(2) Tolerances are established for residues of bifentazate (1-methylethyl 2-(4-methoxy[1,1'-biphenyl]-3-yl)hydrazinecarboxylate) including its metabolites and degradates, in or on the commodities listed in the following table. Compliance with the tolerance levels specified are to be determined by measuring only the sum of bifentazate and its metabolites diazinecarboxylic acid, 2-(4-methoxy-[1,1'-biphenyl]-3-yl), 1-methylethyl ester; 1,1'-biphenyl, 4-ol; and 1,1'-biphenyl, 4-oxysulfonic acid (calculated as the stoichiometric equivalent of bifentazate) in or on the following food commodities:

| Commodity                     | Parts per million |
|-------------------------------|-------------------|
| Cattle, meat .....            | 0.02              |
| Cattle, meat byproducts ..... | 0.02              |
| Goat, meat .....              | 0.02              |
| Goat, meat byproducts .....   | 0.02              |
| Hog, meat .....               | 0.02              |
| Hog, meat byproducts .....    | 0.02              |
| Horse, meat .....             | 0.02              |
| Horse, meat byproducts .....  | 0.02              |
| Milk .....                    | 0.02              |
| Sheep, meat .....             | 0.02              |
| Sheep, meat byproducts .....  | 0.02              |

(b) *Section 18 emergency exemptions.* [Reserved]

(c) *Tolerances with regional registrations.* Tolerances with regional registration, as defined in §180.1(1), are established for residues of bifentazate (1-methylethyl 2-(4-methoxy[1,1'-biphenyl]-3-yl)hydrazinecarboxylate) including its metabolites and degradates, in or on the commodities listed in the following table. Compliance with the tolerance levels specified are to be determined by measuring only the sum of bifentazate and its metabolite, diazinecarboxylic acid, 2-(4-methoxy-[1,1'-biphenyl]-3-yl), 1-methylethyl ester, (calculated as the stoichiometric equivalent of bifentazate) in or on the following food commodities:

| Commodity             | Parts per million |
|-----------------------|-------------------|
| Timothy, forage ..... | 200               |
| Timothy, hay .....    | 150               |

40 CFR Ch. I (7–1–24 Edition)

(d) *Indirect or inadvertent residues.* [Reserved]

[66 FR 34569, June 29, 2001]

EDITORIAL NOTE: For FEDERAL REGISTER citations affecting § 180.572, see the List of CFR Sections Affected, which appears in the Finding Aids section of the printed volume and at [www.govinfo.gov](http://www.govinfo.gov).

§ 180.573 Tepraloxym; tolerances for residues.

(a) *General.* (1) Tolerances are established for residues of tepraloxym, including its metabolites and degradates, in or on the commodities in the table below. Compliance with the tolerance levels specified below is to be determined by measuring only the combined residues of tepraloxym, (2-[1-[[[(2E)-3-chloro-2-propen-1-yl]oxy]imino]propyl]-3-hydroxy-5-(tetrahydro-2H-pyran-4-yl)-2-cyclohexen-1-one) and its metabolites convertible to GP (3-(tetrahydropyran-4-yl)pentane-1,5-dioic acid) and OH-GP (3-hydroxy-3-(tetrahydropyran-4-yl)pentane-1,5-dioic acid), calculated as tepraloxym, in or on the commodities.

| Commodity                                                                   | Parts per million | Expiration/revocation date |
|-----------------------------------------------------------------------------|-------------------|----------------------------|
| Cotton, undelinted seed .....                                               | 0.2               | 12/31/18                   |
| Cotton, gin byproducts .....                                                | 3.0               | 12/31/18                   |
| Flax, seed .....                                                            | 0.10              | 12/31/18                   |
| Grain, aspirated fraction .....                                             | 1200.0            | 12/31/18                   |
| Pea and bean, dried shelled, except soybean, subgroup 6C <sup>1</sup> ..... | 0.10              | 12/31/18                   |
| Soybean, seed .....                                                         | 6.0               | 12/31/18                   |
| Soybean, hulls .....                                                        | 8.0               | 12/31/18                   |
| Sunflower subgroup 20B <sup>1</sup> .....                                   | 0.20              | 12/31/18                   |

<sup>1</sup> There are no U.S. registrations for commodities in this subgroup.

(2) Tolerances are established for residues of tepraloxym, including its metabolites and degradates, in or on the commodities in the table below. Compliance with the tolerance levels specified below is to be determined by measuring only the combined residues of tepraloxym (2-[1-[[[(2E)-3-chloro-2-propen-1-yl]oxy]imino]propyl]-3-hydroxy-5-(tetrahydro-2H-pyran-4-yl)-2-cyclohexen-1-one) and its metabolites convertible to GP (3-(tetrahydropyran-4-yl)pentane-1,5-dioic acid), OH-GP (3-hydroxy-3-(tetrahydropyran-4-yl)pentane-1,5-dioic acid), and GL (3-(2-oxotetrahydropyran-4-yl)-1,5-dioic acid), calculated as tepraloxym, in or on the commodities.

(b) *Section 18 emergency exemptions.*  
[Reserved]

(c) *Tolerances with regional registrations.* A tolerance with regional registration, as defined in §180.1(l), is established for residues of tepraloxym, including its metabolites and degradates, in or on the commodities in the table below. Compliance with the tolerance levels specified below is to be determined by measuring only the combined residues of tepraloxym (2-[1-[[[(2*E*)-3-chloro-2-propen-1-yl]oxy]imino]propyl]-3-hydroxy-5-(tetrahydro-2*H*-pyran-4-yl)-2-cyclohexen-1-one) and its metabolites convertible to GP (3-(tetrahydropyran-4-yl)pentane-1,5-dioic acid) and OH-GP (3-hydroxy-3-(tetrahydropyran-4-yl)pentane-1,5-dioic acid), calculated as tepraloxym, in or on the commodities.

| Commodity          | Parts per million | Expiration/revocation date |
|--------------------|-------------------|----------------------------|
| Canola, seed ..... | 0.50              | 12/31/18                   |

(d) *Indirect or inadvertent residues.*  
[Reserved]

[66 FR 40150, Aug. 2, 2001, as amended at 72 FR 54588, Sept. 26, 2007; 76 FR 34885, June 15, 2011; 76 FR 82152, Dec. 30, 2011; 81 FR 34906, June 1, 2016]

## § 180.574 Fluazinam; tolerances for residues.

(a) *General.* (1) Tolerances are established for residues of fluazinam (3-chloro-*N*-[3-chloro-2,6-dinitro-4-(trifluoromethyl)phenyl]-5-(trifluoromethyl)-2-pyridinamine), including its metabolites and degradates, in or on the commodities in the table below. Compliance with the tolerance levels specified below is to be determined by measuring only fluazinam.

TABLE 1 TO PARAGRAPH (a)(1)

| Commodity                              | Parts per million |
|----------------------------------------|-------------------|
| Apple .....                            | 2.0               |

<sup>1</sup> There is no U.S. registration as of January 19, 2017.

(2) Tolerances are established for residues of fluazinam, including its metabolites and degradates, in or on the commodities in the table below. Compliance with the tolerance levels specified below is to be determined by measuring only fluazinam and its metabolite AMGT (3-[[4-amino-3-[[3-chloro-5-(trifluoromethyl)-2-pyridinyl]amino]-2-nitro-6-(trifluoromethyl) phenyl]thio]-2-(beta-D-glucopyranosyloxy) propionic acid).

| Commodity                      | Parts per million |
|--------------------------------|-------------------|
| Grape, wine <sup>1</sup> ..... | 3.0               |

<sup>1</sup> No US registration as of March 15, 2002.

(3) Tolerances are established for residues of fluazinam (3-chloro-*N*-[3-chloro-2,6-dinitro-4-(trifluoromethyl)phenyl]-5-(trifluoromethyl)-2-pyridinamine), including its metabolites and degradates, in or on the commodities in the table below. Compliance with the tolerance levels specified below is to be determined by measuring only fluazinam, AMPA (2-(6-amino-3-chloro- $\alpha,\alpha,\alpha$ -trifluoro-2-nitro-p-toluidino)-3-chloro-5-(trifluoromethyl) pyridine), DAPA (3-chloro-2-(2,6-diamino-3-chloro- $\alpha,\alpha,\alpha$ -trifluoro-p-toluidino)-5-

### § 180.575 Sulfuryl fluoride; tolerances for residues.

(a)(1) *General.* Tolerances are established for residues of sulfuryl fluoride in or on the following commodities from the postharvest fumigation with sulfuryl fluoride for the control of insects:

| Commodity                                                 | Parts per million |
|-----------------------------------------------------------|-------------------|
| All processed food commodities not otherwise listed ..... | 2.0               |
| Barley, bran, postharvest .....                           | 0.05              |
| Barley, flour, postharvest .....                          | 0.05              |
| Barley, grain, postharvest .....                          | 0.1               |
| Barley, pearled barley, postharvest .....                 | 0.05              |
| Cacao bean, roasted bean, postharvest .....               | 0.2               |
| Cattle, meat, dried .....                                 | 0.01              |
| Cheese .....                                              | 2.0               |
| Coconut, postharvest .....                                | 1.0               |
| Coffee, bean, roasted bean, postharvest .....             | 1.0               |
| Corn, field, flour, postharvest .....                     | 0.01              |
| Corn, field, grain, postharvest .....                     | 0.05              |
| Corn, field, grits, postharvest .....                     | 15.0              |
| Corn, field, meal, postharvest .....                      | 0.01              |
| Corn, pop, grain, postharvest .....                       | 0.05              |
| Cotton, undelinted seed, postharvest .....                | 0.5               |
| Egg, dried .....                                          | 1.0               |
| Fruit, dried, postharvest .....                           | 0.05              |
| Ginger, postharvest .....                                 | 0.5               |
| Grain, aspirated fractions, postharvest .....             | 0.05              |
| Herbs and spices group 19, postharvest .....              | 0.5               |
| Hog, meat .....                                           | 0.02              |
| Milk, powdered .....                                      | 2.0               |
| Millet, grain, postharvest .....                          | 0.1               |
| Nut, pine, postharvest .....                              | 0.2               |
| Nut, tree, Group 14, postharvest .....                    | 3.0               |
| Oat, flour, postharvest .....                             | 0.05              |
| Oat, grain, postharvest .....                             | 0.1               |

| Commodity                                     | Parts per million |
|-----------------------------------------------|-------------------|
| Oat, groats/rolled oats, postharvest .....    | 0.1               |

(2) To assure safe use of this pesticide commodities treated with sulfuryl fluoride must be aerated for at least 24 hours prior to entering commerce.

(b) *Section 18 emergency exemptions.*  
[Reserved]

(c) *Tolerances with regional registration.* [Reserved]

(d) *Indirect or inadvertent residues.*  
[Reserved]

[67 FR 5740, Feb. 7, 2002, as amended at 69 FR 3257, Jan. 23, 2004; 70 FR 40908, July 15, 2005]

### § 180.576 Cyhalofop-butyl; tolerances for residues.

(a) *General.* Tolerances are established for residues of cyhalofop-butyl, including its metabolites and degradates, in or on the commodities listed in the table below. Compliance with the tolerance levels specified below is to be determined by measuring cyhalofop butyl [R-( + )-n-butyl-2-(4(4-cyano-2-fluorophenoxy)-phenoxy)propionate], cyhalofop acid [R-( + )-2-(4(4-cyano-2-fluorophenoxy)-phenoxy)propionic acid], and the diacid metabolite [(2R)-4-(4-(1-carboxyethoxy)phenoxy)-3-fluorobenzoic acid].

| Commodity              | Parts per million |
|------------------------|-------------------|
| Rice, grain .....      | 0.40              |
| Wild rice, grain ..... | 0.40              |

(b) *Section 18 emergency exemptions.*  
[Reserved]

(c) *Tolerances with regional registrations.* [Reserved]

**§ 180.577**

(d) *Indirect or inadvertent residues.*  
[Reserved]

[67 FR 43256, June 27, 2002, as amended at 74 FR 15880, Apr. 8, 2009; 76 FR 82157, Dec. 30, 2011]

**§ 180.577 Bispyribac-sodium; tolerances for residues.**

(a) *General.* Tolerances are established for residues of the herbicide bispyribac-sodium, including its metabolites and degradates, in or on the commodity listed below. Compliance with the tolerance level specified below is to be determined by measuring only bispyribac-sodium, (2,6-bis[(4,6-dimethoxy-2-pyrimidinyl)oxy]benzoic acid, sodium salt), in or on the following raw agricultural commodities:

| Commodity              | Parts per million |
|------------------------|-------------------|
| Fish, freshwater ..... | 0.01              |
| Rice, grain .....      | 0.02              |

(b) *Section 18 emergency exemptions.*  
[Reserved]

(c) *Tolerances with regional registrations.* [Reserved]

(d) *Indirect or inadvertent residues.*  
[Reserved]

[66 FR 48097, Sept. 18, 2001, as amended at 76 FR 5716, Feb. 2, 2011; 80 FR 72599, Nov. 20, 2015]

**§ 180.578 Acetamiprid; tolerances for residues.**

(a) *General.* (1) Tolerances are established for residues of the insecticide acetamiprid (1*E*)-*N*-[(6-chloro-3-pyridinyl)methyl]-*N'*-cyano-*N*-methylethanimidamide, including its metabolites and degradates, in or on the commodities in the table below as a result of the application of acetamiprid. Compliance with the tolerance levels specified below is to be determined by measuring only acetamiprid in or on the following commodities.

| Commodity                                    | Parts per million |
|----------------------------------------------|-------------------|
| Almond, hulls .....                          | 5.0               |
| Asparagus .....                              | 0.80              |
| Berry, low growing subgroups 13-07G .....    | 0.60              |
| Brassica, leafy greens, subgroup 4-16B ..... | 15                |
| Bushberry subgroup 13-07B .....              | 1.6               |
| Caneberry subgroup 13-07A .....              | 1.6               |

<sup>1</sup>There are no U.S. registrations as of February 10, 2010, for the use of acetamiprid on dried tea.

(2) Tolerances are established for residues of the insecticide acetamiprid (1*E*)-*N*-[(6-chloro-3-pyridinyl)methyl]-*N'*-cyano-*N*-methylethanimidamide, including its metabolites and degradates, in or on the commodities in the table below as a result of the application of acetamiprid. Compliance with the tolerance levels specified below is to be determined by measuring acetamiprid and (1*E*)-*N*-[(6-chloro-3-pyridinyl)methyl]-*N'*-cyano-*N*-ethanimidamide in or on the following commodities.

| Commodity                     | Parts per million |
|-------------------------------|-------------------|
| Cattle, fat .....             | 0.20              |
| Cattle, meat .....            | 0.30              |
| Cattle, meat byproducts ..... | 0.70              |
| Egg .....                     | 0.010             |
| Goat, fat .....               | 0.20              |
| Goat, meat .....              | 0.30              |
| Goat, meat byproducts .....   | 0.70              |
| Hog, fat .....                | 0.10              |
| Hog, meat .....               | 0.10              |
| Hog, meat byproducts .....    | 0.20              |

| Poultry, liver .....          | 0.050             |
| Poultry, meat .....           | 0.010             |

# Environmental Protection Agency

§ 180.579

| Commodity                    | Parts per million |
|------------------------------|-------------------|
| Sheep, fat .....             | 0.20              |
| Sheep, meat .....            | 0.30              |
| Sheep, meat byproducts ..... | 0.70              |

(3) A tolerances of 0.01 ppm is established for residues of the insecticide acetamiprid, including its metabolites and degradates, in or on all food/feed items (other than those covered by a higher tolerance in paragraph (a)(1) or (a)(2) of this section as a result of the use on growing crops) as a result of the application of acetamiprid in food/feed handling establishments. Compliance with the 0.01 ppm tolerance level is to be determined by measuring only acetamiprid (1*E*)-*N*-[(6-chloro-3-pyridinyl)methyl]-*N'*-cyano-*N*-methylethananimidamide in or on the commodities.

(b) *Section 18 emergency exemptions.* Time-limited tolerances specified in the following table are established for residues of the acetamiprid, (1*E*)-*N*-[(6-chloro-3-pyridinyl)methyl]-*N'*-cyano-*N*-methylethananimidamide, in or on the specified agricultural commodities, resulting from use of the pesticide pursuant to FIFRA section 18 emergency exemptions. Compliance with the tolerance levels specified below is to be determined by measuring only acetamiprid. The tolerances expire on the date specified in the table.

| Commodity                 | Parts per million | Expiration date |
|---------------------------|-------------------|-----------------|
| Sugarcane, cane .....     | 45                | 12/31/19        |
| Sugarcane, molasses ..... | 600               | 12/31/19        |

(c) *Tolerances with regional registrations.* Tolerances with regional registrations are established for residues of the insecticide acetamiprid (1*E*)-*N*-[(6-chloro-3-pyridinyl)methyl]-*N'*-cyano-*N*-methylethananimidamide, including its metabolites and degradates, in or on the commodities in the table below as a result of the application of acetamiprid. Compliance with the tolerance levels specified below is to be determined by measuring only acetamiprid in or on the following commodities.

| Commodity            | Parts per million |
|----------------------|-------------------|
| Clover, forage ..... | 0.30              |

| Commodity         | Parts per million |
|-------------------|-------------------|
| Clover, hay ..... | 2.0               |

(d) *Indirect or inadvertent residues.* [Reserved]

[67 FR 14659, Mar. 27, 2002, as amended at 68 FR 52352, Sept. 3, 2003; 70 FR 19293, Apr. 13, 2005; 72 FR 67262, Nov. 28, 2007; 73 FR 2811, Jan. 16, 2008; 75 FR 6582, Feb. 10, 2010; 77 FR 18716, Mar. 28, 2012; 77 FR 43529, July 25, 2012; 78 FR 36676, June 19, 2013; 80 FR 68778, Nov. 6, 2015; 82 FR 17151, Apr. 10, 2017; 85 FR 8441, Feb. 14, 2020]

## § 180.579 Fenamidone; tolerances for residues.

(a) *General.* (1) Tolerances are established for residues of the fungicide, fenamidone, including its metabolites and degradates, in or on the following commodities. Compliance with the tolerance levels is to be determined by measuring only fenamidone (4*H*-Imidazol-4-one, 3,5-dihydro-5-methyl-2-(methylthio)-5-phenyl-3 (phenylamino)-, (S)-), in or on the commodities:

| Commodity                                                            | Parts per million |
|----------------------------------------------------------------------|-------------------|
| Basil, dried leaves .....                                            | 200               |
| Basil, fresh leaves .....                                            | 30                |
| Bean, succulent, except cowpea .....                                 | 0.80              |

dihydro-5-methyl-2-(methylthio)-5-phenyl-3 (phenylamino)-, (S)-, and its metabolite RPA 717879 (2,4-imidazolidinedione, 5-methyl-5-phenyl), in or on the commodities:

| Commodity                     | Parts per million |
|-------------------------------|-------------------|
| Cattle, fat .....             | 0.10              |
| Cattle, meat .....            | 0.10              |
| Cattle, meat byproducts ..... | 0.10              |
| Goat, fat .....               | 0.10              |
| Goat, meat .....              | 0.10              |
| Goat, meat byproducts .....   | 0.10              |
| Milk .....                    | 0.02              |
| Sheep, fat .....              | 0.10              |
| Sheep, meat .....             | 0.10              |
| Sheep, meat byproducts .....  | 0.10              |

(b) *Section 18 emergency exemptions.* [Reserved]

(c) *Tolerances with regional registrations.* A tolerance with regional registration as defined in §180.1(l) is established for residues of the fungicide fenamidone, including its metabolites and degradates, in or on the following commodities. Compliance with the tolerance levels is to be determined by measuring only fenamidone (4H-Imidazol-4-one, 3,5-dihydro-5-methyl-2-(methylthio)-5-phenyl-3 (phenylamino)-, (S)-), in or on the commodity:

| Commodity                | Parts per million |
|--------------------------|-------------------|
| Grape <sup>1</sup> ..... | 1.0               |

<sup>1</sup> Applicable to grapes grown East of the Rocky Mountains.

(d) *Indirect or inadvertent residues.* Tolerances are established for residues of the fungicide fenamidone, including its metabolites and degradates, in or on the following commodities. Compliance with the tolerance levels is to be determined by measuring fenamidone (4H-Imidazol-4-one, 3,5-dihydro-5-methyl-2-(methylthio)-5-phenyl-3 (phenylamino)-, (S)-), and its metabolite RPA 717879 (2,4-imidazolidinedione, 5-methyl-5-phenyl), in or on the following commodities when present therein as a result of application of fenamidone to the crops in paragraph (a)(1).

| Commodity                                                            | Parts per million |
|----------------------------------------------------------------------|-------------------|

**§ 180.582 Pyraclostrobin; tolerances for residues.**

(a) *General.* (1) Tolerances are established for residues of the fungicide pyraclostrobin, including its metabolites and degradates, in or on the commodities in the table below. Compliance with the tolerance levels specified below is to be determined by measuring only the sum of pyraclostrobin (carbamic acid, [2-[[[1-(4-chlorophenyl)-1H-pyrazol-3-yl]oxy] methyl]phenyl]methoxy-, methyl ester) and its desmethoxy metabolite (methyl-N-[[[1-(4-chlorophenyl)-1H-pyrazol-3-yl]oxy]methyl] phenylcarbamate), calculated as the stoichiometric equivalent of pyraclostrobin, in or on the commodity.

TABLE 1 TO PARAGRAPH (a)(1)

| Commodity                                                 | Parts per million |
|-----------------------------------------------------------|-------------------|
| Alfalfa, forage                                           | 10                |
| Alfalfa, hay                                              | 30                |
| Almond, hulls                                             | 7.0               |
| Apple, wet pomace                                         | 8.0               |
| Artichoke, globe                                          | 3.0               |

[67 FR 60141, Sept. 25, 2002]

**§ 180.585 Pyraflufen-ethyl; tolerances for residues.**

(a) *General.* Tolerances are established for residues of the herbicide, pyraflufen-ethyl, including its metabolites and degradates, in the commodities in the table below. Compliance with the plant commodity tolerance levels specified in the table is to be determined by measuring only the sum of the parent pyraflufen-ethyl, ethyl 2-[2-chloro-5-(4-chloro-5-difluoromethoxy)-1-methyl-1H-pyrazol-3-yl]-4-fluorophenoxy] acetate, and its acid metabolite, E-1, 2-chloro-5-(4-chloro-5-difluoromethoxy-1-methyl-1H-pyrazol-3-yl)-4-fluorophenoxyacetic acid, calculated as the stoichiometric equivalent of pyraflufen-ethyl in or on the

## Environmental Protection Agency

## § 180.586

commodity. Compliance with the live-stock commodity tolerance levels specified in the table is to be determined by measuring only the sum of the parent pyraflufen-ethyl, ethyl 2-[2-chloro-5-(4-chloro-5-difluoromethoxy)-1-methyl-1*H*-pyrazol-3-yl]-4-fluorophenoxy] acetate and its acid metabolites: E-1, 2-chloro-5-(4-chloro-5-difluoromethoxy-1-methyl-1*H*-pyrazol-3-yl)-4-fluorophenoxyacetic acid, and E-9, 2-chloro-5-(4-chloro-5-difluoromethoxy-1*H*-pyrazol-3-yl)-4-fluorophenoxyacetic acid, both calculated as the stoichiometric equivalent of pyraflufen-ethyl in or on the commodity.

### § 180.586 Clothianidin; tolerances for residues.

(a) *General.* (1) Tolerances are established for residues of the insecticide clothianidin, including its metabolites and degradates. Compliance with the tolerance levels specified below is to be determined by measuring only clothianidin, (E)-*N*-[(2-Chloro-5-thiazolyl)methyl]-*N'*-methyl-*N''*-nitroguanidine, in or on the following raw agricultural commodities:

TABLE 1 TO PARAGRAPH (a)(1)

| Commodity                                                                                                             | Parts per million |
|-----------------------------------------------------------------------------------------------------------------------|-------------------|
| Almond, hulls .....                                                                                                   | 1.5               |
| Beet, sugar, dried pulp .....                                                                                         | 0.03              |
| Beet, sugar, molasses .....                                                                                           | 0.05              |
| Beet, sugar, roots .....                                                                                              | 0.02              |
| Berry, low-growing, subgroup 13-07H, except strawberry .....                                                          | 0.01              |
| Canola, seed .....                                                                                                    | 0.01              |
| Cotton, gin byproducts .....                                                                                          | 4.5               |
| Cotton, undelinted seed .....                                                                                         | 0.20              |
| Fig .....                                                                                                             | 0.05              |
| Food and feed commodities (other than those covered by a higher tolerance) in food/feed handling establishments ..... | 0.01              |
| Fruit, pome .....                                                                                                     | 1.0               |
| Grain, cereal, forage, fodder and straw, group 16, except rice, forage .....                                          | 0.35              |
| Grain, cereal, forage, fodder and straw, group 16, except rice, hay .....                                             | 0.07              |
| Grain, cereal, forage, fodder and straw, group 16, except rice, stover .....                                          | 0.1               |
| Grain, cereal, forage, fodder and straw, group 16, except rice, straw .....                                           | 0.05              |
| Grain, cereal, group 15, except rice .....                                                                            | 0.01              |
| Grape .....                                                                                                           | 0.60              |
| Milk .....                                                                                                            | 0.01              |
| Mustard, seed .....                                                                                                   | 0.01              |
| Nut, tree, group 14 .....                                                                                             | 0.01              |
| Peach .....                                                                                                           | 0.80              |
| Pepper .....                                                                                                          | 0.80              |
| Persimmon <sup>1</sup> .....                                                                                          | 0.5               |
| Pomegranate .....                                                                                                     | 0.20              |
| Potato, chips .....                                                                                                   | 0.6               |
| Potato, granules/flakes .....                                                                                         | 1.5               |
| Rice, grain .....                                                                                                     | 0.01              |
| Soybean, seed .....                                                                                                   | 0.02              |
| Tea, dried <sup>1</sup> .....                                                                                         | 70                |
| Vegetable, brassica, leafy, group 5 .....                                                                             | 1.9               |
| Vegetable, bulb, group 3-07 .....                                                                                     | 0.45              |
| Vegetable, cucurbit, group 9 .....                                                                                    | 0.06              |
| Vegetable, fruiting, group 8, except pepper .....                                                                     | 0.20              |
| Vegetable, leafy, except brassica, group 4 .....                                                                      | 3.0               |
| Vegetable, root, except sugar beet, subgroup 1B .....                                                                 | 0.8               |

§ 180.587

40 CFR Ch. I (7–1–24 Edition)

TABLE 1 TO PARAGRAPH (a)(1)—Continued

| Commodity                                     | Parts per million |
|-----------------------------------------------|-------------------|
| Vegetable, tuberous and corm, subgroup 1C ... | 0.3               |

<sup>1</sup> No U.S. registrations.

(2) Time-limited tolerances are established for residues of the insecticide clothianidin, including its metabolites and degradates. Compliance with the tolerance levels specified below is to be determined by measuring only clothianidin, (E)-1-(2-chloro-1,3-thiazol-5-ylmethyl)-3-methyl-2-nitroguanidine, in or on the following raw agricultural commodity:

TABLE 3 TO PARAGRAPH (b)

| Commodity                        | Parts per million | Expiration/revocation date |
|----------------------------------|-------------------|----------------------------|
| Fruit, citrus, group 10–10 ..... | 0.07              | 12/31/26                   |
| Rice, grain .....                | 0.5               | 12/31/24                   |

(c) *Tolerances with regional registrations.* [Reserved]

(d) *Indirect and inadvertent residues.* Tolerances are established for the indirect or inadvertent residues of the insecticide clothianidin, including its metabolites and degradates. Compliance with the tolerance levels specified below is to be determined by measuring only clothianidin, (E)-1-(2-chloro-1,3-thiazol-5-ylmethyl)-3-methyl-2-nitroguanidine, in or on the following raw agricultural commodities when present therein as a result of the application of clothianidin to crops listed in paragraph (a) of this section:

| Commodity                                     | Parts per million |
|-----------------------------------------------|-------------------|
| Animal feed, nongrass, group 18 .....         | 0.02              |
| Grass, forage, fodder and hay, group 17 ..... | 0.02              |
| Soybean, forage .....                         | 0.02              |
| Soybean, hay .....                            | 0.02              |

[74 FR 65028, Dec. 9, 2009, as amended at 76 FR 7718, Feb. 11, 2011; 76 FR 25246, May 4, 2011; 76 FR 34886, June 15, 2011; 77 FR 52252, Aug. 29, 2012; 78 FR 19136, Mar. 29, 2013; 80 FR 10007, Feb. 25, 2015; 82 FR 57151, Dec. 4, 2017; 84 FR 53336, Oct. 7, 2019; 84 FR 64777, Nov. 25, 2019; 86 FR 8704, Feb. 9, 2021; 86 FR 56656, Oct. 12, 2021; 88 FR 75506, Nov. 3, 2023]

| Commodity        | Parts per million | Expiration/revocation date |
|------------------|-------------------|----------------------------|
| Rice, seed ..... | 0.01              | 6/23/12                    |

(b) *Section 18 emergency exemptions.* A time-limited tolerance specified in the following table is established for residues of clothianidin, (E)-N-[(2-chloro-5-thiazolyl)methyl]-N'-methyl-N''-nitroguanidine, in or on the specified agricultural commodity, resulting from use of the pesticide pursuant to FIFRA section 18 emergency exemptions. This tolerance expires on the date specified in the table.

§ 180.587 Famoxadone; tolerance for residues.

(a) *General.* Tolerances are established for residues of the fungicide famoxadone (3-anilino-5-methyl-5-(4-phenoxyphenyl)-1,3-oxazolidine-2,4-dione) in or on the following commodities:

| Commodity                                                        | Parts per million |
|------------------------------------------------------------------|-------------------|
| Caneberry subgroup 13–07A .....                                  | 10                |
| Cattle, fat .....                                                | 0.02              |
| Cattle, liver .....                                              | 0.05              |
| Cilantro, leaves .....                                           | 25                |
| Goat, fat .....                                                  | 0.02              |
| Goat, liver .....                                                | 0.05              |
| Grape, raisin <sup>1</sup> .....                                 | 4.0               |
| Hop, dried cone .....                                            | 80                |
| Horse, fat .....                                                 | 0.02              |
| Horse, liver .....                                               | 0.05              |
| Milk, fat (reflecting negligible residues in whole milk) .....   | 0.06              |
| Onion, bulb, subgroup 3–07A .....                                | 0.45              |
| Onion, green, subgroup 3–07B .....                               | 40                |
| Potato .....                                                     | 0.02              |
| Sheep, fat .....                                                 | 0.02              |
| Sheep, liver .....                                               | 0.05              |
| Spinach .....                                                    | 50                |
| Tomato .....                                                     | 1.0               |
| Vegetable, cucurbit, group 9 .....                               | 0.30              |
| Vegetable, fruiting, group 8, except tomato .....                | 4.0               |
| Vegetable, leafy, except Brassica, group 4, except spinach ..... | 25                |

<sup>1</sup> There are no U.S. registrations as of May 15, 2003.

(b) *Section 18 emergency exemptions.* [Reserved]

## Environmental Protection Agency

**§ 180.589**

(c) *Tolerances with a regional registration.* Tolerances with a regional registration as defined in §180.1(l) are established for the residues of the fungicide famoxadone, 3-anilino-5-methyl-5-(4-phenoxyphenyl)-1,3-oxazolidine-2,4-dione) in or on the raw agricultural commodities:

| Commodity   | Parts per million |
|-------------|-------------------|
| Grape ..... | 2.5               |

(d) *Indirect or inadvertant residues.* [Reserved]

[68 FR 39471, July 2, 2003, as amended at 72 FR 28881, May 23, 2007; 74 FR 9364, Mar. 4, 2009; 76 FR 34885, June 15, 2011]

### **§ 180.588 Quinoxifen; tolerances for residues.**

(a) *General.* Tolerances are established for residues of the fungicide quinoxifen, including its metabolites and degradates, in or on the commodities in the following table. Compliance with the tolerance levels specified in the following table is to be determined by measuring only quinoxifen (5,7-dichloro-4-(4-fluorophenoxy)quinoline).

| Commodity                                                                 | Parts per million |
|---------------------------------------------------------------------------|-------------------|
| Artichoke, globe .....                                                    | 1.4               |

(b) *Section 18 emergency exemptions.* [Reserved]

(c) *Tolerances with regional registrations.* [Reserved]

(d) *Indirect or inadvertent residues.* [Reserved]

[68 FR 55858, Sept. 29, 2003, as amended at 70 FR 4032, Jan. 28, 2005; 71 FR 50354, Aug. 25, 2006; 74 FR 14743, Apr. 1, 2009; 78 FR 57280, Sept. 18, 2013]

### **§ 180.589 Boscalid; tolerances for residues.**

(a) *General.* (1) Tolerances are established for residues of the fungicide

boscalid, including its metabolites and degradates, in or on the commodities listed below. Compliance with the tolerance levels specified below is to be determined by measuring only boscalid, 3-pyridinecarboxamide, 2-chloro-N-(4'-chloro[1,1'-biphenyl]-2-yl), in or on the following raw agricultural commodities:

| Commodity                                                                 | Parts per million |
|---------------------------------------------------------------------------|-------------------|
| Alfalfa, forage .....                                                     | 30.0              |
| Alfalfa, hay .....                                                        | 65.0              |
| Almond, hulls .....                                                       | 17                |
| Apple, wet pomace .....                                                   | 10                |
| Artichoke, globe .....                                                    | 6.0               |
| Avocado .....                                                             | 1.5               |
| Banana, import <sup>1</sup> .....                                         | 0.40              |
| Berry, low growing, subgroup 13-07G, except cranberry .....               | 4.5               |
| Brassica, leafy greens, subgroup 4-16B, except watercress .....           | 60                |
| Bushberry subgroup 13-07B .....                                           | 13.0              |
| Caneberry subgroup 13-07A .....                                           | 10.0              |
| Canistel .....                                                            | 1.5               |
| Canola, refined oil .....                                                 | 5.0               |
| Celtuce .....                                                             | 45                |
| Citrus, dried pulp .....                                                  | 4.5               |
| Citrus, oil .....                                                         | 85.0              |
| Coffee, green bean, import <sup>1</sup> .....                             | 0.05              |
| Cotton, gin byproducts .....                                              | 55.0              |
| Dill, seed .....                                                          | 100               |
| Endive, Belgium .....                                                     | 6.0               |
| Fennel, Florence .....                                                    | 45                |
| Fruit, citrus, group 10-10 .....                                          | 2.0               |
| Fruit, pome, group 11-10 .....                                            | 3.0               |
| Fruit, small vine climbing, except fuzzy kiwifruit, subgroup 13-07F ..... | 5.0               |
| Fruit, stone, group 12-12 .....                                           | 3.5               |
| Grain, aspirated fractions .....                                          | 3.0               |
| Grape, raisin .....                                                       | 8.5               |
| Herb subgroup 19A .....                                                   | 150               |
| Hop, dried cones .....                                                    | 35                |
| Kohlrabi .....                                                            | 6.0               |
| Leaf petiole vegetable subgroup 22B .....                                 | 45                |
| Leafy greens subgroup 4-16A .....                                         | 70                |
| Mango .....                                                               | 1.5               |
| Nut, tree, group 14-12 .....                                              | 0.70              |
| Oilseed group 20 .....                                                    | 3.5               |
| Papaya .....                                                              | 1.5               |
| Pea and bean, dried shelled, except soybean, subgroup 6C .....            | 2.5               |
| Pea and bean, succulent shelled, subgroup 6B .....                        | 0.60              |
| Peanut .....                                                              | 0.05              |
| Peanut, meal .....                                                        | 0.15              |
| Peanut, refined oil .....                                                 | 0.15              |
| Peppermint, tops .....                                                    | 30.0              |
| Persimmon .....                                                           | 8.0               |
| Sapodilla .....                                                           | 1.5               |
| Sapote, black .....                                                       | 1.5               |
| Sapote, mamey .....                                                       | 1.5               |
| Soybean, hulls .....                                                      | 0.2               |
| Soybean, seed .....                                                       | 0.1               |
| Soybean, vegetable .....                                                  | 2.0               |
| Spearmint, tops .....                                                     | 30.0              |
| Star apple .....                                                          | 1.5               |
| Tea, dried <sup>2</sup> .....                                             | 70                |
| Tea, instant <sup>2</sup> .....                                           | 70                |
| Vegetable, Brassica, head and stem, group 5-16 .....                      | 6.0               |
| Vegetable, bulb, group 3-07 .....                                         | 5.0               |
| Vegetable, cucurbit, group 9 .....                                        | 3.0               |

§ 180.589

| Commodity                                             | Parts per million |
|-------------------------------------------------------|-------------------|
| Vegetable, fruiting, group 8–10 .....                 | 3.0               |
| Vegetable, legume, edible podded subgroup 6A .....    | 5.0               |
| Vegetable, root, except sugar beet, subgroup 1B ..... | 2.0               |
| Vegetable, tuberous and corm, subgroup 1C ...         | 0.05              |

<sup>1</sup>There are no U.S. registrations for this commodity as of September 16, 2009.

<sup>2</sup>There are no U.S. registrations for these commodities as of August 13, 2021.

(2) Tolerances are established for residues of the fungicide boscalid, including its metabolites and degradates, in or on the commodities listed below. Compliance with the tolerance levels specified below is to be determined by measuring only the sum of boscalid, 3-pyridinecarboxamide, 2-chloro-*N*-(4'-chloro[1,1'-biphenyl]-2-yl), and metabolites 2-chloro-*N*-(4'-chloro-5-hydroxybiphenyl-2-yl) nicotinamide and glucuronic acid conjugate of 2-chloro-*N*-(4'-chloro-5-hydroxybiphenyl-2-yl) nicotinamide, calculated as the stoichiometric equivalent of boscalid in or on the following food commodities:

| Commodity                      | Parts per million |
|--------------------------------|-------------------|
| Cattle, fat .....              | 0.30              |
| Cattle, meat .....             | 0.10              |
| Cattle, meat byproducts .....  | 0.35              |
| Egg .....                      | 0.02              |
| Goat, fat .....                | 0.30              |
| Goat, meat .....               | 0.10              |
| Goat, meat byproducts .....    | 0.35              |
| Hog, fat .....                 | 0.20              |
| Hog, meat .....                | 0.05              |
| Hog, meat byproducts .....     | 0.10              |
| Horse, fat .....               | 0.30              |
| Horse, meat .....              | 0.10              |
| Horse, meat byproducts .....   | 0.35              |
| Milk .....                     | 0.10              |
| Poultry, fat .....             | 0.20              |
| Poultry, meat .....            | 0.05              |
| Poultry, meat byproducts ..... | 0.20              |
| Sheep, fat .....               | 0.30              |
| Sheep, meat .....              | 0.10              |
| Sheep, meat byproducts .....   | 0.35              |

(b) *Section 18 emergency exemptions.* Time-limited tolerances are established for residues of the fungicide boscalid, including its metabolites and degradates, in connection with use of the pesticide under section 18 emergency exemptions granted by EPA. Compliance with the tolerance level specified below is to be determined by measuring only boscalid, 3-pyridinecarboxamide, 2-chloro-*N*-(4'-chloro[1,1'-biphenyl]-2-yl). This toler-

40 CFR Ch. I (7–1–24 Edition)

ance will expire and is revoked on the date specified in the following table:

| Commodity             | Parts per million | Expiration/revocation date |
|-----------------------|-------------------|----------------------------|
| Endive, Belgian ..... | 16                | 12/31/13                   |

(c) *Tolerances with regional registration.* [Reserved]

(d) *Indirect or inadvertent residues.* Tolerances are established for the indirect or inadvertent residues of the fungicide boscalid, including its metabolites and degradates, in or on the commodities listed below. Compliance with the tolerance levels specified below is to be determined by measuring only boscalid, 3-pyridinecarboxamide, 2-chloro-*N*-(4'-chloro[1,1'-biphenyl]-2-yl), in or on the following commodities:

| Commodity                                                                            | Parts per million |
|--------------------------------------------------------------------------------------|-------------------|
| Animal feed, nongrass, group 18, forage, except alfalfa .....                        | 1.0               |
| Animal feed, nongrass, group 18, hay, except alfalfa .....                           | 2.0               |
| Animal feed, nongrass, group 18, seed .....                                          | 0.05              |
| Beet, sugar, roots .....                                                             | 0.1               |
| Grain, cereal, forage, fodder and straw, group 16, forage .....                      | 2.0               |
| Grain, cereal, forage, fodder and straw, group 16, stover .....                      | 1.5               |
| Grain, cereal, forage, fodder and straw, group 16, straw .....                       | 3.0               |
| Grain, cereal, group 15 .....                                                        | 0.20              |
| Grass, forage, fodder, and hay, group 17, forage .....                               | 2.0               |
| Grass, forage, fodder, and hay, group 17, hay .....                                  | 8.0               |

# Environmental Protection Agency

# § 180.593

## § 180.590 2, 6-Diisopropyl-naphthalene (2, 6-DIPN); tolerances for residues.

(a) *General.* Tolerances are established for residues of the growth inhibitor 2,6-DIPN, including its metabolites and degradates, in or on the commodities in the following table. Compliance with the tolerance levels specified in the following table is to be determined by measuring only 2,6-Diisopropyl-naphthalene.

| Commodity                                 | Parts per million |
|-------------------------------------------|-------------------|
| Cattle, fat .....                         | 0.2               |
| Cattle, meat .....                        | 0.02              |
| Cattle, meat byproducts, except fat ..... | 0.02              |
| Goat, fat .....                           | 0.2               |
| Goat, meat .....                          | 0.02              |
| Goat, meat byproducts, except fat .....   | 0.02              |
| Horse, fat .....                          | 0.2               |
| Horse, meat .....                         | 0.02              |
| Horse, meat byproducts, except fat .....  | 0.02              |
| Milk, fat .....                           | 0.02              |
| Potato, granules/flakes .....             | 5.5               |
| Potato, wet peel .....                    | 6.0               |
| Potato, whole .....                       | 2.0               |
| Sheep, fat .....                          | 0.2               |
| Sheep, meat .....                         | 0.02              |
| Sheep, meat byproducts, except fat .....  | 0.02              |

(b) *Section 18 emergency exemptions.* [Reserved]

(c) *Tolerances with regional registrations.* [Reserved]

(d) *Indirect or inadvertent residues.* [Reserved]

[71 FR 52011, Sept. 1, 2006, as amended at 74 FR 66579, Dec. 16, 2009; 77 FR 32406, June 1, 2012]

## § 180.591 Trifloxysulfuron; tolerances for residues.

(a) *General.* Tolerances are established for residues of the herbicide trifloxysulfuron, N-[[[(4,6-dimethoxy-2-pyrimidinyl)amino]carbonyl]-3-(2,2,2-trifluoroethoxy)-2-pyridinesulfonamide in or on the following raw agricultural commodities.

| Commodity                     | Parts per million |
|-------------------------------|-------------------|
| Almond .....                  | 0.02              |
| Almond, hulls .....           | 0.01              |
| Fruit, citrus, Group 10 ..... | 0.03              |
| Cotton, undelinted seed ..... | 0.05              |
| Cotton, gin byproducts .....  | 1.0               |
| Sugarcane .....               | 0.01              |
| Tomato .....                  | 0.01              |

(b) *Section 18 emergency exemptions.* [Reserved]

(c) *Tolerances with regional registrations.* [Reserved]

(d) *Indirect or inadvertent residues.* [Reserved]

[68 FR 54386, Sept. 17, 2003]

## § 180.592 Butafenacil; tolerances for residues.

(a) *General.* (1) Tolerances are established for residues of the herbicide butafenacil, (1,1-dimethyl-2-oxo-2-(2-propenyloxy)ethyl 2-chloro-5-[3,6-dihydro-3-methyl-2,6-dioxo-4-(trifluoromethyl)-1(2H)-pyrimidinyl] benzoate) in or on the following raw agricultural commodities:

| Commodity                     | Parts per million |
|-------------------------------|-------------------|
| Cotton, gin byproducts .....  | 10                |
| Cotton, undelinted seed ..... | 0.50              |

(2) Tolerances are established for residues of the herbicide butafenacil, (1,1-dimethyl-2-oxo-2-(2-propenyloxy)ethyl 2-chloro-5-[3,6-dihydro-3-methyl-2,6-dioxo-4-(trifluoromethyl)-1(2H)-pyrimidinyl] benzoate) and its metabolite CGA-293731 (1-carboxy-1-methylethyl 2-chloro-5-[3,6-dihydro-3-methyl-2,6-dioxo-4-(trifluoromethyl)-1(2H)-pyrimidinyl] benzoate), in or on the following livestock commodities:

| Commodity            | Parts per million |
|----------------------|-------------------|
| Cattle, kidney ..... | 0.05              |
| Cattle, liver .....  | 0.50              |
| Goat, kidney .....   | 0.05              |
| Goat, liver .....    | 0.50              |
| Hog, kidney .....    | 0.05              |
| Hog, liver .....     | 0.50              |
| Horse, kidney .....  | 0.05              |
| Horse, liver .....   | 0.50              |
| Sheep, kidney .....  | 0.05              |
| Sheep, liver .....   | 0.50              |

(b) *Section 18 emergency exemptions.* [Reserved]

(c) *Tolerances with regional registrations.* [Reserved]

(d) *Indirect and inadvertant residues.* [Reserved]

[68 FR 54827, Sept. 19, 2003]

## § 180.593 Etoxazole; tolerances for residues.

(a) *General.* Tolerances are established for residues of etoxazole, including its metabolites and degradates, in or on the commodities in the table

§ 180.594

40 CFR Ch. I (7–1–24 Edition)

below. Compliance with the tolerance levels specified below is to be determined by measuring only etoxazole (2-(2,6-difluorophenyl)-4-[4-(1,1-dimethylethyl)-2-ethoxyphenyl]-4,5-dihydrooxazole) in or on the commodity.

| Commodity                                                                 | Parts per million |
|---------------------------------------------------------------------------|-------------------|
| Almond, hulls .....                                                       | 2.0               |
| Apple, wet pomace .....                                                   | 0.50              |
| Avocado .....                                                             | 0.20              |
| Beet, sugar, leaves .....                                                 | 1                 |
| Beet, sugar, roots .....                                                  | 0.02              |
| Berry, low growing, subgroup 13–07G .....                                 | 0.50              |
| Caneberry subgroup 13–07A .....                                           | 1.5               |
| Canistel .....                                                            | 0.20              |
| Cattle, fat .....                                                         | 0.02              |
| Cattle, liver .....                                                       | 0.01              |

§ 180.594 Thiacloprid; tolerances for residues.

(a) *General.* Tolerances are established for residues of the insecticide thiacloprid, including its metabolites and degradates in or on the commodities in the following table. Compliance with the tolerance levels specified in the following table is to be determined by measuring only thiacloprid ([3-[(6-chloro-3-pyridinyl)methyl]-2-thiazolidinylidene] cyanamide) in or on the commodity.

TABLE 1 TO PARAGRAPH (a)

| Commodity                                  | Parts per million |
|--------------------------------------------|-------------------|
| Apple, wet pomace <sup>1</sup> .....       | 0.60              |
| Cattle, fat <sup>1</sup> .....             | 0.020             |
| Cattle, kidney <sup>1</sup> .....          | 0.050             |
| Cattle, liver <sup>1</sup> .....           | 0.15              |
| Cattle, meat <sup>1</sup> .....            | 0.030             |
| Cattle, meat byproducts <sup>1</sup> ..... | 0.050             |
| Cherry subgroup 12–12A <sup>1</sup> .....  | 0.5               |
| Cotton, gin byproducts <sup>1</sup> .....  | 11.0              |
| Cotton, undelinted seed <sup>1</sup> ..... | 0.020             |
| Fruit, pome, group 11 <sup>1</sup> .....   | 0.30              |
| Goat, fat <sup>1</sup> .....               | 0.020             |
| Goat, kidney <sup>1</sup> .....            | 0.050             |
| Goat, liver <sup>1</sup> .....             | 0.15              |
| Goat, meat <sup>1</sup> .....              | 0.030             |
| Goat, meat byproducts <sup>1</sup> .....   | 0.050             |
| Horse, fat <sup>1</sup> .....              | 0.020             |
| Horse, kidney <sup>1</sup> .....           | 0.050             |
| Horse, liver <sup>1</sup> .....            | 0.15              |
| Horse, meat <sup>1</sup> .....             | 0.030             |
| Horse, meat byproducts <sup>1</sup> .....  | 0.050             |
| Milk <sup>1</sup> .....                    | 0.030             |
| Peach subgroup 12–12B <sup>1</sup> .....   | 0.5               |
| Pepper <sup>1</sup> .....                  | 1.0               |
| Plum subgroup 12–12C <sup>1</sup> .....    | 0.05              |
| Sheep, fat <sup>1</sup> .....              | 0.020             |
| Sheep, kidney <sup>1</sup> .....           | 0.050             |
| Sheep, liver <sup>1</sup> .....            | 0.15              |
| Sheep, meat <sup>1</sup> .....             | 0.030             |
| Sheep, meat byproducts <sup>1</sup> .....  | 0.050             |

<sup>1</sup>There are no U.S. registrations for the commodity since August 6, 2014.

