

(a) In the Gulf EEZ, the fisheye BRD must be installed at the top center of the cod end of the trawl to create an opening in the trawl facing in the direction of the mouth of the trawl no further forward than 9 ft (2.7 m) from the cod end drawstring (tie-off rings).

(b) In the South Atlantic EEZ, the fisheye BRD must be installed at the top center of the cod end of the trawl to create an escape opening in the trawl facing the direction of the mouth of the trawl no further forward than 11 ft (3.4 m) from the cod end tie-off rings.

D. Gulf fisheye.

1. *Description.* The Gulf fisheye is a cone-shaped rigid frame constructed from aluminum or steel rod of at least ¼ inch (6.35-mm) diameter, which is inserted into the top center of the cod end, and is offset not more than 15 meshes perpendicular to the top center of the cod end to form an escape opening.

2. *Minimum Construction and Installation Requirements.* The Gulf fisheye has a minimum escape opening dimension of 5 inches (12.7 cm) and a minimum total escape opening area of 36 in² (91.4 cm²). To be used in the South Atlantic EEZ, the Gulf fisheye BRD must be installed in the cod end of the trawl to create an escape opening in the trawl, facing in the direction of the mouth of the trawl, no less than 8.5 ft (2.59 m) and no further forward than 12.5 ft (3.81 m) from the cod end tie-off rings, and may be offset no more than 15 meshes perpendicular to the top center of the cod end. When the Gulf fisheye BRD is installed, no part of the lazy line attachment system (*i.e.*, any mechanism, such as elephant ears or choker straps, used to attach the lazy line to the cod end) may overlap the fisheye escape opening when the fisheye is installed aft of the attachment point of the cod end retrieval system.

E. Jones-Davis.

1. *Description.* The Jones-Davis BRD is similar to the expanded mesh and the extended funnel BRDs except that the fish escape openings are windows cut around the funnel rather than large-mesh sections. In addition, a webbing cone fish deflector is installed behind the funnel.

2. *Minimum Construction and Installation Requirements.* The Jones-Davis BRD must contain all of the following.

(a) *Webbing extension.* The webbing extension must be constructed from a single piece of 1½-inch (3.5-cm) stretch mesh number 30 nylon 42 meshes by 120 meshes. A tube is formed from the extension webbing by sewing the 42-mesh side together.

(b) *28-inch (71.1-cm) cable hoop.* A single hoop must be constructed of ½-inch (1.3-cm) steel cable 88 inches (223.5 cm) in length. The cable must be joined at its ends by a 3-inch (7.6-cm) piece of ½-inch (1.3-cm) aluminum pipe and pressed with a ¾-inch (0.95-cm) die to form a hoop. The inside diameter of this hoop must be between 27 and 29 inches (68.6 and 73.7 cm). The hoop must be attached to the extension webbing 17½ meshes behind the leading edge. The extension webbing must be quartered and attached in four places around the hoop, and every other mesh must be attached all the way around the hoop using number 24 twine or larger. The hoop must be laced with ¾-inch (0.95-cm) polypropylene or polyethylene rope for chaffing.

(c) *24-inch (61.0-cm) hoop.* A single hoop must be constructed of either number 60 twine 80 inches (203.2 cm) in length or ¾-inch (0.95-cm) steel cable 75½ inches (191.8 cm) in length. If twine is used, the twine must be laced in and out of the extension webbing 39 meshes behind the leading edge, and the ends must be tied together. If cable is used, the cable must be joined at its ends by a 3-inch (7.6-cm) piece of ¾-inch (0.95-cm) aluminum pipe and pressed together with a ¼-inch (0.64-cm) die to form a hoop. The inside diameter of this hoop must be between 23 and 25 inches (58.4 and 63.4 cm). The hoop must be attached to the extension webbing 39 meshes behind the leading edge. The extension webbing must be quartered and attached in four places around the hoop, and every other mesh must be attached all the way around the hoop using number 24 twine or larger. The hoop must be laced with ¾-inch (0.95-cm) polypropylene or polyethylene rope for chaffing.

(d) *Funnel.* The funnel must be constructed from four sections of 1½-inch (3.8-cm) heat-set and depth-stretched polypropylene or polyethylene webbing. The two side sections must be rectangular in shape, 29½ meshes on the leading edge by 23 meshes deep. The top and bottom sections are 29½ meshes on the leading edge by 23 meshes deep and tapered 1 point 2 bars on both sides down to 8 meshes across the back. The four sections must be sewn together down the 23-mesh edge to form the funnel.

(e) *Attachment of the funnel in the webbing extension.* The funnel must be installed two meshes behind the leading edge of the extension starting at the center seam of the extension and the center mesh of the funnel's

top section leading edge. On the same row of meshes, the funnel must be sewn evenly all the way around the inside of the extension. The funnel's top and bottom back edges must be attached one mesh behind the 28-inch (71.1-cm) cable hoop (front hoop). Starting at the top center seam, the back edge of the top funnel section must be attached four meshes each side of the center. Counting around 60 meshes from the top center, the back edge of the bottom section must be attached 4 meshes on each side of the bottom center. Clearance between the side of the funnel and the 28-inch (71.1-cm) cable hoop (front hoop) must be at least 6 inches (15.2 cm) when measured in the hanging position.

(f) *Cutting the escape openings.* The leading edge of the escape opening must be located within 18 inches (45.7 cm) of the posterior edge of the turtle excluder device (TED) grid. The area of the escape opening must total at least 864 in² (5,574.2 cm²). Two escape openings 10 meshes wide by 13 meshes deep must be cut 6 meshes apart in the extension webbing, starting at the top center extension seam, 3 meshes back from the leading edge and 16 meshes to the left and to the right (total of four openings). The four escape openings must be double selvaged for strength.

(g) *Alternative Method for Constructing the Funnel and Escape Openings.* The following method for constructing the funnel and escape openings may be used instead of the method described in paragraphs F.2.d., F.2.e., and F.2.f. of this section. With this alternative method, the funnel and escape openings are formed by cutting a flap in each side of the extension webbing; pushing the flaps inward; and attaching the top and bottom edges along the bars of the extension webbing to form the v-shape of the funnel. Minimum requirements applicable to this method include: The funnel's top and bottom back edges must be attached one mesh behind the 28-inch (71.1-cm) cable hoop (front hoop); clearance between the side of the funnel and the 28-inch (71.1-cm) cable hoop (front hoop) must be at least 6 inches (15.2 cm) when measured in the hanging position; the leading edge of the escape opening must be located within 18 inches (45.7 cm) of the posterior edge of the turtle excluder device (TED) grid; and, the area of the escape opening must total at least 864 in² (5,574.2 cm²). To construct the funnel and escape openings using this method, begin 3½ meshes from the leading edge of the extension, at the top center seam, count over 18 meshes on each side, and cut 13 meshes toward the back of the extension. Turn parallel to the leading edge, and cut 26 meshes toward the bottom center of the extension. Next, turn parallel to the top center seam, and cut 13 meshes forward toward the leading edge, creating a flap of webbing 13 meshes by 26 meshes by 13 meshes. Lengthen the flap to 18 meshes by

adding a 4½-mesh by 26-mesh rectangular section of webbing to the 26-mesh edge. Attach the 18-mesh edges to the top and bottom of the extension by sewing 2 bars of the extension to 1 mesh on the flap in toward the top center and bottom center of the extension, forming the exit opening and the funnel. Connect the two flaps together in the center with a 7-inch piece of number 42 twine to allow adequate clearance for fish escapement between the flaps and the side openings. On each side, sew a 6-mesh by 10½-mesh section of webbing to 6 meshes of the center of the 26-mesh cut on the extension and 6 meshes centered between the 13-mesh cuts 3½ meshes from the leading edge. This forms two 10-mesh by 13-mesh openings on each side.

(h) *Cone fish deflector.* The cone fish deflector is constructed of 2 pieces of 1½-inch (4.13-cm) polypropylene or polyethylene webbing, 40 meshes wide by 20 meshes in length and cut on the bar on each side forming a triangle. Starting at the apex of the two triangles, the two pieces must be sewn together to form a cone of webbing. The apex of the cone fish deflector must be positioned within 10–14 inches (25.4–35.6 cm) of the posterior edge of the funnel.

(i) *11-inch (27.9-cm) cable hoop for cone deflector.* A single hoop must be constructed of ⅝-inch (0.79-cm) or ¾-inch (0.95-cm) cable 34½ inches (87.6 cm) in length. The ends must be joined by a 3-inch (7.6-cm) piece of ⅝-inch (0.95-cm) aluminum pipe pressed together with a ¼-inch (0.64-cm) die. The hoop must be inserted in the webbing cone, attached 10 meshes from the apex and laced all the way around with heavy twine.

(j) *Installation of the cone in the extension.* The cone must be installed in the extension 12 inches (30.5 cm) behind the back edge of the funnel and attached in four places. The midpoint of a piece of number 60 twine 4 ft (1.22 m) in length must be attached to the apex of the cone. This piece of twine must be attached to the 28-inch (71.1-cm) cable hoop at the center of each of its sides; the points of attachment for the two pieces of twine must be measured 20 inches (50.8 cm) from the midpoint attachment. Two 8-inch (20.3-cm) pieces of number 60 twine must be attached to the top and bottom of the 11-inch (27.9-cm) cone hoop. The opposite ends of these two pieces of twine must be attached to the top and bottom center of the 24-inch (61-cm) cable hoop; the points of attachment for the two pieces of twine must be measured 4 inches (10.2 cm) from the points where they are tied to the 11-inch (27.9-cm) cone hoop.

F. Modified Jones-Davis.

1. *Description.* The Modified Jones-Davis BRD is a variation to the alternative funnel construction method of the Jones-Davis BRD except the funnel is assembled by using depth-stretched and heat-set polyethylene webbing instead of the flaps formed from the

extension webbing. In addition, no hoops are used to hold the BRD open.

2. *Minimum Construction and Installation Requirements.* The Modified Jones-Davis BRD must contain all of the following.

(a) *Webbing extension.* The webbing extension must be constructed from a single rectangular piece of 1½-inch (4.1-cm) stretch mesh number 30 nylon with dimensions of 39½ meshes by 150 meshes. A tube is formed from the extension webbing by sewing the 39½-mesh-sides together.

(b) *Funnel.* The funnel must be constructed from two sections of 1½-inch (4.1-cm) heat-set and depth-stretched polypropylene or polyethylene webbing. The two side sections must be rectangular in shape, 25 meshes on the leading edge by 21 meshes deep. The 25-mesh leading edge of each polyethylene webbing section must be sewn evenly two meshes in from the front of the extension webbing starting 25 meshes from the top center on each side. The 21-mesh edge must be sewn to the extension webbing on a 9-bar and 1-mesh angle in the top and bottom, forming a V-shape funnel.

(c) *Cutting the escape opening.* The leading edge of the escape openings must be located within 18 inches (45.7 cm) of the posterior edge of the turtle excluder device (TED) grid. The area of the escape opening must total at least 635 in² (4,097 cm²). Two escape openings, 6 meshes wide by 12 meshes deep, must be cut 4 meshes apart in the extension webbing, starting at the top center extension seam, 7 meshes back from the leading edge, and 30 meshes to the left and to the right (total of four openings). The four escape openings must be double selvaged for strength.

(d) *Cone fish deflector.* The cone fish deflector is constructed of 2 pieces of 1½-inch (4.1-cm) polypropylene or polyethylene webbing, 40 meshes wide by 20 meshes in length and cut on the bar on each side forming a triangle. Starting at the apex of the two triangles, the two pieces must be sewn together to form a cone of webbing. The apex of the cone fish deflector must be positioned within 12 inches (30.5 cm) of the posterior edge of the funnel.

(e) *11-inch (27.9-cm) cable hoop for cone deflector.* A single hoop must be constructed of ¾-inch (0.79-cm) or ¾-inch (0.95-cm) cable 34½ inches (87.6 cm) in length. The ends must be joined by a 3-inch (7.6-cm) piece of ¾-inch (0.95-cm) aluminum pipe pressed together with a ¼-inch (0.64-cm) die. The hoop must be inserted in the webbing cone, attached 10 meshes from the apex and laced all the way around with heavy twine.

(f) *Installation of the cone in the extension.* The apex of the cone must be installed in the extension within 12 inches (30.5 cm) behind the back edge of the funnel and attached in four places. The midpoint of a piece of number 60 twine (or at least 4-mesh wide strip of number 21 or heavier webbing) 3 ft (1.22 m) in

length must be attached to the apex of the cone. This piece of twine or webbing must be attached within 5 meshes of the aft edge of the funnel at the center of each of its sides. Two 12-inch (30.5-cm) pieces of number 60 (or heavier) twine must be attached to the top and bottom of the 11-inch (27.9-cm) cone hoop. The opposite ends of these two pieces of twine must be attached to the top and bottom center of the extension webbing to keep the cone from inverting into the funnel.

G. [Reserved]

H. *Cone Fish Deflector Composite Panel.* 1. *Description.* The Cone Fish Deflector Composite Panel BRD is a variation to the alternative funnel construction method of the Jones-Davis BRD, except the funnel is assembled by using depth-stretched and heat-set polyethylene webbing with square mesh panels on the inside instead of the flaps formed from the extension webbing. In addition, no hoops are used to hold the BRD open.

2. *Minimum Construction and Installation Requirements.* The Cone Fish Deflector Composite Panel BRD must contain all of the following:

(a) *Webbing extension.* The webbing extension must be constructed from a single rectangular piece of 1½-inch to 1¾-inch (3.8-cm to 4.5-cm) stretch mesh with dimensions of 24½ meshes by 150 to 160 meshes. A tube is formed from the extension webbing piece by sewing the 24½-mesh sides together. The leading edge of the webbing extension must be attached no more than 4 meshes from the posterior edge of the TED grid.

(b) *Funnel.* The V-shaped funnel consists of two webbing panels attached to the extension along the leading edge of the panels. The top and bottom edges of the panels are sewn diagonally across the extension toward the center to form the funnel. The panels are 2-ply in design, each with an inner layer of 1½-inch to 1¾-inch (3.8-cm to 4.1-cm) heat-set and depth-stretched polyethylene webbing and an outer layer constructed of no larger than 2-inch (5.1-cm) square mesh webbing (1-inch bar). The inner webbing layer must be rectangular in shape, 36 meshes on the leading edge by 20 meshes deep. The 36-mesh leading edges of the polyethylene webbing should be sewn evenly to 24 meshes of the extension webbing 1½ meshes from and parallel to the leading edge of the extension starting 12 meshes up from the bottom center on each side. Alternately sew 2 meshes of the polyethylene webbing to 1 mesh of the extension webbing then 1 mesh of the polyethylene webbing to 1 mesh of the extension webbing toward the top. The bottom 20-mesh edges of the polyethylene layers are sewn evenly to the extension webbing on a 2 bar 1 mesh angle toward the bottom back center forming a v-shape in the bottom of the extension webbing. The top 20-mesh edges of the polyethylene layers are sewn evenly

along the bars of the extension webbing toward the top back center. The square mesh layers must be rectangular in shape and constructed of no larger than 2-inch (5.1-cm) webbing that is 18 inches (45.7 cm) in length on the leading edge. The depth of the square mesh layer must be no more than 2 inches (5.1 cm) less than the 20 mesh side of the inner polyethylene layer when stretched taught. The 18-inch (45.7-cm) leading edge of each square mesh layer must be sewn evenly to the 36-mesh leading edge of the polyethylene section and the sides are sewn evenly (in length) to the 20-mesh edges of the polyethylene webbing. This will form a v-shape funnel using the top of the extension webbing as the top of the funnel and the bottom of the extension webbing as the bottom of the funnel.

(c) *Cutting the escape opening.* There are two escape openings on each side of the funnel. The leading edge of the escape openings must be located on the same row of meshes in the extension webbing as the leading edge of the composite panels. The lower openings are formed by starting at the first attachment point of the composite panels and cutting 9 meshes in the extension webbing on an even row of meshes toward the top of the extension. Next, turn 90 degrees and cut 15 points on an even row toward the back of the extension webbing. At this point turn and cut 18 bars toward the bottom front of the extension webbing. Finish the escape opening by cutting 6 points toward the original starting point. The top escape openings start 5 meshes above and mirror the lower openings. Starting at the leading edge of the composite panel and 5 meshes above the lower escape opening, cut 9 meshes in the extension on an even row of meshes toward the top of the extension. Next, turn 90 degrees, and cut 6 points on an even row toward the back of the extension webbing. Then cut 18 bars toward the bottom back of the extension. To complete the escape opening, cut 15 points forward toward the original starting point. The area of each escape opening must total at least 212 in² (1,368 cm²). The four escape openings must be double selvaged for strength.

