(1) With one or more propelling motors designed for moving other equipment;

(2) With one or more propelling motors designed to carry freight or passenger traffic or both; or

(3) Without propelling motors but with one or more control stands.

Locomotive engineer means any person who moves a locomotive or group of locomotives regardless of whether they are coupled to other rolling equipment except:

(1) A person who moves a locomotive or group of locomotives within the confines of a locomotive repair or servicing area as provided for in §§218.5 and 218.29(a)(1) of this chapter; or

(2) A person who moves a locomotive or group of locomotives for distances of less than 100 feet and this incidental movement of a locomotive or locomotives is for inspection or maintenance purposes.

Locomotive engineer certificate means a certificate issued pursuant to part 240 of this chapter.

Main track means a track upon which the operation of trains is governed by one or more of the following methods of operation: Timetable; mandatory directive; signal indication; or any form of absolute or manual block system.

Medical examiner means a person licensed as a doctor of medicine or doctor of osteopathy. A medical examiner can be a qualified full-time salaried employee of a railroad, a qualified practitioner who contracts with the railroad on a fee-for-service or other

basis, or a qualified practitioner designated by the railroad to perform functions in connection with medical evaluations of employees. As used in this rule, the medical examiner owes a duty to make an honest and fully informed evaluation of the condition of an employee.

On-the-job training means job training that occurs in the workplace, *i.e.*, the employee learns the job while doing the job.

Passenger conductor means a conductor who has also received emergency preparedness training under part 239 of this chapter. *See also* the definition of ''conductor'' in this section.

Person means an entity of any type covered under 1 U.S.C. 1, including but not limited to the following: A railroad; a manager, supervisor, official, or other employee or agent of a railroad; any owner, manufacturer, lessor, or lessee of railroad equipment, track, or facilities; any independent contractor providing goods or services to a railroad; and any employee of such owner, manufacturer, lessor, lessee, or independent contractor.

Physical characteristics means the actual track profile of and physical location for points within a specific yard or route that affect the movement of a locomotive or train. *Physical characteristics* includes both *main track physical characteristics* (see definition of ''main track'' in this section) and other than main track physical characteristics.

Plant railroad means a plant or installation that owns or leases a locomotive, uses that locomotive to switch cars throughout the plant or installation, and is moving goods solely for use in the facility's own industrial processes. The plant or installation could include track immediately adjacent to the plant or installation if the plant railroad leases the track from the general system railroad and the lease provides for (and actual practice entails) the exclusive use of that trackage by the plant railroad and the general system railroad for purposes of moving only cars shipped to or from the plant. A plant or installation that operates a locomotive to switch or move cars for other entities, even if solely within the confines of the plant or installation, rather than for its own purposes or industrial processes, will not be considered a plant railroad because the performance of such activity makes the operation part of the general railroad system of transportation.

Qualified means a person who has successfully completed all instruction, training and examination programs required by the employer, and the applicable parts of this chapter and that the person therefore may reasonably be expected to be proficient on all safety related tasks the person is assigned to perform.

Qualified instructor means a person who has demonstrated, pursuant to the railroad's written program, an adequate knowledge of the subjects under instruction and, where applicable, has the necessary operating experience to effectively instruct in the field, and has the following qualifications:

(1) Is a certified conductor under this part; and

(2) Has been selected as such by a designated railroad officer, in concurrence with the designated employee representative, where present; or

(3) In absence of concurrence provided in paragraph (2) of this definition, has a minimum of 12 months service working as a train service employee.

If a railroad does not have designated employee representation, then a person employed by the railroad need not comply with paragraphs (2) or (3) of this definition to be a *qualified instructor*.

Railroad means any form of nonhighway ground transportation that runs on rails or electromagnetic guideways and any entity providing such transportation, including:

(1) Commuter or other short-haul railroad passenger service in a metropolitan or suburban area and commuter railroad service that was operated by the Consolidated Rail Corporation on January 1, 1979; and

(2) High speed ground transportation systems that connect metropolitan areas, without regard to whether those systems use new technologies not associated with traditional railroads; but does not include rapid transit operations in an urban area that are not connected to the general railroad system of transportation.

Railroad officer means any supervisory employee of a railroad.

Railroad rolling stock is on-track equipment that is either a ''railroad freight car'' (as defined in § 215.5 of this chapter) or a ''passenger car'' (as defined in § 238.5 of this chapter).

Remote control operator (RCO) means a certified locomotive engineer, as defined in § 240.7 of this chapter, certified by a railroad to operate remote control locomotives pursuant to § 240.107 of this chapter.

Roadway maintenance equipment is on-track equipment powered by any means of energy other than hand power which is used in conjunction with maintenance, repair, construction or inspection of track, bridges, roadway, signal, communications, or electric traction systems.

Serve or *service,* in the context of serving documents, has the meaning given in Rule 5 of the Federal Rules of Civil Procedure as amended. Similarly, the computation of time provisions in Rule 6 of the Federal Rules of Civil Procedure as amended are also applicable in this part. *See also* the definition of ''filing'' in this section.

Specialized roadway maintenance equipment is roadway maintenance equipment that does not have the capability to move railroad rolling stock. Any alteration of such equipment that enables it to move railroad rolling stock will require that the equipment be treated as a dual purpose vehicle.

Substance abuse disorder refers to a psychological or physical dependence on alcohol or a drug, or another identifiable and treatable mental or physical disorder involving the abuse of alcohol or drugs as a primary manifestation. A substance abuse disorder is ''active'' within the meaning of this part if the person is currently using alcohol or other drugs, except under medical supervision consistent with the restrictions described in § 219.103 of this chapter or has failed to complete primary treatment successfully or participate in aftercare successfully as directed by a DAC or SAP.

Substance Abuse Professional (SAP) means a person who meets the qualifications of a substance abuse professional, as provided in part 40 of this title.

Territorial qualifications means possessing the necessary knowledge concerning a railroad's operating rules and timetable special instructions including familiarity with applicable *main track and other than main track physical characteristics* of the territory over which the locomotive or train movement will occur.

Tourist, scenic, historic, or excursion operations that are not part of the general railroad system of transportation means a tourist, scenic, historic, or excursion operation conducted only on track used exclusively for that purpose (*i.e.*, there is no freight, intercity passenger, or commuter passenger railroad operation on the track).

[76 FR 69841, Nov. 9, 2011, as amended at 85 FR 81324, Dec. 15, 2020]

§ 242.9 Waivers.

(a) A person subject to a requirement of this part may petition the Administrator for a waiver of compliance with such requirement. The filing of such a petition does not affect that person's responsibility for compliance with that requirement while the petition is being considered.

(b) Each petition for a waiver under this section must be filed in the manner and contain the information required by part 211 of this chapter.

(c) If the Administrator finds that a waiver of compliance is in the public interest and is consistent with railroad safety, the Administrator may grant the waiver subject to any conditions the Administrator deems necessary.

§ 242.11 Penalties and consequences for noncompliance.

(a) A person who violates any requirement of this part or causes the violation of any such requirement is subject to a civil penalty of at least $1,086 and not more than $35,516 per violation, except that: Penalties may be assessed against individuals only for willful violations, and, where a grossly negligent violation or a pattern of repeated violations has created an imminent hazard of death or injury to persons, or has caused death or injury, a penalty not to exceed $142,063 per violation may be assessed. Each day a violation continues shall constitute a separate offense. *See* FRA's website at

www.fra.dot.gov for a statement of agency civil penalty policy.

(b) A person who violates any requirement of this part or causes the violation of any such requirement may be subject to disqualification from all safety-sensitive service in accordance with part 209 of this chapter.

(c) A person who knowingly and willfully falsifies a record or report required by this part may be subject to criminal penalties under 49 U.S.C. 21311.

(d) In addition to the enforcement methods referred to in paragraphs (a), (b), and (c) of this section, FRA may also address violations of this part by use of the emergency order, compliance order, and/or injunctive provisions of the Federal rail safety laws.

[76 FR 69841, Nov. 9, 2011, as amended at 77 FR 24423, Apr. 24, 2012; 81 FR 43113, July 1, 2016; 82 FR 16135, Apr. 3, 2017; 83 FR 60750, Nov. 27, 2018; 84 FR 23737, May 23, 2019; 84 FR 37075, July 31, 2019; 86 FR 1760, Jan. 11, 2021; 86 FR 23256, May 3, 2021; 87 FR 15870, Mar. 21, 2022; 88 FR 1129, Jan. 6, 2023; 88 FR 89564, Dec. 28, 2023]

§ 242.13 Information collection requirements.

(a) The information collection requirements of this Part are being reviewed by the Office of Management and Budget pursuant to the Paperwork Reduction Act of 1980 (44 U.S.C. 3501 *et seq.*) and have not yet been assigned an OMB control number.

(b) The information collection requirements are found in the following sections: §§ 242.9, 242.101, 242.103, 242.105, 242.107, 242.109, 242.111, 242.113, 242.115, 242.117, 242.119, 242.121, 242.123, 242.125, 242.127, 242.203, 242.205, 242.209, 242.211, 242.213, 242.215, 242.301, 242.401, 242.403, 242.405, and 242.407.

Subpart B—Program and Eligibility Requirements

§ 242.101 Certification program required.

(a) After the pertinent date specified in § 242.105(d) or (e), each railroad shall have a certification program approved in accordance with § 242.103 that includes:

(1) A designation of the types of service that it determines will be used in compliance with the criteria established in § 242.107;

(2) A procedure for evaluating prior safety conduct that complies with the criteria established in § 242.109;

(3) A procedure for evaluating visual and hearing acuity that complies with the criteria established in § 242.117;

(4) A procedure for training that complies with the criteria established in § 242.119;

(5) A procedure for knowledge testing that complies with the criteria established in § 242.121; and

(6) A procedure for monitoring operational performance that complies with the criteria established in § 242.123.

(b) [Reserved]

§ 242.103 Approval of design of individual railroad programs by FRA.

(a) Each railroad shall submit its written certification program and request for approval in accordance with the procedures contained in appendix B of this part according to the following schedule:

(1) A Class I railroad (including the National Railroad Passenger Corporation), Class II railroad, or railroad providing commuter service shall submit a program no later than September 30, 2012; and

(2) A Class III railroad (including a switching and terminal or other railroad not otherwise classified) shall submit a program no later than January 31, 2013.

(b) A railroad commencing operations after the pertinent date specified in paragraph (a) of this section shall submit its written certification program and request for approval in accordance with the procedures contained in appendix B to this part at least 60 days prior to commencing operations. The primary method for a railroad's submission is by email to *FRAOPCERTPROG@dot.gov*. For those railroads that are unable to send the program by email, the program may be sent to the Associate Administrator for Railroad Safety/Chief Safety Officer, Federal Railroad Administration, 1200 New Jersey Avenue SE, Washington, DC 20590.

(c) Each railroad shall:

(1) Simultaneous with its filing with FRA, provide a copy of the submission filed pursuant to paragraph (a) or (b) of this section, a resubmission filed pursuant to paragraph (h) of this section, or a material modification filed pursuant to paragraph (i) of this section to the president of each labor organization that represents the railroad's employees subject to this part; and

(2) Include in its submission filed pursuant to paragraph (a) or (b) of this section, a resubmission filed pursuant to paragraph (h) of this section, or a material modification filed pursuant to paragraph (i) of this section a statement affirming that the railroad has provided a copy to the president of each labor organization that represents the railroad's employees subject to this part, together with a list of the names and addresses of persons provided a copy.

(d) Not later than 45 days from the date of filing a submission pursuant to paragraph (a) or (b) of this section, a resubmission pursuant to paragraph (h) of this section, or a material modification pursuant to paragraph (i) of this section, any designated representative of railroad employees subject to this part may comment on the submission, resubmission, or material modification:

(1) Each comment shall set forth specifically the basis upon which it is made, and contain a concise statement of the interest of the commenter in the proceeding;

(2) Each comment shall be submitted by email to *FRAOPCERTPROG@dot.gov* or by mail to the Associate Administrator for Railroad Safety/Chief Safety Officer, FRA, 1200 New Jersey Avenue SE, Washington, DC 20590; and

(3) The commenter shall affirm that a copy of the comment was provided to the railroad.

(e) The submission required by paragraph (a) or (b) of this section shall state the railroad's election either:

(1) To accept responsibility for the training of conductors and thereby obtain authority for that railroad to initially certify a person as a conductor in an appropriate type of service; or

(2) To recertify only conductors previously certified by other railroads.

(f) A railroad that elects to accept responsibility for the training of conductors shall state in its submission whether it will conduct the training program or employ a training program conducted by some other entity on its behalf but adopted and ratified by that railroad.

(g) A railroad's program is considered approved and may be implemented 30 days after the required filing date (or the actual filing date) unless the Administrator notifies the railroad in writing that the program does not conform to the criteria set forth in this part.

(1) If the Administrator determines that the program does not conform, the Administrator will inform the railroad of the specific deficiencies.

(2) If the Administrator informs the railroad of deficiencies more than 30 days after the initial filing date, the original program may remain in effect until 30 days after approval of the revised program is received so long as the railroad has complied with the requirements of paragraph (h) of this section.

(h) A railroad shall resubmit its program within 30 days after the date of such notice of deficiencies. A failure to resubmit the program with the necessary revisions will be considered a failure to implement a program under this part.

(1) The Administrator will inform the railroad in writing whether its revised program conforms to this part.

(2) If the program does not conform, the railroad shall resubmit its program.

(i) A railroad that intends to materially modify its program after receiving initial FRA approval shall submit a description of how it intends to modify the program in conformity with the specific requirements of this part at least 60 days prior to implementing such a change.

(1) A modification is material if it would affect the program's conformance with this part.

(2) The modification submission shall contain a description that conforms to the pertinent portion of the procedures contained in appendix B of this part.

(3) The modification submission will be handled in accordance with the procedures of paragraphs (g) and (h) of this

section as though it were a new program.

[76 FR 69841, Nov. 9, 2011, as amended at 77 FR 6491, Feb. 8, 2012; 85 FR 81324, Dec. 15, 2020]

§ 242.105 Schedule for implementation.

(a) By September 1, 2012, each railroad shall:

(1) In writing, designate as certified conductors all persons authorized by the railroad to perform the duties of a conductor as of January 1, 2012; and

(2) Issue a certificate that complies with § 242.207 to each person that it designates.

(b) After September 1, 2012, each railroad shall:

(1) In writing, designate as a certified conductor any person who has been authorized by the railroad to perform the duties of a conductor between January 1, 2012 and the pertinent date in paragraph (d) or (e) of this section; and

(2) Issue a certificate that complies with § 242.207 to each person that it designates.

(c) No railroad shall permit or require a person, designated as a certified conductor under the provisions of paragraph (a) or (b) of this section, to perform service as a certified conductor for more than a 36-month period beginning on the pertinent date for compliance with the mandatory procedures for testing and evaluation set forth in the applicable provisions of paragraph (d) or (e) of this section unless that person has been certified in accordance with procedures that comply with subpart B of this part.

(1) Except as provided in paragraph (c)(3) of this section, a person who has been designated as a certified conductor under the provisions of paragraph (a) or (b) of this section and who is eligible to receive a retirement pension in accordance with the terms of an applicable agreement or in accordance with the terms of the Railroad Retirement Act (45 U.S.C. 231) within 36 months from the pertinent date for compliance with the mandatory procedures for testing and evaluation set forth in the applicable provisions of paragraph (d) or (e) of this section, may request, in writing, that a railroad not recertify that person, pursuant to subpart B of this part, until 36 months from the pertinent date for compliance with the mandatory procedures for testing and evaluation set forth in the applicable provisions of paragraph (d) or (e) of this section.

(2) Upon receipt of a written request pursuant to paragraph (c)(1) of this section, a railroad may wait to recertify the person making the request until the end of the 36-month period described in paragraph (c) of this section. If a railroad grants any request, it must grant the request of all eligible persons to every extent possible.

(3) A person who is subject to recertification under part 240 of this chapter may not make a request pursuant to paragraph (c)(1) of this section.

(d) After December 1, 2012, no Class I railroad (including the National Railroad Passenger Corporation), Class II railroad, or railroad providing commuter service shall initially certify or recertify a person as a conductor unless that person has been tested and evaluated in accordance with procedures that comply with subpart B of this part and issued a certificate that complies with § 242.207.

(e) After April 1, 2013, no Class III railroad (including a switching and terminal or other railroad not otherwise classified) shall initially certify or recertify a person as a conductor unless that person has been tested and evaluated in accordance with procedures that comply with subpart B of this part and issued a certificate that complies with § 242.207.

(f) After the applicable dates specified in paragraphs (d) and (e) of this section, no person shall serve as a conductor in any type of service and no railroad shall require or permit any person to serve as a conductor in any type of service unless that person has been tested and evaluated in accordance with procedures that comply with subpart B of this part and issued a certificate that complies with § 242.207.

[76 FR 69841, Nov. 9, 2011, as amended at 77 FR 6491, Feb. 8, 2012]

§ 242.107 Types of service.

(a) Each railroad's program shall state which of the two types of service (conductor and passenger conductor), provided for in paragraph (b) of this section, that it will cover.

(b) A railroad may issue certificates for either of the following types of service:

(1) Conductor; and

(2) Passenger conductor.

(c) A railroad shall not reclassify the certification of any type of certified conductor to a different type of conductor certification during the period in which the certification is otherwise valid except when a conductor completes the emergency training identified in part 239 of this chapter and is certified as a passenger conductor.

(d) Each railroad is authorized to impose additional conditions or operational restrictions on the service a conductor may perform beyond those identified in this section provided those conditions or restrictions are not inconsistent with this part.

§ 242.109 Determinations required for certification and recertification.

(a) After the pertinent date specified in § 242.105(d) or (e), each railroad, prior to initially certifying or recertifying any person as a conductor, shall, in accordance with its FRA-approved program, determine in writing that:

(1) The individual meets the eligibility requirements of §§ 242.111, 242.113, 242.115, and 242.403; and

(2) The individual meets the vision and hearing acuity standards of § 242.117 (''Vision and hearing acuity'');

(3) The individual has the necessary knowledge, as demonstrated by successfully completing a test that meets the requirements of § 242.121 (''Knowledge testing''); and

(4) Where a person has not previously been certified, that the person has completed a training program that meets the requirements of § 242.119 (''Training'').

(b) When evaluating a person's prior safety conduct, a railroad shall not consider information concerning prior conduct that:

(1) Occurred prior to the effective date of this rule; or

(2) Occurred at a time other than that specifically provided for in §§ 242.111, 242.115 or 242.403.

(c) In order to make the determination required under paragraph (a) of this section, a railroad shall have on file documents pertinent to those determinations.

(d) A railroad's program shall provide a candidate for certification or recertification a reasonable opportunity to review and comment in writing on any record which contains information concerning the person's prior safety conduct, including information pertinent to determinations required under § 242.115, if the railroad believes the record contains information that could be sufficient to render the person ineligible for certification under this subpart.

(e) The opportunity for comment shall be afforded to the person prior to the railroad's rendering its eligibility decision based on that information. Any responsive comment furnished shall be retained by the railroad in accordance with § 242.203.

(f) The program shall include a method for a person to advise the railroad that he or she has never been a railroad employee or obtained a license to drive a motor vehicle. Nothing in this section shall be construed as imposing a duty or requirement that a person have prior railroad employment experience or obtain a motor vehicle driver's license in order to become a certified conductor.

(g) Nothing in this section, § 242.111 or § 242.113 shall be construed to prevent persons subject to this part from entering into an agreement that results in a railroad's obtaining the information needed for compliance with this subpart in a different manner than that prescribed in § 242.111 or § 242.113.

§ 242.111 Prior safety conduct as motor vehicle operator.

(a) Each railroad shall adopt and comply with a program meeting the requirements of this section. When any person (including, but not limited to, each railroad, railroad officer, supervisor, and employee) violates any requirement of a program which complies with the requirements of this section, that person shall be considered to have violated the requirements of this section.

(b) Except as provided in paragraphs (c), (d), (e), and (f) of this section, after the pertinent date specified in § 242.105(d) or (e), each railroad, prior to

initially certifying or recertifying any person as a conductor for any type of service, shall determine that the person meets the eligibility requirements of this section involving prior conduct as a motor vehicle operator.

(c) A railroad shall initially certify a person as a conductor for 60 days if the person:

(1) Requested the information required by paragraph (h) of this section at least 60 days prior to the date of the decision to certify that person; and

(2) Otherwise meets the eligibility requirements provided in § 242.109.

(d) A railroad shall recertify a person as a conductor for 60 days from the expiration date of that person's certification if the person:

(1) Requested the information required by paragraph (h) of this section at least 60 days prior to the date of the decision to recertify that person; and

(2) Otherwise meets the eligibility requirements provided in § 242.109.

(e) Except as provided in paragraph (f) of this section, if a railroad who certified or recertified a person pursuant to paragraph (c) or (d) of this section does not obtain and evaluate the information required pursuant to paragraph (h) of this section within 60 days of the pertinent dates identified in paragraph (c) or (d) of this section, that person will be ineligible to perform as a conductor until the information can be evaluated.

(f) If a person requests the information required pursuant to paragraph (h) of this section but is unable to obtain it, that person or the railroad certifying or recertifying that person may petition for a waiver of the requirements of paragraph (b) of this section in accordance with the provisions of part 211 of this chapter. A railroad shall certify or recertify a person during the pendency of the waiver request if the person otherwise meets the eligibility requirements provided in § 242.109.

(g) *Individual's duty.* Except for persons designated as conductors under § 242.105(a) or (b) or for persons covered by § 242.109(f), each person seeking certification or recertification under this part shall, within 366 days preceding the date of the railroad's decision on certification or recertification:

(1) Take the actions required by paragraphs (h) through (j) of this section to make information concerning his or her driving record available to the railroad that is considering such certification or recertification; and

(2) Take any additional actions, including providing any necessary consent required by State, Federal, or foreign law to make information concerning his or her driving record available to that railroad.

(h) Each person seeking certification or recertification under this part shall request, in writing, that the chief of each driver licensing agency identified in paragraph (i) of this section provide a copy of that agency's available information concerning his or her driving record to the railroad that is considering such certification or recertification.

(i) Each person shall request the information required under paragraph (h) of this section from:

(1) The chief of the driver licensing agency of any jurisdiction, including a state or foreign country, which last issued that person a driver's license; and

(2) The chief of the driver licensing agency of any other jurisdiction, including states or foreign countries, that issued or reissued the person a driver's license within the preceding five years.

(j) If advised by the railroad that a driver licensing agency has informed the railroad that additional information concerning that person's driving history may exist in the files of a state agency or foreign country not previously contacted in accordance with this section, such person shall:

(1) Request in writing that the chief of the driver licensing agency which compiled the information provide a copy of the available information to the prospective certifying railroad; and

(2) Take any additional action required by State, Federal, or foreign law to obtain that additional information.

(k) Any person who has never obtained a motor vehicle driving license is not required to comply with the provisions of paragraph (h) of this section but shall notify the railroad of that fact in accordance with procedures of

the railroad that comply with § 242.109(f).

(l) Each certified conductor or person seeking initial certification shall report motor vehicle incidents described in paragraphs (n)(1) and (2) of this section to the employing railroad within 48 hours of being convicted for, or completed state action to cancel, revoke, suspend, or deny a motor vehicle drivers license for, such violations. For purposes of this paragraph and paragraph (n) of this section, ''state action'' means action of the jurisdiction that has issued the motor vehicle driver's license, including a foreign country. For the purposes of conductor certification, no railroad shall require reporting earlier than 48 hours after the conviction, or completed state action to cancel, revoke, or deny a motor vehicle drivers license.

(m) *Evaluation of record.* When evaluating a person's motor vehicle driving record, a railroad shall not consider information concerning motor vehicle driving incidents that occurred:

(1) Prior to the effective date of this rule;

(2) More than 36 months before the month in which the railroad is making its certification decision; or

(3) At a time other than that specifically provided for in §§ 242.111, 242.115, or 242.403.

(n) A railroad shall only consider information concerning the following types of motor vehicle incidents:

(1) A conviction for, or completed state action to cancel, revoke, suspend, or deny a motor vehicle drivers license for, operating a motor vehicle while under the influence of or impaired by alcohol or a controlled substance; or

(2) A conviction for, or completed state action to cancel, revoke, suspend, or deny a motor vehicle driver's license for, refusal to undergo such testing as is required by State or foreign law when a law enforcement official seeks to determine whether a person is operating a vehicle while under the influence of alcohol or a controlled substance.

(o) If such an incident is identified:

(1) The railroad shall provide the data to the railroad's DAC, together with any information concerning the person's railroad service record, and shall refer the person for evaluation to determine if the person has an active substance abuse disorder;

(2) The person shall cooperate in the evaluation and shall provide any requested records of prior counseling or treatment for review exclusively by the DAC in the context of such evaluation; and

(3) If the person is evaluated as not currently affected by an active substance abuse disorder, the subject data shall not be considered further with respect to certification. However, the railroad shall, on recommendation of the DAC, condition certification upon participation in any needed aftercare and/or follow-up testing for alcohol or drugs deemed necessary by the DAC consistent with the technical standards specified in § 242.115(f)(3).

(4) If the person is evaluated as currently affected by an active substance abuse disorder, the provisions of § 242.115(d) will apply.

(5) If the person fails to comply with the requirements of paragraph (o)(2) of this section, the person shall be ineligible to perform as a conductor until such time as the person complies with the requirements.

§ 242.113 Prior safety conduct as an employee of a different railroad.

(a) Each railroad shall adopt and comply with a program which complies with the requirements of this section. When any person including, but not limited to, each railroad, railroad officer, supervisor, and employee violates any requirement of a program which complies with the requirements of this section, that person shall be considered to have violated the requirements of this section.

(b) After the pertinent date specified in § 242.105(d) or (e), each railroad, prior to initially certifying or recertifying any person as a conductor for any type of service, shall determine that the person meets the eligibility requirements of this section.

(c) Except for persons designated as conductors under § 242.105(a) or (b) or for persons covered by § 242.109(f), each person seeking certification or recertification under this part shall, within

366 days preceding the date of the railroad's decision on certification or recertification:

(1) Request, in writing, that the chief operating officer or other appropriate person of the former employing railroad provide a copy of that railroad's available information concerning his or her service record pertaining to compliance or non-compliance with §§ 242.111, 242.115, and 242.403 to the railroad that is considering such certification or recertification; and

(2) Take any additional actions, including providing any necessary consent required by State or Federal law to make information concerning his or her service record available to that railroad.

§ 242.115 Substance abuse disorders and alcohol drug rules compliance.

(a) Each railroad shall adopt and comply with a program which complies with the requirements of this section. When any person, including, but not limited to, each railroad, railroad officer, supervisor, and employee, violates any requirement of a program which complies with the requirements of this section, that person shall be considered to have violated the requirements of this section.

(b) After the pertinent date specified in § 242.105(d) or (e), each railroad, prior to initially certifying or recertifying any person as a conductor for any type of service, shall determine that the person meets the eligibility requirements of this section.

(c) In order to make the determination required under paragraph (d) of this section, a railroad shall have on file documents pertinent to that determination, including a written document from its DAC which states his or her professional opinion that the person has been evaluated as not currently affected by a substance abuse disorder or that the person has been evaluated as affected by an active substance abuse disorder.

(d) *Fitness requirement.* (1) A person who has an active substance abuse disorder shall be denied certification or recertification as a conductor.

(2) Except as provided in paragraph (g) of this section, a certified conductor who is determined to have an active substance abuse disorder shall be ineligible to hold certification. Consistent with other provisions of this part, certification may be reinstated as provided in paragraph (f) of this section.

(3) In the case of a current employee of the railroad evaluated as having an active substance abuse disorder (including a person identified under the procedures of § 242.111), the employee may, if otherwise eligible, voluntarily self-refer for substance abuse counseling or treatment under the policy required by § 219.403 of this chapter; and the railroad shall then treat the substance abuse evaluation as confidential except with respect to ineligibility for certification.

(e) *Prior alcohol/drug conduct; Federal rule compliance.* (1) In determining whether a person may be or remain certified as a conductor, a railroad shall consider conduct described in paragraph (e)(2) of this section that occurred within a period of 60 consecutive months prior to the review. A review of certification shall be initiated promptly upon the occurrence and documentation of any incident of conduct described in this paragraph.

(2) A railroad shall consider any violation of § 219.101 or § 219.102 of this chapter and any refusal to provide a breath or body fluid sample for testing under the requirements of part 219 of this chapter when instructed to do so by a railroad representative.

(3) A period of ineligibility described in this section shall begin:

(i) For a person not currently certified, on the date of the railroad's written determination that the most recent incident has occurred; or

(ii) For a person currently certified, on the date of the railroad's notification to the person that recertification has been denied or certification has been revoked; and

(4) The period of ineligibility described in this section shall be determined in accordance with the following standards:

(i) In the case of a single violation of § 219.102 of this chapter, the person shall be ineligible to hold a certificate during evaluation and any required primary treatment as described in paragraph (f) of this section. In the case of

two violations of § 219.102 of this chapter, the person shall be ineligible to hold a certificate for a period of two years. In the case of more than two such violations, the person shall be ineligible to hold a certificate for a period of five years.

(ii) In the case of one violation of § 219.102 of this chapter and one violation of § 219.101 of this chapter, the person shall be ineligible to hold a certificate for a period of three years.

(iii) In the case of one violation of § 219.101 of this chapter, the person shall be ineligible to hold a certificate for a period of 9 months (unless identification of the violation was through a qualifying ''co-worker report'' as described in § 219.405 of this chapter and the conductor waives investigation, in which case the certificate shall be deemed suspended during evaluation and any required primary treatment as described in paragraph (f)). In the case of two or more violations of § 219.101 of this chapter, the person shall be ineligible to hold a certificate for a period of five years.

(iv) A refusal to provide a breath or body fluid sample for testing under the requirements of part 219 of this chapter when instructed to do so by a railroad representative shall be treated, for purposes of ineligibility under this paragraph, in the same manner as a violation of:

(A) Section 219.102 of this chapter, in the case of a refusal to provide a body fluid specimen for testing; or

(B) Section 219.101 of this chapter, in the case of a refusal to provide a breath sample for alcohol testing or a blood specimen for mandatory post-accident toxicological testing.

(f) *Future eligibility to hold certificate following alcohol/drug violation.* The following requirements apply to a person who has been denied certification or who has had certification suspended or revoked as a result of conduct described in paragraph (e) of this section:

(1) The person shall not be eligible for grant or reinstatement of the certificate unless and until the person has:

(i) Been evaluated by a SAP to determine if the person currently has an active substance abuse disorder;

(ii) Successfully completed any program of counseling or treatment determined to be necessary by the SAP prior to return to service; and

(iii) In accordance with the testing procedures of subpart H of part 219 of this chapter, has had an alcohol test with an alcohol concentration of less than .02 and presented a body fluid sample that tested negative for controlled substances assayed.

(2) A conductor placed in service or returned to service under the above-stated conditions shall continue in any program of counseling or treatment deemed necessary by the SAP and shall be subject to a reasonable program of follow-up alcohol and drug testing without prior notice for a period of not more than 60 months following return to service. Follow-up tests shall include not fewer than 6 alcohol tests and 6 drug tests during the first 12 months following return to service.