(b) *Section 18 emergency exemptions.*  
[Reserved]

## Environmental Protection Agency

## § 180.598

(c) *Tolerances with regional registrations.* [Reserved]

(d) *Indirect or inadvertent residues.* [Reserved]

[68 FR 55512, Sept. 26, 2003, as amended at 78 FR 8416, Feb. 6, 2013; 81 FR 34907, June 1, 2016; 88 FR 46086, July 19, 2023]

### § 180.595 Flufenpyr-ethyl; tolerances for residues.

(a) *General.* (1) Tolerances are established for residues of the herbicide, flufenpyr-ethyl; acetic acid, [2-chloro-4-fluoro-5-[5-methyl-6-oxo-4-(trifluoromethyl)-1-(6H)-pyridazinyl]-phenoxy]-ethyl ester], in or on the following commodities:

| Commodity                | Parts per million |
|--------------------------|-------------------|
| Corn, field, grain ..... | 0.01              |
| Soybean, seed .....      | 0.01              |
| Sugarcane, cane .....    | 0.01              |

(2) Tolerances are established for residues of the herbicide flufenpyr-ethyl; acetic acid, [2-chloro-4-fluoro-5-[5-methyl-6-oxo-4-(trifluoromethyl)-1-(6H)-pyridazinyl]-phenoxy]-ethyl ester], and its metabolite, S-3153 acid-4-OH; [2-chloro-4-hydroxy-5-[5-methyl-6-oxo-4-(trifluoromethyl)-1-(6H)-pyridazinyl]-phenoxy]-acetic acid, free and conjugated, in or on the following commodities:

| Commodity                 | Parts per million |
|---------------------------|-------------------|
| Corn, field, forage ..... | 0.05              |
| Corn, field, stover ..... | 0.05              |

(b) *Section 18 emergency exemptions.* [Reserved]

(c) *Tolerances with regional registrations.* [Reserved]

(d) *Indirect or inadvertent residues.* [Reserved]

[68 FR 54842, Sept. 19, 2003]

### § 180.596 Fosthiazate; tolerances for residues.

(a) *General.* A tolerance is established for residues of the insecticide fosthiazate, including its metabolites and degradates, in or on the commodity in the table in this paragraph. Compliance with the tolerance level specified in this paragraph is to be determined by measuring only the sum of fosthiazate, O-ethyl S-(1-

methylpropyl)(2-oxo-3-thiazolidinyl)phosphonothioate, and its metabolite, O-ethyl S-(1-methylpropyl)(2-(methylsulfonyl)ethyl)phosphoramidothioate, calculated as the stoichiometric equivalent of fosthiazate, in or on the commodity.

| Commodity    | Parts per million |
|--------------|-------------------|
| Tomato ..... | 0.02              |

(b) *Section 18 emergency exemptions.* [Reserved]

(c) *Tolerances with regional registrations.* [Reserved]

(d) *Indirect or inadvertent residues.* [Reserved]

[69 FR 18275, Apr. 7, 2004, as amended at 76 FR 23498, Apr. 27, 2011]

### § 180.597 Mesosulfuron-methyl; tolerances for residues.

(a) *General.* Tolerances are established for residues of the herbicide mesosulfuron-methyl, (methyl 2-[[[(4,6-dimethoxy-2-pyrimidinyl)amino]carbonyl]amino]sulfonyl]-4-[(methylsulfonyl)amino]methyl]benzoate)] in or on the following raw agricultural commodities:

| Commodity                        | Parts per million |
|----------------------------------|-------------------|
| Cattle, meat byproducts .....    | 0.01              |
| Goat, meat byproducts .....      | 0.01              |
| Grain, aspirated fractions ..... | 0.60              |
| Horse, meat byproducts .....     | 0.01              |
| Sheep, meat byproducts .....     | 0.01              |
| Wheat, forage .....              | 0.60              |
| Wheat, germ .....                | 0.10              |
| Wheat, grain .....               | 0.03              |
| Wheat, hay .....                 | 0.06              |
| Wheat, straw .....               | 0.30              |

(b) *Section 18 emergency exemptions.* [Reserved]

(c) *Tolerances with regional registrations.* [Reserved]

(d) *Indirect or inadvertent residues.* [Reserved]

[69 FR 18263, Apr. 7, 2004]

### § 180.598 Novaluron; tolerances for residues.

(a) *General.* Tolerances are established for residues of the insecticide novaluron, including its metabolites and degradates, in or on the following

commodities. Compliance with the tolerance levels specified in the following table is to be determined by measuring only novaluron, (*N*-[[[3-chloro-4-[1,1,2-trifluoro-2- (trifluoromethoxy)ethoxy]phenyl]amino]carbonyl]-2,6-difluorobenzamide), in or on the following raw agricultural commodities:

TABLE 1 TO PARAGRAPH (a)

| Commodity                                     | Parts per million |
|-----------------------------------------------|-------------------|
| Almond, hulls .....                           | 15                |
| Almond, hulls .....                           | 15                |
| Apple, wet pomace .....                       | 8.0               |
| Avocado .....                                 | 0.60              |
| Bean, adzuki, dry seed .....                  | 0.3               |
| Bean, African yam, dry seed .....             | 0.3               |
| Bean, American potato, dry seed .....         | 0.3               |
| Bean, asparagus, dry seed .....               | 0.3               |
| Bean, asparagus, edible podded .....          | 0.7               |
| Bean, black, dry seed .....                   | 0.3               |
| Bean, broad, dry seed .....                   | 0.3               |
| Bean, broad, succulent shelled .....          | 0.7               |
| Bean, catjang, dry seed .....                 | 0.3               |
| Bean, catjang edible podded .....             | 0.7               |
| Bean, catjang, succulent shelled .....        | 0.7               |
| Bean, cranberry, dry seed .....               | 0.3               |
| Bean, dry bean, dry seed .....                | 0.3               |
| Bean, field, dry seed .....                   | 0.3               |
| Bean, French, dry seed .....                  | 0.3               |
| Bean, French, edible podded .....             | 0.7               |
| Bean, garden, dry seed .....                  | 0.3               |
| Bean, garden, edible podded .....             | 0.7               |
| Bean, goa, dry seed .....                     | 0.3               |
| Bean, goa, edible podded .....                | 0.7               |
| Bean, goa, succulent shelled .....            | 0.7               |
| Bean, great northern, dry seed .....          | 0.3               |
| Bean, green, dry seed .....                   | 0.3               |
| Bean, green, edible podded .....              | 0.7               |

## § 180.599 Acequinocyl; tolerances for residues.

(a) *General.* Tolerances are established for residues of acequinocyl, including its metabolites and degradates, in or on the commodities in the table below. Compliance with the tolerance levels specified below is to be determined by measuring only the sum of acequinocyl [2-(acetyloxy)-3-dodecyl-1,4-naphthalenedione] and its metabolite, 2-dodecyl-3-hydroxy-1,4-naphthoquinone, calculated as the stoichiometric equivalent of acequinocyl, in or on the commodity.

| Tropical and subtropical, small fruit, inedible peel, subgroup 24A .....                  | 2.0               |
| Vegetable, cucurbit, group 9 .....                                                        | 0.30              |
| Vegetable, fruiting, group 8–10 .....                                                     | 0.70              |

<sup>1</sup> There are no U.S. registrations as of January 18, 2017 for use on tea.

(b) *Section 18 emergency exemptions.* [Reserved]

(c) *Tolerances with regional registrations.* [Reserved]

(d) *Indirect or inadvertent residues.* [Reserved]

[69 FR 43533, July 21, 2004, as amended at 73 FR 17910, Apr. 2, 2008; 75 FR 70148, Nov. 17, 2010; 77 FR 25909, May 2, 2012; 81 FR 21756, Apr. 13, 2016; 82 FR 5414, Jan. 18, 2017; 83 FR 26373, June 7, 2018; 85 FR 29340, May 15, 2020; 86 FR 48510, Aug. 31, 2021]

§ 180.600 Propoxycarbazone; tolerances for residues.

(a) *General.* (1) Tolerances are established for combined residues of the herbicide propoxycarbazone methyl 2-[[[(4,5-dihydro-4-methyl-5-oxo-3-propoxy-1H-1,2,4-triazol-1-yl)carbonyl]amino]sulfonyl]benzoate and its metabolite methyl 2-[[[(4,5-dihydro-3-(2-hydroxypropoxy)-4-methyl-5-oxo-1H-1,2,4-triazol-1-yl)carbonyl]amino]sulfonyl]benzoate in/on the following raw agricultural commodities:

| Commodity           | Parts per million |
|---------------------|-------------------|
| Grass, forage ..... | 20                |
| Grass, hay .....    | 25                |
| Wheat, forage ..... | 17                |
| Wheat, grain .....  | 0.02              |
| Wheat, hay .....    | 0.15              |
| Wheat, straw .....  | 0.05              |

(2) Tolerances are established for residues of the herbicide propoxycarbazone methyl 2-[[[(4,5-dihydro-4-methyl-5-oxo-3-propoxy-1H-1,2,4-triazol-1-yl)carbonyl]amino]sulfonyl]benzoate

in/on the following raw agricultural commodities:

| Commodity                     | Parts per million |
|-------------------------------|-------------------|
| Cattle, meat .....            | 0.05              |
| Cattle, meat byproducts ..... | 0.3               |
| Goat, meat .....              | 0.05              |
| Goat, meat byproducts .....   | 0.3               |
| Horse, meat .....             | 0.05              |
| Horse, meat byproducts .....  | 0.3               |
| Milk .....                    | 0.03              |
| Sheep, meat .....             | 0.05              |
| Sheep, meat byproducts .....  | 0.3               |

(b) *Section 18 emergency exemptions.* [Reserved]

(c) *Tolerances with regional registrations.* [Reserved]

(d) *Indirect or inadvertent residues.* [Reserved]

[69 FR 40781, July 7, 2004, as amended at 71 FR 52487, Sept. 6, 2006; 74 FR 9377, Mar. 4, 2009]

§ 180.601 Cyazofamid; tolerances for residues.

(a) *General.* Tolerances are established for residues of the fungicide cyazofamid, including its metabolites and degradates, in or on the commodities in the following table. Compliance with the tolerance levels specified in the following table is to be determined by measuring only the sum of 4-chloro-2-cyano-*N,N*-dimethyl-5-(4-methylphenyl)-1*H*-imidazole-1-sulfonamide and its metabolite, 4-chloro-5-(4-methylphenyl)-1*H*-imidazole-2-carbonitrile, calculated as the stoichiometric equivalent of cyazofamid, in or on the following commodities:

| Commodity                                            | Parts per million |
|------------------------------------------------------|-------------------|
| Bean, succulent .....                                | 0.5               |
| Bean, succulent shelled .....                        | 0.08              |
| Brassica, leafy greens, subgroup 4–16B .....         | 15                |
| Bulb vegetables, group 3–07 .....                    | 2.0               |
| Carrot, roots .....                                  | 0.09              |
| Ginseng .....                                        | 0.3               |
| Herb subgroup 19A .....                              | 90                |
| Hop dried cones .....                                | 10.0              |
| Kohlrabi .....                                       | 1.5               |
| Leafy greens subgroup 4–16A .....                    | 10                |
| Vegetable, brassica, head and stem, group 5–16 ..... | 1.5               |
| Vegetable, cucurbit, group 9 .....                   | 0.10              |
| Vegetable, fruiting, group 8–10 .....                | 0.9               |
| Vegetable, tuberous and corn, subgroup 1C ...        | 0.02              |

(b) [Reserved]

(c) *Tolerances with regional registrations.* Tolerances with regional registrations are established for residues

## Environmental Protection Agency

## § 180.603

of the fungicide cyazofamid, including its metabolites and degradates, in or on the commodities in the following table. Compliance with the tolerance levels specified in the following table is to be determined by measuring only the sum of 4-chloro-2-cyano-*N,N*-dimethyl-5-(4-methylphenyl)-1*H*-imidazole-1-sulfonamide and its metabolite, 4-chloro-5-(4-methylphenyl)-1*H*-imidazole-2-carbonitrile, calculated as the stoichiometric equivalent of cyazofamid, in or on the following commodities:

| Commodity   | Parts per million |
|-------------|-------------------|
| Grape ..... | 1.5               |

(d) *Indirect or inadvertent residues.* [Reserved]

[69 FR 58299, Sept. 30, 2004, as amended at 73 FR 21839, Apr. 23, 2008; 74 FR 32453, July 8, 2009; 75 FR 40751, July 14, 2010; 77 FR 4252, Jan. 27, 2012; 77 FR 59119, Sept. 26, 2012; 81 FR 5605, Feb. 3, 2016; 85 FR 15391, Mar. 18, 2020]

### § 180.602 Spiroxamine; tolerances for residues.

(a) *General.* Tolerances are established for residues of the fungicide spiroxamine, including its metabolites and degradates, in or on the commodities in the table below. Compliance with the tolerance levels specified in the following table is to be determined by measuring only spiroxamine, [(8-(1,1-dimethylethyl)-*N*-ethyl-*N*-propyl-1,4-dioxaspiro[4,5]decane-2-methanamine) in or on the commodities.

| Commodity                                            | Parts per million |
|------------------------------------------------------|-------------------|
| Artichoke, globe, import <sup>1</sup> .....          | 0.7               |
| Asparagus <sup>1</sup> .....                         | 0.05              |
| Banana (import) .....                                | 3.0               |
| Grape (import) .....                                 | 1.0               |
| Vegetable, fruiting, crop group 8 <sup>1</sup> ..... | 1.2               |

<sup>1</sup> No U.S. registration as of December 1, 2010.

(b) *Section 18 emergency exemptions.* [Reserved]

(c) *Tolerances with regional registrations.* [Reserved]

(d) *Indirect or inadvertent residues.* [Reserved]

[69 FR 42570, July 16, 2004, as amended at 75 FR 74640, Dec. 1, 2010; 80 FR 72599, Nov. 20, 2015]

### § 180.603 Dinotefuran; tolerances for residues.

(a) *General.* (1) Tolerances are established for residues of dinotefuran, (*RS*)-1-methyl-2-nitro-3-((tetrahydro-3-furanyl)methyl)guanidine, including its metabolites and degradates, in or on the commodities listed in the following table. Compliance with the tolerance levels specified below is to be determined by measuring only the sum of dinotefuran and its metabolites DN, 1-methyl-3-(tetrahydro-3-furylmethyl)guanidine, and UF, 1-methyl-3-(tetrahydro-3-furylmethyl)urea, calculated as the stoichiometric equivalent of dinotefuran, in or on the commodities listed in the table below:

| Commodity                                                                 | Parts per million |
|---------------------------------------------------------------------------|-------------------|
| Berry, low growing, except strawberry, subgroup 13-07H .....              | 0.2               |
| Brassica, head and stem, subgroup 5A .....                                | 1.4               |
| Brassica, leafy greens, subgroup 5B .....                                 | 15.0              |
| Cotton, undelinted seed .....                                             | 0.4               |
| Cotton, gin byproducts .....                                              | 8.0               |
| Fruit, small vine climbing, except fuzzy kiwifruit, subgroup 13-07F ..... | 0.9               |
| Grape, raisin .....                                                       | 2.5               |
| Onion, bulb, subgroup 3-07A .....                                         | 0.15              |
| Onion, green, subgroup 3-07B .....                                        | 5.0               |
| Peach .....                                                               | 1.0               |
| Persimmon <sup>1</sup> .....                                              | 2                 |
| Potato, chips .....                                                       | 0.1               |
| Potato, granules/flakes .....                                             | 0.15              |
| Rice, grain .....                                                         | 9.0               |
| Tea, dried <sup>2</sup> .....                                             | 50                |
| Tomato, paste .....                                                       | 1.0               |
| Turnip, greens .....                                                      | 15.0              |
| Vegetable, fruiting, group 8 .....                                        | 0.7               |
| Vegetable, cucurbit, group 9 .....                                        | 0.5               |
| Vegetable, leafy, except Brassica, group 4 .....                          | 5.0               |
| Vegetable, tuberous and corm, subgroup 1C .....                           | 0.05              |
| Watercress .....                                                          | 8.0               |

<sup>1</sup> There are no U.S. registrations for use of dinotefuran on this commodity

<sup>2</sup> There are no U.S. registrations for tea.

(2) Tolerances are established for residues of dinotefuran, (*RS*)-1-methyl-2-nitro-3-((tetrahydro-3-furanyl)methyl)guanidine, including its metabolites and degradates, in or on the commodities listed in the following table. Compliance with the tolerance levels specified below is to be determined by measuring only the sum of dinotefuran, (*RS*)-1-methyl-2-nitro-3-((tetrahydro-3-furanyl)methyl)guanidine in or on the commodities listed in the table below:

§ 180.604

| Commodity                      | Parts per million |
|--------------------------------|-------------------|
| Cattle, fat .....              | 0.05              |
| Cattle, meat .....             | 0.05              |
| Cattle, meat byproducts .....  | 0.05              |
| Egg .....                      | 0.01              |
| Goat, fat .....                | 0.05              |
| Goat, meat .....               | 0.05              |
| Goat, meat byproducts .....    | 0.05              |
| Hog, fat .....                 | 0.05              |
| Hog, meat .....                | 0.05              |
| Hog, meat byproducts .....     | 0.05              |
| Horse, fat .....               | 0.05              |
| Horse, meat .....              | 0.05              |
| Horse, meat byproducts .....   | 0.05              |
| Milk .....                     | 0.05              |
| Poultry, meat byproducts ..... | 0.01              |
| Sheep, fat .....               | 0.05              |
| Sheep, meat .....              | 0.05              |
| Sheep, meat byproducts .....   | 0.05              |

(3) A tolerance of 0.01 parts per million is established for residues of the insecticide dinotefuran, (*RS*)-1-methyl-2-nitro-3-((tetrahydro-3-furanyl)methyl)guanidine, including its metabolites and degradates, in or on all food and/or feed commodities (other than those covered by a higher tolerance as a result of use on growing crops or inadvertent residues) when residues result from application of dinotefuran in food and/or feed handling establishments where food and/or feed products are held, stored, processed, prepared, or served. Compliance with the tolerance level is to be determined by measuring only dinotefuran.

(b) *Section 18 emergency exemptions.* Time-limited tolerances are established for residues of dinotefuran, (*RS*)-1-methyl-2-nitro-3-((tetrahydro-3-furanyl)methyl)guanidine, including its metabolites and degradates, in or on the commodities in the table below resulting from use of the pesticide pursuant to FIFRA section 18 emergency exemptions. Compliance with the tolerance levels specified below is to be determined by measuring only the sum of dinotefuran and its metabolites DN, 1-methyl-3-(tetrahydro-3-furylmethyl)guanidine, and UF, 1-methyl-3-(tetrahydro-3-furylmethyl)urea, calculated as the stoichiometric equivalent of dinotefuran, in or on the commodities listed in the table below. The tolerances expire and are revoked on the dates specified in the table.

40 CFR Ch. I (7–1–24 Edition)

| Commodity                    | Parts per million | Expiration/revocation date |
|------------------------------|-------------------|----------------------------|
| Fruit, pome, Group 11 .....  | 2.0               | 12/31/21                   |
| Fruit, stone, Group 12 ..... | 2.0               | 12/31/21                   |
| Kiwifruit, fuzzy .....       | 0.9               | 12/31/2022                 |

(c) *Tolerances with regional registrations.* [Reserved]

(d) *Indirect or inadvertent residues.* [Reserved]

[70 FR 14546, Mar. 23, 2005, as amended at 74 FR 12601, Mar. 25, 2009; 74 FR 67104, Dec. 18, 2009; 75 FR 770, Jan. 6, 2010; 77 FR 56138, Sept. 12, 2012; 77 FR 67285, Nov. 9, 2012; 77 FR 70913, Nov. 28, 2012; 78 FR 21272, Apr. 10, 2013; 78 FR 24683, Apr. 26, 2013; 79 FR 3512, Jan. 22, 2014; 80 FR 78145, Dec. 16, 2015; 83 FR 62732, Dec. 6, 2018; 84 FR 49479, Sept. 20, 2019; 84 FR 59936, Nov. 7, 2019]

§ 180.604 Mepanipyrim; tolerances for residues.

(a) *General.* [Reserved]

(b) *Section 18 emergency exemptions.* [Reserved]

(c) *Tolerances with regional registrations.* [Reserved]

(d) *Indirect of inadvertent residues.* [Reserved]

(e) *Revoked tolerances subject to the channel of trade provisions.* [Reserved]

(f) *Import tolerances.* Tolerances are established for the combined residues of mepanipyrim, 4-methyl-N-phenyl-6-(1-propynyl)-2-pyrimidinamine, and its metabolite, 4-methyl-N-phenyl-6-(2-hydroxypropyl)-2-pyrimidinamine, both free and conjugated in or on the following commodities:

| Commodity           | Parts per million |
|---------------------|-------------------|
| Grape .....         | 1.5               |
| Grape, raisin ..... | 3.0               |
| Strawberry .....    | 1.5               |
| Tomato .....        | 0.5               |

[68 FR 60827, Oct. 13, 2004]

§ 180.605 Penoxsulam; tolerances for residues.

(a) *General.* Tolerances are established for residues of penoxsulam, including its metabolites and degradates, in or on the commodities listed in the table below. Compliance with the tolerance levels specified below is to be determined by measuring only penoxsulam 2-(2,2-difluoroethoxy)-*N*-(5,8-dimethoxy[1,2,4]triazolo[1,5-*c*]

### § 180.607 Spiromesifen; tolerances for residues.

(a) *General.* (1) Tolerances are established for residues of the insecticide/miticide spiromesifen, including its metabolites and degradates, in or on the commodities listed below. Compliance with the tolerance levels specified below is to be determined by measuring only the sum of spiromesifen [2-oxo-3-(2,4,6-trimethylphenyl)-1-oxaspiro[4.4]non-3-en-4-yl 3,3-dimethylbutanoate] and 4-hydroxy-3-(2,4,6-trimethylphenyl)-1-oxaspiro[4.4]non-3-en-2-one, calculated as the stoichiometric equivalent of spiromesifen, in or on the following primary crop commodities:

TABLE 1 TO PARAGRAPH (a)(1)

| Commodity                                                       | Parts per million |
|-----------------------------------------------------------------|-------------------|
| Bean, dry .....                                                 | 0.02              |
| Bean, edible podded .....                                       | 0.80              |
| Bean, succulent .....                                           | 0.10              |

| Orange <sup>2</sup> .....                             | 0.15              |
| Orange subgroup 10–10A, oil <sup>2</sup> .....        | 10                |
| Pea, dry, seed .....                                  | 0.20              |
| Peppermint, tops .....                                | 45                |
| Spearmint, tops .....                                 | 45                |
| Tea, dry .....                                        | 40                |
| Tomato, paste .....                                   | 0.80              |
| Vegetable, cucurbit, group 9 .....                    | 0.10              |
| Vegetable, fruiting, group 8 .....                    | 0.45              |
| Vegetable, tuberous and corn, subgroup 1C ...         | 0.02              |

<sup>1</sup>This use has not been registered in the United States as of August 28, 2018.

<sup>2</sup>There are no U.S. registrations for these commodities as of June 26, 2024.

(2) Tolerances are established for residues of the insecticide/miticide spiromesifen, including its metabolites and degradates, in or on the commodities listed below. Compliance with the tolerance levels specified below is to be determined by measuring only the sum of spiromesifen [2-oxo-3-(2,4,6-trimethylphenyl)-1-oxaspiro[4.4]non-3-en-4-yl 3,3-dimethylbutanoate] and its metabolites containing the 4-hydroxy-3-(2,4,6-trimethylphenyl)-1-oxaspiro[4.4]non-3-en-2-one and 4-hydroxy-3-[4-(hydroxymethyl)-2,6-dimethylphenyl]-1-oxaspiro[4.4]non-3-en-2-one moieties, calculated as the stoichiometric equivalent of spiromesifen, in the following livestock commodities:

| Commodity                     | Parts per million |
|-------------------------------|-------------------|
| Cattle, fat .....             | 0.10              |
| Cattle, meat .....            | 0.02              |
| Cattle, meat byproducts ..... | 0.20              |
| Goat, fat .....               | 0.10              |
| Goat, meat .....              | 0.02              |
| Goat, meat byproducts .....   | 0.20              |
| Horse, fat .....              | 0.10              |
| Horse, meat .....             | 0.02              |
| Horse, meat byproducts .....  | 0.20              |
| Milk .....                    | 0.01              |
| Milk, fat .....               | 0.25              |
| Sheep, fat .....              | 0.10              |
| Sheep, meat .....             | 0.02              |
| Sheep, meat byproducts .....  | 0.20              |

§ 180.608

(b) *Section 18 emergency exemptions.* Time-limited tolerances specified in the following table are established for residues of the insecticide/miticide spiromesifen, including its metabolites and degradates, in or on the commodities listed below. Compliance with the tolerance levels specified below is to be determined by measuring only the sum of spiromesifen [2-oxo-3-(2,4,6-trimethylphenyl)-1-oxaspiro[4.4]non-3-en-4-yl 3,3-dimethylbutanoate] and 4-hydroxy-3-(2,4,6-trimethylphenyl)-1-oxaspiro[4.4]non-3-en-2-one, calculated as the stoichiometric equivalent of spiromesifen, in or on the specified agricultural commodities, resulting from use of the pesticide pursuant to FIFRA section 18 emergency exemptions. The tolerances expire and are revoked on the date specified in the table.

| Commodity             | Parts per million | Expiration/revocation date |
|-----------------------|-------------------|----------------------------|
| Soybean, forage ..... | 30                | 12/31/14                   |
| Soybean, hay .....    | 86                | 12/31/14                   |
| Soybean, seed .....   | 0.02              | 12/31/14                   |

(c) *Tolerances with regional registrations.* [Reserved]

(d) *Indirect or inadvertent residues.* Tolerances are established for the inadvertent or indirect residues of the insecticide/miticide spiromesifen, including its metabolites and degradates, in or on the commodities listed below. Compliance with the tolerance levels specified below is to be determined by measuring only the sum of spiromesifen [2-oxo-3-(2,4,6-trimethylphenyl)-1-oxaspiro[4.4]non-3-en-4-yl 3,3-dimethylbutanoate], 4-hydroxy-3-(2,4,6-trimethylphenyl)-1-oxaspiro[4.4]non-3-en-2-one, and its metabolites containing the 4-hydroxy-3-[4-(hydroxymethyl)-2,6-dimethylphenyl]-1-oxaspiro[4.4]non-3-en-2-one moiety, calculated as the stoichiometric equivalent of spiromesifen, in the following rotational crop commodities:

| Commodity                | Parts per million |
|--------------------------|-------------------|
| Alfalfa, forage .....    | 1.5               |
| Alfalfa, hay .....       | 3.0               |
| Barley, grain .....      | 0.03              |
| Barley, hay .....        | 0.25              |
| Barley, straw .....      | 0.15              |
| Beet, sugar, roots ..... | 0.03              |
| Beet, sugar, tops .....  | 0.20              |
| Oat, forage .....        | 0.20              |

40 CFR Ch. I (7–1–24 Edition)

| Commodity                         | Parts per million |
|-----------------------------------|-------------------|

[70 FR 40211, July 13, 2005, as amended at 75 FR 25539, May 7, 2008; 75 FR 24434, May 5, 2010; 77 FR 73939, Dec. 12, 2012; 79 FR 33464, June 11, 2014]

### § 180.609 Fluoxastrobin; tolerances for residues.

(a) *General.* (1) Tolerances are established for residues of fluoxastrobin, including its metabolites and degradates, in or on the commodities in the table below. Compliance with the tolerance levels specified below is to be determined by measuring only fluoxastrobin, (1E)-[2-[[6-(2-chlorophenoxy)-5-fluoro-4-pyrimidinyl]oxy]phenyl](5,6-dihydro-1,4,2-dioxazin-3-yl)methanone O-methyloxime and its Z isomer, (1Z)-[2-[[6-(2-chlorophenoxy)-5-fluoro-4-pyrimidinyl]oxy]phenyl](5,6-dihydro-1,4,2-dioxazin-3-yl)methanone O-methyloxime, calculated as the stoichiometric equivalent of fluoxastrobin.

| Commodity                                             | Parts per million |
|-------------------------------------------------------|-------------------|

| Sheep, meat byproducts .....  | 0.20              |

**§ 180.610**

(b) *Section 18 emergency exemptions.*  
[Reserved]

(c) *Tolerances with regional registrations.* [Reserved]

(d) *Indirect or inadvertent residues.*  
Tolerances are established for the indirect or inadvertent residues of fluoxastrobin, including its metabolites and degradates, in or on the commodities in the table below, when present therein as a result of the application of fluoxastrobin to the growing crops listed in paragraph (a)(1) of this section. Compliance with the tolerance levels specified below is to be determined by measuring only fluoxastrobin, (1E)-[2-[[6-(2-chlorophenoxy)-5-fluoro-4-pyrimidinyl]oxy]phenyl](5,6-dihydro-1,4,2-dioxazin-3-yl)methanone O-methyloxime and its Z isomer, (1Z)-[2-[[6-(2-chlorophenoxy)-5-fluoro-4-pyrimidinyl]oxy]phenyl](5,6-dihydro-1,4,2-dioxazin-3-yl)methanone O-methyloxime, calculated as the stoichiometric equivalent of fluoxastrobin.

### § 180.612 Topramezone; tolerances for residues.

(a) *General.* Tolerances are established for residues of the herbicide topramezone, including its metabolites and degradates, in or on the following commodities. Compliance with the following tolerance levels is to be determined by measuring only topramezone

([3-(4,5-dihydro-3-isoxazolyl)-2-methyl-4-(methylsulfonyl)phenyl](5-hydroxy-1-methyl-1H-pyrazol-4-yl)methanone) in or on the following commodities:

| Commodity                                             | Parts per million |
|-------------------------------------------------------|-------------------|
| Cattle, meat byproducts .....                         | 0.80              |

### § 180.613 Flonicamid; tolerances for residues.

(a) *General.* (1) Tolerances are established for the residues of the insecticide flonicamid, including its metabolites and degradates, in or on the commodities in the table below. Compliance with the tolerance levels specified below is to be determined by measuring only the sum of flonicamid, N-(cyanomethyl)-4-(trifluoromethyl)-3-pyridinecarboxamide, and its metabolites, TFNA (4-trifluoromethylnicotinic acid), TFNA-AM (4-trifluoromethylnicotinamide), and TFNG, N-(4-trifluoromethylnicotinoyl)glycine, calculated as the stoichiometric equivalent of flonicamid, in or on the following commodities.

TABLE 1 TO PARAGRAPH (a)(1)

| Commodity             | Parts per million |
|-----------------------|-------------------|
| Alfalfa, forage ..... | 10.0              |
| Alfalfa, hay .....    | 7                 |

TABLE 1 TO PARAGRAPH (a)(1)—Continued

| Commodity                                                                           | Parts per million |
|-------------------------------------------------------------------------------------|-------------------|
| Alfalfa, seed .....                                                                 | 1.5               |
| Almond, hulls .....                                                                 | 9.0               |
| Berry, low-growing, subgroup 13–07G .....                                           | 2                 |
| Brassica, leafy greens, subgroup 4–16B, except radish, tops .....                   | 16                |
| Bushberry subgroup 13–07B .....                                                     | 1.5               |
| Caneberry subgroup 13–07A .....                                                     | 3                 |
| Celtuce .....                                                                       | 4.0               |
| Cherry subgroup 12–12A .....                                                        | 0.6               |
| Corn, sweet, forage .....                                                           | 9                 |
| Corn, sweet, kernel plus cob with husks removed .....                               | 0.4               |
| Corn, sweet, stover .....                                                           | 20                |
| Cotton, gin byproducts .....                                                        | 6.0               |
| Cotton, hulls .....                                                                 | 2.0               |
| Cotton, meal .....                                                                  | 1.0               |
| Cottonseed subgroup 20C .....                                                       | 0.60              |
| Florence fennel .....                                                               | 4.0               |
| Fruit, citrus, group 10–10 .....                                                    | 1.5               |
| Fruit, pome, group 11–10 .....                                                      | 0.20              |
| Hop, dried cones .....                                                              | 20.0              |
| Kohlrabi .....                                                                      | 1.5               |
| Leaf petiole vegetable subgroup 22B .....                                           | 4.0               |
| Leafy greens subgroup 4–16A, except spinach .....                                   | 8                 |
| Peach subgroup 12–12B .....                                                         | 1.5               |
| Nut, tree, group 14–12 except pistachio .....                                       | 0.15              |
| Pepper/Eggplant, subgroup 8–10B .....                                               | 3.0               |
| Peppermint, tops .....                                                              | 7.0               |
| Pistachio .....                                                                     | 0.60              |
| Plum subgroup 12–12C .....                                                          | 0.6               |
| Pomegranate .....                                                                   | 0.5               |
| Potato, granules/flakes .....                                                       | 0.40              |
| Prickly pear, fruit .....                                                           | 2                 |
| Prickly pear, pads .....                                                            | 3                 |
| Radish, tops .....                                                                  | 20                |
| Rapeseed subgroup 20A .....                                                         | 1.5               |
| Small fruit vine climbing (except fuzzy kiwifruit), subgroup 13–07F .....           | 3                 |
| Spearmint, tops .....                                                               | 7.0               |
| Spinach .....                                                                       | 9.0               |
| Sunflower subgroup 20B .....                                                        | 0.70              |

| Vegetable, tuberous and corm, subgroup 1C .....                                     | 0.20              |

<sup>1</sup> There are no U.S. registrations for tea as of May 11, 2017.

(2) Tolerances are established for the residues of the insecticide flonicamid, including its metabolites and degradates, in or on the commodities

in the table below. Compliance with the tolerance levels specified below is to be determined by measuring only the sum of flonicamid, *N*-(cyanomethyl)-4-(trifluoromethyl)-3-pyridinecarboxamide, and its metabolites, TFNA (4-trifluoromethylnicotinic acid), and TFNA-AM (4-trifluoromethylnicotinamide), calculated as the Stoichiometric equivalent of flonicamid, in or on the following commodities.

| Commodity                      | Parts per million |
|--------------------------------|-------------------|
| Cattle, fat .....              | 0.03              |
| Cattle, meat .....             | 0.08              |
| Cattle, meat byproducts .....  | 0.08              |
| Egg .....                      | 0.04              |
| Goat, fat .....                | 0.03              |
| Goat, meat .....               | 0.08              |
| Goat, meat byproducts .....    | 0.08              |
| Hog, fat .....                 | 0.03              |
| Hog, meat .....                | 0.03              |
| Hog, meat byproducts .....     | 0.03              |
| Horse, fat .....               | 0.03              |
| Horse, meat .....              | 0.08              |
| Horse, meat byproducts .....   | 0.08              |
| Milk .....                     | 0.05              |
| Poultry, fat .....             | 0.03              |
| Poultry, meat .....            | 0.03              |
| Poultry, meat byproducts ..... | 0.03              |
| Sheep, fat .....               | 0.03              |
| Sheep, meat .....              | 0.08              |
| Sheep, meat byproducts .....   | 0.08              |

(b) [Reserved]

(c) *Tolerances with regional registrations.* Tolerances with regional registration, as defined by §180.1(1), are established for the residues of the insecticide flonicamid, including its metabolites and degradates, in or on the commodities in the table below. Compliance with the tolerance levels specified below is to be determined by measuring only the sum of flonicamid, *N*-(cyanomethyl)-4-(trifluoromethyl)-3-pyridinecarboxamide, and its metabolites, TFNA (4-trifluoromethylnicotinic acid), TFNA-AM (4-trifluoromethylnicotinamide), and TFNG (*N*-(4-trifluoromethylnicotinoyl)glycine), calculated as the stoichiometric equivalent of flonicamid, in or on the following commodities:

| Commodity            | Parts per million |
|----------------------|-------------------|
| Clover, forage ..... | 0.90              |
| Clover, hay .....    | 5.0               |

### § 180.614 Kasugamycin; tolerances for residues.

(a) *General.* Tolerances are established for residues of kasugamycin, including its metabolites and degradates, in or on the commodities listed in the following table. Compliance with the tolerance levels specified is to be determined by measuring only kasugamycin (3-O-[2-amino-4-[(carboxyimino-methyl)amino]-2,3,4,6-tetradeoxy- $\alpha$ -D-arabino-hexopyranosyl]-D-chiro-inositol) in or on the commodity.

| Commodity                                       | Parts per million |
|-------------------------------------------------|-------------------|
| Cherry subgroup 12-12A .....                    | 0.60              |
| Fruit, pome, group 11-10 .....                  | 0.20              |
| Vegetable, fruiting, group 8 <sup>1</sup> ..... | 0.04              |
| Walnut .....                                    | 0.04              |

<sup>1</sup> There is no U.S. registration as of September 1, 2005.

(b) *Section 18 emergency exemptions.* Time-limited tolerances specified in the following table are established for residues of kasugamycin, including metabolites and degradates, in or on the specified agricultural commodities, resulting from use of the pesticide pursuant to FIFRA section 18 emergency exemptions. Compliance with the tolerance levels specified is to be determined by measuring only kasugamycin (3-O-[2-amino-4-[(carboxyimino-methyl)amino]-2,3,4,6-tetradeoxy- $\alpha$ -D-arabino-hexopyranosyl]-D-chiro-inositol) in or on the commodity. The tolerances expire on the date specified in the table.

TABLE 2 TO PARAGRAPH (b)

| Commodity           | Parts per million | Expiration/revocation date |
|---------------------|-------------------|----------------------------|
| Almond .....        | 0.04              | 12/31/26                   |
| Almond, hulls ..... | 0.4               | 12/31/26                   |

(c) *Tolerances with regional registrations.* [Reserved]

(d) *Indirect or inadvertent residues.*  
[Reserved]

[79 FR 51497, Aug. 29, 2014, as amended at 83 FR 9446, Mar. 6, 2018; 85 FR 63453, Oct. 8, 2020; 88 FR 87362, Dec. 18, 2023]

### § 180.615 Amicarbazone; tolerances for residues.

(a) *General.* Tolerances are established for combined residues of the herbicide, amicarbazone [4-amino-4, 5-dihydro-N-(1,1-dimethylethyl)-3-(1-methylethyl)-5-oxo-1H-1,2,4-triazole-1-carboxamide] and its metabolites DA amicarbazone [N-(1,1-dimethylethyl)-4,5-dihydro-3-(1-methylethyl)-5-oxo-1H-1,2,4-triazole-1-carboxamide] and iPr-2-OH DA amicarbazone [N-(1,1-dimethylethyl)-4,5-dihydro-3-(1-hydroxy-1-methylethyl)-5-oxo-1H-1,2,4-triazole-1-carboxamide], calculated as parent equivalents, in or on the following commodities:

| Commodity                                   | Parts per million |
|---------------------------------------------|-------------------|
| Cattle, fat .....                           | 0.01              |
| Cattle, liver .....                         | 1.0               |
| Cattle, meat .....                          | 0.01              |
| Cattle, meat byproducts, except liver ..... | 0.10              |
| Corn, field, forage .....                   | 0.80              |
| Corn, field, grain .....                    | 0.05              |
| Corn, field, stover .....                   | 1.0               |
| Goat, fat .....                             | 0.01              |
| Goat, liver .....                           | 1.0               |
| Goat, meat .....                            | 0.01              |
| Goat, meat byproducts, except liver .....   | 0.10              |
| Hog, fat .....                              | 0.01              |
| Hog, liver .....                            | 0.10              |
| Hog, meat .....                             | 0.01              |
| Hog, meat byproducts, except liver .....    | 0.01              |
| Horse, fat .....                            | 0.01              |
| Horse, liver .....                          | 1.0               |
| Horse, meat .....                           | 0.01              |
| Horse, meat byproducts, except liver .....  | 0.10              |
| Milk .....                                  | 0.01              |
| Sheep, fat .....                            | 0.01              |
| Sheep, liver .....                          | 1.0               |
| Sheep, meat .....                           | 0.01              |
| Sheep, meat byproducts, except liver .....  | 0.10              |
| Poultry, liver .....                        | 0.10              |

(b) *Section 18 emergency exemptions.*  
[Reserved]

(c) *Tolerances with regional registrations.* [Reserved]

(d) *Indirect or inadvertent residues.* Tolerances are established for the indirect or inadvertent residues of amicarbazone [4-amino-4, 5-dihydro-N-(1,1-dimethylethyl)-3-(1-methylethyl)-5-oxo-1H-1,2,4-triazole-1-carboxamide] and its metabolites DA amicarbazone

**§ 180.616**

[N-(1,1-dimethylethyl)-4,5-dihydro-3-(1-methylethyl)-5-oxo-1H-1,2,4-triazole-1-carboxamide] and iPr-2-OH DA amicarbazone [N-(1,1-dimethylethyl)-4,5-dihydro-3-(1-hydroxy-1-methylethyl)-5-oxo-1H-1,2,4-triazole-1-carboxamide], calculated as parent equivalents, in or on the following commodities when present therein as a result of application of amicarbazone to the growing crops in paragraph (a) of this section:

| Commodity                     | Parts per million |
|-------------------------------|-------------------|
| Alfalfa, forage .....         | 0.05              |
| Alfalfa, hay .....            | 0.10              |
| Cotton, gin byproducts .....  | 0.30              |
| Cotton, undelinted seed ..... | 0.07              |
| Soybean, forage .....         | 1.50              |
| Soybean, hay .....            | 5.0               |
| Soybean, seed .....           | 0.80              |
| Wheat, bran .....             | 0.15              |
| Wheat, flour .....            | 0.15              |
| Wheat, forage .....           | 0.50              |
| Wheat, germ .....             | 0.15              |
| Wheat, grain .....            | 0.10              |
| Wheat, hay .....              | 1.0               |
| Wheat, middlings, .....       | 0.15              |
| Wheat, shorts .....           | 0.15              |
| Wheat, straw .....            | 0.50              |

[70 FR 55760, Sept. 23, 2005, as amended at 74 FR 46377, Sept. 9, 2009]

**§ 180.616 Fenpropimorph; tolerances for residues.**

Tolerances are established for the residues of the fungicide fenpropimorph (rel-(2R,6S)-4-[3-[4-(1,1-dimethylethyl)phenyl]-2-methylpropyl]-2,6-dimethylmorpholine) in or on the following commodity:

| Commodity     | Parts per million |
|---------------|-------------------|
| Banana* ..... | 2.0               |

\*No U.S. registration as of February 10, 2006.

(b) *Section 18 emergency exemptions.* [Reserved]

(c) *Tolerances with regional registrations.* [Reserved]

(d) *Indirect or inadvertent residues.* [Reserved]

[71 FR 15612, Mar. 29, 2006]

**§ 180.617 Metconazole; tolerances for residues.**

(a) *General.* Tolerances are established for residues of metconazole, including its metabolites and degradates, in or on the commodities in the fol-

**40 CFR Ch. I (7–1–24 Edition)**

lowing table. Compliance with the tolerance levels specified below is to be determined by measuring only metconazole [5-[(4-chlorophenyl)methyl]-2,2-dimethyl-1-(1H-1,2,4-triazol-1-ylmethyl)cyclopentanol] as the sum of its *cis*- and *trans*-isomers in or on the following commodities:

| Commodity                                                      | Parts per million |
|----------------------------------------------------------------|-------------------|
| Almond, hulls .....                                            | 4.0               |
| Banana <sup>1</sup> .....                                      | 0.1               |

### § 180.620 Etofenprox; tolerances for residues.

(a) *General.* A tolerance is established for residues of the insecticide etofenprox, including its metabolites and degradates, in or on the commodity in the table in this paragraph. Compliance with the tolerance level specified in this paragraph is to be determined by measuring only etofenprox, 2-(4-ethoxyphenyl)-2-methylpropyl 3-phenoxybenzyl ether, in or on the commodity.

| Commodity                                                                                    | Parts per million |
|----------------------------------------------------------------------------------------------|-------------------|
| Cattle, fat .....                                                                            | 10.0              |

### § 180.621 Dithianon; tolerances for residues.

(a) *General.* Tolerances are established for residues of dithianon, including its metabolites and degradates, in or on the commodities in the table below. Compliance with the tolerance levels specified below is to be determined by measuring only dithianon, 5, 10-dihydro-5,10-dioxonaphtho(2,3-b)-1,4-dithiin-2,3-dicarbonitrile.

§ 180.622

| Commodity                                | Parts per million |
|------------------------------------------|-------------------|
| Fruit, pome, group 11 <sup>1</sup> ..... | 5                 |
| Grape <sup>2</sup> .....                 | 3                 |
| Hop, dried cones <sup>1</sup> .....      | 100               |

<sup>1</sup>No U.S. registration as of September 5, 2006.

<sup>2</sup>No U.S. registration as of January 29, 2010.

§ 180.622 Ethaboxam; tolerances for residues.

(a) *General.* Tolerances are established for residues of ethaboxam, including its metabolites and degradates, in or on the commodities listed in the table below. Compliance with the tolerance levels specified below is to be determined by measuring only ethaboxam (*N*-(cyano-2-thienylmethyl)-4-ethyl-2-(ethylamino)-5-thiazolecarboxamide) in or on the commodity.

TABLE 1 TO PARAGRAPH (a)

| Commodity                                                    | Parts per million |
|--------------------------------------------------------------|-------------------|

§ 180.624 Metrafenone; tolerances for residues.

(a) *General.* Tolerances are established for residues of the fungicide metrafenone, including its metabolites and degradates, in or on the commodities in the table below. Compliance with the tolerance levels specified in the following table is to be determined by measuring only metrafenone (3-bromo-6-methoxy-2-methylphenyl)(2,3,4-trimethoxy-6-methylphenyl)methanone in or on the following commodities:

| Commodity                                                                  | Parts per million |
|----------------------------------------------------------------------------|-------------------|
| Apricot .....                                                              | 0.70              |
| Cherry subgroup 12-12A .....                                               | 2.0               |
| Fruit, pome, group 11-10 .....                                             | 1.5               |
| Fruit, small, vine climbing, except fuzzy kiwifruit, subgroup 13-07F ..... | 4.5               |
| Grape, raisin .....                                                        | 17                |
| Hop, dried cones .....                                                     | 70                |
| Peach subgroup 12-12B .....                                                | 0.70              |
| Vegetable, cucurbit, group 9 .....                                         | 0.50              |
| Vegetable, fruiting, group 8-10 .....                                      | 0.90              |
| White button mushroom .....                                                | 0.50              |

### § 180.625 Orthosulfamuron; tolerances for residues.

(a) *General.* Tolerances are established for residues of the herbicide orthosulfamuron, including its metabolites and degradates, in or on the commodities in the table, below. Compliance with the tolerance levels specified in the following table is to be determined by measuring only orthosulfamuron, 1-(4,6-dimethoxypyrimidin-2-yl)-3-[(2-(dimethylcarbamoyl)phenyl)sulfamoyl]urea, in or on the following commodities:

TABLE TO PARAGRAPH (a)

| Commodity                                                                  | Parts per million |
|----------------------------------------------------------------------------|-------------------|
| Almond, hulls .....                                                        | 0.03              |
| Fruit, small, vine climbing, except fuzzy kiwifruit, subgroup 13-07F ..... | 0.01              |
| Nut, tree, group 14-12 .....                                               | 0.01              |
| Rice, grain .....                                                          | 0.05              |

### § 180.626 Prothioconazole; tolerances for residues.

(a) *General.* (1) Tolerances are established for residues of prothioconazole, 2-[2-(1-chlorocyclopropyl)-3-(2-chlorophenyl)-2-hydroxypropyl]-1,2-dihydro-3H-1,2,4-triazole-3-thion, including its metabolites and degradates, in or on the commodities in the table below. Compliance with the tolerance levels specified below is to be determined by measuring only prothioconazole and its metabolite prothioconazole-desthio, or  $\alpha$ -(1-chlorocyclopropyl)- $\alpha$ -(2-chlorophenyl)methyl]-1H-1,2,4-triazole-1-ethanol, calculated as parent in or on the commodity.

| Commodity                                                                                 | Parts per million |
|-------------------------------------------------------------------------------------------|-------------------|
| Alfalfa, forage .....                                                                     | 0.02              |

<sup>1</sup>There are no U.S. registrations allowing use of prothioconazole on the commodities in the Sunflower subgroup 20B as of August 16, 2017.