(d) *Cone fish deflector.* The cone fish deflector is constructed of 2 pieces of 1½-inch (4.1-cm) polypropylene or polyethylene webbing, 40 meshes wide by 20 meshes in length and cut on the bar on each side forming a triangle. Starting at the apex of the two triangles, the two pieces must be sewn together to form a cone of webbing. The apex of the cone fish deflector must be positioned within 12 inches (30.5 cm) of the posterior edge of the funnel.

(e) *11-inch (27.9-cm) cable hoop for cone deflector.* A single hoop must be constructed of ¾-inch (0.79-cm) or ¾-inch (0.95-cm) cable 34½ inches (87.6 cm) in length. The ends must be joined by a 3-inch (7.6-cm) piece of ¾-inch

(0.95-cm) aluminum pipe pressed together with a ¼-inch (0.64-cm) die. The hoop must be inserted in the webbing cone, attached 10 meshes from the apex and laced all the way around with heavy twine.

(f) *Installation of the cone in the extension.* The apex of the cone must be installed in the extension within 12 inches (30.5 cm) behind the back edge of the funnel and attached in four places. The midpoint of a piece of number 60 twine (or at least 4-mesh wide strip of number 21 or heavier webbing) 3 ft (1.22 m) in length must be attached to the apex of the cone. This piece of twine or webbing must be attached within 5 meshes of the aft edge of the funnel at the center of each of its sides. Two 12-inch (30.5-cm) pieces of number 60 (or heavier) twine must be attached to the top and bottom of the 11-inch (27.9-cm) cone hoop. The opposite ends of these two pieces of twine must be attached to the top and bottom center of the extension webbing to keep the cone from inverting into the funnel.

1. Square Mesh Panel (SMP) Composite Panel

1. *Description.* The SMP is a panel of square mesh webbing placed in the top of the cod end to provide finfish escape openings.

2. *Minimum Construction and Installation Requirements.* The SMP Composite Panel BRD must contain all of the following:

(a) *Webbing extension.* The webbing extension must be constructed from a single rectangular piece of 1½-inch to 1¾-inch (3.8-cm to 4.5-cm) stretch mesh with dimensions of 24½ meshes by 150 to 160 meshes. A tube is formed from the extension webbing piece by sewing the 24½-mesh sides together. The leading edge of the webbing extension must be attached no more than 4 meshes from the posterior edge of the TED grid.

(b) *Funnel.* The V-shaped funnel consists of two webbing panels attached to the extension along the leading edge of the panels. The top and bottom edges of the panels are sewn diagonally across the extension toward the center to form the funnel. The panels are 2-ply in design, each with an inner layer of 1½-inch to 1¾-inch (3.8-cm to 4.1-cm) heat-set and depth-stretched polyethylene webbing and an outer layer constructed of no larger than 2-inch (5.1-cm) square mesh webbing (1-inch bar). The inner webbing layer must be rectangular in shape, 36 meshes on the leading edge by 20 meshes deep. The 36-mesh leading edges of the polyethylene webbing should be sewn evenly to 24 meshes of the extension webbing 1½ meshes from and parallel to the leading edge of the extension starting 12 meshes up from the bottom center on each side. Alternately sew 2 meshes of the polyethylene webbing to 1 mesh of the extension webbing then 1 mesh of the polyethylene webbing to 1 mesh of the extension webbing toward the top. The bottom 20-mesh edges of the polyethylene layers are sewn evenly to the extension webbing on a 2 bar 1 mesh angle toward the bottom back center

forming a v-shape in the bottom of the extension webbing. The top 20-mesh edges of the polyethylene layers are sewn evenly along the bars of the extension webbing toward the top back center. The square mesh layers must be rectangular in shape and constructed of no larger than 2-inch (5.1-cm) webbing that is 18 inches (45.7 cm) in length on the leading edge. The depth of the square mesh layer must be no more than 2 inches (5.1 cm) less than the 20 mesh side of the inner polyethylene layer when stretched taught. The 18-inch (45.7-cm) leading edge of each square mesh layer must be sewn evenly to the 36-mesh leading edge of the polyethylene section and the sides are sewn evenly (in length) to the 20-mesh edges of the polyethylene webbing. This will form a v-shape funnel using the top of the extension webbing as the top of the funnel and the bottom of the extension webbing as the bottom of the funnel.

(c) *Cutting the escape opening.* There are two escape openings on each side of the funnel. The leading edge of the escape openings must be located on the same row of meshes in the extension webbing as the leading edge of the composite panels. The lower openings are formed by starting at the first attachment point of the composite panels and cutting 9 meshes in the extension webbing on an even row of meshes toward the top of the extension. Next, turn 90 degrees and cut 15 points on an even row toward the back of the extension webbing. At this point turn and cut 18 bars toward the bottom front of the extension webbing. Finish the escape opening by cutting 6 points toward the original starting point. The top escape openings start 5 meshes above and mirror the lower openings. Starting at the leading edge of the

composite panel and 5 meshes above the lower escape opening, cut 9 meshes in the extension on an even row of meshes toward the top of the extension. Next, turn 90 degrees, and cut 6 points on an even row toward the back of the extension webbing. Then cut 18 bars toward the bottom back of the extension. To complete the escape opening, cut 15 points forward toward the original starting point. The area of each escape opening must total at least 212 in² (1,368 cm²). The four escape openings must be double selvaged for strength.

(d) *SMP.* The SMP is constructed from a single piece of square mesh webbing with a minimum dimension of 5 squares wide and 12 squares in length with a minimum mesh size of 3-inch (76-mm) stretched mesh. The maximum twine diameter of the square mesh is number 96 twine (4 mm).

(e) *Cutting the SMP escape opening.* The escape opening is a rectangular hole cut in the top center of the cod end webbing. The posterior edge of the escape opening must be placed no farther forward than 8 ft (2.4 m) from the cod end drawstring (tie-off rings). The width of the escape opening, as measured across the cod end, must be four cod end meshes per square of the SMP (*i.e.*, a cut of 20 cod end meshes for a SMP that is 5 meshes wide). The stretched mesh length of the escape opening must be equal to the total length of the SMP. No portion of the SMP escape opening may be covered with additional material or netting such as chaffing webbing, which might impede or prevent fish escapement.

(f) *Installation of the SMP.* The SMP must be attached to the edge of the escape opening evenly around the perimeter of the escape opening cut with heavy twine.

APPENDIX E TO PART 622—CARIBBEAN ISLAND/ISLAND GROUP MANAGEMENT AREAS

TABLE 1 OF APPENDIX E TO PART 622—*Coordinates of the Puerto Rico Management Area.*

The Puerto Rico management area is bounded by rhumb lines connecting, in order, the following points.

Point	North latitude	West longitude
A (intersects with the International/EEZ boundary)	19°37'29"	65°20'57"
B	18°25'46.3015"	65°06'31.866"
From Point B, proceed southerly along the 3-nautical mile Territorial boundary of the St. Thomas/St. John island group to Point C.		
C	18°13'59.0606"	65°05'33.058"
D	18°01'16.9636"	64°57'38.817"
E	17°30'00.000"	65°20'00.1716"
F	16°02'53.5812"	65°20'00.1716"
From Point F, proceed southwesterly, then northerly, then easterly, and finally southerly along the International/EEZ boundary to Point A.		
A (intersects with the International/EEZ boundary)	19°37'29"	65°20'57"

TABLE 2 OF APPENDIX E TO PART 622—*Coordinates of the St. Croix Management Area.*

The St. Croix management area is bounded by rhumb lines connecting, in order, the following points.

Fishery Conservation and Management

Pt. 622, App. F

Point	North latitude	West longitude
G	18°03'03"	64°38'03"
From Point G, proceed easterly, then southerly, then southwesterly along the International/EEZ boundary to Point F.		
F	16°02'53.5812"	65°20'00.1716"
E	17°30'00.000"	65°20'00.1716"

TABLE 3 OF APPENDIX E TO PART 622—*Coordinates of the St. Thomas/St. John Management Area.*

The St. Thomas/St. John management area is bounded by rhumb lines connecting, in order, the following points.

Point	North latitude	West longitude
A (intersects with the International/EEZ boundary)	19°37'29"	65°20'57"
From Point A, proceed southeasterly along the International/EEZ boundary to Point G.		
G	18°03'03"	64°38'03"
D	18°01'16.9636"	64°57'38.817"
C	18°13'59.0606"	65°05'33.058"
From Point C, proceed northerly along the 3-nautical mile Territorial boundary of the St. Thomas/St. John island group to Point B.		
B	18°25'46.3015"	65°06'31.866"
A (intersects with the International/EEZ boundary)	19°37'29"	65°20'57"

[78 FR 33258, June 4, 2013]

APPENDIX F TO PART 622—SPECIFICATIONS FOR SEA TURTLE RELEASE GEAR AND HANDLING REQUIREMENTS

A. Sea Turtle Release Gear

1. *Long-handled line clipper or cutter.* Line cutters are intended to cut fishing line as close as possible to the hook, and assist in removing line from an entangled sea turtle to minimize any remaining gear upon release. One long-handled line clipper or cutter and one set of replacement blades are required to be on board. The minimum design standards are as follows:

(a) *A protected and secured cutting blade.* The cutting blade(s) must be capable of cutting 2.0 to 2.1-mm (0.078 to 0.083-inch) diameter monofilament line (approximately 400 to 450-lb test strength) or polypropylene multi-strand material, known as braided or tarred mainline, and the cutting blade must be maintained in working order. The cutting blade must be curved, recessed, contained in a holder, or otherwise designed to facilitate its safe use so that direct contact between the cutting surface and the sea turtle or the user is prevented. The cutting instrument must be securely attached to an extended reach handle and the blade(s) must be easily replaceable during a trip if necessary. The extra set of replacement blades must meet these standards and be carried on board to replace all cutting surfaces on the line cutter or clipper.

(b) *An extended reach handle.* The line cutter blade must be securely fastened to an ex-

tended reach handle or pole with a minimum length equal to or greater than 150 percent of the freeboard, or a minimum length of 6 ft (1.8 m), whichever is greater. The extended reach handle may break down into sections for storage, but it is not required. There is no restriction on the type of material used to construct this handle as long as it is sturdy and facilitates the secure attachment of the cutting blade.

2. *Long-handled dehooker for internal hooks.* One long-handled dehooker to remove internal hooks from sea turtles that cannot be brought on board is required on the vessel. It should also be used to engage an unattached hook when a sea turtle is entangled but not hooked, and line is being removed. The design must shield the point of the hook and prevent the hook from re-engaging during the removal process. The minimum design standards are as follows:

(a) *Hook removal device.* The dehooker must be constructed of 3/16-inch (4.8-mm) to 5/16-inch (7.9-mm) diameter 316L or 304L stainless steel and have a dehooking end no larger than 1 1/8 inches (4.8 cm) outside diameter. The dehooker must securely engage and control the leader while shielding the point to prevent the hook from re-engaging during removal. It may not have any unprotected terminal points (including blunt ones), as these could cause injury to the esophagus during hook removal. The dehooker must be of a size appropriate to secure the range of hook sizes and styles used on the vessel.

(b) *Extended reach handle.* The dehooking end that secures the fishhook must be securely fastened to an extended reach handle

or pole with a minimum length equal to or greater than 150 percent of the freeboard, or a minimum of 6 ft (1.8 m), whichever is greater. The extended reach handle may break down into sections for storage, but it is not required. The handle must be sturdy and strong enough to facilitate the secure attachment of the dehooking end.

3. *Long-handled dehooker for external hooks.* One long-handled dehooker to remove external hooks from sea turtles that cannot be brought on board is required on the vessel. The long-handled dehooker for internal hooks described in paragraph A.2. of this appendix may be used to comply with this requirement. The minimum design standards are as follows:

(a) *Hook removal device.* A long-handled dehooker must be constructed of $\frac{3}{16}$ -inch (4.8-mm) to $\frac{1}{2}$ -inch (7.9-mm) diameter 316L or 304L stainless steel and have a dehooking end no larger than $1\frac{1}{4}$ inches (4.8 cm) outside diameter. The dehooking end that secures the fishhook must be blunt with all edges rounded. The dehooker must be of a size appropriate to secure the range of hook sizes and styles used on the vessel.

(b) *Extended reach handle.* The handle must be a minimum length equal to the freeboard of the vessel or 6 ft (1.8 m), whichever is greater. The extended reach handle may break down into sections for storage, but it is not required.

4. *Long-handled device to pull an “inverted V”.* One long-handled device to pull an “inverted V” is required on board. This tool is used to pull an “inverted V” in the fishing line when implementing the “inverted V” dehooking technique, as described in the 2019 version of the document titled “Careful Release Protocols for Sea Turtle Release with Minimal Injury,” for dehooking and disentangling sea turtles. A long-handled J-style dehooker as described in paragraph A.3. of this appendix may be used to comply with this requirement. The minimum design standards are as follows:

(a) *Hook end.* This device, such as a standard boat hook or gaff must be constructed of stainless steel or aluminum; if a long-handled J-style dehooker is used to comply with this requirement, it must be constructed of 316L or 304L stainless steel. The semicircular or “J” shaped hook end must be securely attached to the handle to allow the hook end to engage and pull an “inverted V” in the fishing line. A gaff or any other tool with a sharp point is to be used only for holding fishing lines and must never contact the sea turtle.

(b) *Extended reach handle.* The handle must have a minimum length equal to the freeboard of the vessel or must be at least 6 ft (1.8 m) in length, whichever is greater. The extended reach handle may break down into sections for storage, but it is not required. The handle must be sturdy and strong

enough to facilitate the secure attachment of the hook end.

5. *Net or hoist.* One approved net or hoist is required on board. These devices are to be used to facilitate safe handling of sea turtles by allowing them to be brought on board for fishing gear removal, without causing further injury to the animal. Sea turtles must not be brought on board without the use of a net or hoist. There must be no sharp edges or burrs on the hoop or frame, or where the hoop or frame attaches to the handle. There is no requirement for the hoop or frame to be circular as long as it meets the applicable minimum specifications. In this appendix, bar measure means the non-stretched distance between a side knot and a bottom knot of a net mesh; also known as the square mesh measurement. The types and minimum design standards for approved nets and hoists are as follows:

(a) *Dip net*—(i) *Size of the net.* The dip net must have a sturdy net hoop or frame of at least 31 inches (78.7 cm) inside diameter and a bag depth of at least 38 inches (96.5 cm) to accommodate sea turtles up to 3 ft (0.9 m) in carapace (shell) length. The bag mesh size must not exceed 3 inches (7.6 cm), bar measure. The net hoop or frame must be made of a rigid material strong enough to facilitate the sturdy attachment of the net.

(ii) *Extended reach handle.* The dip net hoop or frame must be securely fastened to an extended reach handle or pole with a minimum length equal to or greater than 150 percent of the freeboard, or at least 6 ft (1.8 m) in length, whichever is greater. The handle and net must be able to support a minimum of 100 lb (45.4 kg) without breaking or significant bending or distortion. The extended reach handle may break down into sections for storage, but it is not required.

(b) *Collapsible hoop net*—(i) *Size of the net.* The collapsible hoop net must have a sturdy net hoop of at least 31 inches (78.7 cm) inside diameter and a bag depth of at least 38 inches (96.5 cm) to accommodate sea turtles up to 3 ft (0.9 m) in carapace (shell) length. The bag mesh size must not exceed 3 inches (7.6 cm), bar measure. The net hoop must be strong enough to facilitate the sturdy attachment of the net.

(ii) *Extended reach handle.* The collapsible hoop net must be securely fastened with rope(s) or other line(s) connected to the hoop with a minimum length equal to or greater than 150 percent of the freeboard, or at least 6 ft (1.8 m) in length, whichever is greater. The rope(s) and net must be able to support a minimum of 100 lb (45.4 kg) without breaking or significant distortion.

(c) *Small hoist*—(i) *Size of the hoist.* The sea turtle hoist must have a sturdy net hoop or frame of at least 31 inches (78.7 cm) inside diameter to accommodate sea turtles up to 3 ft (0.9 m) in carapace (shell) length. The net mesh size must not exceed 3 inches (7.6 cm),

bar measure. If polyvinyl chloride, or PVC, pipe is used to construct the hoist, the pipe fittings must be glued together and a minimum strength of Schedule 40 pipe must be used. The hoist hoop or frame must be made of a rigid material strong enough to facilitate the sturdy attachment of the net.