(3) Return-to-service and follow-up alcohol and drug tests shall be performed consistent with the requirements of subpart H of part 219 of this chapter.

(4) This paragraph does not create an entitlement to utilize the services of a railroad SAP, to be afforded leave from employment for counseling or treatment, or to employment as a conductor. Nor does it restrict any discretion available to the railroad to take disciplinary action based on conduct described herein.

(g) *Confidentiality protected.* Nothing in this part shall affect the responsibility of the railroad under § 219.403 of this chapter (''Voluntary referral policy'') to treat voluntary referrals for substance abuse counseling and treatment as confidential; and the certification status of a conductor who is successfully assisted under the procedures of that section shall not be adversely affected. However, the railroad shall include in its voluntary referral policy required to be issued pursuant to § 219.403 of this chapter a provision that, at least with respect to a certified conductor or a candidate for certification, the policy of confidentiality is waived (to the extent that the railroad shall receive from the SAP or DAC official notice of the substance

abuse disorder and shall suspend or revoke the certification, as appropriate) if the person at any time refuses to cooperate in a recommended course of counseling or treatment.

[76 FR 69841, Nov. 9, 2011, as amended at 88 FR 27652, May 2, 2023]

§ 242.117 Vision and hearing acuity.

(a) Each railroad shall adopt and comply with a program which complies with the requirements of this section. When any person including, but not limited to, each railroad, railroad officer, supervisor, and employee violates any requirement of a program which complies with the requirements of this section, that person shall be considered to have violated the requirements of this section.

(b) After the pertinent date specified in § 242.105(d) or (e), each railroad, prior to initially certifying or recertifying any person as a conductor for any class of service, shall determine that the person meets the standards for visual acuity and hearing acuity prescribed in this section.

(c) In order to make the determination required under paragraph (b) of this section, a railroad shall have on file either:

(1) A medical examiner's certificate that the individual has been medically examined and meets these acuity standards; or

(2) A written document from its medical examiner documenting his or her professional opinion that the person does not meet one or both acuity standards and stating the basis for his or her determination that:

(i) The person can nevertheless be certified under certain conditions; or

(ii) The person's acuity is such that the person cannot safely perform as a conductor even with conditions attached.

(d) Any examination required for compliance with this section shall be performed by or under the supervision of a medical examiner or a licensed physician's assistant such that:

(1) A licensed optometrist or a technician responsible to that person may perform the portion of the examination that pertains to visual acuity; and

(2) A licensed or certified audiologist or a technician responsible to that person may perform the portion of the examination that pertains to hearing acuity.

(e) If the examination required under this section discloses that the person needs corrective lenses or a hearing aid, or both, either to meet the threshold acuity levels established in this section or to meet a lower threshold determined by the railroad's medical examiner to be sufficient to perform as a conductor, that fact shall be noted on the certificate issued in accordance with the provisions of this part.

(f) Any person with such a certificate notation shall use the relevant corrective device(s) while performing as a conductor unless the railroad's medical examiner subsequently determines in writing that the person can safely perform without using the device.

(g) In order to be currently certified as a conductor, except as permitted by paragraph (j) of this section, a person's vision and hearing shall meet or exceed the standards prescribed in this section and appendix D to this part. It is recommended that each test conducted pursuant to this section should be performed according to any directions supplied by the manufacturer of such test and any American National Standards Institute (ANSI) standards that are applicable.

(h) Except as provided in paragraph (j) of this section, each person shall have visual acuity that meets or exceeds the following thresholds:

(1) For distant viewing, either:

(i) Distant visual acuity of at least 20/40 (Snellen) in each eye without corrective lenses; or

(ii) Distant visual acuity separately corrected to at least 20/40 (Snellen) with corrective lenses and distant binocular acuity of at least 20/40 (Snellen) in both eyes with or without corrective lenses;

(2) A field of vision of at least 70 degrees in the horizontal meridian in each eye; and

(3) The ability to recognize and distinguish between the colors of railroad signals as demonstrated by successfully completing one of the tests in appendix D to this part.

(i) Except as provided in paragraph (j) of this section, each person shall have a hearing test or audiogram that

shows the person's hearing acuity meets or exceeds the following thresholds: The person does not have an average hearing loss in the better ear greater than 40 decibels with or without use of a hearing aid, at 500 Hz, 1,000 Hz, and 2,000 Hz. The hearing test or audiogram shall meet the requirements of one of the following:

(1) As required in 29 CFR 1910.95(h) (Occupational Safety and Health Administration);

(2) As required in § 227.111 of this chapter; or

(3) Conducted using an audiometer that meets the specifications of and is maintained and used in accordance with a formal industry standard, such as ANSI S3.6, ''Specifications for Audiometers.''

(j) A person not meeting the thresholds in paragraphs (h) and (i) of this section shall, upon request, be subject to further medical evaluation by a railroad's medical examiner to determine that person's ability to safely perform as a conductor. In accordance with the guidance prescribed in Appendix D to this part, a person is entitled to one retest without making any showing and to another retest if the person provides evidence substantiating that circumstances have changed since the last test to the extent that the person could now safely perform as a conductor. The railroad shall provide its medical examiner with a copy of this part, including all appendices. If, after consultation with a railroad officer, the medical examiner concludes that, despite not meeting the threshold(s) in paragraphs (h) and (i) of this section, the person has the ability to safely perform as a conductor, the person may be certified as a conductor and such certification conditioned on any special restrictions the medical examiner determines in writing to be necessary.

(k) As a condition of maintaining certification, each certified conductor shall notify his or her employing railroad's medical department or, if no such department exists, an appropriate railroad official if the person's best correctable vision or hearing has deteriorated to the extent that the person no longer meets one or more of the prescribed vision or hearing standards or requirements of this section. This notification is required prior to any subsequent performance as a conductor.

[76 FR 69841, Nov. 9, 2011, as amended at 85 FR 81324, Dec. 15, 2020]

§ 242.119 Training.

(a) Each railroad shall adopt and comply with a program that meets the requirements of this section. When any person including, but not limited to, each railroad, railroad officer, supervisor, and employee violates any requirement of a program which complies with the requirements of this section, that person shall be considered to have violated the requirements of this section.

(b) After the pertinent date specified in § 242.105(d) or (e), each railroad, prior to the initial issuance of a certificate to any person as a conductor, shall determine that the person has, in accordance with the requirements of this section, the knowledge to safely perform as a conductor in each type of service that the person will be permitted to perform.

(c) In making this determination, a railroad shall have written documentation showing that:

(1) The person completed a training program that complies with paragraph (d) of this section;

(2) The person demonstrated his or her knowledge by achieving a passing grade under the testing and evaluation procedures of that training program; and

(3) The person demonstrated that he or she is qualified on the physical characteristics of the railroad, or its pertinent segments, over which that person will perform service.

(d) A railroad that elects to train a previously untrained person to be a conductor shall develop an initial training program which, at a minimum, includes the following:

(1) Determine how training must be structured, developed, and delivered, including an appropriate combination of classroom, simulator, computer-based, correspondence, on-the-job training, or other formal training. The curriculum shall be designed to impart knowledge of, and ability to comply with applicable Federal railroad safety laws, regulations, and orders, as well as

any relevant railroad rules and procedures promulgated to implement those applicable Federal railroad safety laws, regulations, and orders. This training shall document a person's knowledge of, and ability to comply with, Federal railroad safety laws, regulations, and orders, as well as railroad rules and procedures.

(2) The on-the-job portion of the training program shall consist of the following three key components:

(i) A brief statement describing the tasks and related steps the employee learning the job shall be able to perform;

(ii) A statement of the conditions (*e.g.,* prerequisites, tools, equipment, documentation, briefings, demonstrations, and practice) necessary for learning transfer; and

(iii) A statement of the standards by which proficiency is measured through a combination of task/step accuracy, completeness, and repetition.

(3) Prior to beginning the initial safety-related tasks associated with on-the-job exercises, employers shall make any relevant information or materials, such as operating rules, safety rules, or other rules available to employees involved for referencing.

(4) The tasks and related steps associated with on-the-job exercises for a particular type of conductor service (*e.g.,* passenger conductor) shall be maintained together in one manual, checklist, or similar document. This reference shall be made available to all employees involved in those on-the-job exercises.

(5) When new safety-related railroad laws, regulations, orders, technologies, procedures, or equipment are introduced into the workplace, the railroad must review its training program and modify its training plan accordingly.

(e) Prior to a previously untrained person being certified as a conductor, a railroad shall require the person to:

(1) Successfully complete the formal initial training program developed pursuant to paragraph (d) of this section and any associated examinations covering the skills and knowledge the person will need to possess in order to perform the tasks necessary to be a conductor; and

(2) Demonstrate, to the satisfaction of the railroad with input from a qualified instructor, on-the-job proficiency by successfully completing the tasks necessary to be a conductor. However, a person may perform such tasks under the direct onsite supervision of a person, who has the necessary operating experience, as part of the on-the-job training process prior to completing such training and passing the field evaluation; and

(3) Demonstrate knowledge of the physical characteristics of any assigned territory by successfully completing a test created by a person qualified on the physical characteristics of the territory.

(f) If a railroad uses a written test for purposes of paragraph (e)(3) of this section, the railroad must provide the person(s) being tested with an opportunity to consult with a supervisory employee, who possesses territorial qualifications for the territory, to explain a question.

(g) A person may acquire familiarity with the physical characteristics of a territory through the following methods:

(1) The methods used by a railroad for familiarizing its conductors with new territory while starting up a new railroad;

(2) The methods used by a railroad for starting operations over newly acquired rail lines; or

(3) The methods used by a railroad for reopening of a long unused route.

(h) The methods listed in paragraph (g) of this section shall be described in the railroad's conductor qualification program required under this part and submitted according to the procedures described in Appendix B to this part.

(i) If ownership of a railroad is being transferred from one company to another, the conductor(s) of the acquiring company may receive familiarization training from the selling company prior to the acquiring railroad commencing operation.

(j) A railroad shall designate in its program required by this section the time period in which a conductor must be absent from a territory or yard, before requalification on physical characteristics is required.

(k) A railroad's program shall include the procedures used to qualify or requalify a person on the physical characteristics.

(l) A railroad shall provide for the continuing education of certified conductors to ensure that each conductor maintains the necessary knowledge concerning railroad safety and operating rules and compliance with all applicable Federal regulations, including, but not limited to, hazardous materials, passenger train emergency preparedness, brake system safety standards, pre-departure inspection procedures, and passenger equipment safety standards, and physical characteristics of a territory.

§ 242.121 Knowledge testing.

(a) Each railroad shall adopt and comply with a program that meets the requirements of this section. When any person including, but not limited to, each railroad, railroad officer, supervisor, and employee violates any requirement of a program which complies with the requirements of this section, that person shall be considered to have violated the requirements of this section.

(b) After the pertinent date specified in § 242.105(d) or (e), each railroad, prior to initially certifying or recertifying any person as a conductor for any type of service, shall determine that the person has, in accordance with the requirements of this section, demonstrated sufficient knowledge of the railroad's rules and practices for the safe movement of trains.

(c) In order to make the knowledge determination required by paragraph (b) of this section, a railroad shall have procedures for testing a person being evaluated for certification as a conductor that shall be:

(1) Designed to examine a person's knowledge of the railroad's operating rules and practices for the safe movement of trains;

(2) Objective in nature;

(3) Administered in written or electronic form;

(4) Cover the following subjects:

(i) Safety and operating rules;

(ii) Timetable instructions;

(iii) Compliance with all applicable Federal regulations;

(iv) Physical characteristics of the territory on which a person will be or is currently serving as a conductor; and

(v) Use of any job aid that a railroad may provide a conductor;

(5) Sufficient to accurately measure the person's knowledge of the covered subjects; and

(6) Conducted without open reference books or other materials except to the degree the person is being tested on his or her ability to use such reference books or materials.

(d) The conduct of the test shall be documented in writing and the documentation shall contain sufficient information to identify the relevant facts relied on for evaluation purposes.

(e) For purposes of paragraph (c) of this section, the railroad must provide the person(s) being tested with an opportunity to consult with a supervisory employee, who possesses territorial qualifications for the territory, to explain a question.

(f) The documentation shall indicate whether the person passed or failed the test.

(g) If a person fails to pass the test, no railroad shall permit or require that person to function as a conductor prior to that person's achieving a passing score during a reexamination of the person's knowledge.

§ 242.123 Monitoring operational performance.

(a) Each railroad shall adopt and comply with a program that meets the requirements of this section. When any person including, but not limited to, each railroad, railroad officer, supervisor, and employee violates any requirement of a program which complies with the requirements of this section, that person shall be considered to have violated the requirements of this section.

(b) Each railroad shall have a program to monitor the conduct of its certified conductors by performing unannounced operating rules compliance tests. The program shall include procedures to address the testing of certified conductors who are not given an unannounced compliance test in a calendar year pursuant to paragraph (f) of this

section. At a minimum, such procedures shall include the following:

(1) A requirement that an unannounced compliance test must be conducted within 30 days of a return to conductor service; and

(2) The railroad must retain a written record indicating the date that the conductor stopped performing service that requires certification pursuant to this part, the date that the conductor returned to performing service that requires certification pursuant to this part, and the date that the unannounced compliance test was performed.

(c) Except as provided in paragraph (f) of this section, each conductor shall be given at least one unannounced compliance test in each calendar year by a railroad officer who meets the requirements of §217.9(b)(1) of this chapter.

(d) The unannounced test program shall:

(1) Test those persons certified as a conductor pursuant to §242.107(b)(1) for compliance with one or more operational tests in accordance with the provisions of §217.9 of this chapter; and one or more provisions of §§218.99 through 218.109 of this chapter; and

(2) Test those persons certified as a passenger conductor pursuant to §242.107(b)(2) for compliance with one or more operational tests in accordance with the provisions of §217.9 of this chapter.

(i) For persons certified as passenger conductors pursuant to §242.107(b)(2) who do not require compliance with part 218, subpart F of this chapter except under emergency circumstances, the requirement for an annual, unannounced test on the requirements of part 218, subpart F may be satisfied by annual training.

(ii) [Reserved]

(e) Each railroad's program shall indicate the action the railroad will take in the event that it finds deficiencies with a conductor's performance during an unannounced compliance test administered in accordance with this section.

(f) A certified conductor who is not performing a service that requires certification pursuant to this part need not be given an unannounced compliance test. However, when the certified conductor returns to a service that requires certification pursuant to this part, that certified conductor must be tested pursuant to this section within 30 days of his or her return.

§ 242.125 Certification determinations made by other railroads.

(a) A railroad that is considering certification of a person as a conductor may rely on determinations made by another railroad concerning that person's certification. The railroad's certification program shall address how the railroad will administer the training of previously uncertified conductors with extensive operating experience or previously certified conductors who have had their certification expire. If a railroad's certification program fails to specify how it will train a previously certified conductor hired from another railroad, then the railroad shall require the newly hired conductor to take the hiring railroad's entire training program.

(b) A railroad relying on another railroad's certification shall determine that:

(1) The prior certification is still valid in accordance with the provisions of §§242.201 and 242.407;

(2) The prior certification was for the same type of service as the certification being issued under this section;

(3) The person has received training on the physical characteristics of the new territory in accordance with §242.119; and

(4) The person has demonstrated the necessary knowledge concerning the railroad's operating rules in accordance with §242.121.

§ 242.127 Reliance on qualification requirements of other countries.

A Canadian railroad that is required to comply with this regulation or a railroad that conducts joint operations with a Canadian railroad may certify that a person is eligible to be a conductor provided it determines that:

(a) The person is employed by the Canadian railroad; and

(b) The person meets or exceeds the qualifications standards issued by Transport Canada for such service.

Subpart C—Administration of the Certification Program

§ 242.201 Time limitations for certification.

(a) After the pertinent date in § 242.105(d) or (e), a railroad shall not certify or recertify a person as a conductor in any type of service, if the railroad is making:

(1) A determination concerning eligibility under §§ 242.111, 242.113, 242.115, and 242.403 and the eligibility data being relied on was furnished more than 366 days before the date of the railroad's certification decision;

(2) A determination concerning visual and hearing acuity and the medical examination being relied on was conducted more than 450 days before the date of the railroad's certification decision;

(3) A determination concerning demonstrated knowledge and the knowledge examination being relied on was conducted more than 366 days before the date of the railroad's certification decision; or

(4) A determination concerning demonstrated knowledge and the knowledge examination being relied on was conducted more than 24 months before the date of the railroad's recertification decision if the railroad administers a knowledge testing program pursuant to § 242.121 at intervals that do not exceed 24 months.

(b) The time limitations of paragraph (a) of this section do not apply to a railroad that is making a certification decision in reliance on determinations made by another railroad in accordance with paragraph (c)(3) of this section, § 242.125, or § 242.127.

(c) No railroad shall:

(1) Permit or require a person, designated under § 242.105(a) or (b), to perform service as a certified conductor for more than the 36-month period beginning on the pertinent date for compliance with the mandatory procedures for testing and evaluation set forth in the applicable provisions of § 242.105(d) or (e) unless that person has been determined to be eligible in accordance with procedures that comply with subpart B of this part.

(2) Certify a person as a conductor for an interval of more than 36 months; or

(3) Rely on a certification issued by another railroad that is more than 36 months old.

(d) Except as provided for in § 242.105 concerning initial implementation of the program, a railroad shall issue each person designated as a certified conductor a certificate that complies with § 242.207 no later than 30 days from the date of its decision to certify or recertify that person.

§ 242.203 Retaining information supporting determinations.

(a) After the pertinent date in § 242.105(d) or (e), a railroad that issues, denies, or revokes a certificate after making the determinations required under § 242.109 shall maintain a record for each certified conductor or applicant for certification that contains the information the railroad relied on in making the determinations.

(b) A railroad shall retain the following information:

(1) Relevant data from the railroad's records concerning the person's prior safety conduct;

(2) Relevant data furnished by another railroad;

(3) Relevant data furnished by a governmental agency concerning the person's motor vehicle driving record;

(4) Relevant data furnished by the person seeking certification concerning his or her eligibility;

(5) The relevant test results data concerning hearing and vision acuity;

(6) If applicable, the relevant data concerning the professional opinion of the railroad's medical examiner on the adequacy of the person's hearing or vision acuity;

(7) Relevant data from the railroad's records concerning the person's success or failure of the passage of knowledge test(s) under § 242.121;

(8) A sample copy of the written knowledge test or tests administered; and

(9) The relevant data from the railroad's records concerning the person's success or failure on unannounced operating rules compliance tests the railroad performed to monitor the conductor's performance in accordance with § 242.123.

(c) If a railroad is relying on successful completion of an approved training

program conducted by another entity, the relying railroad shall maintain a record for each certified conductor that contains the relevant data furnished by the training entity concerning the person's demonstration of knowledge and relied on by the railroad in making its determinations.

(d) If a railroad is relying on a certification decision initially made by another railroad, the relying railroad shall maintain a record for each certified conductor that contains the relevant data furnished by the other railroad which it relied on in making its determinations.

(e) All records required under this section shall be retained for a period of six years from the date of the certification, recertification, denial or revocation decision and shall be made available to FRA representatives upon request during normal business hours.

(f) It shall be unlawful for any railroad to knowingly or any individual to willfully:

(1) Make, cause to be made, or participate in the making of a false entry on the record(s) required by this section; or

(2) Otherwise falsify such records through material misstatement, omission, or mutilation.

(g) Nothing in this section precludes a railroad from maintaining the information required to be retained under this section in an electronic format provided that:

(1) The railroad maintains an information technology security program adequate to ensure the integrity of the electronic data storage system, including the prevention of unauthorized access to the program logic or individual records;

(2) The program and data storage system must be protected by a security system that utilizes an employee identification number and password, or a comparable method, to establish appropriate levels of program access meeting all of the following standards:

(i) No two individuals have the same electronic identity; and

(ii) A record cannot be deleted or altered by any individual after the record is certified by the employee who created the record;

(3) Any amendment to a record is either:

(i) Electronically stored apart from the record that it amends; or

(ii) Electronically attached to the record as information without changing the original record;

(4) Each amendment to a record uniquely identifies the person making the amendment;

(5) The system employed by the railroad for data storage permits reasonable access and retrieval of the information in usable format when requested to furnish data by FRA representatives; and

(6) Information retrieved from the system can be easily produced in a printed format which can be readily provided to FRA representatives in a timely manner and authenticated by a designated representative of the railroad as a true and accurate copy of the railroad's records if requested to do so by FRA representatives.

§ 242.205 Identification of certified persons and recordkeeping.

(a) After September 1, 2012, a railroad shall maintain a list identifying each person designated as a certified conductor. That list shall indicate the types of service the railroad determines each person is authorized to perform and date of the railroad's certification decision.

(b) If a railroad employs conductors working in joint operations territory, the list shall include person(s) determined by that railroad to be certified as conductor(s) and possessing the necessary territorial qualifications for the applicable territory in accordance with § 242.301.

(c) The list required by paragraphs (a) and (b) of this section shall:

(1) Be updated at least annually;

(2) Be available at the divisional or regional headquarters of the railroad; and

(3) Be available for inspection or copying by FRA during regular business hours.

(d) It shall be unlawful for any railroad to knowingly or any individual to willfully:

(1) Make, cause to be made, or participate in the making of a false entry on the list required by this section; or

(2) Otherwise falsify such list through material misstatement, omission, or mutilation.

(e) Nothing in this section precludes a railroad from maintaining the list required this section in an electronic format provided that:

(1) The railroad maintains an information technology security program adequate to ensure the integrity of the electronic data storage system, including the prevention of unauthorized access to the program logic or the list;

(2) The program and data storage system must be protected by a security system that utilizes an employee identification number and password, or a comparable method, to establish appropriate levels of program access meeting all of the following standards:

(i) No two individuals have the same electronic identity; and

(ii) An entry on the list cannot be deleted or altered by any individual after the entry is certified by the employee who created the entry;

(3) Any amendment to the list is either:

(i) Electronically stored apart from the entry on the list that it amends; or

(ii) Electronically attached to the entry on the list as information without changing the original entry;

(4) Each amendment to the list uniquely identifies the person making the amendment;

(5) The system employed by the railroad for data storage permits reasonable access and retrieval of the information in usable format when requested to furnish data by FRA representatives; and

(6) Information retrieved from the system can be easily produced in a printed format which can be readily provided to FRA representatives in a timely manner and authenticated by a designated representative of the railroad as a true and accurate copy of the railroad's records if requested to do so by FRA representatives.

[76 FR 69841, Nov. 9, 2011, as amended at 77 FR 6491, Feb. 8, 2012]

§ 242.207 Certificate components.

(a) At a minimum, each certificate issued in compliance with this part shall:

(1) Identify the railroad or parent company that is issuing it;

(2) Indicate that the railroad, acting in conformity with this part, has determined that the person to whom it is being issued has been determined to be eligible to perform as a conductor or as a passenger conductor;

(3) Identify the person to whom it is being issued (including the person's name, employee identification number, the year of birth, and either a physical description or photograph of the person);

(4) Identify any conditions or limitations, including the type of service or conditions to ameliorate vision or hearing acuity deficiencies, that restrict the person's operational authority;

(5) Show the effective date of each certification held;

(6) Be signed by an individual designated in accordance with paragraph (b) of this section; and

(7) Be of sufficiently small size to permit being carried in an ordinary pocket wallet.

(b) Each railroad shall designate in writing any person that it authorizes to sign the certificates described in this section. The designation shall identify such persons by name or job title.

(c) Nothing in paragraph (a) of this section shall prohibit any railroad from including additional information on the certificate or supplementing the certificate through other documents.

(d) It shall be unlawful for any railroad to knowingly or any individual to willfully:

(1) Make, cause to be made, or participate in the making of a false entry on that certificate; or

(2) Otherwise falsify that certificate through material misstatement, omission, or mutilation.

§ 242.209 Maintenance of the certificate.

(a) Each conductor who has received a certificate required under this part shall:

(1) Have that certificate in his or her possession while on duty as a conductor; and

(2) Display that certificate upon the receipt of a request to do so from:

(i) A representative of the Federal Railroad Administration,

(ii) A State inspector authorized under part 212 of this chapter,

(iii) An officer of the issuing railroad, or

(iv) An officer of another railroad when serving as a conductor in joint operations territory.

(b) Any conductor who is notified or called to serve as a conductor and such service would cause the conductor to exceed certificate limitations, set forth in accordance with subpart B of this part, shall immediately notify the railroad that he or she is not authorized to perform that anticipated service and it shall be unlawful for the railroad to require such service.

(c) Nothing in this section shall be deemed to alter a certified conductor's duty to comply with other provisions of this chapter concerning railroad safety.

§ 242.211 Replacement of certificates.

(a) A railroad shall have a system for the prompt replacement of lost, stolen or mutilated certificates at no cost to conductors. That system shall be reasonably accessible to certified conductors in need of a replacement certificate or temporary replacement certificate.

(b) At a minimum, a temporary replacement certificate must identify the person to whom it is being issued (including the person's name, identification number and year of birth); indicate the date of issuance; and be authorized by a designated supervisor. Temporary replacement certificates may be delivered electronically and are valid for a period no greater than 30 days.

§ 242.213 Multiple certifications.

(a) A person may hold certification for multiple types of conductor service.

(b) A person may hold both conductor and locomotive engineer certification.

(c) A railroad that issues multiple certificates to a person, shall, to the extent possible, coordinate the expiration date of those certificates.

(d) Except as provided in paragraph (e) of this section, a locomotive engineer, including a remote control operator, who is operating a locomotive without an assigned certified conductor must either be:

(1) Certified as both a locomotive engineer under part 240 of this chapter and as a conductor under this part; or

(2) Accompanied by a person certified as a conductor under this part but who will be attached to the crew in a manner similar to that of an independent assignment.

(e) If the conductor is removed from a passenger train for a medical, police or other such emergency after the train departs from an initial terminal, the train may proceed to the first location where the conductor can be replaced without incurring undue delay without the locomotive engineer being a certified conductor. However, an assistant conductor or brakeman must be on the train and the locomotive engineer must be informed that there is no certified conductor on the train prior to any movement.

(f) During the duration of any certification interval, a person who holds a current conductor and/or locomotive engineer certificate from more than one railroad shall immediately notify the other certifying railroad(s) if he or she is denied conductor or locomotive engineer recertification under § 242.401 or § 240.219 of this chapter or has his or her conductor or locomotive engineer certification revoked under § 242.407 or § 240.307 of this chapter by another railroad.

(g) A person who is certified to perform multiple types of conductor service and who has had any of those certifications revoked under § 242.407 may not perform any type of conductor service during the period of revocation.

(h) A person who holds a current conductor and locomotive engineer certificate and who has had his or her conductor certification revoked under § 242.407 for a violation of § 242.403(e)(1) through (5) or (e)(12) may not work as a locomotive engineer during the period of revocation. However, a person who holds a current conductor and locomotive engineer certificate and who has had his or her conductor certification revoked under § 242.407 for a violation of § 242.403(e)(6) through (11) may work as a locomotive engineer during the period of revocation.

(1) For purposes of determining the period for which a person may not work as a certified locomotive engineer due to a revocation of his or her conductor certification, only violations of §242.403(e)(1) through (5) or (e)(12) will be counted. Thus, a person who holds a current conductor and locomotive engineer certificate and who has had his or her conductor certification revoked three times in less than 36 months for two violations of §242.403(e)(6) and one violation of §242.403(e)(1) would have his or her conductor certificate revoked for 1 year, but would not be permitted to work as a locomotive engineer for one month (*i.e.*, the period of revocation for one violation of §242.403(e)(1)).

(i) A person who holds a current conductor and locomotive engineer certificate and who has had his or her locomotive engineer certification revoked under §240.307 of this chapter may not work as a conductor during the period of revocation.

(j) A person who has had his or her locomotive engineer certification revoked under §240.307 of this chapter may not obtain a conductor certificate pursuant to this part during the period of revocation.

(k) A person who had his or her conductor certification revoked under §242.407 for violations of §242.403(e)(1) through (5) or (e)(12) may not obtain a locomotive engineer certificate pursuant to part 240 of this chapter during the period of revocation.

(l) A railroad that denies a person conductor certification or recertification under §242.401 shall not, solely on the basis of that denial, deny or revoke that person's locomotive engineer certification or recertification.

(m) A railroad that denies a person locomotive engineer certification or recertification under §240.219 of this chapter shall not, solely on the basis of that denial, deny or revoke that person's conductor certification or recertification.

(n) In lieu of issuing multiple certificates, a railroad may issue one certificate to a person who is certified to perform multiple types of conductor service or is certified as a conductor and a locomotive engineer. The certificate must comply with §240.223 of this chapter and §242.207.

(o) A person who holds a current conductor and locomotive engineer certificate and who is involved in a revocable event under §242.407 or §240.307 of this chapter may only have one certificate revoked for that event. The determination by the railroad as to which certificate to revoke for the revocable event must be based on the work the person was performing at the time the event occurred.

[76 FR 69841, Nov. 9, 2011, as amended at 85 FR 81325, Dec. 15, 2020]

§242.215 Railroad oversight responsibilities.

(a) No later than March 31 of each year (beginning in calendar year 2014), each Class I railroad (including the National Railroad Passenger Corporation and a railroad providing commuter service) and each Class II railroad shall conduct a formal annual review and analysis concerning the administration of its program for responding to detected instances of poor safety conduct by certified conductors during the prior calendar year.

(b) Each review and analysis shall involve:

(1) The number and nature of the instances of detected poor safety conduct including the nature of the remedial action taken in response thereto;

(2) The number and nature of FRA reported train accidents attributed to poor safety performance by conductors;

(3) The number and type of operational monitoring test failures recorded by railroad officers who meet the requirements of §217.9(b)(1) of this chapter; and

(4) If the railroad conducts joint operations with another railroad, the number of conductors employed by the other railroad(s) which: were involved in events described in this paragraph and were determined to be certified and to have possessed the necessary territorial qualifications for joint operations purposes by the controlling railroad.

(c) Based on that review and analysis, each railroad shall determine what action(s) it will take to improve

the safety of railroad operations to reduce or eliminate future incidents of that nature.

(d) If requested in writing by FRA, the railroad shall provide a report of the findings and conclusions reached during such annual review and analysis effort.

(e) For reporting purposes, information about the nature of detected poor safety conduct shall be capable of segregation for study and evaluation purposes into the following categories:

(1) Incidents involving noncompliance with part 218 of this chapter;

(2) Incidents involving noncompliance with part 219 of this chapter;

(3) Incidents involving noncompliance with the procedures for the safe use of train or engine brakes when the procedures are required for compliance with the Class I, Class IA, Class II, Class III, or transfer train brake test provisions of part 232 of this chapter or when the procedures are required for compliance with the Class 1, Class 1A, Class II, or running brake test provisions of part 238 of this chapter;

(4) Incidents involving noncompliance with the railroad's operating rules involving operation of a locomotive or train to operate at a speed that exceeds the maximum authorized limit;

(5) Incidents involving noncompliance with the railroad's operating rules resulting in operation of a locomotive or train past any signal, excluding a hand or a radio signal indication or a switch, that requires a complete stop before passing it;

(6) Incidents involving noncompliance with the provisions of restricted speed, and the operational equivalent thereof, that must be reported under the provisions of part 225 of this chapter;

(7) Incidents involving occupying main track or a segment of main track without proper authority or permission; and

(8) Incidents involving the failure to comply with prohibitions against tampering with locomotive mounted safety devices, or knowingly operating or permitting to be operated a train with an unauthorized or disabled safety device in the controlling locomotive.