(2) Tolerances are established for residues of prothioconazole, 2-[2-(1-chlorocyclopropyl)-3-(2-chlorophenyl)-2-hydroxypropyl]-1,2-dihydro-3H-1,2,4-triazole-3-thion, including its metabolites and degradates, in or on the commodities in the table below. Compliance with the tolerance levels specified below is to be determined by measuring only prothioconazole and its metabolites prothioconazole-desthio, or  $\alpha$ -(1-chlorocyclopropyl)- $\alpha$ -(2-chlorophenyl)methyl]-1H-1,2,4-triazole-1-ethanol, and conjugates that can be converted to these two compounds by acid hydrolysis, calculated as parent in or on the commodity.

**§ 180.627 Fluopicolide; tolerances for residues.**

(a) *General.* Tolerances are established for residues of the fungicide fluopicolide [2,6-dichloro-*N*-[[3-chloro-5-(trifluoromethyl)-2-pyridinyl]methyl]benzamide], including its metabolites and degradates, in or on the commodities in the table in this paragraph. Compliance with the tolerance levels specified below is to be determined by measuring only fluopicolide [2,6-dichloro-*N*-[[3-chloro-5-(trifluoromethyl)-2-pyridinyl]methyl]benzamide] in or on the commodity.

| Commodity                                                                  | Parts per million |

**§ 180.628 Chlorantraniliprole; tolerances for residues.**

(a) *General.* Tolerances are established for residues of the insecticide chlorantraniliprole, including its metabolites and degradates, in or on the commodities in the table below. Compliance with the tolerance levels specified below is to be determined by measuring only chlorantraniliprole, 3-bromo-*N*-[4-chloro-2-methyl-6-[(methylamino)carbonyl]phenyl]-1-(3-chloro-2-pyridinyl)-1*H*-pyrazole-5-carboxamide.

§ 180.629 Flutriafof; tolerances for residues.

(a) *General.* Tolerances are established for the residues of flutriafof, [(±)-α-(2-fluorophenyl)-α-(4-fluorophenyl)-1*H*-1,2,4-triazole-1-ethanol], including its metabolites and degradates in or on the following commodities. Compliance with the following tolerances is to be determined by measuring flutriafof only.

| Commodity                                            | Parts per million |
|------------------------------------------------------|-------------------|
| African tree nut .....                               | 0.02              |
| Alfalfa, forage .....                                | 20                |

(b) *Section 18 emergency exemptions.* [Reserved]

(c) *Tolerances with regional registrations* [Reserved]

(d) *Indirect or inadvertent residues.* Tolerances are established for the indirect or inadvertent residues of the fungicide flutriafof, including its metabolites and degradates, in or on the commodities in the table 2 to this paragraph (d) when present therein as a result of the application of flutriafof to the growing crops listed in the table to

## Environmental Protection Agency

§ 180.632

paragraph (a) of this section. Compliance with the following tolerance levels specified in table 2 to this paragraph (d) is to be determined by measuring only flutriafol ((±)-α-(2-fluorophenyl)-α-(4-fluorophenyl)-1*H*-1,2,4-triazole-1-ethanol) in or on the following commodities:

TABLE 2 TO PARAGRAPH (d)

| Commodity         | Parts per million |
|-------------------|-------------------|
| Rice, grain ..... | 0.5               |

[75 FR 26673, May 12, 2010, as amended at 76 FR 69647, Nov. 9, 2011; 77 FR 47301, Aug. 8, 2012; 77 FR 48901, Aug. 15, 2012; 78 FR 75262, Dec. 11, 2013; 79 FR 32673, June 6, 2014; 80 FR 5951, Feb. 4, 2015; 80 FR 71952, Nov. 18, 2015; 85 FR 8467, Feb. 14, 2020]

### § 180.631 Pyrasulfotole; tolerances for residues.

(a) *General.* Tolerances are established for residues of the herbicide pyrasulfotole, including its metabolites and degradates, in or on the commodities in the table below. Compliance with the tolerance levels specified below is to be determined by measuring only the sum of pyrasulfotole ((5-hydroxy-1,3-dimethyl-1*H*-pyrazol-4-yl)[2-(methylsulfonyl)-4-(trifluoromethyl)phenyl]methanone) and its desmethyl metabolite (5-hydroxy-3-methyl-1*H*-pyrazol-4-yl)[2-(methylsulfonyl)-4-(trifluoromethyl)phenyl]methanone), calculated as the stoichiometric equivalent of pyrasulfotole, in or on the commodities:

| Commodity                                   | Parts per million |
|---------------------------------------------|-------------------|
| Aspirated grain fractions .....             | 0.40              |
| Barley, grain .....                         | 0.02              |
| Barley, hay .....                           | 0.30              |
| Barley, straw .....                         | 0.20              |
| Cattle, fat .....                           | 0.03              |

### § 180.632 Fenazaquin; Tolerances for residues.

(a) *General.* Tolerances are established for residues of the insecticide fenazaquin, including its metabolites and degradates, in or on the commodities in the table below. Compliance with the tolerance levels specified below is to be determined by measuring only fenazaquin, or 4-[2-[4-(1,1-dimethylethyl)phenyl]-ethoxy]quinazoline.

| Commodity                                                                 | Parts per million |
|---------------------------------------------------------------------------|-------------------|
| Almond, hulls .....                                                       | 4                 |
| Avocado .....                                                             | 0.15              |
| Berry, low growing, subgroup 13-07G .....                                 | 2                 |
| Bushberry, subgroup 13-07B .....                                          | 0.8               |
| Caneberry, subgroup 13-07A .....                                          | 0.7               |
| Fruit, Citrus, Group 10 except Grapefruit <sup>2</sup> .....              | 0.5               |
| Fruit, citrus, group 10-10 .....                                          | 0.4               |
| Fruit, citrus, group 10-10, oil .....                                     | 20                |
| Fruit, pome, group 11-10 .....                                            | 0.6               |
| Fruit, small vine climbing, except fuzzy kiwifruit, subgroup 13-07F ..... | 0.7               |
| Fruit, stone, group 12-12 .....                                           | 2                 |
| Grape, raisin .....                                                       | 0.8               |
| Hop, dried cones .....                                                    | 30                |
| Nuts, Tree, Group 14-12 .....                                             | 0.02              |

# § 180.633

| Commodity                                                      | Parts per million |
|----------------------------------------------------------------|-------------------|
| Pea and bean, dried shelled, except soybean, subgroup 6C ..... | 0.3               |
| Pea and bean, succulent shelled, subgroup 6B .....             | 0.03              |
| Peppermint, fresh leaves .....                                 | 10                |
| Pineapple <sup>1</sup> .....                                   | 0.2               |
| Spearmint, fresh leaves .....                                  | 10                |
| Tea, dried <sup>1</sup> .....                                  | 9                 |
| Vegetable, cucurbit, group 9 .....                             | 0.3               |
| Vegetable, fruiting, group 8–10 .....                          | 0.3               |
| Vegetable, legume, edible podded, subgroup 6A .....            | 0.4               |

<sup>1</sup> There are no U.S. registrations as of May 25, 2017 for use on pineapple and tea.

<sup>2</sup> This tolerance expires on October 11, 2019.

## § 180.634 Tembotrione; tolerances for residues.

(a) *General.* (1) Tolerances are established for residues of the herbicide tembotrione, including its metabolites and degradates, in or on the commodities listed in the table to this paragraph. Compliance with the tolerance levels specified below is to be determined by measuring only the sum of tembotrione, 2-[2-chloro-4-(methylsulfonyl)-3-[(2,2,2-trifluoroethoxy)methyl]benzoyl]-1,3-cyclohexanedione and its metabolite, 2-[2-chloro-4-(methylsulfonyl)-3-[(2,2,2-trifluoroethoxy)methyl]benzoyl]-4,6-dihydroxy-1,3-cyclohexanedione, calculated as the stoichiometric equivalent of tembotrione, in or on the following commodities.

| Commodity                                   | Parts per million |
|---------------------------------------------|-------------------|
| Cattle, liver .....                         | 0.40              |
| Cattle, meat byproducts, except liver ..... | 0.07              |
| Corn, field, forage .....                   | 0.60              |
| Corn, field, grain .....                    | 0.02              |
| Corn, field, stover .....                   | 0.45              |
| Corn, pop, grain .....                      | 0.02              |
| Corn, pop, stover .....                     | 0.35              |
| Corn, sweet, forage .....                   | 0.35              |
| Corn, sweet, stover .....                   | 0.60              |
| Goat, liver .....                           | 0.40              |
| Goat, meat byproducts, except liver .....   | 0.07              |
| Horse, liver .....                          | 0.40              |
| Horse, meat byproducts, except liver .....  | 0.07              |
| Poultry, liver .....                        | 0.07              |
| Sheep, liver .....                          | 0.40              |
| Sheep, meat byproducts, except liver .....  | 0.07              |

## Environmental Protection Agency

§ 180.635

(2) Tolerances are established for residues of the herbicide tembotrione, including its metabolites and degradates, in or on the commodities listed in the table to this paragraph. Compliance with the tolerance levels specified below is to be determined by measuring only tembotrione, 2-[2-chloro-4-(methylsulfonyl)-3-[(2,2,2-trifluoroethoxy)methyl]benzoyl]-1,3-cyclohexanedione in or on the following commodities.

| Commodity                                             | Parts per million |
|-------------------------------------------------------|-------------------|
| Corn, sweet, kernel plus cob with husks removed ..... | 0.01              |

(b) *Section 18 emergency exemptions.* [Reserved]

(c) *Tolerances with regional registrations.* [Reserved]

(d) *Indirect or inadvertent residues.* [Reserved]

[72 FR 55085, Sept. 28, 2007, as amended at 74 FR 47894, Sept. 18, 2009]

### § 180.635 Spinetoram; tolerances for residues.

(a) *General.* Tolerances are established for residues of the insecticide spinetoram, including its metabolites and degradates, in or on the commodities in the table below. Compliance with the tolerance levels specified below is to be determined by measuring only the sum of XDE-175-J: 1-*H-as-indaceno*[3,2-d]oxacyclododecin-7,15-dione, 2-[(6deoxy-3-*O*-ethyl-2,4-di-*O*-methyl- $\alpha$ -*L*-mannopyranosyl)oxy]-13-[[*(2R,5S,6R)*-5-(dimethylamino)tetrahydro-6-methyl-2*H*-pyran-2-yl]oxy]-9-ethyl-2,3,3a,4,5,5a,5b,6,9,10,11,12,13,14,16a,16b-hexadecahydro-14-methyl-, (*2R,3aR,5aR,5bS,9S,13S,14R,16aS,16bR*); XDE-175-L: 1-*H-as-indaceno*[3,2-d]oxacyclododecin-7,15-dione, 2-[(6deoxy-3-*O*-ethyl-2,4-di-mannopyranosyl)oxy]-13-[[*(2R,5S,6R)*-5-(dimethylamino)tetrahydro-6-methyl-2*H*-pyran-2-yl]oxy]-9-ethyl-2,3,3a,5a,5b,6,9,10,11,12,13,14,16a,16b-tetradecahydro-4,14-dimethyl-, (*2S,3aR,5aS,5bS,9S,13S,14R,16aS,16bS*); ND-J: (*2R,3aR,5aR,5bS,9S,13S,14R,16aS,16bR*)-9-ethyl-14-methyl-13[[*(2S,5S,6R)*-6-methyl-5-(methylamino)tetrahydro-2*H*-

pyran-2-yl]oxy]-7,15-dioxo-2,3,3a,4,5,5a,5b,6,7,9,10,11,12,13,14,15,16a,16b-octadecahydro-1-*H-as-indaceno*[3,2d]oxacyclododecin-2-yl-6-deoxy-3-*O*-ethyl-2,4-di-*O*-methyl- $\alpha$ -*L*-mannopyranoside; and NF-J: (*2R,3S,6S*)-6-[[*(2R,3aR,5aR,5bS,9S,13S,14R,16aS,16bR)*-2-[(6-deoxy-3-*O*-ethyl-2,4-di-*O*-methyl- $\alpha$ -*L*-mannopyranosyl)oxy]-9-ethyl-14-methyl-7,15-dioxo-2,3,3a,4,5,5a,5b,6,7,9,10,11,12,13,14,15,16a,16b-octadecahydro-1-*H-as-indaceno*[3,2d]oxacyclododecin-13-yl]oxy]-2-methyltetrahydro-2,3-yl(methyl)formamide, calculated as the stoichiometric equivalent of spinetoram.

TABLE 1 TO PARAGRAPH (a)

| Commodity                                                                  | Parts per million |
|----------------------------------------------------------------------------|-------------------|
| Acerola .....                                                              | 0.30              |
| Almond, hulls .....                                                        | 19                |
| Amaranth grain, grain .....                                                | 1.0               |
| Animal feed, nongrass, group 18, forage .....                              | 35                |
| Animal feed, nongrass, group 18, hay .....                                 | 30                |
| Apple, wet pomace .....                                                    | 0.50              |
| Artichoke, globe .....                                                     | 0.30              |
| Atemoya .....                                                              | 0.30              |
| Avocado .....                                                              | 0.30              |
| Banana .....                                                               | 0.25              |
| Beet, sugar, molasses .....                                                | 0.75              |
| Berry, low growing, except strawberry, subgroup 13-07H .....               | 0.04              |
| Berry, low growing, subgroup 13-07G, except cranberry .....                | 0.90              |
| Biriba .....                                                               | 0.30              |
| Bushberry subgroup 13-07B .....                                            | 0.50              |
| Caneberry subgroup 13-07A .....                                            | 0.80              |

<sup>1</sup>There are no U.S. registrations allowing use of mandipropamid on cacao as of October 28, 2019.

(b) *Section 18 emergency exemptions.* Time-limited tolerances are established for residues of mandipropamid, including its metabolites and degradates, in or on the commodities listed in the table below resulting from use of the pesticide pursuant to FFIFRA section 18 emergency exemptions. Compliance with the tolerance levels specified below is to be determined by measuring only mandipropamid (4-chloro-*N*-[2-[3-methoxy-4-(2-propynyloxy)phenyl]ethyl]- $\alpha$ -(2-propynyloxy)benzeneacetamide) in or on the commodity. The tolerances expire on the date specified in the table.

| Commodity          | Parts per million | Expiration/revocation date |
|--------------------|-------------------|----------------------------|
| Basil, dried ..... | 240               | 12/31/15                   |

(c) *Tolerances with regional registrations.* [Reserved]

(d) *Indirect or inadvertent tolerances.* [Reserved]

[73 FR 10402, Feb. 27, 2008, as amended at 82 FR 30990, July 5, 2017; 83 FR 31895, July 10, 2018]

**§ 180.639 Flubendiamide; tolerances for residues.**

(a) *General.* (1) Tolerances are established for residues of flubendiamide, including its metabolites and degradates, in or on the commodities in the table below. Compliance with the tolerance levels specified in the table is to be determined by measuring only flubendiamide  $N^2$ -[1, 1-dimethyl-2-(methylsulfonyl)ethyl]-3-iodo- $N^1$ -[2-methyl-4-[1,2,2,2-tetrafluoro-1-(trifluoromethyl)ethyl]phenyl]-1,2-benzenedicarboxamide, in or on the following commodities:

| Commodity                                                | Parts per million |
|----------------------------------------------------------|-------------------|
| Almond, hulls .....                                      | 9.0               |
| Apple, wet pomace .....                                  | 5.0               |
| Corn, field, forage .....                                | 8.0               |
| Corn, field, grain .....                                 | 0.03              |
| Corn, field, stover .....                                | 15                |
| Corn, pop, grain .....                                   | 0.02              |
| Corn, pop, stover .....                                  | 15                |
| Corn, sweet, forage .....                                | 9.0               |
| Corn, sweet, kernel plus cob with husks removed .....    | 0.01              |
| Corn, sweet, stover .....                                | 25                |
| Cotton gin byproducts .....                              | 60                |
| Cotton, undelinted seed .....                            | 0.90              |
| Fruit, pome, group 11 .....                              | 1.5               |
| Fruit, stone, group 12 .....                             | 1.6               |
| Grape .....                                              | 1.4               |
| Nut, tree, group 14 .....                                | 0.06              |
| Okra .....                                               | 0.30              |
| Tea <sup>1</sup> .....                                   | 50                |
| Vegetable, cucurbit, group 9 .....                       | 0.20              |
| Vegetable, fruiting, group 8 .....                       | 0.60              |
| Vegetable, leafy, except <i>Brassica</i> , group 4 ..... | 11                |

<sup>1</sup> There are no U.S. registrations as of July 5, 2017, for use of flubendiamide on tea.

(2) Tolerances are established for residues of flubendiamide, including its metabolites and degradates, in or on the commodities in the table below. Compliance with the tolerance levels specified in the table is to be determined by measuring only

**40 CFR Ch. I (7–1–24 Edition)**

flubendiamide  $N^2$ -[1,1-dimethyl-2-(methylsulfonyl)ethyl]-3-iodo- $N^1$ -[2-methyl-4-[1,2,2,2-tetrafluoro-1-(trifluoromethyl)ethyl]phenyl]-1,2-benzenedicarboxamide, in or on the following commodities:

| Commodity                                                                      | Parts per million |
|--------------------------------------------------------------------------------|-------------------|
| Alfalfa, forage .....                                                          | 25                |
| Alfalfa, hay .....                                                             | 65                |
| Artichoke, globe .....                                                         | 1.6               |
| Berry, low growing, subgroup 13–07G, except cranberry .....                    | 1.5               |

### § 180.640 Pyridalyl; tolerances for residues.

(a) *General.* Tolerances are established for residues of pyridalyl, pyridine, 2-[3-[2,6-dichloro-4-[(3,3-dichloro-2-propenyl)oxy]phenoxy]propoxy]-5-(trifluoromethyl), in or on the following raw agricultural commodities:)

| Commodity                                                 | Parts per million |
|-----------------------------------------------------------|-------------------|
| <i>Brassica</i> , head and stem, subgroup 5A .....        | 3.5               |
| Mustard greens .....                                      | 30                |
| Turnip greens .....                                       | 30                |
| Vegetable, fruiting, group 8 .....                        | 1.0               |
| Vegetables, leafy, except <i>Brassica</i> , group 4 ..... | 20                |

(b) *Section 18 emergency exemptions.* [Reserved]

(c) *Tolerances with regional registrations.* [Reserved]

(d) *Indirect or inadvertent residues.* [Reserved]

[73 FR 25533, May 7, 2008]

### § 180.641 Spirotetramat; tolerances for residues.

(a) *General.* (1) Tolerances are established for residues of the insecticide spirotetramat, including its metabolites and degradates, in or on the commodities in the table below. Compliance with the tolerance levels specified below is to be determined by measuring only the sum of spirotetramat (cis-3-(2,5-dimethylphenyl)-8-methoxy-2-oxo-1-azaspiro[4.5]dec-3-en-4-yl-ethyl carbonate) and its metabolites cis-3-(2,5-dimethylphenyl)-4-hydroxy-8-methoxy-1-azaspiro[4.5]dec-3-en-2-one, cis-3-(2,5-dimethylphenyl)-3-hydroxy-8-methoxy-1-azaspiro[4.5]decane-2,4-dione, cis-3-(2,5-dimethylphenyl)-8-methoxy-2-oxo-1-azaspiro[4.5]dec-3-en-4-yl beta-D-glucopyranoside, and cis-3-(2,5-dimethylphenyl)-4-hydroxy-8-methoxy-1-azaspiro[4.5]decan-2-one, calculated as the stoichiometric equivalent of spirotetramat, in or on the following commodities.

| Commodity                                                    | Parts per million |
|--------------------------------------------------------------|-------------------|
| Acerola .....                                                | 2.5               |
| Almond, hulls .....                                          | 9.0               |
| Artichoke, globe .....                                       | 1.5               |
| Asparagus <sup>1</sup> .....                                 | 0.10              |
| Aspirated grain fractions .....                              | 10.0              |
| Avocado .....                                                | 0.60              |
| Beet, sugar, molasses .....                                  | 0.30              |
| Beet, sugar, roots .....                                     | 0.15              |
| Berry, low growing, except strawberry, subgroup 13-07H ..... | 0.30              |
| Black sapote .....                                           | 0.60              |
| Brassica, head and stem, subgroup 5A .....                   | 2.5               |
| Brassica, leafy, subgroup 5B .....                           | 8.0               |
| Bushberry subgroup 13-07B .....                              | 3.0               |
| Canistel .....                                               | 0.60              |
| Carrot, roots .....                                          | 0.15              |
| Citrus, oil .....                                            | 6.0               |
| Coffee, green bean .....                                     | 0.20              |
| Coffee, instant .....                                        | 0.50              |
| Corn, sweet, kernel plus cob with husks removed .....        | 1.5               |
| Cotton gin byproducts <sup>1</sup> .....                     | 10.0              |
| Cotton, undelinted seed <sup>1</sup> .....                   | 0.30              |
| Feijoa .....                                                 | 2.5               |
| Fruit, citrus, group 10-10 .....                             | 0.60              |
| Fruit, pome, group 11-10 .....                               | 0.70              |
| Fruit, stone, group 12-12 .....                              | 4.5               |
| Grape, raisin .....                                          | 3.0               |
| Guava .....                                                  | 2.5               |
| Hop, dried cones .....                                       | 10.0              |
| Jaboticaba .....                                             | 2.5               |
| Longan .....                                                 | 13.0              |
| Lychee .....                                                 | 13.0              |
| Mamey sapote .....                                           | 0.60              |
| Mango .....                                                  | 0.60              |

| Commodity                                                                         | Parts per million |
|-----------------------------------------------------------------------------------|-------------------|
| Nut, tree, group 14–12 .....                                                      | 0.25              |
| Papaya .....                                                                      | 0.40              |
| Passionfruit .....                                                                | 2.5               |
| Persimmon .....                                                                   | 2.5               |
| Pineapple .....                                                                   | 0.30              |
| Pistachio .....                                                                   | 0.25              |
| Pomegranate .....                                                                 | 0.50              |
| Potato, flakes .....                                                              | 1.6               |
| Pulasan .....                                                                     | 13.0              |
| Rambutan .....                                                                    | 13.0              |
| Sapodilla .....                                                                   | 0.60              |
| Small fruit vine climbing subgroup, except fuzzy kiwifruit, subgroup 13–07F ..... | 1.3               |
| Soybean forage .....                                                              | 8.0               |
| Soybean hay .....                                                                 | 16.0              |
| Soybean seed .....                                                                | 5.0               |
| Spanish lime .....                                                                | 13                |
| Star apple .....                                                                  | 0.60              |
| Starfruit .....                                                                   | 2.5               |
| Strawberry <sup>1</sup> .....                                                     | 0.40              |
| Taro, leaves .....                                                                | 9.0               |
| Vegetable, bulb, group 3–07 .....                                                 | 0.80              |
| Vegetable, cucurbit, group 9 .....                                                | 0.30              |
| Vegetable, foliage of legume, except soybean, subgroup 07A .....                  | 7.0               |
| Vegetable, fruiting, group 8–10 .....                                             | 2.5               |
| Vegetable, leafy, except brassica, group 4 .....                                  | 9.0               |
| Vegetable, legume, group 06, except soybean .....                                 | 2.5               |
| Vegetable, tuberous and corm, subgroup 1C .....                                   | 0.60              |
| Watercress .....                                                                  | 2.0               |
| Wax jambu .....                                                                   | 2.5               |
| White sapote .....                                                                | 0.60              |

<sup>1</sup> There are no U.S. registrations for these commodities.

(2) Tolerances are also established for residues of the insecticide spirotetramat, including its metabolites and degradates, in or on the commodities in the table below. Compliance with the tolerance levels specified below is to be determined by measuring only the sum of spirotetramat (*cis*-3-(2,5-dimethylphenyl)-8-methoxy-2-oxo-1-azaspiro[4.5]dec-3-en-4-yl-ethyl carbonate) and its metabolite *cis*-3-(2,5-dimethylphenyl)-4-hydroxy-8-methoxy-1-azaspiro[4.5]dec-3-en-2-one, calculated as the stoichiometric equivalent of spirotetramat, in or on the following commodities:

| Commodity                      | Parts per million |
|--------------------------------|-------------------|
| Cattle, fat .....              | 0.02              |
| Cattle, meat .....             | 0.02              |
| Cattle, meat byproducts .....  | 0.20              |
| Eggs .....                     | 0.02              |
| Goat, fat .....                | 0.02              |
| Goat, meat .....               | 0.02              |
| Goat, meat byproducts .....    | 0.20              |
| Hog, meat byproducts .....     | 0.02              |
| Horse, fat .....               | 0.02              |
| Horse, meat .....              | 0.02              |
| Horse, meat byproducts .....   | 0.20              |
| Milk .....                     | 0.01              |
| Poultry, meat byproducts ..... | 0.02              |
| Sheep, fat .....               | 0.02              |
| Sheep, meat .....              | 0.02              |

| Commodity                    | Parts per million |
|------------------------------|-------------------|
| Sheep, meat byproducts ..... | 0.20              |

(b) *Section 18 emergency exemptions.* [Reserved]

(c) *Tolerances with regional registrations.* Tolerances with regional registrations are established for residues of the insecticide spirotetramat, including its metabolites and degradates, in or on the commodities in the table below. Compliance with the tolerance levels specified below is to be determined by measuring only the sum of spirotetramat (*cis*-3-(2,5-dimethylphenyl)-8-methoxy-2-oxo-1-azaspiro[4.5]dec-3-en-4-yl-ethyl carbonate) and its metabolites *cis*-3-(2,5-dimethylphenyl)-4-hydroxy-8-methoxy-1-azaspiro[4.5]dec-3-en-2-one, *cis*-3-(2,5-dimethylphenyl)-3-hydroxy-8-methoxy-1-azaspiro[4.5]decane-2,4-dione, *cis*-3-(2,5-dimethylphenyl)-8-methoxy-2-oxo-1-azaspiro[4.5]dec-3-en-4-yl beta-D-glucopyranoside, and *cis*-3-(2,5-dimethylphenyl)-4-hydroxy-8-methoxy-1-azaspiro[4.5]decan-2-one, calculated as the stoichiometric equivalent of spirotetramat, in or on the following commodities.

| Commodity    | Parts per million |
|--------------|-------------------|
| Banana ..... | 4.0               |

(d) *Indirect or inadvertant residues.* [Reserved]

[73 FR 39256, July 9, 2008, as amended at 76 FR 28681, May 18, 2011; 77 FR 8746, Feb. 15, 2012; 77 FR 75859, Dec. 26, 2012; 78 FR 28512, May 15, 2013; 78 FR 66651, Nov. 6, 2013; 81 FR 73347, Oct. 25, 2016; 82 FR 27149, June 14, 2017]

#### § 180.643 Uniconazole; tolerances for residues.

(a) *General.* Tolerances are established for residues of the fungicide/plant growth regulator uniconazole-P, (E)-(S)-1-(4-chlorophenyl)-4,4-dimethyl-2-(1H-1,2,4-triazol-1-yl)pent-1-en-3-ol, its *R*-enantiomer and its *Z*-isomer in or on the following raw agricultural commodities:

| Commodity                          | Parts per million |
|------------------------------------|-------------------|
| Vegetable, fruiting, group 8 ..... | 0.01              |

### § 180.644 Cyprosulfamide; tolerances for residues.

(a) *General.* (1) Tolerances are established for residues of the herbicide safener cyprosulfamide, *N*-[[4-[(cyclopropylamino)carbonyl]phenyl]sulfonyl]-2-methoxybenzamide, in or on the following raw agricultural commodities:

| Commodity                                             | Parts per million |
|-------------------------------------------------------|-------------------|
| Corn, field, forage .....                             | 0.20              |
| Corn, field, grain .....                              | 0.01              |
| Corn, field, stover .....                             | 0.20              |
| Corn, pop, grain .....                                | 0.01              |
| Corn, pop, stover .....                               | 0.20              |
| Corn, sweet, forage .....                             | 0.40              |
| Corn, sweet, kernel plus cob with husks removed ..... | 0.01              |
| Corn, sweet, stover .....                             | 0.35              |

(2) Tolerances are established for residues of the herbicide safener cyprosulfamide, *N*-[[4-[(cyclopropylamino)carbonyl]phenyl]sulfonyl]-2-methoxybenzamide, and its metabolite 4-(aminosulfonyl)-*N*-cyclopropylbenzamide, calculated as cyprosulfamide, in or on the following raw agricultural commodities:

| Commodity                     | Parts per million |
|-------------------------------|-------------------|
| Cattle, meat byproducts ..... | 0.02              |
| Goat, meat byproducts .....   | 0.02              |
| Horse, meat byproducts .....  | 0.02              |
| Sheep, meat byproducts .....  | 0.02              |

(b) *Section 18 emergency exemptions.*  
[Reserved]

(c) *Tolerances with regional registrations.* [Reserved]

(d) *Indirect or inadvertant residues.*  
[Reserved]

[73 FR 60974, Oct. 15, 2008]

### § 180.645 Thien carbazole-methyl; tolerances for residues.

(a)(1) *General.* Tolerances are established for residues of the thien carbazole-methyl, including its metabolites and degradates, in or on the commodities in the table below.

Compliance with the tolerance levels specified below is to be determined by measuring only only thien carbazole-methyl [methyl 4-[[[(4,5-dihydro-3-methoxy-4-methyl-5-oxo-1*H*-1,2,4-triazol-1-yl)-carbonyl]amino]sulfonyl]-5-methyl-3-thiophenecarboxylate] in or on the following food and feed commodities.

| Commodity                                             | Parts per million |
|-------------------------------------------------------|-------------------|
| Corn, field, forage .....                             | 0.04              |
| Corn, field, grain .....                              | 0.01              |
| Corn, field, stover .....                             | 0.02              |
| Corn, pop, grain .....                                | 0.01              |

(2) Tolerances are established for residues of thien carbazole-methyl, including its metabolites and degradates, in or on the commodities in the table below. Compliance with the tolerance levels specified below is to be determined by measuring only the sum of thien carbazole-methyl [methyl 4-[[[(4,5-dihydro-3-methoxy-4-methyl-5-oxo-1*H*-1,2,4-triazol-1-yl)-carbonyl]amino]sulfonyl]-5-methyl-3-thiophenecarboxylate] and its metabolite BYH 18636-MMT [5-methoxy-4-methyl-2,4-dihydro-3*H*-1,2,4-triazol-3-one], calculated as the stoichiometric equivalent of thien carbazole-methyl, in or on the following food commodities of animal origin:

| Commodity                     | Parts per million |
|-------------------------------|-------------------|
| Cattle, meat .....            | 0.02              |
| Cattle, meat byproducts ..... | 0.02              |
| Goat, meat .....              | 0.02              |
| Goat, meat byproducts .....   | 0.02              |
| Horse, meat .....             | 0.02              |
| Horse, meat byproducts .....  | 0.02              |
| Milk .....                    | 0.02              |
| Sheep, meat .....             | 0.02              |
| Sheep, meat byproducts .....  | 0.02              |

(b) *Section 18 emergency exemptions.*  
[Reserved]

(c) *Tolerances with regional registrations.* [Reserved]

(d) *Indirect or inadvertent residues.*  
Tolerances are established for residues of thien carbazole-methyl, including its metabolites and degradates, in or on

**§ 180.646**

the commodities in the table below. Compliance with the tolerance levels specified below is to be determined by measuring only the sum of thiencarbazone-methyl [methyl 4-[[[(4,5-dihydro-3-methoxy-4-methyl-5-oxo-1*H*-1,2,4-triazol-1-yl)-carbonyl]amino]sulfonyl]-5-methyl-3-thiophenecarboxylate] and its metabolite BYH 18636-MMT-glucoside [2-hexopyranosyl-5-methoxy-4-methyl-2,4-dihydro-3*H*-1,2,4-triazol-3-one], calculated as the stoichiometric equivalent of thiencarbazone-methyl, in or on the following food commodities:

| Commodity             | Parts per million |
|-----------------------|-------------------|
| Soybean, forage ..... | 0.04              |
| Soybean, hay .....    | 0.15              |

**§ 180.646 Ipconazole; tolerances for residues.**

(a) *General.* Tolerances are established for residues of ipconazole, including its metabolites and degradates, in or on the commodities listed in the table below. Compliance with the tolerance levels specified below is to be determined by measuring only ipconazole (2-[(4-chlorophenyl)methyl]-5-(1-methylethyl)-1-(1*H*-1,2,4-triazol-1-yl)methyl)cyclopentanol) in or on the commodity.

| Commodity                                                            | Parts per million |

(c) *Tolerances with regional registrations.* [Reserved]

(d) *Indirect or inadvertent residues.* [Reserved]

[73 FR 69559, Nov. 19, 2008, as amended at 79 FR 15240, Mar. 19, 2014]

**40 CFR Ch. I (7–1–24 Edition)**

**§ 180.647 d-Phenothrin; tolerances for residues.**

(a) *General.* A tolerance of 0.01 parts per million is established for residues of the insecticide d-phenothrin in or on all food/feed crops following wide-area mosquito adulticide applications.

(b) *Section 18 emergency exemptions.* [Reserved]

(c) *Tolerances with regional registrations.* [Reserved]

(d) *Indirect or inadvertent residues.* [Reserved]

[74 FR 32443, July 8, 2009]

**§ 180.648 Meptyldinocap; tolerances for residues.**

(a) *General.* Tolerances are established for the combined residues of the fungicide meptyldinocap, 2-(1-methylheptyl)-4,6-dinitrophenyl (2E)-2-butenate and 2,4-DNOP, 2,4-dinitro-6-(1-methylheptyl)phenol expressed as meptyldinocap in or on the following commodities:

| Commodity   | Parts Per Million |
|-------------|-------------------|
| Grape ..... | 0.20              |

(b) *Section 18 emergency exemptions.* [Reserved]

(c) *Tolerances with regional registrations.* [Reserved]

(d) *Indirect or inadvertent residues.* [Reserved]

[74 FR 48396, Sept. 23, 2009]

**§ 180.649 Saflufenacil; tolerances for residues.**

(a) *General.* (1) Tolerances are established for residues of saflufenacil, including its metabolites and degradates, in or on the commodities in the table below. Compliance with the tolerance levels specified below is to be determined by measuring only the sum of saflufenacil, 2-chloro-5-[3,6-dihydro-3-methyl-2,6-dioxo-4-(trifluoromethyl)-1(2*H*)-pyrimidinyl]-4-fluoro-*N*-[[methyl(1-methylethyl)amino]sulfonyl]benzamide, and its metabolites *N*-[2-chloro-5-(2,6-dioxo-4-(trifluoromethyl)-3,6-dihydro-1(2*H*)-pyrimidinyl)-4-fluorobenzoyl]-*N'*-isopropylsulfamide and *N*-[4-chloro-2-fluoro-5-({(isopropylamino)sulfonyl]

## § 180.650 Isoxaben; tolerances for residues.

(a) *General.* Tolerances are established for residues of the herbicide isoxaben, including its metabolites and degradates, in or on the commodities in the table below. Compliance with the tolerance levels specified below is to be determined by measuring only isoxaben, *N*-[3-(1-ethyl-1-methylpropyl)-5-isoxazolyl]-2, 6-dimethoxybenzamide, in or on the commodity.

§ 180.651

| Commodity                                                                  | Parts per million |
|----------------------------------------------------------------------------|-------------------|
| Almond, hulls .....                                                        | 0.40              |
| Apple .....                                                                | 0.01              |

§ 180.652 Ethiprole; tolerances for residues.

(a) *General.* Tolerances are established for residues of ethiprole, including its metabolites and degradates, in or on the commodities in the table below. Compliance with the tolerance levels specified below is to be deter-

40 CFR Ch. I (7-1-24 Edition)

mined by measuring only ethiprole, 5-amino-1-[2,6-dichloro-4-(trifluoromethyl)phenyl]-4-(ethylsulfinyl)-1*H*-pyrazole-3-carbonitrile.

| Commodity                             | Parts per million |
|---------------------------------------|-------------------|
| Coffee, green bean <sup>1</sup> ..... | 0.1               |
| Rice, grain <sup>1</sup> .....        | 1.7               |
| Tea, dried <sup>1</sup> .....         | 30                |

<sup>1</sup> There are no U.S. registrations for this commodity as of June 28, 2019.

(b) *Section 18 emergency exemptions.* [Reserved]

(c) *Tolerances with regional registrations.* [Reserved]

(d) *Indirect or inadvertent residues.* [Reserved]

[76 FR 18921, Apr. 6, 2011, as amended at 84 FR 30939, June 28, 2019]

§ 180.653 Indaziflam; tolerances for residues.

(a) *General.* (1) Tolerances are established for residues of the herbicide indaziflam, *N*-[(1*R*,2*S*)-2,3-dihydro-2,6-dimethyl-1*H*-inden-1-yl]-6-(1-fluoroethyl)-1,3,5-triazine-2,4-diamine, including its metabolites and degradates, in or on the commodities in the following table. Compliance with the tolerance levels specified in the following table is to be determined by measuring only indaziflam and FDAT, 6-[(1*R*)-1-fluoroethyl]-1,3,5-triazine-2,4-diamine, calculated as the stoichiometric equivalent of indaziflam, in or on the commodity.

TABLE 1 TO PARAGRAPH (a)(1)

| Commodity                                                                  | Parts per million |
|----------------------------------------------------------------------------|-------------------|
| Almond, hulls .....                                                        | 0.15              |
| Bushberry subgroup 13-07B .....                                            | 0.01              |
| Caneberry subgroup 13-07A .....                                            | 0.01              |

| Palm, oil <sup>1</sup> .....                                               | 0.03              |
| Sugarcane, cane .....                                                      | 0.01              |

<sup>1</sup> No U.S. Registrations as of 12/02/2013.

## Environmental Protection Agency

§ 180.656

(2) Tolerances are established for residues of the herbicide indaziflam, *N*-[(1*R*,2*S*)-2,3-dihydro-2,6-dimethyl-1*H*-inden-1-yl]-6-(1-fluoroethyl)-1,3,5-triazine-2,4-diamine, including its metabolites and degradates, in or on the commodities in the following table. Compliance with the tolerance levels specified in the following table is to be determined by measuring only indaziflam in or on the commodity.

TABLE 2 TO PARAGRAPH (a)(2)

| Commodity                     | Parts per million |
|-------------------------------|-------------------|
| Cattle, fat .....             | 0.1               |
| Cattle, meat .....            | 0.01              |
| Cattle, meat byproducts ..... | 0.3               |
| Goat, fat .....               | 0.1               |
| Goat, meat .....              | 0.01              |
| Goat, meat byproducts .....   | 0.3               |
| Horse, fat .....              | 0.1               |
| Horse, meat .....             | 0.01              |
| Horse, meat by-products ..... | 0.3               |
| Milk .....                    | 0.015             |
| Milk, fat .....               | 0.4               |
| Sheep, fat .....              | 0.1               |
| Sheep, meat .....             | 0.01              |
| Sheep, meat by-products ..... | 0.3               |

(b) [Reserved]

(c) *Tolerances with regional registrations.* [Reserved]

(d) *Indirect or inadvertent residues.* [Reserved]

### § 180.654 Isopyrazam; tolerances for residues.

(a) *General.* Tolerances are established for residues of the fungicide isopyrazam, including its metabolites and degradates, in or on the commodities listed in the following table. Compliance with the tolerance levels specified in the following table is to be determined by measuring only isopyrazam (3-(difluoromethyl)-1-methyl-*N*-[1,2,3,4-tetrahydro-9-(1-methylethyl)-1,4-methano-naphthalen-5-yl]-1*H*-pyrazole-4-carboxamide), as the sum of its *syn*-isomer (3-(difluoromethyl)-1-methyl-*N*-[(1*R*,4*S*,9*R*)-1,2,3,4-tetrahydro-9-(1-methylethyl)-1,4-methanonaphthalen-5-yl]-1*H*-pyrazole-4-carboxamide) and *anti*-isomer (3-(difluoromethyl)-1-methyl-*N*-[(1*R*,4*S*,9*S*)-1,2,3,4-

tetrahydro-9-(1-methylethyl)-1,4-methano-naphthalen-5-yl]-1*H*-pyrazole-4-carboxamide) in or on the commodity.

| Commodity                                           | Parts per million |
|-----------------------------------------------------|-------------------|
| Apple <sup>1</sup> .....                            | 0.70              |
| Banana <sup>1</sup> .....                           | 0.05              |
| Peanut <sup>1</sup> .....                           | 0.01              |
| Pepper, bell <sup>1</sup> .....                     | 0.50              |
| Tomato <sup>1</sup> .....                           | 0.50              |
| Vegetable, cucurbit, subgroup 9A <sup>1</sup> ..... | 0.30              |

<sup>1</sup> There are no U.S. registrations for use of isopyrazam on these commodities.

(b) *Section 18 emergency exemptions.* [Reserved]

(c) *Tolerances with regional registrations.* [Reserved]

(d) *Indirect or inadvertent residues.* [Reserved]

[76 FR 61596, Oct. 5, 2011, as amended at 78 FR 78745, Dec. 27, 2013; 82 FR 24075, May 25, 2017]

### § 180.655 Flazasulfuron; tolerances for residues.

(a) *General.* Tolerances are established for residues of flazasulfuron, including its metabolites and degradates, in or on the commodities in the table below. Compliance with the tolerance levels specified below is to be determined by measuring only flazasulfuron (*N*-[(4,6-dimethoxy-2-pyrimidinyl)amino]carbonyl]-3-(trifluoromethyl)-2-pyridinesulfonamide).

| Commodity                        | Parts per million |
|----------------------------------|-------------------|
| Almond, hulls .....              | 0.01              |
| Fruit, citrus, group 10–10 ..... | 0.01              |
| Grape .....                      | 0.01              |
| Nut, tree, group 14–12 .....     | 0.01              |
| Olive .....                      | 0.01              |
| Sugarcane .....                  | 0.01              |

(b) *Section 18 emergency exemptions.* [Reserved]

(c) *Tolerances with regional registrations.* [Reserved]

(d) *Indirect or inadvertent residues.* [Reserved]

### § 180.656 Amisulbrom; tolerances for residues.

(a) *General.* Tolerances are established for residues of the fungicide

§ 180.657

amisulbrom, including its metabolites and degradates, in or on the commodities listed below. Compliance with the tolerance levels is to be determined by measuring only amisulbrom, 3-[(3-bromo-6-fluoro-2-methyl-1*H*-indole-1-yl) sulfonyl]-*N*, *N*-dimethyl-1*H*-1, 2, 4-triazole-1-sulfonamide].

| Commodity <sup>1</sup> | Parts per million |
|------------------------|-------------------|
| Grape .....            | 0.40              |
| Grape, raisin .....    | 1.0               |
| Tomato .....           | 0.50              |
| Tomato, paste .....    | 1.2               |

<sup>1</sup> There is no U.S. registration for use of amisulbrom on grape or tomato.

(b) *Section 18 emergency exemptions.* [Reserved]

(c) *Tolerances with regional registrations.* [Reserved]

(d) *Indirect or inadvertent residues.* [Reserved]

[76 FR 59914, Sept. 28, 2011]

**§ 180.657 Metaflumizone; tolerances for residues.**

(a) *General.* (1) Tolerances are established for residues of the insecticide metaflumizone, including its metabolites and degradates, in or on the commodities listed in table 1 to this paragraph (a)(1). Compliance with the tolerance levels specified in this paragraph (a)(1) is to be determined by measuring only the sum of metaflumizone (E and Z isomers; 2-[2-(4-cyanophenyl)-1-[3-(trifluoromethyl) phenyl]ethylidene]-*N*-[4-(trifluoromethoxy)phenyl]hydrazinecarboxamide) and its metabolite 4-{2-oxo-2-[3-(trifluoromethyl) phenyl]ethyl}-benzonitrile, calculated as the stoichiometric equivalent of metaflumizone, in or on the following commodities:

TABLE 1 TO PARAGRAPH (a)(1)

| Commodity                                    | Parts per million |
|----------------------------------------------|-------------------|
| Almond, hulls .....                          | 0.04              |
| Apple .....                                  | 0.9               |
| Apple, wet pomace .....                      | 3                 |
| Coffee, green bean <sup>1</sup> .....        | 0.15              |
| Eggplant <sup>1</sup> .....                  | 1.5               |
| Fruit, pome, group 11–10, except apple ..... | 0.04              |
| Fruit, stone, group 12–12 .....              | 0.04              |
| Grape .....                                  | 5                 |
| Grape, raisin .....                          | 13                |
| Grapefruit subgroup 10–10C .....             | 0.04              |
| Lemon/lime subgroup 10–10B .....             | 3                 |
| Lemon/lime subgroup 10–10B, oil .....        | 100               |
| Melon subgroup 9A <sup>1</sup> .....         | 1                 |

40 CFR Ch. I (7–1–24 Edition)

TABLE 1 TO PARAGRAPH (a)(1)—Continued

| Commodity                         | Parts per million |
|-----------------------------------|-------------------|
| Nut, tree, group 14–12 .....      | 0.04              |
| Orange subgroup 10–10A .....      | 3                 |
| Orange subgroup 10–10A, oil ..... | 100               |
| Pepper <sup>1</sup> .....         | 1.5               |
| Tomato <sup>1</sup> .....         | 0.60              |
| Tomato, paste <sup>1</sup> .....  | 1.2               |

<sup>1</sup> There are no U.S. registrations for this commodity as of April 19, 2021.

(2) Tolerances are established for residues of the insecticide metaflumizone, including its metabolites and degradates, in or on the commodities listed in table 2 to this paragraph (a)(2). Compliance with the tolerance levels specified in this paragraph (a)(2) is to be determined by measuring only metaflumizone (E and Z isomers; 2-[2-(4-cyanophenyl)-1-[3-(trifluoromethyl) phenyl]ethylidene]-*N*-[4-(trifluoromethoxy)phenyl]hydrazinecarboxamide) in or on the following animal commodities:

TABLE 2 TO PARAGRAPH (a)(2)

| Commodity         | Parts per million |
|-------------------|-------------------|
| Cattle, fat ..... | 0.15              |
| Goat, fat .....   | 0.15              |
| Horse, fat .....  | 0.15              |
| Milk, fat .....   | 0.6               |
| Sheep, fat .....  | 0.15              |

(b) *Section 18 emergency exemptions.* [Reserved]

(c) *Tolerances with regional registrations.* [Reserved]

(d) *Indirect or inadvertent residues.* [Reserved]

[77 FR 10386, Feb. 22, 2012, as amended at 79 FR 18810, Apr. 4, 2014; 80 FR 66800, Oct. 30, 2015; 86 FR 20293, Apr. 19, 2021; 86 FR 53558, Sept. 28, 2021]

**§ 180.658 Penthiopyrad; tolerances for residues.**

(a) *General.* (1) Tolerances are established for residues of penthiopyrad, including its metabolites and degradates, in or on the commodities in the table below. Compliance with the tolerance levels specified below is to be determined by measuring only penthiopyrad (*N*-[2-(1,3-dimethylbutyl)-3-thienyl]-1-methyl-3-(trifluoromethyl)-1*H*-pyrazole-4-carboxamide).

Environmental Protection Agency

§ 180.659

TABLE 1 TO PARAGRAPH (a)(1)

| Commodity                                                      | Parts per million |
|----------------------------------------------------------------|-------------------|
| Alfalfa, forage .....                                          | 7.0               |
| Alfalfa, hay .....                                             | 20                |

<sup>1</sup> This tolerance expires on December 6, 2019.