(ii) *Extended reach handle.* The sea turtle hoist must be securely fastened with ropes or other lines connected to the hoop or frame with a minimum length equal to or greater than 150 percent of the freeboard, or at least 6 ft (1.8 m) in length, whichever is greater. The ropes and hoist hoop or frame must be able to support a minimum of 100 lb (45.4 kg) without breaking or significant distortion.

6. *Cushion or support device.* A standard automobile tire free of exposed steel belts, a boat cushion, or any other comparable cushioned and elevated surface, is required for supporting a sea turtle in an upright orientation while the sea turtle is on board. The cushion or support device must be appropriately sized to fully support a range of sea turtle sizes. Any life-saving device that would be used to support a sea turtle on board must be dedicated for that purpose and in addition to all minimum human safety at sea requirements.

7. *Short-handled dehooker for internal hooks.* One short-handled dehooker for removing internal hooks is required on board. This dehooker is designed to remove internal hooks from sea turtles brought on board. This dehooker can also be used on external hooks. The minimum design standards are as follows:

(a) *General.* The dehooker must allow the hook to be secured and the hook point shielded without re-engaging during the removal process. It may not have any unprotected terminal points, including blunt ones, as this could cause injury to the esophagus during hook removal. A sliding plastic bite block must be permanently installed around the shaft to protect the beak and facilitate hook removal in case a sea turtle bites down on the dehooker. The dehooker must be of a size appropriate to secure the range of hook sizes and styles used on the vessel.

(b) *Specifications.* The dehooker must be constructed of 316L or 304L stainless steel. The shaft must be $\frac{3}{16}$ inch (4.8-mm) to $\frac{1}{2}$ inch (7.9-mm) in diameter. The shaft must be 16 to 24 inches (40.6 cm to 60.7 cm) long, with approximately a 4 to 6-inch (10.2 to 15.2-cm) long tube T-handle, wire loop handle, or similar. The bite block must be constructed of a $\frac{3}{4}$ to 1-inch (1.9 to 2.5-cm) inside diameter high impact rated, rigid plastic cylinder (e.g., Schedule 80 PVC) that is 4 to 6 inches (10.2 to 15.2 cm) long to allow for 5 inches (12.7 cm) of slide along the shaft. The dehooking end must be no larger than 1 $\frac{1}{2}$ inches (4.8 cm) outside diameter.

8. *Short-handled dehooker for external hooks.* One short-handled dehooker for external

hooks is required on board. This dehooker is designed to remove external hooks from sea turtles brought on board. The short-handled dehooker for internal hooks required to comply with paragraph A.7. of this appendix may be used to comply with this requirement. The minimum design standards are as follows:

(a) *Fixed handle dehooker—(i) General.* The dehooking end that secures the fishhook must be blunt and all edges rounded. The dehooker must be of a size appropriate to secure the range of hook sizes and styles used on the vessel.

(ii) *Specifications.* The dehooker must be constructed of 316L or 304L stainless steel. The shaft must be $\frac{3}{16}$ inch (4.8-mm) to $\frac{1}{2}$ inch (7.9-mm) in diameter. The shaft must be 16 to 24 inches (40.6 to 60.7 cm) long with approximately a 4 to 6-inch (10.2 to 15.2-cm) long tube T-handle, wire loop handle, or similar.

(b) *Squeeze handle dehooker—(i) General.* The dehooking end that secures the fishhook must be blunt and all edges rounded. The dehooker must be able to secure the range of hook sizes and styles used on the vessel. This dehooker secures a fishhook for removal by squeezing the handles together using one hand to grab and pull the hook into notches at the top of the shaft of the dehooker.

(ii) *Specifications.* The dehooker must be constructed of 316L or 304L stainless steel. The overall length must be a minimum of 11 inches (27.9 cm) long.

9. *Long-nose or needle-nose pliers.* One pair of long-nose or needle-nose pliers is required on board. Required long-nose or needle-nose pliers can be used to remove hooks from the sea turtle's flesh or for removing hooks from the front of the mouth. They can also hold PVC splice couplings in place, when used as mouth gags. The minimum design standards are as follows: The long-nose or needle-nose pliers must be a minimum of 11 inches (27.9 cm) in length. It is recommended that the pliers be constructed of stainless steel or other corrosion resistant metal material.

10. *Bolt cutters.* One pair of bolt cutters is required on board. Required bolt cutters may be used to cut off the eye or barb of a hook to facilitate the hook removal without causing further injury to the sea turtle. They should also be used to cut off as much of the hook as possible, when the remainder of the hook cannot be removed. The minimum design standards are as follows: The bolt cutters must be a minimum of 14 inches (35.6 cm) in total length, with blades that are a minimum of 4 inches (10.2 cm) long and 2 $\frac{1}{4}$ inches (5.7 cm) wide, when closed. Required bolt cutters must be able to cut hard metals, such as stainless or carbon steel hooks, up to $\frac{1}{4}$ -inch (6.4-mm) wire diameter, and they must be capable of cutting through the hooks used on the vessel.

11. *Monofilament line cutters.* One pair of monofilament line cutters is required on board. Required monofilament line cutters must be used to remove fishing line entangling a sea turtle, or to cut fishing line as close to the eye of the hook as possible if the hook is swallowed or if the hook cannot be removed. The minimum design standards are as follows: The monofilament line cutters must be a minimum of 6 inches (15.2 cm) in length. The blades must be a minimum of 1 inch (2.5 cm) in length and $\frac{5}{8}$ inches (1.6 cm) wide, when closed.

12. *Mouth openers or mouth gags.* Required mouth openers and mouth gags are used to open sea turtle mouths, and to keep them open when removing internal hooks from sea turtles brought on board. They must allow access to the hook or line without causing further injury to the sea turtle. Design standards are included in the item descriptions. At least two of the seven different types of mouth openers or mouth gags described in paragraphs A.12.(a) through (g) of this appendix are required.

(a) *A block of hard wood.* A block of hard wood of a type that does not splinter (*e.g.*, maple) with rounded and smoothed edges, or a wooden-handled brush with the bristles removed. The dimensions must be a minimum of 10 inches (25.4 cm) by $\frac{3}{4}$ inch (1.9 cm) by $\frac{3}{4}$ inch (1.9 cm).

(b) *A set of three canine mouth gags.* A set of canine mouth gags must include one of each of the following sizes: small—5 inches (12.7 cm), medium—6 inches (15.2 cm), and large—7 inches (17.8 cm). They must be constructed of stainless steel.

(c) *A set of two sturdy dog chew bones.* Required canine chews must be constructed of durable nylon or thermoplastic polymer, and strong enough to withstand biting without splintering. To accommodate a variety of sea turtle beak sizes, a set must include one large ($5\frac{1}{2}$ to 8 inches (14 cm to 20.3 cm) in length), and one small ($3\frac{1}{2}$ to $4\frac{1}{2}$ inches (8.9 cm to 11.4 cm) in length) canine chew bones.

(d) *A set of two rope loops covered with protective tubing.* A required set consists of two 3-ft (0.9-m) lengths of poly braid rope ($\frac{3}{8}$ -inch (9.5-mm) diameter suggested), each covered with an 8-inch (20.3-cm) long section of $\frac{1}{2}$ -inch (1.3-cm) to $\frac{3}{4}$ -inch (1.9-cm) diameter light duty garden hose or similar flexible tubing, and each rope tied into a loop.

(e) *A hank of rope.* A length of soft braided or twisted nylon rope a minimum of $\frac{3}{16}$ -inch (4.8-mm) diameter must be folded to create a hank, or looped bundle, of rope. The rope must create a hank of 2 to 4 inches (5.1 cm to 10.2 cm) in thickness.

(f) *A set of four PVC splice couplings.* A required set must consist of the following Schedule 40 PVC splice coupling sizes: 1 inch (2.5 cm), $1\frac{1}{4}$ inch (3.2 cm), $1\frac{1}{2}$ inch (3.8 cm), and 2 inches (5.1 cm). PVC splice couplings

are held in a sea turtle's mouth with the needle-nose pliers.

(g) *A large avian oral speculum.* The avian oral speculum must be 9 inches (22.9 cm) long, and constructed of $\frac{3}{16}$ -inch (4.8-mm) wire diameter 304 stainless steel. The wire must be covered with 8 inches (20.3 cm) of clear vinyl tubing ($\frac{1}{8}$ -inch (7.9-mm) outside diameter, $\frac{3}{16}$ -inch (4.8-mm) inside diameter), friction tape, or similar to pad the surface.

B. *Sea turtle handling requirements.* Any sea turtle incidentally captured during fishing operations must be handled, and release gear must be used, in accordance with the NMFS careful handling, resuscitation, and release protocols as specified in this appendix, in the 2019 version of the NMFS document titled, "Careful Release Protocols for Sea Turtle Release with Minimal Injury", or on the NMFS sea turtle handling and release guidelines placard.

1. *Sea turtles brought on board.* When practicable, both active and inactive (comatose) sea turtles must be brought on board the vessel without causing further injury to the animal, using a net or hoist as specified in paragraph A.5. of this appendix. Release gear specified in paragraphs A.6. through A.12. of this appendix must be used to remove fishing gear from sea turtles. All sea turtles up to 3 ft (0.9 m) carapace (shell) length must be brought on board to remove fishing gear if sea conditions allow.

(a) Place a sea turtle upright on its bottom shell on a cushion or support device, as specified in paragraph A.6. of this appendix, to immobilize it and facilitate gear removal. Then, determine if the fishing gear can be removed without causing further injury. All externally embedded hooks should be removed, unless hook removal would result in further injury to the sea turtle. No attempt to remove a hook should be made if it has been swallowed and the insertion point of the hook is not clearly visible, or if it is determined that removal would result in further injury to the sea turtle.

(b) If a hook cannot be removed, remove as much line as possible from the sea turtle and the hook using monofilament cutters as specified in paragraph A.11. of this appendix, and as much of the hook as possible should be removed before releasing the sea turtle, using bolt cutters as specified in paragraph A.10. of this appendix.

(c) If a hook can be removed, an effective technique may be to cut off the barb or the eye of the hook using bolt cutters, and then to slide the hook out. When the hook is visible in the mouth, a mouth opener or mouth gag, as specified in paragraph A.12. of this appendix, may facilitate opening the sea turtle's mouth and keeping the mouth open. Short-handled dehookers for internal hooks, or long-nose or needle-nose pliers, as specified in paragraphs A.7. and A.8. of this appendix, respectively, should be used to remove

visible hooks from the mouth that have not been swallowed on boated sea turtles, as appropriate.

(d) If a sea turtle appears comatose or inactive, follow the NMFS resuscitation protocols to attempt revival before its release. As much gear as possible must be removed from the sea turtle without causing further injury prior to its release.

(e) *Sea turtle resuscitation.* Resuscitation must be attempted on any sea turtle that is comatose or appears inactive by the following methods:

(i) Place the sea turtle upright on its bottom shell and elevate its hindquarters at least 6 inches (15.2 cm) to drain any water from the sea turtle for a period of at least 4 hours and up to 24 hours. The amount of the elevation depends on the size of the sea turtle; greater elevations are needed for larger sea turtles.

(ii) Periodically rock the sea turtle gently from left to right by holding the outer edge of the shell (carapace) and lift one side about 3 inches (7.6 cm), and then alternate to the other side.

(iii) The sea turtle being resuscitated must be shaded and kept damp or moist. Do not put the sea turtle into a container holding water. A water-soaked towel placed over the head, shell, and flippers is the most effective method to keep a sea turtle moist.

(iv) Gently touch the corner of the eye and pinch the tail (reflex test) periodically to see if there is a response indicating the sea turtle may be recovering.

(f) *Sea turtle release.* A sea turtle that is actively moving or determined to be dead as described in paragraph B.1.(g) of this appendix must be released. Release the sea turtle when fishing gear is not in use to avoid recapturing the sea turtle. Place the engine gear in neutral position, and then lower the sea turtle into the water from a low part on the vessel, in an area where the sea turtle is unlikely to be recaptured or injured by vessels.

(g) A sea turtle is determined to be dead if the muscles are stiff (*rigor mortis*) and/or the flesh has begun to rot; otherwise the sea turtle is determined to be comatose or inactive, and resuscitation attempts are necessary as specified in paragraph B.1.(e).

(h) A sea turtle that fails to respond to the reflex test or fails to move within 4 hours (up to 24 hours if possible) must be returned to the water in the same manner as that for an actively moving sea turtle.

2. *Sea turtles that cannot be brought on board.* If a sea turtle is too large, or is hooked or entangled in a manner that prevents bringing the sea turtle on board safely and without causing further injury, release gear specified in paragraph A. of this appendix must be used to remove the maximum amount of fishing gear from the sea turtle, or to remove as much line as possible from

the sea turtle or from a hook that cannot be removed prior to releasing the sea turtle.

(a) A non-boated sea turtle should be brought close to the boat. Then, determine whether the hook can be removed without causing further injury to the sea turtle. All externally embedded hooks should be removed, unless hook removal would result in further injury to the sea turtle. No attempt should be made to remove a hook if it has been swallowed and the insertion point is not clearly visible, or if it is determined that removal would result in further injury.

(b) If the hook cannot be removed or if the sea turtle is only entangled, remove as much line as possible prior to its release using a long-handled line cutter or monofilament line cutters specified in paragraphs A.1. and A.11. of this appendix.

(c) If the hook can be removed, it must be removed using the appropriate dehooker or other hook removal device specified in paragraph A. of this appendix. Without causing further injury, as much gear as possible must be removed from the sea turtle prior to its release.

3. *Other sea turtle requirements.* Any sea turtle taken incidentally while fishing, regardless of whether the sea turtle is alive or dead, or whether it is brought on board, must not be consumed, sold, landed, offloaded, transshipped, or kept below deck.

C. *Incorporation by reference.* The standards required in paragraphs A. and B. of this appendix are incorporated by reference into this appendix with the approval of the Director of the Federal Register under 5 U.S.C. 552(a) and 1 CFR part 51. All approved material is available for inspection at the National Marine Fisheries Service, Southeast Regional Office, 263 13th Ave. South, St. Petersburg, FL 33701, phone: 727-824-5301, website: <https://www.fisheries.noaa.gov/south-east/endangered-species-conservation/sea-turtle-and-smalltooth-sawfish-release-gear-protocols>, and is available from the sources listed below. It is also available for inspection at the National Archives and Records Administration (NARA). 635.54 Reports.

Subpart F—Enforcement

635.69 Vessel monitoring systems.
635.70 Penalties.
635.71 Prohibitions.

APPENDIX A TO PART 635—SPECIES TABLES

AUTHORITY: 16 U.S.C. 971 *et seq.*; 16 U.S.C. 1801 *et seq.*

SOURCE: 64 FR 29135, May 28, 1999, unless otherwise noted.

Subpart A—General

§ 635.1 Purpose and scope.

(a) The regulations in this part govern the conservation and management of Atlantic tunas, Atlantic billfish, Atlantic sharks, and Atlantic swordfish under the authority of the Magnuson-Stevens Act and ATCA. They implement the 2006 Consolidated Highly Migratory Species Fishery Management Plan and its amendments. The Atlantic tunas regulations govern conservation and management of Atlantic tunas in the management unit. The Atlantic billfish regulations govern conservation and management of Atlantic billfish in the management unit. The Atlantic swordfish regulations govern conservation and management of North and South Atlantic swordfish in the management unit. North Atlantic swordfish are managed under the authority of both ATCA and the Magnuson-Stevens Act. South Atlantic swordfish are managed under the sole authority of ATCA. The shark regulations govern conservation and management of sharks in the management unit, under the authority of the Magnuson-Stevens Act.

(b) Under section 9(d) of ATCA, NMFS has determined that the regulations contained in this part with respect to Atlantic tunas are applicable within the territorial sea of the United States adjacent to, and within the boundaries of, the States of Maine, New Hampshire, Massachusetts, Rhode Island, New York, New Jersey, Delaware, Maryland, Virginia, North Carolina, South Carolina, Georgia, Florida, Alabama, Louisiana, and Texas, and the Commonwealths of Puerto Rico and the Virgin Islands. NMFS will un-

dertake a continuing review of State regulations to determine if regulations applicable to Atlantic tunas, swordfish, or billfish are at least as restrictive as regulations contained in this part and if such regulations are effectively enforced. In such case, NMFS will file with the Office of the Federal Register for publication notification of the basis for the determination and of the specific regulations that shall or shall not apply in the territorial sea of the identified State.