(f) For reporting purposes, an instance of poor safety conduct involving a person who holds both conductor certification pursuant to this part and locomotive engineer certification pursuant to part 240 of this chapter need only be reported once (either under 49 CFR 240.309 of this chapter or this section). The determination as to where to report the instance of poor safety conduct should be based on the work the person was performing at the time the conduct occurred.

(g) For reporting purposes each category of detected poor safety conduct identified in paragraph (b) of this section shall be capable of being annotated to reflect the following:

(1) The nature of the remedial action taken and the number of events subdivided so as to reflect which of the following actions was selected:

(i) Imposition of informal discipline;

(ii) Imposition of formal discipline;

(iii) Provision of informal training; or

(iv) Provision of formal training; and

(2) If the nature of the remedial action taken was formal discipline, the number of events further subdivided so as to reflect which of the following punishments was imposed by the railroad:

(i) The person was withheld from service;

(ii) The person was dismissed from employment or

(iii) The person was issued demerits. If more than one form of punishment was imposed only that punishment deemed the most severe shall be shown.

(h) For reporting purposes each category of detected poor safety conduct identified in paragraph (b) of this section which resulted in the imposition of formal or informal discipline shall be annotated to reflect the following:

(1) The number of instances in which the railroad's internal appeals process reduced the punishment initially imposed at the conclusion of its hearing; and

(2) The number of instances in which the punishment imposed by the railroad was reduced by any of the following entities: The National Railroad Adjustment Board, a Public Law Board, a Special Board of Adjustment or other body for the resolution of disputes duly constituted under the provisions of the Railway Labor Act.

(i) For reporting purposes, each category of detected poor safety conduct identified in paragraph (b) of this section shall be capable of being annotated to reflect the following:

(1) The total number of incidents in that category;

(2) The number of incidents within that total which reflect incidents requiring an FRA accident/incident report under part 225 of this chapter; and

(3) The number of incidents within that total which were detected as a result of a scheduled operational monitoring effort.

[76 FR 69841, Nov. 9, 2011, as amended at 77 FR 6491, Feb. 8, 2012]

Subpart D—Territorial Qualification and Joint Operations

§ 242.301 Requirements for territorial qualification.

(a) Except as provided in paragraph (c), (d), or (e) of this section, a railroad, including a railroad that employs conductors working in joint operations territory, shall not permit or require a person to serve as a conductor unless that railroad determines that the person is certified as a conductor and possesses the necessary territorial qualifications for the applicable territory pursuant to § 242.119.

(b) Each person who is called to serve as a conductor shall:

(1) Meet the territorial qualification requirements on the segment of track upon which he or she will serve as a conductor; and

(2) Immediately notify the railroad upon which he or she is employed if he or she does not meet the required territorial qualifications.

(c) Except as provided in paragraph (e) of this section, if a conductor lacks territorial qualification on main track physical characteristics required by paragraph (a) of this section, he or she shall be assisted by a person who meets the territorial qualification requirements for main track physical characteristics.

(1) For a conductor who has never been qualified on main track physical characteristics of the territory over which he or she is to serve as a conductor, the assistant shall be a person who is certified as a conductor, meets the territorial qualification requirements for main track physical characteristics, and is not an assigned crew member.

(2) For a conductor who was previously qualified on main track physical characteristics of the territory over which he or she is to serve as a conductor, but whose qualification has been expired for one year or less and who regularly traversed the territory prior to the expiration of the qualification, the assistant may be any person, including an assigned crewmember, who meets the territorial qualification requirements for main track physical characteristics.

(3) For a conductor who was previously qualified on main track physical characteristics of the territory over which he or she is to serve as a conductor, and whose qualification has been expired for one year or less but who has not regularly traversed the territory prior to the expiration of the qualification, or a conductor whose territorial qualification on main track has been expired for more than a year, the assistant may be any person, including an assigned crewmember other than the locomotive engineer so long as serving as the assistant would not conflict with that crewmember's other safety sensitive duties, who meets the territorial qualification requirements for main track physical characteristics.

(d) If a conductor lacks territorial qualification on other than main track physical characteristics required by paragraph (a) of this section, where practicable, he or she shall be assisted by a person who is a certified conductor and meets the territorial qualification requirements for other than main track physical characteristics. Where not practicable, the conductor shall be provided an appropriate up-to-date job aid.

(e) An assistant is not required if the movement is on a section of main track with an average grade of less than 1% over 3 continuous miles, and

(1) The maximum distance the locomotive or train will be operated does not exceed one mile; or

(2) The maximum authorized speed for any operation on the track does not exceed 20 miles per hour; or

(3) Operations are conducted under operating rules that require every locomotive and train to proceed at a speed that permits stopping within one half the range of vision of the locomotive engineer.

[76 FR 69841, Nov. 9, 2011, as amended at 77 FR 6491, Feb. 8, 2012]

Subpart E—Denial and Revocation of Certification

§ 242.401 Denial of certification.

(a) A railroad shall notify a candidate for certification or recertification of information known to the railroad that forms the basis for denying the person certification and provide the person a reasonable opportunity to explain or rebut that adverse information in writing prior to denying certification. A railroad shall provide the conductor candidate with any written documents or records, including written statements, related to failure to meet a requirement of this part which support its pending denial decision.

(b) This section does not require further opportunity to comment if the railroad's denial is based solely on factors addressed by §§ 242.111, 242.115, or 242.403 and the opportunity to comment afforded by § 242.109 has been provided.

(c) If a railroad denies a person certification or recertification, it shall notify the person of the adverse decision and explain, in writing, the basis for its denial decision. The basis for a railroad's denial decision shall address any explanation or rebuttal information that the conductor candidate may have provided in writing pursuant to paragraph (a) of this section. The document explaining the basis for the denial shall be served on the person within 10 days after the railroad's decision and shall give the date of the decision.

(d) A railroad shall not deny the person's certification for failing to comply with a railroad operating rule or practice which constitutes a violation under § 242.403(e)(1) through (11) of this part if sufficient evidence exists to establish that an intervening cause prevented or materially impaired the conductor's ability to comply with that railroad operating rule or practice.

§ 242.403 Criteria for revoking certification.

(a) Each railroad shall adopt and comply with a program which meets the requirements of this section. When any person including, but not limited to, each railroad, railroad officer, supervisor, and employee violates any requirement of a program which complies with the requirements of this section, that person shall be considered to have violated the requirements of this section.

(b) It shall be unlawful to fail to comply with any of the railroad rules and practices described in paragraph (e) of this section.

(c)(1) A certified conductor who has demonstrated a failure to comply with railroad rules and practices described in paragraph (e) of this section shall have his or her certification revoked.

(2) A certified conductor who is monitoring, piloting, or instructing a conductor and fails to take appropriate action to prevent a violation of paragraph (e) of this section shall have his or her certification revoked. Appropriate action does not mean that a supervisor, pilot, or instructor must prevent a violation from occurring at all costs; the duty may be met by warning the conductor or the engineer, as appropriate, of a potential or foreseeable violation.

(3) A certified conductor who is called by a railroad to perform the duty of a train crew member other than that of conductor or locomotive engineer shall not have his or her certification revoked based on actions taken or not taken while performing that duty.

(d) In determining whether a person may be or remain certified as a conductor, a railroad shall consider as operating rule compliance data only conduct described in paragraphs (e)(1) through (11) of this section that occurred within a period of 36 consecutive months prior to the determination. A review of an existing certification shall be initiated promptly upon the occurrence and documentation of any conduct described in this section.

(e) A railroad shall only consider violations of its operating rules and practices that involve:

(1) Failure to take appropriate action to prevent the locomotive engineer of the train the conductor is assigned to from failing to control a locomotive or train in accordance with a signal indication, excluding a hand or a radio signal indication or a switch, that requires a complete stop before passing it, when the conductor is located in the operating cab, or otherwise has knowledge of the signal indication. Appropriate action does not mean that a conductor must prevent a violation from occurring at all costs; the duty may be met by warning an engineer of a potential or foreseeable violation.

(2) Failure to take appropriate action to prevent the locomotive engineer of the train the conductor is assigned to from failing to adhere to the following limitations concerning train speed:

(i) When the conductor is located in the operating cab and the speed at which the train was operated exceeds the maximum authorized limit by at least 10 miles per hour. Where restricted speed is in effect, railroads shall consider only those violations of the conditional clause of restricted speed rules (*i.e.,* the clause that requires stopping within one half of the locomotive engineer's range of vision), or the operational equivalent thereof, which cause reportable accidents or incidents under part 225 of this chapter, except for accidents and incidents that are classified as ''covered data'' under §225.5 of this chapter. Appropriate action does not mean that a conductor must prevent a violation from occurring at all costs; the duty may be met by warning an engineer of a potential or foreseeable violation.

(ii) When not in the operating cab, the conductor is deemed to have taken appropriate action when in compliance with all applicable Railroad Operating Rules and Special Instructions.

(3) Failure to perform or have knowledge that a required brake test was performed pursuant to the Class I, Class IA, Class II, Class III, or transfer train brake test provisions of part 232 of this chapter or the Class 1, Class 1A, Class II, or running brake test provisions of part 238 of this chapter.

(4) Failure to take appropriate action to prevent the locomotive engineer of the train the conductor is assigned to from occupying main track or a segment of main track without proper authority or permission. Appropriate action does not mean that a conductor must prevent a violation from occurring at all costs; the duty may be met by warning an engineer of a potential or foreseeable violation.

(5) Failure to comply with prohibitions against tampering with locomotive mounted safety devices; knowingly fail to take appropriate action to prevent the locomotive engineer of the train the conductor is assigned to from failing to comply with prohibitions against tampering with locomotive mounted safety devices; or knowingly fail to take appropriate action to prevent the locomotive engineer of the train the conductor is assigned to from operating or permitting to be operated a train with an unauthorized disabled safety device in the controlling locomotive. (*See* 49 CFR part 218, subpart D and appendix C to part 218);

(6) Failure to comply with the provisions of §218.99 of this chapter (Shoving or pushing movements). Railroads shall only consider those violations of §218.99 of this chapter which cause reportable accidents or incidents under part 225 of this chapter, except for accidents and incidents that are classified as ''covered data'' under §225.5 of this chapter.

(7) Failure to comply with the provisions of §218.101 of this chapter (Leaving rolling and on-track maintenance-of-way equipment in the clear). Railroads shall only consider those violations of §218.101 of this chapter which cause reportable accidents or incidents under part 225 of this chapter, except for accidents and incidents that are classified as ''covered data'' under §225.5 of this chapter.

(8) Failure to comply with the provisions of §218.103 of this chapter (Hand-operated switches, including crossover switches). Railroads shall only consider those violations of §218.103 of this chapter which cause reportable accidents or incidents under part 225 of this chapter, except for accidents and incidents that are classified as ''covered data'' under §225.5 of this chapter.

(9) Failure to comply with the provisions of §218.105 of this chapter (Additional operational requirements for

hand-operated main track switches). Railroads shall only consider those violations of § 218.105 of this chapter which cause reportable accidents or incidents under part 225 of this chapter, except for accidents and incidents that are classified as ''covered data'' under § 225.5 of this chapter.

(10) Failure to comply with the provisions of § 218.107 of this chapter (Additional operational requirements for hand-operated crossover switches). Railroads shall only consider those violations of § 218.107 of this chapter which cause reportable accidents or incidents under part 225 of this chapter, except for accidents and incidents that are classified as ''covered data'' under § 225.5 of this chapter.

(11) Failure to comply with the provisions of § 218.109 of this chapter (Hand-operated fixed derails). Railroads shall only consider those violations of § 218.109 of this chapter which cause reportable accidents or incidents under part 225 of this chapter, except for accidents and incidents that are classified as ''covered data'' under § 225.5 of this chapter.

(12) Failure to comply with § 219.101 of this chapter; however such incidents shall be considered as a violation only for the purposes of § 242.405(a)(2) and (3).

(f)(1) If in any single incident the person's conduct contravened more than one operating rule or practice, that event shall be treated as a single violation for the purposes of this section.

(2) A violation of one or more operating rules or practices described in paragraphs (e)(1) through (11) of this section that occurs during a properly conducted operational compliance test subject to the provisions of this chapter shall be counted in determining the periods of ineligibility described in § 242.405.

(3) An operational test that is not conducted in compliance with this part, a railroad's operating rules, or a railroad's program under § 217.9 of this chapter, will not be considered a legitimate test of operational skill or knowledge, and will not be considered for certification, recertification or revocation purposes.

(4) A railroad shall not be permitted to deny or revoke an employee's certification based upon additional conditions or operational restrictions imposed pursuant to § 242.107(d).

[76 FR 69841, Nov. 9, 2011, as amended at 85 FR 81325, Dec. 15, 2020]

§ 242.405 Periods of ineligibility.

(a) A period of ineligibility described in this paragraph shall:

(1) Begin, for a person not currently certified, on the date of the railroad's written determination that the most recent incident has occurred; or

(2) Begin, for a person currently certified, on the date of the railroad's notification to the person that recertification has been denied or certification has been revoked; and

(3) Be determined according to the following standards:

(i) On other than main track where restricted speed or the operational equivalent thereof is in effect, the period of revocation for a violation of § 242.403(e)(6) through (8), (10), or (11) shall be reduced by one half provided that another revocable event has not occurred within the previous 12 months.

(ii) In the case of a single incident involving violation of one or more of the operating rules or practices described in § 242.403(e)(1) through (11), the person shall have his or her certificate revoked for a period of 30 calendar days.

(iii) In the case of two separate incidents involving a violation of one or more of the operating rules or practices described in § 242.403(e)(1) through (11), that occurred within 24 months of each other, the person shall have his or her certificate revoked for a period of six months.

(iv) In the case of three separate incidents involving violations of one or more of the operating rules or practices, described in § 242.403(e)(1) through (12), that occurred within 36 months of each other, the person shall have his or her certificate revoked for a period of one year.

(v) In the case of four separate incidents involving violations of one or more of the operating rules or practices, described in § 242.403(e)(1) through (12), that occurred within 36 months of each other, the person shall have his or her certificate revoked for a period of three years.

(vi) Where, based on the occurrence of violations described in §242.403(e)(12), different periods of ineligibility may result under the provisions of this section and §242.115, the longest period of revocation shall control.

(b) Any or all periods of revocation provided in paragraph (a) of this section may consist of training.

(c) Reduction in period of ineligibility: A person whose certification is denied or revoked shall be eligible for grant or reinstatement of the certificate prior to the expiration of the initial period of ineligibility only if:

(1) The denial or revocation of certification in accordance with the provisions of paragraph (a)(3) of this section is for a period of one year or less;

(2) Certification is denied or revoked for reasons other than noncompliance with §219.101 of this chapter;

(3) The person is evaluated by a railroad officer and determined to have received adequate remedial training;

(4) The person successfully completes any mandatory program of training or retraining, if that is determined to be necessary by the railroad prior to return to service; and

(5) At least one half the pertinent period of ineligibility specified in paragraph (a)(3) of this section has elapsed.

§242.407 Process for revoking certification.

(a) Except as provided for in §242.115(g), a railroad that certifies or recertifies a person as a conductor and, during the period that certification is valid, acquires reliable information regarding violation(s) of §242.403(e) or §242.115(e) of this chapter shall revoke the person's conductor certificate.

(b) Pending a revocation determination under this section, the railroad shall:

(1) Upon receipt of reliable information regarding violation(s) of §242.403(e) or §242.115(e) of this chapter, immediately suspend the person's certificate;

(2) Prior to or upon suspending the person's certificate, provide notice of the reason for the suspension, the pending revocation, and an opportunity for a hearing before a presiding officer other than the investigating officer. The notice may initially be given either orally or in writing. If given orally, it must be confirmed in writing and the written confirmation must be made promptly. Written confirmation which conforms to the notification provisions of an applicable collective bargaining agreement shall be deemed to satisfy the written confirmation requirements of this section. In the absence of an applicable collective bargaining agreement provision, the written confirmation must be made within 96 hours.

(3) Convene the hearing within the deadline prescribed by either paragraph (c)(1) of this section or the applicable collective bargaining agreement as permitted under paragraph (d) of this section;

(4) No later than the convening of the hearing and notwithstanding the terms of an applicable collective bargaining agreement, the railroad convening the hearing shall provide the person with a copy of the written information and list of witnesses the railroad will present at the hearing. If requested, a recess to the start of the hearing will be granted if that information is not provided until just prior to the convening of the hearing. If the information was provided through statements of an employee of the convening railroad, the railroad will make that employee available for examination during the hearing required by paragraph (b)(3) of this section. Examination may be telephonic where it is impractical to provide the witness at the hearing.

(5) Determine, on the record of the hearing, whether the person no longer meets the certification requirements of this part stating explicitly the basis for the conclusion reached;

(6) When appropriate, impose the pertinent period of revocation provided for in §242.405 or §242.115; and

(7) Retain the record of the hearing for 3 years after the date the decision is rendered.

(c) Except as provided for in paragraphs (d), (f), (i), and (j) of this section, a hearing required by this section shall be conducted in accordance with the following procedures:

(1) The hearing shall be convened within 10 days of the date the certificate is suspended unless the conductor

requests or consents to delay in the start of the hearing.

(2) The hearing shall be conducted by a presiding officer, who can be any proficient person authorized by the railroad other than the investigating officer.

(3) The presiding officer will exercise the powers necessary to regulate the conduct of the hearing for the purpose of achieving a prompt and fair determination of all material issues in controversy.

(4) The presiding officer shall convene and preside over the hearing.

(5) Testimony by witnesses at the hearing shall be recorded verbatim.

(6) All relevant and probative evidence shall be received unless the presiding officer determines the evidence to be unduly repetitive or so extensive and lacking in relevancy that its admission would impair the prompt, orderly, and fair resolution of the proceeding.

(7) The presiding officer may:

(i) Adopt any needed procedures for the submission of evidence in written form;

(ii) Examine witnesses at the hearing;

(iii) Convene, recess, adjourn or otherwise regulate the course of the hearing; and

(iv) Take any other action authorized by or consistent with the provisions of this part and permitted by law that may expedite the hearing or aid in the disposition of the proceeding.

(8) Parties may appear and be heard on their own behalf or through designated representatives. Parties may offer relevant evidence including testimony and may conduct such examination of witnesses as may be required for a full disclosure of the relevant facts.

(9) The record in the proceeding shall be closed at the conclusion of the hearing unless the presiding officer allows additional time for the submission of information. In such instances the record shall be left open for such time as the presiding officer grants for that purpose.

(10) No later than 10 days after the close of the record, a railroad official, other than the investigating officer, shall prepare and sign a written decision in the proceeding.

(11) The decision shall:

(i) Contain the findings of fact as well as the basis therefor, concerning all material issues of fact presented on the record and citations to all applicable railroad rules and practices;

(ii) State whether the railroad official found that a revocable event occurred and the applicable period of revocation with a citation to 49 CFR 242.405 (Periods of revocation); and

(iii) Be served on the employee and the employee's representative, if any, with the railroad to retain proof of that service.

(12) The railroad shall have the burden of proving that the conductor's conduct was not in compliance with the applicable railroad operating rule or practice or part 219 of this chapter.

(d) A hearing required by this section which is conducted in a manner that conforms procedurally to the applicable collective bargaining agreement shall be deemed to satisfy the procedural requirements of this section.

(e) A hearing required under this section may be consolidated with any disciplinary or other hearing arising from the same facts, but in all instances a railroad official, other than the investigating officer, shall make separate findings as to the revocation required under this section.

(f) A person may waive the right to the hearing provided under this section. That waiver shall:

(1) Be made in writing;

(2) Reflect the fact that the person has knowledge and understanding of these rights and voluntarily surrenders them; and

(3) Be signed by the person making the waiver.

(g) A railroad that has relied on the certification by another railroad under the provisions of § 242.127 or § 242.301, shall revoke its certification if, during the period that certification is valid, the railroad acquires information which convinces it that another railroad has revoked its certification in accordance with the provisions of this section. The requirement to provide a hearing under this section is satisfied

when any single railroad holds a hearing and no additional hearing is required prior to a revocation by more than one railroad arising from the same facts.

(h) The period of certificate suspension prior to the commencement of a hearing required under this section shall be credited towards satisfying any applicable revocation period imposed in accordance with the provisions of § 242.405.

(i) A railroad:

(1) Shall not revoke the person's certification as provided for in paragraph (a) of this section if sufficient evidence exists to establish that an intervening cause prevented or materially impaired the conductor's ability to comply with the railroad operating rule or practice which constitutes a violation under § 242.403(e)(1) through (e)(11); or

(2) May decide not to revoke the person's certification as provided for in paragraph (a) of this section if sufficient evidence exists to establish that the violation of § 242.403(e)(1) through (11) was of a minimal nature and had no direct or potential effect on rail safety.

(j) The railroad shall place the relevant information in the records maintained in compliance with § 242.215 for Class I (including the National Railroad Passenger Corporation) and Class II railroads, and § 242.203 for Class III railroads if sufficient evidence meeting the criteria provided in paragraph (i) of this section, becomes available either:

(1) Prior to a railroad's action to suspend the certificate as provided for in paragraph (b)(1) of this section; or

(2) Prior to the convening of the hearing provided for in this section;

(k) Provided that the railroad makes a good faith determination after a reasonable inquiry that the course of conduct provided for in paragraph (i) of this section is appropriate, the railroad which does not suspend a conductor's certification, as provided for in paragraph (b) of this section, is not in violation of paragraph (a) of this section.

Subpart F—Dispute Resolution Procedures

§ 242.501 Review board established.

(a) Any person who has been denied certification, denied recertification, or has had his or her certification revoked and believes that a railroad incorrectly determined that he or she failed to meet the certification requirements of this regulation when making the decision to deny or revoke certification, may petition the Federal Railroad Administrator to review the railroad's decision.

(b) The Administrator has delegated initial responsibility for adjudicating such disputes to the Operating Crew Review Board.

(c) The Operating Crew Review Board shall be composed of employees of the Federal Railroad Administration selected by the Administrator.

§ 242.503 Petition requirements.

(a) To obtain review of a railroad's decision to deny certification, deny recertification, or revoke certification, a person shall file a petition for review that complies with this section.

(b) Each petition shall:

(1) Be in writing;

(2) Be filed with the Docket Clerk, U.S. Department of Transportation, Docket Operations (M–30), West Building Ground Floor, Room W12–140, 1200 New Jersey Avenue SE., Washington, DC 20590. The form of such request may be in written or electronic form consistent with the standards and requirements established by the Federal Docket Management System and posted on its Web site at *http://www.regulations.gov*.

(3) Contain all available information that the person thinks supports the person's belief that the railroad acted improperly, including:

(i) The petitioner's full name;

(ii) The petitioner's current mailing address;

(iii) The petitioner's daytime telephone number;

(iv) The petitioner's email address (if available);

(v) The name and address of the railroad; and

(vi) The facts that the petitioner believes constitute the improper action

by the railroad, specifying the locations, dates, and identities of all persons who were present or involved in the railroad's actions (to the degree known by the petitioner);

(4) Explain the nature of the remedial action sought;

(5) Be supplemented by a copy of all written documents in the petitioner's possession or reasonably available to the petitioner that document that railroad's decision; and

(6) Be filed in a timely manner.

(7) Be supplemented, if requested by the Operating Crew Review Board, with a copy of the information under 49 CFR 40.329 that laboratories, medical review officers, and other service agents are required to release to employees. The petitioner must provide written explanation in response to an Operating Crew Review Board request if written documents that should be reasonably available to the petitioner are not supplied.

(c) A petition seeking review of a railroad's decision to deny certification or recertification or revoke certification in accordance with the procedures required by § 242.407 filed with FRA more than 120 days after the date the railroad's denial or revocation decision was served on the petitioner will be denied as untimely except that the Operating Crew Review Board for cause shown may extend the petition filing period at any time in its discretion:

(1) Provided that the request for extension is filed before the expiration of the period provided in this paragraph (c); or

(2) Provided that the failure to file timely was the result of excusable neglect.

(d) A party aggrieved by a Board decision to deny a petition as untimely or not in compliance with the requirements of this section may file an appeal with the Administrator in accordance with § 242.511.

[76 FR 69841, Nov. 9, 2011, as amended at 85 FR 81325, Dec. 15, 2020]

§ 242.505 Processing certification review petitions.

(a) Each petition shall be acknowledged in writing by FRA. The acknowledgment shall contain the docket number assigned to the petition and a statement of FRA's intention that the Board will attempt to render a decision on this petition within 180 days from the date that the railroad's response is received or from the date upon which the railroad's response period has lapsed pursuant to paragraph (c) of this section.

(b) Upon receipt of the petition, FRA will notify the railroad that it has received the petition and where the petition may be accessed.

(c) Within 60 days from the date of the notification provided in paragraph (b) of this section, the railroad may submit to FRA any information that the railroad considers pertinent to the petition. Late filings will only be considered to the extent practicable.

(d) A railroad that submits such information shall:

(1) Identify the petitioner by name and the docket number of the review proceeding and provide the railroad's email address (if available);

(2) Serve a copy of the information being submitted to FRA to the petitioner and petitioner's representative, if any; and

(3) File the information with the Docket Clerk, U.S. Department of Transportation, Docket Operations (M–30), West Building Ground Floor, Room W12–140, 1200 New Jersey Avenue SE., Washington, DC 20590. The form of such information may be in written or electronic form consistent with the standards and requirements established by the Federal Docket Management System and posted on its Web site at *http://www.regulations.gov*.

(e) Each petition will then be referred to the Operating Crew Review Board for a decision.

(f) Based on the record, the Board shall have the authority to grant, deny, dismiss or remand the petition.

(g) If the Board finds that there is insufficient basis for granting or denying the petition, the Board shall issue an order affording the parties an opportunity to provide additional information or argument consistent with its findings.

(h) When considering factual issues, the Board will determine whether there is substantial evidence to support the

railroad's decision, and a negative finding is grounds for granting the petition.

(i) When considering procedural issues, the Board will determine whether the petitioner suffered substantial harm that was caused by the failure to adhere to the dictated procedures for making the railroad's decision. A finding of substantial harm is grounds for reversing the railroad's decision. To establish grounds upon which the Board may grant relief, Petitioner must show:

(1) That procedural error occurred, and

(2) The procedural error caused substantial harm.

(j) Pursuant to its reviewing role, the Board will consider whether the railroad's legal interpretations are correct based on a *de novo* review.

(k) The Board will determine whether the denial or revocation of certification or recertification was improper under this part (*i.e.*, based on an incorrect determination that the person failed to meet the certification requirements of this part) and grant or deny the petition accordingly. The Board will not otherwise consider the propriety of a railroad's decision, *i.e.*, it will not consider whether the railroad properly applied its own more stringent requirements.

(l) The Board's written decision shall be served on the petitioner, including the petitioner's representative, if any, and the railroad.

[76 FR 69841, Nov. 9, 2011, as amended at 85 FR 81325, Dec. 15, 2020]

§ 242.507 Request for a hearing.

(a) If adversely affected by the Operating Crew Review Board's decision, either the petitioner before the Board or the railroad involved shall have a right to an administrative proceeding as prescribed by § 242.509.

(b) To exercise that right, the adversely affected party shall, within 20 days of service of the Board's decision on that party, file a written request with the Docket Clerk, U.S. Department of Transportation, Docket Operations (M–30), West Building Ground Floor, Room W12–140, 1200 New Jersey Avenue SE., Washington, DC 20590. The form of such request may be in written or electronic form consistent with the standards and requirements established by the Federal Docket Management System and posted on its Web site at *http://www.regulations.gov*.

(c) If a party fails to request a hearing within the period provided in paragraph (b) of this section, the Operating Crew Review Board's decision will constitute final agency action.

(d) If a party elects to request a hearing, that person shall submit a written request to the Docket Clerk containing the following:

(1) The name, address, telephone number, and email address (if available) of the respondent and the requesting party's designated representative, if any;

(2) The specific factual issues, industry rules, regulations, or laws that the requesting party alleges need to be examined in connection with the certification decision in question; and

(3) The signature of the requesting party or the requesting party's representative, if any.

(e) Upon receipt of a hearing request complying with paragraph (d) of this section, FRA shall arrange for the appointment of a presiding officer who shall schedule the hearing for the earliest practicable date.

§ 242.509 Hearings.

(a) An administrative hearing for a conductor certification petition shall be conducted by a presiding officer, who can be any person authorized by the Administrator, including an administrative law judge.

(b) The presiding officer may exercise the powers of the Administrator to regulate the conduct of the hearing for the purpose of achieving a prompt and fair determination of all material issues in controversy.

(c) The presiding officer shall convene and preside over the hearing. The hearing shall be a de novo hearing to find the relevant facts and determine the correct application of this part to those facts. The presiding officer may determine that there is no genuine issue covering some or all material facts and limit evidentiary proceedings to any issues of material fact as to which there is a genuine dispute.

(d) The presiding officer may authorize discovery of the types and quantities which in the presiding officer's discretion will contribute to a fair hearing without unduly burdening the parties. The presiding officer may impose appropriate non-monetary sanctions, including limitations as to the presentation of evidence and issues, for any party's willful failure or refusal to comply with approved discovery requests.

(e) Every petition, motion, response, or other authorized or required document shall be signed by the party filing the same, or by a duly authorized officer or representative of record, or by any other person. If signed by such other person, the reason therefor must be stated and the power of attorney or other authority authorizing such other person to subscribe the document must be filed with the document. The signature of the person subscribing any document constitutes a certification that he or she has read the document; that to the best of his or her knowledge, information and belief every statement contained in the document is true and no such statements are misleading; and that it is not interposed for delay or to be vexatious.

(f) After the request for a hearing is filed, all documents filed or served upon one party must be served upon all parties. Each party may designate a person upon whom service is to be made when not specified by law, regulation, or directive of the presiding officer. If a party does not designate a person upon whom service is to be made, then service may be made upon any person having subscribed to a submission of the party being served, unless otherwise specified by law, regulation, or directive of the presiding officer. Proof of service shall accompany all documents when they are tendered for filing.

(g) If any document initiating, filed, or served in, a proceeding is not in substantial compliance with the applicable law, regulation, or directive of the presiding officer, the presiding officer may strike or dismiss all or part of such document, or require its amendment.

(h) Any party to a proceeding may appear and be heard in person or by an authorized representative.

(i) Any person testifying at a hearing or deposition may be accompanied, represented, and advised by an attorney or other representative, and may be examined by that person.

(j) Any party may request to consolidate or separate the hearing of two or more petitions by motion to the presiding officer, when they arise from the same or similar facts or when the matters are for any reason deemed more efficiently heard together.

(k) Except as provided in § 242.507(c) and paragraph (u)(4) of this section, whenever a party has the right or is required to take action within a period prescribed by this part, or by law, regulation, or directive of the presiding officer, the presiding officer may extend such period, with or without notice, for good cause, provided another party is not substantially prejudiced by such extension. A request to extend a period which has already expired may be denied as untimely.