<sup>2</sup> There are no U.S. registrations for this commodity as of April 7, 2021.

(2) Tolerances are established for residues of penthiopyrad, including its metabolites and degradates, in or on the commodities in the table below. Compliance with the tolerance levels specified below is to be determined by measuring only the sum of penthiopyrad (*N*-[2-(1,3-dimethylbutyl)-3-thienyl]-1-methyl-3-(trifluoromethyl)-1H-pyrazole-4-carboxamide) and its metabolite (1-methyl-3-trifluoromethyl-1H-pyrazole-4-carboxamide), calculated as the stoichiometric equivalent of penthiopyrad, in or on the commodity.

**§ 180.659 Pyroxasulfone; tolerances for residues.**

(a) *General.* (1) Tolerances are established for residues of the herbicide

pyroxasulfone, including its metabolites and degradates, in or on the commodities in the table below. Compliance with the tolerance levels specified below is to be determined by measuring only the sum of pyroxasulfone, 3-[[[5-(difluoromethoxy)-1-methyl-3-(trifluoromethyl)-1*H*-pyrazol-4-yl)methyl]sulfonyl]-4,5-dihydro-5,5-dimethylisoxazole, and its metabolite, 5-(difluoromethoxy)-1-methyl-3-(trifluoromethyl)-1*H*-pyrazol-4-carboxylic acid (M-3), calculated as the stoichiometric equivalent of pyroxasulfone, in or on the commodity.

(2) Tolerances are established for residues of the herbicide pyroxasulfone, including its metabolites and degradates, in or on the commodities in the table below. Compliance with the tolerance levels specified below is to be determined by measuring only the sum of pyroxasulfone, 3-[[[5-(difluoromethoxy)-1-methyl-3-(trifluoromethyl)-1*H*-pyrazol-4-yl)methyl]sulfonyl]-4,5-dihydro-5,5-dimethylisoxazole, and its metabolites, 5-(difluoromethoxy)-1-methyl-3-(trifluoromethyl)-1*H*-pyrazol-4-yl)methanesulfonic acid (M-1); 5-(difluoromethoxy)-1-methyl-3-(trifluoromethyl)-1*H*-pyrazol-4-carboxylic acid (M-3); and [5-(difluoromethoxy)-3-(trifluoromethyl)-1*H*-pyrazol-4-yl)methanesulfonic acid (M-25), calculated as the stoichiometric equivalent of pyroxasulfone, in or on the commodity.

| Commodity                    | Parts per million |
|------------------------------|-------------------|
| Corn, field, forage .....    | 0.09              |
| Corn, field, stover .....    | 0.15              |
| Corn, pop, stover .....      | 0.15              |
| Corn, sweet, forage .....    | 0.10              |
| Corn, sweet, stover .....    | 0.15              |
| Cotton, gin byproducts ..... | 0.20              |
| Soybean, forage .....        | 1.0               |

| Wheat, forage .....          | 6.0               |
| Wheat, hay .....             | 1.0               |
| Wheat, straw .....           | 0.60              |

(3) Tolerances are established for residues of the herbicide pyroxasulfone, including its metabolites and degradates, in or on the commodities in the table below. Compliance with the tolerance levels specified below is to be determined by measuring only the sum of pyroxasulfone, 3-[[[5-(difluoromethoxy)-1-methyl-3-(trifluoromethyl)-1*H*-pyrazol-4-yl)methyl]sulfonyl]-4,5-dihydro-5,5-dimethylisoxazole, and its metabolites, 5-(difluoromethoxy)-1-methyl-3-(trifluoromethyl)-1*H*-pyrazol-4-carboxylic acid (M-3); [5-(difluoromethoxy)-3-(trifluoromethyl)-1*H*-pyrazol-4-yl)methanesulfonic acid (M-25); and 3-[1-carboxy-2-(5,5-dimethyl-4,5-dihydroisoxazol-3-ylthio)ethylamino]-3-oxopropanoic acid (M-28), calculated as the stoichiometric equivalent of pyroxasulfone, in or on the commodity.

| Commodity           | Parts per million |
|---------------------|-------------------|
| Soybean, seed ..... | 0.06              |

(4) Tolerances are established for residues of the herbicide pyroxasulfone, including its metabolites and degradates, in or on the commodities in the following table. Compliance with the tolerance levels specified in the following table is to be determined by measuring only the sum of pyroxasulfone [3-[[[5-(difluoromethoxy)-1-methyl-3-(trifluoromethyl)-1*H*-pyrazol-4-yl)methyl]sulfonyl]-4,5-dihydro-5,5-dimethylisoxazole] and its metabolites [5-(difluoromethoxy)-1-methyl-3-(trifluoromethyl)-1*H*-pyrazol-4-yl)methanesulfonic acid (M-1) and 5-(difluoromethoxy)-1-methyl-3-(trifluoromethyl)-1*H*-pyrazol-4-carboxylic acid (M-3), calculated as the stoichiometric equivalent of pyroxasulfone, in or on the commodity.

| Commodity  | Parts per million |
|------------|-------------------|
| Milk ..... | 0.003             |

(5) Tolerances are established for residues of the herbicide pyroxasulfone, including its metabolites and degradates, in or on the commodities in the table below. Compliance with the tolerance levels specified below is

## Environmental Protection Agency

§ 180.660

to be determined by measuring only the sum of pyroxasulfone (3-[(5-difluoromethoxy-1-methyl-3-(trifluoromethyl)pyrazol-4-yl)methylsulfonyl]-4,5-dihydro-5,5-dimethyl-1,2-oxazole), and its metabolites, M-1 (5-difluoromethoxy-1-methyl-3-trifluoromethyl-1H-pyrazol-4-yl)methanesulfonic acid), M-3 (5-difluoromethoxy-1-methyl-3-trifluoromethyl-1H-pyrazol-4-carboxylic acid), M-25 (5-difluoromethoxy-3-trifluoromethyl-1H-pyrazol-4-yl)methanesulfonic acid) and M-28 (3-[1-carboxy-2-(5,5-dimethyl-4,5-dihydroisoxazol-3-ylthio)ethylamino]-3-oxopropanoic acid) calculated as the stoichiometric equivalent of pyroxasulfone, in or on the following commodities:

| Commodity                                                       | Parts per million |

(b) *Section 18 emergency exemptions.* [Reserved]

(c) *Tolerance with regional registrations.* Tolerances are established for residues of the herbicide pyroxasulfone, including its metabolites and degradates, in or on the commodities in the table below. Compliance with the tolerance levels specified below is to be determined by measuring only the sum of pyroxasulfone (3-[(5-difluoromethoxy-1-methyl-3-(trifluoromethyl)pyrazol-4-yl)methylsulfonyl]-4,5-dihydro-5,5-dimethyl-1,2-oxazole), and its metabolites, M-1 (5-difluoromethoxy-1-methyl-3-trifluoromethyl-1H-pyrazol-4-yl)methanesulfonic acid), M-3 (5-difluoromethoxy-1-methyl-3-trifluoromethyl-1H-pyrazol-4-carboxylic acid), M-25 (5-difluoromethoxy-

3-trifluoromethyl-1H-pyrazol-4-yl)methanesulfonic acid) and M-28 (3-[1-carboxy-2-(5,5-dimethyl-4,5-dihydroisoxazol-3-ylthio)ethylamino]-3-oxopropanoic acid) calculated as the stoichiometric equivalent of pyroxasulfone, in or on the commodity.

| Commodity           | Parts per million |
|---------------------|-------------------|
| Grass, forage ..... | 0.50              |
| Grass, hay .....    | 1.0               |

(d) *Indirect or inadvertent residues.* [Reserved]

[77 FR 12213, Feb. 29, 2012, as amended at 78 FR 13257, Feb. 27, 2013; 78 FR 46279, July 31, 2013; 79 FR 34633, June 18, 2014; 82 FR 18235, Apr. 18, 2017; 83 FR 22859, May 17, 2018; 83 FR 54264, Oct. 29, 2018]

## § 180.660 Pyriofenone; tolerances for residues.

(a) *General.* Tolerances are established for residues of the fungicide pyriofenone, including its metabolites and degradates, in or on the following commodities listed in the table. Compliance with the tolerance levels specified in the table is to be determined by measuring only pyriofenone, (5-chloro-2-methoxy-4-methyl-3-pyridinyl)(2,3,4-trimethoxy-6-methylphenyl) methanone, in or on the following commodities:

TABLE 1 TO PARAGRAPH (a)

| Commodity                                                      | Parts per million |

§ 180.661 Fluopyram; tolerances for residues.

(a) *General.* (1) Tolerances are established for residues of the fungicide Fluopyram, *N*-[2-[3-chloro-5-(trifluoromethyl)-2-pyridinyl]ethyl]-2-(trifluoromethyl)benzamide, including its metabolites and degradates in or on the commodities in the table below. Compliance with the tolerance levels specified in the table is to be determined by measuring only fluopyram in or on the commodity.

TABLE 1 TO PARAGRAPH (a)(1)

| Commodity                                                                 | Parts per million |

<sup>1</sup> There are no U.S. registrations.

(2) Tolerances are established for residues of the fungicide fluopyram, *N*-[2-[3-chloro-5-(trifluoromethyl)-2-pyridinyl]ethyl]-2-(trifluoromethyl)benzamide, including its metabolites and degradates. Compliance with the tolerance levels specified in the table below is to be determined by measuring only the sum of fluopyram and its metabolite, 2-(trifluoromethyl)benzamide, calculated as the stoichiometric equivalent of fluopyram, in or on the commodity.

(b) *Section 18 emergency exemptions.* [Reserved]

(c) *Tolerances with regional registrations.* Tolerances with regional registration, as defined in §180.1(1), are established for indirect or inadvertent residues of fungicide fluopyram, N-[2-[3-chloro-5-(trifluoromethyl)-2-pyridinyl]ethyl]-2-(trifluoromethyl)benzamide, including its metabolites and degradates, in or on the commodities in the table below. Compliance with the tolerance levels specified in the table is to be determined by measuring only fluopyram in or on the commodity.

| Commodity             | Parts per million |
|-----------------------|-------------------|
| Sugarcane, cane ..... | 0.08              |

(d) *Indirect or inadvertent residues.* It is recommended that tolerances be established for indirect or inadvertent residues of fungicide fluopyram, N-[2-[3-chloro-5-(trifluoromethyl)-2-pyridinyl]ethyl]-2-(trifluoromethyl)benzamide, including its metabolites and degradates, in or on the commodities in the table below. Compliance with the tolerance levels specified in the table is to be determined by measuring only fluopyram in or on the commodity.

## § 180.662 Trinexapac-ethyl; tolerances for residues.

(a) *General.* Tolerances are established for residues of the plant growth regulator, trinexapac-ethyl, including its metabolites and degradates, in or on the commodities in table 1 to this paragraph (a). Compliance with the tol-

erance levels specified in table 1 is to be determined by measuring only the free and conjugated forms of both trinexapac-ethyl, ethyl 4-(cyclopropylhydroxymethylene)-3,5-dioxocyclohexanecarboxylate and trinexapac, (cyclopropylhydroxymethylene)-3,5-dioxocyclohexanecarboxylic acid, calculated as the stoichiometric equivalent of trinexapac-ethyl, in or on the commodity.

**§ 180.666 Fluxapyroxad; tolerances for residues.**

(a) *General.* Tolerances are established for residues of the fungicide fluxapyroxad, including its metabolites and degradates, in or on the commodities listed in the table below. Compliance with the tolerance levels specified below is to be determined by measuring only fluxapyroxad, 3-(difluoromethyl)-1-methyl-*N*-(3',4',5'-trifluoro[1,1'-biphenyl]-2-yl)-1*H*-pyrazole-4-carboxamide in or on the commodity.

TABLE 1 TO PARAGRAPH (a)

| Commodity                                 | Parts per million |

<sup>1</sup> There are no U.S. registrations for this commodity as of November 8, 2016.

(b) *Section 18 emergency exemptions.*  
[Reserved]

(c) *Tolerances with regional registrations.* [Reserved]

(d) *Indirect or inadvertent residues.*  
Tolerances are established for the combined indirect or inadvertent residues of the fungicide fluxapyroxad, including its metabolites and degradates, in or on the commodities listed in the table below. Compliance with the tolerance levels specified below is to be determined by measuring only fluxapyroxad, 3-(difluoromethyl)-1-methyl-N-(3',4',5'-trifluoro[1,1'-biphenyl]-2-yl)-1H-pyrazole-4-carboxamide in or on the commodity.

#### § 180.667 Cyflufenamid, tolerance for residues.

(a) *General.* Tolerances are established for residues of the fungicide cyflufenamid, including its metabolites and degradates, in or on the commodities in the table below. Compliance with the tolerance levels specified below is to be determined by measuring only cyflufenamid, [N(Z)]-N-[[[(cyclopropylmethoxy)amino][2,3-difluoro-6-(trifluoromethyl)phenyl]methylene]benzenacetamide.

#### § 180.668 Sulfoxaflo; tolerances for residues.

(a) *General.* Tolerances are established for residues of the insecticide sulfoxaflo, including its metabolites and degradates, in or on the commodities in the table. Compliance with the tolerance levels specified is to be determined by measuring only sulfoxaflo (N-[methyloxido[1-[6-(trifluoromethyl)-3-pyridinyl]ethyl]-γ<sup>4</sup>-sulfanylidene]cyanamide).

TABLE 1 TO PARAGRAPH (a)

**§ 180.669 Picoxystrobin; tolerances for residues.**

(a) *General.* Tolerances are established for residues of the fungicide picoxystrobin, including its metabolites and degradates, in or on the commodities listed below. Compliance with the tolerance levels specified below is to be determined by measuring only picoxystrobin, methyl ( $\alpha E$ )- $\alpha$ -(methoxymethylene)-2-[[[6-(trifluoromethyl)-2-pyridinyl]oxy]methyl]benzeneacetate.

[77 FR 72231, Dec. 5, 2012, as amended at 83 FR 39610, Aug. 10, 2018]

§ 180.671 Fenpyrazamine; tolerances for residues.

(a) *General.* Tolerances are established for residues of the fungicide fenpyrazamine, in or on the following commodities. Compliance with the tolerance levels specified in the following table is to be determined by measuring only fenpyrazamine S-allyl 5-amino-2-isopropyl-4-(2-methylphenyl)-3-oxo-2,3-dihydropyrazole-1-carbothioate, in or on the following commodities:

| Commodity                                                                 | Parts per million |
|---------------------------------------------------------------------------|-------------------|
| Almond .....                                                              | 0.02              |

[78 FR 14465, Mar. 6, 2013]

§ 180.672 Cyantraniliprole; tolerances for residues.

(a) *General.* Tolerances are established for the combined residues of the insecticide cyantraniliprole, 3-bromo-1-(3-chloro-2-pyridinyl)-N-[4-cyano-2-methyl-6-[(methlamino)carbonyl]phenyl]-1H-pyrazole-5-carboxamide, including its metabolites and degradates, in or on commodities in the following table. Compliance with the tolerance levels specified in the following table is to be determined by measuring only cyantraniliprole in or on the commodity.

TABLE 1 TO PARAGRAPH (a)

| Commodity                                                                                               | Parts per million |
|---------------------------------------------------------------------------------------------------------|-------------------|
| Almond, hulls .....                                                                                     | 8.0               |

### § 180.673 Triforine; tolerances for residues.

(a) *General.* Tolerances are established for residues of triforine, including its metabolites and degradates. Compliance with the tolerance levels specified in the following table is to be

**§ 180.674**

determined by measuring only triforine (*N,N*-[1,2-piperazinediylbis(2,2,2-trichloroethylidene)]bis[formamide]), in or on the following commodities.

| Commodity                    | Parts per million |
|------------------------------|-------------------|
| Blueberry <sup>1</sup> ..... | 1.0               |
| Tomato <sup>1</sup> .....    | 0.5               |

<sup>1</sup> There are no U.S. registrations for blueberry and tomato.

(b) *Section 18 emergency exemptions.*  
[Reserved]

(c) *Tolerances with regional registrations.* [Reserved]

(d) *Indirect or inadvertent residues.*

**§ 180.674 Proquinazid; tolerances for residues.**

(a) *General.* Tolerances are established for residues of the fungicide, proquinazid, including its metabolites and degradates, in or on the commodities listed in the following table. Compliance with the tolerance levels specified in the following table is to be determined by measuring only proquinazid, [6-Iodo-2-propoxy-3-propyl-3H-quinazolin-4-one), in or on the following commodities:

| Commodity                        | Parts per million |
|----------------------------------|-------------------|
| Grape <sup>1</sup> .....         | 0.50              |
| Grape, raisin <sup>1</sup> ..... | 1.0               |

<sup>1</sup> No U.S. registrations for Proquinazid.

(b) *Section 18 emergency exemptions.*  
[Reserved]

(c) *Tolerances with regional registrations.* [Reserved]

(d) *Indirect or inadvertent residues.*  
[Reserved]

[79 FR 18815, Apr. 4, 2014]

**§ 180.675 Tolfenpyrad; tolerances for residues.**

(a) *General.* (1) Tolerances are established for residues of the insecticide tolfenpyrad, including its metabolites and degradates, in or on the commodities in the table below. Compliance with the tolerance levels specified below is to be determined by measuring only tolfenpyrad (4-chloro-3-ethyl-1-methyl-*N*-[[4-(4-methylphenoxy)phenyl]methyl]-1*H*-

**40 CFR Ch. I (7–1–24 Edition)**

pyrazole-5-carboxamide) in or on the commodity.

<sup>1</sup> This tolerance expires on December 24, 2018.

(2) Tolerances are established for residues of the insecticide tolfenpyrad, including its metabolites and degradates, in or on the commodities in the following table. Compliance with the tolerance levels specified below is to be determined by measuring only the sum of tolfenpyrad, 4-chloro-3-ethyl-1-methyl-*N*-[[4-(4-methylphenoxy)phenyl]methyl]-1*H*-pyrazole-5-carboxamide, and its metabolite 4-[4-[(4-chloro-3-ethyl-1-methylpyrazol-5-yl)carbonylamino-methyl]phenoxy]benzoic acid, calculated as the stoichiometric equivalent of tolfenpyrad.

## § 180.677 Cyflumetofen; tolerances for residues.

(a) *General.* Tolerances are established for residues of the insecticide cyflumetofen, including its metabolites and degradates, in or on the commodities in the table below. Compliance with the tolerance levels for cyflumetofen is to be determined by measuring only cyflumetofen, 2-methoxyethyl  $\alpha$ -cyano- $\alpha$ -[4-(1,1-dimethylethyl)phenyl]- $\beta$ -oxo-2-(trifluoromethyl)benzenepropanoate, in or on the commodity.

## § 180.678 Tricyclazole; tolerances for residues.

(a) *General.* (1) Tolerances are established for residues of the fungicide tricyclazole, including its metabolites and degradates, in or on the commodities in the table below. Compliance with the tolerance levels specified below is to be determined by measuring only tricyclazole (5-methyl-1,2,4-triazolo[3,4-b ]benzothiazole).

| Commodity                      | Parts per million |
|--------------------------------|-------------------|
| Rice, grain <sup>1</sup> ..... | 3.0               |

**§ 180.679 Flupyradifurone; tolerances for residues.**

(a) *General.* Tolerances are established for residues of the insecticide flupyradifurone, including its metabolites and degradates, in or on the commodities in the following table. Compliance with the tolerance levels specified in the following table is to be determined by measuring only flupyradifurone, 4-[[[(6-chloro-3-pyridinyl)methyl](2,2-difluoroethyl)amino]-2(5H)-furanone.

TABLE 1 TO PARAGRAPH (a)

<sup>1</sup> No U.S. registration.

(b) [Reserved]

(c) *Tolerances with regional restrictions.* Tolerances are established for residues of the insecticide flupyradifurone, including its metabolites and degradates, in or on the commodities in the following table. Compliance with the tolerance levels specified in the following table is to be determined by measuring only flupyradifurone, 4-[[[(6-chloro-3-pyridinyl)methyl](2,2-difluoroethyl)amino]-2(5H)-furanone.

TABLE 3 TO PARAGRAPH (c)

§ 180.681

## § 180.680 Fluensulfone; tolerances for residues.

(a) *General.* Tolerances are established for residues of the nematicide fluensulfone, including its metabolites and degradates, in or on the commodities in the table 1 to § 180.680. Compliance with the tolerance levels specified in the following table below is to be determined by measuring only the sum of fluensulfone, 5-chloro-2-[(3,4,4-trifluoro-3-buten-1-yl)sulfonyl]thiazole and its metabolite, 3,4,4-trifluoro-but-3-ene-1-sulfonic acid, calculated as the stoichiometric equivalent of fluensulfone, in or on the commodity.

TABLE 1 TO § 180.680

| Commodity                                                              | Parts per million |
|------------------------------------------------------------------------|-------------------|
| Almond, hulls .....                                                    | 5                 |

# Environmental Protection Agency

# § 180.685

## § 180.682 Bicyclopyrone; tolerances for residues.

(a) *General.* (1) Tolerances are established for residues of the herbicide bicyclopyrone (4-hydroxy-3-[[2-[(2-methoxyethoxy)methyl]-6-(trifluoromethyl)-3-pyridinyl]carbonyl]bicyclo[3.2.1]oct-3-en-2-one), including its metabolites and degradates, in or on the commodities in the following table. Compliance with the tolerance levels specified in this paragraph (a)(1) is to be determined by measuring only the sum of the common moieties SYN503780 (2-[(2-methoxyethoxy)methyl]-6-(trifluoromethyl)-3-pyridinecarboxylic acid) and CSCD686480 (2-[(2-hydroxyethoxy)methyl]-6-(trifluoromethyl)-3-pyridinecarboxylic acid), calculated as the stoichiometric equivalent of bicyclopyrone, in or on the commodities.

TABLE 1 TO PARAGRAPH (a)(1)

| Commodity                                             | Parts per million |
|-------------------------------------------------------|-------------------|
| Banana .....                                          | 0.01              |
| Barley, bran .....                                    | 0.15              |
| Barley, grain .....                                   | 0.07              |
| Barley, hay .....                                     | 0.30              |
| Barley, straw .....                                   | 0.40              |
| Broccoli .....                                        | 0.01              |
| Cattle, meat byproducts .....                         | 2.0               |
| Corn, field, forage .....                             | 0.30              |
| Corn, field, grain .....                              | 0.02              |
| Corn, field, stover .....                             | 0.40              |
| Corn, pop, grain .....                                | 0.02              |
| Corn, pop, stover .....                               | 0.40              |
| Corn, sweet, forage .....                             | 0.40              |
| Corn, sweet, kernel plus cob with husks removed ..... | 0.03              |
| Corn, sweet, stover .....                             | 0.70              |
| Goat, meat byproducts .....                           | 2.0               |
| Grain, aspirated fractions .....                      | 0.30              |
| Hog, meat byproducts .....                            | 0.40              |
| Hop, dried cones .....                                | 0.04              |
| Horse, meat byproducts .....                          | 2.0               |
| Horseradish .....                                     | 0.02              |
| Lemongrass, dried .....                               | 0.5               |
| Lemongrass, fresh .....                               | 0.3               |
| Onion, bulb .....                                     | 0.02              |
| Onion, green .....                                    | 0.05              |
| Papaya .....                                          | 0.01              |
| Rosemary, dried .....                                 | 0.3               |

| Wheat, grain .....                                    | 0.04              |
| Wheat, hay .....                                      | 0.80              |
| Wheat, straw .....                                    | 0.50              |

TABLE 1 TO PARAGRAPH (a)(1)—Continued

| Commodity             | Parts per million |
|-----------------------|-------------------|
| Wormwood, dried ..... | 0.09              |
| Wormwood, fresh ..... | 0.05              |

<sup>1</sup> There are no U.S. Registration on Sugarcane as of March 13, 2015.

(2) [Reserved]

(b) [Reserved]

[80 FR 22654, Apr. 23, 2015, as amended at 81 FR 86965, Dec. 2, 2016; 86 FR 72851, Dec. 23, 2021; 87 FR 15339, Mar. 18, 2022]

## § 180.684 Benalaxyl-M; tolerances for residues.

(a) *General.* Tolerances are established for residues of the fungicide benalaxyl-M, including its metabolites and degradates, in or on the commodities in the table below. Compliance with the tolerance levels specified below is to be determined by measuring only benalaxyl [methyl N-(2,6-dimethylphenyl)-N-(phenylacetyl)-DL-alaninate] in or on the commodity.

| Commodity                 | Parts per million |
|---------------------------|-------------------|
| Grape <sup>1</sup> .....  | 3.0               |
| Tomato <sup>1</sup> ..... | 0.20              |

<sup>1</sup> There is no U.S. registration for use on this commodity as of July 30, 2015.

(b) *Section 18 emergency exemptions.* [Reserved]

(c) *Tolerances with regional registrations.* [Reserved]

(d) *Indirect or inadvertent residues.* [Reserved]

[80 FR 45448, July 30, 2015]

## § 180.685 Oxathiapiprolin; tolerances for residues.

(a) *General.* Tolerances are established for residues of the fungicide oxathiapiprolin, including its metabolites and degradates, in or on the commodities in the table below. Compliance with the tolerance levels specified below is to be determined by measuring only oxathiapiprolin, 1-[4-[4-[5-(2,6-difluorophenyl)-4,5-dihydro-3-isoxazolyl]-2-thiazolyl]-1-piperidinyl]-2-[5-methyl-3-(trifluoromethyl)-1H-pyrazol-1-yl]-ethanone, in or on the commodity.

<sup>1</sup>There is no associated U.S. registration as of September 4, 2015.

(b) *Section 18 emergency exemptions.*  
[Reserved]

(c) *Tolerances with regional registrations.* [Reserved]

(d) *Indirect or inadvertent residues.*  
Tolerances are established for residues of the fungicide oxathiapiprolin, including its metabolites and degradates, in or on the commodities in the table below. Compliance with the tolerance levels specified below is to be determined by measuring only oxathiapiprolin, 1-[4-[4-[5-(2,6-difluorophenyl)-4,5-dihydro-3-isoxazolyl]-2-thiazolyl]-1-piperidinyl]-2-[5-methyl-3-(trifluoromethyl)-1H-pyrazol-1-yl]-ethanone, in or on the commodity.

**§ 180.686 Benzovindiflupyr; tolerances for residues.**

(a) *General.* Tolerances are established for residues of the fungicide benzovindiflupyr, including its metabolites and degradates, in or on the commodities in the table below. Compliance with the tolerance levels specified below is to be determined by measuring only benzovindiflupyr (*N*-[9-(dichloromethylene)-1,2,3,4-tetrahydro-1,4-methanonaphthalen-5-yl]-3-(difluoromethyl)-1-methyl-1*H*-pyrazole-

4-carboxamide) in or on the commodity.

**§ 180.687 Teflubenzuron; tolerances for residues.**

(a) *General.* (1) Tolerances are established for residues of the insecticide teflubenzuron, including its metabolites and degradates, in or on the commodities in the table below. Compliance with the tolerance levels specified below is to be determined by measuring only teflubenzuron (*N*-[[[3,5-dichloro-2,4-difluorophenyl]amino]carbonyl]-2,6-difluorobenzamide).

TABLE 1 TO PARAGRAPH (a)(1)

| Commodity                                   | Parts per million |
|---------------------------------------------|-------------------|
| Apple <sup>1</sup> .....                    | 1.0               |
| Broccoli <sup>1</sup> .....                 | 0.20              |
| Cauliflower <sup>1</sup> .....              | 0.01              |
| Citrus, oil <sup>1</sup> .....              | 100               |
| Coffee, bean, green <sup>1</sup> .....      | 0.60              |
| Corn, field, grain <sup>1</sup> .....       | 0.01              |
| Corn, field, refined oil <sup>1</sup> ..... | 0.02              |
| Grape <sup>1</sup> .....                    | 0.7               |
| Grape, raisin <sup>1</sup> .....            | 0.9               |
| Lemon <sup>1</sup> .....                    | 0.80              |
| Mango <sup>1</sup> .....                    | 1.5               |
| Melon, subgroup 9A <sup>1</sup> .....       | 0.30              |
| Orange <sup>1</sup> .....                   | 0.60              |
| Papaya <sup>1</sup> .....                   | 0.50              |
| Pineapple <sup>1</sup> .....                | 0.80              |
| Soybean, seed <sup>1</sup> .....            | 0.05              |
| Soybean, hulls <sup>1</sup> .....           | 0.15              |
| Sugarcane, cane <sup>1</sup> .....          | 0.01              |
| Sunflower, seed <sup>1</sup> .....          | 0.30              |
| Tomato <sup>1</sup> .....                   | 1.5               |

**§ 180.689 Aminocyclopyrachlor; tolerances for residues.**

(a) *General.* Tolerances are established for residues of the herbicide aminocyclopyrachlor, including its metabolites and degradates, in or on the commodities in the table below. Compliance with the tolerance levels specified below is to be determined by measuring only the sum of aminocyclopyrachlor, 6-amino-5-chloro-2-cyclopropyl-4-pyrimidinecarboxylic acid, and aminocyclopyrachlor methyl ester, methyl 6-amino-5-chloro-2-cyclopropyl-4-pyrimidinecarboxylate, calculated as the stoichiometric equivalent of aminocyclopyrachlor.

| Commodity                                  | Parts per million |

[82 FR 36094, Aug. 3, 2017, as amended at 84 FR 50763, Sept. 26, 2019; 87 FR 69204, Nov. 18, 2022; 89 FR 30280, Apr. 23, 2024]

§ 180.696 Tolpyralate; tolerances for residues.

(a)(1) *General.* Tolerances are established for residues of tolpyralate, including its metabolites and degradates, in or on the commodities in the table below. Compliance with the tolerance levels specified below is to be determined by measuring only tolpyralate, 1-[[1-ethyl-4-[3-(2-methoxyethoxy)-2-methyl-4-(methylsulfonyl)benzoyl]-1H-pyrazol-5-yl]oxy]ethyl methyl carbonate, in or on the commodity.

TABLE 1 TO PARAGRAPH (a)(1)

| Commodity                                             | Parts per million |
|-------------------------------------------------------|-------------------|
| Barley, grain .....                                   | 0.01              |
| Barley, hay .....                                     | 0.2               |
| Barley, straw .....                                   | 0.08              |
| Corn, field, forage .....                             | 0.01              |
| Corn, field, grain .....                              | 0.01              |
| Corn, field, stover .....                             | 0.01              |
| Corn, pop, grain .....                                | 0.01              |
| Corn, pop, stover .....                               | 0.01              |
| Corn, sweet, forage .....                             | 0.01              |
| Corn, sweet, kernel plus cob with husks removed ..... | 0.01              |
| Corn, sweet, stover .....                             | 0.01              |
| Wheat, forage .....                                   | 0.02              |
| Wheat, grain .....                                    | 0.01              |
| Wheat, hay .....                                      | 0.05              |
| Wheat, straw .....                                    | 0.03              |

(2) Tolerances are established for residues of tolpyralate, 1-[[1-ethyl-4-[3-(2-methoxyethoxy)-2-methyl-4-(methylsulfonyl)benzoyl]-1H-pyrazol-5-yl]oxy]ethyl methyl carbonate and metabolite MT-2153 [1-ethyl-5-hydroxy-1H-pyrazol-4-yl-3-(2-methoxyethoxy)-4-mesyl-2-methylphenyl ketone], in or on the livestock commodities in table 2 to this paragraph (a)(2). Compliance with the tolerance levels specified in table 2 to this paragraph (a)(2) is to be deter-

mined by measuring tolpyralate, 1-[[1-ethyl-4-[3-(2-methoxyethoxy)-2-methyl-4-(methylsulfonyl)benzoyl]-1H-pyrazol-5-yl]oxy]ethyl methyl carbonate and metabolite MT-2153 [1-ethyl-5-hydroxy-1H-pyrazol-4-yl-3-(2-methoxyethoxy)-4-mesyl-2-methylphenyl ketone], in or on the commodity.

TABLE 2 TO PARAGRAPH (a)(2)

| Commodity                | Parts per million |
|--------------------------|-------------------|
| Cattle, byproducts ..... | 0.02              |
| Goat, byproducts .....   | 0.02              |
| Horse, byproducts .....  | 0.02              |
| Sheep, byproducts .....  | 0.02              |

(b) *Section 18 emergency exemptions.* [Reserved]

(c) *Tolerances with regional registrations.* [Reserved]

(d) *Indirect or inadvertent residues.* [Reserved]

[82 FR 34882, July 27, 2017, as amended at 88 FR 82786, Nov. 27, 2023]

§ 180.697 Flutianil; tolerances for residues.

(a) *General.* Tolerances are established for the combined residues of the fungicide flutianil, including its metabolites and degradates in or on food commodities in Table 1 to this paragraph (a). Compliance with the tolerance levels specified in Table 1 is to be determined by measuring only flutianil, (2Z)-2-[2-fluoro-5-(trifluoromethyl)phenyl]sulfanyl-2-[3-(2-methoxyphenyl)thiazolidin-2-ylidene]acetonitrile in or on the following commodities:

TABLE 1 TO PARAGRAPH (a)

| Commodity                                                                  | Parts per million |
|----------------------------------------------------------------------------|-------------------|
| Apple .....                                                                | 0.15              |
| Apple, wet pomace .....                                                    | 0.30              |
| Berry, low growing, subgroup 13–07G .....                                  | 0.5               |
| Cherry subgroup 12–12A .....                                               | 0.4               |
| Fruit, small, vine climbing, except fuzzy kiwifruit, subgroup 13–07F ..... | 0.7               |
| Hop, dried cones .....                                                     | 2                 |
| Melon subgroup 9A .....                                                    | 0.07              |

### **§ 180.698 Chlormequat chloride; tolerances for residues.**

(a) *General.* Tolerances are established for the residues of the plant regulator chlormequat chloride, including its metabolites and degradates in or on food commodities in the table below. Compliance with the tolerance levels specified below is to be determined by measuring only chlormequat chloride [(2-chloroethyl) trimethylammonium chloride in or on the following commodities:

| Commodity                                  | Parts per million |
|--------------------------------------------|-------------------|
| Barley, grain <sup>1</sup> .....           | 2.0               |
| Cattle, meat byproduct <sup>1</sup> .....  | 0.50              |
| Cattle, meat <sup>1</sup> .....            | 0.20              |
| Egg <sup>1</sup> .....                     | 0.10              |
| Goat, meat byproduct <sup>1</sup> .....    | 0.50              |
| Goat, meat <sup>1</sup> .....              | 0.20              |
| Hog, meat byproduct <sup>1</sup> .....     | 0.50              |
| Hog, meat <sup>1</sup> .....               | 0.20              |
| Milk <sup>1</sup> .....                    | 0.50              |
| Oat, grain <sup>2</sup> .....              | 40                |
| Poultry, meat byproduct <sup>1</sup> ..... | 0.10              |
| Poultry, meat <sup>1</sup> .....           | 0.04              |
| Sheep, meat byproduct <sup>1</sup> .....   | 0.50              |
| Sheep, meat <sup>1</sup> .....             | 0.20              |
| Wheat, grain <sup>1</sup> .....            | 3.0               |

<sup>1</sup> There are no U.S. registrations for this commodity as of April 25, 2018.

<sup>2</sup> There are no U.S. registrations for this commodity.

### **§ 180.699 Pydiflumetofen; tolerances for residues.**

(a) *General.* Tolerances are established for residues of pydiflumetofen, including its metabolites and degradates, in or on the commodities in the table below. Compliance with the tolerance levels specified below is to be determined by measuring only pydiflumetofen (3-(difluoromethyl)-N-methoxy-1-methyl-trichlorophenyl)ethyl]-1H-pyrazole-4-carboxamide) in or on the commodity:

TABLE 1 TO PARAGRAPH (a)

| Commodity                                                                 | Parts per million |

**§ 180.700 Afidopyropen; tolerances for residues.**

(a) *General.* (1) Tolerances are established for residues of afidopyropen, including its metabolites and degradates, in or on the commodities in table 1 to this paragraph (a)(1). Compliance with the tolerance levels specified in this paragraph (a)(1) is to be determined by measuring only afidopyropen, [(3*S*,4*R*,4*aR*,6*S*,6*aS*,12*R*,12*aS*,12*bS*)-3-

[(cyclopropylcarbonyl)oxy]-1,3,4,4*a*,5,6*a*,12,12*a*,12*b*-decahydro-6,12-dihydroxy-4,6*a*,12*b*-trimethyl-11-oxo-9-(3-pyridinyl)2*b*]pyrano[3,4-*e*]pyran-4-yl]methyl cyclopropanecarboxylate, in or on the following food commodities:

TABLE 1 TO PARAGRAPH (a)(1)

| Sheep, meat byproducts .....  | 0.2                         |

(b) *Section 18 emergency exemptions.* Time-limited tolerances specified in the following table are established for residues of afidopyropen, including its metabolites and degradates, in or on the commodities in table 3 to this para-

graph (b). Compliance with the tolerance levels specified in this paragraph (b) is to be determined by measuring only afidopyropen, [(3*S*,4*R*,4*aR*,6*S*,6*aS*,12*R*,12*aS*,12*bS*)-3-[(cyclopropylcarbonyl)oxy]-1,3,4,4*a*,5,6*a*,12,12*a*,12*b*-decahydro-6,12-dihydroxy-4,6*a*,12*b*-trimethyl-11-oxo-9-(3-pyridinyl)2*H*,11*H*-naphtho[2,1-*b*]pyrano[3,4-*e*]pyran-4-yl)methyl cyclopropanecarboxylate, in or on the specified agricultural commodities, resulting from use of the pesticide pursuant to FIFRA section 18 emergency exemptions. The tolerances expire on the dates specified in table 3 to this paragraph (b).

TABLE 3 TO PARAGRAPH (b)

| Commodity        | Parts per million | Expiration date |
|------------------|-------------------|-----------------|
| Strawberry ..... | 0.3               | 12/31/2027      |

(c) *Tolerances with regional registrations.* [Reserved]

(d) *Indirect or inadvertent residues.* [Reserved]

[83 FR 46401, Sept. 13, 2018, as amended at 85 FR 63459, Oct. 8, 2020; 89 FR 51848, June 20, 2024]

#### § 180.701 Pyrfluquinazon; tolerances for residues.

(a) *General.* (1) Tolerances are established for residues of the insecticide pyrfluquinazon, including its metabolites and degradates, in or on the commodities in the table below. Compliance with the tolerance levels specified below is to be determined by measuring only the sum of pyrfluquinazon (1-acetyl-3,4-dihydro-3-[(3-pyridinylmethyl)amino]-6-[1,2,2,2-tetrafluoro-1-(trifluoromethyl)ethyl]-2(1*H*)-quinazolinone) and its metabolite IV-01 (3-[(pyridin-3-ylmethyl)amino]-6-[1,2,2,2-tetrafluoro-1-(trifluoromethyl)ethyl]-3,4-dihydro-1*H*-quinazolin-2-one), calculated as the stoichiometric equivalent of pyrfluquinazon.

(2) Tolerances are established for residues of the fungicide bixafen, including its metabolites and degradates, in or on the commodities in the table below. Compliance with the tolerance levels specified below is to be determined by measuring only the sum of bixafen, *N*-(3,4-dichloro-5-fluorobiphenyl-2-yl)-3-(difluoromethyl)-1-methylpyrazole-4-carboxamide, and its desmethyl metabolite, *N*-(3',4'-dichloro-5-fluoro[1,1'-biphenyl]-2-yl)-3-(difluoromethyl)-1H-pyrazole-4-carboxamide, calculated as

**40 CFR Ch. I (7–1–24 Edition)**

the stoichiometric equivalent of bixafen, in or on the commodity.

| Commodity                     | Parts per million |
|-------------------------------|-------------------|

**§ 180.704 Sulfometuron-methyl; tolerances for residues.**

(a) *General.* (1) Tolerances are established for residues of the herbicide sulfometuron-methyl, including its metabolites and degradates, in or on the commodity in the table below. Compliance with the tolerance levels specified

## Environmental Protection Agency

§ 180.705

below is to be determined by measuring only sulfometuron-methyl, (methyl 2-[[[(4,6-dimethyl-2-pyrimidinyl)amino]carbonyl]amino]sulfonyl]benzoate), in or on the following raw agricultural commodities:

| Commodity                    | Parts per million |
|------------------------------|-------------------|
| Sugarcane, cane <sup>1</sup> | 0.1               |

<sup>1</sup> There are no U.S. Registrations on Sugarcane as of September 24, 2018.

(b) *Section 18 emergency exemptions.* [Reserved]

(c) *Tolerances with regional registrations.* [Reserved]

(d) *Indirect or inadvertent residues.* [Reserved]

[84 FR 11420, Mar. 27, 2019]

### § 180.705 Mefentrifluconazole; tolerances for residues.

(a) *General.* Tolerances are established for residues of mefentrifluconazole, including its metabolites and degradates, in or on the commodities in Table 1 to this paragraph (a). Compliance with the tolerance levels specified in Table 1 to this paragraph (a) is to be determined by measuring only mefentrifluconazole,  $\alpha$ -[4-(4-chlorophenoxy)-2-(trifluoromethyl)phenyl]- $\alpha$ -methyl-1*H*-1,2,4-triazole-1-ethanol, in or on the commodity.

TABLE 1 TO PARAGRAPH (a)

| Commodity                                       | Parts per million |
|-------------------------------------------------|-------------------|
| Almond, hulls                                   | 4                 |

[84 FR 30945, June 28, 2019, as amended at 85 FR 71000, Nov. 6, 2020; 86 FR 71158, Dec. 15, 2021]

**§ 180.706**

**40 CFR Ch. I (7–1–24 Edition)**

**§ 180.706 Valifenalate; tolerances for residues.**

(a)(1) Tolerances are established for residues of the fungicide valifenalate, including its metabolites and degradates, in or on the following commodities. Compliance with the tolerance levels is to be determined by measuring only valifenalate (methyl N-(isopropoxycarbonyl)-L-valyl-(3RS)-3-(4-chlorophenyl)-β-alainate), in or on the following commodities.

| Commodity                             | Parts per million |
|---------------------------------------|-------------------|
| Celery .....                          | 5                 |
| Grape <sup>1</sup> .....              | 5                 |
| Grape, raisin <sup>1</sup> .....      | 6                 |
| Vegetable, bulb, group 3–07 .....     | 0.6               |
| Vegetable, cucurbit, group 9 .....    | 0.3               |
| Vegetable, fruiting, group 8–10 ..... | 1                 |

<sup>1</sup>As of July 1, 2019, valifenalate is not registered in the United States for use on this commodity.

(2) Tolerances are established for residues of the fungicide valifenalate, including its metabolites and degradates, in or on the following commodities. Compliance with the tolerance levels is to be determined by measuring only the sum of valifenalate, methyl N-(isopropoxycarbonyl)-L-valyl-(3RS)-3-(4-chlorophenyl)-β-alainate and valifenalate acid, 3-(4-chlorophenyl)-3-[[N-(isopropoxycarbonyl)-L-valyl]-amino] propionic acid calculated as the stoichiometric equivalent of valifenalate, in or on the following commodities.

| Commodity                     | Parts per million |
|-------------------------------|-------------------|
| Potato .....                  | 0.04              |
| Potato, granules/flakes ..... | 0.09              |

(b) *Section 18 emergency exemptions.* [Reserved]

(c) *Tolerances with regional registrations.* [Reserved]

(d) *Indirect or inadvertent residues.* [Reserved]

[84 FR 31218, July 1, 2019]

**§ 180.708 Isotianil; tolerances for residues.**

(a) *General.* Tolerances are established for residues of isotianil, including its metabolites and degradates, in or on the commodities in the table below. Compliance with the tolerance level specified in the table in this para-

graph (a) is to be determined by measuring only isotianil (3,4-dichloro-N-(2-cyanophenyl)-5-isothiazolecarboxamide) in or on the commodity.

| Commodity                 | Parts per million |
|---------------------------|-------------------|
| Banana <sup>1</sup> ..... | 0.02              |

<sup>1</sup>There are no U.S. registrations for bananas as of November 1, 2019.

(b) [Reserved]

[84 FR 58627, Nov. 1, 2019]

**§ 180.709 Tetraniliprole; tolerances for residues.**

(a) *General.* Tolerances are established for residues of tetraniliprole, including its metabolites and degradates, in or on the commodities in table 1 in this paragraph (a). Compliance with the tolerance levels specified in table 1 in this paragraph (a) is to be determined by measuring only tetraniliprole 1-(3-chloro-2-pyridinyl)-N-[4-cyano-2-methyl-6-[(methylamino)carbonyl]phenyl]-3-[[5-(trifluoromethyl)-2H-tetrazol-2-yl]methyl]-1H-pyrazole-5-carboxamide.

## § 180.710 Pethoxamid; tolerances for residues.

(a) *General.* Tolerances are established for residues of the herbicide pethoxamid, including its metabolites and degradates, in or on the commodities in the table below. Compliance with the tolerance levels specified below is to be determined by measuring only pethoxamid, 2-chloro-ethoxyethyl)-*N*-(2-methyl-1-phenyl-1-

propen-1-yl) acetamide in or on the commodity.

| Commodity                                            | Parts per million |

(b) [Reserved]

[ 85 FR 48659, Aug. 12, 2021]

## § 180.711 1-Aminocyclopropane-1-carboxylic acid (1-ACC); exemption from the requirement of a tolerance.

An exemption from the requirement of a tolerance is established for 1-aminocyclopropane-1-carboxylic acid (1-ACC) in or on apple and stone fruit when applied in accordance with good agricultural practices.

[86 FR 33892, June 28, 2021]

## § 180.712 Inpyrfluxam; tolerances for residues.

(a) *General.* (1) Tolerances are established for residues of the fungicide inpyrfluxam, including its metabolites and degradates, in or on the commodities in Table 1 to this section. Compliance with the tolerance levels specified in Table 1 to this section is to be determined by measuring only inpyrfluxam (3-(difluoromethyl)-*N*-[(3*R*)-2,3-dihydro-

§ 180.713

1,1,3-trimethyl-1*H*-inden-4-yl]-1-methyl-1*H*-pyrazole-4-carboxamide), in or on the following commodities:

TABLE 1 TO § 180.712

(2) Tolerances are established for residues of inpyrfluxam, including its metabolites and degradates, in or on the commodities in Table 2 to this section. Compliance with the tolerance levels specified in Table 2 to this section is to be determined by measuring the free and conjugated forms of the sum of inpyrfluxam (3-(difluoromethyl)-*N*-[(3*R*)-2,3-dihydro-1,1,3-trimethyl-1-inden-4-yl]-1-methyl-1*H*-pyrazole-4-carboxamide, and its metabolites 3-(difluoromethyl)-*N*-[1'-(hydroxymethyl)-(1'*S*,3'*R*)-1',3'-dimethyl-2',3'-dihydro-1'*H*-inden-4'-yl]-1-methyl-1*H*-pyrazole-4-carboxamide and 3-(difluoromethyl)-*N*-[1'-(hydroxymethyl)-(1'*R*,3'*S*)-1',3'-dimethyl-2',3'-dihydro-1'*H*-inden-4'-yl]-1-methyl-1*H*-pyrazole-4-carboxamid, calculated as the stoichiometric equivalent of inpyrfluxam, in or on the commodity:

§ 180.713 Tiafenacil; tolerances for residues.

(a) *General.* (1) Tolerances are established for residues of the herbicide tiafenacil, including its metabolites and degradates, in or on the commodities in the table below. Compliance with the tolerance levels specified below is to be determined by measuring only tiafenacil, methyl *N*-[2-[[2-chloro-5-[3,6-dihydro-3-methyl-2,6-dioxo-4-(trifluoromethyl)-1(2*H*)-pyrimidinyl]-4-fluorophenyl]thio]-1-oxopropyl]-β-alaninate, in or on the following commodities:

### § 180.714 Broflanilide; tolerances for residues.

(a) *General.* (1) Tolerances are established for residues of broflanilide, including its metabolites and degradates, in or on the commodities to Table 1 of this section. Compliance with the tolerance levels specified in Table 1 is to be determined by measuring only broflanilide, 3-(benzoylmethylamino)-N-[2-bromo-4-[1,2,2,2-tetrafluoro-1-(trifluoromethyl)ethyl]-6-(trifluoromethyl)phenyl]-2-fluorobenzamide, in or on the commodity.