[64 FR 29135, May 28, 1999, as amended at 75 FR 30524, June 1, 2010; 86 FR 42744, Aug. 5, 2021]

§ 635.2 Definitions.

In addition to the definitions in the Magnuson-Stevens Act, ATCA, and § 600.10 of this chapter, the terms used in this part have following meanings. If applicable, the terms used in this part supercede those used in § 600.10:

Archival tag means a device that is implanted or affixed to a fish to electronically record scientific information about the migratory behavior of that fish.

ATCA Certificate of Eligibility (COE) means the certificate that must accompany any applicable shipment of fish pursuant to a finding under 16 U.S.C. 971d (c)(4) or (c)(5).

Atlantic Aggregated LCS means one of the following species, or parts thereof, as listed in Table 1 of appendix A to this part: Atlantic blacktip, bull, lemon, nurse, silky, spinner, and tiger.

Atlantic HMS means Atlantic tunas, billfish, sharks, and swordfish.

Atlantic Ocean, as used in this part, includes the North and South Atlantic Oceans, the Gulf of Mexico, and the Caribbean Sea.

Atlantic shark identification workshop certificate means the document issued by NMFS, or its designee, indicating that the person named on the certificate has successfully completed the Atlantic shark identification workshop.

Atlantic States, consistent with section 803 of Public law 103-206 (16 U.S.C. 5102), refers to Maine, New Hampshire, Massachusetts, Rhode Island, Connecticut, New York, New Jersey, Pennsylvania, Delaware, Maryland, Virginia, North Carolina, South Carolina,

Georgia, Florida, the District of Columbia, and the Potomac River Fisheries Commission, for purposes of applying the Shark Conservation Act exception at 50 CFR 635.30(c)(5).

BAYS means Atlantic bigeye, albacore, yellowfin, and skipjack tunas as defined in § 600.10 of this part.

BFT landings quota means the portion of the ICCAT BFT catch quota allocated to the United States against which landings of BFT are counted.

Bottom longline means a longline that is deployed with enough weights and/or anchors to maintain contact with the ocean bottom. For the purposes of this part, a vessel is considered to have bottom longline gear on board when a power-operated longline hauler, a mainline, weights and/or anchors capable of maintaining contact between the mainline and the ocean bottom, and leaders (gangions) with hooks are on board. Removal of any of these elements constitutes removal of bottom longline gear. Bottom longline vessels may have a limited number of floats and/or high flyers onboard for the purposes of marking the location of the gear but removal of these floats does not constitute removal of bottom longline gear.

BSD tag means a numbered tag affixed to a BFT issued by any country in conjunction with a catch statistics information program and recorded on a BSD.

Buoy gear means a fishing gear consisting of one or more floatation devices supporting a single mainline to which no more than two hooks or gangions are attached.

Caudal keel means the horizontal ridges along each side of a fish at the base of the tail fin.

CFL (curved fork length) means the length of a fish measured from the tip of the upper jaw to the fork of the tail along the contour of the body in a line that runs along the top of the pectoral fin and the top of the caudal keel.

Charter/headboat commercial sale endorsement means an authorization added to an HMS Charter/Headboat permit that is required for vessels that sell or intend to sell Atlantic tunas, sharks, and swordfish, provided that all other requirements in this part are also met.

Charleston Bump closed area means the Atlantic Ocean area seaward of the inner boundary of the U.S. EEZ from a point intersecting the inner boundary of the U.S. EEZ at 34°00' N. lat. near Wilmington Beach, NC, and proceeding due east to connect by straight lines the following coordinates in the order stated: 34°00' N. lat., 76°00' W. long.; 31°00' N. lat., 76°00' W. long.; then proceeding due west to intersect the inner boundary of the U.S. EEZ at 31°00' N. lat. near Jekyll Island, GA.

Circle hook means a fishing hook originally designed and manufactured so that the point is turned perpendicularly back to the shank to form a generally circular, or oval, shape.

Cleithrum to Caudal Keel or *CK* measurement means the length of a fish measured along the body contour, i.e., a curved measurement, from the point on the cleithrum that provides the shortest possible measurement along the body contour to the anterior portion of the caudal keel. The cleithrum is the semicircular bony structure at the posterior edge of the gill opening.

Convention means the International Convention for the Conservation of Atlantic Tunas, signed at Rio de Janeiro, Brazil, on May 14, 1966, 20 U.S.T. 2887, TIAS 6767, including any amendments or protocols thereto, which are binding upon the United States.

Conventional tag means a numbered, flexible ribbon that is implanted or affixed to a fish that is released back into the ocean that allows for the identification of that fish in the event it is recaptured.

Corrodible Hook means a fishing hook composed of any material other than stainless steel.

Dealer tag means the numbered, flexible, self-locking ribbon issued by NMFS for the identification of BFT sold to a permitted dealer as required under § 635.5(b)(2)(ii).

Dehooking device means a device intended to remove a hook embedded in a fish in order to release the fish with minimum damage.

Designated by NMFS means the address or location indicated in a letter to permit holders or in a letter accompanying reporting forms.

DeSoto Canyon closed area means the area within the Gulf of Mexico bounded

by straight lines connecting the following coordinates in the order stated: 30°00' N. lat., 88°00' W. long.; 30°00' N. lat., 86°00' W. long.; 28°00' N. lat., 86°00' W. long.; 28°00' N. lat., 84°00' W. long.; 26°00' N. lat., 84°00' W. long.; 26°00' N. lat., 86°00' W. long.; 28°00' N. lat., 86°00' W. long.; 28°00' N. lat., 88°00' W. long.; 30°00' N. lat., 88°00' W. long.

Display permit means a permit issued in order to catch and land HMS for the purpose of public display pursuant to § 635.32(d).

Division Chief means the Chief, Highly Migratory Species Management Division, NMFS (F/SF1), 1315 East-West Highway, Silver Spring, MD, 20910; (301) 427-8503.

Downrigger means a piece of equipment attached to a vessel and with a weight on a cable that is in turn attached to hook-and-line gear to maintain lures or bait at depth while trolling. The downrigger has a release system to retrieve the weight by rod and reel or by manual, electric, or hydraulic winch after a fish strike on the hook-and-line gear.

Dress, for swordfish, tunas, and billfish, means to process a fish by removal of head, viscera, and fins, but does not include removal of the backbone, halving, quartering, or otherwise further reducing the carcass. For sharks, dress means to process a fish by removal of head and viscera, but does not include removal of the fins, backbone, halving, quartering, or otherwise further reducing the carcass.

Dressed weight (dw), for swordfish, tunas, and billfish, means the weight of a fish after it has been dressed. For sharks, dressed weight means the weight of a fish after it has been dressed and had its fins, including the tail, removed.

Drift gillnet means a gillnet that is floating unattached to the ocean bottom and not anchored, secured, or weighted to the ocean bottom.

East Florida Coast closed area means the Atlantic Ocean area seaward of the inner boundary of the U.S. EEZ from a point intersecting the inner boundary of the U.S. EEZ at 31°00' N. lat. near Jeckyll Island, GA, and proceeding due east to connect by straight lines the following coordinates in the order stated: 31°00' N. lat., 78°00' W. long.; 28°17'10"

N. lat., 79°11'24" W. long.; then proceeding along the outer boundary of the EEZ to the intersection of the EEZ with 24°00' N. lat.; then proceeding due west to 24°00' N. lat., 81°47' W. long.; and then proceeding due north to intersect the inner boundary of the U.S. EEZ at 81°47' W. long. near Key West, FL.

Edges 40 Fathom Contour closed area means a parallelogram-shaped area in the Gulf of Mexico bounded by straight lines connecting the following coordinates in the order stated: 28° 51' N. lat., 85° 16' W. long.; 28° 51' N. lat., 85° 04' W. long.; 28° 14' N. lat., 84° 42' W. long.; 28° 14' N. lat., 84° 54' W. long.

EFP means an exempted fishing permit issued pursuant to § 600.745 of this chapter or to § 635.32(c).

Eviscerated means a fish that has only the alimentary organs removed.

Export, for purposes of this subpart, means to effect exportation.

Exportation has the same general meaning as 19 CFR 101.1 and generally refers to a severance of goods from the mass of things belonging to one country with the intention of uniting them to the mass of things belonging to some foreign country. For purposes of this subpart, a shipment between the United States and its insular possessions is not an export.

Exporter, for purposes of this subpart, is the principal party in interest, meaning the party that receives the primary benefit, monetary or otherwise, of the export transaction. For exports from the United States, the exporter is the U.S. principal party in interest, as identified in 15 CFR part 30. An exporter is subject to the requirements of this subpart, even if exports are exempt from statistical reporting requirements under 15 CFR part 30.

Federal Atlantic Commercial Shark Permit means any of the commercial shark permits issued pursuant to § 635.4.

Finlet means one of the small individual fins on a tuna located behind the second dorsal and anal fins and forward of the tail fin.

First receive means to take possession for commercial purposes of any fish or any part thereof by purchasing, trading or bartering for it from the fishing vessel owner or operator once it is offloaded, where the vessel has been issued, or should have been issued, a

valid permit under this part. First receive does not mean to take possession solely for transport.

First transaction in the United States means the time and place at which a fish is filleted, cut into steaks, or processed in any way that physically alters it after being landed in or imported into the United States.

Fishing record means all records of navigation and operations of a fishing vessel, as well as all records of catching, harvesting, transporting, landing, purchasing, or selling a fish.

Fishing vessel means any vessel engaged in fishing, processing, or transporting fish loaded on the high seas, or any vessel outfitted for such activities.

Fishing year means January 1 through December 31.

FL (fork length) means the straight-line measurement of a fish from the midpoint of the anterior edge of the fish to the fork of the caudal fin. The measurement is not made along the curve of the body.

Floatation device means any positively buoyant object rigged to be attached to a fishing gear.

Floatline means a line attached to a buoyant object that is used to support the mainline of a longline at a specific target depth.

Florida Swordfish Management Area means the Atlantic Ocean area shoreward of the outer boundary of the U.S. EEZ from a point where latitude 28°17'10" N. lat. intersects the U.S. mainland near Rockledge, Florida and proceeding due east across the barrier island near Cocoa Beach, Florida to connect by straight lines the following coordinates in the order stated: 28°17'10" N. lat., 79°11'24" W. long.; then proceeding along the outer boundary of the EEZ to the intersection of the EEZ with 24°00' N. lat.; then proceeding due west to 24°00' N. lat., 82°0' W. long. then proceeding due north to 25°48' N. lat., 82°0' W. long., then proceeding due east to the shore near Chokoloskee, Florida).

For-hire trip means a recreational fishing trip taken by a vessel with an Atlantic HMS Charter/Headboat permit during which paying passenger(s) are aboard; or, for uninspected vessels, trips during which there are more than three persons aboard, including oper-

ator and crew; or, for vessels that have been issued a Certificate of Inspection by the U.S. Coast Guard to carry passengers for hire, trips during which there are more persons aboard than the number of crew specified on the vessel's Certificate of Inspection.

Freeboard is defined as the working distance between the top rail of the gunwale to the water's surface, and will vary based on the vessel design.

Gangion means a line that serves to attach a hook, suspended at a specific target depth, to the mainline of a longline.

Giant BFT means an Atlantic BFT measuring 81 inches (206 cm) CFL or greater.

Green-stick gear means an actively trolled mainline attached to a vessel and elevated or suspended above the surface of the water with no more than 10 hooks or gangions attached to the mainline. The suspended line, attached gangions and/or hooks, and catch may be retrieved collectively by hand or mechanical means. Green-stick does not constitute a pelagic longline or a bottom longline as defined in this section.

Gulf of Mexico Aggregated LCS means one of the following species, or parts thereof, as listed in Table 1 of appendix A to this part: Bull, lemon, nurse, silky, spinner, and tiger.

Hammerhead shark(s) means great, scalloped, and smooth hammerhead shark species, or parts thereof, as listed in Table 1 of appendix A to this part.

Handgear means handline, harpoon, rod and reel, bandit gear, buoy gear, or speargun gear.

Handline means fishing gear that is attached to, or in contact with, a vessel; that consists of a mainline to which no more than two hooks or gangions may be attached; and that is released and retrieved by hand rather than by mechanical means.

High-flyer means a flag, radar reflector or radio beacon transmitter, suitable for attachment to a longline to facilitate its location and retrieval.

Highly migratory species (HMS) means bluefin, bigeye, yellowfin, albacore, and skipjack tunas; swordfish; sharks (listed in Table 1 of appendix A to this

part); white marlin; blue marlin; sailfish; longbill spearfish; and roundscale spearfish.

Importer, for purposes of this subpart, means the principal party responsible for the import of product into a country. For imports into the United States, and for purposes of this subpart, “importer” means the consignee as identified on entry documentation or any authorized, equivalent electronic medium required for release of shipments, or any authorized equivalent entry documentation from the customs authority of the United States or the separate customs territory of a U.S. insular possession. If a consignee is not declared, then the importer of record is considered to be the consignee.

In transit means non-stop progression through an area without any fishing activity occurring.

LAP means a limited access permit issued pursuant to § 635.4.

Large coastal shark (LCS) means one of the species, or a part thereof, listed in heading A, Large Coastal Sharks, of Table 1 of appendix A to this part.

Large medium BFT means a BFT measuring at least 73 inches (185 cm) and less than 81 inches (206 cm) CFL.

Large school BFT means a BFT measuring at least 47 inches (119 cm) and less than 59 inches (150 cm) CFL.

LJFL (lower jaw-fork length) means the straight-line measurement of a fish from the anterior tip of the lower jaw to the fork of the caudal fin. The measurement is not made along the curve of the body.

Longline means fishing gear that is set horizontally, either anchored, floating, or attached to a vessel, and that consists of a mainline or groundline with three or more leaders (gangions) and hooks, whether retrieved by hand or mechanical means.

Madison-Swanson closed area means a rectangular-shaped area in the Gulf of Mexico bounded by straight lines connecting the following coordinates in the order stated: 29°17' N. lat., 85°50' W. long.; 29°17' N. lat., 85°38' W. long.; 29°06' N. lat., 85°38' W. long.; 29°06' N. lat., 85°50' W. long.; and 29°17' N. lat., 85°50' W. long.

Management group in regard to sharks means a group of shark species that are

combined for quota management purposes. A management group may be split by region or sub-region, as defined at § 635.27(b)(1). A fishery for a management group can be opened or closed as a whole or at the regional or sub-regional levels. Sharks have the following management groups: Atlantic aggregated LCS, Gulf of Mexico aggregated LCS, research LCS, hammerhead, Atlantic non-blacknose SCS, Gulf of Mexico non-blacknose SCS, and pelagic sharks other than blue or porbeagle.

Management unit means in this part:

(1) For Atlantic tunas, longbill spearfish, roundscale spearfish, blue marlin, and white marlin, means all fish of these species in the Atlantic Ocean;

(2) For sailfish, means all fish of this species in the Atlantic Ocean west of 30° W. long.;

(3) For North Atlantic swordfish, means all fish of this species in the Atlantic Ocean north of 5° N. lat.;

(4) For South Atlantic swordfish, means all fish of this species in the Atlantic Ocean south of 5° N. lat.; and

(5) For sharks, means all fish of the species listed in Table 1 of Appendix A to this part, in the western north Atlantic Ocean, including the Gulf of Mexico and the Caribbean Sea.

Mid-Atlantic Bight means the area bounded by straight lines connecting the mid-Atlantic states' internal waters and extending to 71° W. long. between 35° N. lat. and 43° N. lat.

Mid-Atlantic shark closed area means the Atlantic Ocean area seaward of the inner boundary of the U.S. EEZ from a point intersecting the inner boundary of the U.S. EEZ at 35°41' N. lat. just south of Oregon Inlet, North Carolina, and connecting by straight lines the following coordinates in the order stated: 35°41' N. lat., 75°25' W. long. proceeding due east to 35°41' N. lat., 74°51' W. long.; then proceeding southeast to 35°30' N. lat., 74°46' W. long.; then proceeding southwest, roughly following the 55 fathom mark, to 33°51' N. lat., 76°24' W. long.; then proceeding due west to intersect the inner boundary of the U.S. EEZ at 33°51' N. lat., 77°53' W. long. near Cape Fear, North Carolina.