(l) An application to the presiding officer for an order or ruling not otherwise specifically provided for in this part shall be by motion. The motion shall be filed with the presiding officer and, if written, served upon all parties. All motions, unless made during the hearing, shall be written. Motions made during hearings may be made orally on the record, except that the presiding officer may direct that any oral motion be reduced to writing. Any motion shall state with particularity the grounds therefor and the relief or order sought, and shall be accompanied by any affidavits or other evidence desired to be relied upon which is not already part of the record. Any matter submitted in response to a written motion must be filed and served within fourteen (14) days of the motion, or within such other period as directed by the presiding officer.

(m) Testimony by witnesses at the hearing shall be given under oath and the hearing shall be recorded verbatim. The presiding officer shall give the parties to the proceeding adequate opportunity during the course of the hearing for the presentation of arguments in support of or in opposition to motions,

and objections and exceptions to rulings of the presiding officer. The presiding officer may permit oral argument on any issues for which the presiding officer deems it appropriate and beneficial. Any evidence or argument received or proffered orally shall be transcribed and made a part of the record. Any physical evidence or written argument received or proffered shall be made a part of the record, except that the presiding officer may authorize the substitution of copies, photographs, or descriptions, when deemed to be appropriate.

(n) The presiding officer shall employ the Federal Rules of Evidence for United States Courts and Magistrates as general guidelines for the introduction of evidence. Notwithstanding paragraph (m) of this section, all relevant and probative evidence shall be received unless the presiding officer determines the evidence to be unduly repetitive or so extensive and lacking in relevancy that its admission would impair the prompt, orderly, and fair resolution of the proceeding.

(o) The presiding officer may:

(1) Administer oaths and affirmations;

(2) Issue subpoenas as provided for in § 209.7 of this chapter;

(3) Adopt any needed procedures for the submission of evidence in written form;

(4) Examine witnesses at the hearing;

(5) Convene, recess, adjourn or otherwise regulate the course of the hearing; and

(6) Take any other action authorized by or consistent with the provisions of this part and permitted by law that may expedite the hearing or aid in the disposition of the proceeding.

(p) The petitioner before the Operating Crew Review Board, the railroad involved in taking the certification action, and FRA shall be parties at the hearing. All parties may participate in the hearing and may appear and be heard on their own behalf or through designated representatives. All parties may offer relevant evidence, including testimony, and may conduct such cross-examination of witnesses as may be required to make a record of the relevant facts.

(q) The party requesting the administrative hearing shall be the ''hearing petitioner.'' The hearing petitioner shall have the burden of proving its case by a preponderance of the evidence. Hence, if the hearing petitioner is the railroad involved in taking the certification action, that railroad will have the burden of proving that its decision to deny certification, deny recertification, or revoke certification was correct. Conversely, if the petitioner before the Operating Crew Review Board is the hearing petitioner, that person will have the burden of proving that the railroad's decision to deny certification, deny recertification, or revoke certification was incorrect. The party who is not the hearing petitioner will be a respondent.

(r) FRA will be a mandatory party to the administrative hearing. At the start of each proceeding, FRA will be a respondent.

(s) The record in the proceeding shall be closed at the conclusion of the evidentiary hearing unless the presiding officer allows additional time for the submission of additional evidence. In such instances the record shall be left open for such time as the presiding officer grants for that purpose.

(t) At the close of the record, the presiding officer shall prepare a written decision in the proceeding.

(u) The decision:

(1) Shall contain the findings of fact and conclusions of law, as well as the basis for each concerning all material issues of fact or law presented on the record;

(2) Shall be served on the hearing petitioner and all other parties to the proceeding;

(3) Shall not become final for 35 days after issuance;

(4) Constitutes final agency action unless an aggrieved party files an appeal within 35 days after issuance; and

(5) Is not precedential.

§ 242.511 Appeals.

(a) Any party aggrieved by the presiding officer's decision may file an appeal in the presiding officer's docket. The appeal must be filed within 35 days of issuance of the decision. A copy of the appeal shall be served on each

party. The appeal shall set forth objections to the presiding officer's decision, supported by reference to applicable laws and regulations and with specific reference to the record. If no appeal is timely filed, the presiding officer's decision constitutes final agency action.

(b) A party may file a reply to the appeal within 25 days of service of the appeal. The reply shall be supported by reference to applicable laws and regulations and with specific reference to the record, if the party relies on evidence contained in the record.

(c) The Administrator may extend the period for filing an appeal or a response for good cause shown, provided that the written request for extension is served before expiration of the applicable period provided in this section.

(d) The Administrator has sole discretion to permit oral argument on the appeal. On the Administrator's own initiative or written motion by any party, the Administrator may grant the parties an opportunity for oral argument.

(e) The Administrator may remand, vacate, affirm, reverse, alter or modify the decision of the presiding officer and the Administrator's decision constitutes final agency action except where the terms of the Administrator's decision (for example, remanding a case to the presiding officer) show that the parties' administrative remedies have not been exhausted.

(f) An appeal from an Operating Crew Review Board decision pursuant to §242.503(d) must be filed in the Board's docket within 35 days of issuance of the decision. A copy of the appeal shall be served on each party. The Administrator may affirm or vacate the Board's decision, and may remand the petition to the Board for further proceedings. An Administrator's decision to affirm the Board's decision constitutes final agency action.

[76 FR 69841, Nov. 9, 2011, as amended at 85 FR 81325, Dec. 15, 2020]

APPENDIX A TO PART 242 [RESERVED]

APPENDIX B TO PART 242—PROCEDURES FOR SUBMISSION AND APPROVAL OF CONDUCTOR CERTIFICATION PROGRAMS

This appendix establishes procedures for the submission and approval of a railroad's program concerning the training, testing, and evaluating of persons seeking certification or recertification as a conductor in accordance with the requirements of this part. It also contains guidance on how FRA will exercise its review and approval responsibilities.

SUBMISSION BY A RAILROAD

As provided for in §242.101, each railroad must have a program for determining the certification of each person it permits or requires to perform as a conductor or as a passenger conductor. Each railroad must submit its individual program to FRA for approval as provided for in §242.103. Each program must be accompanied by a request for approval organized in accordance with this appendix. Requests for approval must contain appropriate references to the relevant portion of the program being discussed. Requests should be submitted in writing on standard sized paper (8½ × 11) and can be in letter or narrative format. The railroad's submission shall be sent to the Associate Administrator for Railroad Safety/Chief Safety Officer, FRA. The mailing address for FRA is 1200 New Jersey Avenue SE., Washington, DC 20590. Simultaneous with its filing with the FRA, each railroad must serve a copy of its submission on the president of each labor organization that represents the railroad's employees subject to this part.

Each railroad is authorized to file by electronic means any program submissions required under this part. Prior to any person submitting a railroad's first program submission electronically, the person shall provide the Associate Administrator with the following information in writing:

(1) The name of the railroad;

(2) The names of two individuals, including job titles, who will be the railroad's points of contact and will be the only individuals allowed access to FRA's secure document submission site;

(3) The mailing addresses for the railroad's points of contact;

(4) The railroad's system or main headquarters address located in the United States;

(5) The email addresses for the railroad's points of contact; and

(6) The daytime telephone numbers for the railroad's points of contact.

A request for electronic submission or FRA review of written materials shall be addressed to the Associate Administrator for Railroad Safety/Chief Safety Officer, Federal Railroad Administration, 1200 New Jersey Avenue SE., Washington, DC 20590. Upon receipt of a request for electronic submission that contains the information listed above, FRA will then contact the requestor with instructions for electronically submitting its program.

A railroad that electronically submits an initial program or new portions or revisions to an approved program required by this part shall be considered to have provided its consent to receive approval or disapproval notices from FRA by email. FRA may electronically store any materials required by this part regardless of whether the railroad that submits the materials does so by delivering the written materials to the Associate Administrator and opts not to submit the materials electronically. A railroad that opts not to submit the materials required by this part electronically, but provides one or more email addresses in its submission, shall be considered to have provided its consent to receive approval or disapproval notices from FRA by email or mail.

ORGANIZATION OF THE SUBMISSION

Each request should be organized to present the required information in the following standardized manner. Each section must begin by giving the name, title, telephone number, and mailing address of the person to be contacted concerning the matters addressed by that section. If a person is identified in a prior section, it is sufficient to merely repeat the person's name in a subsequent section.

SECTION 1 OF THE SUBMISSION: GENERAL INFORMATION AND ELECTIONS

The first section of the request must contain the name of the railroad, the person to be contacted concerning the request (including the person's name, title, telephone number, and mailing address) and a statement electing either to accept responsibility for educating previously untrained persons to be certified conductors or recertify only conductors previously certified by other railroads. *See* §242.103(b).

If a railroad elects not to provide initial conductor training, the railroad is obligated to state so in its submission. A railroad that makes this election will be limited to recertifying persons initially certified by another railroad. A railroad that makes this election can rescind it by obtaining FRA approval of a modification of its program. *See* §242.103(f).

If a railroad elects to accept responsibility for training persons not previously trained to be conductors, the railroad is obligated to submit information on how such persons will be trained but has no duty to actually conduct such training. A railroad that elects to accept the responsibility for the training of such persons may authorize another railroad or a non-railroad entity to perform the actual training effort. The electing railroad remains responsible for assuring that such other training providers adhere to the training program the railroad submits. This section must also state which types of service the railroad will employ. *See* §242.107.

SECTION 2 OF THE SUBMISSION: TRAINING PERSONS PREVIOUSLY CERTIFIED

The second section of the request must contain information concerning the railroad's program for training previously certified conductors. As provided for in §242.119(l) each railroad must have a program for the ongoing education of its conductors to assure that they maintain the necessary knowledge concerning operating rules and practices, familiarity with physical characteristics, and relevant Federal safety rules.

Section 242.119(l) provides a railroad latitude to select the specific subject matter to be covered, duration of the training, method of presenting the information, and the frequency with which the training will be provided. The railroad must describe in this section how it will use that latitude to assure that its conductors remain knowledgeable concerning the safe discharge of their responsibilities so as to comply with the performance standard set forth in §242.119(l). This section must contain sufficient detail to permit effective evaluation of the railroad's training program in terms of the subject matter covered, the frequency and duration of the training sessions, the training environment employed (for example, use of classroom, use of computer based training, use of film or slide presentations, and use of on-job-training) and which aspects of the program are voluntary or mandatory.

Time and circumstances have the capacity to diminish both abstract knowledge and the proper application of that knowledge to discrete events. Time and circumstances also have the capacity to alter the value of previously obtained knowledge and the application of that knowledge. In formulating how it will use the discretion being afforded, each railroad must design its program to address both loss of retention of knowledge and changed circumstances, and this section of the submission to FRA must address these matters.

For example, conductors need to have their fundamental knowledge of operating rules and procedures refreshed periodically. Each railroad needs to advise FRA how that need is satisfied in terms of the interval between attendance at such training, the nature of the training being provided, and methods for conducting the training. A matter of particular concern to FRA is how each railroad

acts to ensure that conductors remain knowledgeable about the territory over which a conductor is authorized to perform but from which the conductor has been absent. The railroad must have a plan for the familiarization training that addresses the question of how long a person can be absent before needing more education and, once that threshold is reached, how the person will acquire the needed education. Similarly, the program must address how the railroad responds to changes such as the introduction of new technology, new operating rule books, or significant changes in operations including alteration in the territory conductors are authorized to work over.

In addition to stating how long a conductor must be absent from a territory before their qualification on the physical characteristics of the territory expires, railroads must also state in their programs the number of times a person must pass over a territory per year to be considered to have ''regularly traversed'' a territory for purposes of §242.301(c). Since territories differ in their complexity, railroads will be given discretion to determine how many times a conductor must pass over a territory to be considered to have ''regularly traversed'' a territory.

SECTION 3 OF THE SUBMISSION: TESTING AND EVALUATING PERSONS PREVIOUSLY CERTIFIED

The third section of the request must contain information concerning the railroad's program for testing and evaluating previously certified conductors. As provided for in §242.121, each railroad must have a program for the ongoing testing and evaluating of its conductors to assure that they have the necessary knowledge and skills concerning operating rules and practices, familiarity with physical characteristics of the territory, and relevant Federal safety rules. Similarly, each railroad must have a program for ongoing testing and evaluating to assure that its conductors have the necessary vision and hearing acuity as provided for in §242.117.

Section 242.121 requires that a railroad rely on written procedures for determining that each person can demonstrate his or her knowledge of the railroad's rules and practices and skill at applying those rules and practices for the safe performance as a conductor. Section 242.121 directs that, when seeking a demonstration of the person's knowledge, a railroad must employ a written test that contains objective questions and answers and covers the following subject matters: (i) Safety and operating rules; (ii) timetable instructions; (iii) physical characteristics of the territory; and (iv) compliance with all applicable Federal regulations. The test must accurately measure the person's knowledge of all of these areas.

Section 242.121 provides a railroad latitude in selecting the design of its own testing policies (including the number of questions each test will contain, how each required subject matter will be covered, weighting (if any) to be given to particular subject matter responses, selection of passing scores, and the manner of presenting the test information). The railroad must describe in this section how it will use that latitude to assure that its conductors will demonstrate their knowledge concerning the safe discharge of their responsibilities so as to comply with the performance standard set forth in §242.121.

Section 242.117 provides a railroad latitude to rely on the professional medical opinion of the railroad's medical examiner concerning the ability of a person with substandard acuity to safely perform as a conductor. The railroad must describe in this section how it will assure that its medical examiner has sufficient information concerning the railroad's operations to effectively form appropriate conclusions about the ability of a particular individual to safely perform as a conductor.

SECTION 4 OF THE SUBMISSION: TRAINING, TESTING, AND EVALUATING PERSONS NOT PREVIOUSLY CERTIFIED

Unless a railroad has made an election not to accept responsibility for conducting the initial training of persons to be conductors, the fourth section of the request must contain information concerning the railroad's program for educating, testing, and evaluating persons not previously trained as conductors. As provided for in §242.119(d), a railroad that is issuing an initial certification to a person to be a conductor must have a program for the training, testing, and evaluating of its conductors to assure that they acquire the necessary knowledge and skills concerning operating rules and practices, familiarity with physical characteristics of the territory, and relevant Federal safety rules.

Section 242.119 establishes a performance standard and gives a railroad latitude in selecting how it will meet that standard. A railroad must describe in this section how it will use that latitude to assure that its conductors will acquire sufficient knowledge and skill and demonstrate their knowledge and skills concerning the safe discharge of their responsibilities. This section must contain the same level of detail concerning initial training programs as that described for each of the components of the overall program contained in sections 2 through 4 of this Appendix. A railroad that plans to accept responsibility for the initial training of conductors may authorize another railroad or a non-railroad entity to perform the actual training effort. The authorizing railroad

may submit a training program developed by that authorized trainer but the authorizing railroad remains responsible for assuring that such other training providers adhere to the training program submitted. Railroads that elect to rely on other entities, to conduct training away from the railroad's own territory, must indicate how the student will be provided with the required familiarization with the physical characteristics for its territory.

SECTION 5 OF THE SUBMISSION: MONITORING OPERATIONAL PERFORMANCE BY CERTIFIED CONDUCTORS

The fifth section of the request must contain information concerning the railroad's program for monitoring the operation of its certified conductors. As provided for in §242.123, each railroad must have a program for the ongoing monitoring of its conductors to assure that they perform in conformity with the railroad's operating rules and practices and relevant Federal safety rules.

SECTION 6 OF THE SUBMISSION: PROCEDURES FOR ROUTINE ADMINISTRATION OF THE CONDUCTOR CERTIFICATION PROGRAM

The final section of the request must contain a summary of how the railroad's program and procedures will implement the various specific aspects of the regulatory provisions that relate to routine administration of its certification program for conductors. At a minimum this section needs to address the procedural aspects of the rule's provisions identified in the following paragraph.

Section 242.109 provides that each railroad must have procedures for review and comment on adverse prior safety conduct, but allows the railroad to devise its own system within generalized parameters. Sections 242.111, 242.115 and 242.403 require a railroad to have procedures for evaluating data concerning prior safety conduct as a motor vehicle operator and as railroad workers, yet leave selection of many details to the railroad. Sections 242.109, 242.201, and 242.401 place a duty on the railroad to make a series of determinations but allow the railroad to select what procedures it will employ to assure that all of the necessary determinations have been made in a timely fashion; who will be authorized to conclude that person will or will be not certified; and how it will communicate adverse decisions. Documentation of the factual basis the railroad relied on in making determinations under §§242.109, 242.117, 242.119 and 242.121 is required, but these sections permit the railroad to select the procedures it will employ to accomplish compliance with these provisions. Sections 242.125 and 242.127 permit reliance on certification/qualification determinations made by other entities and permit a railroad latitude in selecting the procedures it will employ to assure compliance with these provisions. Similarly, §242.301 permits the use of railroad selected procedures to meet the requirements for certification of conductors performing service in joint operations territory. Sections 242.211 and 242.407 allow a railroad a certain degree of discretion in complying with the requirements for replacing lost certificates or the conduct of certification revocation proceedings.

This section of the request should outline in summary fashion the manner in which the railroad will implement its program so as to comply with the specific aspects of each of the rule's provisions described in the preceding paragraph.

FRA REVIEW

The submissions made in conformity with this appendix will be deemed approved within 30 days after the required filing date or the actual filing date whichever is later. No formal approval document will be issued by FRA. FRA has taken the responsibility for notifying a railroad when it detects problems with the railroad's program. FRA retains the right to disapprove a program that has obtained approval due to the passage of time as provided for in section §242.103.

Rather than establish rigid requirements for each element of the program, FRA has given railroads discretion to select the design of their individual programs within a specified context for each element. The rule, however, provides a good guide to the considerations that should be addressed in designing a program that will meet the performance standards of this rule.

In reviewing program submissions, FRA will focus on the degree to which a particular program deviates from the norms identified in its rule. To the degree that a particular program submission materially deviates from the norms set out in its rule, FRA's review and approval process will be focused on determining the validity of the reasoning relied on by a railroad for selecting its alternative approach and the degree to which the alternative approach is likely to be effective in producing conductors who have the knowledge and ability to safely perform as conductors.

[76 FR 69841, Nov. 9, 2011, as amended at 77 FR 6491, Feb. 8, 2012]

APPENDIX C TO PART 242—PROCEDURES FOR OBTAINING AND EVALUATING MOTOR VEHICLE DRIVING RECORD DATA

The purpose of this appendix is to outline the procedures available to individuals and railroads for complying with the requirements of §§242.109 and 242.111 of this part. Those provisions require that railroads consider the motor vehicle driving record of

each person prior to issuing him or her certification or recertification as a conductor.

To fulfill that obligation, a railroad must review a certification candidate's recent motor vehicle driving record. Generally, that will be a single record on file with the state agency that issued the candidate's current license. However, it can include multiple records if the candidate has been issued a motor vehicle driving license by more than one state agency or foreign country.

ACCESS TO STATE MOTOR VEHICLE DRIVING RECORD DATA

The right of railroad workers, their employers, or prospective employers to have access to a state motor vehicle licensing agency's data concerning an individual's driving record is controlled by state law. Although many states have mechanisms through which employers and prospective employers such as railroads can obtain such data, there are some states in which privacy concerns make such access very difficult or impossible. Since individuals generally are entitled to obtain access to driving record data that will be relied on by a state motor vehicle licensing agency when that agency is taking action concerning their driving privileges, FRA places responsibility on individuals, who want to serve as conductors to request that their current state drivers licensing agency or agencies furnish such data directly to the railroad considering certifying them as a conductor. Depending on the procedures adopted by a particular state agency, this will involve the candidate's either sending the state agency a brief letter requesting such action or executing a state agency form that accomplishes the same effect. It will normally involve payment of a nominal fee established by the state agency for such a records check. In rare instances, when a certification candidate has been issued multiple licenses, it may require more than a single request.

Once the railroad has obtained the motor vehicle driving record(s), the railroad must afford the prospective conductor an opportunity to review that record and respond in writing to its contents in accordance with the provisions of §242.401. The review opportunity must occur before the railroad evaluates that record. The railroad's required evaluation and subsequent decision making must be done in compliance with the provisions of this part.

APPENDIX D TO PART 242—MEDICAL STANDARDS GUIDELINES

(1) The purpose of this appendix is to provide greater guidance on the procedures that should be employed in administering the vision and hearing requirements of §242.117.

(2) In determining whether a person has the visual acuity that meets or exceeds the requirements of this part, the following testing protocols are deemed acceptable testing methods for determining whether a person has the ability to recognize and distinguish among the colors used as signals in the railroad industry. The acceptable test methods are shown in the left hand column and the criteria that should be employed to determine whether a person has failed the particular testing protocol are shown in the right hand column.

Accepted tests	Failure criteria
Pseudoisochromatic Plate Tests	
American Optical Company 1965	5 or more errors on plates 1–15.
AOC—Hardy-Rand-Ritter plates—second edition	Any error on plates 1–6 (plates 1–4 are for demonstration—test plate 1 is actually plate 5 in book).
Dvorine—Second edition	3 or more errors on plates 1–15.
Ishihara (14 plate)	2 or more errors on plates 1–11.
Ishihara (16 plate)	2 or more errors on plates 1–8.
Ishihara (24 plate)	3 or more errors on plates 1–15.
Ishihara (38 plate)	4 or more errors on plates 1–21.
Richmond Plates 1983	5 or more errors on plates 1–15.
Multifunction Vision Tester	
Keystone Orthoscope	Any error.
OPTEC 2000	Any error.
Titmus Vision Tester	Any error.
Titmus II Vision Tester	Any error.

(3) In administering any of these protocols, the person conducting the examination should be aware that railroad signals do not always occur in the same sequence and that ''yellow signals'' do not always appear to be the same. It is not acceptable to use ''yarn'' or other materials to conduct a simple test to determine whether the certification candidate has the requisite vision. No person shall be allowed to wear chromatic lenses

during an initial test of the person's color vision; the initial test is one conducted in accordance with one of the accepted tests in the chart and §242.117(h)(3).

(4) An examinee who fails to meet the criteria in the chart, may be further evaluated as determined by the railroad's medical examiner. Ophthalmologic referral, field testing, or other practical color testing may be utilized depending on the experience of the examinee. The railroad's medical examiner will review all pertinent information and, under some circumstances, may restrict an examinee who does not meet the criteria for serving as a conductor at night, during adverse weather conditions or under other circumstances. The intent of §242.117(j) is not to provide an examinee with the right to make an infinite number of requests for further evaluation, but to provide an examinee with at least one opportunity to prove that a hearing or vision test failure does not mean the examinee cannot safely perform as a conductor. Appropriate further medical evaluation could include providing another approved scientific screening test or a field test. All railroads should retain the discretion to limit the number of retests that an examinee can request but any cap placed on the number of retests should not limit retesting when changed circumstances would make such retesting appropriate. Changed circumstances would most likely occur if the examinee's medical condition has improved in some way or if technology has advanced to the extent that it arguably could compensate for a hearing or vision deficiency.

(5) Conductors who wear contact lenses should have good tolerance to the lenses and should be instructed to have a pair of corrective glasses available when on duty.

PART 243—TRAINING, QUALIFICATION, AND OVERSIGHT FOR SAFETY-RELATED RAILROAD EMPLOYEES

Subpart A—General

Sec.

243.1 Purpose and scope.

243.3 Application and responsibility for compliance.
243.5 Definitions.
243.7 Penalties and consequences for noncompliance.

Subpart B—Program Components and Approval Process

243.101 Employer program required.
243.103 Training components identified in program.
243.105 Optional model program development.
243.107 Training program submission, introductory information required.
243.109 Training program submission, review, and approval process.
243.111 Approval of programs filed by training organizations or learning institutions.
243.113 Electronic and written program submission requirements.

Subpart C—Program Implementation and Oversight Requirements

243.201 Employee qualification requirements.
243.203 Records.
243.205 Periodic oversight.
243.207 Annual review.
243.209 Railroad maintained list of contractors utilized.

AUTHORITY: 49 U.S.C. 20103, 20107, 20131–20155, 20162, 20301–20306, 20701–20702, 21301–21304, 21311; 28 U.S.C. 2461 note; and 49 CFR 1.89.

SOURCE: 79 FR 66501, Nov. 7, 2014, unless otherwise noted.

Subpart A—General

§ 243.1 Purpose and scope.

(a) The purpose of this part is to ensure that any person employed by a railroad or a contractor of a railroad as a safety-related railroad employee is trained and qualified to comply with any relevant Federal railroad safety laws, regulations, and orders, as well as any relevant railroad rules and procedures promulgated to implement those Federal railroad safety laws, regulations, and orders.

(b) This part contains the general minimum training and qualification requirements for each category and subcategory of safety-related railroad employee, regardless of whether the employee is employed by a railroad or a contractor of a railroad. Contractors shall coordinate with railroads and comply with the contents of this part, including those aspects of training that are specific to the contracting railroad's rules and procedures.

(c) The requirements in this part do not exempt any other requirement in this chapter.

(d) Unless otherwise noted, this part augments other training and qualification requirements contained in this chapter.

(e) The requirements in this part do not address hazardous materials training of ''hazmat employees'' as defined in 49 CFR 171.8 as such training is required pursuant to 49 CFR part 172, subpart H.

§ 243.3 Application and responsibility for compliance.

(a) This part applies to all railroads, contractors of railroads, and training organizations or learning institutions that train safety-related railroad employees except:

(1) Railroads or contractors of railroads that operate only on track inside an installation that is not part of the general railroad system of transportation (i.e., plant railroads, as defined in § 243.5);

(2) Tourist, scenic, historic, or excursion operations that are not part of the general railroad system of transportation as defined in § 243.5; or

(3) Rapid transit operations in an urban area that are not connected to the general railroad system of transportation.

(b) Although the duties imposed by this part are generally stated in terms of the duty of a railroad, each person, including a contractor for a railroad, who performs any duty covered by this part, shall perform that duty in accordance with this part.

§ 243.5 Definitions.

As used in this part—

Administrator means the Administrator of the Federal Railroad Administration or the Administrator's delegate.

Associate Administrator means the Associate Administrator for Railroad Safety and Chief Safety Officer of the Federal Railroad Administration or that person's delegate as designated in writing.

Calendar year means the period of time beginning on January 1 and ending on December 31 of each year.

Contractor means a person under contract with a railroad, including, but not limited to, a prime contractor or a subcontractor.

Designated instructor means a person designated as such by an employer, training organization, or learning institution, who has demonstrated, pursuant to the training program submitted by the employer, training organization, or learning institution, an adequate knowledge of the subject matter under instruction and, where applicable, has the necessary experience to effectively provide formal training of the subject matter.

Employer means a railroad or a contractor of a railroad that employs at least one safety-related railroad employee.

Formal training means training that has a structured and defined curriculum, and which provides an opportunity for training participants to have questions timely answered during the training or at a later date. In the context of this part, formal training may include, but is not limited to, classroom, computer-based, correspondence, on-the-job, simulator, or laboratory training.

Knowledge-based training is a type of formal training that is not task-based and is intended to convey information required for a safety-related railroad employee to comply with Federal railroad safety laws, regulations, and orders, as well as any relevant railroad rules and procedures promulgated to implement those Federal railroad safety laws, regulations, and orders.

On-the-job training (OJT) means job training that occurs in the workplace, i.e., the employee learns the job while doing the job.

Person means an entity of any type covered under 1 U.S.C. 1, including, but not limited to, the following: A railroad; a manager, supervisor, official, or other employee or agent of a railroad; any owner, manufacturer, lessor, or lessee of railroad equipment, track, or facilities; any independent contractor providing goods or services to a railroad; and any employee of such owner, manufacturer, lessor, lessee, or independent contractor.

Plant railroad means a plant or installation that owns or leases a locomotive, uses that locomotive to switch cars throughout the plant or installation, and is moving goods solely for use in the facility's own industrial processes. The plant or installation could include track immediately adjacent to the plant or installation if the plant railroad leases the track from the general system railroad and the lease provides for (and actual practice entails) the exclusive use of that trackage by the plant railroad and the general system railroad for purposes of moving only cars shipped to or from the plant. A plant or installation that operates a locomotive to switch or move cars for other entities, even if solely within the confines of the plant or installation, rather than for its own purposes or industrial processes, will not be considered a plant railroad because the performance of such activity makes the operation part of the general railroad system of transportation.

Qualified means that a person has successfully completed all instruction, training, and examination programs required by both the employer and this part, and that the person, therefore, may reasonably be expected to proficiently perform his or her duties in compliance with all Federal railroad safety laws, regulations, and orders.

Refresher training means periodic retraining required by an employer for each safety-related railroad employee to remain qualified.

Safety-related duty means either a safety-related task or a knowledge-based prohibition that a person meeting the definition of a safety-related railroad employee is required to comply with, when such duty is covered by any Federal railroad safety law, regulation, or order.

Safety-related railroad employee means an individual who is engaged or compensated by an employer to:

(1) Perform work covered under the hours of service laws found at 49 U.S.C. 21101, et seq.;

(2) Perform work as an operating railroad employee who is not subject to the hours of service laws found at 49 U.S.C. 21101, et seq.;

(3) In the application of parts 213 and 214 of this chapter, inspect, install, repair, or maintain track, roadbed, and signal and communication systems, including a roadway worker or railroad bridge worker as defined in § 214.7 of this chapter;

(4) Inspect, repair, or maintain locomotives, passenger cars or freight cars;

(5) Inspect, repair, or maintain other railroad on-track equipment when such equipment is in a service that constitutes a train movement under part 232 of this chapter;

(6) Determine that an on-track roadway maintenance machine or hi-rail vehicle may be used in accordance with part 214, subpart D of this chapter, without repair of a non-complying condition;

(7) Directly instruct, mentor, inspect, or test, as a primary duty, any person while that other person is engaged in a safety-related task; or

(8) Directly supervise the performance of safety-related duties in connection with periodic oversight in accordance with § 243.205.

Safety-related task means a task that a person meeting the definition of a safety-related railroad employee performs, when such task is covered by any Federal railroad safety law, regulation, or order.

Task-based training means a type of formal training with a primary focus on teaching the skills necessary to perform specific tasks that require some degree of neuromuscular coordination.

Tourist, scenic, historic, or excursion operations that are not part of the general railroad system of transportation means a tourist, scenic, historic, or excursion operation conducted only on track used exclusively for that purpose (i.e., there is no freight, intercity passenger, or commuter passenger railroad operation on the track).

§ 243.7 Penalties and consequences for noncompliance.

(a) A person who violates any requirement of this part, or causes the violation of any such requirement, is subject to a civil penalty of at least $1,086 and not more than $35,516 per violation, except that: Penalties may be assessed against individuals only for willful violations, and, where a grossly negligent violation or a pattern of repeated violations has created an imminent hazard of death or injury to persons, or has caused death or injury, a penalty not to exceed $142,063 per violation may be assessed. Each day a violation continues shall constitute a separate offense. *See* FRA's website at *www.fra.dot.gov* for a statement of agency civil penalty policy.

(b) A person who violates any requirement of this part or causes the violation of any such requirement may be subject to disqualification from all safety-sensitive service in accordance with part 209 of this chapter.