TABLE 1 TO PARAGRAPH (a)(1)

(2) Tolerances are established for residues of the fungicide fluindapyr, in-

cluding its metabolites and degradates, in or on the commodities in Table 2 of this section. Compliance with the tolerance levels specified in Table 2 is to be determined by measuring the sum of fluindapyr, 3-(difluoromethyl)-*N*-(7-fluoro-1,1,3-trimethyl-2,3-dihydro-1*H*-inden-4-yl)-1-methyl-1*H*-pyrazole-4-carboxamide, and 3-(difluoromethyl)-*N*-(7-fluoro-1-hydroxymethyl-1,3-dimethyl-2,3-dihydro-1*H*-inden-4-yl)-1-methyl-1*H*-pyrazole-4-carboxamide, calculated as the stoichiometric equivalent of fluindapyr, in or on the commodity.

TABLE 2 TO PARAGRAPH (a)(2)

| Tomato <sup>1</sup> .....          | 0.8               |
| Watermelon <sup>1</sup> .....      | 0.9               |

<sup>1</sup> There are no U.S. registrations for this commodity as of July 20, 2022.

(2) Tolerances are established for residues of the insecticide spiropidion, including its metabolites and degradates, in or on the commodities in Table 2 to this paragraph (a)(2). Compliance with the tolerance levels specified in Table 2 to this paragraph (a)(2) is to be determined by measuring only SYN547305 [3-(4-chloro-2,6-dimethylphenyl)-4-hydroxy-8-methoxy-1-methyl-1,8-diazaspiro[4.5]dec-3-en-2-one] calculated as the stoichiometric equivalent of spiropidion, in or on the following livestock commodities:

## § 180.724 Benzpyrimoxan; tolerances for residues.

(a) *General.* Tolerances are established for residues of benzpyrimoxan, including its metabolites and degradates, in or on the commodities in Table 1 to this paragraph (a). Compliance with the tolerance levels specified in Table 1 to this paragraph (a) is to be determined by measuring residues of benzpyrimoxan (5-(1,3-dioxan-2-yl)-4-[[4-(trifluoromethyl)phenyl]

§ 180.725

methoxy]pyrimidine) in or on the following commodities:

TABLE 1 TO PARAGRAPH (a)

| Commodity                              | Parts per million |

§ 180.725 **Pyraclonil; tolerances for residues.**

(a)–(b) [Reserved]

(c) *Tolerances with regional registrations.* Tolerances are established for residues of the herbicide pyraclonil, including its metabolites and degradates, in or on the commodities to the table to this paragraph (c). Compliance with the tolerance levels specified in the table to this paragraph (c) is to be determined by measuring only pyraclonil (1-(3-chloro-4,5,6,7-tetrahydropyrazolo[1,5-*a*]pyridin-2-yl)-5-(methyl-2-propyn-1-ylamino)-1*H*-pyrazole-4-carbonitrile).

[88 FR 57891, Aug. 24, 2023]

**Subpart D—Exemptions From Tolerances**

§ 180.900 **Exemptions from the requirement of a tolerance.**

An exemption from a tolerance shall be granted when it appears that the

40 CFR Ch. I (7–1–24 Edition)

total quantity of the pesticide chemical in or on all raw agricultural commodities for which it is useful under conditions of use currently prevailing or proposed will involve no hazard to the public health.

[69 FR 23117, Apr. 28, 2004]

§ 180.905 **Pesticide chemicals; exemptions from the requirement of a tolerance.**

(a) When applied to growing crops, in accordance with good agricultural practice, the following pesticide chemicals are exempt from the requirement of a tolerance:

- (1) Petroleum oils.
- (2) Piperonyl butoxide.
- (3) Pyrethrins.
- (4) Sabadilla.

(b) When applied to growing crops, in accordance with good agricultural practice, the pesticides rotenone or derris or cube roots are exempt from the requirement of a tolerance. There are no U.S. registrations for use of rotenone, derris, or cube roots on food commodities as of March 23, 2011.

(c) These pesticides are not exempted from the requirement of a tolerance when applied to a crop at the time of or after harvest.

[77 FR 59128, Sept. 26, 2012]

§ 180.910 **Inert ingredients used pre- and post-harvest; exemptions from the requirement of a tolerance.**

Residues of the following materials are exempted from the requirement of a tolerance when used in accordance with good agricultural practice as inert (or occasionally active) ingredients in pesticide formulations applied to growing crops or to raw agricultural commodities after harvest:

TABLE 1 TO 180.910

| Inert ingredients                                                                                                                                             | Limits | Uses               |

§ 180.910

TABLE 1 TO 180.910—Continued

| Inert ingredients                                                                                                                                                                                                                                                                                             | Limits                                                                                                                      | Uses                                                        |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------|
| Phosphoric acid .....                                                                                                                                                                                                                                                                                         | .....                                                                                                                       | Buffer                                                      |
| Polyammonium bisulfate (CAS Reg. No. 10043-02-4) .....                                                                                                                                                                                                                                                        | Not to exceed 40% in non-residential formulations. Not to exceed 5% in outdoor and indoor formulations for residential use. | Carrier, adjuvant, buffer, and stabilizer                   |
| Polyethylene, conforming to 21 CFR 177.1520(c) .....                                                                                                                                                                                                                                                          | .....                                                                                                                       | Binder, carrier, and coating agent                          |
| Polyethylene glycol[ $\alpha$ -hydro- $\omega$ -hydroxypoly(oxyethylene)]; mean molecular weight (in amu) 194 to 9,500 conforms to 21 CFR 178.3750.                                                                                                                                                           | .....                                                                                                                       | Surfactants, related adjuvants of surfactants               |
| Polyethyleneimine (CAS Reg. No. 9002-98-6) .....                                                                                                                                                                                                                                                              | Minimum number average molecular weight 1,300 amu.                                                                          | Emulsifier, surfactant, adjuvant, dispersant and/or coating |
| Polyglycerol esters of fatty acids conforming to 21 CFR 172.854 .....                                                                                                                                                                                                                                         | .....                                                                                                                       | Surfactants, related adjuvants of surfactants               |
| Polyglyceryl phthalate ester of coconut oil fatty acids, including fatty acid coco polymers with glyceryl and phthalic anhydride (CAS No. 67746-02-5) and coconut oil polymer with glyceryl and phthalic anhydride (CAS No. 66070-87-9).                                                                      | None .....                                                                                                                  | Surfactants, related adjuvants of surfactants               |
| Poly(oxy-1,2-ethanediyl), $\alpha$ -acetyl- $\omega$ -(2-propen-1-yloxy)- (CAS Reg. No. 27252-87-5).                                                                                                                                                                                                          | .....                                                                                                                       | .....                                                       |
| Poly (oxy-1,2-ethanediyl), $\alpha,\alpha'$ -[[[4-[2-(4-methyl-2-benzothiazolyl)diazenyl]phenyl]imino]di-2,1-ethanediyl]bis[ $\omega$ -hydroxy- (CAS Reg. No. 158172-12-4).                                                                                                                                   | .....                                                                                                                       | Colorant.                                                   |
| Poly(oxy-1,2-ethanediyl), $\alpha$ -(carboxymethyl)- $\omega$ -(nonylphenoxy) produced by the condensation of 1 mole of nonylphenol (nonyl group is a propylene trimer isomer) with an average of 4-14 or 30-90 moles of ethylene oxide. The molecular weight (in amu) ranges are 454-894 and 1598-4238.      | .....                                                                                                                       | Surfactant                                                  |
| Poly(oxy-1,2-ethanediyl), $\alpha$ -methyl- $\omega$ -(2-propen-1-yloxy)- (CAS Reg. No. 27252-80-8).                                                                                                                                                                                                          | .....                                                                                                                       | .....                                                       |
| Poly(oxy-1,2-ethanediyl), $\alpha$ -(1-oxoalkyl)- $\omega$ -methoxy-, where the alkyl chain contains a minimum of 6 and a maximum of 18 carbons and the oxyethylene content is 3-13 moles (CAS Reg. No. 53100-65-5, 194289-64-0, 34398-00-0, 9006-27-3, 32761-35-6, 53467-81-5, 518299-31-5, and 34397-99-4). | Not to exceed 25% by weight in pesticide formulation.                                                                       | Stabilizer, solubilizing agent                              |
| Poly(oxy-1,2-ethanediyl), $\alpha$ -[tris(1-phenylethyl)phenyl]- $\omega$ -hydroxy-, (CAS Reg. No. 99734-09-5).                                                                                                                                                                                               | For use in post-harvest applications; not to exceed 15% by weight in pesticide formulations.                                | Surfactants                                                 |
| Poly(oxy-1,2-ethanediyl), $\alpha$ -(3-carboxy-1-oxosulfopropyl)- $\omega$ -hydroxy-, $C_{10-12}$ -alkyl ethers, disodium salts, the poly(oxyethylene) content averages 5-15 moles (CAS Reg. No. 68954-91-6).                                                                                                 | Not to exceed 10% by weight of pesticide formulation.                                                                       | Surfactant                                                  |
| Poly(oxy-1,2-ethanediyl), $\alpha$ -(3-carboxy-1-oxosulfopropyl)- $\omega$ -hydroxy-, $C_{10-16}$ -alkyl ethers, disodium salts, the poly(oxyethylene) content averages 5-15 moles (CAS Reg. No. 68815-56-5).                                                                                                 | Not to exceed 10% by weight of pesticide formulation.                                                                       | Surfactant                                                  |
| Poly(oxy-1,2-ethanediyl), $\alpha$ -(3-carboxy-1-oxosulfopropyl)- $\omega$ -hydroxy-, $C_{12-14}$ -alkyl ethers, disodium salts, the poly(oxyethylene) content averages 5-15 moles (CAS Reg. No. 1024612-24-5).                                                                                               | Not to exceed 10% by weight of pesticide formulation.                                                                       | Surfactant                                                  |
| Poly(oxy-1,2-ethanediyl), $\alpha$ -(3-carboxy-1-oxosulfopropyl)- $\omega$ -(isotridecyloxy)-, sodium salt (1:2), the poly(oxyethylene) content averages 5-15 moles (CAS Reg. No. 1013906-64-3).                                                                                                              | Not to exceed 10% by weight of pesticide formulation.                                                                       | Surfactant                                                  |
| Polyoxyethylene (20) sorbitan monostearate .....                                                                                                                                                                                                                                                              | .....                                                                                                                       | Surfactants, related adjuvants of surfactants               |
| [Poly[oxy(methyl-1,2-ethanediyl)], $\alpha$ -[2-bis(2-hydroxyethyl)amino]propyl]- $\omega$ -hydroxy-ether with $\alpha$ -hydro- $\omega$ -hydroxypoly(oxy-1,2-ethanediyl) (1:2), mono- $C_{12-16}$ alkyl ethers, (CAS Reg. **§ 180.920 Inert ingredients used pre-harvest; exemptions from the requirement of a tolerance.**

The following materials are exempted from the requirement of a tolerance

when used in accordance with good agricultural practice as inert (or occasionally active) ingredients in pesticide formulations applied to growing crops only:

**§ 180.930 Inert ingredients applied to animals; exemptions from the requirement of a tolerance.**

The following materials are exempted from the requirement of a tolerance

when used in accordance with good agricultural practice as inert (or occasionally active) ingredients in pesticide formulations applied to animals:

TABLE 1 TO 180.930

| Inert ingredients                                                                                                                                                 | Limits                                       | Uses                                                      |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------|-----------------------------------------------------------|
| Acetic acid (CAS Reg. No. 64–19–7) .....                                                                                                                          | Not more than 0.5% of pesticide formulation. | Catalyst                                                  |
| Acetic anhydride .....                                                                                                                                            | .....                                        | Solvent, cosolvent, stabilizer                            |
| Acetone (Cas Reg. No. 67–64–1) .....                                                                                                                              | .....                                        | Solvent or cosolvent                                      |
| Alcohols, C <sub>2</sub> –C <sub>33</sub> , manuf. of, by-products from, overheads (CAS Reg. No. 876065–86–0). ....                                               | .....                                        | Solvent                                                   |
| Alkanoic and alkenoic acids, mono- and diesters of $\alpha$ -hydro- $\omega$ -hydroxypoly(oxyethylene) with molecular weight (in amu) range of 200 to 6,000. .... | .....                                        | Emulsifiers                                               |
| Alkyl (C <sub>8</sub> –C <sub>24</sub> ) benzenesulfonic acid and its ammonium, calcium, magnesium, potassium, sodium, and zinc salts. ....                       | .....                                        | Surfactants, emulsifier, related adjuvants of surfactants |
| Alkyl (C <sub>12</sub> –C <sub>16</sub> ) dimethyl ammonio acetate (CAS Reg. Nos. 683–10–3, 2601–33–4 and 693–33–4. ....                                          | 20% by weight in pesticide formulation.      | Surfactant                                                |

EDITORIAL NOTE: For FEDERAL REGISTER citations affecting § 180.930, see the List of CFR Sections Affected, which appears in the Finding Aids section of the printed volume and at [www.govinfo.gov](http://www.govinfo.gov).

**Environmental Protection Agency**

**§ 180.940**

**§ 180.940 Tolerance exemptions for active and inert ingredients for use in antimicrobial formulations (Food-contact surface sanitizing solutions).**

Residues of the following chemical substances are exempted from the requirement of a tolerance when used in accordance with good manufacturing practice as ingredients in an antimicrobial pesticide formulation, provided that the substance is applied on a

semi-permanent or permanent food-contact surface (other than being applied on food packaging) with adequate draining before contact with food.

(a) The following chemical substances when used as ingredients in an antimicrobial pesticide formulation may be applied to: Food-contact surfaces in public eating places, dairy-processing equipment, and food-processing equipment and utensils.

|-----------------------------------------------------------|--------------|-------------------------------------------------------------------------|
| p-Anisyl acetate                                          | 104-21-2     | When ready for use, the end-use concentration is not to exceed 100 ppm  |
| Anisyl formate                                            | 122-91-8     | When ready for use, the end-use concentration is not to exceed 100 ppm  |
| Anisyl propionate                                         | 7549-33-9    | When ready for use, the end-use concentration is not to exceed 100 ppm  |
| Aspartic acid, N-(1,2-dicarboxyethyl)-, tetrasodium salt. | 144538-83-0  | When ready for use, the end-use concentration is not to exceed 5000 ppm |
| Balsam oil, Peru ( <i>Myroxylon perei</i> (Klotzsch).     | 8007-00-9    | When ready for use, the end-use concentration is not to exceed 100 ppm  |
| Benzaldehyde                                              | 100-52-7     | When ready for use, the end-use concentration is not to exceed 100 ppm  |
| Benzaldehyde, methyl-                                     | 1334-78-7    | When ready for use, the end-use concentration is not to exceed 100 ppm  |
| Benzene, 1,2-dimethoxy-                                   | 91-16-7      | When ready for use, the end-use concentration is not to exceed 100 ppm  |
| Benzene, 2-methoxy-4-methyl-1-(1-methylethyl)-            | 1076-56-8    | When ready for use, the end-use concentration is not to exceed 100 ppm  |
| Benzeneacetaldehyde                                       | 122-78-1     | When ready for use, the end-use concentration is not to exceed 100 ppm  |
| Benzoic acid                                              | 65-85-0      | When ready for use, the end-use concentration is not to exceed 100 ppm  |
| Benzoin gum, Sumatra                                      | 9000-05-9    | When ready for use, the end-use concentration is not to exceed 100 ppm  |
| Benzyl acetate                                            | 140-11-4     | When ready for use, the end-use concentration is not to exceed 100 ppm  |
| benzyl alcohol                                            | 100-51-6     | When ready for use, the end-use concentration is not to exceed 100 ppm  |
| Benzyl benzoate                                           | 120-51-4     | When ready for use, the end-use concentration is not to exceed 100 ppm  |
| benzyl butyrate                                           | 103-37-7     | When ready for use, the end-use concentration is not to exceed 100 ppm  |
| Benzyl cinnamate                                          | 103-41-3     | When ready for use, the end-use concentration is not to exceed 100 ppm  |
| Benzyl formate                                            | 104-57-4     | When ready for use, the end-use concentration is not to exceed 100 ppm  |
| benzyl isobutyrate                                        | 103-28-6     | When ready for use, the end-use concentration is not to exceed 100 ppm  |
| benzyl propionate                                         | 122-63-4     | When ready for use, the end-use concentration is not to exceed 100 ppm  |
| Benzyl salicylate                                         | 118-58-1     | When ready for use, the end-use concentration is not to exceed 100 ppm  |
| Benzyl trans-2-methyl-2-butenolate.                       | 37526-88-8   | When ready for use, the end-use concentration is not to exceed 100 ppm  |

|----------------------------------------------------------|------------------|------------------------------------------------------------------------|
| Isobutyl phenylacetate .....                             | 102–13–6 .....   | When ready for use, the end-use concentration is not to exceed 100 ppm |
| Isobutyl salicylate .....                                | 87–19–4 .....    | When ready for use, the end-use concentration is not to exceed 100 ppm |
| Isobutyraldehyde .....                                   | 78–84–2 .....    | When ready for use, the end-use concentration is not to exceed 100 ppm |
| Isobutyric acid .....                                    | 79–31–2 .....    | When ready for use, the end-use concentration is not to exceed 100 ppm |
| Isoeugenol .....                                         | 97–54–1 .....    | When ready for use, the end-use concentration is not to exceed 100 ppm |
| Isoeugenyl acetate .....                                 | 93–29–8 .....    | When ready for use, the end-use concentration is not to exceed 100 ppm |
| Iso-Methyl-β-ionone .....                                | 79–89–0 .....    | When ready for use, the end-use concentration is not to exceed 100 ppm |
| Isopropyl acetate .....                                  | 108–21–4 .....   | When ready for use, the end-use concentration is not to exceed 100 ppm |
| p-Isopropylacetophenone .....                            | 645–13–6 .....   | When ready for use, the end-use concentration is not to exceed 100 ppm |
| p-Isopropylbenzyl alcohol .....                          | 536–60–7 .....   | When ready for use, the end-use concentration is not to exceed 100 ppm |
| Isopropyl-3-hydroxybutyrate .....                        | 54074–94–1 ..... | When ready for use, the end-use concentration is not to exceed 100 ppm |
| Isopropyl 2-methylbutyrate .....                         | 66576–71–4 ..... | When ready for use, the end-use concentration is not to exceed 100 ppm |
| 2-Isopropylphenol .....                                  | 88–69–7 .....    | Solvent                                                                |
| p-Isopropyl phenylacet-<br>aldehyde .....                | 4395–92–0 .....  | When ready for use, the end-use concentration is not to exceed 100 ppm |
| Isopulegol .....                                         | 89–79–2 .....    | When ready for use, the end-use concentration is not to exceed 100 ppm |
| Isovaleric acid .....                                    | 503–74–2 .....   | When ready for use, the end-use concentration is not to exceed 100 ppm |
| Jasmine lactone .....                                    | 25524–95–2 ..... | When ready for use, the end-use concentration is not to exceed 100 ppm |
| Jasmine oil ( <i>Jasminum<br/>grandiflorum</i> L.) ..... | 8022–96–6 .....  | When ready for use, the end-use concentration is not to exceed 100 ppm |
| Juniper oil ( <i>Juniperus<br/>communis</i> L.) .....    | 8002–68–4 .....  | When ready for use, the end-use concentration is not to exceed 100 ppm |
| Labdanum oil ( <i>Cistus</i> spp.) ..                    | 8016–26–0 .....  | When ready for use, the end-use concentration is not to exceed 100 ppm |
| Lactic acid .....                                        | 50–21–5 .....    | When ready for use, the end-use concentration is not to exceed 100 ppm |
| laevo-Bornyl acetate .....                               | 5655–61–8 .....  | When ready for use, the end-use concentration is not to exceed 100 ppm |
| Lauryl acetate .....                                     | 112–66–3 .....   | When ready for use, the end-use concentration is not to exceed 100 ppm |

|                                                 |                  |                                                                         |
|-------------------------------------------------|------------------|-------------------------------------------------------------------------|
| Lauric acid .....                               | 143-07-7 .....   | When ready for use, the end-use concentration is not to exceed 100 ppm  |
| Lauric aldehyde .....                           | 112-54-9 .....   | When ready for use, the end-use concentration is not to exceed 100 ppm  |
| Lauryl alcohol .....                            | 112-53-8 .....   | When ready for use, the end-use concentration is not to exceed 100 ppm  |
| Lavandin oil ( <i>Lavandula hybrida</i> ) ..... | 8022-15-9 .....  | When ready for use, the end-use concentration is not to exceed 100 ppm  |
| Levulinic acid .....                            | 123-76-2 .....   | When ready for use, the end-use concentration is not to exceed 100 ppm  |
| d-Limonene .....                                | 5989-27-5 .....  | When ready for use, the end-use concentration is not to exceed 100 ppm  |
| Linalool .....                                  | 78-70-6 .....    | When ready for use, the end-use concentration is not to exceed 100 ppm  |
| Linalool acetate .....                          | 115-95-7 .....   | When ready for use, the end-use concentration is not to exceed 100 ppm  |
| Linalyl acetate .....                           | 115-95-7 .....   | When ready for use, the end-use concentration is not to exceed 100 ppm  |
| Linalyl benzoate .....                          | 126-64-7 .....   | When ready for use, the end-use concentration is not to exceed 100 ppm  |
| Linalyl cinnamate .....                         | 78-37-5 .....    | When ready for use, the end-use concentration is not to exceed 100 ppm  |
| Linalyl formate .....                           | 115-99-1 .....   | When ready for use, the end-use concentration is not to exceed 100 ppm  |
| Linalyl hexanoate .....                         | 7779-23-9 .....  | When ready for use, the end-use concentration is not to exceed 100 ppm  |
| Linalyl isobutyrate .....                       | 78-35-3 .....    | When ready for use, the end-use concentration is not to exceed 100 ppm  |
| Linalyl isovalerate .....                       | 1118-27-0 .....  | When ready for use, the end-use concentration is not to exceed 100 ppm  |
| Linalyl propionate .....                        | 144-39-8 .....   | When ready for use, the end-use concentration is not to exceed 100 ppm  |
| Linoleic acid, methyl ester ....                | 112-63-0 .....   | When ready for use, the end-use concentration is not to exceed 100 ppm  |
| Lipase, triacylglycerol .....                   | 9001-62-1 .....  | When ready for use, the end-use concentration is not to exceed 500 ppm  |
| Lovage oil (Levisticum officinale Koch) .....   | 8016-31-7 .....  | When ready for use, the end-use concentration is not to exceed 100 ppm  |
| Mace oil (Myristica fragrans Houtt.) .....      | 8007-12-3 .....  | When ready for use, the end-use concentration is not to exceed 100 ppm  |
| Magnesium oxide .....                           | 1309-48-4 .....  | When ready for use, the end-use concentration is not to exceed 100 ppm  |
| Magnesium sulfate anhydrous .....               | 7487-88-9 .....  | When ready for use, the end-use concentration is not to exceed 100 ppm  |
| Magnesium sulfate heptahydrate .....            | 10034-99-8 ..... | None                                                                    |
| Magnesium sulfate hexahydrate .....             | 7830-18-1 .....  | When ready for use, the end-use concentration is not to exceed 4400 ppm |
| Magnesium sulfate monohydrate .....             | 14168-73-1 ..... | When ready for use, the end-use concentration is not to exceed 4400 ppm |

| p-Mentha-1,8-dien-7-ol                                                                                                                                 | 536-59-4                       | When ready for use, the end-use concentration is not to exceed 100 ppm.  |
| p-Mentha-1,8-dien-7-yl acetate.                                                                                                                        | 15111-96-3                     | When ready for use, the end-use concentration is not to exceed 100 ppm.  |
| Menthol                                                                                                                                                | 15356-70-4; 89-78-1; 1490-04-6 | When ready for use, the end-use concentration is not to exceed 100 ppm   |
| 4-Mercapto-4-methyl-2-pentanone.                                                                                                                       | 19872-52-7                     | When ready for use, the end-use concentration is not to exceed 100 ppm   |
| Methane sulfonic acid                                                                                                                                  | 75-75-2                        | When ready for use, the end use concentration is not to exceed 5,000 ppm |
| 1H-3a,7-Methanoazulen-6-ol, octahydro-3,6,8,8-tetramethyl- [3R-(3 $\alpha$ ,3a, $\beta$ ,6 $\alpha$ ,7 $\beta$ ,8 $\alpha$ )]-2-methoxy-4-propylphenol | 77-53-2                        | When ready for use, the end-use concentration is not to exceed 100 ppm.  |
| 4-Methoxy-2-methyl-2-butanethiol.                                                                                                                      | 2785-87-7                      | When ready for use, the end-use concentration is not to exceed 100 ppm   |
| 2-Methoxy-4-methylphenol                                                                                                                               | 94087-83-9                     | When ready for use, the end-use concentration is not to exceed 100 ppm   |
| 4-(p-Methoxyphenyl)-2-butanone.                                                                                                                        | 93-51-6                        | When ready for use, the end-use concentration is not to exceed 100 ppm   |
| 2-Methoxy-4-vinylphenol                                                                                                                                | 104-20-1                       | When ready for use, the end-use concentration is not to exceed 100 ppm   |
| Methylene blue                                                                                                                                         | 7786-61-0                      | When ready for use, the end-use concentration is not to exceed 100 ppm   |
| Methyl- $\alpha$ -ionone                                                                                                                               | 61-73-4                        | When ready for use, the end-use concentration is not to exceed 0.4 ppm   |
| 4'-methylacetophenone                                                                                                                                  | 127-42-4                       | When ready for use, the end-use concentration is not to exceed 100 ppm   |
| Methyl anthranilate                                                                                                                                    | 122-00-9                       | When ready for use, the end-use concentration is not to exceed 100 ppm   |
| alpha-methylbenzyl alcohol                                                                                                                             | 134-20-3                       | When ready for use, the end-use concentration is not to exceed 100 ppm   |
| methyl benzoate                                                                                                                                        | 98-85-1                        | When ready for use, the end-use concentration is not to exceed 100 ppm   |
| 3-Methyl-2-butenyl acetate                                                                                                                             | 93-58-3                        | When ready for use, the end-use concentration is not to exceed 100 ppm   |
| alpha-methylcinnamaldehyde                                                                                                                             | 1191-16-8                      | When ready for use, the end-use concentration is not to exceed 100 ppm   |
|                                                                                                                                                        | 101-39-3                       | When ready for use, the end-use concentration is not to exceed 100 ppm   |

|                                                    |                                          |                                                                        |
|----------------------------------------------------|------------------------------------------|------------------------------------------------------------------------|
| methyl cinnamate .....                             | 103-26-4 .....                           | When ready for use, the end-use concentration is not to exceed 100 ppm |
| 3-Methylcrotonic acid .....                        | 541-47-9 .....                           | When ready for use, the end-use concentration is not to exceed 100 ppm |
| Methyl 3,7-dimethyl-6-octenoate .....              | 2270-60-2 .....                          | When ready for use, the end-use concentration is not to exceed 100 ppm |
| Methyl heptene carbonate .....                     | 111-12-6 .....                           | When ready for use, the end-use concentration is not to exceed 100 ppm |
| Methyl hexanoate .....                             | 106-70-7 .....                           | When ready for use, the end-use concentration is not to exceed 100 ppm |
| Methyl linolenate .....                            | 301-00-8 .....                           | When ready for use, the end-use concentration is not to exceed 100 ppm |
| Methyl 2-methylbutyrate .....                      | 868-57-5 .....                           | When ready for use, the end-use concentration is not to exceed 100 ppm |
| 2-Methyl-3-(p-isopropylphenyl)propanaldehyde ..... | 103-95-7 .....                           | When ready for use, the end-use concentration is not to exceed 100 ppm |
| Methyl N-acetylthranilate .....                    | 2719-08-6 .....                          | When ready for use, the end-use concentration is not to exceed 100 ppm |
| Methyl anisate .....                               | 121-98-2 .....                           | When ready for use, the end-use concentration is not to exceed 100 ppm |
| Methyl N-methylthranilate .....                    | 85-91-6 .....                            | When ready for use, the end-use concentration is not to exceed 100 ppm |
| Methyl 2-nonenoate .....                           | 111-79-5 .....                           | When ready for use, the end-use concentration is not to exceed 100 ppm |
| Methyl 2-nonynoate .....                           | 111-80-8 .....                           | When ready for use, the end-use concentration is not to exceed 100 ppm |
| Methyl 3-nonenoate .....                           | 13481-87-3 .....                         | When ready for use, the end-use concentration is not to exceed 100 ppm |
| 2-Methyl-4-phenyl-2-butanol .....                  | 103-05-9 .....                           | When ready for use, the end-use concentration is not to exceed 100 ppm |
| p-Methylanisole .....                              | 104-93-8 .....                           | When ready for use, the end-use concentration is not to exceed 100 ppm |
| Methylbenzyl acetate (mixed o,m,p) .....           | 360676-70-1; 2216-45-7; 17373-93-2 ..... | When ready for use, the end-use concentration is not to exceed 100 ppm |
| α-Methylbenzyl propionate .....                    | 120-45-6 .....                           | When ready for use, the end-use concentration is not to exceed 100 ppm |
| 3-Methyl-2-butenyl benzoate .....                  | 5205-11-8 .....                          | When ready for use, the end-use concentration is not to exceed 100 ppm |
| 3-Methylindole .....                               | 83-34-1 .....                            | When ready for use, the end-use concentration is not to exceed 100 ppm |
| Methyl-α-ionone .....                              | 127-42-4 .....                           | When ready for use, the end-use concentration is not to exceed 100 ppm |
| Methyl-β-ionone .....                              | 127-43-5 .....                           | When ready for use, the end-use concentration is not to exceed 100 ppm |
| Methyl o-methoxybenzoate .....                     | 606-45-1 .....                           | When ready for use, the end-use concentration is not to exceed 100 ppm |
| Methyl 3-methylthiopropionate .....                | 13532-18-8 .....                         | When ready for use, the end-use concentration is not to exceed 100 ppm |

| Oleic acid                                                                                                                    | 112-80-1                           | When ready for use, the end-use concentration is not to exceed 100 ppm  |
| Oleic acid, ethyl ester                                                                                                       | 111-62-6                           | When ready for use, the end-use concentration is not to exceed 100 ppm  |
| Oleyl alcohol                                                                                                                 | 143-28-2                           | When ready for use, the end-use concentration is not to exceed 100 ppm  |
| Olibanum oil (Boswellia spp.)                                                                                                 | 8016-36-2                          | When ready for use, the end-use concentration is not to exceed 100 ppm  |
| Orange flower water absolute                                                                                                  | 8030-28-2                          | When ready for use, the end-use concentration is not to exceed 100 ppm  |
| Orris absolute ( <i>Iris pallida</i> )                                                                                        | 8002-73-1                          | When ready for use, the end-use concentration is not to exceed 100 ppm  |
| Ortho-benzyl-para-chlorophenol                                                                                                | 120-32-1                           | When ready for use, the end-use concentration is not to exceed 100 ppm  |
| Oxacycloheptadec-10-ene-2-one                                                                                                 | 28645-51-4                         | When ready for use, the end-use concentration is not to exceed 2080 ppm |
| Oxirane, methyl-, polymer with oxirane, minimum molecular weight (in amu), 1900                                               | 9003-11-6                          | When ready for use, the end-use concentration is not to exceed 100 ppm  |
| Palmitic acid                                                                                                                 | 57-10-3                            | When ready for use, the end-use concentration is not to exceed 100 ppm  |
| Paraffin waxes and hydrocarbon waxes; carboxypolyethylene resin; and paraffin waxes and hydrocarbon, oxidized, lithium salts. | 8002-74-2; 68153-22-0; 68649-48-9. | When ready for use, the end-use concentration is not to exceed 100 ppm  |
| ω-Pentadecalactone                                                                                                            | 106-02-5                           | When ready for use, the end-use concentration is not to exceed 100 ppm  |
| 1-pentanol                                                                                                                    | 71-41-0                            | When ready for use, the end-use concentration is not to exceed 100 ppm  |
| Pepper, black, oil ( <i>Piper nigrum</i> L.)                                                                                  | 8006-82-4                          | When ready for use, the end-use concentration is not to exceed 100 ppm  |
| Peppermint ( <i>Mentha piperita</i> ext.)                                                                                     | 84082-70-2                         | When ready for use, the end-use concentration is not to exceed 100 ppm  |
| Peroxyacetic acid                                                                                                             | 79-21-0                            | When ready for use, the end-use concentration is not to exceed 58 ppm   |
| Peroxyoctanoic acid                                                                                                           | 33734-57-5                         | When ready for use, the end-use concentration is not to exceed 52 ppm   |

TABLE 1 TO PARAGRAPH (a)—Continued

| Pesticide Chemical                       | CAS Reg. No.     | Limits                                                                 |
|------------------------------------------|------------------|------------------------------------------------------------------------|
| Pettigrain bigarade oil .....            | 8014–17–3 .....  | When ready for use, the end-use concentration is not to exceed 100 ppm |
| Pettigrain Paraguay oil .....            | 8014–17–3 .....  | When ready for use, the end-use concentration is not to exceed 100 ppm |
| α-Phellandrene .....                     | 99–83–2 .....    | When ready for use, the end-use concentration is not to exceed 100 ppm |
| phenethyl acetate .....                  | 103–45–7 .....   | When ready for use, the end-use concentration is not to exceed 100 ppm |
| Phenethyl butyrate .....                 | 103–52–6 .....   | When ready for use, the end-use concentration is not to exceed 100 ppm |
| Phenethyl cinnamate .....                | 103–53–7 .....   | When ready for use, the end-use concentration is not to exceed 100 ppm |
| Phenethyl formate .....                  | 104–62–1 .....   | When ready for use, the end-use concentration is not to exceed 100 ppm |
| Phenethyl hexanoate .....                | 6290–37–5 .....  | When ready for use, the end-use concentration is not to exceed 100 ppm |
| Phenethyl propionate .....               | 122–70–3 .....   | When ready for use, the end-use concentration is not to exceed 100 ppm |
| Phenethyl salicylate .....               | 87–22–9 .....    | When ready for use, the end-use concentration is not to exceed 100 ppm |
| Phenethyl tiglate .....                  | 55719–85–2 ..... | When ready for use, the end-use concentration is not to exceed 100 ppm |
| Phenol, 2-methoxy-4-(2-propenyl)- .....  | 97–53–0 .....    | When ready for use, the end-use concentration is not to exceed 100 ppm |
| Phenol, 2,4,6-trimethyl- .....           | 527–60–6 .....   | When ready for use, the end-use concentration is not to exceed 100 ppm |
| phenyl ethyl alcohol .....               | 60–12–8 .....    | When ready for use, the end-use concentration is not to exceed 100 ppm |
| phenethyl isobutyrate .....              | 103–48–0 .....   | When ready for use, the end-use concentration is not to exceed 100 ppm |
| phenethyl phenylacetate .....            | 102–20–5 .....   | When ready for use, the end-use concentration is not to exceed 100 ppm |
| phenylacetaldehyde dimethyl acetal ..... | 101–48–4 .....   | When ready for use, the end-use concentration is not to exceed 100 ppm |
| Phenylacetaldehyde glyceryl acetal ..... | 29895–73–6 ..... | When ready for use, the end-use concentration is not to exceed 100 ppm |
| Phenylacetic acid .....                  | 103–82–2 .....   | When ready for use, the end-use concentration is not to exceed 100 ppm |
| 2-phenylethyl 2-methylbutyrate .....     | 24817–51–4 ..... | When ready for use, the end-use concentration is not to exceed 100 ppm |
| 3-Phenylpropionaldehyde .....            | 104–53–0 .....   | When ready for use, the end-use concentration is not to exceed 100 ppm |
| 3-Phenylpropionic acid .....             | 501–52–0 .....   | When ready for use, the end-use concentration is not to exceed 100 ppm |
| 3-Phenylpropyl acetate .....             | 122–72–5 .....   | When ready for use, the end-use concentration is not to exceed 100 ppm |

| 1,3,5-Triazine, N,N',N''-trichloro-2,4,6-triamino-                   | 7673–09–8    | When ready for use, the end-use concentration of all di- or trichloroisocyanuric acid chemicals in the solution is not to exceed 200 ppm determined as total available chlorine |

[69 FR 23136, Apr. 28, 2004]

EDITORIAL NOTE: For FEDERAL REGISTER citations affecting §180.940, see the List of CFR Sections Affected, which appears in the Finding Aids section of the printed volume and at [www.govinfo.gov](http://www.govinfo.gov).

## § 180.950 Tolerance exemptions for minimal risk active and inert ingredients.

Unless specifically excluded, residues resulting from the use of the following substances as either an inert or an active ingredient in a pesticide chemical formulation, including antimicrobial pesticide chemicals, are exempted from the requirement of a tolerance under FFDCA section 408, if such use is in accordance with good agricultural or manufacturing practices.

(a) *Commonly consumed food commodities.* Commonly consumed food commodities means foods that are commonly consumed for their nutrient properties. The term commonly consumed food commodities shall only apply to food commodities (whether a raw agricultural commodity or a processed commodity) in the form the commodity is sold or distributed to the public for consumption.

(1) Included within the term commonly consumed food commodities are:

(i) Sugars such as sucrose, lactose, dextrose and fructose, and invert sugar and syrup.

(ii) Spices such as cinnamon, cloves, and red pepper.

(iii) Herbs such as basil, anise, or fenugreek.

(2) Excluded from the term commonly consumed food commodities are:

(i) Any food commodity that is adulterated under 21 U.S.C. 342.

(ii) Both the raw and processed forms of peanuts, tree nuts, milk, soybeans, eggs, fish, crustacea, and wheat.

(iii) Alcoholic beverages.

(iv) Dietary supplements.

(b) *Animal feed items.* Animal feed items means meat meal and all items derived from field crops that are fed to livestock excluding both the raw and processed forms of peanuts, tree nuts, milk, soybeans, eggs, fish, crustacea, and wheat. Meat meal is an animal feed composed of dried animal fat and protein that has been sterilized. Other than meat meal, the term animal feed item does not extend to any item designed to be fed to animals that contains, to any extent, components of animals. Included within the term animal feed items are:

(1) The hulls and shells of the commodities specified in paragraph (a)(2)(ii) of this section, and cocoa bean.

(2) Bird feed such as canary seed.

(3) Any feed component of a medicated feed meeting the definition of an animal feed item.

§ 180.950

(c) *Edible fats and oils.* Edible fats and oils means all edible (food or feed) fats and oils, derived from either plants or animals, whether or not commonly consumed, including products derived from hydrogenating (food or feed) oils, or liquefying (food or feed) fats.

(1) Included within the term edible fats and oils are oils (such as soybean oil) that are derived from the commodities specified in paragraph (a)(2)(ii) of this section when such oils are highly refined via a solvent extraction procedure.

(2) Excluded from the term edible fats and oils are plant oils used in the pesticide chemical formulation specifically to impart their characteristic fragrance and/or flavoring.

(d) [Reserved]

(e) *Specific chemical substances.* Residues resulting from the use of the following substances as either an inert or an active ingredient in a pesticide chemical formulation, including antimicrobial pesticide chemicals, are exempted from the requirement of a tolerance under FFDCA section 408, if such use is in accordance with good agricultural or manufacturing practices.

## Environmental Protection Agency

## § 180.960

[67 FR 36537, May 24, 2002]

EDITORIAL NOTE: For FEDERAL REGISTER citations affecting § 180.950, see the List of CFR Sections Affected, which appears in the Finding Aids section of the printed volume and at [www.govinfo.gov](http://www.govinfo.gov).

### § 180.960 Polymers; exemptions from the requirement of a tolerance.

Residues resulting from the use of the following substances, that meet the definition of a polymer and the criteria specified for defining a low-risk polymer in 40 CFR 723.250, as an inert ingre-

dient in a pesticide chemical formulation, including antimicrobial pesticide chemical formulations, are exempted from the requirement of a tolerance under FFDCA section 408, if such use is in accordance with good agricultural or manufacturing practices.

TABLE 1 TO § 180.960

| Polymer                                                                                                                                                                               | CAS No.      |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------|
| Acetic acid ethenyl ester, polymer with ethane, ethenyltriethoxysilane and sodium ethenesulfonate (1:1); minimum number average molecular weight (in amu), 16,200                     | 913187–38–9  |
| Acetic acid ethenyl ester, polymer with ethene and ethenol, minimum number average molecular weight (in amu), 20,000                                                                  | 26221–27–2   |
| Acetic acid ethenyl ester, polymer with ethene, N-(hydroxymethyl)-2-propenamide, and 2-propenamide, (AM–E–NMA–VA) minimum number average molecular weight (in amu), 5500              | 49603–78–3   |
| Acetic acid ethenyl ester, polymer with ethenol and (α)-2-propenyl-(ω)-hydroxypoly (oxy-1,2-ethanediyl) minimum number average molecular weight (in amu), 15,000                      | 137091–12–4  |
| Acetic acid ethenyl ester, polymer with 1-ethenyl-2-pyrrolidinone                                                                                                                     | 25086–89–9   |
| Acetic acid ethenyl ester, polymer with oxirane, minimum number average molecular weight (in amu), 17,000                                                                             | 25820–49–9   |
| Acetic acid ethenyl ester, polymer with sodium 2-methyl-2-[(1-oxo-2-propen-1-yl)amino]-1-propanesulfonate (1:1), hydrolyzed, minimum number average molecular weight (in amu), 61,000 | 924892–37–5  |
| Acrylamide-Sodium Acrylamidomethylpropanesulfonate Copolymer, minimum number average molecular weight (amu), 1,000,000 daltons.                                                       | 38193–60–1   |
| Acrylic acid-benzyl methacrylate-1-propanesulfonic acid, 2-methyl-2-[(1-oxo-2-propenyl)amino]-, monosodium salt, minimum number average molecular weight (in amu), 1500               | 1152297–42–1 |
| Acrylic acid-butyl acrylate-styrene copolymer, minimum number average molecular weight (in amu), 5,200                                                                                | 25586–20–3   |
| Acrylic acid, polymerized, and its ethyl and methyl esters                                                                                                                            | None         |
| Acrylic acid-sodium acrylate-sodium-2-methylpropanesulfonate copolymer, minimum average molecular weight (in amu), 4,500                                                              | 97953–25–8   |
| Acrylic acid-stearyl methacrylate copolymer, minimum number average molecular weight (in amu), 2,500                                                                                  | 27756–15–6   |
| Acrylic acid, styrene, α-methyl styrene copolymer, ammonium salt, minimum number average molecular weight (in amu), 1,250                                                             | 89678–90–0   |
| Acrylic acid terpolymer, partial sodium salt, minimum number average molecular weight (in amu), 2,400                                                                                 | 151006–66–5  |

TABLE 1 TO § 180.960—Continued

| Polymer                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | CAS No.                                                               |

TABLE 1 TO § 180.960—Continued

| Polymer                                                                                                                                                                                                                 | CAS No.                 |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------|
| Cellulose, ethyl 2-hydroxyethyl ether, minimum number average molecular weight (in amu), 165,000 Daltons                                                                                                                | 9004-58-4               |
| Chlorinated polyethylene                                                                                                                                                                                                | 64754-90-1              |
| Cross-linked nylon-type polymer formed by the reaction of a mixture of sebacoyl chloride and polymethylene polyphenylisocyanate with a mixture of ethylenediamine and diethylenetriamine                                | None                    |
| Cross-linked polyurea-type encapsulating polymer                                                                                                                                                                        | None                    |
| D-Glucitol, polymer with decanedioic acid, docosanoate, minimum number average molecular weight (in amu) 1,100                                                                                                          | 943440-33-3             |
| D-Glucitol, polymer with decanedioic acid, docosanoate, minimum number average molecular weight (in amu) 1,100                                                                                                          | 1681043-28-6            |
| D-Glucitol, polymer with decanedioic acid, octadecanoate, minimum number average molecular weight (in amu) 1,100                                                                                                        | 68562-93-6              |
| D-Glucitol, polymer with decanedioic acid and 1,3-propanediol, minimum number average molecular weight (in amu) 1,100                                                                                                   | 1681043-31-1            |
| D-Glucitol, polymer with decanedioic acid and 1,3-propanediol, octadecanoate, minimum number average molecular weight (in amu) 1,100                                                                                    | 1681043-33-3            |
| $\alpha$ -D-Glucopyranoside, $\beta$ -D-fructofuranosyl, polymer with methyloxirane and oxirane with a minimum number average molecular weight (in amu) of 9,800.                                                       | 26301-10-0              |
| Dimethylpolysiloxane minimum number average molecular weight (in amu), 6,800                                                                                                                                            | 63148-62-9              |
| Dimethyl silicone polymer with silica, minimum number average molecular weight (in amu), 1,100,000                                                                                                                      | 67762-90-7              |
| $\alpha$ -(o,p-Dinonylphenyl)- $\omega$ -hydroxypoly(oxyethylene) produced by condensation of 1 mole of dinonylphenol (nonyl group is a propylene trimer isomer) with an average of 140-160 moles of ethylene oxide     | 9014-93-1               |
| Docosyl methacrylate-acrylic acid copolymer, or docosyl methacrylate-octadecyl methacrylate-acrylic acid copolymer, minimum number average molecular weight (in amu), 3,000                                             | None                    |
| 1,12-Dodecanediol dimethacrylate polymer, minimum molecular weight (in amu), 100,000                                                                                                                                    | None                    |
| $\alpha$ -(p-Dodecylphenyl)- $\omega$ -hydroxypoly(oxyethylene) produced by the condensation of 1 mole of dodecylphenol (dodecyl group is a propylene tetramer isomer) with an average of 30-70 moles of ethylene oxide | 9014-92-0<br>26401-47-8 |
| 1,2-Ethanediamine, N1-(2-aminoethyl)-, polymer with 2,4-diisocyanato-1-methylbenzene, minimum number average molecular weight (in amu), one million                                                                     | 35297-61-1              |
| 1, 2-Ethanediamine, polymer with methyl oxirane and oxirane, minimum number average molecular weight (in amu), 1,100                                                                                                    | 26316-40-5              |
| Ethylene glycol dimethacrylate-lauryl methacrylate copolymer, minimum molecular weight (in amu), 100,000                                                                                                                | None                    |
| Ethylene glycol dimethacrylate polymer, minimum molecular weight (in amu), 100,000                                                                                                                                      | None                    |
| Fatty acids, montan-wax, ethoxylated, minimum number average molecular weight (in amu), 1800                                                                                                                            | 68476-04-0              |
| Fatty acids, C <sub>18</sub> -unsatd., dimers, polymers with docosanoic acid and sorbitol, minimum number average molecular weight (in amu) 1,100                                                                       | 1685270-83-0            |
| Fatty acids, C <sub>18</sub> -unsatd., dimers, polymers with docosenoic acid and sorbitol, minimum number average molecular weight (in amu) 1,100                                                                       | 1685271-02-6            |

| 2-Propenoic acid, methyl-, polymer with butyl 2-propenoate and methyl 2-methyl-2-propenoate compd. with 2-amino-2-methyl-1-propanol, minimum number average molecular weight (in amu), 22,700                                                                                                                                                                       | 1203962-19-9       |
| [2-propenoic acid, 2-methyl-, C12-16-alkyl esters, telomers with 1-dodecanethiol, polyethylene-polypropylene glycol ether with propylene glycol monomethacrylate (1:1), and styrene 2,2'-(1,2-diazenediyl)bis[2-methylbutanenitrile]-initiated, minimum number average molecular weight (in amu), 4,000                                                             | 950207-35-9        |
| 2-propenoic acid, 2-methyl-, dodecyl ester, polymer with 1-ethenyl-2-pyrrolidinone and $\alpha$ -(2-methyl-1-oxo-2-propen-1-yl)- $\omega$ -methoxypoly(oxy-1,2-ethanediyl), minimum number average molecular weight (in amu), 20,600                                                                                                                                | 193743-10-1        |
| 2-Propenoic acid, methyl ester, polymer with ethene and 2,5-furandione, minimum number average molecular weight (in amu), 10,500                                                                                                                                                                                                                                    | 88450-35-5         |
| 2-Propenoic acid, methyl ester, polymer with ethenyl acetate, hydrolyzed, sodium salts                                                                                                                                                                                                                                                                              | 886993-11-9        |
| 2-Propenoic acid, 2-methyl-, 2-ethylhexyl ester, telomer with 1-dodecanethiol, ethenylbenzene and 2-methyloxirane polymer with oxirane monoether with 1,2-propanediol mono(2-methyl-2-propenoate), hydrogen 2-sulfobutanedioate, sodium salt, 2, 2'-(1,2-diazenediyl)bis[2-methylpropanenitrile]-initiated, minimum number average molecular weight (in amu), 1,200 | 1283712-50-4       |
| 2-Propenoic acid, 2-methyl-, 2-methylpropyl ester, homopolymer, minimum number average molecular weight (in amu), 55,000                                                                                                                                                                                                                                            | 9011-15-8          |
| 2-Propenoic acid, 2-methyl-, 2-oxiranylmethyl ester, polymer with butyl 2-propenoate, ethenylbenzene and 2-ethylhexyl 2-propenoate, minimum number average molecular weight (in amu), 3,600.                                                                                                                                                                        | 58499-26-6         |
| 2-propenoic acid, 2-methyl-, 2-oxiranylmethyl ester, polymer with ethene, ethenyl acetate, ethenyltrimethoxysilane and sodium ethenesulfonate (1:1), minimum number average molecular weight (in amu), 20,000.                                                                                                                                                      | 518057-54-0        |
| 2-Propenoic acid, 2-methyl-, phenylmethyl ester, polymer with 2-propenoic acid, peroxydisulfuric acid ((HO)S(O)2[O2]) sodium salt (1:2)-initiated, compounds with diethanolamine, minimum number average molecular weight (in amu), 2,000                                                                                                                           | 1574486-33-1       |
| 2-Propenoic acid, 2-methyl-, phenylmethyl ester, polymer with 2-propenoic acid and sodium 2-methyl-2-[(1-oxo-2-propen-1-yl)amino]-1-propanesulfonate (1:1), peroxydisulfuric acid ((HO)S(O)2[O2]) sodium salt (1:2)-initiated minimum number average molecular weight >1,000 Daltons; maximum number average molecular weight 10,000 Daltons                        | CASRN 1246766-57-3 |
| 2-Propenoic acid, 2-methyl-, polymer with butyl 2-methyl-2-propenoate, butyl 2-propenoate, N-(1,1-dimethyl-3-oxobutyl)-2-propenamide, ethenylbenzene, 2-ethylhexyl 2-propenoate and methyl 2-methyl-2-propenoate, minimum number average molecular weight (in amu), 7,300                                                                                           | 481053-27-4        |
| 2-Propenoic acid, 2-methyl-, polymer with butyl 2-propenoate and ethenylbenzene, minimum number average molecular weight (in amu), 17,000                                                                                                                                                                                                                           | 25036-16-2         |
| 2-Propenoic acid, 2-Methyl-, Polymer with Butyl 2-Propenoate, Methyl 2-Methyl-2-Propenoate, Methyl 2-Propenoate and 2-Propenoic Acid, graft, Compound with 2-Amino-2-Methyl-1-Propanol                                                                                                                                                                              | 153163-36-1        |
| 2-Propenoic Acid, 2-Methyl-, Polymer with Ethenylbenzene, 2-Ethylhexyl 2-Propenoate, 2-Hydroxyethyl 2-Propenoate, N-(Hydroxymethyl) -2-Methyl-2-Propenamide and Methyl 2-Methyl-2-Propenoate, Ammonium Salt                                                                                                                                                         | 146753-99-3        |