Naturally attached, as it is used to describe shark fins, refers to shark fins that remain attached to the shark carcass via at least some portion of uncut

skin. As used to describe the head of a swordfish, naturally attached refers to the whole head remaining fully attached to the carcass except for the bill, which may be removed provided it has been removed forward of the anterior tip of the lower jaw.

Net check refers to a visual inspection of a shark gillnet where the vessel operator transits the length of the gear and inspects it either with a spotlight or by pulling up the gear.

Non-blacknose SCS means one of the species, or part thereof, listed in heading B, Small Coastal Sharks, of Table 1 of appendix A to this part other than the blacknose shark.

North Atlantic swordfish or North Atlantic swordfish stock means those swordfish occurring in the Atlantic Ocean north of 5° N. lat.

Northeast Distant gear restricted area means the Atlantic Ocean area bounded by straight lines connecting the following coordinates in the order stated: 35°00' N. lat., 60°00' W. long.; 55°00' N. lat., 60°00' W. long.; 55°00' N. lat., 20°00' W. long.; 35°00' N. lat., 20°00' W. long.; 35°00' N. lat., 60°00' W. long.

Northeastern United States Pelagic Longline Monitoring Area means the area bounded by straight lines connecting the following coordinates in the order stated: 40°00' N. lat., 74°00' W. long.; 40°00' N. lat., 68°00' W. long.; 39°00' N. lat., 68°00' W. long.; and 39°00' N. lat., 74°00' W. long.

Offset circle hook means a circle hook originally designed and manufactured so that the barbed end of the hook is displaced relative to the parallel plane of the eyed-end, or shank, of the hook when laid on its side.

Operator, with respect to any vessel, means the master or other individual aboard and in charge of that vessel.

Pectoral fin means the fin located behind the gill cover on either side of a fish.

Pelagic longline means a longline that is suspended by floats in the water column and that is not fixed to or in contact with the ocean bottom. For the purposes of this part, a vessel is considered to have pelagic longline gear on board when a power-operated longline hauler, a mainline, floats capable of supporting the mainline, and leaders (gangions) with hooks are on board.

Removal of any of these elements constitutes removal of pelagic longline gear.

Pelagic shark means one of the species, or a part thereof, listed in heading C, Pelagic Sharks, of Table 1 of appendix A to this part.

PFCFL (pectoral fin curved fork length) means the length of a beheaded fish from the dorsal insertion of the pectoral fin to the fork of the tail measured along the contour of the body in a line that runs along the top of the pectoral fin and the top of the caudal keel.

Prohibited shark means one of the species, or a part thereof, listed in heading D, Prohibited Sharks, of Table 1 of appendix A to this part.

Reporting week means the period of time beginning at 0001 local time on Sunday and ending at 2400 hours local time the following Saturday.

Research LCS means one of the species, or part thereof, listed in heading A, Large Coastal Sharks, of Table 1 of appendix A to this part, other than sandbar sharks.

Restricted-fishing day (RFD) is a day, beginning at 0000 hours and ending at 2400 hours local time, during which a person aboard a vessel issued:

(1) An Atlantic Tunas General category permit may not fish for, possess, retain, land, or sell a BFT; and

(2) A Charter/Headboat permit with a commercial endorsement may not fish commercially for BFT under the General category rules, but may fish for, possess, retain, or land BFT under the Angling category restrictions and retention limits.

Round wire stock means round metal wire, typically used in the manufacturing of fishing hooks, that has not been forged, or otherwise modified or treated in any way to increase the original factory tensile strength set by the hook manufacturer.

Safe handling, release, and identification workshop certificate means the document issued by NMFS, or its designee, indicating that the person named on the certificate has successfully completed the Atlantic HMS safe handling, release, and identification workshop.

School BFT means a BFT measuring at least 27 inches (69 cm) and less than 47 inches (119 cm) CFL.

Shark means one of the oceanic species, or a part thereof, listed in Table 1 of Appendix A to this part.

Shark endorsement means an authorization added to an HMS Angling, HMS Charter/Headboat, Atlantic Tunas General, or Swordfish General Commercial permit that allows for the retention of authorized Atlantic sharks consistent with all other applicable regulations in this part.

Shark research permit means a permit issued to catch and land a limited number of sharks to maintain time series for stock assessments and for other scientific research purposes. These permits may be issued only to the owner of a vessel who has been issued either a directed or incidental shark LAP. The permit is specific to the commercial shark vessel and owner combination and is valid only per the terms and conditions listed on the permit.

Sink gillnet means a gillnet that is designed to be or is fished on or near the ocean bottom in the lower third of the water column by means of a weight line or enough weights and/or anchors that the bottom of the gillnet sinks to, on, or near the ocean bottom.

Small coastal shark (SCS) means one of the species, or a part thereof, listed in heading B, Small Coastal Sharks, of Table 1 of appendix A to this part.

Small medium BFT means a BFT measuring at least 59 inches (150 cm) and less than 73 inches (185 cm) CFL.

Smoothhound shark(s) means one of the species, or part thereof, listed in heading E, Smoothhound Sharks, of Table 1 of appendix A to this part.

South Atlantic swordfish or south Atlantic swordfish stock means those swordfish occurring in the Atlantic Ocean south of 5° N. lat.

Speargun fishing gear means a muscle-powered speargun equipped with a trigger mechanism, a spear with a tip designed to penetrate and retain fish, and terminal gear. Terminal gear may include, but is not limited to, trawling lines, reels, and floats. The term “muscle-powered speargun” for the purposes of this part means a speargun that stores potential energy provided from the operator’s muscles, and that releases only the amount of energy that the operator has provided to it from his or her own muscles. Common

energy storing methods for muscle-powered spearguns include compressing air and springs, and the stretching of rubber bands.

Spring Gulf of Mexico Pelagic Longline Monitoring Area means two areas within the Gulf of Mexico described here. The first area is bounded by straight lines connecting the following coordinates in the order stated: 26°30′ N lat., 94°40′ W long.; 27°30′ N lat., 94°40′ W long.; 27°30′ N lat., 89° W long.; 26°30′ N lat., 89° W long.; 26°30′ N lat., 94°40′ W long. The second area is bounded by straight lines connecting the following coordinates in the order stated: 27°40′ N lat., 88° W long.; 28° N lat., 88° W long.; 28° N lat., 86° W long.; 27°40′ N lat., 86° W long.; 27°40′ N lat., 88° W long.

Steamboat Lumps closed area means a rectangular-shaped area in the Gulf of Mexico bounded by straight lines connecting the following coordinates in the order stated: 28°14′ N. lat., 84°48′ W. long.; 28°14′ N. lat., 84°37′ W. long.; 28°03′ N. lat., 84°37′ W. long.; 28°03′ N. lat., 84°48′ W. long.; and 28°14′ N. lat., 84°48′ W. long.

Tournament means any fishing competition involving Atlantic HMS in which participants must register or otherwise enter or in which a prize or award is offered for catching or landing such fish.

Tournament operator means a person or entity responsible for maintaining records of participants and results used for awarding tournament points or prizes, regardless of whether fish are retained.

Transiting means progressing through an area without any fishing activity occurring.

Trip limit means the total allowable take from a single trip as defined in § 600.10 of this chapter.

Tuna or tuna-like means the Scombriformes (with the exception of families Trichiuridae and Gempylidae and the genus Scomber) and such other species of fishes that are regulated by ICCAT in the Atlantic Ocean.

Weighout slip means a document provided to the owner or operator of the vessel by a person who weighs fish or parts thereof that are landed from a fishing vessel. A document, such as a “tally sheet,” “trip ticket,” or “sales

§ 635.3

receipt,” that contains such information is considered a weighout slip.

Young school BFT means an Atlantic BFT measuring less than 27 inches (69 cm) CFL.

[64 FR 29135, May 28, 1999]

EDITORIAL NOTE: For FEDERAL REGISTER citations affecting § 635.2, see the List of CFR Sections Affected, which appears in the Finding Aids section of the printed volume and at www.govinfo.gov.

§ 635.3 Relation to other laws.

(a) The relation of this part to other laws is set forth in § 600.705 of this chapter and in paragraphs (b) and (c) of this section.

(b) In accordance with regulations issued under the Marine Mammal Protection Act of 1972, as amended, it is unlawful for a commercial fishing vessel, a vessel owner, or a master or operator of a vessel to engage in fisheries for HMS in the Atlantic Ocean, unless the vessel owner or authorized representative has complied with specified requirements including, but not limited to, registration, exemption certificates, decals, and reports, as contained in part 229 of this title.

(c) General provisions on facilitation of enforcement, penalties, and enforcement policy applicable to all domestic fisheries are set forth in §§ 600.730, 600.735, and § 600.740 of this chapter, respectively.

(d) An activity that is otherwise prohibited by this part may be conducted if authorized as scientific research activity, exempted fishing or exempted educational activity, or for public display, as specified in § 635.32.

[64 FR 29135, May 28, 1999, as amended at 68 FR 74784, Dec. 24, 2003]

§ 635.4 Permits and fees.

Information on permits and permit requirements may be obtained from the Division Chief or where otherwise stated in this part.

(a) *General*—(1) *Authorized activities*. Each permit issued by NMFS authorizes certain activities, and persons may not conduct these activities without the appropriate permit, unless otherwise authorized by NMFS in accordance with this part. In certain cases, additional permits may be required to

50 CFR Ch. VI (10–1–21 Edition)

authorize these same or related activities under federal, state or local jurisdictions.

(2) *Vessel permit inspection*. The owner or operator of a vessel of the United States must have the appropriate valid permit on board the vessel to fish for, take, retain, or possess Atlantic HMS when engaged in recreational fishing and to fish for, take, retain or possess Atlantic tunas, swordfish, or sharks when engaged in commercial fishing. The vessel operator must make such permit available for inspection upon request by NMFS or by a person authorized by NMFS. The owner of the vessel is responsible for satisfying all of the requirements associated with obtaining, maintaining, and making available for inspection all required vessel permits.

(3) *Property rights*. LAPs or any other permit issued pursuant to this part do not represent either an absolute right to the resource or any interest that is subject to the takings provision of the Fifth Amendment of the U.S. Constitution. Rather, LAPs represent only a harvesting privilege that may be revoked, suspended, or amended subject to the requirements of the Magnuson-Stevens Act or other applicable law.

(4) *Dealer permit inspection*. A dealer permit issued under this section, or a copy thereof, must be available at each of the dealer's places of business. A dealer must present the permit or a copy for inspection upon the request of a NMFS-authorized officer.

(5) *Display upon offloading*. Upon offloading of Atlantic HMS for sale, the owner or operator of the harvesting vessel must present for inspection the vessel's HMS Charter/Headboat permit with a commercial sale endorsement; Atlantic tunas, shark, or swordfish permit; Incidental HMS squid trawl; HMS Commercial Caribbean Small Boat permit; and/or the shark research permit to the first receiver. The permit(s) must be presented prior to completing any applicable landing report specified at § 635.5(a)(1), (a)(2), and (b)(2)(i).

(6) *Sanctions and denials*. A permit issued under this section may be revoked, suspended, or modified, and a permit application may be denied, in accordance with the procedures governing enforcement-related permit

sanctions and denials found at 15 CFR part 904, subpart D.

(7) *Alteration.* A vessel or dealer permit that is altered, erased, mutilated, or otherwise modified is invalid.

(8) *Replacement.* NMFS may issue a replacement permit upon the request of the permittee. An application for a replacement permit will not be considered a new application. An appropriate fee, consistent with paragraph (a)(9) of this section, may be charged for issuance of the replacement permit.

(9) *Fees.* NMFS may charge a fee for each application for a permit or for each transfer or replacement of a permit. The amount of the fee is calculated in accordance with the procedures of the NOAA Finance Handbook, available from NMFS, for determining administrative costs of each special product or service. The fee may not exceed such costs and is specified in the instructions provided with each application form. Each applicant must include the appropriate fee with each application or request for transfer or replacement. A permit will not be issued to anyone who fails to pay the fee.

(10) *Permit condition.* An owner of a vessel with a valid swordfish, shark, HMS Angling, HMS Charter/Headboat, Incidental HMS squid trawl, or HMS Commercial Caribbean Small Boat permit issued pursuant to this part must agree, as a condition of such permit, that the vessel's HMS fishing, catch, and gear are subject to the requirements of this part during the period of validity of the permit, without regard to whether such fishing occurs in the U.S. EEZ, or outside the U.S. EEZ, and without regard to where such HMS, or gear, are possessed, taken, or landed. However, when a vessel fishes within the waters of a state that has more restrictive regulations pertaining to HMS, persons aboard the vessel must abide by the state's more restrictive regulations.

(b) *HMS Charter/Headboat permits.* (1) The owner of a charter boat or headboat used to fish for, retain, possess, or land any Atlantic HMS must obtain an HMS Charter/Headboat permit. In order to fish for, retain, possess, or land Atlantic sharks, the owner must have a valid shark endorsement issued by NMFS. A vessel issued

an HMS Charter/Headboat permit for a fishing year shall not be issued an HMS Angling permit, a Swordfish General Commercial permit, or an Atlantic Tunas permit in any category for that same fishing year, regardless of a change in the vessel's ownership.

(2) While persons aboard a vessel that has been issued an HMS Charter/Headboat permit are fishing for or are in possession of Atlantic HMS, the operator of the vessel must have a valid Merchant Marine License or Uninspected Passenger Vessel License, as applicable, issued by the U.S. Coast Guard pursuant to regulations at 46 CFR part 10. Such Coast Guard license must be carried on board the vessel.

(3) The owner of a charter boat or headboat that intends to sell Atlantic tunas or swordfish must obtain a commercial sale endorsement for the vessel's HMS Charter/Headboat permit. The owner of a charter boat or headboat that intends to sell Atlantic sharks must obtain a commercial sale endorsement for the vessel's HMS Charter/Headboat permit at the time of permit renewal or when the permit is obtained and must also obtain any applicable Atlantic commercial shark permits. A vessel owner that has obtained an HMS Charter/Headboat permit without a commercial sale endorsement is prohibited from selling any Atlantic HMS.

(c) *HMS Angling permits.* (1) The owner of any vessel used to fish recreationally for Atlantic HMS or on which Atlantic HMS are retained or possessed recreationally, must obtain an HMS Angling permit, except as provided in paragraph (c)(2) of this section. In order to fish for, retain, possess, or land Atlantic sharks, the owner must have a valid shark endorsement issued by NMFS. Atlantic HMS caught, retained, possessed, or landed by persons on board vessels with an HMS Angling permit may not be sold or transferred to any person for a commercial purpose. A vessel issued an HMS Angling permit for a fishing year shall not be issued an HMS Charter/Headboat permit, a Swordfish General Commercial permit, or an Atlantic Tunas permit in any category for that same fishing year, regardless of a change in the vessel's ownership.

§ 635.4

50 CFR Ch. VI (10–1–21 Edition)

(2) A vessel with a valid Atlantic Tunas General category permit issued under paragraph (d) of this section or with a valid Swordfish General Commercial permit issued under paragraph (f) of this section may fish in a recreational HMS fishing tournament if the vessel has registered for, paid an entry fee to, and is fishing under the rules of a tournament that has registered with NMFS' HMS Management Division as required under § 635.5(d). When a vessel with a valid Atlantic Tunas General category permit or a valid Swordfish General Commercial permit is fishing in such a tournament, such vessel must comply with HMS Angling category regulations, except as provided in paragraphs (c)(3) through (5) of this section.

(3) A vessel issued an Atlantic Tunas General category permit fishing in a tournament, as authorized under § 635.4(c)(2), shall comply with Atlantic Tunas General category regulations when fishing for, retaining, possessing, or landing Atlantic tunas.

(4) A vessel issued a Swordfish General Commercial permit fishing in a tournament, as authorized under § 635.4(c)(2), shall comply with Swordfish General Commercial permit regulations when fishing for, retaining, possessing, or landing Atlantic swordfish.

(5) In order to fish for, retain, possess, or land sharks, the owner of a vessel fishing in a registered recreational HMS fishing tournament and issued either an Atlantic Tunas General category or Swordfish General Commercial permit must have a shark endorsement.

(d) *Atlantic Tunas vessel permits.* (1) The owner of each vessel used to fish for or take Atlantic tunas commercially or on which Atlantic tunas are retained or possessed with the intention of sale must obtain an HMS Charter/Headboat permit with a commercial sale endorsement issued under paragraph (b) of this section, an HMS Commercial Caribbean Small Boat permit issued under paragraph (o) of this section, or an Atlantic tunas permit in one, and only one, of the following categories: General, Harpoon, Longline, Purse Seine, or Trap.