(c) A person who knowingly and willfully falsifies a record or report required by this part may be subject to criminal penalties under 49 U.S.C. 21311.

[79 FR 66501, Nov. 7, 2014, as amended at 81 FR 43113, July 1, 2016; 82 FR 16135, Apr. 3, 2017; 83 FR 60750, Nov. 27, 2018; 84 FR 23737, May 23, 2019; 84 FR 37075, July 31, 2019; 86 FR 1760, Jan. 11, 2021; 86 FR 23256, May 3, 2021; 87 FR 15870, Mar. 21, 2022; 88 FR 1129, Jan. 6, 2023; 88 FR 89564, Dec. 28, 2023]

Subpart B—Program Components and Approval Process

§ 243.101 Employer program required.

(a)(1) Effective January 1, 2020, each Class I railroad, and each intercity or commuter passenger railroad conducting operations subject to this part with 400,000 total employee work hours annually or more, shall submit, adopt, and comply with a training program for its safety-related railroad employees.

(2) Effective May 1, 2021, each employer conducting operations subject to this part not covered by paragraph (a)(1) of this section shall submit, adopt, and comply with a training program for its safety-related railroad employees.

(b) Except for an employer subject to the requirement in paragraph (a)(2) of this section, an employer commencing operations subject to this part after January 1, 2020, shall submit a training program for its safety-related railroad employees before commencing operations. Upon commencing operations, the employer shall adopt and comply with the training program.

(c) In the program required by this part, the employer shall:

(1) Classify its safety-related railroad employees in occupational categories or subcategories by craft, class, task, or other suitable terminology;

(2) Define the occupational categories or subcategories of safety-related railroad employees. The definition of each category or subcategory shall include a list of the Federal railroad safety laws, regulations, and orders that the employee is required to comply with, based on the employee's assignments and duties, broken down at a minimum to the applicable part of the Code of Federal Regulations, section of the United States Code, or citation to an order. The listing of the Federal requirements shall contain the descriptive title of each law, regulation, or order;

(3) Create tables or utilize other suitable formats which summarize the information required in paragraphs (c)(1) and (2) of this section, segregated by major railroad departments (e.g., Operations, Maintenance of Way, Maintenance of Equipment, Signal and Communications). After listing the major departments, the tables or other formats should list the categories and subcategories of safety-related railroad employees within those departments;

(4) Develop procedures to design and develop key learning points for any task-based or knowledge-based training; and

(5) Determine how training shall be structured, developed, and delivered, including an appropriate combination of classroom, simulator, computer-based, correspondence, OJT, or other formal training. The curriculum shall be designed to impart knowledge of, and ability to comply with applicable Federal railroad safety laws, regulations, and orders, as well as any relevant railroad rules and procedures promulgated to implement those applicable Federal railroad safety laws, regulations, and orders.

(d) On-the-job (OJT) training requirements:

(1) If a training program has OJT, the OJT portion of the training program shall consist of the following three key components:

(i) A brief statement describing the tasks and related steps the employee learning the job shall be able to perform;

(ii) A statement of the conditions (prerequisites, tools, equipment, documentation, briefings, demonstrations, and practice) necessary for learning transfer; and

(iii) A statement of the standards by which proficiency is measured through a combination of task/step accuracy, completeness, and repetition.

(2) Prior to beginning the initial safety-related tasks associated with OJT exercises, employers shall make any relevant information or materials, such as operating rules, safety rules, or other rules available to employees involved for referencing.

(3) The tasks and related steps associated with OJT exercises for a particular category or subcategory of employee shall be maintained together in one manual, checklist, or similar document. This reference shall be made available to all employees involved in those OJT exercises.

(e) Contractor's responsibility to validate approved program to a railroad: A contractor that chooses to train its own safety-related railroad employees shall provide each railroad that utilizes it with a document indicating that the contractor's program of training was approved by FRA. A contractor is being utilized by a railroad when any of the contractor's employees conduct safety-related duties on behalf of the railroad and the railroad does not otherwise qualify those employees of the contractor that are allowed to perform those duties.

(f) Railroad's responsibility to retain contractor's validation of program: A railroad that chooses to utilize contractor employees to perform safety-related duties and relies on contractor-provided training as the basis for those employees' qualification to perform those duties shall retain a document from the contractor indicating that the contractor's program was approved by FRA. A copy of the document required in paragraph (e) of this section satisfies this requirement.

[79 FR 66501, Nov. 7, 2014, as amended at 82 FR 20552, May 3, 2017; 83 FR 18458, Apr. 27, 2018; 85 FR 13, Jan. 2, 2020]

§ 243.103 Training components identified in program.

(a) Each employer's program shall include the following components:

(1) A unique name and identifier for each formal course of study;

(2) A course outline for each course that includes the following:

(i) Any prerequisites to course attendance;

(ii) A brief description of the course, including the terminal learning objectives;

(iii) A brief description of the target audience, e.g., a list of the occupational categories and subcategories of employees the course will be delivered to;

(iv) The method(s) of course delivery, which may include, but are not limited to, classroom, computer-based, on-the-job, simulator, laboratory, correspondence courses, or any combination thereof;

(v) The anticipated course duration;

(vi) A syllabus of the course to include any applicable U.S.C. chapters, 49 CFR parts, or FRA orders covered in the training; and

(vii) The kind of assessment (written test, performance test, verbal test, OJT standard, etc.) performed to demonstrate employee competency.

(3) A document for each OJT program component that includes the following:

(i) The roles and responsibilities of each category of person involved in the administration and implementation, guidelines for program coordination, and the progression and application of the OJT;

(ii) A listing of the occupational categories and subcategories of employees for which the OJT program applies; and

(iii) Details of the safety-related tasks and subtasks, conditions, and standards covered by the program components.

(4) The job title and telephone number of the employer's primary training point(s) of contact, listed separately by major department or employee occupational category, if applicable.

(5) If any training organization or learning institution developed and will deliver all or any part of the training, the employer must include the following:

(i) A narrative, text table, or other suitable format which describes those portions of the training that fit into this category;

(ii) The business name of the organization that developed and will deliver the training; and

(iii) The job title and telephone number of the training organization or learning institution's primary training point of contact.

(b) An employer that is required to submit similar training programs or plans pursuant to other regulatory requirements contained elsewhere in this chapter may elect to cross-reference these other programs or plans in the program required by this part rather than resubmitting that similar program or plan. When any such similar program or plan did not include the OJT components specified in paragraph (a)(3) of this section, the employer shall supplement its program in accordance with this part by providing that additional information.

(c) If an employer arranges job-related practice and practice related feedback sessions to supplement classroom, laboratory, simulator training, or OJT, the program shall include a description of the supplemental training.

(d) FRA may require modifications to any programs, including those programs referenced in paragraph (b) of this section, if it determines essential program components, such as OJT, or arranged practice and feedback, are missing or inadequate.

§ 243.105 Optional model program development.

(a) Any organization, business, or association may develop and submit one or more model training programs to FRA for review and approval so that the model program(s) may be used by multiple employers.

(1) Any such model program should be submitted with a unique identifier associated with the program, or FRA will assign a unique identifier.

(2) The program associated with the organization's unique identifier shall include all information required by § 243.103.

(3) Each model training program submitted to FRA before May 1, 2019, is

considered approved and may be implemented 180 days after the date of submission unless the Associate Administrator advises the organization, business, or association that developed and submitted the program that all or part of the program does not conform.

(b) An employer that chooses to use a model program approved by FRA is not required to submit the entire program to FRA. Instead, the employer must submit only the unique identifier, and all other information that is specific to that employer or deviates from the model program.

[79 FR 66501, Nov. 7, 2014, as amended at 82 FR 20552, May 3, 2017; 83 FR 18458, Apr. 27, 2018]

§ 243.107 Training program submission, introductory information required.

(a) An employer who provides or is responsible for the training of safety-related railroad employees shall submit its training program to FRA for review and approval. Each employer shall state in its submission whether, at the time of filing, it:

(1) Primarily conducts the training program of its own safety-related railroad employees, utilizing its own resources;

(2) Conducts any training for other than its own safety-related railroad employees;

(3) Implements any training programs conducted by some other entity on its behalf but adopted by that employer;

(4) Qualifies safety-related railroad employees previously qualified by other employers;

(5) Qualifies safety-related railroad employees previously trained by training organizations or learning institutions; or

(6) Any combination of paragraph (a)(1) through (5) of this section.

(b) An employer who utilizes any of the options specified in paragraphs (a)(2) through (5) of this section shall provide the following information in its submission:

(1) The categories of safety-related railroad employees who, at the time of filing, will receive training utilizing one or more of these options; and

(2) Whether the training delivered, utilizing one or more of these options, composes all or part of the overall training program regimen for that category of employee at the time of filing.

(c) An employer that elects to use training organizations or learning institutions to train some or all of its safety-related railroad employees, or to hire new safety-related railroad employees that have previously received training from any training organizations or learning institutions, shall include the full name of the training organization or learning institution in its submission.

§ 243.109 Training program submission, review, and approval process.

(a) *Initial programs.* (1) Apprenticeship or similar intern programs, that began prior to submission of the employer's initial program filed in accordance with this part, shall be described in the employer's initial program. Any such apprenticeship or similar intern programs may continue, but if the Associate Administrator advises the employer of specific deficiencies, the employer shall resubmit that portion of its program, as revised to address specific deficiencies, within 90 days after the date of any notice of deficiencies from the Associate Administrator. A failure to resubmit the program with the necessary revisions shall be considered a failure to implement a program under this part. The Associate Administrator may extend this 90-day period upon written request.

(2) An employer's initial program, as required by § 243.101(a) or (b), must be submitted to the Associate Administrator and is considered approved, and may be implemented immediately upon submission. Following submission, the Associate Administrator will review the program and inform the employer as to whether the initial program conforms to this part. If the Associate Administrator determines that all or part of the program does not conform, the Associate Administrator will inform the employer of the specific deficiencies. The deficient portions of the non-conforming program may remain in effect until approval of the revised

program, unless FRA provides notification otherwise. An employer shall resubmit the portion of its program, as revised to address specific deficiencies, within 90 days after the date of any notice of deficiencies from the Associate Administrator. A failure to resubmit the program with the necessary revisions shall be considered a failure to implement a program under this part. The Associate Administrator may extend this 90-day period upon written request.

(b) *Previously approved programs require an informational filing when modified.* The employer must review its previously approved training program and modify it accordingly when new safety-related Federal railroad laws, regulations, or orders are issued, or new safety-related technologies, procedures, or equipment are introduced into the workplace and result in new knowledge requirements, safety-related tasks, or modification of existing safety-related duties. An employer that modifies its training program for these described reasons shall submit an informational filing to the Associate Administrator not later than 30 days after the end of the calendar year in which the modification occurred, unless FRA advises otherwise to individual employers, one or more group of employers, or the general public. Programs modified in accordance with this paragraph, after the initial FRA approval, are considered approved upon being modified and may be implemented immediately. Any program deficiencies noted by the Associate Administrator shall be addressed in the same manner as paragraph (a)(2) of this section. The filing shall contain a summary description of sufficient detail that FRA can associate the changes with the employer's previously approved program, and shall include:

(1) Descriptions of all new or refresher training courses developed since the previous FRA approval, using the same criteria required for an initial filing;

(2) Explanations whenever OJT or arranged practice is added to, or discontinued from, a program;

(3) Explanations as to how the methods of delivering training, or qualifying employees has changed; and

(4) A statement from an organization, business, or association that has submitted a model program pursuant to this part, that the organization, business, or association has informed each employer who requested the right to use the affected training program of the changes and the need for the employer to comply with those changes that apply to the employer's operation.

(c) *New portions or revisions to an approved program.* Substantial additions or revisions to a previously approved program, that are not described as informational filings in accordance with paragraph (b) of this section, shall be considered approved and may be implemented immediately upon submission. Following submission, the Associate Administrator will review the new portions or revisions to the previously approved program and inform the employer as to whether the modifications conform to this part. Any program deficiencies noted by the Associate Administrator shall be addressed in the same manner as paragraph (a)(2) of this section. The Associate Administrator will inform the employer as to whether a new portion or revision to an approved program conforms to this part. If the Associate Administrator has determined that the changes do not conform to this part, the employer shall resubmit the portion of its program, as revised to address specific deficiencies, within 90 days after the date of any notice of deficiencies from the Associate Administrator. Failure to resubmit the program with the necessary revisions shall be considered a failure to implement a program under this part. The Associate Administrator may extend this 90-day period upon written request.

(d) *Additional submission, resubmission, or informational filing requirement for railroads.* (1) Each railroad shall:

(i) Simultaneous with its filing with the FRA, serve a copy of any submission, resubmission, or informational filing required pursuant to this section, to the president of each labor organization that represents the railroad's employees subject to this part; and

(ii) Include in its submission, resubmission, or informational filing required pursuant to this section a statement affirming that the railroad has

served a copy to the president of each labor organization that represents the railroad's employees subject to this part, together with a list of the names and addresses of persons served.

(2) Not later than 90 days from the date a railroad files its submission, resubmission, or informational filing required pursuant to this section, a representative designated by the president of each labor organization that represents railroad employees subject to this part, may file a comment on the submission, resubmission, or informational filing:

(i) Each comment shall be submitted to the Associate Administrator for Railroad Safety/Chief Safety Officer, Federal Railroad Administration, 1200 New Jersey Avenue SE., Washington, DC 20590; and

(ii) The commenter shall certify that a copy of the comment was served on the railroad.

§ 243.111 Approval of programs filed by training organizations or learning institutions.

(a) A training organization or learning institution that provides training services for safety-related railroad employees, including providing such training services to independent students who enroll with such training organization or learning institution and who will rely on the training services provided to qualify to become safety-related railroad employees, must submit its program to FRA for review and approval.

(b) A training organization or learning institution that has provided training services to employers covered by this part before January 1, 2019, may continue to offer such training services without FRA approval until January 1, 2020. The Associate Administrator may extend this period at any time based on a written request. Such written requests for an extension of time to submit a program should contain any factors the training organization or learning institution wants the Associate Administrator to consider before approving or disapproving the extension.

(c) A program submitted by a training organization or learning institution must include all information required for an employer's program in accordance with this part, unless the requirement could only apply to an employer's program. The submitted program for a training organization or learning institution must also include the following information:

(1) The full corporate or business name of the training organization or learning institution;

(2) The training organization or learning institution's primary business and email address;

(3) The training organization or learning institution's primary telephone number and point of contact;

(4) A listing of the training organization or learning institution's designated instructors;

(5) A resume for each designated instructor, showing how the instructor achieved the subject-matter and training expertise necessary to develop and deliver training to safety-related railroad employees, unless the designated instructors are currently employed by a railroad;

(6) A list of references of employer customers the learning organization or training institution has provided services to in the past; and

(7) A brief summary statement indicating how the training organization or learning institution determined the knowledge, skills, and abilities necessary to develop the training courses it provides to employers and independent students who enroll with such training organization or learning institution in order to become safety-related railroad employees. This brief summary should be of sufficient detail so that FRA can ascertain the methodologies the training organization or learning institution used during training development.

(d) Except as specified in paragraph (b) of this section, prior approval by the Associate Administrator is required before FRA will accept such training as sufficient to meet the requirements of this part. The Associate Administrator will advise the training organization or learning institution in writing whether FRA has approved the program. If all or part of the program is not approved by FRA, the Associate Administrator will inform the training organization or learning institution of specific deficiencies. At the time that

the Associate Administrator informs of any deficiencies, the Associate Administrator will clarify whether any particular training courses shall be considered approved.

(e) Previously approved programs require an informational filing when modified. The training organization or learning institution shall review its previously approved training program and modify it accordingly when new safety-related Federal railroad laws, regulations, or orders are issued, or new safety-related technologies, procedures, or equipment are introduced into the workplace and result in new knowledge requirements, safety-related tasks, or in modifications of existing safety-related duties. A training organization or learning institution that modifies its training program for these described reasons shall submit an informational filing to the Associate Administrator not later than 30 days after the end of the calendar year in which the modification occurred, unless FRA advises otherwise. Programs modified in accordance with this paragraph are considered approved upon modification and may be implemented immediately. Any program deficiencies noted by the Associate Administrator shall be addressed as specified in this section. The filing shall contain a summary description of sufficient detail so that FRA can associate the changes with the training organization's or learning institution's previously approved program, and shall include:

(1) Descriptions of all new or refresher training courses developed after the previous FRA approval, using the same criteria required for an initial filing;

(2) Explanations whenever OJT or arranged practice is added to, or discontinued from, a program; and

(3) Explanations as to how the methods of delivering training, or qualifying employees has changed.

(f) New portions or revisions to an approved program: Substantial additions or revisions to a previously approved program, that are not described as informational filings in accordance with paragraph (e) of this section, shall require prior approval by the Associate Administrator before FRA will accept such training as sufficient to meet the requirements of this part. The Associate Administrator will advise the training organization or learning institution in writing whether FRA has approved the new or revised program. If all or part of the program is not approved by FRA, the Associate Administrator will inform the training organization or learning institution of specific deficiencies. At the time that the Associate Administrator informs the training organization or learning institution of any deficiencies, the Associate Administrator will clarify whether any particular new or revised training courses shall be considered approved.

(g) Training organizations and learning institutions subject to this part are required to maintain records for each safety-related railroad employee that attends the training, in accordance with the recordkeeping requirements of this part.

(h) Training organizations and learning institutions subject to this part shall provide a student's training transcript or training record to any employer upon request by the student.

[79 FR 66501, Nov. 7, 2014, as amended at 82 FR 20553, May 3, 2017; 83 FR 18459, Apr. 27, 2018]

§ 243.113 Electronic and written program submission requirements.

(a) Except for an employer with less than 400,000 total employee work hours annually, each employer, training organization, or learning institution to which this part applies is required to file by electronic means any program submissions required under this part in accordance with the requirements of this section. Each organization, business, or association that develops an optional model program in accordance with § 243.105 of this part is required to electronically file the program in accordance with the requirements of this section.

(b) Prior to any person's first program submission electronically, the person shall provide the Associate Administrator with the following information in writing:

(1) The name of the employer, organization, learning institution, business, or association;

(2) The names of two individuals, including job titles, who will be the person's points of contact and will be the only individuals allowed access to FRA's secure document submission site;

(3) The mailing addresses for the person's points of contact;

(4) The person's system or main headquarters address located in the United States;

(5) The email addresses for the person's points of contact; and

(6) The daytime telephone numbers for the person's points of contact.

(c) A person that electronically submits an initial program, informational filing, or new portions or revisions to an approved program required by this part shall be considered to have provided its consent to receive approval or disapproval notices from FRA by email.

(d) A request for FRA review of written materials shall be addressed to the Associate Administrator for Railroad Safety/Chief Safety Officer, Federal Railroad Administration, 1200 New Jersey Avenue SE., Washington, DC 20590.

(e) FRA may electronically store any materials required by this part regardless of whether the person that submits the materials does so by delivering the written materials to the Associate Administrator and opts not to submit the materials electronically.

(f) A person that opts not to submit the materials required by this part electronically, but provides one or more email addresses in its submission, shall be considered to have provided consent to receive approval or disapproval notices from FRA by email or mail.

Subpart C—Program Implementation and Oversight Requirements

§ 243.201 Employee qualification requirements.

(a) Designating existing employees:

(1) By no later than September 1, 2020, each Class I railroad, and each intercity or commuter passenger railroad conducting operations subject to this part with 400,000 total employee work hours annually or more in operation as of January 1, 2020, shall declare the designation of each of its existing safety-related railroad employees by occupational category or subcategory, and only permit designated employees to perform safety-related service in that occupational category or subcategory. The Associate Administrator may extend this period based on a written request.

(2) By no later than January 1, 2022, each employer conducting operations subject to this part not covered by paragraph (a)(1) of this section in operation as of January 1, 2021, shall declare the designation of each of its existing safety-related railroad employees by occupational category or subcategory, and only permit designated employees to perform safety-related service in that occupational category or subcategory. The Associate Administrator may extend this period based on a written request.

(b) Except for an employer subject to the requirement in paragraph (a)(2) of this section, an employer commencing operations after January 1, 2020, shall declare the designation of each of its existing safety-related railroad employees by occupational category or subcategory before beginning operations, and only permit designated employees to perform safety-related service in that category or subcategory. Any person designated shall have met the requirements for newly hired employees or those assigned new safety-related duties in accordance with paragraph (c) of this section.

(c) Newly hired employees or those assigned new safety-related duty:. The following requirements apply to qualifying a safety-related railroad employee who, subsequent to the employer's designation in accordance with paragraphs (a) and (b) of this section, is newly hired or is to engage in a safety-related task not associated with the employee's previous training.

(1) Prior to an employee becoming a qualified member of an occupational category or subcategory, the employer shall require a safety-related railroad employee who is newly hired or is to engage in safety-related duties not associated with the employee's previous training to successfully complete the formal training curriculum for that

category or subcategory of safety-related railroad employee. Successful completion of the formal training curriculum includes passing any required examinations covering the skills and knowledge the employee will need to possess in order to perform the safety-related duties necessary to be a member of the occupational category or subcategory.

(2) If the training curriculum includes OJT, the employee shall demonstrate, to the satisfaction of a designated instructor, OJT proficiency by successfully completing the safety-related tasks necessary to become a qualified member of the occupational category or subcategory. However, as part of the OJT process and prior to completing such training and passing the field evaluation, a person may perform such tasks under the direct onsite observation of any qualified person, provided the qualified person has been advised of the circumstances and is capable of intervening if an unsafe act or non-compliance with Federal railroad safety laws, regulations, or orders is observed. An employee designated to provide formal training to other employees, and who is not a designated instructor, shall be qualified on the safety-related topics or tasks in accordance with the employer's training program and the requirements of this part.

(d) Employees previously qualified or trained, but not by the current employer: If an employee has received relevant qualification or training for a particular occupational category or subcategory through participation in a FRA-approved training program submitted by an entity other than the employee's current employer, that training shall satisfy the requirements of this part:

(1) Provided that:

(i) A current record of training is obtained from that other entity; or

(ii) When a current record of training is unavailable from that other entity, an employer performs testing to ensure the employee has the knowledge necessary to be a member of that category or subcategory of safety-related railroad employee; and

(2) When the employee, in the previous 180 days, has either not performed the safety-related duties or not received initial or periodic training for an occupational category or subcategory, the employer shall perform testing to ensure the employee has retained the knowledge necessary to remain a member of that occupational category or subcategory. In the situation where an employee's records are unavailable and the employee is subject to testing under paragraph (d)(1)(ii) of this section, no additional testing is required.

(e) Refresher training requirements and options:

(1) Beginning January 1, 2022, each Class I railroad, and each intercity or commuter passenger railroad conducting operations subject to this part with 400,000 total employee work hours annually or more, shall deliver refresher training at an interval not to exceed 3 calendar years from the date of an employee's last training event, except where refresher training is specifically required more frequently in accordance with this chapter. If the last training event occurs before FRA's approval of the employer's training program, the employer shall provide refresher training either within 3 calendar years from that prior training event or no later than December 31, 2024. Each employer shall ensure that, as part of each employee's refresher training, the employee is trained and qualified on the application of any Federal railroad safety laws, regulations, and orders the person is required to comply with, as well as any relevant railroad rules and procedures promulgated to implement those Federal railroad safety laws, regulations, and orders.

(2) Beginning May 1, 2023, each employer conducting operations subject to this part not covered by paragraph (e)(1) of this section shall deliver refresher training at an interval not to exceed 3 calendar years from the date of an employee's last training event, except where refresher training is specifically required more frequently in accordance with this chapter. If the last training event occurs before FRA's approval of the employer's training program, the employer shall provide refresher training either within 3 calendar years from that prior training

event or no later than December 31, 2025. Each employer shall ensure that, as part of each employee's refresher training, the employee is trained and qualified on the application of any Federal railroad safety laws, regulations, and orders the person is required to comply with, as well as any relevant railroad rules and procedures promulgated to implement those Federal railroad safety laws, regulations, and orders.

[79 FR 66501, Nov. 7, 2014, as amended at 82 FR 20553, May 3, 2017; 83 FR 18459, Apr. 27, 2018; 85 FR 13, Jan. 2, 2020]

§ 243.203 Records.

(a) *General requirements for qualification status records; accessibility.* Each employer shall maintain records to demonstrate the qualification status of each safety-related railroad employee that it employs.

(1) The records for former safety-related railroad employees shall be accessible for 6 years at the employer's system headquarters after the employment relationship ends.

(2) Current employee records shall be accessible at the employer's system headquarters.

(b) *Employee information.* The records shall include the following information concerning each such employee:

(1) The name of the employee;

(2) Occupational category or subcategory designations for which the employee is deemed qualified;

(3) The dates that each formal training course was completed;

(4) The title of each formal training course successfully completed;

(5) If the safety-related railroad employee attended safety-related training offered by a business, a training organization, or a learning institution with an FRA-approved program, a copy of the transcript or appropriate record from that business, training organization, or learning institution;

(6) The employee's OJT performance, which shall include the unique name or identifier of the OJT program component in accordance with §243.103, the date the OJT program component was successfully completed, and the identification of the person(s) determining that the employee successfully completed all OJT training necessary to be considered qualified to perform the safety-related tasks identified with the occupational categories or subcategories for which the employee is designated in accordance with the program required by this part;

(7) The date that the employee's status is determined to be qualified and the employee is designated to perform the safety-related duties identified with any particular occupational categories or subcategories, in accordance with the program required by this part;

(8) If an employee's qualification status was transferred from another entity with an approved program, a copy of the training record from that other entity; and

(9) Any additional information required by this part.

(c) *Record accessibility for other than individual employee records.* Except for records demonstrating the qualification status of each safety-related railroad employee as described in paragraph (b) of this section or otherwise specified in this part, each test, inspection, annual review, or other event record required by this part shall be accessible for 3 calendar years after the end of the calendar year to which the event relates. Each employer shall make these records accessible at one headquarters location within the United States, including, but not limited to, a railroad's system headquarters, a holding company's headquarters, a joint venture's headquarters, a contractor's principal place of business or other headquarters located where the contractor is incorporated. This requirement does not prohibit an employer with divisions from also maintaining any of these records at any division headquarters.

(d) *Availability of records.* Each employer, training organization, or learning institution required to maintain records under this part shall:

(1) Make all records available for inspection and copying/photocopying to representatives of FRA, upon request during normal business hours; and

(2) Make an employee's records available for inspection and copying/photocopying to that employee, former employee, or such person's representative upon written authorization by

such employee during normal business hours.

(e) *Electronic recordkeeping.* Nothing in this section precludes an employer, a training organization, or a learning institution from maintaining the information required to be retained under this part in an electronic format provided that:

(1) The employer, training organization, or learning institution maintains an information technology security program adequate to ensure the integrity of the electronic data storage system, including the prevention of unauthorized access to the program logic or individual records;

(2) The program and data storage system must be protected by a security system that utilizes an employee identification number and password, or a comparable method, to establish appropriate levels of program access meeting all of the following standards:

(i) No two individuals have the same electronic identity; and

(ii) A record cannot be deleted or altered by any individual after the record is certified by the employee who created the record;

(3) Any amendment to a record is either:

(i) Electronically stored apart from the record that it amends; or

(ii) Electronically attached to the record as information without changing the original record;

(4) Each amendment to a record uniquely identifies the person making the amendment;

(5) The system employed by the employer, training organization, or learning institution for data storage permits reasonable access and retrieval of the information in usable format when requested to furnish data by FRA representatives; and

(6) Information retrieved from the system can be easily produced in a printed format which can be readily provided to FRA representatives in a timely manner and authenticated by a designated representative of the railroad as a true and accurate copy of the railroad's records if requested to do so by FRA representatives.

(f) *Transfer of records.* If an employer ceases to do business and its assets will be transferred to a successor employer, it shall transfer to the successor employer all records required to be maintained under this part, and the successor employer shall retain them for the remainder of the period prescribed in this part.

§ 243.205 Periodic oversight.

(a) *General.* As part of the program required in accordance with this part, an employer shall adopt and comply with a program to conduct periodic oversight tests and inspections to determine if safety-related railroad employees comply with Federal railroad safety laws, regulations, and orders particular to FRA-regulated personal and work group safety. The program of periodic oversight shall commence on the day the employer files its program with FRA pursuant to §243.101(a) or on the day the employer commences operations pursuant to §243.101(b). The data gathered through the testing and inspection components of the program shall be used to determine whether systemic performance gaps exist, and to determine if modifications to the training component of the program are appropriate to close those gaps.

(b) *Locomotive engineer and conductor oversight exception.* Periodic oversight specified in this section is not required for employees covered by parts 240 and 242 of this chapter, but a railroad shall use results of the assessments required by those parts to determine if changes in its training programs are necessary to close any proficiency gaps found during those assessments.

(c) *Railroad oversight.* Each railroad shall identify supervisory employees, by category or subcategory, responsible for conducting periodic oversight tests and inspections for the safety-related railroad employees that it authorizes to perform safety-related duties on its property, except a railroad is not required to:

(1) Provide oversight for a contractor's safety-related railroad employees if that contractor is required to conduct its own periodic oversight because it meets the criteria specified in paragraph (g) of this section;

(2) Provide oversight for categories or subcategories of a contractor's safety-related railroad employees if the railroad does not employ supervisory

employees who are qualified as safety-related railroad employees in those categories or subcategories; or

(3) Provide oversight for any supervisory employee identified by the railroad as responsible for conducting oversight in accordance with this section.

(d) *Operational test exception for a railroad.* A railroad is not required to perform operational tests of safety-related railroad employees employed by a contractor.

(e) *Railroad oversight for contractors.* A railroad may choose to require supervisory employees to perform oversight of safety-related railroad employees employed by a contractor either:

(1) When oversight test and inspection sessions are scheduled specifically to determine if safety-related employees are in compliance with Federal railroad safety laws, regulations, and orders particular to FRA-regulated personal and work group safety; or

(2) When a qualified railroad supervisory employee's duties place this person in the vicinity of one or more safety-related railroad employees employed by a contractor and performing the oversight would result in minimal disruption of this person's other assigned duties.

(f) *Railroad's duty to notify contractor of non-compliance.* A railroad that finds evidence of contractor employee noncompliance with Federal railroad safety laws, regulations, and orders particular to FRA-regulated personal and work group safety during the periodic oversight shall provide that employee and that employee's employer with details of the non-compliance.

(g) *Contractor oversight.* Each contractor shall conduct periodic oversight tests and inspections of its safety-related railroad employees provided:

(1) A contractor employs more than 15 safety-related railroad employees;

(2) A contractor relies on training it directly provides to its own employees as the basis for qualifying those employees to perform safety-related duties on a railroad; and

(3) A contractor employs supervisory safety-related railroad employees capable of performing oversight.

(h) *Oversight divided by agreement.* Notwithstanding the requirements of paragraphs (c) and (g) of this section, a railroad and a contractor may agree that the contractor will provide the oversight by specifying in the program that the railroad has trained the contractor employees responsible for training and oversight.