TABLE 1 TO § 180.960—Continued

| Polymer                                                                                                                                                                                                                                                                                                                           | CAS No.      |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------|
| 2-Propenoic acid, 2-methyl-, polymers with Bu acrylate, Et acrylate, Me methacrylate and polyethylene glycol methacrylate C <sub>16-18</sub> -alkyl ethers, minimum number average molecular weight (in amu), 13,000                                                                                                              | 890051–63–5  |
| 2-propenoic acid, 2-methyl-, polymer with 2,5-furandione and 2,4,4-trimethyl-1-pentene, potassium salt, with a minimum number average molecular weight (in amu) of 6,000                                                                                                                                                          | 1802325–28–5 |
| 2-propenoic acid, 2-methyl-, polymers with tert-Bu acrylate, Me methacrylate, polyethylene glycol methacrylate C <sub>16</sub> –C <sub>18</sub> -alkyl ethers and vinylpyrrolidone, tert-Bu 2-ethylhexaneperoxoate-initiated, compounds with 2-amino-2-methyl-1-propanol, minimum number average molecular weight (in amu), 2,600 | 1515872–09–9 |
| 2-Propenoic acid, 2-methyl-, telomer with 2-ethylhexyl 2-propenoate, 2-propanol and sodium 2-methyl-2-[(1-oxo-2-propen-1-yl) amino]-1-propanesulfonate (1:1), sodium salt, minimum number average molecular weight (in amu): 2,900                                                                                                | 1260001–65–7 |
| 2-Propenoic acid, monoester with 1,2-propanediol, polymer with $\alpha$ -[4-(ethenyloxy) butyl]- $\omega$ -hydroxypoly (oxy-1,2-ethanediyl) and 2,5-furandione, minimum number average molecular weight (in amu), 25,000                                                                                                          | 955015–23–3  |
| 2-propenoic acid polymer, with 1,3-butadiene and ethenylbenzene, minimum number average molecular weight (in amu), 9400                                                                                                                                                                                                           | 25085–39–6   |
| 2-Propenoic acid, polymer with butyl 2-propenoate, ethenylbenzene and (1-methylethenyl) benzene, ammonium salt, minimum number average molecular weight (in amu), 2,300                                                                                                                                                           | 360564–31–4  |
| 2-Propenoic acid, polymer with ethene, ethenyl acetate and sodium ethenesulfonate, minimum number average molecular weight (in amu) 5,600                                                                                                                                                                                         | 429691–44–1  |
| 2-Propenoic acid, polymer with ethenyl acetate, ethenylbenzene, 2-ethylhexyl 2-propenoate and ethyl 2-propenoate, minimum number average molecular weight (50,149 Daltons)                                                                                                                                                        | 85075–52–1   |
| 2-Propenoic acid, polymer with ethenylbenzene and (1-methylethenyl)benzene, minimum number average molecular weight (in amu), 2,000                                                                                                                                                                                               | 52831–04–6   |
| 2-Propenoic acid, polymer with ethenylbenzene and (1-methylethenyl) benzene, sodium salt, minimum number average molecular weight (in amu), 2,800                                                                                                                                                                                 | 129811–24–1  |
| 2-Propenoic acid, polymer with $\alpha$ -[4-(ethenyloxy) butyl]- $\omega$ -hydroxypoly (oxy-1,2-ethanediyl) and 2,5-furandione, sodium salt, minimum number average molecular weight (in amu), 25,000                                                                                                                             | 251479–97–7  |
| 2-Propenoic acid, polymer with $\alpha$ -[4-(ethenyloxy) butyl]- $\omega$ -hydroxypoly (oxy-1,2-ethanediyl) and 1,2-propanediol mono-2-propenoate, potassium sodium salt, minimum number average molecular weight (in amu), 16,000                                                                                                | 518026–64–7  |
| 2-Propenoic acid, polymer with $\alpha$ -[4-(ethenyloxy) butyl]- $\omega$ -hydroxypoly (oxy-1, 2-ethanediyl), sodium salt, minimum number average molecular weight (in amu), 24,000                                                                                                                                               | 250591–84–5  |
| 2-Propenoic acid, polymer with 2-propenamide, sodium salt, minimum number average molecular weight (in amu), 18,000                                                                                                                                                                                                               | 25085–02–3   |
| 2-Propenoic acid, sodium salt, polymer with 2-propenamide, minimum number average molecular weight (in amu), 18,000                                                                                                                                                                                                               | 25987–30–8   |
| 2-Propenoic, 2-methyl-, polymers with ethyl acrylate and polyethylene glycol methylacrylate C <sub>18-22</sub> alkyl ethers                                                                                                                                                                                                       | 888969–14–0  |
| 2-Propenoic acid, telomer with N-(1,1-dimethylethyl)-2-propenamide, sodium 2-methyl-2-[(1-oxo-2-propen-1-yl)amino]-1-propanesulfonate (1:1) and sodium sulfite (1:1), sodium salt; number average of molecular weight (in amu), 2,871                                                                                             | 115035–53–5  |
| 2-Pyrrolidone, 1-ethenyl-, polymer with ethenol, minimum number average molecular weight (in amu), 23,000                                                                                                                                                                                                                         | 26008–54–8   |

## Environmental Protection Agency

## § 180.1017

### § 180.1011 Viable spores of the microorganism *Bacillus thuringiensis* Berliner; exemption from the requirement of a tolerance.

(a) For the purposes of this section the microbial insecticide for which exemption from the requirement of a tolerance is being established shall have the following specifications:

(1) The microorganism shall be an authentic strain of *Bacillus thuringiensis* Berliner conforming to the morphological and biochemical characteristics of *Bacillus thuringiensis* as described in Bergey's Manual of Determinative Bacteriology, Eighth Edition.

(2) Spore preparations of *Bacillus thuringiensis* Berliner shall be produced by pure culture fermentation procedures with adequate control measures during production to detect any changes from the characteristics of the parent strain or contamination by other microorganisms.

(3) Each lot of spore preparation, prior to the addition of other materials, shall be tested by subcutaneous injection of at least 1 million spores into each of five laboratory test mice weighing 17 grams to 23 grams. Such test shall show no evidence of infection or injury in the test animals when observed for 7 days following injection.

(4) Spore preparations shall be free of the *Bacillus thuringiensis*  $\beta$ -exotoxin when tested with the fly larvae toxicity test ("Microbial Control of Insects and Mites," R.P.M. Bond et al., p. 280 ff., 1971). This specification can be satisfied either by determining that each master seed lot brought into production is a *Bacillus thuringiensis* strain which does not produce  $\beta$ -exotoxin under standard manufacturing conditions or by periodically determining that  $\beta$ -exotoxin synthesized during spore production is eliminated by the subsequent spore-harvesting procedure.

(b) Exemption from the requirement of a tolerance is established for residues of the microbial insecticide *Bacillus thuringiensis* Berliner, as specified in paragraph (a) of this section, in or on honey and honeycomb and all other raw agricultural commodities when it is applied either to growing crops, or when it is applied after harvest in ac-

cordance with good agricultural practices.

[36 FR 22540, Nov. 25, 1971, as amended at 38 FR 19045, July 17, 1973; 42 FR 28540, June 3, 1977; 45 FR 43721, June 30, 1980; 45 FR 56347, Aug. 25, 1980; 74 FR 26533, June 3, 2009]

### § 180.1016 Ethylene; exemption from the requirement of a tolerance.

Ethylene is exempted from the requirement of a tolerance for residues when:

(a) For all food commodities, it is used as a plant regulator on plants, seeds, or cuttings and on all food commodities after harvest and when applied in accordance with good agricultural practices.

(b) Injected into the soil to cause premature germination of witchweed in bean (lima and string), cabbage, cantaloupe, collard, corn, cotton, cucumber, eggplant, okra, onion, pasture grass, pea (field and sweet), peanut, pepper, potato, sweet potato, sorghum, soybean, squash, tomato, turnip, and watermelon fields as part of the U.S. Department of Agriculture witchweed control program.

[39 FR 33315, Sept. 17, 1974, as amended at 40 FR 19477, May 5, 1975; 64 FR 31505, June 11, 1999]

### § 180.1017 Diatomaceous earth; exemption from the requirement of a tolerance.

(a) Diatomaceous earth is exempted from the requirement of a tolerance for residues when used in accordance with good agricultural practice in pesticide formulations applied to growing crops, to food commodities after harvest, and to animals.

(b) Diatomaceous earth may be safely used in accordance with the following conditions. Application shall be limited solely to spot and/or crack and crevice treatments in food or feed processing and food or feed storage areas in accordance with the prescribed conditions:

(1) It is used or intended for use for control of insects in food or feed processing and food or feed storage areas: *Provided*, That the food or feed is removed or covered prior to such use.

## § 180.1019

(2) To assure safe use of the insecticide, its label and labeling shall conform to that registered by the U.S. Environmental Protection Agency, and it shall be used in accordance with such label and labeling.

[65 FR 33716, May 24, 2000]

### § 180.1019 Sulfuric acid; exemption from the requirement of a tolerance.

(a) Residues of sulfuric acid are exempted from the requirement of a tolerance when used in accordance with good agricultural practice when used as a herbicide in the production of garlic and onions, and as a vine desiccant in the production of potatoes and hops.

(b) Residues of sulfuric acid are exempted from the requirement of a tolerance in cattle, meat; goat, meat; hog, meat; horse, meat; sheep, meat; poultry, fat; poultry, meat; poultry, meat byproducts; egg; milk; fish, shellfish, and irrigated crops when it results from the use of sulfuric acid as an inert ingredient in a pesticide product used in irrigation conveyance systems and lakes, ponds, reservoirs, or bodies of water in which fish or shellfish are cultivated. The sulfuric acid is not to exceed 10% of the pesticide formulation (non-aerosol formulations only).

[69 FR 40787, July 7, 2004, as amended at 74 FR 26533, June 3, 2009; 85 FR 67293, Oct. 22, 2020]

### § 180.1020 Sodium chlorate; exemption from the requirement of a tolerance.

Sodium chlorate is exempted from the requirement of a tolerance for residues when used as a defoliant or desiccant in accordance with good agricultural practice on the following crops:

Bean, dry, seed  
Corn, field, forage  
Corn, field, grain  
Corn, field, stover  
Corn, pop, grain  
Corn, pop, stover  
Corn, sweet, forage  
Corn, sweet, stover  
Cotton, undelinted seed  
Flax, seed  
Grain, aspirated fractions  
Guar, seed  
Pea, southern  
Pepper, nonbell  
Potato

## 40 CFR Ch. I (7–1–24 Edition)

Rice, grain  
Rice, straw  
Safflower, seed  
Sorghum, forage, forage  
Sorghum, grain, forage  
Sorghum, grain, grain  
Sorghum, grain, stover  
Soybean, forage  
Soybean, hay  
Soybean, seed  
Sunflower, seed  
Wheat, grain

[74 FR 47457, Sept. 16, 2009]

### § 180.1021 Copper; exemption from the requirement of a tolerance.

(a) Copper is exempted from the requirement of a tolerance in cattle, meat; goat, meat; hog, meat; horse, meat; sheep, meat; milk, poultry, fat; poultry, meat; poultry, meat byproducts; egg, fish, shellfish, and irrigated crops when it results from the use of:

(1) Copper sulfate as an algicide or herbicide in irrigation conveyance systems and lakes, ponds, reservoirs, or bodies of water in which fish or shellfish are cultivated.

(2) Basic copper carbonate (malachite) as an algicide or herbicide in impounded and stagnant bodies of water

(3) Copper triethanolamine and copper monoethanolamine as an algicide or herbicide in fish hatcheries, lakes, ponds, and reservoirs

(4) Cuprous oxide bearing antifouling coatings for control of algae or other coatings for control of algae or other organisms on submerged concrete or other (irrigation) structures.

(5) Copper oxide embedded in polymer emitter heads used in irrigation systems for root incursion prevention.

(b) The following copper compounds are exempt from the requirement of a tolerance when applied (primarily) as a fungicide to growing crops using good agricultural practices:

| Copper compounds                            | CAS Reg. No. |
|---------------------------------------------|--------------|
| Basic copper carbonate (malachite) .....    | 1184–64–1    |
| Copper ammonia complex .....                | 16828–95–8   |
| Copper ethylenediamine complex .....        | 13426–91–0   |
| Copper hydroxide .....                      | 20427–59–2   |
| Copper octanoate .....                      | 20543–04–8   |
| Copper oxychloride .....                    | 1332–65–6    |
| Copper oxychloride sulfate .....            | 8012–69–9    |
| Copper salts of fatty and rosin acids ..... | 9007–39–0    |
| Copper sulfate basic .....                  | 1344–73–6    |
| Copper sulfate pentahydrate .....           | 7758–99–8    |
| Cuprous oxide .....                         | 1317–19–1    |

(c) Copper sulfate pentahydrate (CAS Reg. No. 7758-99-8) is exempt from the requirement of a tolerance when applied as a fungicide to growing crops or to raw agricultural commodities after harvest, and as a bactericide/fungicide in or on meat, fat and meat by-products of cattle, sheep, hogs, goats, horses and poultry, milk and eggs when applied as a bactericide/fungicide to animal premises and bedding.

(d) Copper (II) hydroxide (CAS Reg. No. 20427-59-2) is exempt from the requirement of a tolerance when applied to growing crops or to raw agricultural commodities as an inert ingredient (for pH control) in pesticide products.

[65 FR 68912, Nov. 15, 2000, as amended at 69 FR 4069, Jan. 28, 2004; 71 FR 46110, Aug. 11, 2006; 74 FR 26534, June 3, 2009; 74 FR 47457, Sept. 16, 2009; 80 FR 37551, July 1, 2015]

**§ 180.1022 Iodine-detergent complex; exemption from the requirement of a tolerance.**

The aqueous solution of hydriodic acid and elemental iodine, including one or both of the surfactants (a) polyoxypropylene-polyoxyethylene glycol nomionic block polymers (minimum average molecular weight 1,900) and (b)  $\alpha$ -(p-nonylphenyl)- $\omega$ -hydroxypoly (oxyethylene) having a maximum average molecular weight of 748 and in which the nonyl group is a propylene trimer isomer, is exempted from the requirement of a tolerance for residues in egg, and poultry, fat; poultry, meat; poultry, meat byproducts when used as a sanitizer in poultry drinking water.

[74 FR 26534, June 3, 2009]

**§ 180.1023 Propanoic acid; exemptions from the requirement of a tolerance.**

(a) Postharvest application of propanoic acid or a mixture of methylene bispropionate and oxy(bismethylene) bispropionate when used as a fungicide is exempted from the requirement of a tolerance for residues in or on the following raw agricultural commodities: Alfalfa, forage; alfalfa, hay; alfalfa, seed; barley, grain; Bermudagrass, forage; Bermudagrass, hay; bluegrass, forage; bluegrass, hay; bromegrass, forage; bromegrass, hay; clover, forage; clover, hay; corn, field,

grain; corn, pop, grain; cowpea, hay; fescue, forage; fescue, hay; lespedeza, forage; lespedeza, hay; lupin; oat, grain; orchardgrass, forage; orchardgrass, hay; peanut, hay; pea, field, hay; ryegrass, Italian, hay; sorghum, grain, grain; soybean, hay; sudangrass, forage; sudangrass, hay; timothy, forage; timothy, hay; vetch, forage; vetch, hay; and wheat, grain.

(b) Propanoic acid is exempt from the requirement of a tolerance for residues in or on cattle, meat; cattle, meat byproducts; goat, meat; goat, meat byproducts; hog, meat; hog meat byproducts; horse, meat; horse, meat byproducts; sheep, meat; sheep meat byproducts; and, poultry, fat; poultry meat; poultry meat byproducts; milk, and egg when applied as a bactericide/fungicide to livestock drinking water, poultry litter, and storage areas for silage and grain.

(c) Preharvest and postharvest application of propanoic acid (CAS Reg. No. 79-09-4), propanoic acid, calcium salt (CAS Reg. No. 4075-81-4), and propanoic sodium salt (CAS Reg. No. 137-40-6) are exempted from the requirement of a tolerance on all crops when used as either an active or inert ingredient in accordance with good agricultural practice in pesticide formulations applied to growing crops, to raw agricultural commodities before and after harvest and to animals.

[69 FR 47025, Aug. 4, 2004, as amended at 74 FR 26534, June 3, 2009]

**§ 180.1025 Xylene; exemption from the requirement of a tolerance.**

Xylene is exempted from the requirement of a tolerance when used as an aquatic herbicide applied to irrigation conveyance systems in accordance with the following conditions:

(a) It is to be used only in programs of the Bureau of Reclamation, U.S. Department of Interior, and cooperating water user organizations.

(b) It is to be applied as an emulsion at an initial concentration not to exceed 750 parts per million.

(c) It is not to be applied when there is any likelihood that the irrigation water will be used as a source of raw water for a potable water system or where return flows of such treated irrigation water into receiving rivers and

## § 180.1027

streams would contain residues of xylene in excess of 10 parts per million.

(d) Xylene to be used as an aquatic herbicide shall meet the requirement limiting the presence of a polynuclear aromatic hydrocarbons as listed in 21 CFR 172.250.

[38 FR 16352, June 22, 1973, as amended at 50 FR 2980, Jan. 3, 1985]

## § 180.1027 Nuclear polyhedrosis virus of *Heliothis zea*; exemption from the requirement of a tolerance.

(a) For the purposes of this section, the viral insecticide must be produced with an unaltered and unadulterated inoculum of the single-embedded *Heliothis zea* nuclear polyhedrosis virus (HzSNPV). The identity of the seed virus must be assured by periodic checks.

(b) Each lot of active ingredient of the viral insecticide shall have the following specifications:

(1) The level of extraneous bacterial contamination of the final unformulated viral insecticide should not exceed  $10^7$  colonies per gram as determined by an aerobic plate on trypticase soy agar.

(2) Human pathogens, e.g., *Salmonella*, *Shigella*, or *Vibrio*, must be absent.

(3) Safety to mice as determined by an intraperitoneal injection study must be demonstrated.

(4) Identity of the viral product, as determined by the most sensitive and standardized analytical technique, e.g., restriction endonuclease and/or SDS-PAGE analysis, must be demonstrated.

(c) Exemptions from the requirement of a tolerance are established for the residues of the microbial insecticide *Heliothis zea* NPV, as specified in paragraphs (a) and (b) of this section, in or on all agricultural commodities.

[60 FR 42460, Aug. 16, 1995, as amended at 74 FR 26534, June 3, 2009]

## § 180.1033 Methoprene; exemption from the requirement of a tolerance.

Methoprene is exempt from the requirement of a tolerance in or on all food commodities when used to control insect larvae.

[68 FR 34829, June 11, 2003]

## 40 CFR Ch. I (7–1–24 Edition)

## § 180.1037 Polybutenes; exemption from the requirement of a tolerance.

(a) Polybutenes are exempt from the requirement of a tolerance for residues in or on the raw agricultural commodity cotton, undelinted seed when used as a sticker agent for formulations of the attractant gossyplure (1:1 mixture of (Z,Z)- and (Z,E)-7,11-hexadecadien-1-ol acetate) to disrupt the mating of the pink bollworm.

(b) Polybutenes are exempt from the requirement of a tolerance for residues in or on the raw agricultural commodity artichoke when used as a sticker agent in multi-layered laminated controlled-release dispensers of (Z)-11-hexadecenal to disrupt the mating of the artichoke plume moth.

[74 FR 26534, June 3, 2009]

## § 180.1040 Ethylene glycol; exemption from the requirement of a tolerance.

Ethylene glycol as a component of pesticide formulations is exempt from the requirement of a tolerance when used in foliar applications to peanut plants.

[43 FR 41393, Sept. 18, 1978]

## § 180.1041 *Nosema locustae*; exemption from the requirement of a tolerance.

The insecticide *Nosema locustae* is exempted from the requirement of a tolerance for residues in or on all raw agricultural commodities.

[47 FR 21537, May 19, 1982]

## § 180.1043 Gossyplure; exemption from the requirement of a tolerance.

The pheromone gossyplure, a 1:1 mixture of (Z,Z)- and (Z,E)-7,11-hexadecadien-1-ol acetate) is exempt from the requirement of a tolerance in or on the raw agricultural commodity cotton, undelinted seed when applied to cotton from capillary fibers.

[74 FR 26534, June 3, 2009]

## § 180.1049 Carbon dioxide; exemption from the requirement of a tolerance.

The insecticide carbon dioxide is exempted from the requirement of a tolerance when used after harvest in

## Environmental Protection Agency

## § 180.1065

modified atmospheres for stored insect control on food commodities.

[65 FR 33716, May 24, 2000]

### **§ 180.1050 Nitrogen; exemption from the requirements of a tolerance.**

The insecticide nitrogen is exempted from the requirements of a tolerance when used after harvest in modified atmospheres for stored product insect control on all food commodities.

[65 FR 33716, May 24, 2000]

### **§ 180.1052 2,2,5-trimethyl-3-dichloroacetyl-1,3-oxazolidine; exemption from the requirement of a tolerance.**

2,2,5-trimethyl-3-dichloroacetyl-1,3-oxazolidine is exempted from the requirement of a tolerance when used as an inert ingredient in formulations of the herbicides *S*-ethyl dipropylthiocarbamate, *S*-propyl dipropylthiocarbamate, and *S*-ethyl diisobutylthiocarbamate applied to corn fields before the corn plants emerge from the soil with a maximum of 0.5 pound of the inert ingredient per acre.

[45 FR 51201, Aug. 1, 1980]

### **§ 180.1054 Calcium hypochlorite; exemptions from the requirement of a tolerance.**

(a) Calcium hypochlorite is exempted from the requirement of a tolerance when used preharvest or postharvest in solution on all raw agricultural commodities.

(b) Calcium hypochlorite is exempted from the requirement of a tolerance in or on grape when used as a fumigant postharvest by means of a chlorine generator pad.

[59 FR 59165, Nov. 16, 1994, as amended at 74 FR 26534, June 3, 2009]

### **§ 180.1056 Boiled linseed oil; exemption from requirement of tolerance.**

Boiled linseed oil (containing no more than 0.33 percent manganese naphthenate and no more than 0.33 percent cobalt naphthenate) is exempt from the requirement of a tolerance when used as a coating agent for *S*-ethyl hexahydro-1*H*-azepine-1-carbothioate. No more than 15 percent of the pesticide formulation may con-

sist of "boiled linseed oil." This exemption is limited to use on rice before edible parts form.

[46 FR 33270, June 29, 1981]

### **§ 180.1057 *Phytophthora palmivora*; exemption from requirement of tolerance.**

*Phytophthora palmivora* is exempted from the requirement of a tolerance in or on the raw agricultural commodity fruit, citrus.

[74 FR 26534, June 3, 2009]

### **§ 180.1058 Sodium diacetate; exemption from the requirement of a tolerance.**

Sodium diacetate, when used postharvest as a fungicide, is exempt from the requirement of a tolerance for residues in or on alfalfa, hay; Bermudagrass, hay; bluegrass, hay; bromegrass, hay; clover, hay; corm, field, grain; corn, pop, grain; oat, grain; orchardgrass, hay; sorghum, grain, grain; sudangrass, hay; ryegrass, Italian, hay; timothy, hay.

[74 FR 26534, June 3, 2009]

### **§ 180.1064 Tomato pinworm insect pheromone; exemption from the requirement of a tolerance.**

An exemption from the requirement of a tolerance is established for combined residues of both components of the tomato pinworm insect pheromone (*E*)-4-tridecen-1-yl acetate and (*Z*)-4-tridecen-1-yl acetate in or on all raw agricultural commodities (preharvest) in accordance with the following prescribed conditions:

(a) Application shall be limited solely to point source dispensers or point source chopped fibers containing the tomato pinworm insect pheromone.

(b) Cumulative yearly application cannot exceed 200 grams of tomato pinworm pheromone per acre.

[58 FR 34376, June 25, 1993]

### **§ 180.1065 2-Amino-4,5-dihydro-6-methyl-4-propyl-*s*-triazolo(1,5- $\alpha$ )pyrimidin-5-one; exemption from the requirement of a tolerance.**

The inert ingredient, 2-amino-4,5-dihydro-6-methyl-4-propyl-*s*-triazolo(1,5- $\alpha$ )pyrimidin-5-one is

## § 180.1067

exempted from the requirement of a tolerance when used as an emetic at not more than 0.3 percent in formulations of paraquat dichloride. Further restrictions on this exemption are that this ingredient may not be advertised as an emetic and the paraquat product may not be promoted in any way because of the inclusion of this inert ingredient.

[70 FR 46431, Aug. 10, 2005]

## § 180.1067 Methyl eugenol and malathion combination; exemption from the requirement of a tolerance.

The insect attractant methyl eugenol and the insecticide malathion are exempt from the requirement of tolerances on all raw agricultural commodities when used in combination in Oriental fruit fly eradication programs under the authority of the U.S. Department of Agriculture, in accordance with the following directions and specifications:

(a) The combination shall be at the ratio of three parts methyl eugenol to one part technical malathion (3:1).

(b) This combination is to be impregnated on a carrier (cigarette filter tips (cellulose acetate); cotton strings; fiberboard squares) or mixed with a jelly cleared under 40 CFR 180.920 or 180.950.

(c) The maximum actual dosage per application per acre shall be 28.35 grams (one ounce avoirdupois) methyl eugenol and 9.45 grams (one-third (0.33) ounce avoirdupois) technical malathion.

[47 FR 9002, Mar. 3, 1982, as amended at 69 FR 23142, Apr. 28, 2004]

## § 180.1068 C<sub>12</sub>-C<sub>18</sub> fatty acid potassium salts; exemption from the requirement of a tolerance.

C<sub>12</sub>-C<sub>18</sub> fatty acids (saturated and unsaturated) potassium salts are exempted from the requirement of a tolerance for residues in or on all raw agricultural commodities when used in accordance with good agricultural practice.

[60 FR 34871, July 5, 1995]

## 40 CFR Ch. I (7–1–24 Edition)

## § 180.1069 (Z)-11-Hexadecenal; exemption from the requirement of a tolerance.

An exemption from the requirement of a tolerance is established for residues of the biological insecticide (pheromone) (Z)-11-hexadecenal when used as a sex attractant on artichoke plants to control the artichoke plume moth.

[47 FR 14906, Apr. 7, 1982]

## § 180.1070 Sodium chlorite; exemption from the requirement of a tolerance.

Sodium chlorite is exempted from the requirement of a tolerance for residues when used in accordance with good agricultural practice as a seed-soak treatment in the growing of the raw agricultural commodities vegetable, brassica, leafy, group 5 and radish, roots and radish, tops.

[74 FR 26534, June 3, 2009]

## § 180.1071 Peanuts, Tree Nuts, Milk, Soybeans, Eggs, Fish, Crustacea, and Wheat; exemption from the requirement of a tolerance.

(a) *General.* Residues resulting from the following uses of the food commodity forms of peanuts, tree nuts, milk, soybeans, eggs (including putrescent eggs), fish, crustacea, and wheat are exempted from the requirement of a tolerance in or on all food commodities under FFDCA section 408 (when used as either an inert or an active ingredient in a pesticide formulation), if such use is in accordance with good agricultural practices:

(1) Use in pesticide products intended to treat seeds.

(2) Use in nursery and greenhouse operations, as defined in 40 CFR 170.3, which includes seeding, potting and transplanting activities.

(3) Pre-plant and at-transplant applications.

(4) Incorporation into seedling and planting beds.

(5) Applications to cuttings and bare roots.

(6) Applications to the field that occur after the harvested crop has been removed.

(7) Soil-directed applications around and adjacent to all plants.

## Environmental Protection Agency

## § 180.1076

(8) Applications to rangelands, which is land, mostly grasslands, whose plants can provide food (*i.e.*, forage) for grazing or browsing animals.

(9) Use in chemigation and irrigation systems (via flood, drip, or furrow application with no overhead spray applications).

(10) Application as part of a dry fertilizer on which an active ingredient is impregnated.

(11) Aerial and ground applications that occur when no above-ground harvestable food commodities are present (usually pre-bloom).

(12) Application as part of an animal feed-through product.

(13) Applications as gel and solid (non-liquid/non-spray) crack and crevice treatments that place the gel or bait directly into or on top of the cracks and crevices via a mechanism such as a syringe.

(14) Applications to the same crop from which the food commodity is derived, whether the plant fraction(s) intended for harvest are present or not, *e.g.*, applications of peanut meal when applied to peanut plants.

(b) *Specific chemical substances.* Residues resulting from the use of the following substances as either an inert or an active ingredient in a pesticide formulation are exempted from the requirement of a tolerance under FFDCA section 408, if such use is in accordance with good agricultural practices and such use is included in paragraph (a):

| Chemical Substance                 | CAS No.    |
|------------------------------------|------------|
| Caseins .....                      | 9000-71-9  |
| Caseins, ammonium complexes .....  | 9005-42-9  |
| Caseins, hydrolyzates .....        | 65072-00-6 |
| Caseins, potassium complexes ..... | 68131-54-4 |
| Caseins, sodium complexes .....    | 9005-46-3  |

[70 FR 1360, Jan. 7, 2005]

### § 180.1072 Poly-D-glucosamine (chitosan); exemption from the requirement of a tolerance.

(a) An exemption from the requirement of a tolerance is established for residues of the biological plant growth regulator poly-D-glucosamine when used as a seed treatment in or on barley, beans, oats, peas, rice, and wheat.

(b) An exemption from the requirement of a tolerance is established for residues of the biological plant growth

regulator poly-D-glucosamine when used as a pesticide in the production of any raw agricultural commodity.

[60 FR 19524, Apr. 19, 1995]

### § 180.1073 Isomate-M; exemption from the requirement of a tolerance.

The oriental fruit moth pheromone (Isomate-M) (Z-8-dodecen-1-yl acetate, E-8-dodecen-1-yl acetate, Z-8-dodecen-1-ol) is exempt from the requirement of a tolerance in or on all the raw agricultural commodities (food and feed) including, peach; quince; nectarine; and nut, macadamia when used in orchards with encapsulated polyethylene tubing to control oriental fruit moth.

[74 FR 26534, June 3, 2009]

### § 180.1074 F.D.&C. Blue No. 1; exemption from the requirement of a tolerance.

F.D.&C. Blue No. 1 is exempted from the requirement of a tolerance when used as an aquatic plant control agent.

[47 FR 25963, June 16, 1982]

### § 180.1075 *Colletotrichum gloeosporioides* f. sp. *aeschyromene*; exemption from the requirement of a tolerance.

An exemption from the requirement of a tolerance is established for residues of the mycoherbicide *Colletotrichum gloeosporioides* f. sp. *aeschyromene* in or on the following raw agricultural commodities:

#### COMMODITY

Aspirated grain fractions  
Rice, grain  
Soybean, forage  
Soybean, hay  
Soybean, seed

[47 FR 25742, June 15, 1982, as amended at 74 FR 26534, June 3, 2009]

### § 180.1076 Viable spores of the microorganism *Bacillus popilliae*; exemption from the requirement of a tolerance.

(a) For the purposes of this section the microbial insecticide for which exemption from the requirement of a tolerance is being established shall have the following specifications:

## § 180.1080

(1) The microorganism shall be an authentic strain of *Bacillus popilliae* conforming to the morphological and biochemical characteristics of *Bacillus popilliae* as described in Bergey's Manual of Determinative Bacteriology, Eighth Edition.

(2) Spore preparations of *Bacillus popilliae* shall be produced by an extraction process from diseased Japanese beetles, and may contain a small percentage of the naturally occurring milky disease bacterium *Bacillus lentimorbus*.

(3) Each lot of spore preparation, prior to the addition of other materials, shall be tested by subcutaneous injection of at least 1 million spores into each of five laboratory test mice weighing 17 grams to 23 grams. Such test shall show no evidence of infection of injury in the test animals when observed for 7 days following injection.

(b) Exemption from the requirement of a tolerance is established for residues of the microbial insecticide *Bacillus popilliae*, as specified in paragraph (a) of this section in or on grass, pasture, forage and grass, rangeland, forage when it is applied to growing crops in accordance with good agricultural practices.

[47 FR 38535, Sept. 1, 1982, as amended at 74 FR 26535, June 3, 2009]

### **§ 180.1080 Plant volatiles and pheromone; exemptions from the requirement of a tolerance.**

An exemption from the requirement of a tolerance is established for residues of the plant volatiles cyclic decadiene, cyclic decene, cyclic pentadecatriene, and decatriene and the pheromone Z-2-isopropenyl-1-methylcyclobutaneethanol; Z-3,3-dimethyl-Δ1,β-cyclohexaneethanol; Z-3,3-dimethyl-Δ1,α-cyclohexaneethanol; E-3,3-dimethyl-Δ1,α-cyclohexaneethanol combination when applied to cotton in hollow synthetic fibers.

[48 FR 28442, June 22, 1983]

### **§ 180.1083 Dimethyl sulfoxide; exemption from the requirement of a tolerance.**

Dimethyl sulfoxide (DMSO) [CAS Registry Number 67-68-5] is exempted from the requirement of a tolerance when used as an inert solvent or cosol-

## 40 CFR Ch. I (7-1-24 Edition)

vent in formulations with the following pesticides when used in accordance with good agricultural practices in or on the following raw agricultural commodities:

(a) Carbaryl (1-naphthyl methyl-carbamate)

Pea, dry, seed

Pea, succulent

(b) O-O-Diethyl O-(2-isopropyl-6-methyl-4-pyrimidinyl) phosphorothioate

Pea, dry, seed

Pea, succulent

[48 FR 54819, Dec. 7, 1983, as amended at 74 FR 26535, June 3, 2009]

### **§ 180.1084 Monocarbamide dihydrogen sulfate; exemption from the requirement of a tolerance.**

Monocarbamide dihydrogen sulfate is exempted from the requirement of a tolerance when used as a herbicide or desiccant in or on all raw agricultural commodities.

[53 FR 12152, Apr. 13, 1988]

### **§ 180.1086 3,7,11-Trimethyl-1,6,10-dodecatriene-1-ol and 3,7,11-trimethyl-2,6,10-dodecatriene-3-ol; exemption from the requirement of a tolerance.**

The insect pheromone containing the active ingredients 3,7,11-trimethyl-1,6,10-dodecatriene-1-ol and 3,7,11-trimethyl-2,6,10-dodecatriene-3-ol is exempted from the requirement of a tolerance in or on all raw agricultural commodities.

[52 FR 12165, Apr. 15, 1987; 52 FR 29014, Aug. 5, 1987]

### **§ 180.1087 Sesame stalks; exemption from the requirement of a tolerance.**

An exemption from the requirement of a tolerance is established for residues of the biorational nematocide sesame stalk in or on the following raw agricultural commodities: Almond; almond, hulls; cotton, undelinted seed; cotton, gin byproducts; soybean, seed; soybean, forage; soybean, hay; aspirated grain fractions; potato; beet, sugar, roots; beet, sugar, tops; tomato; pepper, bell; squash; strawberry; eggplant; cucumber; carrot, roots; radish, roots; radish, top; turnip, roots; turnip,

## § 180.1100

tops; onion; pea, dry; pea, succulent; melon; grape; walnut; orange; grapefruit; mulberry; peach; apple; apricot; blackberry; loganberry; pecan; cherry; plum, and cranberry.

[74 FR 26535, June 3, 2009]

### **§ 180.1089 Poly-*N*-acetyl-*D*-glucosamine; exemption from the requirement of tolerance.**

An exemption from the requirement of a tolerance is established for residues of the biochemical nematocide poly-*N*-acetyl-*D*-glucosamine on a variety of agricultural crops.

[53 FR 10249, Mar. 30, 1988]

### **§ 180.1090 Lactic acid; exemption from the requirement of a tolerance.**

Lactic acid (2-hydroxypropanoic acid) is exempted from the requirement of a tolerance when used as a plant growth regulator in or on all raw agricultural commodities.

[53 FR 15286, May 4, 1988]

### **§ 180.1091 Aluminum isopropoxide and aluminum secondary butoxide; exemption from the requirement of a tolerance.**

Aluminum isopropoxide (CAS Reg. No. 555-31-7) and aluminum secondary butoxide (CAS Reg. No. 2269-22-9) are exempted from the requirement of a tolerance when used in accordance with good agricultural practices as stabilizers in formulations of the insecticide amitraz [*N*-(2,4-dimethylphenyl)-*N*-[[[(2,4-dimethylphenyl)imino]-*N*-methylmethanimidamide] applied to growing crops or animals.

[53 FR 34509, Sept. 7, 1988; 53 FR 36696, Sept. 21, 1988]

### **§ 180.1092 Menthol; exemption from the requirement of a tolerance.**

An exemption from the requirement of a tolerance is established for residues of the pesticidal chemical menthol in or on honey and honeycomb when used in accordance with good agricultural practice in over-wintering bee hives.

[74 FR 26535, June 3, 2009]

### **§ 180.1095 Chlorine gas; exemptions from the requirement of a tolerance.**

Chlorine gas is exempted from the requirement of a tolerance when used preharvest or postharvest in solution on all raw agricultural commodities.

[56 FR 21309, May 8, 1991]

### **§ 180.1097 GBM-ROPE; exemption from the requirement of a tolerance.**

The grape berry moth pheromone (GBM-ROPE) containing the active ingredients (Z)-9-dedecenyl acetate and (Z)-11-tetradecenyl acetate is exempt from the requirement of a tolerance in or on the raw agricultural commodity grape when used in orchards with encapsulated polyethylene tubing to control grape berry moth.

[74 FR 26535, June 3, 2009]

### **§ 180.1098 Gibberellins [Gibberellic Acids (GA3 and GA4 + GA7), and Sodium or Potassium Gibberellate]; exemption from the requirement of a tolerance.**

An exemption from the requirement of a tolerance is established for residues of gibberellins [gibberellic acids (GA3 and GA4 + GA7), and sodium or potassium gibberellate] in or on all food commodities when used as plant regulators on plants, seeds, or cuttings and on all food commodities after harvest in accordance with good agricultural practices.

[64 FR 31505, June 11, 1999]

### **§ 180.1100 *Gliocladium virens* isolate GL-21; exemption from the requirement of a tolerance.**

An exemption from the requirement of a tolerance is established for residues of the biofungicide *Gliocladium virens* GL-21 in or on all raw agricultural commodities when used either as a fungicide for inoculation of plant growth media in greenhouses or on terrestrial food crops grown outdoors in accordance with good agricultural practices.

[60 FR 48659, Sept. 20, 1995; 60 FR 52248, Oct. 5, 1995]

## § 180.1101

### § 180.1101 Parasitic (parasitoid) and predatory insects; exemption from the requirement of a tolerance.

Parasitic (parasitoid) and predatory insects are exempted from the requirement of a tolerance for residues when they are used in accordance with good agricultural and pest control practices to control insect pests of stored raw whole grains such as corn, small grains, rice, soybeans, peanuts, and other legumes either bulk or warehoused in bags. For the purposes of this rule, the parasites (parasitoids) and predators are considered to be species of Hymenoptera in the genera *Trichogramma*, *Trichogrammatidae*; *Bracon*, *Braconidae*; *Venturia*, *Mesostenus*, *Ichneumonidae*; *Anisopteromalus*, *Choetospila*, *Lariophagus*, *Dibrachys*, *Habrocytus*, *Pteromalus*, *Pteromalidae*; *Cephalonomia*, *Holepyris*, *Laelius*, *Bethylidae*; and of Hemiptera in the genera *Xylocoris*, *Lyctocoris*, and *Dufouriellus*, *Anthocoridae*. Whole insects, fragments, parts, and other residues of these parasites and predators remain subject to 21 U.S.C. 342(a)(3).

[57 FR 14646, Apr. 22, 1992]

### § 180.1102 *Trichoderma harzianum* KRL-AG2 (ATCC #20847) strain T-22; exemption from requirement of a tolerance.

An exemption from the requirement of a tolerance is established for residues of the biofungicide *Trichoderma harzianum* KRL-AG2 (ATCC #20847); also known as strain T-22 when applied in/or on all food commodities.

[64 FR 16860, Apr. 7, 1999]

### § 180.1103 Isomate-C; exemption from the requirement of a tolerance.

The codling moth pheromone (Isomate-C) E,E-8,10-dodecenyl alcohol, dodecanol, tetradecanol is exempt from the requirements of a tolerance in or on all raw agricultural commodities when formulated in polyethylene pheromone dispensers for use in orchards with encapsulated polyethylene tubing to control codling moth.

[74 FR 26535, June 3, 2009]

## 40 CFR Ch. I (7–1–24 Edition)

### § 180.1110 3-Carbamyl-2,4,5-trichlorobenzoic acid; exemption from the requirement of a tolerance.

An exemption from the requirement of a tolerance is established for the residues of 3-carbamyl-2,4,5-trichlorobenzoic acid in or on all raw agricultural commodities which occur from the direct application of chlorothalonil to crops in § 180.275 (a) and (b) and/or as an inadvertent residue resulting from the soil metabolism of chlorothalonil when applied to crops in § 180.275 (a) and (b), and subsequent uptake by rotated crops when used according to approved agricultural practices.

[57 FR 24552, June 10, 1992]

### § 180.1111 *Bacillus subtilis* GB03; exemption from the requirement of a tolerance.

The biofungicide *Bacillus subtilis* GB03 is exempted from the requirement of a tolerance in or on all raw agricultural commodities when used in accordance with good agricultural practices.

[73 FR 50556, Aug. 27, 2008]

### § 180.1114 *Pseudomonas fluorescens* A506, *Pseudomonas fluorescens* 1629RS, and *Pseudomonas syringae* 742RS; exemptions from the requirement of a tolerance.

The biological pesticides *Pseudomonas fluorescens* A506, *Pseudomonas fluorescens* 1629RS, and *Pseudomonas syringae* 742RS are exempted from the requirement of a tolerance in or on all raw agricultural commodities when applied as a frost protection agent or biological control agent to growing agricultural crops in accordance with good agricultural practices.

[57 FR 42700, Sept. 16, 1992]

### § 180.1118 *Spodoptera exigua* nuclear polyhedrosis virus; exemption from the requirement of a tolerance.

An exemption from the requirement of a tolerance is established for the microbial pest control agent *Spodoptera exigua* nuclear polyhedrosis virus when used as a pesticide control agent on all raw agricultural commodities.

[58 FR 25784, Apr. 28, 1993]

## Environmental Protection Agency

## § 180.1126

### **§ 180.1119 Azadirachtin; exemption from the requirement of a tolerance.**

An exemption from the requirement of a tolerance is established for the biochemical azadirachtin, which is isolated from the berries of the Neem tree (*Azadirachta indica*), when used as a pesticide at 20 grams or less per acre on all raw agricultural commodities.

[58 FR 8696, Feb. 17, 1993]

### **§ 180.1120 *Streptomyces* sp. strain K61; exemption from the requirement of a tolerance.**

An exemption from the requirement of a tolerance is established for residues of *Streptomyces* sp. strain K61 in or on all food commodities when used in accordance with label directions and good agricultural practices.

[87 FR 51914, Aug. 24, 2022]

### **§ 180.1121 Boric acid and its salts, borax (sodium borate decahydrate), disodium octaborate tetrahydrate, boric oxide (boric anhydride), sodium borate and sodium metaborate; exemptions from the requirement of a tolerance.**

An exemption from the requirement of a tolerance is established for residues of the pesticidal chemical boric acid and its salts, borax (sodium borate decahydrate), disodium octaborate tetrahydrate, boric oxide (boric anhydride), sodium borate and sodium metaborate, in or on raw agricultural commodities when used as an active ingredient in insecticides, herbicides, or fungicides preharvest or postharvest in accordance with good agricultural practices.

[58 FR 44283, Aug. 20, 1993]

### **§ 180.1122 Inert ingredients of semiochemical dispensers; exemptions from the requirement of a tolerance.**

(a) All inert ingredients of semiochemical dispenser products formulated with, and/or contained in, dispensers made of polymeric matrix materials (including the monomers, plasticizers, dispersing agents, antioxidants, UV protectants, stabilizers, and other inert ingredients) are exempted from the requirement of a tolerance when used as carriers in pes-

ticide formulations for application to growing crops only. These dispensers shall conform to the following specifications:

(1) Exposure must be limited to inadvertent physical contact only. The design of the dispenser must be such as to preclude any contamination by its components of the raw agricultural commodity (RAC) or processed foods/feeds derived from the commodity by virtue of its proximity to the RAC or as a result of its physical size.

(2) The dispensers must be applied discretely. This exemption does not apply to components of semiochemical formulations applied in a broadcast manner either to a crop field plot or to individual plants.

(b) A semiochemical dispenser is a single enclosed or semi-enclosed unit that releases semiochemical(s) into the surrounding atmosphere via volatilization and is applied in a manner to provide discrete application of the semiochemical(s) into the environment.

(c) Semiochemicals are chemicals that are emitted by plants or animals and modify the behavior of receiving organisms. These chemicals must be naturally occurring or substantially identical to naturally occurring semiochemicals.