(2) Persons aboard a vessel with a valid Atlantic Tunas, HMS Angling,

HMS Charter/Headboat, or an HMS Commercial Caribbean Small Boat permit may fish for, take, retain, or possess Atlantic tunas, but only in compliance with the quotas, catch limits, size classes, and gear applicable to the permit or permit category of the vessel from which he or she is fishing. Persons may sell Atlantic tunas only if the harvesting vessel has a valid permit in the General, Harpoon, Longline, Purse Seine, or Trap category of the Atlantic Tunas permit, a valid HMS Charter/Headboat permit with a commercial sale endorsement, or an HMS Commercial Caribbean Small Boat permit.

(3) A vessel issued an Atlantic Tunas permit in any category for a fishing year shall not be issued an HMS Angling permit, HMS Charter/Headboat permit, or an Atlantic Tunas permit in any other category for that same fishing year, regardless of a change in the vessel's ownership. A vessel issued an Atlantic Tunas permit may be issued an HMS Commercial Caribbean Small Boat permit, subject to restrictions set forth at § 635.4(o), within that same fishing year; however, a vessel may not hold any other HMS fishing permit simultaneously with the HMS Commercial Caribbean Small Boat permit.

(4) A person can obtain an Atlantic Tunas Longline category LAP for a vessel only if the vessel has been issued both a LAP for shark and a LAP, other than handgear, for swordfish. Atlantic Tunas Longline category LAPs may only be obtained through transfer from current owners consistent with the provisions under paragraph (1)(2) of this section.

(5) An owner of a vessel with an Atlantic Tunas permit in the Purse Seine category may transfer the permit to another purse seine vessel that he or she owns. In either case, the owner must submit a written request for transfer to NMFS, to an address designated by NMFS, and attach an application for the new vessel and the existing permit. NMFS will issue no more than 5 Atlantic Tunas Purse Seine category permits.

(e) *Shark vessel permits.* (1) The owner of each vessel used to fish for or take Atlantic sharks or on which Atlantic sharks are retained, possessed with an

intention to sell, or sold must obtain, in addition to any other required permits, at least one of the Federal Atlantic commercial shark permits described below or an HMS Commercial Caribbean Small Boat permit. A Federal Atlantic commercial shark permit or HMS Commercial Caribbean Small Boat permit is not required if the vessel is recreationally fishing and retains no more sharks than the recreational retention limit specified in §635.22(c), is operating pursuant to the conditions of a shark display or EFP issued pursuant to §635.32, or fishes exclusively within State waters. It is a rebuttable presumption that the owner or operator of a vessel without a permit issued pursuant to this part, on which sharks are possessed in excess of the recreational retention limits, intends to sell the sharks.

(2) The owner of vessels that fish for, take, retain, or possess the Atlantic oceanic sharks listed in headings A, B, or C of Table 1 of appendix A to this part with an intention to sell must obtain a Federal Atlantic commercial shark directed or incidental LAP or an HMS Commercial Caribbean Small Boat permit. The only valid Federal commercial shark directed and shark incidental LAPs are those that have been issued under the limited access program consistent with the provisions under paragraphs (1) and (m) of this section.

(3) A vessel owner issued or required to be issued a Federal Atlantic commercial shark directed or shark incidental LAP may harvest, consistent with the other regulations in this part, any shark species listed in headings A, B, or C of Table 1 of appendix A to this part.

(4) Owners of vessels that fish for, take, retain, or possess the Atlantic oceanic sharks listed in heading E, Smoothhound Sharks, of Table 1 of appendix A to this part with an intention to sell them must obtain a Federal commercial smoothhound permit. In addition to other permits issued pursuant to this section or other authorities, a Federal commercial smoothhound permit may be issued to a vessel alone or to a vessel that also holds either a Federal Atlantic commercial shark directed or incidental LAP.

(f) *Swordfish vessel permits.* (1) Except as specified in paragraphs (n) and (o) of this section, the owner of a vessel of the United States used to fish for or take swordfish commercially from the management unit, or on which swordfish from the management unit are retained or possessed with an intention to sell, or from which swordfish are sold, must obtain an HMS Charter/Headboat permit with a commercial sale endorsement issued under paragraph (b) of this section, or one of the following swordfish permits: A swordfish directed LAP, swordfish incidental LAP, swordfish handgear LAP, or a Swordfish General Commercial permit. These permits cannot be held in combination with each other on the same vessel, except that an HMS Charter/Headboat permit with a commercial sale endorsement may be held in combination with a swordfish handgear LAP on the same vessel. It is a rebuttable presumption that the owner or operator of a vessel on which swordfish are possessed in excess of the recreational retention limits intends to sell the swordfish.

(2) The only valid commercial Federal vessel permits for swordfish are the HMS Charter/Headboat permit with a commercial sale endorsement issued under paragraph (b) of this section (and only when on a non for-hire trip), the Swordfish General Commercial permit issued under paragraph (f) of this section, a swordfish LAP issued consistent with paragraphs (1) and (m) of this section, or permits issued under paragraphs (n) and (o) of this section.

(3) A commercial Federal permit for swordfish is not required if the vessel is recreational fishing.

(4) A directed or incidental swordfish LAP is valid only when the vessel has on board a valid shark LAP and a valid Atlantic Tunas Longline category LAP issued for such vessel.

(5) A Swordfish General Commercial permit may not be held on a vessel in conjunction with an HMS Charter/Headboat permit issued under paragraph (b) of this section, an HMS Angling category permit issued under paragraph (c) of this section, a swordfish LAP issued consistent with paragraphs (1) and (m) of this section, an Incidental HMS Squid Trawl permit

issued under paragraph (n) of this section, or an HMS Commercial Caribbean Small Boat permit issued under paragraph (o) of this section. A vessel issued a Swordfish General Commercial open access permit for a fishing year shall not be issued an HMS Angling permit or an HMS Charter/Headboat permit for that same fishing year, regardless of a change in the vessel's ownership.

(g) *Dealer permits*—(1) *Atlantic tunas*. A dealer, as defined under §600.10 of this chapter, must possess a valid federal Atlantic tunas dealer permit to purchase, trade, or barter any Atlantic tunas except as noted under paragraph (o) of this section.

(2) *Shark*. A dealer, as defined in §600.10 of this chapter, must possess a valid federal Atlantic shark dealer permit to purchase, trade, or barter any Atlantic shark listed in Table 1 of appendix A to this part except as noted under paragraph (o) of this section.

(3) *Swordfish*. A dealer, as defined under §600.10 of this chapter, must possess a valid federal Atlantic swordfish dealer permit to purchase, trade, or barter any Atlantic swordfish except as noted under paragraph (o) of this section.

(h) *Applications for permits*. An owner of a vessel or a dealer must submit to NMFS, at an address designated by NMFS, a complete application and required supporting documents at least 30 days before the date on which the permit is to be made effective. Application forms and instructions for their completion are available from NMFS.

(1) *Atlantic Tunas, HMS Angling, HMS Charter/Headboat, Swordfish General Commercial, Incidental HMS Squid Trawl, and HMS Commercial Caribbean Small Boat vessel permits*. (i) An applicant must provide all information concerning his or her identification, vessel, gear used, fishing areas, fisheries participated in, the corporation or partnership owning the vessel, and income requirements requested by NMFS and included on the application form.

(ii) An applicant must also submit a copy of the vessel's valid U.S. Coast Guard documentation or, if not documented, a copy of its valid state registration and any other information that may be necessary for the issuance

or administration of the permit as requested by NMFS. The owner must submit such information to an address designated by NMFS.

(iii) NMFS may require an applicant to provide documentation supporting the application before a permit is issued or to substantiate why such permit should not be revoked or otherwise sanctioned under paragraph (a)(6) of this section.

(iv) An applicant for an incidental HMS squid trawl permit must submit, in addition to all other information specified in §635.4(h)(1), a copy of a valid *Illex* squid moratorium permit, as described at §648.4(a)(5)(i) of this chapter.

(2) *LAPs for swordfish and shark*. See paragraph (1) of this section for transfers of LAPs for shark and swordfish. See paragraph (m) of this section for renewals of LAPs for shark and swordfish.

(3) *Dealer permits*. (i) An applicant for a dealer permit must provide all the information requested on the application form necessary to identify the company, its principal place of business, and mechanisms by which the company can be contacted.

(ii) An applicant must also submit a copy of each state wholesaler's license held by the dealer and, if a business is owned by a corporation or partnership, the corporate or partnership documents requested on the application form.

(iii) An applicant must also submit any other information that may be necessary for the issuance or administration of the permit, as requested by NMFS.

(i) *Change in application information*. A vessel owner or dealer must report any change in the information contained in an application for a permit within 30 days after such change. The report must be submitted in a manner and/or to a location designated by NMFS. For certain information changes, a new permit may be issued to incorporate the new information, subject to limited access provisions specified in paragraph (1)(2) of this section. NMFS may require supporting documentation before a new permit will be issued. If a change in the permit information is not reported within 30 days,

the permit is void as of the 31st day after such change.

(j) *Permit issuance.* (1) NMFS will issue a permit within 30 days of receipt of a complete and qualifying application. An application is complete when all requested forms, information, and documentation have been received, including all reports and fishing or catch information required to be submitted under this part.

(2) NMFS will notify the applicant of any deficiency in the application, including failure to provide information or reports required to be submitted under this part. If the applicant fails to correct the deficiency within 30 days following the date of notification, the application will be considered abandoned.

(3) A vessel owner issued an Atlantic Tunas permit in the General, Harpoon, or Trap category or an Atlantic HMS permit in the Angling or Charter/Headboat category under paragraph (b), (c), or (d) of this section may change the category of the vessel permit once within 45 calendar days of the date of issuance of the permit, provided the vessel has not landed bluefin tuna during those 45 calendar days as verified by NMFS via landings data. After 45 calendar days from the date of issuance of the permit, the vessel owner may not change the permit category until the following fishing season.

(4) In order to obtain a shark endorsement to fish for, retain, possess, or land sharks, a vessel owner with a vessel fishing in a registered recreational HMS fishing tournament and issued or required to be issued either an Atlantic Tunas General category or Swordfish General Commercial permit or a vessel owner of a vessel issued or required to be issued an HMS Angling or HMS Charter/Headboat permit must take a shark endorsement online quiz. After completion of the quiz, NMFS will issue the vessel owner a new or revised permit with the shark endorsement for the vessel. The vessel owner can take the quiz at any time during the fishing year, but his or her vessel may not leave the dock on a trip during which sharks will be fished for, retained, possessed, or landed unless a new or revised permit with a shark en-

dorsement has been issued by NMFS for the vessel. The addition of a shark endorsement to the permit does not constitute a permit category change and does not change the timing considerations for permit category changes specified in paragraph (j)(3) of this section. Vessel owners may request that NMFS remove the shark endorsement from the permit at any time. If NMFS removes the shark endorsement from the vessel permit, no person on board the vessel may fish for, retain, possess, or land sharks.

(k) *Duration.* A permit issued under this section will be valid for the period specified on it unless it is revoked, suspended, or modified pursuant to subpart D of 15 CFR part 904, the vessel or dealership is sold, or any other information previously submitted on the application changes, as specified in paragraph (i) of this section.

(l) *Transfer—(1) General.* A permit issued under this section is not transferable or assignable to another vessel or owner or dealer; it is valid only for the vessel or owner or dealer to whom it is issued. If a person acquires a vessel or dealership and wants to conduct activities for which a permit is required, that person must apply for a permit in accordance with the provisions of paragraph (h) of this section or, if the acquired vessel is permitted in either the shark, swordfish, or tuna longline fishery, in accordance with paragraph (1)(2) of this section. If the acquired vessel or dealership is currently permitted, an application must be accompanied by the original permit, by a copy of a signed bill of sale or equivalent acquisition papers, and the appropriate workshop certificates as specified in § 635.8.

(2) *Shark, swordfish, and tuna longline LAPs.* (i) Subject to the restrictions on upgrading the harvesting capacity of permitted vessels in paragraph (1)(2)(ii) of this section, as applicable, and to the limitations on ownership of permitted vessels in paragraph (1)(2)(iii) of this section, an owner may transfer a shark or swordfish LAP or an Atlantic Tunas Longline category permit to another vessel that he or she owns or to another person. Directed handgear LAPs for swordfish may be transferred to another vessel or to another person

but only for use with handgear and subject to the upgrading restrictions in paragraph (1)(2)(ii) of this section and the limitations on ownership of permitted vessels in paragraph (1)(2)(iii) of this section. Shark directed and incidental LAPs, swordfish directed and incidental LAPs, and Atlantic Tunas Longline category permits are not subject to the upgrading requirements specified in paragraph (1)(2)(ii) of this section. Shark and swordfish incidental LAPs are not subject to the ownership requirements specified in paragraph (1)(2)(iii) of this section.

(ii) An owner may upgrade a vessel with a swordfish handgear LAP, or transfer such permit to another vessel or to another person, and be eligible to retain or renew such permit only if the upgrade or transfer does not result in an increase in horsepower of more than 20 percent or an increase of more than 10 percent in length overall, gross registered tonnage, or net tonnage from the vessel baseline specifications.

(A) The vessel baseline specifications are the respective specifications (length overall, gross registered tonnage, net tonnage, horsepower) of the first vessel that was issued an initial LAP or, if applicable, of that vessel's replacement owned as of May 28, 1999.

(B) Subsequent to the issuance of a swordfish handgear LAP, the vessel's horsepower may be increased, relative to the baseline specifications of the vessel initially issued the LAP, through refitting, replacement, or transfer. Such an increase may not exceed 20 percent of the baseline specifications of the vessel initially issued the LAP.

(C) Subsequent to the issuance of a swordfish handgear LAP, the vessel's length overall, gross registered tonnage, and net tonnage may be increased, relative to the baseline specifications of the vessel initially issued the LAP, through refitting, replacement, or transfer. An increase in any of these three specifications of vessel size may not exceed 10 percent of the baseline specifications of the vessel initially issued the LAP. This type of upgrade may be done separately from an engine horsepower upgrade.

(iii) No person or entity may own or control more than 5 percent of the ves-

sels for which swordfish directed, shark directed, or Atlantic Tunas Longline category LAPs have been issued.

(iv) In order to transfer a swordfish, shark, or an Atlantic Tunas Longline category LAP to a replacement vessel, the owner of the vessel issued the LAP must submit a request to NMFS, at an address designated by NMFS, to transfer the LAP to another vessel, subject to requirements specified in paragraph (1)(2)(ii) of this section, if applicable. The owner must return the current valid LAP to NMFS with a complete application for a LAP, as specified in paragraph (h) of this section, for the replacement vessel. Copies of both vessels' U.S. Coast Guard documentation or state registration must accompany the application.

(v) For swordfish, shark, and Atlantic Tunas Longline category LAP transfers to a different person, the transferee must submit a request to NMFS, at an address designated by NMFS, to transfer the original LAP(s), subject to the requirements specified in paragraphs (1)(2)(ii) and (iii) of this section, if applicable. The following must accompany the completed application: The original LAP(s) with signatures of both parties to the transaction on the back of the permit(s) and the bill of sale for the permit(s). A person must include copies of both vessels' U.S. Coast Guard documentation or state registration for LAP transfers involving vessels.

(vi) For LAP transfers in conjunction with the sale of the permitted vessel, the transferee of the vessel and LAP(s) issued to that vessel must submit a request to NMFS, at an address designated by NMFS, to transfer the limited access permit(s) LAP(s), subject to the requirements specified in paragraphs (1)(2)(ii) and (iii) of this section, if applicable. The following must accompany the completed application: The original LAP(s) with signatures of both parties to the transaction on the back of the permit(s), the bill of sale for the LAP(s) and the vessel, and a copy of the vessel's U.S. Coast Guard documentation or state registration.

(vii) The owner of a vessel issued a LAP(s) who sells the permitted vessel but retains the LAP(s) must notify NMFS within 30 days after the sale of

the change in application information in accordance with paragraph (i) of this section. If the owner wishes to transfer the LAP(s) to a replacement vessel, he/she must apply according to the procedures in paragraph (1)(2)(iv) of this section.