(i) *Detailed records required.* Each employer that conducts periodic oversight in accordance with this section must keep a record of the date, time, place, and result of each test or inspection. The records shall specify each person administering tests and inspections, and each person tested. The record shall also provide a method to record whether the employee complied with the monitored duties, and any interventions used to remediate non-compliance. Modifications of the program required by § 217.9 of this chapter may be used in lieu of this oversight program, provided a railroad specifies it has done so in its program submitted in accordance with this part.

(j) *Additional records requirement.* Records required under this section are subject to the requirements of § 243.203.

§ 243.207 Annual review.

(a) The purpose of this review is to determine if knowledge or performance gaps exist in the application of Federal railroad safety laws, regulations, and orders. This section shall apply to each railroad once a program has been approved by FRA in accordance with this part. This section does not apply to a railroad with less than 400,000 total employee work hours annually. This section does not apply to employers other than railroads except as specified in paragraph (f) of this section.

(b) Except as provided for in paragraph (a) of this section, each railroad that is required to conduct periodic oversight in accordance with § 243.205 is also required to conduct an annual review, as provided in this section, and shall retain, at its system headquarters, one copy of the written annual review.

(c) Each railroad shall designate a person(s) who shall conduct a written annual review. The annual review shall be designed to identify knowledge or performance gaps in occupational categories and determine whether adjustments to the training component of the

program are the appropriate intervention to close those gaps or otherwise improve the effectiveness of the program. Such review shall include analysis of the following data:

(1) Periodic oversight data required by §243.205;

(2) Reportable accident/incident data as defined in part 225 of this chapter;

(3) FRA inspection report data;

(4) Employee training feedback received through a course evaluation process, if such feedback is available; and

(5) Feedback received from labor representatives, if such feedback is available.

(d) Based upon the results of the annual review, the designated person(s) shall coordinate any necessary adjustments to the initial and refresher training programs. At the railroad's option, the annual review required under this section may be conducted in conjunction with any periodic review required under part 217 of this chapter.

(e) If a railroad utilizes a contractor that directly trains its own safety-related railroad employees, the railroad shall notify the contractor of the relevant training program adjustments made to the railroad's program in accordance with paragraph (d) of this section.

(f) A contractor shall use any information provided by a railroad to adjust its training specific to the Federal railroad safety laws, regulations, and orders particular to FRA-regulated personal and work group safety.

(g) Prior to September 1 of each calendar year, each railroad to which this section applies shall complete its annual review for the previous calendar year.

§243.209 Railroad maintained list of contractors utilized.

(a) Each railroad utilizing contractors to supply the railroad with safety-related railroad employees shall maintain a list, at its system headquarters, with information regarding each contractor utilized unless:

(1) The railroad qualifies each of the contractor's safety-related railroad employees utilized; and

(2) The railroad maintains the training records for each of the contractor's safety-related railroad employees utilized.

(b) The listing required by paragraph (a) of this section shall include:

(1) The full corporate or business name of the contractor;

(2) The contractor's primary business and email address; and

(3) The contractor's primary telephone number.

(c) The information required by this section shall be continuously updated as additional contractors are utilized, and no contractor information shall be deleted from the list unless the contractor has not been utilized for at least 3 years from the end of the calendar year the contractor was last utilized.

PART 244—REGULATIONS ON SAFETY INTEGRATION PLANS GOVERNING RAILROAD CONSOLIDATIONS, MERGERS, AND ACQUISITIONS OF CONTROL

Subpart A—General

Sec.
244.1 Scope, application, and purpose.
244.3 Preemptive effect.
244.5 Penalties.
244.7 Waivers.
244.9 Definitions.

Subpart B—Safety Integration Plans

244.19 Disposition.
244.21 Compliance and Enforcement.
APPENDIX A TO PART 244—SCHEDULE OF CIVIL PENALTIES [RESERVED]

AUTHORITY: 49 U.S.C. 20103, 20107, 21301; 5 U.S.C. 553 and 559; 28 U.S.C. 2461 note; and 49 CFR 1.89.

SOURCE: 67 FR 11604, Mar. 15, 2002, unless otherwise noted.

Subpart A—General

§ 244.1 Scope, application, and purpose.

(a) This part prescribes requirements for filing and implementing a Safety Integration Plan with FRA whenever a Class I railroad proposes to consolidate with, merge with, or acquire control of another Class I railroad, or with a Class II railroad where there is a proposed amalgamation of operations.

(b) The purpose of this part is to achieve a reasonable level of railroad safety during the implementation of transactions described in paragraph (a) of this section. This part does not preclude a railroad from taking additional measures not inconsistent with this part to provide for safety in connection with a transaction.

(c) The requirements prescribed under this part apply only to FRA's disposition of a regulated transaction filed by an applicant. The transactions covered by this part also require separate filing with and approval by the Surface Transportation Board. *See* 49 CFR part 1106.

§ 244.3 Preemptive effect.

Under 49 U.S.C. 20106, issuance of these regulations preempts any State law, regulation, or order covering the same subject matter, except an additional or more stringent law, regulation, or order that:

(a) Is necessary to eliminate or reduce an essentially local safety hazard;

(b) Is not incompatible with a law, regulation, or order of the United States Government; and

(c) Does not unreasonably burden interstate commerce.

§ 244.5 Penalties.

(a) Any person who violates any requirement of this part or causes the violation of any such requirement is subject to a civil penalty of at least $1,086, but not more than $35,516 per day, except that: Penalties may be assessed against individuals only for willful violations, and, where a grossly negligent violation or a pattern of repeated violations has created an imminent hazard of death or injury to persons, or has caused death or injury, a penalty not to exceed $142,063 per violation may be assessed. Each day a violation continues shall constitute a separate offense.

(b) As specified in § 244.21, FRA may also exercise any of its other enforcement remedies if a railroad fails to comply with § 244.21.

(c) Any person who knowingly and willfully makes a false entry in a record or report required by this part shall be subject to criminal penalties under 49 U.S.C. 21311.

[67 FR 11604, Mar. 15, 2002, as amended at 69 FR 30595, May 28, 2004; 72 FR 51198, Sept. 6, 2007; 73 FR 79705, Dec. 30, 2008; 77 FR 24423, Apr. 24, 2012; 81 FR 43113, July 1, 2016; 82 FR 16135, Apr. 3, 2017; 83 FR 60750, Nov. 27, 2018; 84 FR 37075, July 31, 2019; 86 FR 1760, Jan. 11, 2021; 86 FR 23256, May 3, 2021; 87 FR 15870, Mar. 21, 2022; 88 FR 1129, Jan. 6, 2023; 88 FR 89564, Dec. 28, 2023]

§ 244.7 Waivers.

(a) A person subject to a requirement of this part may petition the Administrator for a waiver of compliance with any requirement of this part. The filing of such a petition does not affect that person's responsibility for compliance with that requirement pending action on such a petition.

(b) Each petition for a waiver under this section must be filed in the manner and contain the information required by part 211 of this chapter.

(c) If the Administrator finds that a waiver of compliance is in the public interest and is consistent with railroad safety, the Administrator may grant the waiver subject to any conditions the Administrator deems necessary.

(d) The procedures governing a petition for a waiver that are prescribed under this part apply only to FRA's disposition of such a petition. A person seeking a waiver of a Surface Transportation Board regulation would need to file a petition for a waiver with the Board. (*See* 49 CFR 1106.5.)

§ 244.9 Definitions.

As used in this part—

Administrator means the Administrator of the Federal Railroad Administration or the Administrator's delegate.

Amalgamation of operations means the migration, combination, or unification of one set of railroad operations with

another set of railroad operations, including, but not limited to, the allocation of resources affecting railroad operations (*e.g.*, changes in personnel, track, bridges, or communication or signal systems; or use or deployment of maintenance-of-way equipment, locomotives, or freight or passenger cars).

Applicant means a Class I railroad or a Class II railroad engaging in a transaction subject to this part.

Best practices means measures that are tried, tested, and proven to be the safest and most efficient rules or instructions governing railroad operations.

Class I or Class II railroad has the meaning assigned by regulations of the Surface Transportation Board (49 CFR part 1201; General Instructions 1–1), as those regulations may be revised by the Board (including modifications in class thresholds based on the revenue deflator formula) from time to time.

Corporate culture means the totality of the commitments, written and oral directives, and practices that make up the way a railroad's management and its employees operate their railroad.

Control means actual control, legal control, or the power to exercise control through:

(1) Common directors, officers, stockholders, a voting trust, or a holding or investment company, or

(2) Any other means. *See* 49 U.S.C. 10102.

Consolidation means the creation of a new Class I railroad by combining existing Class I railroads or a Class I railroad and a Class II railroad where there is an amalgamation of operations, or by a railroad or a corporate parent of a Class I railroad taking over the assets or assuming the liabilities, or both, of another Class I railroad such that the resulting unified entity has the combined capital, powers, and subsidiaries and affiliates, if applicable, of all of its constituents.

Environmental documentation means either an Environmental Assessment or Environmental Impact Statement prepared in accordance with the Surface Transportation Board's environmental rules at 49 CFR part 1105.

Merger means the acquisition of one Class I railroad or Class II railroad where there is amalgamation of operations by a Class I railroad such that the acquiring railroad or a corporate parent of that railroad acquires the stock, assets, liabilities, powers, subsidiaries and affiliates of the railroad acquired.

Person means an entity of any type covered under 1 U.S.C. 1, including the following: A railroad; a manager, supervisor, official, or other employee or agent of a railroad; any owner, manufacturer, lessor, or lessee of railroad equipment, track, or facilities; any independent contractor providing goods or services to a railroad; and any employee of such owner, manufacturer, lessor, lessee, or independent contractor.

Railroad means any form of non-highway ground transportation that runs on rails or electromagnetic guideways, including:

(1) Commuter or other short-haul rail passenger service in a metropolitan or suburban area; and

(2) High speed ground transportation systems that connect metropolitan areas, without regard to whether those systems use new technologies not associated with traditional railroads. The term does not include rapid transit operations in an urban area that are not connected to the general railroad system of transportation.

Safety Integration Plan means a comprehensive written plan submitted to and approved by FRA in compliance with this part that demonstrates in required detail how an applicant will provide for safe railroad operations during and after any transaction covered by this part, and otherwise assure compliance with the Federal railroad safety laws.

Section of Environmental Analysis or ''SEA'' means the Section of the Surface Transportation Board that prepares its environmental documentation and analyses.

Transaction means a consolidation, merger, or acquisition of control subject to the requirements of this part.

Subpart B—Safety Integration Plans

§ 244.11 Contents of a Safety Integration Plan.

Each Safety Integration Plan shall contain the following information for each subject matter identified in § 244.13 or § 244.15:

(a) A detailed description of how the applicant differs from each railroad it proposes to acquire or with which the applicant proposes to consolidate or merge, including the rules or instructions governing railroad operations of these railroads;

(b) A detailed description of the proposed manner of operations of the resulting railroad, including a reconciliation of the differing rules or instructions governing railroad operations of the railroads involved in the transaction;

(c) The measures to be taken to comply with applicable Federal railroad safety laws and regulations;

(d) The proposed specific measures, expressed step-by-step, for each relevant subject matter that the applicant believes will result in safe implementation of the proposed transaction consistent with the requirements of this part;

(e) The allocation of resources, expressed as human and capital resources within designated operating budgets, directed to complete safety-relevant operations subject to the transaction; and

(f) The timetable, targeted in specific terms from commencement to completion, for implementing paragraphs (c), (d) and (e) of this section.

§ 244.13 Subjects to be addressed in a Safety Integration Plan involving an amalgamation of operations.

Each Safety Integration Plan involving an amalgamation of operations shall address the following subjects for railroad operations conducted on property subject to the transaction:

(a) *Corporate culture.* Each applicant shall:

(1) Identify and describe differences for each safety-related area between the corporate cultures of the railroads involved in the transaction;

(2) Describe how these cultures lead to different practices governing rail operations; and

(3) Describe, in step-by-step measures, the integration of these corporate cultures and the manner in which it will produce a system of ''best practices'' when the transaction is implemented.

(b) *Training.* Each applicant shall identify classroom and field courses, lectures, tests, and other educational or instructional forums designed to ensure the proficiency, qualification, and familiarity with the operating rules and operating tasks of territory assigned of the following employees, either when these employees are assigned to a new territory or the operating rules on a given territory are changed:

(1) Employees who perform train and engine service;

(2) Employees who inspect and maintain track and bridges;

(3) Employees who inspect, maintain and repair any type of on-track equipment, including locomotives, passenger cars, and freight cars of all types;

(4) Dispatchers or operators;

(5) Employees who inspect and maintain signal and train control devices and systems;

(6) Hazardous materials personnel, including information technology personnel who affect the transportation of hazardous materials;

(7) Employees who maintain or upgrade communication systems affecting rail operations; and

(8) Supervisors of employees enumerated in paragraphs (b)(1) through (7) of this section.

(c) *Operating practices*—(1) *Operating rules.* Each applicant shall identify the operating rules, timetables, and timetable special instructions to govern railroad operations, including yard or terminal operations and freight or passenger service.

(2) *Alcohol and drug.* Each applicant shall identify the post-accident toxicological testing, reasonable cause testing, and random alcohol and drug testing programs as required under 49 CFR part 219.

(3) *Qualification and certification of locomotive engineers.* Each applicant shall identify the program for qualifying and

certifying locomotive engineers under 49 CFR part 240.

(4) *Hours of service laws.* Each applicant shall identify the procedures for complying with the Federal hours of service laws and related measures to minimize fatigue of employees covered by 49 U.S.C. chapter 211.

(d) *Motive power and equipment.* Each applicant shall identify the qualification standards for employees who inspect, maintain, or repair railroad freight or passenger cars and locomotives, and the designated facilities used, or to be used, to repair such equipment.

(e) *Signal and train control.* Each applicant shall identify the signal and train control systems governing railroad operations and maintenance, and any planned amendments or modifications to capital improvement and research and development projects for signal and train control operations.

(f) *Track Safety Standards and bridge structures.* Each applicant shall identify the maintenance and inspection programs for track and bridges, and the qualification standards for roadway workers.

(g) *Hazardous Materials.* Each applicant shall identify an inspection program covering the following areas:

(1) Field inspection practices;

(2) Hazardous materials communication standards;

(3) Emergency response procedures; and

(4) Information technology systems and personnel employed for transmitting or receiving information accompanying hazardous materials shipments. The inspection program should identify preventive measures that will be employed to respond to potential information technology integration and hazardous materials documentation deficiencies.

(h) *Dispatching operations.* Each applicant shall identify:

(1) The railroad dispatching system to be adopted;

(2) The migration of the existing dispatching systems to the adopted system, if applicable; and

(3) The criteria used to determine workload and duties performed by operators or dispatchers employed to execute operations.

(i) *Highway-rail grade crossing systems.* Each applicant shall identify a program, including its development and implementation, covering the following:

(1) Identification of the highway-rail grade crossings at which there will be an increase in rail traffic resulting from the transaction;

(2) An applicant's existing grade-crossing programs as they apply to grade crossings identified in paragraph (i)(1) of this section;

(3) Integration of the grade crossing programs of the railroads subject to the transaction to the extent the programs may be different;

(4) Emergency response actions;

(5) Avoidance of blocked or obstructed highway-rail crossing systems by trains, locomotives, railroad cars, or other pieces of rolling equipment; and

(6) Signs employed for changes in rail traffic patterns.

(j) *Personnel staffing.* Each applicant shall identify the number of employees by job category, currently and proposed, to perform the following types of functions when there is a projected change of operations that will impact workforce duties or responsibilities for employees of that job category:

(1) Train and engine service;

(2) Yard and terminal service;

(3) Dispatching operations;

(4) Roadway maintenance;

(5) Freight car and locomotive maintenance;

(6) Maintenance of signal and train control systems, devices, and appliances;

(7) Hazardous materials operations; and

(8) Managers responsible for oversight of safety programs.

(k) *Capital investment.* Each applicant shall identify the capital investment program, clearly displaying planned investments in track and structures, signals and train control, and locomotives and equipment. The program shall describe any differences from the program currently in place on each of the railroads involved in the transaction.

(l) *Information systems compatibility.* Each applicant shall identify measures providing for a seamless interchange of

information relating to the following subject matters:

(1) Train consists;

(2) Movements and movement history of locomotives and railroad freight cars;

(3) Dispatching operations;

(4) Emergency termination of operations; and

(5) Transportation of hazardous materials.

[67 FR 11604, Mar. 15, 2002, as amended at 67 FR 68045, Nov. 8, 2002]

§ 244.15 Subjects to be addressed in a Safety Integration Plan not involving an amalgamation of operations.

If an applicant does not propose an amalgamation of operations conducted on properties subject to the transaction, the applicant shall not be required to file a Safety Integration Plan unless directed to do so by FRA.

§ 244.17 Procedures.

(a) Each applicant shall file one original of a proposed Safety Integration Plan with the Associate Administrator for Safety, FRA, 1200 New Jersey Avenue, SE., Mail Stop 25, Washington, DC, 20590, no later than 60 days after the date it files its application with the Surface Transportation Board.

(b) The applicant shall submit such additional information necessary to support its proposed Safety Integration Plan as FRA may require to satisfy the requirements of this part.

(c) The applicant shall coordinate with FRA to resolve FRA's comments on the proposed Safety Integration Plan until such plan is approved.

(d) FRA will file its findings and conclusions on the proposed Safety Integration Plan with the Board's Section of Environmental Analysis at a date sufficiently in advance of the Board's issuance of its draft environmental documentation in the case to permit incorporation in the draft environmental document.

(e) Assuming FRA approves the proposed Safety Integration Plan and the Surface Transportation Board approves the transaction and adopts the Plan, each applicant involved in the transaction shall coordinate with FRA in implementing the approved Safety Integration Plan.

(f) During implementation of an approved Safety Integration Plan, FRA expects that an applicant may change and refine its Safety Integration Plan in response to unforeseen developments. An applicant shall communicate with FRA about such developments and submit amendments to its Safety Integration Plan to FRA for approval.

(g) During implementation of an approved Safety Integration Plan, FRA will inform the Surface Transportation Board about implementation of the plan at times and in a manner designed to aid the Board's exercise of its continuing jurisdiction over the approved transaction in accordance with an agreement that FRA and the Board will enter into and execute. Pursuant to such agreement, FRA will consult with the Board at all appropriate stages of implementation, and will advise the Board on the status of the implementation process:

(1) For a period of no more than five years after the Board approves the transaction,

(2) For an oversight period for the transaction established by the Board, or

(3) Until FRA advises the Board in writing that the integration of operations subject to the transaction is complete, whichever is shorter.

(h) *Request for Confidential Treatment.* Each applicant requesting that advanced drafts of the proposed Safety Integration Plan and information in support of the proposed and approved plan that are filed with FRA receive confidential treatment shall comply with the procedures enumerated at 49 CFR 209.11.

[67 FR 11604, Mar. 15, 2002, as amended at 74 FR 25176, May 27, 2009]

§ 244.19 Disposition.

(a) *Standard of review.* FRA reviews an applicant's Safety Integration Plan, and any amendments thereto, to determine whether it provides a reasonable assurance of safety at every step of the transaction. In making this determination, FRA will consider whether the plan:

(1) Is thorough, complete, and clear; and

(2) Describes in adequate detail a logical and workable transition from conditions existing before the transaction to conditions intended to exist after consummation of the transaction.

(b) *Approval of the Safety Integration Plan and Amendments Thereto.* FRA approves a Safety Integration Plan, and any amendments thereto, that meets the standard set forth in paragraph (a) of this section. The approval will be conditioned on an applicant's execution of all of the elements contained in the plan, including any amendments to the plan approved by FRA.

(c) *Amendment*—(1) *By the applicant.* The applicant may amend its Safety Integration Plan, from time to time, provided it explains the need for the proposed amendment in writing to FRA. Any amendment shall take effect no earlier than 30 days after its submission to FRA, unless it is either approved or disapproved by FRA within that period. Any disapproval of an amendment shall be in accordance with the requirements prescribed in paragraph (b) of this section.

(2) *By FRA.* FRA may request an applicant to amend its approved Safety Integration Plan from time to time should circumstances warrant.

[67 FR 11604, Mar. 15, 2002, as amended at 67 FR 68045, Nov. 8, 2002]

§ 244.21 Compliance and Enforcement.

(a) After the Surface Transportation Board has approved a transaction subject to this part, a railroad implementing a transaction subject to this part shall operate in accordance with the Safety Implementation Plan approved by FRA until the properties involved in the transaction are completely integrated into the form contemplated in the Surface Transportation Board's approval of the transaction.

(b) FRA may exercise any or all of its enforcement remedies authorized by the Federal railroad safety laws if a railroad fails to comply with paragraph (a) of this section or to execute any measure contained in a Safety Implementation Plan approved by FRA.

APPENDIX A TO PART 244—SCHEDULE OF CIVIL PENALTIES [RESERVED]

PART 245—QUALIFICATION AND CERTIFICATION OF DISPATCHERS

Subpart A—General

Sec.
245.1 Purpose and scope.
245.3 Application and responsibility for compliance.
245.5 Effect and construction.
245.7 Definitions.
245.9 Waivers.
245.11 Penalties and consequences for noncompliance.

Subpart B—Program and Eligibility Requirements

245.101 Certification program required.
245.103 FRA review of certification programs.
245.105 Implementation schedule for certification programs.
245.107 Requirements for certification programs.
245.109 Determinations required for certification and recertification.
245.111 Prior safety conduct as motor vehicle operator.
245.113 Prior safety conduct with other railroads.
245.115 Substance abuse disorders and alcohol drug rules compliance.
245.117 Visual acuity.
245.118 Hearing acuity.
245.119 Training requirements.
245.120 Requirements for territorial qualification.
245.121 Knowledge testing.
245.123 Monitoring operational performance.
245.125 Certification determinations made by other railroads.

Subpart C—Administration of the Certification Program

245.201 Time limitations for certification.
245.203 Retaining information supporting determinations.
245.205 List of certified dispatchers and recordkeeping.
245.207 Certificate requirements.
245.213 Multiple certifications.
245.215 Railroad oversight responsibilities.

Subpart D—Denial and Revocation of Certification

245.301 Process for denying certification.
245.303 Criteria for revoking certification.
245.305 Periods of ineligibility.
245.307 Process for revoking certification.

Subpart E—Dispute Resolution Procedures

245.401 Review board established.
245.403 Petition requirements.
245.405 Processing certification review petitions.
245.407 Request for a hearing.
245.409 Hearings.
245.411 Appeals.

APPENDIX A TO PART 245—PROCEDURES FOR OBTAINING AND EVALUATING MOTOR VEHICLE DRIVING RECORD DATA

APPENDIX B TO PART 245—MEDICAL STANDARDS GUIDELINES

AUTHORITY: 49 U.S.C. 20103, 20107, 20162, 21301, 21304, 21311; 28 U.S.C. 2461 note; 49 CFR 1.89; and Pub. L. 110–432, sec. 402, 122 Stat. 4884.

SOURCE: 89 FR 44806, May 21, 2024, unless otherwise noted.

Subpart A—General

§ 245.1 Purpose and scope.

(a) The purpose of this part is to ensure that only those persons who meet minimum Federal safety standards serve as dispatchers, to reduce the rate and number of accidents and incidents, and to improve railroad safety.

(b) This part prescribes minimum Federal safety standards for the eligibility, training, testing, certification, and monitoring of all dispatchers to whom it applies. This part does not restrict a railroad from adopting and enforcing additional or more stringent requirements consistent with this part.

(c) The dispatcher certification requirements prescribed in this part apply to any person who meets the definition of dispatcher contained in §245.7, regardless of the fact that the person may have a job classification title other than that of dispatcher.

§ 245.3 Application and responsibility for compliance.

(a) This part applies to all railroads except:

(1) Railroads that do not have any dispatch (as defined in §245.7) tasks performed either by dispatchers employed by the railroad or employed by a contractor or subcontractor;

(2) Railroads that operate only on track inside an installation that is not part of the general railroad system of transportation (*i.e.*, plant railroads, as defined in §245.7);

(3) Tourist, scenic, historic, or excursion operations that are not part of the general railroad system of transportation as defined in §245.7; or

(4) Rapid transit operations in an urban area that are not connected to the general railroad system of transportation.

(b) Although the duties imposed by this part are generally stated in terms of the duty of a railroad, each person, as defined in §245.7, who performs any function required by this part must perform that function in accordance with this part.

§ 245.5 Effect and construction.

(a) FRA does not intend, by use of the term dispatcher in this part, to alter the terms, conditions, or interpretation of existing collective bargaining agreements that employ other job classification titles when identifying a person who dispatches a train.

(b) FRA does not intend, by issuance of the regulations in this part, to alter the authority of a railroad to initiate disciplinary sanctions against its employees, including managers and supervisors, in the normal and customary manner, including those contained in its collective bargaining agreements.

(c) Except as provided in §245.213, nothing in this part shall be construed to create or prohibit an eligibility or entitlement to employment in other service for the railroad as a result of denial, suspension, or revocation of certification under this part.

(d) Nothing in this part shall be deemed to abridge any additional procedural rights or remedies not inconsistent with this part that are available to the employee under a collective bargaining agreement, the Railway Labor Act, or (with respect to employment at will) at common law with respect to removal from service or other adverse action taken as a consequence of this part.

§ 245.7 Definitions.

As used in this part:

Administrator means the Administrator of the FRA or the Administrator's delegate.

Alcohol means ethyl alcohol (ethanol) and includes use or possession of any

beverage, mixture, or preparation containing ethyl alcohol.

Blocking device means a method of control that either prohibits the operation of a switch or signal or restricts access to a section of track.

Controlled substance has the meaning assigned by 21 U.S.C. 802 and includes all substances listed on Schedules I through V as they may be revised from time to time (21 CFR parts 1301 through 1316).

Dispatch means:

(1) To perform a function that would be classified as a duty of a ''dispatching service employee,'' as that term is defined by the hours of service laws at 49 U.S.C. 21101(2), if the function were to be performed in the United States. The term dispatch includes, but is not limited to, by the use of an electrical or mechanical device:

(i) Controlling the movement of a train or other on-track equipment by the issuance of a written or verbal authority or permission affecting a railroad operation, or by establishing a route through the use of a railroad signal or train control system but not merely by aligning or realigning a switch; or

(ii) Controlling the occupancy of a track by a roadway worker or stationary on-track equipment, or both; or

(iii) Issuing a mandatory directive, including, but not limited to, speed restrictions, highway-rail grade crossing protections, or those which establish working limits for roadway workers.

(2) The term *dispatch* does not include the actions of personnel in the field:

(i) Effecting implementation of a written or verbal authority or permission for a railroad operation, including an authority for working limits to a roadway worker (*e.g.,* initiating an interlocking timing device, authorizing a train to enter working limits); or

(ii) Operating a function of a signal system designed for use by those personnel; or

(iii) Sorting and grouping rail cars inside a railroad yard to assemble or disassemble a train.

Dispatcher means any individual who dispatches.

Dispatcher Pilot means a dispatcher qualified on assigned territory, tasked with overseeing a non-qualified employee who has not successfully completed all instruction, training and examination programs for the physical characteristics of the territory or position.

Drug means any substance (other than alcohol) that has known mind or function-altering effects on a human subject, specifically including any psychoactive substance and including, but not limited to, controlled substances.

Drug and alcohol counselor (DAC) means a person who meets the credentialing and qualification requirements of a ''Substance Abuse Professional'' (SAP), as provided in 49 CFR part 40.

File, filed, and *filing* mean submission of a document under this part on the date when the Docket Clerk receives it, or if sent by mail, the date mailing was completed.

FRA means the Federal Railroad Administration.

FRA representative means the FRA Associate Administrator for Railroad Safety/Chief Safety Officer and the Associate Administrator's delegate, including any safety inspector employed by the Federal Railroad Administration and any qualified State railroad safety inspector acting under part 212 of this chapter.

Ineligible or *ineligibility* means that a person is legally disqualified from serving as a certified dispatcher. The term covers a number of circumstances in which a person may not serve as a certified dispatcher. Revocation of certification pursuant to § 245.307 and denial of certification pursuant to § 245.301 are two examples in which a person would be ineligible to serve as a dispatcher. A period of ineligibility may end when a condition or conditions are met, such as when a person meets the conditions to serve as a dispatcher following an alcohol or drug violation pursuant to § 245.115.

Knowingly means having actual knowledge of the facts giving rise to the violation or that a reasonable person acting in the circumstances, exercising due care, would have had such knowledge.

Main track means a track upon which the operation of trains is governed by

one or more of the following methods of operation: Timetable; mandatory directive; signal indication; or any form of absolute or manual block system.

Mandatory directive means any movement authority or speed restriction that affects a railroad operation.

Medical examiner means a person licensed as a doctor of medicine or doctor of osteopathy. A medical examiner can be a qualified full-time salaried employee of a railroad, a qualified practitioner who contracts with the railroad on a fee-for-service or other basis, or a qualified practitioner designated by the railroad to perform functions in connection with medical evaluations of employees. As used in this part, the medical examiner owes a duty to make an honest and fully informed evaluation of the condition of an individual.

On-the-job training means job training that occurs in the workplace, *i.e.*, the employee learns the job while doing the job.

Person means an entity of any type covered under 1 U.S.C. 1, including but not limited to the following: a railroad; a manager, supervisor, official, or other employee or agent of a railroad; any owner, manufacturer, lessor, or lessee of railroad equipment, track, or facilities; any independent contractor providing goods or services to a railroad; and any employee of such owner, manufacturer, lessor, lessee, or independent contractor.

Physical characteristics means the actual track profile of and physical location for points within a specific yard or route that affect the movement of a locomotive or train. Physical characteristics includes *main track physical characteristics* (see definition of ''main track'' in this section) and other than main track physical characteristics.

Plant railroad means a plant or installation that owns or leases a locomotive, uses that locomotive to switch cars throughout the plant or installation, and is moving goods solely for use in the facility's own industrial processes. The plant or installation could include track immediately adjacent to the plant or installation if the plant railroad leases the track from the general system railroad and the lease provides for (and actual practice entails) the exclusive use of that trackage by the plant railroad and the general system railroad for purposes of moving only cars shipped to or from the plant. A plant or installation that operates a locomotive to switch or move cars for other entities, even if solely within the confines of the plant or installation, rather than for its own purposes or industrial processes, will not be considered a plant railroad because the performance of such activity makes the operation part of the general railroad system of transportation.

Qualified means a person who has successfully completed all instruction, training and examination programs required by the employer, and the applicable parts of this chapter and that the person therefore may reasonably be expected to be proficient on all safety related tasks the person is assigned to perform.

Qualified instructor means a person who has demonstrated, pursuant to the railroad's written program, an adequate knowledge of the subjects under instruction and, where applicable, has the necessary dispatching experience to effectively instruct in the field, and has the following qualifications:

(1) Is a certified dispatcher under this part; and

(2) Has been selected as such by a designated railroad officer, in concurrence with the designated employee representative, where present; or

(3) In absence of concurrence provided in paragraph (2) of this definition, has a minimum of one year of service working as a dispatcher.

If a railroad does not have designated employee representation, then a person need not comply with paragraph (2) or (3) of this definition to be a *qualified instructor*.