[58 FR 64494, Dec. 8, 1993]

### **§ 180.1124 Arthropod pheromones; exemption from the requirement of a tolerance.**

Arthropod pheromones, as described in § 152.25(b) of this chapter, when used in retrievably sized polymeric matrix dispensers are exempt from the requirement of a tolerance in or on all raw agricultural commodities when applied to growing crops only at a rate not to exceed 150 grams active ingredient/acre/year in accordance with good agricultural practices.

[59 FR 14759, Mar. 30, 1994]

### **§ 180.1126 Codlure, (E,E)-8,10-Dodecadien-1-ol; exemption from the requirement of a tolerance.**

An exemption from the requirement of a tolerance is established for the insect pheromone codlure, (E,E)-8,10-dodecadien-1-ol, on all raw agricultural

§ 180.1127

40 CFR Ch. I (7–1–24 Edition)

commodities in accordance with the following prescribed conditions:

(a) Application shall be limited solely to codlure dispensers that conform to the following specifications:

(1) Commodity exposure must be limited to inadvertent physical contact. The design of the dispenser must be such as to preclude any exposure of its components to the raw agricultural commodity (RAC) or processed foods/feeds derived from the commodity due to its proximity to the RAC or as a result of its physical size. Dispensers must be of such size and construction that they are readily recognized post-application.

(2) The dispensers must be applied discretely, *i.e.*, placed in the field in easily perceived distinct locations in a manner that does not prevent later retrieval. This exemption does not apply to codlure applied in a broadcast manner either to a crop field plot or to individual plants.

(b) A codlure dispenser is a single enclosed or semi-enclosed unit that releases codlure into the surrounding atmosphere via volatilization and is applied in a manner to provide discrete application (*i.e.*, in easily perceived distinct locations in a manner that does not prevent later retrieval) of the codlure into the environment.

[59 FR 9931, Mar. 2, 1994]

**§ 180.1127 Biochemical pesticide plant floral volatile attractant compounds: cinnamaldehyde, cinnamyl alcohol, 4-methoxy cinnamaldehyde, 3-phenyl propanol, 4-methoxy phenethyl alcohol, indole, and 1,2,4-trimethoxybenzene; exemptions from the requirement of a tolerance.**

Residues of the biochemical pesticide plant floral volatile attractant compounds: cinnamaldehyde, cinnamyl alcohol, 4-methoxy cinnamaldehyde, 3-phenyl propanol, 4-methoxy phenethyl alcohol, indole, and 1,2,4-trimethoxybenzene are exempt from the requirement of a tolerance in or on the following raw agricultural commodities: the following field crops—alfalfa, clover, cotton, dandelion, peanuts (including hay), rice, sorghum (milo), soybeans, sunflower, sweet potatoes, and wheat; the following vegetable crops—asparagus, beans (including

ing forage hay), beets, carrots, celery, cole crops (cabbage, broccoli, brussels sprouts, cauliflower), collards (kale, mustard greens, turnip greens, kohlrabi), corn, fresh (field, sweet, pop, seed), corn fodder and forage, chinese cabbage, cowpeas, cucurbitis (cucumbers, squash, pumpkin), egg plant, endive (escarole), horseradish (radish, rutabagas, turnip roots), leafy greens (spinach, swiss chard), lettuce (head leaf), okra, parsley, parsnip, peas, peas with pods, peppers, potatoes, sugar beets, tomatoes; the following tree fruit, berry and nut crops—almonds, apples, apricots, berries (blackberry, boysenberry, dewberry, loganberry, raspberry), blueberry, cherry, citrus (grapefruit, kumquat, lemon, lime, orange, tangelo, and tangerine) cranberry, grapes, melons, (watermelon, honeydew, crenshaw, cantaloupe, casaba, persian), nectarines, pears, pecans, peaches, and strawberry as dispersed from the end-use product Corn Rootworm Bait®, a pesticidal bait, in accordance with the prescribed conditions in paragraph (a) of this section.

(a) Cumulative yearly application cannot exceed 20 grams of each floral attractant/acre/application.

(b) [Reserved]

[59 FR 15857, Apr. 5, 1994]

**§ 180.1128 *Bacillus amyloliquefaciens* MBI600; exemption from the requirement of a tolerance.**

An exemption from the requirement of a tolerance is established for residues of the biofungicide *Bacillus amyloliquefaciens* MBI600 (antecedent *Bacillus subtilis* MBI600) in or on all food commodities, including residues resulting from post-harvest uses, when applied or used in accordance with

[80 FR 78143, Dec. 16, 2015]

**§ 180.1130 *N*-(*n*-octyl)-2-pyrrolidone and *N*-(*n*-dodecyl)-2-pyrrolidone; exemptions from the requirement of a tolerance.**

(a) *N*-(*n*-octyl)-2-pyrrolidone and *N*-(*n*-dodecyl)-2-pyrrolidone are exempt from the requirement of a tolerance when used as solvents in cotton defoliant formulations containing thidiazuron and diuron as active ingredients.

## Environmental Protection Agency

## § 180.1146

(b) *N*-(*n*-octyl)-2-pyrrolidone is exempt from the requirement of a tolerance when used as a solvent in formulations containing pyraflufen-ethyl as an active ingredient at a concentration not to exceed 20% by weight.

(c) *N*-(*n*-Octyl)-2-pyrrolidone is exempt from the requirement of a tolerance when used as a solvent in formulations containing prothioconazole as an active ingredient at a concentration not to exceed 15% by weight.

[79 FR 10682, Feb. 26, 2014, as amended at 88 FR 47778, July 25, 2023]

### **§ 180.1135 *Pasteuria penetrans*; exemption from the requirement of a tolerance.**

The biological nematocide *Pasteuria penetrans* is exempted from the requirement of a tolerance in or on all raw agricultural commodities, except roots and tubers, when used as a nematocide in the production of fruits and vegetables in greenhouses.

[59 FR 66741, Dec. 28, 1994]

### **§ 180.1139 Sodium 5-nitroguaiacolate; exemption from the requirement of a tolerance.**

The biochemical sodium 5-nitroguaiacolate is exempted from the requirement of a tolerance when used as a plant growth regulator in end-use products at a concentration of 0.1% by weight and applied at an application rate of 20 g of a.i. per acre or less per application, in or on all food commodities.

[65 FR 66181, Nov. 3, 2000]

### **§ 180.1140 Sodium *o*-nitrophenolate; exemption from the requirement of a tolerance.**

The biochemical sodium *o*-nitrophenolate is exempted from the requirement of a tolerance when used as a plant growth regulator in end-use products at a concentration of 0.2% by weight and applied at an application rate of 20 g of a.i. per acre or less per application, in or on all food commodities.

[65 FR 66181, Nov. 3, 2000]

### **§ 180.1141 Sodium *p*-nitrophenolate; exemption from the requirement of a tolerance.**

The biochemical sodium *p*-nitrophenolate is exempted from the requirement of a tolerance when used as a plant growth regulator in end-use product at a concentration of 0.3% by weight and applied at an application rate of 20 g of a.i. per acre or less per application, in or on all food commodities.

[65 FR 66181, Nov. 3, 2000]

### **§ 180.1142 1,4-Dimethylnaphthalene; exemption from the requirement of a tolerance.**

An exemption from the requirement of a tolerance is established for the residues of the plant growth regulator, 1,4-dimethylnaphthalene (1,4-DMN), when applied postharvest to all sprouting root, tuber, and bulb crops in accordance with good agricultural practices.

[77 FR 68697, Nov. 16, 2012]

### **§ 180.1143 Methyl anthranilate; exemption from the requirement of a tolerance.**

Residues of methyl anthranilate, a biochemical pesticide, are exempt from the requirement of a tolerance in or on all food commodities, when used in accordance with good agricultural practices.

[67 FR 51088, Aug. 7, 2002]

### **§ 180.1145 *Pseudomonas syringae*; exemption from the requirement of a tolerance.**

*Pseudomonas syringae* is exempted from the requirement of a tolerance on all raw agricultural commodities when applied postharvest according to good agricultural practices.

[60 FR 12703, Mar. 8, 1995]

### **§ 180.1146 *Beauveria bassiana* Strain GHA; exemption from the requirement of a tolerance.**

*Beauveria bassiana* Strain GHA is exempted from the requirement of a tolerance in or on all raw agricultural commodities when applied to growing

## § 180.1148

crops according to good agricultural practices.

[60 FR 18547, Apr. 12, 1995]

### **§ 180.1148 Occlusion Bodies of the Granulosis Virus of *Cydia pomonella*; tolerance exemption.**

An exemption from the requirement of a tolerance is established for residues of the microbial pest control agent Occlusion Bodies of the Granulosis Virus of *Cydia pomonella* (codling moth) in or on all raw agricultural commodities.

[60 FR 42450, Aug. 16, 1995]

### **§ 180.1149 Inclusion bodies of the multi-nuclear polyhedrosis virus of *Anagrapha falcifera*; exemption from the requirement of a tolerance.**

The microbial pest control agent inclusion bodies of the multi-nuclear polyhedrosis virus of *Anagrapha falcifera* is exempted from the requirement of a tolerance in or on all raw agricultural commodities when used to control certain lepidopteran pest species.

[60 FR 37020, July 19, 1995]

### **§ 180.1150 6-Benzyladenine; exemption from the requirement of a tolerance.**

The biochemical plant regulator 6-benzyladenine (6-BA) is exempt from the requirement of a tolerance in or on apple and pear when applied at a rate of ≤182 grams of active ingredient per acre per season, and in or on pistachio when applied at a rate of ≤60 grams of active ingredient per acre per season.

[72 FR 13179, Mar. 21, 2007]

### **§ 180.1153 Lepidopteran pheromones; exemption from the requirement of a tolerance.**

Lepidopteran pheromones that are naturally occurring compounds, or identical or substantially similar synthetic compounds, designated by an unbranched aliphatic chain (between 9 and 18 carbons) ending in an alcohol, aldehyde or acetate functional group and containing up to 3 double bonds in the aliphatic backbone, are exempt from the requirement of a tolerance in or on all raw agricultural commodities.

## 40 CFR Ch. I (7–1–24 Edition)

This exemption only pertains to those situations when the pheromone is: Applied to growing crops at a rate not to exceed 150 grams active ingredient/acre/year in accordance with good agricultural practices; and applied as a post-harvest treatment to stored food commodities at a rate not to exceed 3.5 grams active ingredient/1,000 ft<sup>2</sup>/year (equivalent to 150 grams active ingredient/acre/year) in accordance with good agricultural practices.

[71 FR 45399, Aug. 9, 2006]

### **§ 180.1156 Cinnamaldehyde; exemption from the requirement of a tolerance.**

Cinnamaldehyde (3-phenyl-2-propenal) is exempted from the requirement of a tolerance in or on all food commodities, when used as a fungicide, insecticide, and algicide in accordance with good agricultural practices.

[64 FR 7804, Feb. 17, 1999; 64 FR 14099, Mar. 24, 1999]

### **§ 180.1157 Cytokinins; exemption from the requirement of a tolerance.**

An exemption from the requirement of a tolerance is established for residues of cytokinins (specifically: aqueous extract of seaweed meal and kinetin) in or on all food commodities when used as plant regulators on plants, seeds, or cuttings and on all food commodities after harvest in accordance with good agricultural practices.

[64 FR 31505, June 11, 1999]

### **§ 180.1158 Auxins; exemption from the requirement of a tolerance.**

An exemption from the requirement of a tolerance is established for residues of auxins (specifically: indole-3-acetic acid and indole-3-butyric acid) in or on all food commodities when used as plant regulators on plants, seeds, or cuttings and on all food commodities after harvest in accordance with good agricultural practices.

[64 FR 31505, June 11, 1999]

### **§ 180.1159 Pelargonic acid; exemption from the requirement of tolerances.**

(a) An exemption from the requirement of a tolerance is established for

## Environmental Protection Agency

## § 180.1162

residues of pelargonic acid in or on all food commodities when used as a plant regulator on plants, seeds, or cuttings and on all food commodities after harvest in accordance with good agricultural practices.

(b) Pelargonic acid when used as an herbicide is exempt from the requirement of a tolerance on all plant food commodities provided that:

(1) Applications are not made directly to the food commodity except when used as a harvest aid or desiccant to: any root and tuber vegetable, bulb vegetable or cotton.

(2) When pelargonic acid is used as a harvest aid or desiccant, applications must be made no later than 24 hours prior to harvest.

(c) An exemption from the requirement of a tolerance is established for residues of pelargonic acid in or on all raw agricultural commodities and in processed commodities, when such residues result from the use of pelargonic acid as an antimicrobial treatment in solutions containing a diluted end-use concentration of pelargonic acid up to 170 ppm per application on food contact surfaces such as equipment, pipelines, tanks, vats, fillers, evaporators, pasteurizers and aseptic equipment in restaurants, food service operations, dairies, breweries, wineries, beverage and food processing plants.

[62 FR 28364, May 23, 1997, as amended at 64 FR 31505, June 11, 1999; 68 FR 7935, Feb. 19, 2003]

### **§ 180.1160 Jojoba oil; exemption from the requirement of a tolerance.**

The insecticide and spray tank adjuvant jojoba oil is exempted from the requirement of a tolerance in or on all raw agricultural commodities when applied at the rate of 1.0% or less of the final spray in accordance with good agricultural practices, provided the jojoba oil does not contain simmondsin, simmondsin-2-ferulate, and related conjugated organonitriles including demethyl simmondsin and didemethylsimmondsin.

[61 FR 2121, Jan. 25, 1996]

### **§ 180.1161 Clarified hydrophobic extract of neem oil; exemption from the requirement of a tolerance.**

Clarified hydrophobic extract of neem oil is exempt from the requirement of a tolerance on all food commodities when used as a botanical fungicide/insecticide/miticide.

[67 FR 43552, June 28, 2002]

### **§ 180.1162 Acrylate polymers and copolymers; exemption from the requirement of a tolerance.**

(a) Acrylate polymers and copolymers are exempt from the requirement of a tolerance when used as inert ingredients in pesticidal formulations applied to growing, raw agricultural commodities. This tolerance exemption covers the acrylate polymers/copolymers that are intrinsically safe and already listed in TSCA inventory or will meet the polymer tolerance exemption from requirements of premanufacturing notification under 40 CFR 723.250. Polymers exempted can be used as dispensers, resins, fibers, and beads, as long as the fibers, beads and resins particle sizes are greater than 10 microns and insoluble in water. This exemption pertains to the acrylate polymers/copolymers used as inert ingredients for sprayable and dispenser pesticide formulations that are applied on food crops. Any acrylate polymers/copolymers used for encapsulating material must be cleared as an inert ingredient when used in pesticide formulation applied on food crops.

(b) For the purposes of this exemption, acrylate polymers/copolymers used as inert ingredients in an end-use formulation must meet the definition for a polymer as given in 40 CFR 723.250(b), are not automatically excluded by 40 CFR 723.250(d), and meet the tolerance exemption criteria in 40 CFR 723.250(e)(1), 40 CFR 723.250 (e)(2) or 40 CFR 723.250(e)(3). Therefore, acrylate polymers and copolymers that are already listed in the TSCA inventory or will meet the polymer tolerance exemption under 40 CFR 723.250 as amended on March 29, 1995 are covered by this exemption.

[61 FR 6551, Feb. 21, 1996]

**§ 180.1163**

**§ 180.1163 Killed *Myrothecium verrucaria*; exemption from the requirement of a tolerance.**

Killed *Myrothecium verrucaria* is exempted from the requirement of a tolerance in or on all raw agricultural commodities when applied as a pre-seed or pre- or post-planting soil treatment alone or mixed with water and the mixed suspension be applied through drip or border irrigation systems and the indicator mycotoxin levels do not exceed 15 ppm.

[61 FR 11315, Mar. 20, 1996, as amended at 61 FR 58332, Nov. 14, 1996]

**§ 180.1165 Capsaicin; exemption from the requirement of a tolerance.**

Capsaicin is exempt from the requirement of a tolerance in or on all food commodities when used in accordance with approved label rates and good agricultural practice.

[63 FR 39521, July 23, 1998]

**§ 180.1167 Allyl isothiocyanate as a component of food grade oil of mustard; exemption from the requirement of a tolerance.**

The insecticide and repellent Allyl isothiocyanate is exempt from the requirement of a tolerance for residues when used as a component of food grade oil of mustard, in or on all raw agricultural commodities, when applied according to approved labeling.

[61 FR 24894, May 17, 1996]

**§ 180.1176 Sodium bicarbonate; exemption from the requirement of a tolerance.**

The biochemical pesticide sodium bicarbonate is exempted from the requirement of a tolerance in or on all raw agricultural commodities when applied as a fungicide or post-harvest fungicide in accordance with good agricultural practices.

[61 FR 67473, Dec. 23, 1996]

**§ 180.1177 Potassium bicarbonate; exemption from the requirement of a tolerance.**

The biochemical pesticide potassium bicarbonate is exempted from the requirement of a tolerance in or on all raw agricultural commodities when applied as a fungicide or post-harvest fun-

**40 CFR Ch. I (7–1–24 Edition)**

gicide in accordance with good agricultural practices.

[61 FR 67473, Dec. 23, 1996]

**§ 180.1178 Formic acid; exemption from the requirement of a tolerance.**

The pesticide formic acid is exempted from the requirement of a tolerance in or on honey and honeycomb when used to control tracheal mites and suppress varroa mites in bee colonies, and applied in accordance with label use directions.

[74 FR 26535, June 3, 2009]

**§ 180.1179 Plant extract derived from *Opuntia lindheimeri*, *Quercus falcata*, *Rhus aromatica*, and *Rhizophora mangle*; exemption from the requirement of a tolerance.**

The biochemical pesticide plant extract derived from *Opuntia lindheimeri*, *Quercus falcata*, *Rhus aromatica*, and *Rhizophora mangle* is exempted from the requirement of a tolerance in or on all raw agricultural commodities when applied as a nematocide/plant regulator in accordance with good agricultural practices.

[62 FR 24842, May 7, 1997]

**§ 180.1180 Kaolin; exemption from the requirement of a tolerance.**

Kaolin is exempted from the requirement of a tolerance for residues when used on or in food commodities to aid in the control of insects, fungi, and bacteria (food/feed use).

[81 FR 34907, June 1, 2016]

**§ 180.1181 *Bacillus cereus* strain BPO1; exemption from the requirement of a tolerance.**

An exemption from the requirement of a tolerance for residues of the *Bacillus cereus* strain BPO1 in or on all raw agricultural commodities when applied/used in accordance with label directions.

[67 FR 70017, Nov. 20, 2002]

**§ 180.1187 L-glutamic acid; exemption from the requirement of a tolerance.**

L-glutamic acid is exempt from the requirement of a tolerance on all food

## Environmental Protection Agency

## § 180.1196

commodities when used in accordance with good agricultural practices.

[66 FR 33198, June 21, 2001]

### **§ 180.1188 Gamma aminobutyric acid; exemption from the requirement of a tolerance.**

Gamma aminobutyric acid is exempt from the requirement of a tolerance on all food commodities when used in accordance with good agricultural practices.

[66 FR 33198, June 21, 2001]

### **§ 180.1189 Methyl salicylate; exemption from the requirement of a tolerance.**

The biochemical pesticide methyl salicylate is exempt from the requirement of a tolerance for residues in or on food or feed when used as an insect repellent in food packaging and animal feed packaging at an application rate that does not exceed 0.2 mg of methyl salicylate per square inch of packaging materials.

[62 FR 61639, Nov. 19, 1997]

### **§ 180.1191 Ferric phosphate; exemption from the requirement of a tolerance.**

An exemption from the requirement of a tolerance is established for residues of the biochemical pesticide, ferric phosphate ( $\text{FePO}_4$ , CAS No. 11045-86-0) in or on all food commodities.

[62 FR 56105, Oct. 29, 1997]

### **§ 180.1193 Potassium dihydrogen phosphate; exemption from the requirement of a tolerance.**

Potassium dihydrogen phosphate is exempted from the requirement of a tolerance in or on all food commodities when applied as a fungicide in accordance with good agricultural practices.

[63 FR 43085, Aug. 12, 1998]

### **§ 180.1195 Titanium dioxide.**

(a) Titanium dioxide (CAS Reg. No. 13463-67-7) is exempted from the requirement of a tolerance for residues in or on growing crops, when used as an inert ingredient (UV protectant) in microencapsulated formulations of the insecticide lambda cyhalothrin at no more than 3.0% by weight of the formu-

lation and as an inert ingredient (UV stabilizer) at no more than 5% in pesticide formulations containing the active ingredient napropamide.

(b) Residues of titanium dioxide (CAS Reg. No. 13463-67-7) in honey are exempted from the requirement of a tolerance, when used as an inert ingredient (colorant) in pesticide formulations intended for varroa mite control around bee hives at no more than 0.1% by weight in the pesticide formulation.

(c) Titanium dioxide (CAS Reg. No. 13463-67-7) is exempted from the requirement of a tolerance for residues in or on growing crops, when used as an inert ingredient (colorant) in foliar applications at no more than 45% of the formulations containing anthraquinone.

[82 FR 30997, July 5, 2017, as amended at 83 FR 8619, Feb. 28, 2018]

### **§ 180.1196 Peroxyacetic acid; exemption from the requirement of a tolerance.**

(a) An exemption from the requirement of a tolerance is established for residues of peroxyacetic acid in or on all food commodities, when such residues result from the use of peroxyacetic acid as an antimicrobial treatment in solutions containing a diluted end use concentration of peroxyacetic acid up to 100 ppm per application on fruits, vegetables, tree nuts, cereal grains, herbs, and spices.

(b) An exemption from the requirement of a tolerance is established for residues of peroxyacetic acid, in or on all food commodities when used in sanitizing solutions containing a diluted end-use concentration of peroxyacetic acid up to 500 ppm, and applied to tableware, utensils, dishes, pipelines, tanks, vats, fillers, evaporators, pasteurizers, aseptic equipment, milking equipment, and other food processing equipment in food handling establishments including, but not limited to dairies, dairy barns, restaurants, food service operations, breweries, wineries, and beverage and food processing plants.

(c) An exemption from the requirement of a tolerance is established for residues of the biochemical pesticide peroxyacetic acid and its metabolites and degradates, including hydrogen

## § 180.1197

peroxide and acetic acid, in or on all food commodities, when used in accordance with good agricultural practices.

[74 FR 26535, June 3, 2009, as amended at 76 FR 11969, Mar. 4, 2011]

### **§ 180.1197 Hydrogen peroxide; exemption from the requirement of a tolerance.**

An exemption from the requirement of a tolerance is established for residues of hydrogen peroxide in or on all food commodities at the rate of ≤1% hydrogen peroxide per application on growing and postharvest crops.

[67 FR 41844, June 20, 2002]

### **§ 180.1198 *Gliocladium catenulatum* strain J1446; exemption from the requirement of a tolerance.**

An exemption from the requirement of a tolerance is established for residues of the microbial pesticide, *Gliocladium catenulatum* strain J1446 when used in or on all food commodities.

[63 FR 37288, July 10, 1998]

### **§ 180.1199 Lysophosphatidylethanolamine (LPE); exemption from the requirement of a tolerance.**

An exemption from the requirement of a tolerance is established for residues of the biochemical pesticide lysophosphatidylethanolamine in or on all food commodities.

[67 FR 17636, Apr. 11, 2002]

### **§ 180.1202 *Bacillus sphaericus*; exemption from the requirement of a tolerance.**

An exemption from the requirement of a tolerance is established for residues of the microbial pesticides, *Bacillus sphaericus* when used in or on all food crops.

[63 FR 48597, Sept. 11, 1998]

### **§ 180.1204 Harpin protein; exemption from the requirement of a tolerance.**

An exemption from the requirement of a tolerance is established for residues of individual harpin proteins that meet specified physiochemical and toxicological criteria when used as bio-

## 40 CFR Ch. I (7–1–24 Edition)

chemical pesticides on all food commodities to enhance plant growth, quality and yield, to improve overall plant health, and to aid in pest management. The physiochemical and toxicological criteria identifying harpin proteins are as follows:

(a) Consists of a protein less than 100 kD in size, that is acidic (pI<7.0), glycine rich (>10%), and contains no more than one cystine residue.

(b) The source(s) of genetic material encoding the protein are bacterial plant pathogens not known to be mammalian pathogens.

(c) Elicits the hypersensitive response (HR) which is characterized as rapid, localized cell death in plant tissue after infiltration of harpin into the intercellular spaces of plant leaves.

(d) Possesses a common secondary structure consisting of  $\alpha$  and  $\beta$  units that form an HR domain.

(e) Is heat stable (retains HR activity when heated to 65 °C for 20 minutes).

(f) Is readily degraded by a proteinase representative of environmental conditions (no protein fragments >3.5 kD after 15 minutes degradation with Subtilisin A).

(g) Exhibits a rat acute oral toxicity ( $LD_{50}$ ) of greater than 5,000 mg product/kg body weight.

[69 FR 24996, May 5, 2004]

### **§ 180.1205 *Beauveria bassiana* ATCC #74040; exemption from the requirements of a tolerance.**

An exemption from the requirement of a tolerance is established for residues of the insecticide *Beauveria bassiana* (ATCC #74040) in or on all food commodities when applied or used as ground and aerial foliar sprays for use only on terrestrial crops.

[64 FR 22796, Apr. 28, 1999]

### **§ 180.1206 *Aspergillus flavus* strain AF36; exemption from the requirement of a tolerance.**

An exemption from the requirement of a tolerance is established for residues of the microbial pesticide *Aspergillus flavus* strain AF36 in or on all food and feed commodities of almond;

## Environmental Protection Agency

## § 180.1219

corn, field; corn, pop; corn, sweet; cotton; fig; and pistachio when used in accordance with label directions and good agricultural practices.

| N-methyl-N-(1-oxotetradecyl) glycine .....     | 30364-51-3   |

[64 FR 68046, Dec. 6, 1999]

### § 180.1209 *Bacillus subtilis* strain QST 713 and strain QST 713 variant soil; exemption from the requirement of a tolerance.

An exemption from the requirement of a tolerance is established for residues of the microbial pesticides *Bacillus subtilis* strain QST 713 and strain QST 713 variant soil when used in or on all food commodities.

[77 FR 73937, Dec. 12, 2012]

### § 180.1210 Phosphorous acid; exemption from the requirement of a tolerance.

(a) An exemption from the requirement of a tolerance is established for residues of phosphorous acid and its ammonium, sodium and potassium salts in or on all food commodities when used as an agricultural fungicide and in or on potatoes when applied as a post-harvest treatment at 35,600 ppm or less phosphorous acid.

(b) An exemption from the requirement of a tolerance is established for residues of calcium salts of phos-

phorous acid, including its metabolites and degradates, in or on all food commodities when used as a fungicide or as a systemic acquired resistance (SAR) inducer.

[83 FR 3605, Jan. 26, 2018]

### § 180.1212 *Pseudomonas chlororaphis* Strain 63-28; exemption from the requirement of a tolerance.

An exemption from the requirement of a tolerance is established for residues of the microbial pesticide *Pseudomonas chlororaphis* Strain 63-28 in or on all food commodities.

[66 FR 53346, Oct. 22, 2001]

### § 180.1213 *Coniothyrium minitans* strain CON/M/91-08; exemption from the requirement of a tolerance.

An exemption from the requirement of a tolerance is established for residues of the microbial pesticide *Coniothyrium minitans* strain CON/M/91-08 when used in or on all food commodities.

[66 FR 16874, Mar. 28, 2001]

### § 180.1218 Indian Meal Moth Granulosis Virus; exemption from the requirement of a tolerance.

An exemption from the requirement of a tolerance is established for residues of the microbial pesticide Indian Meal Moth Granulosis Virus when used in or on all food commodities.

[68 FR 55875, Sept. 29, 2003]

### § 180.1219 Foramsulfuron; exemption from the requirement of a tolerance.

The pesticide foramsulfuron is exempted from the requirement of a tolerance in corn, field, grain/corn, field, forage/ corn, field, stover/corn, pop, grain/corn, pop, forage/corn, pop, stover; corn, sweet, forage; corn, sweet, kernel plus cob with husks removed; corn, sweet, stover when applied as a herbicide in accordance with good agricultural practices.

[74 FR 26535, June 3, 2009]

## § 180.1220

### § 180.1220 1-Methylcyclopropene; exemption from the requirement of a tolerance.

An exemption from the requirement of a tolerance is established for residues of the 1-Methylcyclopropene in or on fruits and vegetables when:

(a) Used as a post harvest plant growth regulator, *i.e.*, for the purpose of inhibiting the effects of ethylene.

(b) Applied or used outdoors for pre-harvest treatments.

[73 FR 19150, Apr. 9, 2008]

### § 180.1222 Sucrose octanoate esters; exemption from the requirement of a tolerance.

An exemption from the requirement of a tolerance is established for residues of sucrose octanoate esters [( $\alpha$ -D-glucopyranosyl- $\beta$ -D-fructofuranosyl-octanoate), mono-, di-, and triesters of sucrose octanoate] in or on all food commodities when used in accordance with good agricultural practices.

[67 FR 60152, Sept. 25, 2002]

### § 180.1223 Imazamox; exemption from the requirement of a tolerance.

The herbicide imazamox, ( $\pm$ ) 2, -[4,5-dihydro-4-methyl-4-(1-methylethyl)-5-oxo-1H-imidazol-2-yl]-5-(methoxymethyl)-3-pyridinecarboxylic acid, is exempt from the requirement of a tolerance on all food commodities when applied as a herbicide in accordance with good agricultural practices.

[68 FR 7433, Feb. 14, 2003]

### § 180.1224 *Bacillus pumilus* GB34; exemption from the requirement of a tolerance.

An exemption from the requirement of a tolerance is established for residues of the microbial pesticide *Bacillus pumilus* GB34 when used as a seed treatment in or on all food commodities. An exemption is also granted for such residues on treated but unplanted soybean seeds.

[69 FR 76625, Dec. 22, 2004]

### § 180.1225 Decanoic acid; exemption from the requirement of a tolerance.

An exemption from the requirement of a tolerance is established for residues of decanoic acid in or on all raw

## 40 CFR Ch. I (7–1–24 Edition)

agricultural commodities and in processed commodities, when such residues result from the use of decanoic acid as an antimicrobial treatment in solutions containing a diluted end-use concentration of decanoic acid (up to 170 ppm per application) on food contact surfaces such as equipment, pipelines, tanks, vats, fillers, evaporators, pasteurizers and aseptic equipment in restaurants, food service operations, dairies, breweries, wineries, beverage and food processing plants.

[68 FR 7939, Feb. 19, 2003; 68 FR 17308, Apr. 9, 2003]

### § 180.1226 *Bacillus pumilus* strain QST2808; temporary exemption from the requirement of a tolerance.

A temporary exemption from the requirement of a tolerance is established for residues of the microbial pesticide *Bacillus pumilus* strain QST2808 when used in or on all agricultural commodities when applied/used in accordance with label directions.

[68 FR 36480, June 18, 2003]

### § 180.1228 Diallyl sulfides; exemption from the requirement of a tolerance.

An exemption from the requirement of a tolerance is established for residues of diallyl sulfides when used in/on garlic, leeks, onions, and shallots.

[68 FR 40808, July 9, 2003]

### § 180.1230 Ferrous sulfate; exemption from the requirement of a tolerance.

An exemption from the requirement of a tolerance is established for residues of ferrous sulfate.

[70 FR 33363, June 8, 2005]

### § 180.1231 Lime; exemption from the requirement of a tolerance.

An exemption from the requirement of a tolerance is established for residues of lime.

[70 FR 33363, June 8, 2005]

## Environmental Protection Agency

## § 180.1245

### § 180.1232 Lime-sulfur; exemption from the requirement of a tolerance.

An exemption from the requirement of a tolerance is established for residues of lime-sulfur.

[70 FR 33363, June 8, 2005]

### § 180.1233 Potassium sorbate; exemption from the requirement of a tolerance.

An exemption from the requirement of a tolerance is established for residues of potassium sorbate.

[70 FR 33363, June 8, 2005]

### § 180.1234 Sodium carbonate; exemption from the requirement of a tolerance.

An exemption from the requirement of a tolerance is established for residues of sodium carbonate.

[70 FR 33363, June 8, 2005]

### § 180.1235 Sodium hypochlorite; exemption from the requirement of a tolerance.

An exemption from the requirement of a tolerance is established for residues of sodium hypochlorite.

[70 FR 33363, June 8, 2005]

### § 180.1236 Sulfur; exemption from the requirement of a tolerance.

An exemption from the requirement of a tolerance is established for residues of sulfur.

[70 FR 33363, June 8, 2005]

### § 180.1237 Sodium metasilicate; exemption from the requirement of a tolerance.

(a) An exemption from the requirement of a tolerance is established for residues of sodium metasilicate in or on all food commodities when used in accordance with approved label rates and good agricultural practices as a plant desiccant, so long as the sodium metasilicate does not exceed 4% by weight in aqueous solution.

(b) An exemption from the requirement of a tolerance is established for residues of sodium metasilicate in or on all food commodities when used in accordance with approved label rates and good agricultural practices as an insecticide and fungicide, so long as

the sodium metasilicate does not exceed 2.41% by weight in aqueous solution.

[71 FR 19441, Apr. 14, 2006]

### § 180.1240 Thymol; exemption from the requirement of a tolerance.

(a) An exemption from the requirement of a tolerance is established for thymol (5-methyl-2-isopropyl-1-phenol) in or on all food commodities when used in accordance with good agricultural practices.

(b) An exemption from the requirement of a tolerance for residues of the thymol (as present in thyme oil) in or on food commodities when applied/used in/on public eating places, dairy processing equipment, and/or food processing equipment and utensils.

[70 FR 37696, June 30, 2005, as amended at 71 FR 2895, Jan. 18, 2006; 74 FR 12617, Mar. 25, 2009; 87 FR 54626, Sept. 7, 2022]

### § 180.1243 *Bacillus subtilis* var. *amyloliquefaciens* strain FZB24; exemption from the requirement of a tolerance.

An exemption from the requirement of a tolerance for residues of the *Bacillus subtilis* var. *amyloliquefaciens* strain FZB24 in or on all agricultural commodities when applied/used in accordance with label directions.

[68 FR 44640, July 30, 2003]

### § 180.1244 Ammonium bicarbonate; exemption from the requirement of a tolerance.

An exemption from the requirement of tolerance is established for residues of ammonium bicarbonate used in or on all food commodities when used in accordance with good agricultural practices.

[69 FR 13745, Mar. 24, 2004]

### § 180.1245 Rhamnolipid biosurfactant; exemption from the requirement of a tolerance.

An exemption from the requirement of a tolerance is established for residues of rhamnolipid biosurfactant when used in accordance with good agricultural practices as a fungicide in or on all food commodities.

[69 FR 16800, Mar. 31, 2004]

## § 180.1246

### § 180.1246 Yeast Extract Hydrolysate from *Saccharomyces cerevisiae*; exemption from the requirement of a tolerance.

This regulation establishes an exemption from the requirement of a tolerance for residues of the biochemical pesticide Yeast Extract Hydrolysate from *Saccharomyces cerevisiae* on all food commodities when applied/used for the management of plant diseases.

[69 FR 9958, Mar. 3, 2004]

### § 180.1248 Exemption of citronellol from the requirement of a tolerance.

An exemption from the requirement of a tolerance is established for residues of the biochemical pesticide citronellol in or on all food commodities.

[69 FR 23146, Apr. 28, 2004]

### § 180.1250 C8, C10, and C12 fatty acid monoesters of glycerol and propylene glycol; exemption from the requirement of a tolerance.

The C8, C10, and C12 straight-chain fatty acid monoesters of glycerol (glycerol monocaprylate, glycerol monocaprate, and glycerol monolaurate) and propylene glycol (propylene glycol monocaprylate, propylene glycol monocaprate, and propylene glycol monolaurate) are exempt from the requirement of a tolerance in or on all food commodities when used in accordance with approved label rates and good agricultural practice.

[69 FR 34944, June 23, 2004]

### § 180.1251 Geraniol; exemption from the requirement of a tolerance.

An exemption from the requirement of a tolerance is established for residues of the biochemical pesticide geraniol in or on all food commodities.

[69 FR 23151, Apr. 28, 2004]

### § 180.1253 *Streptomyces lydicus* WYEC 108; exemption from the requirement of a tolerance.

An exemption from the requirement of a tolerance is established for residues of the microbial pesticide *Streptomyces lydicus* WYEC 108 when used in or on all agricultural commod-

## 40 CFR Ch. I (7–1–24 Edition)

ities when applied/used in accordance with label directions.

[69 FR 31301, June 3, 2004]

### § 180.1254 *Aspergillus flavus* NRRL 21882; exemption from the requirement of a tolerance.

Residues of *Aspergillus flavus* NRRL 21882 are exempt from the requirement of a tolerance in or on all food and feed commodities of almond; corn, field; corn, pop; corn, sweet; peanut; and pistachio when used in accordance with label directions and good agricultural practices.

[85 FR 60370, Sept. 25, 2020]

### § 180.1255 *Bacillus pumilus* strain QST 2808; exemption from the requirement of a tolerance.

An exemption from the requirement of a tolerance is established for residues of the microbial pesticide *Bacillus pumilus* strain QST 2808 when used in or on all agricultural commodities when applied/used in accordance with label directions.

[69 FR 63954, Nov. 3, 2004]

### § 180.1257 *Purpureocillium lilacinum* strain 251; exemption from the requirement of a tolerance.

An exemption from the requirement of a tolerance is established for residues of *Purpureocillium lilacinum* strain 251 in or on all food commodities when applied/used in accordance with label directions and good agricultural practices.

[84 FR 70022, Dec. 20, 2019]

### § 180.1258 Acetic acid; exemption from the requirement of a tolerance.

(a) An exemption from the requirement of a tolerance is established for residues of the biochemical pesticide acetic acid when used as a preservative on post-harvest agricultural commodities intended for animal feed, including Alfalfa, seed; alfalfa, hay; barley, grain; bermudagrass, hay; bluegrass, hay; brome grass, hay; clover, hay; corn, field, grain; corn, pop, grain; cowpea, hay; fescue, hay; lespedeza, hay; lupin; oat, grain; orchardgrass, hay; peanut, hay; timothy, hay; vetch, hay; and wheat, grain, or commodities described as grain or hay.

(b) An exemption from the requirement of a tolerance is established for residues of acetic acid in or on all food crops resulting from unintentional spray and drift to non-target vegetation including non-food, food and feed crops when used as a non-selective contact herbicide spray.

[75 FR 40741, July 14, 2010]

**§ 180.1259 *Reynoutria sachalinensis* extract; exemption from the requirement of a tolerance.**

Residues of the biochemical pesticide *Reynoutria sachalinensis* extract, when derived from the whole plant extract, are exempt from the requirement of a tolerance in or on all food commodities.

[70 FR 55277, Sept. 21, 2005]

**§ 180.1260 *Muscodora albus* QST 20799 and the volatiles produced on rehydration; exemption from the requirement of a tolerance.**

An exemption from the requirement of a tolerance is established on all food/feed commodities, for residues of *Muscodora albus* QST 20799, and the volatiles produced on its rehydration, when the pesticide is used for all agricultural applications, including seed, propagule and post harvest treatments.

[70 FR 56576, Sept. 28, 2005]

**§ 180.1261 *Xanthomonas campestris* pv. *vesicatoria* and *Pseudomonas syringae* pv. *tomato* specific Bacteriophages.**

An exemption from the requirement of a tolerance is established for residues of *Xanthomonas campestris* pv. *vesicatoria* and *Pseudomonas syringae* pv. *tomato* specific bacteriophages in or on pepper and tomato.

[74 FR 26536, June 3, 2009]

**§ 180.1262 Sorbitol octanoate; exemption from the requirement of a tolerance.**

An exemption from the requirement of a tolerance is established for residues of sorbitol octanoate in or on all food commodities when used in accordance with label directions.

[71 FR 4518, Jan. 27, 2006]

**§ 180.1263 Tetrahydrofurfuryl alcohol; exemption from the requirement of a tolerance.**

Tetrahydrofurfuryl alcohol (THFA, CAS Reg. No. 97-99-4) is exempt from the requirement of a tolerance in or on all raw agricultural commodities when used in accordance with good agricultural practices as an inert ingredient applied only:

- (a) For use as a seed treatment.
- (b) For applications prior to planting and at the time of planting.
- (c) For use on cotton.
- (d) For use in herbicides with one application to wheat, buckwheat, barley, oats, rye, sorghum, triticale, rice, and wild rice prior to the pre-boot stage.
- (e) For use in herbicides with two applications to field corn and popcorn up to 36 inches tall (V8 stage).
- (f) For use in herbicides with two applications to canola prior to the early bolting stage.
- (g) For use in herbicides with two applications to soybeans prior to the bloom growth stage.

[71 FR 45415, Aug. 9, 2006, as amended at 83 FR 53002, Oct. 19, 2018]

**§ 180.1267 *Pantoea agglomerans* strain C9-1; exemption from the requirement of a tolerance.**

An exemption from the requirement of a tolerance is established for residues of *Pantoea agglomerans* strain C9-1 when used on apples and pears.

[71 FR 24596, Apr. 26, 2006]

**§ 180.1268 Potassium silicate; exemption from the requirement of a tolerance.**

Potassium silicate is exempt from the requirement of a tolerance in or on all food commodities so long as the potassium silicate is not applied at rates exceeding 1% by weight in aqueous solution and when used in accordance with good agricultural practices.

[71 FR 34272, June 14, 2006]

**§ 180.1269 *Bacillus mycoides* isolate J; exemption from the requirement of a tolerance.**

An exemption from the requirement of a tolerance is established for residues of *Bacillus mycoides* isolate J in or on all agricultural commodities when

## § 180.1270

used in accordance with label directions and good agricultural practices.

[81 FR 67922, Oct. 3, 2016]

### **§ 180.1270 Isophorone; exemption from the requirement of a tolerance.**

Isophorone (CAS Reg. No. 78-59-1) is exempt from the requirement of a tolerance when used as an inert ingredient in pesticide formulations applied to beets, ginseng, rice, spinach, sugar beets, and Swiss chard.

[71 FR 45408, Aug. 9, 2006]

### **§ 180.1271 Eucalyptus oil; exemption from the requirement of a tolerance.**

An exemption from the requirement of tolerance is established for residues of eucalyptus oil in or on honey, honeycomb, and honeycomb with honey when used at 2g or less eucalyptus oil per hive, where the eucalyptus oil contains 80% or more eucalyptol.

[71 FR 53979, Sept. 13, 2006]

### **§ 180.1272 *Pantoea agglomerans* strain E325; exemption from the requirement of a tolerance.**

An exemption from the requirement of a tolerance is established for residues of *Pantoea agglomerans* strain E325 when used on apples and pears.

[71 FR 54933, Sept. 20, 2006]

### **§ 180.1273 *Beauveria bassiana* HF23; exemption from the requirement of a tolerance.**

Residues of *Beauveria bassiana* HF23 are exempt from the requirement of a tolerance on all food/feed commodities, when the pesticide is used for the treatment of chicken and livestock facilities, including the treatment of chicken and livestock manure.

[75 FR 10190, Mar. 5, 2010]

### **§ 180.1274 Tris (2-ethylhexyl) phosphate; exemption from the requirement of a tolerance.**

Tris (2-ethylhexyl) phosphate (TEHP, CAS Reg. No. 78-42-2) is exempt from the requirement of a tolerance for residues in grain, aspirated fractions; barley, grain, barley, hay, straw; wheat, grain; wheat, forage; wheat,

## 40 CFR Ch. I (7-1-24 Edition)

hay; wheat, straw when used under the following conditions:

(a) The use is in accordance with good agricultural practices;

(b) Tris (2-ethylhexyl) phosphate is used as an inert ingredient in pesticide formulations with the active ingredients pinoxaden, clodinafop-propargyl, and tralkoxydium;

(c) Tris (2-ethylhexyl) phosphate is applied no more than twice per season; and

(d) The applications occur no later than the pre-boot stage (prior to formation of edible grain).

[72 FR 5624, Feb. 7, 2007, as amended at 74 FR 26536, June 3, 2009]

### **§ 180.1275 *Pythium oligandrum* DV 74; exemption from the requirement of a tolerance.**

An exemption from the requirement of a tolerance is established on all food/feed commodities for residues of *Pythium oligandrum* DV 74 when the pesticide is used on food crops.

[81 FR 34907, June 1, 2016]

### **§ 180.1276 Tobacco mild green mosaic tobamovirus strain U2; exemption from the requirement of a tolerance.**

An exemption from the requirement of a tolerance is established for residues of *Tobacco mild green mosaic tobamovirus* strain U2 in or on all commodities of crop groups 17 and 18 when applied as a post-emergent herbicide and used in accordance with label directions and good agricultural practices.

[79 FR 75756, Dec. 19, 2014]

### **§ 180.1277 Dibasic esters; exemption from the requirement of a tolerance.**

Dibasic esters (CAS Reg. No. 95481-62-2) is exempted from the requirement of a tolerance for residues when used as an inert ingredient (solvent and/or anti-freeze) at 10% W/W or less in microencapsulated pesticide formulations with the active ingredient cyfluthrin.

[73 FR 10398, Feb. 27, 2008]

## Environmental Protection Agency

## § 180.1288

### § 180.1278 *Quillaja saponaria* extract (saponins); exemption from the requirement of a tolerance.

Residues of the biochemical pesticide *Quillaja saponaria* extract (saponins) are exempt from the requirement of a tolerance in or on all food commodities.

[72 FR 41935, Aug. 1, 2007]

### § 180.1280 Poly(hexamethylenebiguanide) hydrochloride (PHMB); exemption from the requirement of a tolerance.

Poly(hexamethylenebiguanide) hydrochloride (PHMB)(CAS Reg. No. 32289-58-0) is exempt from the requirement of a tolerance for residues of the antimicrobial in or on all food commodities when the residues are the result of the lawful application of a food contact surface sanitizer containing PHMB at 550 parts per million (ppm).

[73 FR 1517, Jan. 9, 2008]

### § 180.1281 S-Abscisic Acid, (S)-5-(1-hydroxy-2,6,6-trimethyl-4-oxo-1-cyclohex-2-enyl)-3-methyl-penta-(2Z,4E)-dienoic Acid; exemption from the requirement of a tolerance.

An exemption from the requirement of a tolerance is established for residues of S-Abscisic Acid in or on all food commodities when applied or used preharvest as a plant regulator.

[75 FR 11744, Mar. 12, 2010]

### § 180.1282 *Bacillus firmus* I-1582; exemption from the requirement of a tolerance.

An exemption from the requirement of a tolerance is established in/on all food/feed commodities, for residues of *Bacillus firmus* I-1582 when used as a soil application or seed treatment.

[73 FR 25528, May 7, 2008]

### § 180.1283 (Z)-7,8-epoxy-2-methyloctadecane (Disparlure); exemption from the requirement of a tolerance.

An exemption from the requirement of a tolerance is established for residues of (Z)-7,8-epoxy-2-methyloctadecane on all food and feed crops that occur when it is used to

treat trees, shrubs, and pastures and such use results in unintentional spray and drift to non-target vegetation including non-food, food, and feed crops. This active ingredient is also known as Disparlure.

[73 FR 33714, June 13, 2008]

### § 180.1284 Ammonium salts of higher fatty acids (C<sub>8</sub>-C<sub>18</sub> saturated; C<sub>8</sub>-C<sub>12</sub> unsaturated); exemption from the requirement of a tolerance.

Ammonium salts of C<sub>8</sub>-C<sub>18</sub> saturated and C<sub>8</sub>-C<sub>12</sub> unsaturated higher fatty acids are exempted from the requirement of a tolerance for residues in or on all food commodities when used in accordance with good agricultural practice.

[74 FR 47457, Sept. 16, 2009]

### § 180.1285 Polyoxin D zinc salt; exemption from the requirement of a tolerance.

An exemption from the requirement of a tolerance is established for the residues of polyoxin D zinc salt in or on all food commodities when applied as a fungicide and used in accordance with good agricultural practices.

[77 FR 56133, Sept. 12, 2012]

### § 180.1287 Extract of *Chenopodium ambrosioides* near *ambrosioides*; exemption from the requirement of a tolerance.

An exemption from the requirement of a tolerance is established for the residues of Extract of *Chenopodium ambrosioides* near *ambrosioides* when used as an insecticide/acaricide on all food commodities.