(viii) As specified in paragraph (f)(4) of this section, a directed or incidental swordfish LAP, a directed or incidental shark LAP, and an Atlantic Tunas Longline category LAP are required to retain swordfish for commercial purposes. Accordingly, a swordfish LAP obtained by transfer without either a directed or incidental shark LAP or an Atlantic Tunas Longline category LAP will not entitle an owner or operator to use a vessel to fish in the swordfish fishery.

(ix) As specified in paragraph (d)(4) of this section, a directed or incidental swordfish LAP, a directed or incidental shark LAP, and an Atlantic Tunas Longline category LAP are required to retain Atlantic tunas taken by pelagic longline gear. Accordingly, an Atlantic Tunas Longline category LAP obtained by transfer without either a directed or incidental swordfish or shark LAP will not entitle an owner or operator to use the permitted vessel to fish in the Atlantic tunas fishery with pelagic longline gear.

(m) *Renewal*—(1) *General*. Persons must apply annually for a dealer permit for Atlantic tunas, sharks, and swordfish, and for an Atlantic HMS Angling, HMS Charter/Headboat, tunas, shark, swordfish, Incidental HMS squid trawl, or HMS Commercial Caribbean Small Boat vessel permit. Except as specified in the instructions for automated renewals, persons must submit a renewal application to NMFS, along with a copy of the applicable valid workshop certificate or certificates, if required pursuant to § 635.8, at an address designated by NMFS, at least 30 days before a permit's expiration to avoid a lapse of permitted status. NMFS will renew a permit if the specific requirements for the requested permit are met, including those described in paragraphs (h)(1)(iv) and (1)(2) of this section; all reports required under the Magnuson-Stevens Act and ATCA have been submitted, including those described in §§ 635.5 and

300.185 of this title; the applicant is not subject to a permit sanction or denial under paragraph (a)(6) of this section; and the workshop requirements specified in § 635.8 are met.

(2) *Shark and swordfish permits*. A vessel owner must obtain the applicable LAP(s) issued pursuant to the requirements in paragraphs (e) and (f) of this section and/or a Federal commercial smoothhound permit issued under paragraph (e) of this section; or an HMS Commercial Caribbean Small Boat permit issued under paragraph (o) of this section, if: The vessel is used to fish for or take sharks commercially from the management unit; sharks from the management unit are retained or possessed on the vessel with an intention to sell; or sharks from the management unit are sold from the vessel. A vessel owner must obtain the applicable LAP(s) issued pursuant to the requirements in paragraphs (e) and (f) of this section, a Swordfish General Commercial permit issued under paragraph (f) of this section, an Incidental HMS Squid Trawl permit issued under paragraph (n) of this section, an HMS Commercial Caribbean Small Boat permit issued under paragraph (o) of this section, or an HMS Charter/Headboat permit with a commercial sale endorsement issued under paragraph (b) of this section, which authorizes a Charter/Headboat to fish commercially for swordfish on a non for-hire trip subject to the retention limits at § 635.24(b)(4) if: The vessel is used to fish for or take swordfish commercially from the management unit; swordfish from the management unit are retained or possessed on the vessel with an intention to sell; or swordfish from the management unit are sold from the vessel. The commercial retention and sale of swordfish from vessels issued an HMS Charter/Headboat permit with a commercial sale endorsement is permissible only when the vessel is on a non for-hire trip. Only persons holding non-expired shark and swordfish LAP(s) in the preceding year are eligible to renew those LAP(s). Transferors may not renew LAP(s) that have been transferred according to the procedures in paragraph (1) of this section.

(n) *Incidental HMS Squid Trawl permits*. (1) The owner of a vessel in the

§ 635.5

squid trawl fishery, as described at § 635.24(b)(2), on which Atlantic swordfish are retained, or possessed with an intention to sell, or from which Atlantic swordfish are sold must obtain, in addition to any other required permits, an Incidental HMS squid trawl permit.

(2) An Incidental HMS squid trawl permit is valid only when the vessel has on board a valid *Illex* squid moratorium permit, as described at § 648.4(a)(5)(i) of this chapter, and no commercial fishing gear other than trawl gear.

(c) *HMS Commercial Caribbean Small Boat permits.* (1) The owner of a vessel who fishes in the U.S. Caribbean, as defined at § 622.2 of this chapter, possesses handgear or green-stick gear and retains, with the intention to sell, any BAYS tunas, Atlantic swordfish, or Atlantic sharks may obtain an HMS Commercial Caribbean Small Boat permit. An HMS Commercial Caribbean Small Boat permit is valid only within the U.S. Caribbean, as defined at § 622.2 of this chapter.

(2) To be eligible for an HMS Commercial Caribbean Small Boat permit, vessel owners must provide documentation that the vessel is less than or equal to 13.7 m (45 ft) in length overall.

(3) A vessel issued an HMS Commercial Caribbean Small Boat permit may not be issued any other HMS fishing permit, except those issued under § 635.32, as long as the HMS Commercial Caribbean Small Boat permit is valid.

(4) The owner of a vessel issued an HMS Commercial Caribbean Small Boat permit may fish for, take, retain, or possess only BAYS tunas, Atlantic swordfish, and Atlantic sharks, subject to the trip limits specified at § 635.24.

(5) HMS landed under an HMS Commercial Caribbean Small Boat permit may be sold by the owner or operator to individuals who do not possess a valid HMS dealer permit otherwise required under § 635.4(g). HMS Commercial Caribbean Small Boat permit holders may not sell HMS harvested or landed by another vessel or purchase, barter, or trade for HMS harvested by other vessels with the intent to sell.

[64 FR 29135, May 28, 1999]

EDITORIAL NOTE: For FEDERAL REGISTER citations affecting § 635.4, see the List of CFR Sections Affected, which appears in the

50 CFR Ch. VI (10–1–21 Edition)

Finding Aids section of the printed volume and at www.govinfo.gov.

§ 635.5 Recordkeeping and reporting.

Information on HMS vessel and dealer reporting requirements may be obtained from the Division Chief or where otherwise stated in this part.

(a) *Vessels*—(1) *Logbooks.* If an owner of an HMS charter/headboat vessel, an Atlantic tunas vessel, a shark vessel, a swordfish vessel, or a vessel in the squid trawl fishery for which a permit has been issued under § 635.4(b), (d), (e), (f), or (n) is selected for logbook reporting in writing by NMFS, he or she must maintain and submit a fishing record on a logbook form specified by NMFS. Entries are required regarding the vessel's fishing effort and the number of fish landed and discarded. Entries on a day's fishing activities must be entered on the logbook form within 48 hours of completing that day's activities or before offloading, whichever is sooner. The owner or operator of the vessel must submit the logbook form(s) postmarked within 7 days of offloading all Atlantic HMS. If no fishing occurred during a calendar month, a no-fishing form so stating must be submitted postmarked no later than 7 days after the end of that month. If an owner of an HMS charter/headboat vessel, Atlantic tunas vessel, shark vessel, swordfish vessel, or a vessel in the squid trawl fishery permitted under § 635.4(b), (d), (e), (f), or (n) is selected in writing by NMFS to complete the cost-earnings portion of the logbook(s), the owner or operator must maintain and submit the cost-earnings portion of the logbook postmarked no later than 30 days after completing the offloading for each trip fishing for Atlantic HMS during that calendar year, and submit the Atlantic Highly Migratory Species Annual Expenditures form(s) postmarked no later than the date specified on the form of the following year.

(2) *Weighout slips.* If an owner of a permitted vessel is required to maintain and submit logbooks under paragraph (a)(1) of this section, and Atlantic HMS harvested on a trip are sold, the owner or operator must obtain and submit copies of weighout slips for those fish. Each weighout slip must show the dealer to whom the fish were

transferred, the date they were transferred, and the carcass weight of each fish for which individual weights are normally recorded. For fish that are not individually weighed, a weighout slip must record total weights by species and market category. A weighout slip for sharks prior to or as part of a commercial transaction involving shark carcasses or fins must record the weights of carcasses and any detached fins. The owner or operator must also submit copies of weighout slips with the logbook forms required to be submitted under paragraph (a)(1) of this section.

(3) *Bluefin tuna landed by a commercial vessel and not sold.* If a person who catches and lands a large medium or giant bluefin tuna from a vessel issued a permit in any of the commercial categories for Atlantic tunas does not sell or otherwise transfer the bluefin tuna to a dealer who has a dealer permit for Atlantic tunas, the person must contact a NMFS enforcement agent, at a number designated by NMFS, immediately upon landing such bluefin tuna, provide the information needed for the reports required under paragraph (b)(2)(i) of this section, and, if requested, make the tuna available so that a NMFS enforcement agent or authorized officer may inspect the fish and attach a tag to it. Alternatively, such reporting requirement may be fulfilled if a dealer who has a dealer permit for Atlantic tunas affixes a dealer tag as required under paragraph (b)(2)(ii) of this section and reports the bluefin tuna as being landed but not sold on the reports required under paragraph (b)(2)(i) of this section. If a vessel is placed on a trailer, the person must contact a NMFS enforcement agent, or the bluefin tuna must have a dealer tag affixed to it by a permitted Atlantic tunas dealer, immediately upon the vessel being removed from the water. All bluefin tuna landed but not sold will be applied to the quota category according to the permit category of the vessel from which it was landed.

(4) *Bluefin tuna discarded dead, or landed by a commercial vessel and sold.* The owner of a vessel that has been permitted or that is required to be permitted under § 635.4 in the Atlantic Tunas General or Harpoon categories,

or has been permitted or is required to be permitted under § 635.4 under the HMS Charter/Headboat category and fishing under the General category quotas and daily limits as specified at § 635.23(c), must report all discards and/or landings of bluefin tuna through the NMFS electronic catch reporting system within 24 hours of the landings or the end of trip. Such reports may be made by either calling a phone number designated by NMFS or by submitting the required information online to a Web site designated by NMFS. The owner of a vessel that has been permitted in a different bluefin tuna category must report as specified elsewhere in this section (§ 635.5).

(5) *Chartering arrangements.* (i) For the purposes of this section, a chartering arrangement means any contract, agreement, or commitment between a U.S. vessel owner and a foreign entity (e.g., government, company, person) by which the control, use, possession, or services of a vessel are secured, for a period of time for fishing targeting Atlantic HMS. Chartering arrangements under this part do not include bareboat charters under which a vessel enters into a fishing agreement with a foreign entity, changes registration to fish under another country's registration then, once the agreed-upon fishing is completed, reverts back to the vessel's original registration.

(ii) Before fishing under a chartering arrangement, the owner of a fishing vessel subject to U.S. jurisdiction must apply for, and obtain, a chartering permit as specified in § 635.32(e) and (g). If a chartering permit is obtained, the vessel owner must submit catch information as specified in the terms and conditions of that permit. All catches will be recorded and counted against the applicable quota of the Contracting Party to which the chartering foreign entity is a member and, unless otherwise provided in the chartering permit, must be offloaded in the ports of the chartering foreign entity or offloaded under the direct supervision of the chartering foreign entity.

(iii) If the chartering arrangement terminates before the expiration of the charter permit, the vessel owner must notify NMFS immediately and in writing, upon termination of the chartering

§ 635.5

50 CFR Ch. VI (10–1–21 Edition)

arrangement. Such notification requirements shall also apply to situations where the chartering arrangement is temporarily suspended and during intermittent periods where the vessel may be fishing under U.S. quotas for Atlantic HMS.

(6) Atlantic Tunas permitted vessels. The owner or operator of an Atlantic Tunas vessel fishing with pelagic longline gear or an Atlantic Tunas Purse Seine category participant is subject to the VMS reporting requirements under § 635.69(e)(4) and the applicable Individual Bluefin Quota (IBQ) Program and/or leasing requirements under § 635.15(a)(2).

(b) *Dealers.* Persons who have been issued a dealer permit under § 635.4 must submit reports to NMFS, to an address designated by NMFS, and maintain records as follows:

(1) *Atlantic HMS.* (i) Dealers that have been issued or should have been issued a Federal Atlantic BAYS tunas, swordfish, and/or shark dealer permit under § 635.4 must submit to NMFS all reports required under this section within the timeframe specified under paragraph (b)(1)(ii) of this section. BAYS tunas, swordfish, and sharks commercially-harvested by a vessel can only be first received by dealers that have been issued or should have been issued an Atlantic tunas, swordfish, and/or shark dealer permit under § 635.4. All federal Atlantic HMS dealers must provide a detailed report of all fish first received to NMFS within the period specified under paragraph (b)(1)(ii) of this section. All reports must be species-specific and must include the required information about all swordfish and sharks received by the dealer, including the required vessel information, regardless of where the fish were harvested or whether the harvesting vessel is permitted under § 635.4. For sharks, each report must specify the total weight of the carcass(es) without the fins for each species, and the total fin weight by grade for all sharks combined. Dealers are also required to submit “negative” reports, indicating no receipt of any species, within the timeframe specified under paragraph (b)(1)(ii) of this section if they did not first receive any fish during the reporting period. As stated in § 635.4(a)(6),

failure to comply with these record-keeping and reporting requirements may result in existing dealer permit(s) being revoked, suspended, or modified, and in the denial of any permit applications.

(ii) Reports of any Atlantic BAYS tunas, sharks, and/or swordfish first received by dealers from a vessel must be submitted electronically on a weekly basis through a NMFS-approved electronic reporting system by the dealer and received by NMFS no later than midnight, local time, of the first Tuesday following the end of the reporting week unless the dealer is otherwise notified by NMFS. Reports of BAYS tunas, sharks, and/or swordfish may be modified for not more than 30 days from when the dealer report is submitted to NMFS. NMFS will require BAYS tunas, swordfish, and shark dealers to submit dealer reports to NMFS on a weekly basis. Atlantic BAYS tunas, sharks, and swordfish dealers must submit electronic negative reports stating that no BAYS tunas, sharks, and/or swordfish were first received when they received no fish of these species, and no parts thereof, during the reporting period. Reporting requirements for bluefin tuna are specified in paragraph (b)(2) of this section. The negative reporting requirement does not apply for bluefin tuna.

(iii) Atlantic HMS dealers are not authorized to first receive Atlantic swordfish, sharks, and/or BAYS tunas if the required reports have not been submitted and received by NMFS according to reporting requirements under this section. Delinquent reports automatically result in an Atlantic HMS dealer becoming ineligible to first receive Atlantic swordfish, sharks, and/or BAYS tunas. Atlantic HMS dealers who become ineligible to first receive Atlantic swordfish, sharks, and/or BAYS tunas due to delinquent reports are authorized to first receive Atlantic swordfish, sharks, and/or BAYS tunas only once all required and delinquent reports have been completed, submitted by the dealer, and received by NMFS.

(2) *Requirements for bluefin tuna—*(i) *Dealer reports—*(A) *Landing reports.* Each dealer with a valid Atlantic Tunas dealer permit issued under § 635.4

must submit the landing reports to NMFS for each bluefin received from a U.S. fishing vessel. Such reports must be submitted electronically via the Internet to a number or a web address designated by NMFS not later than 24 hours after receipt of the bluefin. Landing reports must include the name and permit number of the vessel that landed the bluefin and other information regarding the catch as instructed by NMFS. When purchasing bluefin tuna from eligible IBQ Program participants or Atlantic Tunas Purse Seine category participants, permitted Atlantic Tunas dealers must also enter landing reports into the electronic IBQ System established under § 635.15, not later than 24 hours after receipt of the bluefin. The vessel owner or operator must confirm that the IBQ System landing report information is accurate by entering a unique PIN when the dealer report is submitted. The dealer must inspect the vessel's permit to verify that it is a commercial category, the required vessel name and permit number as listed on the permit are correctly recorded in the landing report, and that the vessel permit has not expired.

(B) *Bi-weekly reports.* Each dealer with a valid Atlantic tunas permit under § 635.4 must submit a complete bi-weekly report on forms available from NMFS for BFT received from U.S. vessels. For BFT received from U.S. vessels on the 1st through the 15th of each month, the dealer must submit the bi-weekly report form to NMFS, to be received by NMFS, not later than the 25th of that month. Reports of BFT received on the 16th through the last day of each month must be received by NMFS not later than the 10th of the following month.

(ii) *Dealer tags.* NMFS will issue numbered dealer tags to each person issued a dealer permit for Atlantic tunas under § 635.4. A dealer tag is not transferable and is usable only by the dealer to whom it is issued. Dealer tags may not be reused once affixed to a tuna or recorded on a package, container, or report.