Railroad means any form of nonhighway ground transportation that runs on rails or electromagnetic guideways and any entity providing such transportation, including:

(1) Commuter or other short-haul railroad passenger service in a metropolitan or suburban area and commuter railroad service that was operated by the Consolidated Rail Corporation on January 1, 1979; and

(2) High speed ground transportation systems that connect metropolitan

areas, without regard to whether those systems use new technologies not associated with traditional railroads; but does not include rapid transit operations in an urban area that are not connected to the general railroad system of transportation.

Railroad officer means any supervisory employee of a railroad.

Roadway worker in charge (RWIC) means a roadway worker who is qualified under § 214.353 of this chapter to establish on-track safety for roadway work groups, and lone workers qualified under § 214.347 of this chapter to establish on-track safety for themselves.

Serve or service, in the context of serving documents, has the meaning given in Rule 5 of the Federal Rules of Civil Procedure as amended. Similarly, the computation of time provisions in Rule 6 of the Federal Rules of Civil Procedure as amended are also applicable in this part. *See also* the definition of ''filing'' in this section.

Substance abuse disorder refers to a psychological or physical dependence on alcohol or a drug, or another identifiable and treatable mental or physical disorder involving the abuse of alcohol or drugs as a primary manifestation. A substance abuse disorder is ''active'' within the meaning of this part if the person is currently using alcohol or other drugs, except under medical supervision consistent with the restrictions described in § 219.103 of this chapter or has failed to successfully complete primary treatment or successfully participate in aftercare as directed by a DAC or SAP.

Substance Abuse Professional (SAP) means a person who meets the qualifications of a substance abuse professional, as provided in 49 CFR part 40.

Territorial qualifications means possessing the necessary knowledge concerning a railroad's operating rules and timetable special instructions including familiarity with applicable *main track* and other than *main track physical characteristics* of the territory over which the locomotive or train movement will occur as well as the characteristics of the position to include, and not limited to, the operation and capabilities of dispatch control systems.

Tourist, scenic, historic, or excursion operations that are not part of the general railroad system of transportation means a tourist, scenic, historic, or excursion operation conducted only on track used exclusively for that purpose (*i.e.*, there is no freight, intercity passenger, or commuter passenger railroad operation on the track).

§ 245.9 Waivers.

(a) A person subject to a requirement of this part may petition FRA for a waiver of compliance with such requirement. The filing of such a petition does not affect that person's responsibility for compliance with that requirement while the petition is being considered.

(b) Each petition for a waiver under this section must be filed in the manner and contain the information required by part 211 of this chapter.

(c) If FRA finds that a waiver of compliance is in the public interest and is consistent with railroad safety, FRA may grant the waiver subject to any conditions FRA deems necessary.

§ 245.11 Penalties and consequences for noncompliance.

(a) Any person (including a railroad; any manager, supervisor, official, or other employee or agent of a railroad; any owner, manufacturer, lessor, or lessee of railroad equipment, track, or facilities; any employee of such owner, manufacturer, lessor, or lessee; or any independent contractor or subcontractor of a railroad) who violates any requirement of this part or causes the violation of any such requirement is subject to a civil penalty of at least the minimum civil monetary penalty and not more than the ordinary maximum civil monetary penalty per violation. However, penalties may be assessed against individuals only for willful violations, and a penalty not to exceed the aggravated maximum civil monetary penalty per violation may be assessed, where:

(1) A grossly negligent violation, or a pattern of repeated violations, has created an imminent hazard of death or injury to persons; or

(2) A death or injury has occurred. *See* 49 CFR part 209, appendix A.

(b) Each day a violation continues constitutes a separate offense.

(c) A person who violates any requirement of this part or causes the violation of any such requirement may be subject to disqualification from all safety-sensitive service in accordance with part 209 of this chapter.

(d) A person who knowingly and willfully falsifies a record or report required by this part may be subject to criminal penalties under 49 U.S.C. 21311.

(e) In addition to the enforcement methods referred to in paragraphs (a) through (d) of this section, FRA may address violations of this part by use of the emergency order, compliance order, and/or injunctive provisions of the Federal rail safety laws.

(f) FRA's website at *https://railroads.dot.gov/* contains a schedule of civil penalty amounts used in connection with this part.

Subpart B—Program and Eligibility Requirements

§ 245.101 Certification program required.

(a) Each railroad subject to this part shall have a written dispatcher certification program.

(b) Each certification program shall include all of the following:

(1) A procedure for evaluating prior safety conduct as a motor vehicle operator that complies with the criteria established in § 245.111.

(2) A procedure for evaluating prior safety conduct as an employee or certified dispatcher with other railroads that complies with the criteria established in § 245.113.

(3) A procedure for evaluating potential substance abuse disorders and compliance with railroad alcohol and drug rules that complies with the criteria established in § 245.115.

(4) A procedure for evaluating visual and hearing acuity that complies with the criteria established in §§ 245.117 and 245.118.

(5) A procedure for training that complies with the criteria established in § 245.119.

(6) A procedure for knowledge testing that complies with the criteria established in § 245.121.

(7) A procedure for monitoring operational performance that complies with the criteria established in § 245.123.

§ 245.103 FRA review of certification programs.

(a) *Certification program submission schedule for railroads with current dispatching operations.* Each railroad with current dispatching operations, as of July 22, 2024, shall submit its dispatcher certification program to FRA, in accordance with the procedures and requirements contained in § 245.107, according to the following schedule:

(1) All Class I railroads (including the National Railroad Passenger Corporation) and railroads providing commuter service shall submit their programs to FRA no later than March 17, 2025.

(2) All Class II railroads and Class III railroads (including a switching and terminal or other railroad not otherwise classified) shall submit their programs to FRA no later than November 12, 2025.

(b) *Certification program submission for new dispatching railroads.* For each railroad that commences dispatching operations after July 22, 2024, the railroad shall submit its written dispatcher certification program to, and obtain approval from, FRA in accordance with the procedures and requirements contained in § 245.107, prior to commencing dispatching operations.

(c) *Method for submitting certification programs to FRA.* Railroads must submit their written certification programs and their requests for approval (described in § 245.107(a)) by emailing the documents to *FRADISPATCHCERTPROG@dot.gov*.

(d) *Notification requirements.* Each railroad that submits a program to FRA must:

(1) Simultaneously with its submission, provide a copy of the program and the request for approval (as described in § 245.107(a)) to the president of each labor organization that represents the railroad's dispatchers and to all of the railroad's dispatchers that are subject to this part; and

(2) Include in its submission to FRA, a statement affirming that the railroad has provided a copy of the program and the request for approval to the president of each labor organization that represents the railroad's dispatchers

and to all of the railroad's dispatchers that are subject to this part, along with a list of the names and email addresses of each president of a labor organization who was provided a copy of the program.

(e) *Comment period.* Any designated representative of dispatchers subject to this part or any directly affected person who does not have a designated representative may comment on a railroad's program provided that:

(1) The comment is submitted no later than 60 days after the date the program was submitted to FRA;

(2) The comment includes a concise statement of the commenter's interest in the matter;

(3) The commenter affirms that a copy of the comment was provided to the railroad; and

(4) The comment was emailed to *FRADISPATCHCERTPROG@dot.gov*.

(f) *FRA review period.* Upon receipt of a program, FRA will commence a thorough review of the program to ensure that it satisfies all of the requirements under this part.

(1) If FRA determines that the program satisfies all of the requirements under this part, FRA will issue a letter notifying the railroad that its program has been approved. Such letter will typically be issued within 120 days of the date the program was submitted to FRA.

(2) If FRA determines that the program does not satisfy all of the requirements under this part, FRA will issue a letter notifying the railroad that its program has been disapproved. Such letter will typically be issued within 120 days of the date the program was submitted to FRA and will identify the deficiencies found in the program that must be corrected before the program can be approved. After addressing these deficiencies, railroads can resubmit their programs in accordance with paragraph (h) of this section.

(3) If a railroad does not receive an approval or disapproval letter from FRA within 120 days of the date the program was submitted to FRA, FRA's decision on the program will remain pending until such time that FRA issues a letter either approving or disapproving the program. A certification program is not approved until FRA issues a letter approving the program.

(g) *Material modifications.* A railroad that intends to make one or more material modifications to its FRA-approved program must submit a request for approval (as described in § 245.107(a)(3)) of how it intends to modify the program and a copy of the modified program.

(1) A modification is material if it would affect the program's conformance with this part.

(2) The description of the modification and the modified program shall conform with the procedures and requirements contained in § 245.107.

(3) The process for submission and review of material modifications shall conform with paragraphs (c) through (f) of this section.

(4) A railroad shall not implement a material modification to its program until FRA issues its approval of the material modification in accordance with paragraph (f)(1) of this section.

(h) *Resubmissions.* If FRA disapproves a railroad's program or material modification, as described in paragraph (f)(2) of this section, the railroad can resubmit its program or material modification after addressing all of the deficiencies noted by FRA.

(1) The resubmission must conform with the procedures and requirements contained in § 245.107.

(2) The process for submission and review of resubmitted programs and resubmitted material modifications shall conform with paragraphs (c) through (f) of this section.

(3) The following deadlines apply to railroads that have their programs or material modifications disapproved by FRA:

(i) For a railroad that submitted its program pursuant to paragraph (a) of this section, the railroad must resubmit its program within 30 days of the date that FRA notified the railroad of the deficiencies in its program. If a railroad fails to resubmit its program within this timeframe and it continues its dispatching operations, FRA may consider such actions to be a failure to implement a program.

(ii) For a railroad that submitted its program pursuant to paragraph (b) of this section, there is no FRA-imposed

deadline for resubmitting its program. However, pursuant to §245.105(b), the railroad cannot begin dispatching operations until its program has been approved by FRA.

(iii) For a railroad that submitted a material modification to its FRA-approved program, there is no FRA-imposed deadline for resubmitting the material modification. However, pursuant to paragraph (g)(4) of this section, the railroad cannot implement the material modification until it has been approved by FRA.

(i) *Rescinding prior approval of program.* FRA reserves the right to revisit its prior approval of a railroad's program at any time.

(1) If upon such review, FRA discovers deficiencies in the program such that the program does not comply with subpart B of this part, FRA shall issue the railroad a letter rescinding its prior approval of the program and notifying the railroad of the deficiencies in its program that must be addressed.

(2) Within 30 days of FRA notifying the railroad of the deficiencies in its program, the railroad must address these deficiencies and resubmit its program to FRA. The resubmitted program must conform with the procedures and requirements contained in §245.107.

(3) The process for submission and review of resubmitted programs under this paragraph (i) shall conform with paragraphs (c) through (f) of this section.

(4) If a railroad fails to resubmit its program to FRA within the timeframe prescribed in paragraph (i)(2) of this section and the railroad continues its dispatching operations, FRA may consider such actions to be a failure to implement a program.

(5) If FRA issues a letter disapproving the railroad's resubmitted program, the railroad shall continue to resubmit its program in accordance with this paragraph (i).

(6) A program that has its approval rescinded under paragraph (i)(1) of this section may remain in effect until whichever of the following happens first:

(i) FRA approves the railroad's resubmitted program; or

(ii) FRA disapproves the railroad's second attempt at resubmitting its program.

(7) If FRA disapproves a railroad's second attempt at resubmitting its program under this paragraph (i) and the railroad continues its dispatching operations, FRA may consider such actions to be a failure to implement a program.

(j) *Availability of certification program documents.* The following documents will be available on FRA's website (*railroads.dot.gov*):

(1) A railroad's originally submitted program, a resubmission of its program, or a material modification of its program;

(2) Any comments, submitted in accordance with paragraph (e) of this section, to a railroad's originally submitted program, a resubmission of its program, or a material modification of its program; and

(3) Any approval or disapproval letter issued by FRA in response to a railroad's originally submitted program, a resubmission of its program, or a material modification of its program.

§245.105 Implementation schedule for certification programs.

(a) Each railroad that submits its dispatcher certification program to FRA in accordance with §245.103(a), may continue dispatching operations while it awaits approval of its program by FRA. However, if FRA disapproves a railroad's program on two occasions and the railroad continues dispatching operations, FRA may consider such actions to be a failure to implement a program.

(b) Each railroad that submits its dispatcher certification program to FRA in accordance with §245.103(b), must have its program approved by FRA prior to commencing dispatching operations. If such railroad commences dispatching operations before its program is approved by FRA, FRA may consider such actions to be a failure to implement a program.

(c) By March 17, 2025, each railroad shall:

(1) In writing, designate as certified dispatchers all persons authorized by the railroad to perform the duties of a dispatcher as of March 17, 2025; and

(2) Issue a certificate that complies with § 245.207 to each person that it designates.

(d) Between March 17, 2025 and the date FRA approves the railroad's certification program, each railroad shall:

(1) In writing, designate as a certified dispatcher any person who has been authorized by the railroad to perform the duties of a dispatcher between March 17, 2025 and the date FRA approves the railroad's certification program; and

(2) Issue a certificate that complies with § 245.207 to each person that it designates.

(e) After March 17, 2025, no railroad shall permit or require a person to perform service as a dispatcher unless that person is a certified dispatcher.

(f) No railroad shall permit or require a person, designated as a certified dispatcher under the provisions of paragraph (c) or (d) of this section, to perform service as a certified dispatcher for more than three years after the date FRA approves the railroad's certification program unless that person has been tested and evaluated in accordance with procedures that comply with subpart B of this part.

(1) Except as provided in paragraph (f)(3) of this section, a person who has been designated as a certified dispatcher under the provisions of paragraph (c) or (d) of this section and who is eligible to receive a retirement pension in accordance with the terms of an applicable agreement or in accordance with the terms of the Railroad Retirement Act (45 U.S.C. 231) within three years from the date the certifying railroad's program is approved by FRA, may request in writing, that a railroad not recertify that person, pursuant to subpart B of this part, until three years from the date the certifying railroad's program is approved.

(2) Upon receipt of a written request pursuant to paragraph (f)(1) of this section, a railroad may wait to recertify the person making the request until the end of the three-year period after FRA has approved the railroad's certification program. If a railroad grants any request, it must grant the request of all eligible persons to every extent possible.

(3) A person who is subject to recertification under part 240 or 242 of this chapter may not make a request pursuant to paragraph (f)(1) of this section.

(g) After a railroad's certification program has been approved by FRA, the railroad shall only certify or recertify a person as a dispatcher if that person has been tested and evaluated in accordance with procedures that comply with subpart B of this part.

§ 245.107 Requirements for certification programs.

(a) *Railroad's certification program submission.* (1) A railroad's certification program submission must include a copy of the certification program and a request for approval. If a railroad is submitting a material modification to its program, the copy of the certification program must incorporate all of the material modifications the railroad would like to make.

(2) For a railroad's initial certification program submission, the request for approval can be in letter or narrative format and shall include a statement that the railroad is seeking approval of its program by FRA.

(3) If a railroad is making a material modification to a program that has been previously approved by FRA, the request for approval can be in letter or narrative format and shall include an explanation of all of the material modifications that the railroad is making to its program.

(4) A railroad will receive approval or disapproval notices from FRA by email. (5) FRA may electronically store any materials required by this part.

(b) *Organization of the certification program.* Each program must be organized to present the required information in paragraphs (b)(1) through (6) of this section. Each section of the certification program must begin by giving the name, title, telephone number, and email address of the person to be contacted concerning the matters addressed by that section. If a person is identified in a prior section, it is sufficient to merely repeat the person's name in a subsequent section.

(1) *Section 1 of the program: general information and elections.* (i) The first section of the certification program must contain the name of the railroad, the person to be contacted concerning the

request for approval (including the person's name, title, telephone number, and email address) and a statement electing either to accept responsibility for training persons not previously certified as dispatchers or to not accept this responsibility.

(ii) If a railroad elects not to provide initial dispatcher training, the railroad will be limited to recertifying persons initially certified by another railroad. A railroad can change its election by obtaining FRA approval of a material modification to its program in accordance with § 245.103(g).

(iii) If a railroad elects to accept responsibility for training persons not previously certified as dispatchers, the railroad must submit information on how such persons will be trained but is not required to actually perform such training. A railroad that elects to accept responsibility for the training of such persons may authorize another railroad or a non-railroad entity to perform the actual training effort. The electing railroad remains responsible for ensuring that such other training providers adhere to the training program the railroad submits.

(2) *Section 2 of the program: training persons previously certified.* The second section of the certification program must contain information about the railroad's program for training previously certified dispatchers, including all of the following information:

(i) As provided for in § 245.119(i), each railroad must have a program for the ongoing education of its dispatchers to ensure that they maintain the necessary knowledge concerning relevant Federal safety regulations, operating rules and practices, familiarity with physical characteristics of the territory, and the dispatching systems and technology. The railroad must describe in this section how it will ensure that its dispatchers remain knowledgeable concerning the safe discharge of their responsibilities so as to comply with the standard set forth in § 245.119(i).

(ii) In accordance with the requirements in § 245.119(i), this section must contain sufficient detail to permit effective evaluation of the railroad's training program in terms of the subject matters covered, the frequency and duration of the training sessions (including the interval between attendance at such trainings), the training environment employed (for example, use of classroom, use of computer-based training, use of film or slide presentations, and use of on-the-job training), and which aspects of the program are voluntary or mandatory.

(iii) How the training will address a certified dispatcher's loss of knowledge over time.

(iv) How the training will address changed circumstances over time such as the introduction of new or modified technology including software modifications to dispatch systems and related signal and train control systems, new operating rule books, or significant changes in operations including alteration in the territory dispatchers are authorized to work over.

(v) A plan for familiarization training that addresses how long a person can be absent from dispatching on a territory before needing to be requalified on that territory (a time period that cannot exceed 12 months), and once that threshold is reached, how the person will acquire the needed familiarization training.

(vi) How the railroad will administer the training of previously certified dispatchers who have had their certification expire. If a railroad's certification program fails to specify how it will train these dispatchers, then the railroad shall require these dispatchers to successfully complete the railroad's entire training program.

(3) *Section 3 of the program: testing and evaluating persons previously certified.* The third section of the certification program must contain information about the railroad's program for testing and evaluating previously certified dispatchers including all of the following information:

(i) The railroad must describe in this section how it will ensure that its dispatchers demonstrate their knowledge concerning the safe discharge of their responsibilities so as to comply with the standards set forth in § 245.121.

(ii) The railroad must describe in this section how it will have ongoing testing and evaluation to ensure that its dispatchers have the necessary visual and hearing acuity as provided for in §§ 245.117 and 245.118. This section must

also address how the railroad will ensure that its medical examiners have sufficient information concerning the railroad's operations, as well as the dispatcher's safety-related tasks, to effectively form appropriate conclusions about the ability of a particular individual to safely perform as a dispatcher.

(4) *Section 4 of the program: training, testing, and evaluating persons not previously certified.* Unless a railroad has made an election not to accept responsibility for conducting the initial training of dispatchers, the fourth section of the certification program must contain information about the railroad's program for educating, testing, and evaluating persons not previously certified as dispatchers including all of the following information:

(i) As provided for in §245.119(c), a railroad that is issuing an initial dispatcher certification to a person must have a program for the training, testing, and evaluation of its dispatchers to ensure that they acquire the necessary knowledge and skills. A railroad must describe in this section how it will ensure that its dispatchers will acquire sufficient knowledge and skills and demonstrate their knowledge and skills concerning the safe discharge of their responsibilities.

(ii) This section must contain the same level of detail about the initial training program and the testing and evaluation of previously uncertified persons as is required for previously certified dispatchers in paragraphs (b)(2) and (3) of this section (Sections 2 and 3 of the program).

(iii) Railroads that elect to rely on other entities to conduct training away from the railroad's own territory and dispatching systems and technology must indicate how the student will be provided with the required training on the physical characteristics of the railroad's territory and the railroad's dispatching systems and technology.

(iv) How the railroad will administer the training of previously uncertified persons with extensive dispatching experience. If a railroad's certification program fails to specify how it will train these dispatchers, then the railroad shall require these dispatchers to successfully complete the railroad's entire training program.

(5) *Section 5 of the program: monitoring operational performance by certified dispatchers.* The fifth section of the certification program must contain information about the railroad's program for monitoring the operational performance of its certified dispatchers including all of the following information:

(i) Section 245.123 requires that a railroad perform ongoing monitoring of its dispatchers and that each dispatcher has an annual unannounced compliance test. A railroad must describe in this section how it will ensure that the railroad is monitoring that its dispatchers demonstrate their skills concerning the safe discharge of their responsibilities.

(ii) A railroad must describe the scoring system used by the railroad during an operational monitoring observation or unannounced compliance test administered in accordance with the procedures required under §245.123.

(6) *Section 6 of the program: procedures for routine administration of the dispatcher certification program.* The final section of the certification program must contain a summary of how the railroad's program and procedures will implement the various aspects of the regulatory provisions in this part that relate to routine administration of its certification program for dispatchers. Specifically, this section must address the procedural aspects of the following provisions and must describe the manner in which the railroad will implement its program so as to comply with all of the following provisions:

(i) Section 245.301 which provides that each railroad must have procedures for review and comment on adverse information.

(ii) Sections 245.111, 245.113, 245.115, and 245.303 which require a railroad to have procedures for evaluating data concerning prior safety conduct as a motor vehicle operator and as a railroad worker.

(iii) Sections 245.109, 245.201, and 245.301 which place a duty on the railroad to make a series of determinations. When describing how it will implement its program to comply with

these sections, a railroad must describe: the procedures it will utilize to ensure that all of the necessary determinations have been made in a timely fashion; who will be authorized to conclude that a person will or will be not certified; and how the railroad will communicate adverse decisions.

(iv) Sections 245.109, 245.117, 245.118, 245.119, and 245.121 which place a duty on the railroad to make a series of determinations. When describing how it will implement its program to comply with these sections, a railroad must describe how it will document the factual basis the railroad relied on in making determinations under these sections.

(v) Section 245.125 which permits reliance on certification determinations made by other railroads.

(vi) Sections 245.207 and 245.307 which contain the requirements for replacing lost certificates and the conduct of certification revocation proceedings.

§ 245.109 Determinations required for certification and recertification.

(a) After FRA has approved a railroad's dispatcher certification program, the railroad, prior to initially certifying or recertifying any person as a dispatcher, shall, in accordance with its FRA-approved program, determine in writing that:

(1) The individual meets the prior safety conduct eligibility requirements of §§ 245.111 and 245.113;

(2) The individual meets the eligibility requirements of §§ 245.115 and 245.303;

(3) The individual meets the visual and hearing acuity standards of §§ 245.117 and 245.118;

(4) The individual has the necessary knowledge, as demonstrated by successfully completing a test that meets the requirements of § 245.121; and

(5) If applicable, the individual has completed a training program that meets the requirements of § 245.119.

(b) Nothing in this section, § 245.111, or § 245.113 shall be construed to prevent persons subject to this part from entering into an agreement that results in a railroad obtaining the information needed for compliance with this subpart in a different manner than that prescribed in § 245.111 or § 245.113.

§ 245.111 Prior safety conduct as motor vehicle operator.

(a) Except as provided in paragraphs (b) through (e) of this section, after FRA has approved a railroad's dispatcher certification program, the railroad, prior to initially certifying or recertifying any person as a dispatcher, shall determine that the person meets the eligibility requirements of this section involving prior conduct as a motor vehicle operator.

(b) A railroad shall initially certify a person as a dispatcher for 60 days if the person:

(1) Requested the information required by paragraph (g) of this section at least 60 days prior to the date of the decision to certify that person; and

(2) Otherwise meets the eligibility requirements provided in § 245.109(a)(1) through (5).

(c) A railroad shall recertify a person as a dispatcher for 60 days from the expiration date of that person's certification if the person:

(1) Requested the information required by paragraph (g) of this section at least 60 days prior to the date of the decision to recertify that person; and

(2) Otherwise meets the eligibility requirements provided in § 245.109(a)(1) through (5).

(d) Except as provided in paragraph (e) of this section, if a railroad who certified or recertified a person for 60 days pursuant to paragraph (b) or (c) of this section does not obtain and evaluate the information requested pursuant to paragraph (g) of this section within those 60 days, that person will be ineligible to perform as a dispatcher until the information can be evaluated by the railroad.

(e) If a person requests the information required pursuant to paragraph (g) of this section but is unable to obtain it, that person or the railroad certifying or recertifying that person may petition for a waiver of the requirements of paragraph (a) of this section in accordance with the provisions of part 211 of this chapter. A railroad shall certify or recertify a person during the pendency of the waiver request if the person otherwise meets the eligibility requirements provided in § 245.109(a)(1) through (5).

(f) Except for persons designated as dispatchers under §245.105(c) or (d) or for persons covered by paragraph (j) of this section, each person seeking certification or recertification under this part shall, no more than one year prior to the date of the railroad's decision on certification or recertification:

(1) Take the actions required by paragraphs (g) through (i) of this section to make information concerning their driving record available to the railroad that is considering such certification or recertification; and

(2) Take any additional actions, including providing any necessary consent required by State, Federal, or foreign law to make information concerning their driving record available to that railroad.

(g) Each person seeking certification or recertification under this part shall request, in writing, that the chief of each driver licensing agency identified in paragraph (h) of this section provide a copy of that agency's available information concerning their driving record to the railroad that is considering such certification or recertification.

(h) Each person shall request the information required under paragraph (g) of this section from:

(1) The chief of the driver licensing agency of any jurisdiction, including a State or foreign country, which last issued that person a driver's license; and

(2) The chief of the driver licensing agency of any other jurisdiction, including states or foreign countries, where the person held a driver's license within the preceding three years.

(i) If advised by the railroad that a driver licensing agency has informed the railroad that additional information concerning that person's driving history may exist in the files of a State agency or foreign country not previously contacted in accordance with this section, such person shall:

(1) Request in writing that the chief of the driver licensing agency which compiled the information provide a copy of the available information to the prospective certifying railroad; and

(2) Take any additional action required by State, Federal, or foreign law to obtain that additional information.

(j) Any person who has never obtained a motor vehicle driver's license is not required to comply with the provisions of paragraph (g) of this section but shall notify the railroad of that fact in accordance with procedures established by the railroad in its certification program.

(k) Each certified dispatcher or person seeking initial certification shall report motor vehicle incidents described in paragraphs (m)(1) and (2) of this section to the certifying railroad within 48 hours of being convicted for, or completed State action to cancel, revoke, suspend, or deny a motor vehicle driver's license for, such violations. For purposes of this paragraph (k) and paragraph (m) of this section, ''State action'' means action of the jurisdiction that has issued the motor vehicle driver's license, including a foreign country. For purposes of dispatcher certification, no railroad shall require reporting earlier than 48 hours after the conviction, or completed State action to cancel, revoke, suspend, or deny a motor vehicle driver's license.

(l) When evaluating a person's motor vehicle driving record, a railroad shall not consider information concerning motor vehicle driving incidents that occurred:

(1) Prior to July 22, 2024;

(2) More than three years before the date of the railroad's certification decision; or

(3) At a time other than that specifically provided for in §245.111, §245.113, §245.115, or §245.303.

(m) When evaluating a person's motor vehicle driving record, a railroad shall only consider information concerning the following types of motor vehicle incidents:

(1) A conviction for, or completed State action to cancel, revoke, suspend, or deny a motor vehicle driver's license for operating a motor vehicle while under the influence of, or impaired by, alcohol or a controlled substance; or

(2) A conviction for, or completed State action to cancel, revoke, suspend, or deny a motor vehicle driver's license for refusal to undergo such testing as is required by State or foreign law when a law enforcement official seeks to determine whether a person is

operating a vehicle while under the influence of alcohol or a controlled substance.

(n) If such an incident, described in paragraph (m) of this section, is identified:

(1) The railroad shall provide the data to the railroad's DAC, together with any information concerning the person's railroad service record, and shall refer the person for evaluation to determine if the person has an active substance abuse disorder.

(2) The person shall cooperate in the evaluation and shall provide any requested records of prior counseling or treatment for review exclusively by the DAC in the context of such evaluation.

(3) If the person is evaluated as not currently affected by an active substance abuse disorder, the subject data shall not be considered further with respect to certification. However, the railroad shall, on recommendation of the DAC, condition certification upon participation in any needed aftercare and/or follow-up testing for alcohol or drugs deemed necessary by the DAC consistent with the technical standards specified in 49 CFR part 219, subpart H, as well as 49 CFR part 40.

(4) If the person is evaluated as currently affected by an active substance abuse disorder, the provisions of §245.115(c) will apply.

(5) If the person fails to comply with the requirements of paragraph (n)(2) of this section, the person shall be ineligible to perform as a certified dispatcher until such time as the person complies with the requirements.

(o) Each railroad shall adopt and comply with a program meeting the requirements of this section. When any person (including, but not limited to, each railroad, railroad officer, supervisor, and employee) violates any requirement of a program which complies with the requirements of this section, that person shall be considered to have violated the requirements of this section.

§245.113 Prior safety conduct with other railroads.

(a) After FRA has approved a railroad's dispatcher certification program, the railroad shall determine, prior to issuing any person a dispatcher certificate, that the certification candidate meets the eligibility requirements of this section.

(b) If the certification candidate has not been employed or certified by any other railroad in the previous five years, they do not have to submit a request in accordance with paragraph (c) of this section, but they must notify the railroad of this fact in accordance with procedures established by the railroad in its certification program.

(c) Except as provided for in paragraph (b) of this section, each person seeking certification or recertification under this part shall submit a written request to each railroad that employed or certified the person within the previous five years to provide the following information to the railroad that is considering whether to certify or recertify that person as a dispatcher:

(1) Information about that person's compliance with §245.111 within the three years preceding the date of the request;

(2) Information about that person's compliance with §245.115 within the five years preceding the date of the request; and

(3) Information about that person's compliance with §245.303 within the five years preceding the date of the request.

(d) Each person submitting a written request required by paragraph (c) of this section shall:

(1) Submit the request no more than one year before the date of the railroad's decision on certification or recertification; and

(2) Take any additional actions, including providing any consent required by State or Federal law to make information concerning their service record available to the railroad.

(e) Within 30 days after receipt of a written request that complies with paragraph (c) of this section, a railroad shall provide the information requested to the railroad designated in the written request.

(f) If a railroad is unable to provide the information requested within 30 days after receipt of a written request that complies with paragraph (c) of this section, the railroad shall provide an explanation, in writing, of why it cannot provide the information within

the requested time frame. If the railroad will ultimately be able to provide the requested information, the explanation shall state approximately how much more time the railroad needs to supply the requested information. If the railroad will not be able to provide the requested information, the explanation shall provide an adequate explanation for why it cannot provide this information. Copies of this explanation shall be provided to the railroad designated in the written request and to the person who submitted the written request for information.

(g) When evaluating a person's prior safety conduct with a different railroad, a railroad shall not consider information concerning prior safety conduct that occurred:

(1) Prior to July 22, 2024; or

(2) At a time other than that specifically provided for in § 245.111, § 245.113, § 245.115, or § 245.303.

(h) Each railroad shall adopt and comply with a program that complies with the requirements of this section. When any person (including, but not limited to, each railroad, railroad officer, supervisor, and employee) violates any requirement of a program that complies with the requirements of this subject, that person shall be considered to have violated the requirements of this section.

§ 245.115 Substance abuse disorders and alcohol drug rules compliance.