[74 FR 634, Jan. 7, 2009]

### § 180.1288 Tristyrylphenol ethoxylates; exemption from the requirement of a tolerance.

An exemption from the requirement of a tolerance is established for residues of poly(oxy-1,2-ethanediyl),  $\alpha$ -[2,4,6-tris(1-phenylethyl)phenyl]- $\omega$ -hydroxy-, (CAS Reg. No. 70559-25-0) and poly(oxy-1,2-ethanediyl),  $\alpha$ -[tris(1-phenylethyl)phenyl]- $\omega$ -hydroxy-, (CAS Reg. No. 99734-09-5) on citrus crops, group 10, when used as inert ingredients under the following conditions:

(a) They are applied post-harvest;

## § 180.1289

(b) They are used as inert ingredients in pesticide formulations with azoxystrobin and fludioxonil; and

(c) They constitute no more than 10.0% of the formulated pesticide product.

[74 FR 12625, Mar. 25, 2009]

### § 180.1289 *Candida oleophila* Strain O; exemption from the requirement of a tolerance.

An exemption from the requirement of a tolerance is established for the residues of the microbial pesticide, *Candida oleophila* Strain O, on apples and pears when applied/used as a post-harvest biofungicide.

[74 FR 22464, May 13, 2009]

### § 180.1290 *Pasteuria usgae*; exemption from the requirement of a tolerance.

An exemption from the requirement of a tolerance is established for residues of *Pasteuria usgae* in or on all food commodities when applied preharvest and used as a nematocide in accordance with good agricultural practices.

[75 FR 37737, June 30, 2010]

### § 180.1291 Cold pressed neem oil; exemption from the requirement of a tolerance.

Residues of the biochemical pesticide cold pressed neem oil are exempt from the requirement of a tolerance in or on all food commodities.

[74 FR 55463, Oct. 28, 2009]

### § 180.1292 *Ulocladium oudemansii* (U3 Strain); exemption from the requirement of a tolerance.

An exemption from the requirement of a tolerance is established in/on all food commodities for residues of *Ulocladium oudemansii* (U3 Strain), when applied or used pre-harvest-only, excluding applications made post-harvest or to processed commodities, as a microbial fungicide in accordance with good agricultural practices.

[74 FR 55458, Oct. 28, 2009]

### § 180.1293 *Trichoderma gamsii* strain ICC 080; exemption from the requirement of a tolerance.

*Trichoderma gamsii* strain ICC 080 is exempted from the requirement of a

## 40 CFR Ch. I (7–1–24 Edition)

tolerance in or on all food and feed commodities when applied preharvest and used in accordance with good agricultural practices.

[75 FR 8507, Feb. 25, 2010]

### § 180.1294 *Trichoderma asperellum* strain ICC 012; exemption from the requirement of a tolerance.

*Trichoderma asperellum* strain ICC 012 is exempted from the requirement of a tolerance in or on all food and feed commodities when applied pre-harvest and used in accordance with good agricultural practices.

[75 FR 9530, Mar. 3, 2010]

### § 180.1295 Laminarin; exemption from the requirement of a tolerance.

An exemption from the requirement of a tolerance is established for residues of laminarin in or on all food commodities when laminarin is applied preharvest.

[75 FR 8256, Feb. 24, 2010]

### § 180.1296 Terpene Constituents $\alpha$ -terpinene, d-limonene and p-cymene, of the Extract of *Chenopodium ambrosioides* near *ambrosioides* as Synthetically Manufactured; exemption from the requirement of a tolerance.

An exemption from the requirement of a tolerance is established for the residues of the biochemical pesticide Terpene Constituents  $\alpha$ -terpinene, d-limonene and p-cymene, of the Extract of *Chenopodium ambrosioides* near *ambrosioides* as Synthetically Manufactured when used as an insecticide/acaricide in or on all food commodities.

[75 FR 39455, July 9, 2010]

### § 180.1297 Homobrassinolide; exemption from the requirement of a tolerance.

An exemption from the requirement of a tolerance is established for the residues of homobrassinolide in or on all food commodities when applied/used as a plant growth regulator in accordance with good agricultural practices.

[75 FR 39459, July 9, 2010]

## Environmental Protection Agency

## § 180.1306

### **§ 180.1298 *Trichoderma hamatum* isolate 382; exemption from the requirement of a tolerance.**

An exemption from the requirement of a tolerance is established for residues of *Trichoderma hamatum* isolate 382 in or on all food commodities when applied as a fungicide and used in accordance with good agricultural practices.

[75 FR 43076, July 23, 2010]

### **§ 180.1299 Prohydrojasmon; exemption from the requirement of a tolerance.**

An exemption from the requirement of a tolerance is established for residues of the biochemical pesticide prohydrojasmon (PDJ), propyl-3-oxo-2-pentylcyclo-pentylacetate, when used as a plant growth regulator in or on apple and grape pre-harvest, in accordance with label directions and good agricultural practices.

[78 FR 75257, Dec. 11, 2013]

### **§ 180.1300 Potassium hypochlorite; exemption from the requirement of a tolerance.**

An exemption from the requirement of a tolerance is established for residues of potassium hypochlorite in or on all commodities.

[76 FR 11343, Mar. 2, 2011]

### **§ 180.1301 *Escherichia coli* O157:H7 specific bacteriophages; temporary exemption from the requirement of a tolerance.**

A temporary exemption from the requirement of a tolerance is established for residues of lytic bacteriophages that are specific to *Escherichia coli* O157:H7, sequence negative for shiga toxins I and II, and grown on atoxigenic host bacteria when used/applied on food contact surfaces in food processing plants in accordance with the terms of Experimental Use Permit (EUP) No. 74234-EUP-2. This temporary exemption expires on April 1, 2013.

[76 FR 20546, Apr. 13, 2011]

### **§ 180.1302 Sodium Ferric Ethylenediaminetetraacetate (EDTA); exemption from the requirement of a tolerance.**

An exemption from the requirement of a tolerance is established for resi-

dues of sodium ferric EDTA in or on all food commodities when applied as a molluscicide and used in accordance with good agricultural practices.

[76 FR 17561, Mar. 30, 2011]

### **§ 180.1303 *Metarhizium anisopliae* strain F52; exemption from the requirement of a tolerance.**

An exemption from the requirement of a tolerance is established for residues of *Metarhizium anisopliae* strain F52 in or on all food commodities when applied as an insecticide, miticide, or ixodicide and used in accordance with good agricultural practices.

[76 FR 26198, May 6, 2011]

### **§ 180.1304 *Pseudomonas fluorescens* strain CL145A; exemption from the requirement of a tolerance.**

An exemption from the requirement of a tolerance is established for residues of *Pseudomonas fluorescens* strain CL145A in or on all food commodities when applied as a molluscicide.

[76 FR 52875, Aug. 24, 2011]

### **§ 180.1305 *Chromobacterium subtsugae* strain PRAA4-1<sup>T</sup>; exemption from the requirement of a tolerance.**

An exemption from the requirement of a tolerance is established for residues of *Chromobacterium subtsugae* strain PRAA4-1<sup>T</sup> in or on all food commodities when applied as an insecticide or miticide and used in accordance with good agricultural practices.

[76 FR 55272, Sept. 7, 2011]

### **§ 180.1306 *Isaria fumosorosea* (formerly *Paecilomyces fumosoroseus*) Apopka strain 97; exemption from the requirement of a tolerance.**

An exemption from the requirement of a tolerance is established for residues of *Isaria fumosorosea* (formerly *Paecilomyces fumosoroseus*) Apopka strain 97 in or on all food commodities when applied as an insecticide or miticide and used in accordance with good agricultural practices.

[76 FR 59905, Sept. 28, 2011]

## § 180.1307

### **§ 180.1307 Bacteriophage of *Clavibacter michiganensis* subspecies *michiganensis*; exemption from the requirement of a tolerance.**

An exemption from the requirement of a tolerance is established for residues of lytic bacteriophage of *Clavibacter michiganensis* subspecies *michiganensis* produced in *Clavibacter michiganensis* subspecies *michiganensis* in or on tomato when applied as a bactericide in accordance with good agricultural practices.

[76 FR 66192, Oct. 26, 2011]

### **§ 180.1308 *Bacillus amyloliquefaciens* strain D747; exemption from the requirement of a tolerance.**

An exemption from the requirement of a tolerance is established for residues of the microbial pesticide, *Bacillus amyloliquefaciens* strain D747 in or on all food commodities when used in accordance with good agricultural practices.

[77 FR 749, Jan. 6, 2012. Redesignated at 77 FR 2911, Jan. 20, 2012]

### **§ 180.1309 *Bacillus subtilis* strain CX-9060; exemption from the requirement of a tolerance.**

An exemption from the requirement of a tolerance is established for residues of the microbial pesticide *Bacillus subtilis* strain CX-9060, in or on all food commodities, when applied or used in accordance with good agricultural practices.

[77 FR 1637, Jan. 11, 2012]

### **§ 180.1310 *Trichoderma virens* strain G-41; exemption from the requirement of a tolerance.**

An exemption from the requirement of a tolerance is established for residues of *Trichoderma virens* strain G-41, in or on all food commodities, when applied as a fungicide and used in accordance with good agricultural practices.

[77 FR 4908, Feb. 1, 2012]

### **§ 180.1311 *Pasteuria nishizawae*—Pn1; exemption from the requirement of a tolerance.**

An exemption from the requirement of a tolerance is established for residues of *Pasteuria nishizawae*—Pn1 in or

## 40 CFR Ch. I (7–1–24 Edition)

on all food commodities when applied as a nematocide and used in accordance with good agricultural practices.

[77 FR 8741, Feb. 15, 2012]

### **§ 180.1312 *Aureobasidium pullulans* strains DSM 14940 and DSM 14941; exemption from the requirement of a tolerance.**

An exemption from the requirement of a tolerance is established for residues of *Aureobasidium pullulans* strains DSM 14940 and DSM 14941 in or on all food commodities when used in accordance with label directions and good agricultural practices.

[80 FR 73662, Nov. 25, 2015]

### **§ 180.1313 *Bacillus pumilus* strain GHA 180; exemption from the requirement of a tolerance.**

An exemption from the requirement of a tolerance is established for residues of *Bacillus pumilus* strain GHA 180 in or on all food commodities when used in accordance with good agricultural practices.

[77 FR 19112, Mar. 30, 2012]

### **§ 180.1314 Killed, nonviable *Streptomyces acidiscabies* strain RL-110<sup>T</sup>; exemption from the requirement of a tolerance.**

An exemption from the requirement of a tolerance is established for residues of killed, nonviable *Streptomyces acidiscabies* strain RL-110<sup>T</sup> in or on all food commodities when applied as a pre- or post-emergent herbicide and used in accordance with good agricultural practices.

[77 FR 35295, June 13, 2012]

### **§ 180.1315 Natamycin; exemption from the requirement of a tolerance.**

An exemption from the requirement of a tolerance is established for the residues of natamycin in or on mushrooms, pineapples, citrus, pome, stone fruit crop groups, avocado, kiwi, mango, and pomegranates when used in accordance with label directions and good agricultural practices.

[81 FR 58410, Aug. 25, 2016]

## Environmental Protection Agency

## § 180.1324

### **§ 180.1316 *Pasteuria* spp. (*Rotylenchulus reniformis* nematode)—Pr3; exemption from the requirement of a tolerance.**

An exemption from the requirement of a tolerance is established for residues of *Pasteuria* spp. (*Rotylenchulus reniformis* nematode)—Pr3 in or on all food commodities when applied as a nematicide and used in accordance with label directions and good agricultural practices.

[77 FR 40276, July 9, 2012]

### **§ 180.1317 Pesticide chemicals; exemption from the requirements of a tolerance.**

An exemption from the requirement of a tolerance is established for residues of Didecyl dimethyl ammonium chloride in or on broccoli resulting from the use of Didecyl dimethyl ammonium chloride as a seed treatment at a treatment concentration of 1200 ppm prior to planting by immersion.

[77 FR 47296, Aug. 8, 2012]

### **§ 180.1318 3-decen-2-one; exemption from the requirement of a tolerance.**

An exemption from the requirement of a tolerance is established for residues of the biochemical pesticide, 3-decen-2-one, in or on potatoes when applied as a potato sprout inhibitor and used in accordance with label directions and good agricultural practices.

[78 FR 11766, Feb. 20, 2013]

### **§ 180.1319 Banda de *Lupinus albus* doce (BLAD); exemption from the requirement of a tolerance.**

An exemption from the requirement of a tolerance is established for the residues of Banda de *Lupinus albus* doce (BLAD), a naturally occurring polypeptide from the catabolism of a seed storage protein ( $\beta$ -conglutin) of sweet lupines (*Lupinus albus*), in or on all food commodities when applied as a fungicide and used in accordance with label directions and good agricultural practices.

[78 FR 17604, Mar. 22, 2013]

### **§ 180.1320 Methyl jasmonate; exemption from the requirement of a tolerance.**

An exemption from the requirement of a tolerance is established for residues of methyl jasmonate in or on all food commodities when methyl jasmonate is applied pre-harvest.

[78 FR 22794, Apr. 17, 2013]

### **§ 180.1321 Complex Polymeric Polyhydroxy Acids (CPPA); exemption from the requirement of a tolerance.**

An exemption from the requirement of a tolerance is established for residues of the pesticide complex polymeric polyhydroxy acids (CPPA) in or on all food commodities, when used in accordance with label directions and good agricultural practices.

[87 FR 29053, May 12, 2022]

### **§ 180.1322 *Bacillus pumilus* strain BU F-33; exemption from the requirement of a tolerance.**

An exemption from the requirement of a tolerance is established for residues of *Bacillus pumilus* strain BU F-33 in or on all food commodities when applied to elicit induced systemic resistance in plants and used in accordance with label directions and good agricultural practices.

[78 FR 35149, June 12, 2013]

### **§ 180.1323 Ethyl-2E,4Z-decadienoate (Pear Ester); exemption from the requirement of a tolerance.**

An exemption from the requirement of a tolerance is established for residues of the biochemical pesticide, ethyl-2E,4Z-decadienoate (pear ester), in or on all food commodities, when used in accordance with label directions and good agricultural practices.

[78 FR 53054, Aug. 28, 2013]

### **§ 180.1324 GS-omega/kappa-Hxtx-Hv1a; exemption from the requirement of a tolerance.**

An exemption from the requirement of a tolerance is established for residues of the pesticide GS-omega/kappa-

## § 180.1325

Hxtx-Hv1a in or on all food commodities when applied or used in accordance with label directions and good agricultural practices.

[79 FR 10685, Feb. 26, 2014]

### **§ 180.1325 Heat-killed *Burkholderia* spp. strain A396 cells and spent fermentation media exemption from the requirement of a tolerance.**

An exemption from the requirement of a tolerance is established for residues of heat-killed *Burkholderia* spp. strain A396 cells and spent fermentation media in or on all food commodities when applied as a biological insecticide to agricultural crops and used in accordance with label directions and good agricultural practices.

[79 FR 15704, Mar. 21, 2014]

### **§ 180.1326 *Pseudomonas fluorescens* strain D7; exemption from the requirement of a tolerance.**

An exemption from the requirement of a tolerance is established for residues of *Pseudomonas fluorescens* strain D7 in or on all food commodities when used in accordance with label directions and good agricultural practices.

[79 FR 60750, Oct. 8, 2014]

### **§ 180.1327 Tetraacetylenediamine (TAED) and its metabolite Diacetylenediamine (DAED); Exemption from the Requirement of a Tolerance.**

An exemption from the requirement of a tolerance is established for residues of the pesticide, tetraacetylenediamine (TAED), and its metabolite diacetylenediamine (DAED), in or on all food commodities, when used as a fungicide and bactericide in accordance with label directions and good agricultural practices.

[87 FR 15100, Mar. 17, 2022]

### **§ 180.1328 *Beauveria bassiana* strain ANT-03; exemption from the requirement of a tolerance.**

An exemption from the requirement of a tolerance is established for residues of *Beauveria bassiana* strain ANT-03 in or on all food commodities, when applied as a microbial insecticide and

## 40 CFR Ch. I (7–1–24 Edition)

used in accordance with label directions and good agricultural practices.

[79 FR 77396, Dec. 24, 2014]

### **§ 180.1329 *Bacillus subtilis* strain IAB/BS03, exemption from the requirement of a tolerance.**

An exemption from the requirement of a tolerance is established for residues of *Bacillus subtilis* strain IAB/BS03 in or on all food commodities when used in accordance with label directions and good agricultural practices.

[80 FR 9217, Feb. 20, 2015]

### **§ 180.1330 1-Octanol; exemption from the requirement of a tolerance.**

An exemption from the requirement of a tolerance is established for residues of 1-octanol in or on root and tuber vegetables when applied as a plant growth regulator in accordance with label directions and good agricultural practices.

[80 FR 25953, May 6, 2015]

### **§ 180.1331 *Trichoderma asperelloides* strain JM41R; exemption from the requirement of a tolerance.**

An exemption from the requirement of a tolerance is established for residues of *Trichoderma asperelloides* strain JM41R in or on all food commodities when used in accordance with label directions and good agricultural practices.

[80 FR 28203, May 18, 2015]

### **§ 180.1332 Lavandulyl senecioate; exemption from the requirement of a tolerance.**

An exemption from the requirement of a tolerance is established for residues of the arthropod pheromone, lavandulyl senecioate (5-methyl-2-(1-methylethenyl)-4-hexenyl 3-methyl-2-butanate), in or on all raw agricultural commodities when applied or used in microbeads/dispensers at a rate not to exceed 150 grams active ingredient/acre/year in accordance with good agricultural practices.

[80 FR 49171, Aug. 17, 2015]

## Environmental Protection Agency

## § 180.1341

### **§ 180.1333 Potassium Salts of Hops Beta acids; exemption from the requirement of a tolerance.**

An exemption from the requirement of a tolerance is established for residues of the biochemical potassium salts of hops beta acids in or on honey and honeycomb, when used for the control of Varroa mites in accordance with label directions and good agricultural practices.

[80 FR 63683, Oct. 21, 2015]

### **§ 180.1334 Choline Chloride; Exemption from the Requirement of a Tolerance.**

An exemption from the requirement of a tolerance is established for residues of Choline Chloride in or on all food commodities when Choline Chloride is applied pre-harvest and used in accordance with label directions and good agricultural practices.

[80 FR 78149, Dec. 16, 2015]

### **§ 180.1335 Isaria fumosorosea strain FE 9901; exemption from the requirement of a tolerance.**

An exemption from the requirement of a tolerance is established for residues of *Isaria fumosorosea* strain FE 9901 in or on all food commodities when used in accordance with label directions and good agricultural practices.

[81 FR 47311, July 21, 2016]

### **§ 180.1336 Bacillus amyloliquefaciens strain PTA-4838; exemption from the requirement of a tolerance.**

An exemption from the requirement of a tolerance is established for residues of *Bacillus amyloliquefaciens* strain PTA-4838 in or on all food commodities.

[81 FR 41222, June 24, 2016]

### **§ 180.1337 Citrus tristeza virus expressing spinach defensin proteins 2, 7, and 8; exemption from the requirement of a tolerance.**

A temporary exemption from the requirement of a tolerance is established for residues of the microbial pesticide *Citrus tristeza* virus expressing spinach defensin proteins 2, 7, and 8 (either alone or in combinations with each other) in or on the commodities listed in fruit, citrus group 10-10, when used

in accordance with the terms of Experimental Use Permit No. 88232-EUP-2. This temporary exemption from the requirement of a tolerance expires on August 31, 2023.

[85 FR 54263, Sept. 1, 2020]

### **§ 180.1338 Aspergillus flavus strains TC16F, TC35C, TC38B, and TC46G; exemptions from the requirement of a tolerance.**

Exemptions from the requirement of a tolerance are established for residues of *Aspergillus flavus* strains TC16F, TC35C, TC38B, and TC46G in or on all food and feed commodities of corn, field; corn, pop; and corn, sweet when used in accordance with label directions and good agricultural practices.

[88 FR 57900, Aug. 24, 2023]

### **§ 180.1339 Spodoptera frugiperda multiple nucleopolyhedrovirus strain 3AP2; exemption from the requirement of a tolerance.**

An exemption from the requirement of a tolerance is established for residues of *Spodoptera frugiperda* multiple nucleopolyhedrovirus strain 3AP2 in or on all food commodities when used in accordance with label directions and good agricultural practices.

[81 FR 83706, Nov. 22, 2016]

### **§ 180.1340 Muscodor albus strain SA-13 and the volatiles produced on rehydration; exemption from the requirement of a tolerance.**

An exemption from the requirement of a tolerance is established for residues of *Muscodor albus* strain SA-13 and the volatiles produced on rehydration in or on all food commodities when used in accordance with label directions and good agricultural practices.

[81 FR 86581, Dec. 1, 2016]

### **§ 180.1341 Pseudomonas chlororaphis strain AFS009; exemption from the requirement of a tolerance.**

An exemption from the requirement of a tolerance is established for residues of *Pseudomonas chlororaphis* strain AFS009 in or on all food commodities when used in accordance with label directions and good agricultural practices.

[82 FR 35122, July 28, 2017]

## § 180.1342

### **§ 180.1342 *d*-Limonene; exemption from the requirement of a tolerance.**

(a) An exemption from the requirement of a tolerance is established for residues of *d*-limonene, (4*R*)-1-methyl-4-(1-methylethenyl)cyclohexene, in or on all food commodities when applied as an herbicide in accordance with good agricultural practices.

(b) An exemption from the requirement of a tolerance is established for residues of *d*-limonene, (4*R*)-1-methyl-4-(1-methylethenyl)cyclohexene, in or on all food commodities when applied as an insecticide in kitchens and pantries.

[88 FR 46086, July 19, 2023]

### **§ 180.1343 Tartrazine; exemption from the requirement of a tolerance.**

An exemption from the requirement of a tolerance is established for residues of tartrazine (F.D.&C. Yellow No. 5 or Acid Yellow 23), in or on all food commodities when it is used as an aquatic plant control agent.

[88 FR 46086, July 19, 2023]

### **§ 180.1344 Cyclaniliprole; exemption from the requirement of a tolerance.**

An exemption from the requirement of a tolerance is established for indirect and inadvertent residues of the insecticide cyclaniliprole, including its metabolites and degradates, in or on all raw agricultural commodities not listed in paragraph (a) of § 180.694, when residues are present therein as a result of subsequent uptake by crops rotated into fields where the crops in § 180.694 (a) were treated with cyclaniliprole.

[82 FR 36095, Aug. 3, 2017]

### **§ 180.1345 1-Triacontanol; exemption from the requirement of a tolerance.**

Residues of the biochemical pesticide 1-Triacontanol are exempt from the requirement of a tolerance in or on all food commodities.

[82 FR 38852, Aug. 16, 2017]

## 40 CFR Ch. I (7–1–24 Edition)

### **§ 180.1346 1,3-Dibromo-5,5-Dimethylhydantoin; exemption from the requirement of a tolerance.**

Residues of 1,3-dibromo-5,5-dimethylhydantoin, including its metabolites and degradates, resulting from the use of 1,3-dibromo-5,5-dimethylhydantoin in antimicrobial treatment solutions of raw agricultural commodities in treatment facilities are exempt from the requirement of a tolerance.

[82 FR 57370, Dec. 5, 2017]

### **§ 180.1347 *Bacillus amyloliquefaciens* strain F727; exemption from the requirement of a tolerance.**

An exemption from the requirement of a tolerance is established for residues of *Bacillus amyloliquefaciens* strain F727 in or on all food commodities when used in accordance with label directions and good agricultural practices.

[82 FR 49747, Oct. 27, 2017]

### **§ 180.1348 *Bacillus subtilis* strain BU1814; exemption from the requirement of a tolerance.**

An exemption from the requirement of a tolerance is established for residues of *Bacillus subtilis* strain BU1814 in or on all food commodities when used in accordance with label directions and good agricultural practices.

[82 FR 57873, Dec. 8, 2017]

### **§ 180.1350 *Bacillus licheniformis* strain FMCH001; exemption from the requirement of a tolerance.**

An exemption from the requirement of a tolerance is established for residues of *Bacillus licheniformis* strain FMCH001 in or on all food commodities when used in accordance with label directions and good agricultural practices.

[83 FR 17498, Apr. 20, 2018]

### **§ 180.1351 *Bacillus subtilis* strain FMCH002; exemption from the requirement of a tolerance.**

An exemption from the requirement of a tolerance is established for residues of *Bacillus subtilis* strain FMCH002 in or on all food commodities when

## Environmental Protection Agency

## § 180.1359

used in accordance with label directions and good agricultural practices.

[83 FR 17500, Apr. 20, 2018]

### **§ 180.1352 Methyl-alpha-D-mannopyranoside (Alpha methyl mannoside); exemption from the requirement of a tolerance.**

Residues of the biochemical pesticide Methyl-alpha-D-mannopyranoside (alpha methyl mannoside) are exempt from the requirement of a tolerance in or on all raw agricultural commodities.

[83 FR 7619, Feb. 22, 2018]

### **§ 180.1353 Lipochitooligosaccharide (LCO) SP104; exemption from the requirement of a tolerance.**

Residues of the biochemical pesticide Lipochitooligosaccharide (LCO) SP104 (which has been used in accordance with label directions and good agricultural practices) are exempt from the requirement of a tolerance in or on all food commodities.

[83 FR 9442, Mar. 6, 2018]

### **§ 180.1354 Flutianil; exemption from the requirement of a tolerance.**

An exemption from the requirement of a tolerance is established for indirect and inadvertent residues of the fungicide flutianil, including its metabolites and degradates, in or on all food commodities not listed in § 180.697(a), when residues are present therein as a result of uptake by crops rotated into fields containing the crops in § 180.697(a) that were previously treated with flutianil.

[83 FR 12269, Mar. 21, 2018]

### **§ 180.1355 Duddingtonia flagrans strain IAH 1297; exemption from the requirement of a tolerance.**

An exemption from the requirement of a tolerance is established for residues of *Duddingtonia flagrans* strain IAH 1297 in or on all food commodities when used in accordance with label directions and good agricultural practices.

[83 FR 19972, May 7, 2018]

### **§ 180.1356 Extract of *Swinglea glutinosa*; exemption from the requirement of a tolerance.**

Residues of the biochemical pesticide Extract of *Swinglea glutinosa* are exempt from the requirement of a tolerance in or on all food commodities when applied pre-harvest in accordance with label directions and good agricultural practices.

[83 FR 27713, June 14, 2018]

### **§ 180.1357 Cerevisane (cell walls of *Saccharomyces cerevisiae* strain LAS117); exemption from the requirement of a tolerance.**

Residues of the biochemical pesticide cerevisane (cell walls of *Saccharomyces cerevisiae* strain LAS117) are exempt from the requirement of a tolerance in or on all food commodities, when used in accordance with label directions and good agricultural practices.

[83 FR 39375, Aug. 9, 2018]

### **§ 180.1358 *Metschnikowia fructicola* strain NRRL Y-27328; exemption from the requirement of a tolerance.**

Residues of *Metschnikowia fructicola* strain NRRL Y-27328 are exempt from the requirement of a tolerance in or on the food commodities included in the following crop groups and subgroups when this pesticide chemical is used in accordance with label directions and good agricultural practices: Fruit, stone group 12-12; Fruit, small fruit vine climbing, except fuzzy kiwifruit, subgroup 13-07F; and Berry, low growing subgroup 13-07G.

[83 FR 46117, Sept. 12, 2018]

### **§ 180.1359 Bacteriophage active against *Erwinia amylovora*; exemption from the requirement of a tolerance.**

An exemption from the requirement of a tolerance is established for residues of lytic bacteriophage active against *Erwinia amylovora* that are produced in *Erwinia amylovora* in or on apple and pear, when used in accordance with label directions and good agricultural practices.

[83 FR 46403, Sept. 13, 2018]

## § 180.1360

### **§ 180.1360 Bacteriophage active against *Xanthomonas citri* subsp. *citri*; exemption from the requirement of a tolerance.**

An exemption from the requirement of a tolerance is established for residues of lytic bacteriophage active against *Xanthomonas citri* subsp. *citri* that are produced in *Xanthomonas citri* subsp. *citri* in or on food commodities included in the fruit, citrus groups 10 and 10-10, when used in accordance with label directions and good agricultural practices.

[83 FR 46405, Sept. 13, 2018]

### **§ 180.1361 Pepino mosaic virus, strain CH2, isolate 1906; exemption from the requirement of a tolerance.**

Residues of *Pepino mosaic virus*, strain CH2, isolate 1906 are exempt from the requirement of a tolerance in or on tomato when this pesticide chemical is used in accordance with label directions and good agricultural practices.

[83 FR 46407, Sept. 13, 2018]

### **§ 180.1362 Beauveria bassiana strain PPRI 5339; exemption from the requirement of a tolerance.**

Residues of *Beauveria bassiana* strain PPRI 5339 are exempt from the requirement of a tolerance in or on all food commodities when this pesticide chemical is used in accordance with label directions and good agricultural practices.

[83 FR 47076, Sept. 18, 2018]

### **§ 180.1363 Bacillus amyloliquefaciens strain ENV503; exemption from the requirement of a tolerance.**

An exemption from the requirement of a tolerance is established for residues of *Bacillus amyloliquefaciens* strain ENV503 in or on all food commodities when used in accordance with label directions and good agricultural practices.

[83 FR 58508, Nov. 20, 2018]

### **§ 180.1364 Chlorate; exemption from the requirement of a tolerance.**

Residues of chlorate in or on tomato and cantaloupe are exempt from the requirement of a tolerance when resulting from the application of gaseous chlorine dioxide as a fungicide,

## 40 CFR Ch. I (7–1–24 Edition)

bactericide, and antimicrobial pesticide.

[83 FR 66143, Dec. 26, 2018]

### **§ 180.1365 Bacteriophage active against *Xylella fastidiosa*; exemption from the requirement of a tolerance.**

An exemption from the requirement of a tolerance is established for residues of lytic bacteriophage active against *Xylella fastidiosa* in or on all food commodities when the bacteriophage are sequenced and have sequences free of toxins and lysogenic genes and are used in accordance with label directions and good agricultural practices.

[84 FR 16791, Apr. 23, 2019]

### **§ 180.1366 24-Epibrassinolide; exemption from the requirement of a tolerance.**

Residues of the plant growth regulator 24-epibrassinolide in or on all food commodities are exempt from the requirement of a tolerance, when used in accordance with label directions and good agricultural practices.

[84 FR 27968, June 17, 2019]

### **§ 180.1367 Bacillus amyloliquefaciens subspecies plantarum strain FZB42; exemption from the requirement of a tolerance.**

An exemption from the requirement of a tolerance is established for residues of *Bacillus amyloliquefaciens* subspecies *plantarum* strain FZB42 in or on all food commodities when used in accordance with label directions and good agricultural practices.

[84 FR 28237, June 18, 2019]

### **§ 180.1368 Clonostachys rosea strain CR-7; exemption from the requirement of a tolerance.**

An exemption from the requirement of a tolerance is established for residues of *Clonostachys rosea* strain CR-7 in or on all food commodities when used in accordance with label directions and good agricultural practices.

[84 FR 40271, Aug. 14, 2019]

## Environmental Protection Agency

## § 180.1379

### **§ 180.1369 *Autographa californica* multiple nucleopolyhedrovirus strain FV#11; exemption from the requirement of a tolerance.**

An exemption from the requirement of a tolerance is established for residues of *Autographa californica* multiple nucleopolyhedrovirus strain FV#11 in or on all food commodities when used in accordance with label directions and good agricultural practices.

[84 FR 38562, Aug. 7, 2019]

### **§ 180.1370 Lipochitooolgiosaccharide (LCO) MOR116; exemption from the requirement of a tolerance.**

Residues of the plant growth regulator Lipochitooolgiosaccharide (LCO) MOR116 in or on all food commodities are exempt from the requirement of a tolerance, when used in accordance with label directions and good agricultural practices.

[84 FR 43705, Aug. 22, 2019]

### **§ 180.1371 Florpyrauxifen-benzyl; exemption from the requirement of a tolerance.**

An exemption from the requirement of a tolerance is established for residues of florpyrauxifen-benzyl, including its metabolites and degradates, in or on all food and feed commodities, when it is applied as an herbicide in accordance with good agricultural practices.

[84 FR 50766, Sept. 26, 2019]

### **§ 180.1372 Sodium lauryl sulfate; exemption from the requirement of a tolerance.**

Residues of the fungicide and miticide sodium lauryl sulfate (CAS No. 151-21-3) in or on all food commodities are exempt from the requirement of a tolerance, when used in accordance with label directions and good agricultural practices.

[84 FR 52372, Oct. 2, 2019]

### **§ 180.1373 *Chrysodeixis includens* nucleopolyhedrovirus isolate #460; exemption from the requirement of a tolerance.**

Residues of *Chrysodeixis includens* nucleopolyhedrovirus isolate #460 are exempt from the requirement of a tolerance in or on all food commodities,

when used in accordance with label directions and good agricultural practices.

[85 FR 13548, Mar. 9, 2020]

### **§ 180.1374 *Autographa californica* multiple nucleopolyhedrovirus strain R3; exemption from the requirement of a tolerance.**

Residues of *Autographa californica* multiple nucleopolyhedrovirus strain R3 are exempt from the requirement of a tolerance in or on all food commodities when used in accordance with label directions and good agricultural practices.

[85 FR 20187, Apr. 10, 2020]

### **§ 180.1375 Methyl mercaptan; exemption from the requirement of a tolerance.**

Residues of methyl mercaptan are exempt from the requirement of a tolerance in or on all food commodities, when methyl mercaptan is used as a gopher repellent in irrigation lines in accordance with label directions and good agricultural practices.

[85 FR 29633, May 18, 2020]

### **§ 180.1376 Ea peptide 91398; exemption from the requirement of a tolerance.**

An exemption from the requirement of a tolerance is established for residues of Ea peptide 91398 in or on all food commodities when used in accordance with label directions and good agricultural practices.

[85 FR 34361, June 4, 2020]

### **§ 180.1378 *Trichoderma atroviride* strain SC1; exemption from the requirement of a tolerance.**

Residues of *Trichoderma atroviride* strain SC1 are exempt from the requirement of a tolerance in or on all food commodities when used in accordance with label directions and good agricultural practices.

[85 FR 46004, July 31, 2020]

### **§ 180.1379 *Trichoderma asperellum*, strain T34; exemption from the requirement of a tolerance.**

An exemption from the requirement of a tolerance is established for residues of *Trichoderma asperellum*, strain

## § 180.1380

T34 in or on all food commodities when used in accordance with label directions and good agricultural practices.

[85 FR 60368, Sept. 25, 2020]

### § 180.1380 *Pseudomonas fluorescens* strain ACK55; exemption from the requirement of a tolerance.

Residues of *Pseudomonas fluorescens* strain ACK55 are exempt from the requirement of a tolerance in or on all food commodities when used in accordance with label directions and good agricultural practices.

[86 FR 56653, Oct. 12, 2021]

### § 180.1381 Oxalic Acid; exemption from the requirement of a tolerance.

Residues of oxalic acid in or on honey and honeycomb are exempted from the requirement of a tolerance when oxalic acid is used as a miticide in honeybee hives.

[86 FR 10835, Feb. 23, 2021]

### § 180.1382 *Purpureocillium lilacinum* strain PL11; exemption from the requirement of a tolerance.

An exemption from the requirement of a tolerance is established for residues of *Purpureocillium lilacinum* strain PL11 in or on all food commodities when used in accordance with label directions and good agricultural practices.

[86 FR 31950, June 16, 2021]

### § 180.1383 *Bacillus velezensis* strain RTI301; exemption from the requirement of a tolerance.

An exemption from the requirement of a tolerance is established for residues of *Bacillus velezensis* strain RTI301 in or on all food commodities when used in accordance with label directions and good agricultural practices.

[86 FR 34147, June 29, 2021]

### § 180.1384 *Bacillus subtilis* strain RTI477; exemption from the requirement of a tolerance.

An exemption from the requirement of a tolerance is established for residues of *Bacillus subtilis* strain RTI477 in or on all food commodities when used

## 40 CFR Ch. I (7–1–24 Edition)

in accordance with label directions and good agricultural practices.

[86 FR 34145, June 29, 2021]

### § 180.1385 *Methylobacterium populi* strain NLS0089; exemption from the requirement of a tolerance.

An exemption from the requirement of a tolerance is established for residues of *Methylobacterium populi* strain NLS0089 in or on all food commodities when used in accordance with label directions and good agricultural practices.

[86 FR 62928, Nov. 15, 2021]

### § 180.1386 *Bacillus subtilis* strain AFS032321; exemption from the requirement of a tolerance.

An exemption from the requirement of a tolerance is established for residues of *Bacillus subtilis* strain AFS032321 in or on all food commodities when used in accordance with label directions and good agricultural practices.

[87 FR 20721, Apr. 8, 2022]

### § 180.1387 *Kosakonia cowanii* strain SYM00028; exemption from the requirement of a tolerance.

An exemption from the requirement of a tolerance is established for residues of *Kosakonia cowanii* strain SYM00028 in or on all food commodities when used in accordance with label directions and good agricultural practices.

[86 FR 70982, Dec. 14, 2021]

### § 180.1388 *Bacillus subtilis* strain CH3000; exemption from the requirement of a tolerance.

An exemption from the requirement of a tolerance is established for residues of *Bacillus subtilis* strain CH3000 in or on all food commodities when used in accordance with label directions and good agricultural practices.

[87 FR 7953, Feb. 11, 2022]

### § 180.1389 *Bacillus paralicheniformis* strain CH2970; exemption from the requirement of a tolerance.

An exemption from the requirement of a tolerance is established for residues of *Bacillus paralicheniformis* strain CH2970 in or on all food commodities

## Environmental Protection Agency

## § 180.1400

when used in accordance with label directions and good agricultural practices.

[87 FR 7955, Feb. 11, 2022]

### **§ 180.1390 *Trichoderma harzianum* strain T-78; exemption from the requirement of a tolerance.**

An exemption from the requirement of a tolerance is established for residues of *Trichoderma harzianum* strain T-78 in or on all food commodities when used in accordance with label directions and good agricultural practices.

[86 FR 70980, Dec. 14, 2021]

### **§ 180.1391 *Saccharomyces cerevisiae* strain LAS02; exemption from the requirement of a tolerance.**

An exemption from the requirement of a tolerance is established for residues of *Saccharomyces cerevisiae* strain LAS02 in or on all food commodities when used in accordance with label directions and good agricultural practices.

[87 FR 5711, Feb. 2, 2022]

### **§ 180.1392 *Streptomyces* sp. strain SYM00257; exemption from the requirement of a tolerance.**

An exemption from the requirement of a tolerance is established for residues of *Streptomyces* sp. strain SYM00257 in or on all food commodities when used in accordance with label directions and good agricultural practices.

[87 FR 29058, May 12, 2022]

### **§ 180.1393 *Methylobacterium extorquens* strain NLS0042; exemption from the requirement of a tolerance.**

An exemption from the requirement of a tolerance is established for residues of *Methylobacterium extorquens* strain NLS0042 in or on all food commodities when used in accordance with label directions and good agricultural practices.

[87 FR 44002, July 25, 2022]

### **§ 180.1394 Lysate of *Willaertia magna* C2c Maky; exemption from the requirement of a tolerance.**

An exemption from the requirement of a tolerance is established for residues of the pesticide, lysate of

*Willaertia magna* C2c Maky, in or on all food commodities, when used in accordance with label directions.

[87 FR 61537, Oct. 12, 2022]

### **§ 180.1395 Eugenol; exemption from the requirement of a tolerance.**

An exemption from the requirement of a tolerance is established for eugenol (2-methoxy-4-(2-propenyl)phenol) in or on all food commodities when used in accordance with good agricultural practices.

[87 FR 56898, Sept. 16, 2022]

### **§ 180.1396 Extract of *Caesalpinia spinosa*; exemption from the requirement of a tolerance.**

An exemption from the requirement of a tolerance is established for extract of *Caesalpinia spinosa* in or on all food commodities when used in accordance with good agricultural practices.

[88 FR 993, Jan. 6, 2023]

### **§ 180.1398 Peptide Derived from Harpin Protein (PDHP) 25279; exemption from the requirement of a tolerance.**

An exemption from the requirement of a tolerance is established for residues of Peptide Derived from Harpin Protein (PDHP) 25279 in or on all food commodities when used in accordance with label directions and good agricultural practices.

[88 FR 8236, Feb. 8, 2023]

### **§ 180.1399 Bacteriophage active against *Pseudomonas syringae* pv. *syringae*; exemption from the requirement of a tolerance.**

An exemption from the requirement of a tolerance is established for residues of Bacteriophage active against *Pseudomonas syringae* pv. *syringae* in or on all food commodities when used in accordance with label directions and good agricultural practices.

[88 FR 15619, Mar. 14, 2023]

### **§ 180.1400 Bacteriophage active against *Xanthomonas arboricola* pv. *corylina*; exemption from the requirement of a tolerance.**

An exemption from the requirement of a tolerance is established for residues of Bacteriophage active against

## § 180.1401

*Xanthomonas arboricola* pv. *corylina* in or on all food commodities when used in accordance with label directions and good agricultural practices.

[88 FR 15619, Mar. 14, 2023]

### **§ 180.1401 Bacteriophage active against *Xanthomonas arboricola* pv. *juglandis*; exemption from the requirement of a tolerance.**

An exemption from the requirement of a tolerance is established for residues of Bacteriophage active against *Xanthomonas arboricola* pv. *juglandi* in or on all food commodities when used in accordance with label directions and good agricultural practices.

[88 FR 15619, Mar. 14, 2023]

### **§ 180.1402 Bacteriophage active against *Xanthomonas arboricola* pv. *pruni*; exemption from the requirement of a tolerance.**

An exemption from the requirement of a tolerance is established for residues of Bacteriophage active against *Xanthomonas arboricola* pv. *pruni* in or on all food commodities when used in accordance with label directions and good agricultural practices.

[88 FR 15619, Mar. 14, 2023]

### **§ 180.1403 Ledprona double-stranded RNA (CAS# 2433753-68-3); exemption from the requirement of a tolerance.**

An exemption from the requirement of a tolerance is established for residues of Ledprona dsRNA in or on potato when used as a foliar-applied insecticide for the selective control of Colorado potato beetle and in accordance with label directions and good agricultural practices.

[88 FR 69043, Oct. 5, 2023]

### **§ 180.1404 (2S)-5-Oxopyrrolidine-2-carboxylic Acid (L-PCA); exemption from the requirement of a tolerance.**

An exemption from the requirement of a tolerance is established for residues of the pesticide, (2S)-5-Oxopyrrolidine-2-carboxylic Acid (L-PCA) in or on all food commodities when used as a plant growth regulator

## 40 CFR Ch. I (7–1–24 Edition)

in accordance with label directions and good agricultural practices.

[88 FR 54247, Aug. 10, 2023]

### **§ 180.1405 Flg22-Bt Peptide; exemption from the requirement of a tolerance.**

An exemption from the requirement of a tolerance is established for residues of Flg22-Bt Peptide in or on all food commodities when used as a plant regulator and inducer of local and systemic resistance in accordance with label directions and good agricultural practices.

[88 FR 53809, Aug. 9, 2023]

### **§ 180.1406 U1-AGTX-Ta1b-QA protein; exemption from the requirement of a tolerance.**

An exemption from the requirement of a tolerance is established for residues of U1-AGTX-Ta1b-QA protein in or on all food commodities when used in accordance with label directions and good agricultural practices.

[89 FR 9776, Feb. 12, 2024]

## **Subpart E—Pesticide Chemicals Not Requiring a Tolerance or an Exemption From a Tolerance**

SOURCE: 66 FR 66772, Dec. 27, 2001, unless otherwise noted.

### **§ 180.2000 Scope.**

This subpart sets forth the pesticide chemicals for use in agricultural or other food-related settings for which neither a tolerance nor an exemption is deemed to be needed by EPA.

### **§ 180.2003 Definitions.**

(a) Food uses are the uses of a pesticide chemical that are likely to yield residues in food or feed crops, meat, milk, poultry or egg.

(b) Non-food uses are those uses that are not likely to yield residues in food or feed crops, meat, milk, poultry or egg.

[66 FR 66772, Dec. 27, 2001, as amended at 73 FR 60158, Oct. 10, 2008]

**Environmental Protection Agency****§ 180.2020****§ 180.2010 [Reserved]**

from the requirement of a tolerance based on EPA's determination that they are not likely to result in residues in or on food.

**§ 180.2020 Non-food determinations.**

The following pesticide chemical uses do not need a tolerance or exemption

| Pesticide Chemical                     | CAS Reg. No. | Limits                                                                              | Uses                        |
|----------------------------------------|--------------|-------------------------------------------------------------------------------------|-----------------------------|
| Methyl bromide                         | 74-83-9      | When applied as a pre-plant soil fumigant                                           | All pre-plant soil uses     |
| Potassium triiodide (KI <sub>3</sub> ) | 12298-68-9   | When applied to growing crops in foreign countries                                  | Bananas, grapes, and melons |
| Rhodamine B                            | 81-88-9      | Not to exceed 2% by weight of the formulated product and 60 ppm on the treated seed | Dye for seed treatment      |

[66 FR 66772, Dec. 27, 2001, as amended at 70 FR 40201, July 13, 2005; 71 FR 45402, Aug. 9, 2006]

## FINDING AIDS

---

A list of CFR titles, subtitles, chapters, subchapters and parts and an alphabetical list of agencies publishing in the CFR are included in the CFR Index and Finding Aids volume to the Code of Federal Regulations which is published separately and revised annually.

Table of CFR Titles and Chapters

Alphabetical List of Agencies Appearing in the CFR

List of CFR Sections Affected

## Table of CFR Titles and Chapters

(Revised as of July 1, 2024)

### Title 1—General Provisions

- I Administrative Committee of the Federal Register (Parts 1—49)
- II Office of the Federal Register (Parts 50—299)
- III Administrative Conference of the United States (Parts 300—399)
- IV Miscellaneous Agencies (Parts 400—599)
- VI National Capital Planning Commission (Parts 600—699)

### Title 2—Grants and Agreements

#### SUBTITLE A—OFFICE OF MANAGEMENT AND BUDGET GUIDANCE FOR GRANTS AND AGREEMENTS

- I Office of Management and Budget Governmentwide Guidance for Grants and Agreements (Parts 2—199)
- II Office of Management and Budget Guidance (Parts 200—299)

#### SUBTITLE B—FEDERAL AGENCY REGULATIONS FOR GRANTS AND AGREEMENTS

- III Department of Health and Human Services (Parts 300—399)
- IV Department of Agriculture (Parts 400—499)
- VI Department of State (Parts 600—699)
- VII Agency for International Development (Parts 700—799)
- VIII Department of Veterans Affairs (Parts 800—899)
- IX Department of Energy (Parts 900—999)
- X Department of the Treasury (Parts 1000—1099)
- XI Department of Defense (Parts 1100—1199)
- XII Department of Transportation (Parts 1200—1299)
- XIII Department of Commerce (Parts 1300—1399)
- XIV Department of the Interior (Parts 1400—1499)
- XV Environmental Protection Agency (Parts 1500—1599)
- XVI U.S. International Development Finance Corporation (Parts 1600—1699)
- XXVIII National Aeronautics and Space Administration (Parts 1800—1899)
- XX United States Nuclear Regulatory Commission (Parts 2000—2099)
- XXII Corporation for National and Community Service (Parts 2200—2299)
- XXIII Social Security Administration (Parts 2300—2399)
- XXIV Department of Housing and Urban Development (Parts 2400—2499)

## List of CFR Sections Affected

All changes in this volume of the Code of Federal Regulations (CFR) that were made by documents published in the FEDERAL REGISTER since January 1, 2019 are enumerated in the following list. Entries indicate the nature of the changes effected. Page numbers refer to FEDERAL REGISTER pages. The user should consult the entries for chapters, parts and subparts as well as sections for revisions.

For changes to this volume of the CFR prior to this listing, consult the annual edition of the monthly List of CFR Sections Affected (LSA). The LSA is available at [www.govinfo.gov](http://www.govinfo.gov). For changes to this volume of the CFR prior to 2001, see the “List of CFR Sections Affected, 1949–1963, 1964–1972, 1973–1985, and 1986–2000” published in 11 separate volumes. The “List of CFR Sections Affected 1986–2000” is available at [www.govinfo.gov](http://www.govinfo.gov).