(A) *Affixing dealer tags.* A dealer or a dealer's agent must affix a dealer tag to each BFT purchased or received from a U.S. vessel immediately upon

offloading the BFT. If a vessel is placed on a trailer, the dealer or dealer's agent must affix the dealer tag to the BFT immediately upon the vessel being removed from the water. The dealer tag must be affixed to the BFT between the fifth dorsal finlet and the caudal keel.

(B) *Removal of dealer tags.* A dealer tag affixed to any BFT under paragraph (b)(2)(ii)(A) of this section or a BSD tag affixed to an imported bluefin tuna must remain on the fish until it is cut into portions. If the bluefin tuna or bluefin tuna parts subsequently are packaged for transport for domestic commercial use or for export, the number of the dealer tag or the BSD tag must be written legibly and indelibly on the outside of any package containing the tuna. Such tag number also must be recorded on any document accompanying the shipment of bluefin tuna for commercial use or export.

(iii) Dealers must comply with dealer requirements related to the Individual Bluefin Quota Program under § 635.15(a)(4)(iii).

(3) *Recordkeeping.* Dealers must retain at their place of business a copy of each report required under paragraphs (b)(1)(i), (b)(1)(ii), and (b)(2)(i) of this section for a period of 2 years from the date on which each report was required to be submitted.

(c) *Anglers.* All bluefin tuna, billfish, and North Atlantic swordfish non-tournament landings must be reported as specified under paragraphs (c)(1) or (c)(2) of this section, unless an alternative recreational catch reporting system has been established as specified under paragraph (c)(3) of this section. Tournament landings must be reported as specified under paragraph (d) of this section.

(1) *Bluefin tuna.* The owner of a vessel permitted, or required to be permitted in the Atlantic HMS Angling or Atlantic HMS Charter/Headboat category under § 635.4 must report the catch of all bluefin tuna discarded dead and/or retained under the Angling category quota designated at § 635.27(a) through the NMFS electronic catch reporting system within 24 hours of the landing.

(2) *Non-tournament landings.* The owner, or the owner's designee, of a

vessel permitted, or required to be permitted, in the Atlantic HMS Angling or Atlantic HMS Charter/Headboat category must report all non-tournament landings of Atlantic blue marlin, Atlantic white marlin, roundscale spearfish, and Atlantic sailfish, and all non-tournament and non-commercial landings of North Atlantic swordfish to NMFS by telephone to a number designated by NMFS, or electronically via the internet to an internet website designated by NMFS, or by other means as specified by NMFS, within 24 hours of that landing. For telephone landing reports, the owner, or the owner's designee, must provide a contact phone number so that a NMFS designee can call the vessel owner, or the owner's designee, for follow up questions and to confirm the reported landing. Regardless of how submitted, landing reports submitted to NMFS are not complete unless the vessel owner, or the owner's designee, has received a confirmation number from NMFS or a NMFS designee.

(3) *Alternative recreational catch reporting.* Alternative recreational catch reporting procedures may be established by NMFS with cooperation from states which may include such methodologies as telephone, dockside or mail surveys, mail in or phone-in reports, tagging programs, catch cards, or mandatory check-in stations. A census or a statistical sample of persons fishing under the recreational fishing regulations of this part may be used for these alternative reporting programs (after the programs have received Paperwork Reduction Act approval from OMB). Persons or vessel owners selected for reporting will be notified by NMFS or by the cooperating state agency of the requirements and procedures for reporting recreational catch. Each person so notified must comply with those requirements and procedures. Additionally, NMFS may determine that recreational landing reporting systems implemented by the states, if mandatory, at least as restrictive, and effectively enforced, are sufficient for recreational landing monitoring as required under this part. In such case, NMFS will file with the Office of the Federal Register for publication notification indicating that compliance with

the state system satisfies the reporting requirements of paragraph (c) of this section.

(d) *Tournament operators.* For all tournaments that are conducted from a port in an Atlantic coastal state, including the U.S. Virgin Islands and Puerto Rico, a tournament operator must register with the NMFS' HMS Management Division, at least 4 weeks prior to commencement of the tournament by submitting information on the purpose, dates, and location of the tournament to NMFS. A tournament is not registered unless the tournament operator has received a confirmation number from the NMFS' HMS Management Division. NMFS will notify the tournament operator in writing when a tournament has been selected for reporting. Tournament operators that are selected to report must maintain and submit to NMFS a record of catch and effort on forms available from NMFS. Tournament operators must submit the completed forms to NMFS, at an address designated by NMFS, postmarked no later than the 7th day after the conclusion of the tournament, and must attach a copy of the tournament rules.

(e) *Inspection.* Any person authorized to carry out enforcement activities under the regulations in this part has the authority, without warrant or other process, to inspect, at any reasonable time, catch on board a vessel or on the premises of a dealer, logbooks, catch reports, statistical records, sales receipts, or other records and reports required by this part to be made, kept, or furnished. An owner or operator of a fishing vessel that has been issued a permit under § 635.4 or § 635.32 must allow NMFS or an authorized person to inspect and copy any required reports and the records, in any form, on which the completed reports are based, wherever they exist. An agent of a person issued a permit under this part, or anyone responsible for off-loading, storing, packing, or selling regulated HMS for such permittee, shall be subject to the inspection provisions of this section.

(f) *Additional data and inspection.* Additional data on fishing effort directed

Fishery Conservation and Management

§ 635.7

at Atlantic HMS or on catch of Atlantic HMS, regardless of whether retained, may be collected by contractors and statistical reporting agents, as designees of NMFS, and by authorized officers. A person issued a permit under § 635.4 is required to provide requested information about fishing activity, and a person, regardless of whether issued a permit under § 635.4, who possesses an Atlantic HMS is required to make such fish or parts thereof available for inspection by NMFS or its designees upon request.

[64 FR 29135, May 28, 1999]

EDITORIAL NOTE: For FEDERAL REGISTER citations affecting § 635.5, see the List of CFR Sections Affected, which appears in the Finding Aids section of the printed volume and at www.govinfo.gov.

§ 635.6 Vessel and gear identification.

(a) *Vessel number.* For the purposes of this section, a vessel's number is the vessel's official number issued by either by the U.S. Coast Guard or by the appropriate state agency.

(b) *Vessel identification.* (1) An owner or operator of a vessel for which a permit has been issued under § 635.4, other than an HMS Angling permit, must display the vessel number—

(i) On the port and starboard sides of the deckhouse or hull and on an appropriate weather deck, so as to be clearly visible from an enforcement vessel or aircraft.

(ii) In block Arabic numerals permanently affixed to or painted on the vessel in contrasting color to the background.

(iii) At least 18 inches (45.7 cm) in height for vessels over 65 ft (19.8 m) in length; at least 10 inches (25.4 cm) in height for all other vessels over 25 ft (7.6 m) in length; and at least 3 inches (7.6 cm) in height for vessels 25 ft (7.6 m) in length or less.

(2) The owner or operator of a vessel for which a permit has been issued under § 635.4 must keep the vessel's number clearly legible and in good repair and ensure that no part of the vessel, its rigging, its fishing gear, or any other material on board obstructs the view of the vessel's number from an enforcement vessel or aircraft.

(c) *Gear identification.* (1) The owner or operator of a vessel for which a per-

mit has been issued under § 635.4 and that uses handline, buoy gear, harpoon, longline, or gillnet, must display the vessel's name, registration number, or Atlantic Tunas, HMS Angling, or HMS Charter/Headboat permit number on each float attached to a handline, buoy gear, or harpoon, and on the terminal floats and high-flyers (if applicable) on a longline or gillnet used by the vessel. The vessel's name or number must be at least 1 inch (2.5 cm) in height in block letters or Arabic numerals in a color that contrasts with the background color of the float or high-flyer.

(2) An unmarked handline, buoy gear, harpoon, longline, or gillnet, is illegal and may be disposed of in an appropriate manner by NMFS or an authorized officer.

[64 FR 29135, May 28, 1999, as amended at 66 FR 42804, Aug. 15, 2001; 67 FR 77437, Dec. 18, 2002; 71 FR 58166, Oct. 2, 2006; 83 FR 33153, July 17, 2018]

§ 635.7 At-sea observer coverage.

(a) *Applicability.* NMFS may select for at-sea observer coverage any vessel that has an Atlantic HMS, tunas, shark, or swordfish permit issued under § 635.4 or § 635.32. When selected, vessels are required to take observers on a mandatory basis. Vessels permitted in the HMS Charter/Headboat and Angling categories may be requested to take observers on a voluntary basis.

(b) *Selection of vessels.* NMFS will notify a vessel owner, in writing, by email, by phone, or in person when his or her vessel is selected for observer coverage. Vessels will be selected to provide information on catch, bycatch and other fishery data according to the need for representative samples.

(c) *Notification of trips.* If selected to carry an observer, it is the responsibility of the vessel owner to arrange for and facilitate observer placement. The owner or operator of a vessel that is selected under paragraph (b) of this section must notify NMFS, at an address or by phone at a number designated by NMFS, before commencing any fishing trip that may result in the incidental catch or harvest of Atlantic HMS. Notification procedures and information requirements will be specified in a selection letter sent by NMFS.

§ 635.8

(d) *Assignment of observers.* Once a selected vessel notifies NMFS or its designee, NMFS will assign an observer for that trip based on current information needs relative to the expected catch and bycatch likely to be associated with the indicated gear deployment, trip duration and fishing area. If an observer is not assigned for a fishing trip, NMFS, or their designated observer service provider, will issue a waiver for that trip to the owner or operator of the selected vessel, so long as the waiver is consistent with other applicable laws. If an observer is assigned for a trip, the operator of the selected vessel must arrange to embark the observer and shall not fish for or retain any Atlantic HMS unless the NMFS-assigned observer is aboard.

(e) *Requirements.* The owner or operator of a vessel on which a NMFS-approved observer is embarked, regardless of whether required to carry the observer, must comply with safety regulations in § 600.725 and § 600.746 of this chapter and—

(1) Provide accommodations and food that are equivalent to those provided to the crew.

(2) Allow the observer access to and use of the vessel's communications equipment and personnel upon request for the transmission and receipt of messages related to the observer's duties.

(3) Allow the observer access to and use of the vessel's navigation equipment and personnel upon request to determine the vessel's position.

(4) Allow the observer free and unobstructed access to the vessel's bridge, working decks, holding bins, weight scales, holds, and any other space used to hold, process, weigh, or store fish.

(5) Allow the observer to inspect and copy the vessel's log, communications logs, and any records associated with the catch and distribution of fish for that trip.

(6) Notify the observer in a timely fashion of when fishing operations are to begin and end.

(f) *Vessel responsibilities.* An owner or operator of a vessel required to carry one or more observer(s) must provide reasonable assistance to enable observer(s) to carry out their duties, including, but not limited to:

(1) Measuring decks, codends, and holding bins.

(2) Providing the observer(s) with a safe work area.

(3) Collecting bycatch when requested by the observer(s).

(4) Collecting and carrying baskets of fish when requested by the observer(s).

(5) Allowing the observer(s) to collect biological data and samples.

(6) Providing adequate space for storage of biological samples.

[80 FR 73144, Nov. 24, 2015]

§ 635.8 Workshops.

(a) *Safe handling, release, and identification workshops.* (1) Both the owner and operator of a vessel that fishes with longline or gillnet gear must be certified by NMFS, or its designee, as having completed a workshop on the safe handling, release, and identification of protected species before a shark or swordfish LAP, pursuant to § 635.4(e) and (f), is renewed. For the purposes of this section, it is a rebuttable presumption that a vessel fishes with longline or gillnet gear if: Longline or gillnet gear is onboard the vessel; logbook reports indicate that longline or gillnet gear was used on at least one trip in the preceding year; or, in the case of a permit transfer to new owners that occurred less than a year ago, logbook reports indicate that longline or gillnet gear was used on at least one trip since the permit transfer.

(2) NMFS, or its designee, will issue a safe handling, release, and identification workshop certificate to any person who completes a safe handling, release, and identification workshop. If an owner owns multiple vessels, NMFS will issue a certificate for each vessel that the owner owns upon successful completion of one workshop. An owner who is also an operator will be issued multiple certificates, one as the owner of the vessel and one as the operator.

(3) The owner of a vessel that fishes with longline or gillnet gear, as specified in paragraph (a)(1) of this section, is required to possess on board the vessel a valid protected species safe handling, release, and identification workshop certificate issued to that vessel owner. A copy of a valid protected species safe handling, release, and identification workshop certificate issued to

the vessel owner for a vessel that fishes with longline or gillnet gear must be included in the application package to renew or obtain a shark or swordfish LAP.

(4) An operator that fishes with longline or gillnet gear as specified in paragraph (a)(1) of this section must possess on board the vessel a valid safe handling, release, and identification workshop certificate issued to that operator, in addition to a certificate issued to the vessel owner.

(b) *Atlantic shark identification workshops.* (1) As of December 31, 2007, all Federal Atlantic shark dealers permitted or required to be permitted pursuant to §635.4(g)(2), or a proxy for each place of business as specified in paragraph (b)(4) of this section, must be certified by NMFS, or its designee, as having completed an Atlantic shark identification workshop.

(2) NMFS, or its designee, will issue an Atlantic shark identification workshop certificate to any person who completes an Atlantic shark identification workshop.

(3) Dealers who own multiple businesses and who attend and successfully complete the workshop will be issued a certificate for each place of business that is permitted to receive sharks pursuant to §635.4(g)(2).

(4) Only dealers issued a valid shark dealer permit may send a proxy to the Atlantic shark identification workshops. If a dealer opts to send a proxy, the dealer must designate at least one proxy from each place of business listed on the dealer permit, issued pursuant to §635.4(g)(2), which first receives Atlantic shark. The proxy must be a person who is currently employed by a place of business covered by the dealer's permit; is a primary participant in the identification, weighing, and/or first receipt of fish as they are received; and fills out dealer reports as required under §635.5. Only one certificate will be issued to each proxy. If a proxy is no longer employed by a place of business covered by the dealer's permit, the dealer or another proxy must be certified as having completed a workshop pursuant to this section. At least one individual from each place of business listed on the dealer permit which first receives Atlantic sharks

must possess a valid Atlantic shark identification workshop certificate.

(5) An Atlantic shark dealer issued or required to be issued a shark dealer permit pursuant to §635.4(g)(2) must possess and make available for inspection a valid dealer or proxy Atlantic shark identification workshop certificate issued to the dealer or proxy at each place of business listed on the dealer permit which first receives Atlantic sharks. For the purposes of this part, trucks or other conveyances of a dealer's place of business are considered to be extensions of a dealer's place of business and must possess a copy of a valid dealer or proxy Atlantic shark identification workshop certificate issued to a place of business covered by the dealer permit. A copy of a valid Atlantic shark identification workshop certificate must be included in the dealer's application package to obtain or renew an Atlantic shark dealer permit. If multiple businesses are authorized to first receive Atlantic sharks under the Atlantic shark dealer's permit, a copy of the Atlantic shark identification workshop certificate for each place of business listed on the Atlantic shark dealer permit which first receives Atlantic sharks must be included in the Atlantic shark dealer permit renewal application package.

(6) Persons holding an expired Atlantic shark dealer permit and persons who intend to apply for a new Atlantic shark dealer permit will be issued a participant certificate in their name upon successful completion of the Atlantic shark identification workshop. A participant certificate issued to such persons may be used only to apply for an Atlantic shark dealer permit. Pursuant to §635.8(c)(4), an Atlantic shark dealer may not first receive Atlantic shark without a valid dealer or proxy Atlantic shark identification workshop certificate issued to the dealer or proxy. After an Atlantic shark dealer permit is issued to a person using an Atlantic shark identification workshop participant certificate, such person may obtain an Atlantic shark identification workshop dealer certificate for each location which first receives Atlantic sharks by contacting NMFS at an address designated by NMFS.

(c) *Terms and conditions.* (1) Certificates, as described in paragraphs (a) and (b) of this section, are valid for three calendar years. All certificates must be renewed prior to the expiration date on the certificate.

(2) If a vessel fishes with longline or gillnet gear as described in paragraph (a)(1) of this section, the vessel owner may not renew a shark or swordfish LAP, issued pursuant to § 635.4(e) or (f), without submitting a valid protected species workshop certificate with the permit renewal application.

(3) A vessel that fishes with longline or gillnet gear as described in paragraph (a)(1) of this section and that has been, or should be, issued a valid LAP pursuant to § 635.4(e) or (f), may not fish unless a valid protected species safe handling, release, and identification workshop certificate has been issued to both the owner and operator of that vessel.