(a) *Eligibility determination.* After FRA has approved a railroad's dispatcher certification program, the railroad shall determine, prior to issuing any person a dispatcher certificate, that the person meets the eligibility requirements of this section.

(b) *Documentation.* In order to make the determination required under paragraph (c) of this section, a railroad shall have on file documents pertinent to that determination, including a written document from its DAC which states their professional opinion that the person has been evaluated as not currently affected by a substance abuse disorder or that the person has been evaluated as affected by an active substance abuse disorder.

(c) *Fitness requirement.* (1) A person who has an active substance abuse disorder shall be denied certification or recertification as a dispatcher.

(2) Except as provided for in paragraph (f) of this section, a certified dispatcher who is determined to have an active substance abuse disorder shall be ineligible to hold certification. Consistent with other provisions of this part, certification may be reinstated as provided in paragraph (e) of this section.

(3) In the case of a current employee of a railroad evaluated as having an active substance abuse disorder (including a person identified under the procedures of § 245.111), the employee may, if otherwise eligible, voluntarily self-refer for substance abuse counseling or treatment under the policy required by § 219.1001(b)(1) of this chapter; and the railroad shall then treat the substance abuse evaluation as confidential except with respect to ineligibility for certification.

(d) *Prior alcohol/drug conduct; Federal rule compliance.* (1) In determining whether a person may be or remain certified as a dispatcher, a railroad shall consider conduct described in paragraph (d)(2) of this section that occurred within a period of five consecutive years prior to the review. A review of certification shall be initiated promptly upon the occurrence and documentation of any incident of conduct described in this paragraph (d).

(2) A railroad shall consider any violation of § 219.101 or § 219.102 of this chapter and any refusal to provide a breath or body fluid sample for testing under the requirements of part 219 of this chapter when instructed to do so by a railroad representative.

(3) A period of ineligibility described in this section shall begin:

(i) For a person not currently certified, on the date of the railroad's written determination that the most recent incident has occurred; or

(ii) For a person currently certified, on the date of the railroad's notification to the person that recertification has been denied or certification has been suspended.

(4) The period of ineligibility described in this section shall be determined in accordance with the following standards:

(i) In the case of one violation of § 219.102 of this chapter, the person shall be ineligible to hold a certificate during evaluation and any required primary treatment as described in paragraph (e) of this section. In the case of two violations of § 219.102 of this chapter, the person shall be ineligible to hold a certificate for a period of two years. In the case of more than two such violations, the person shall be ineligible to hold a certificate for a period of five years.

(ii) In the case of one violation of § 219.102 of this chapter and one violation of § 219.101 of this chapter, the person shall be ineligible to hold a certificate for a period of three years.

(iii) In the case of one violation of § 219.101 of this chapter, the person shall be ineligible to hold a certificate for a period of nine months (unless identification of the violation was through a qualifying referral program described in § 219.1001 of this chapter and the dispatcher waives investigation, in which case the certificate shall be deemed suspended during evaluation and any required primary treatment as described in paragraph (e) of this section). In the case of two or more violations of § 219.101 of this chapter, the person shall be ineligible to hold a certificate for a period of five years.

(iv) If a person refuses to provide a breath or body fluid sample for testing under the requirements of part 219 of this chapter when instructed to do so by a railroad representative, the person shall be ineligible to hold a certificate for a period of nine months.

(e) *Future eligibility to hold certificate following alcohol/drug violation.* The following requirements apply to a person who has been denied certification or who has had their certification suspended or revoked as a result of conduct described in paragraph (d) of this section:

(1) The person shall not be eligible for grant or reinstatement of the certificate unless and until the person has:

(i) Been evaluated by a SAP to determine if the person currently has an active substance abuse disorder;

(ii) Successfully completed any program of counseling or treatment determined to be necessary by the SAP prior to return to service; and

(iii) In accordance with the testing procedures of 49 CFR part 219, subpart H, has had a return-to-duty alcohol test with an alcohol concentration of less than .02 and a return-to-duty body fluid sample that tested negative for controlled substances.

(2) A dispatcher placed in service or returned to service under the conditions described in paragraph (e)(1) of this section shall continue in any program of counseling or treatment deemed necessary by the SAP and shall be subject to a reasonable program of follow-up alcohol and drug testing without prior notice for a period of not more than five years following return to service. Follow-up tests shall include not fewer than six alcohol tests and six drug tests during the first year following return to service.

(3) Return-to-duty and follow-up alcohol and drug tests shall be performed consistent with the requirements of 49 CFR part 219, subpart H.

(4) This paragraph (e) does not create an entitlement to utilize the services of a railroad SAP, to be afforded leave from employment for counseling or treatment, or to employment as a dispatcher. Nor does it restrict any discretion available to the railroad to take disciplinary action based on conduct described herein.

(f) *Confidentiality protected.* Nothing in this part shall affect the responsibility of the railroad under § 219.1003(f) of this chapter to treat qualified referrals for substance abuse counseling and treatment as confidential; and the certification status of a dispatcher who is successfully assisted under the procedures of that section shall not be adversely affected. However, the railroad shall include in its referral policy a provision that, at least with respect to a certified dispatcher or a candidate for certification, the policy of confidentiality is waived (to the extent that the railroad shall receive from the SAP or DAC official notice of the substance abuse disorder and shall suspend or revoke the certification, as appropriate) if the person at any time refuses to cooperate in a recommended course of counseling or treatment.

(g) *Complying with certification program.* Each railroad shall adopt and comply with a program meeting the requirements of this section. When any person (including, but not limited to, each railroad, railroad officer, supervisor, and employee) violates any requirement of a program which complies with the requirements of this section, that person shall be considered to have violated the requirements of this section.

§ 245.117 Visual acuity.

(a) After FRA has approved a railroad's dispatcher certification program, the railroad shall determine, prior to issuing any person a dispatcher certificate, that the person meets the standards for visual acuity prescribed in this section and appendix B to this part.

(b) Any examination required under this section shall be performed by or under the supervision of a medical examiner or a licensed physician's assistant.

(c) Except as provided in paragraph (d) of this section, each dispatcher shall have visual acuity that meets or exceeds the following thresholds:

(1) For distant viewing, either:

(i) Distant visual acuity of at least 20/40 (Snellen) in each eye without corrective lenses; or

(ii) Distant visual acuity separately corrected to at least 20/40 (Snellen) with corrective lenses and distant binocular acuity of at least 20/40 (Snellen) in both eyes with or without corrective lenses;

(2) A field of vision of at least 70 degrees in the horizontal meridian in each eye; and

(3) The ability to recognize and distinguish between the colors of railroad signals as demonstrated by successfully completing one of the tests in appendix B to this part.

(d) A person not meeting the thresholds in paragraph (c) of this section shall, upon request of the certification candidate, be subject to further medical evaluation by a railroad's medical examiner to determine that person's ability to safely perform as a dispatcher. In such cases, the following procedures will apply:

(1) In accordance with the guidance prescribed in appendix B to this part, a person is entitled to:

(i) One retest without making any showing; and

(ii) An additional retest if the person provides evidence that circumstances have changed since the last test to the extent that the person may now be able to safely perform as a dispatcher.

(2) The railroad shall provide its medical examiner with a copy of this part, including all appendices.

(3) If, after consultation with a railroad officer, the medical examiner concludes that, despite not meeting the threshold(s) in paragraph (c) of this section, the person has the ability to safely perform as a dispatcher, the railroad may conclude that the person satisfies the visual acuity requirements of this section to be a certified dispatcher. Such certification will be conditioned on any special restrictions the medical examiner determines in writing to be necessary.

(e) To make the determination required under paragraph (a) of this section, a railroad shall have on file the following for each certification candidate:

(1) A medical examiner's certificate that the candidate has been medically examined and either does or does not meet the visual acuity standards prescribed in paragraph (c) of this section.

(2) If needed under paragraph (d) of this section, a medical examiner's written professional opinion which states the basis for their determination that:

(i) The candidate can be certified, under certain conditions if necessary, even though the candidate does not meet the visual acuity standards prescribed in paragraph (c) of this section; or

(ii) The candidate's visual acuity prevents the candidate from being able to safely perform as a dispatcher.

(f) If the examination required under this section shows that the person needs corrective lenses to meet the standards for visual acuity prescribed in this section and appendix B to this part, that person shall use corrective lenses at all times while performing as a dispatcher unless the railroad's medical examiner subsequently determines

in writing that the person can safely perform as a dispatcher without corrective lenses.

(g) When a certified dispatcher becomes aware that their vision has deteriorated, they shall notify the railroad's medical department or other appropriate railroad official of the deterioration. Such notification must occur prior to performing any subsequent service as a dispatcher. The individual cannot return to service as a dispatcher until they are reexamined and determined by the railroad's medical examiner to satisfy the visual acuity standards prescribed in this section and appendix B to this part.

(h) Each railroad shall adopt and comply with a program meeting the requirements of this section. When any person (including, but not limited to, each railroad, railroad officer, supervisor, and employee) violates any requirement of a program which complies with the requirements of this section, that person shall be considered to have violated the requirements of this section.

§ 245.118 Hearing acuity.

(a) After FRA has approved a railroad's dispatcher certification program, the railroad shall determine, prior to issuing any person a dispatcher certificate, that the person meets the standards for hearing acuity prescribed in this section and appendix B to this part.

(b) Any examination required under this section shall be performed by or under the supervision of a medical examiner or a licensed physician's assistant.

(c) Except as provided in paragraph (d) of this section, each dispatcher shall have hearing acuity that meets or exceeds the following thresholds with or without use of a hearing aid: The person does not have an average hearing loss in the better ear greater than 40 decibels at 500 hertz (Hz), 1,000 Hz, and 2,000 Hz. The hearing test or audiogram used to show a person's hearing acuity shall meet the requirements of one of the following:

(1) As required in 29 CFR 1910.95(h) (Occupational Safety and Health Administration);

(2) As required in § 227.111 of this chapter; or

(3) Conducted using an audiometer that meets the specifications of, and is maintained and used in accordance with, a formal industry standard such as American National Standards Institute (ANSI) S3.6, ''Specifications for Audiometers.''

(d) A person not meeting the thresholds in paragraph (c) of this section shall, upon request of the certification candidate, be subject to further medical evaluation by a railroad's medical examiner to determine that person's ability to safely perform as a dispatcher. In such cases, the following procedures will apply:

(1) In accordance with the guidance prescribed in appendix B to this part, a person is entitled to:

(i) One retest without making any showing; and

(ii) An additional retest if the person provides evidence that circumstances have changed since the last test to the extent that the person may now be able to safely perform as a dispatcher.

(2) The railroad shall provide its medical examiner with a copy of this part, including all appendices.

(3) If, after consultation with a railroad officer, the medical examiner concludes that, despite not meeting the threshold(s) in paragraph (c) of this section, the person has the ability to safely perform as a dispatcher, the railroad may conclude that the person satisfies the hearing acuity requirements of this section to be a certified dispatcher. Such certification will be conditioned on any special restrictions the medical examiner determines in writing to be necessary.

(e) To make the determination required under paragraph (a) of this section, a railroad shall have on file the following for each certification candidate:

(1) A medical examiner's certificate that the candidate has been medically examined and either does or does not meet the hearing acuity standards prescribed in paragraph (c) of this section.

(2) If needed under paragraph (d) of this section, a medical examiner's written professional opinion which states the basis for their determination that:

(i) The candidate can be certified, under certain conditions if necessary, even though the candidate does not meet the hearing acuity standards prescribed in paragraph (c) of this section; or

(ii) The candidate's hearing acuity prevents the candidate from being able to safely perform as a dispatcher.

(f) If the examination required under this section shows that the person needs a hearing aid to meet the standards for hearing acuity prescribed in this section and appendix B to this part, that person shall use a hearing aid at all times while performing as a dispatcher unless the railroad's medical examiner subsequently determines in writing that the person can safely perform as a dispatcher without a hearing aid.

(g) When a certified dispatcher becomes aware that their hearing has deteriorated, they shall notify the railroad's medical department or other appropriate railroad official of the deterioration. Such notification must occur prior to performing any subsequent service as a dispatcher. The individual cannot return to service as a dispatcher until they are reexamined and determined by the railroad's medical examiner to satisfy the hearing acuity standards prescribed in this section and appendix B to this part.

(h) Each railroad shall adopt and comply with a program meeting the requirements of this section. When any person (including, but not limited to, each railroad, railroad officer, supervisor, and employee) violates any requirement of a program which complies with the requirements of this section, that person shall be considered to have violated the requirements of this section.

§ 245.119 Training requirements.

(a) After FRA has approved a railroad's certification program, the railroad shall determine, prior to issuing any person a dispatcher certificate, that the person has successfully completed the training, in accordance with the requirements of this section.

(b) A railroad that elects to accept responsibility to provide initial dispatcher training to persons who have not been previously certified as dispatchers shall state in its certification program whether it will conduct the training program or employ a training program conducted by some other entity on its behalf but adopted and ratified by the railroad.

(c) A railroad that elects to train persons not previously certified as dispatchers shall develop an initial training program which, at a minimum, includes the following:

(1) An explanation of how training must be structured, developed, and delivered, including an appropriate combination of classroom, simulator, computer-based, correspondence, on-the-job training, or other formal training. The curriculum shall be designed to impart knowledge of, and ability to comply with, applicable Federal railroad safety laws, regulations, and orders, as well as any relevant railroad rules and procedures promulgated to implement those applicable Federal railroad safety laws, regulations, and orders. This training shall document a person's knowledge of, and ability to comply with, Federal railroad safety laws, regulations, and orders, as well as railroad rules and procedures.

(2) An on-the-job training component which shall include the following:

(i) A syllabus describing content, required tasks, and related steps the person learning the job shall be able to perform within a specified timeframe;

(ii) A statement of the conditions (*e.g.*, prerequisites, dispatch and related dispatch support systems, documentation, briefings, demonstrations, and practice) necessary for learning transfer; and

(iii) A statement of the standards by which proficiency is measured through a combination of task/step accuracy, completeness, and repetition.

(3) A description of the processes to review and modify its training program when new safety-related railroad laws, regulations, orders, technologies, procedures, software, or equipment are introduced into the workplace, including how it is determined if additional or refresher training is needed.

(d) Prior to beginning the initial dispatching related tasks associated with

on-the-job exercises discussed in paragraph (c)(2) of this section, each railroad shall make any relevant information or materials, such as operating rules, safety rules, or other rules, available for referencing by certification candidates.

(e) Prior to a person, not previously certified as a dispatcher, being certified as a dispatcher, a railroad shall require the person to:

(1) Successfully complete the formal initial training program developed pursuant to paragraph (c) of this section and any associated examinations covering the skills and knowledge the person will need to perform the tasks necessary to be a dispatcher;

(2) Perform on-the-job training and demonstrate on-the-job proficiency, with input from a qualified instructor, by successfully completing the tasks and using the dispatching systems and technology necessary to be a dispatcher. A certification candidate may only perform such tasks under the direct onsite supervision of a qualified instructor; and

(3) Demonstrate knowledge of the physical characteristics of any assigned territory. If the railroad uses a written test to fulfill this requirement, the railroad must provide the certification candidate with an opportunity to consult with a supervisory employee who possesses territorial qualifications for the territory to explain a question.

(f) In making the determination required under paragraph (a) of this section, a railroad shall have written documentation showing that:

(1) The person completed a training program that complies with paragraph (c) of this section (if the person has not been previously certified as a dispatcher);

(2) The person demonstrated their knowledge by achieving a passing grade under the testing and evaluation procedures of the training program; and

(3) The person achieved a passing score on the physical characteristics exam associated with the territories, or its pertinent segments, over which the person will be performing dispatching service.

(g) The certification program, required under this part and submitted in accordance with the procedures and requirements described in § 245.107, shall include:

(1) The methods that a person may acquire familiarity with the physical characteristics of a territory;

(2) The procedures used to qualify and requalify a dispatcher on a territory; and

(3) The maximum time period in which a dispatcher can be absent from a territory before requalification is required. In accordance with § 245.120(c), this time period cannot exceed 12 months.

(h) If ownership of a railroad is being transferred from one company to another, the dispatchers of the acquiring company may receive familiarization training from the selling company prior to the acquiring company commencing operation.

(i) A railroad shall provide for the continuing education of its certified dispatchers to ensure that each dispatcher maintains the necessary knowledge concerning:

(1) Railroad safety and operating rules;

(2) Physical territory;

(3) Dispatching systems and technology; and

(4) Compliance with all applicable Federal regulations including, but not limited to, hazardous materials, passenger train emergency preparedness, emergency response procedures, and physical characteristics of a territory.

(j) Each railroad shall adopt and comply with a program meeting the requirements of this section. When any person (including, but not limited to, each railroad, railroad officer, supervisor, and employee) violates any requirement of a program which complies with the requirements of this section, that person shall be considered to have violated the requirements of this section.

§ 245.120 Requirements for territorial qualification.

(a) After FRA has approved a railroad's certification program, a railroad shall not permit or require a person to serve as a dispatcher on a particular territory unless that railroad determines that:

(1) The person is a certified dispatcher; and

(2) The person either:

(i) Possesses the necessary territorial qualifications for the applicable territory pursuant to § 245.119; or

(ii) Is assisted by a Dispatcher Pilot who is qualified on the territory.

(b) If a person is called to serve on a territory that they are not qualified on, the person must immediately notify the railroad that they are not qualified on the assigned territory.

(c) A person shall no longer be considered qualified on a territory if they have not worked on that territory as a dispatcher in the previous 12 months.

(d) Each railroad shall adopt and comply with a program meeting the requirements of this section. When any person (including, but not limited to, each railroad, railroad officer, supervisor, and employee) violates any requirement of a program which complies with the requirements of this section, that person shall be considered to have violated the requirements of this section.

§ 245.121 Knowledge testing.

(a) After FRA has approved a railroad's dispatcher certification program, the railroad shall determine, prior to issuing any person a dispatcher certificate and in accordance with the requirements of this section, that the person has demonstrated sufficient knowledge of the railroad's rules and practices for the safe movement of trains.

(b) In order to make the knowledge determination required by paragraph (a) of this section, a railroad shall have procedures for testing a person being evaluated for certification as a dispatcher that are:

(1) Designed to examine a person's knowledge of the railroad's operating rules and practices for the safe movement of trains;

(2) Objective in nature;

(3) In written or electronic form;

(4) Covering the following subjects:

(i) Safety and operating rules;

(ii) Timetable instructions;

(iii) Compliance with all applicable Federal regulations;

(iv) Physical characteristics of the territory or territories on which a person is currently working or training to qualify as a dispatcher; and

(v) Dispatching systems and technology.

(5) Sufficient to accurately measure the person's knowledge of the covered subjects; and

(6) Conducted without open reference books or other materials except to the degree the person is being tested on their ability to use such reference books or materials.

(c) The railroad shall provide the certification candidate with an opportunity to consult with a supervisory employee who possesses territorial qualifications for the territory to explain a test question.

(d) If a person fails the test, no railroad shall permit or require that person to work as a dispatcher prior to that person's achieving a passing score during a reexamination of the test.

(e) Each railroad shall adopt and comply with a program meeting the requirements of this section. When any person (including, but not limited to, each railroad, railroad officer, supervisor, and employee) violates any requirement of a program which complies with the requirements of this section, that person shall be considered to have violated the requirements of this section.

§ 245.123 Monitoring operational performance.

(a) Each railroad's certification program shall describe how it will monitor the operational performance of its certified dispatchers by including procedures for:

(1) Giving each certified dispatcher at least one unannounced railroad and Federal rules, territorial and dispatch systems compliance test each calendar year, except as provided for in paragraph (c) of this section;

(2) Giving unannounced compliance tests to certified dispatchers who return to dispatcher service after performing service that does not require certification pursuant to this part, as described in paragraph (c) of this section; and

(3) What actions the railroad will take if it finds deficiencies in a dispatcher's performance during an unannounced compliance test.

(b) An unannounced compliance test shall:

(1) Test certified dispatchers for compliance with one or more operational tests in accordance with the provisions of § 217.9 of this chapter;

(2) Be performed by a railroad officer who meets the requirements of § 217.9(b)(1) of this chapter; and

(3) Be given to each certified dispatcher at least once each calendar year, except as provided for in paragraph (c) of this section.

(c) A certified dispatcher who is not performing service that requires certification pursuant to this part does not need to be given an unannounced compliance test. However, when the certified dispatcher returns to service that requires certification pursuant to this part after not being given an unannounced compliance test in a calendar year, the railroad shall:

(1) Give the certified dispatcher an unannounced compliance test within 30 days of their return to dispatcher service; and

(2) Retain a written record that includes the following information:

(i) The date the dispatcher stopped performing service that required certification pursuant to this part;

(ii) The date the dispatcher returned to service that required certification pursuant to this part; and

(iii) The date and the result of the unannounced compliance test that was performed following the dispatcher's return to service requiring certification.

(d) Each railroad shall adopt and comply with a program meeting the requirements of this section. When any person (including, but not limited to, each railroad, railroad officer, supervisor, and employee) violates any requirement of a program which complies with the requirements of this section, that person shall be considered to have violated the requirements of this section.

§ 245.125 Certification determinations made by other railroads.

(a) A railroad that is considering certification of a person as a dispatcher may rely on certain determinations made by another railroad concerning that person's certification.

(b) A railroad relying on certification determinations made by another railroad shall still be responsible for determining that:

(1) The prior certification is still valid in accordance with the provisions of §§ 245.201 and 245.307;

(2) The person has received training on the physical characteristics of the new territory in accordance with § 245.119; and

(3) The person has demonstrated the necessary knowledge concerning the railroad's operating rules, territory, dispatch systems and technology in accordance with § 245.121.

Subpart C—Administration of the Certification Program

§ 245.201 Time limitations for certification.

(a) After FRA approves a railroad's dispatcher certification program, that railroad shall not certify or recertify a person as a dispatcher if the railroad is making:

(1) A determination concerning eligibility under §§ 245.111, 245.113, 245.115, and 245.303 and the eligibility data being relied on was furnished more than one year before the date of the railroad's certification decision;

(2) A determination concerning visual or hearing acuity and the medical examination being relied on was conducted more than 450 days before the date of the railroad's certification decision; or

(3) A determination concerning demonstrated knowledge and the knowledge examination being relied on was conducted more than one year before the date of the railroad's certification decision, or more than two years before the date of the railroad's certification decision if the railroad administers a knowledge testing program pursuant to § 245.121 at intervals that do not exceed two years.

(b) The time limitations of paragraph (a) of this section do not apply to a railroad that is making a certification decision in reliance on determinations made by another railroad in accordance with § 245.125.

(c) Except if a person is designated as a certified dispatcher under § 245.105(c) or (d), no railroad shall certify a person

as a dispatcher for an interval of more than three years.

(d) Each railroad shall issue each certified dispatcher a certificate that complies with § 245.207 no later than 30 days from the date of its decision to certify or recertify that person.

§ 245.203 Retaining information supporting determinations.

(a) After FRA approves a railroad's dispatcher certification program, any time the railroad issues, denies, or revokes a certificate after making the determinations required under § 245.109, it shall maintain a record for each certified dispatcher and certification candidate. Each record shall contain the information, described in paragraph (b) of this section, that the railroad relied on in making the determinations required under § 245.109.

(b) A railroad shall retain the following information:

(1) Relevant data from the railroad's records concerning the person's prior safety conduct and eligibility;

(2) Relevant data furnished by another railroad;

(3) Relevant data furnished by a governmental agency concerning the person's motor vehicle driving record;

(4) Relevant data furnished by the person seeking certification concerning their eligibility;

(5) The relevant test results data concerning visual and hearing acuity;

(6) If applicable, the relevant data concerning the professional opinion of the railroad's medical examiner on the adequacy of the person's visual or hearing acuity;

(7) Relevant data from the railroad's records concerning the person's success or failure on knowledge test(s) under § 245.121;

(8) A sample copy of the written knowledge test or tests administered; and

(9) The relevant data from the railroad's records concerning the person's success or failure on unannounced tests the railroad performed to monitor the dispatcher's performance in accordance with § 245.123.

(c) If a railroad is relying on successful completion of an approved training program conducted by another entity, the relying railroad shall maintain a record for each certification candidate that contains the relevant data furnished by the training entity concerning the person's demonstration of knowledge and relied on by the railroad in making its determinations.

(d) If a railroad is relying on a certification decision initially made by another railroad, the relying railroad shall maintain a record for each certification candidate that contains the relevant data furnished by the other railroad which it relied on in making its determinations.

(e) All records required under this section shall be retained by the railroad for a period of six years from the date of the certification, recertification, denial, or revocation decision and shall, upon request, be made available to FRA representatives in a timely manner.

(f) It shall be unlawful for any railroad to knowingly or any individual to willfully:

(1) Make, cause to be made, or participate in the making of a false entry on the record(s) required by this section; or

(2) Otherwise falsify such records through material misstatement, omission, or mutilation.

(g) Nothing in this section precludes a railroad from maintaining the information required to be retained under this section in an electronic format provided that:

(1) The railroad maintains an information technology security program adequate to ensure the integrity of the electronic data storage system, including the prevention of unauthorized access to the program logic or individual records;

(2) The program and data storage system must be protected by a security system that utilizes an employee identification number and password, or a comparable method, to establish appropriate levels of program access meeting all of the following standards:

(i) No two individuals have the same electronic identity; and

(ii) A record cannot be deleted or altered by any individual after the record is certified by the employee who created the record;

(3) Any amendment to a record is either:

(i) Electronically stored apart from the record that it amends; or

(ii) Electronically attached to the record as information without changing the original record;

(4) Each amendment to a record uniquely identifies the person making the amendment; and

(5) The system employed by the railroad for data storage permits reasonable access and retrieval of the information which can be easily produced in an electronic or printed format that can be:

(i) Provided to FRA representatives in a timely manner; and

(ii) Authenticated by a designated representative of the railroad as a true and accurate copy of the railroad's records if requested to do so by an FRA representative.

§ 245.205 List of certified dispatchers and recordkeeping.

(a) After a railroad's certification program has received its initial approval from FRA, pursuant to § 245.103(f)(1), the railroad must maintain a list of each person who is currently certified as a dispatcher by the railroad. The list must include the date of the railroad's certification decision and the date the person's certification expires.

(b) The list shall:

(1) Be updated at least annually;

(2) Be made available, upon request, to FRA representatives in a timely manner; and

(3) Be available either:

(i) In electronic format pursuant to paragraph (c) of this section; or

(ii) At the divisional or regional headquarters of the railroad.

(c) If a railroad elects to maintain its list in an electronic format, it must:

(1) Maintain an information technology security program adequate to ensure the integrity of the electronic data storage system, including the prevention of unauthorized access to the program logic or the list;

(2) Have its program and data storage system protected by a security system that utilizes an employee identification number and password, or a comparable method, to establish appropriate levels of program access meeting all of the following standards:

(i) No two individuals have the same electronic identity; and

(ii) An entry on the list cannot be deleted or altered by any individual after the entry is certified by the employee who created the entry;

(3) Have any amendment to the list either:

(i) Electronically stored apart from the entry on the list that it amends; or

(ii) Electronically attached to the entry on the list as information without changing the original entry;

(4) Ensure that each amendment to the list uniquely identifies the person making the amendment; and

(5) Ensure that the system employed for data storage permits reasonable access and retrieval of the information which can be easily produced in an electronic or printed format that can be:

(i) Provided to FRA representatives in a timely manner; and

(ii) Authenticated by a designated representative of the railroad as a true and accurate copy of the railroad's records if requested to do so by an FRA representative.

(d) It shall be unlawful for any railroad to knowingly or any individual to willfully:

(1) Make, cause to be made, or participate in the making of a false entry on the list required by this section; or

(2) Otherwise falsify such list through material misstatement, omission, or mutilation.

§ 245.207 Certificate requirements.

(a) Each person who becomes a certified dispatcher in accordance with this part shall be issued a paper or electronic certificate that must:

(1) Identify the railroad or parent company that is issuing the certificate;

(2) Indicate that it is a dispatcher certificate;

(3) Provide the following information about the certified person:

(i) Name;

(ii) Employee identification number; and

(iii) Either a physical description or photograph of the person;

(4) Identify any conditions or limitations, including conditions to ameliorate visual or hearing acuity deficiencies, that restrict, limit, or alter

the person's abilities to work as a dispatcher;

(5) Show the effective date of the certification;

(6) Show the expiration date of the certification unless the certificate was issued pursuant to § 245.105(c) or (d);

(7) Be signed by an individual designated in accordance with paragraph (b) of this section; and

(8) Be electronic or be of sufficiently small size to permit being carried in an ordinary pocket wallet.

(b) Each railroad shall designate in writing any person it authorizes to sign the certificates described in this section. The designation shall identify such persons by name or job title.

(c) Nothing in this section shall prohibit any railroad from including additional information on the certificate or supplementing the certificate through other documents.

(d) It shall be unlawful for any railroad to knowingly or any individual to willfully:

(1) Make, cause to be made, or participate in the making of a false entry on a certificate; or

(2) Otherwise falsify a certificate through material misstatement, omission, or mutilation.

(e) Except as provided for in paragraph (g) of this section, each certified dispatcher shall:

(1) Have their certificate in their possession while on duty as a dispatcher; and

(2) Display their certificate upon a request from:

(i) An FRA representative;

(ii) A state inspector authorized under part 212 of this chapter;

(iii) An officer of the issuing railroad; or

(iv) An officer of the dispatcher's employer if the dispatcher is not employed by the issuing railroad.

(f) If a dispatcher's certificate is lost, stolen, or mutilated, the railroad shall promptly replace the certificate at no cost to the dispatcher.

(g) A certified dispatcher is exempt from the requirements of paragraph (e) of this section if:

(1) The railroad made its certification or recertification decision within the last 30 days and the dispatcher has not yet received their certificate; or

(2) The dispatcher's certificate was lost, stolen, or mutilated, and the railroad has not yet issued a replacement certificate to the dispatcher.

(h) Any dispatcher who is notified or called to serve as a dispatcher and such service would cause the dispatcher to exceed certificate limitations, set forth in accordance with subpart B of this part, shall immediately notify the railroad that they are not authorized to perform that anticipated service and it shall be unlawful for the railroad to require such service.

(i) Nothing in this section shall be deemed to alter a certified dispatcher's duty to comply with other provisions of this chapter concerning railroad safety.

§ 245.213 Multiple certifications.

(a) A person who holds a dispatcher certificate may also be certified in other crafts, such as a locomotive engineer or conductor.

(b) A railroad that issues multiple certificates to a person, shall, to the extent possible, coordinate the expiration date of those certificates.

(c) Paragraphs (c)(1) through (3) of this section apply to persons who are currently certified as a dispatcher for multiple railroads or are seeking to become certified dispatchers for multiple railroads.

(1) A person who holds a current dispatcher certificate from more than one railroad shall immediately notify the other certifying railroad(s) if they are denied dispatcher certification or recertification under § 245.301 by another railroad or has their dispatcher certification suspended or revoked under § 245.307 by another railroad.

(2) If a person has their dispatcher certification suspended or revoked by a railroad under § 245.307, they may not work as a dispatcher for any other railroad during the period that their certification is suspended or revoked.

(3) If a person has their dispatcher certification suspended or revoked by a railroad under § 245.307, they must notify any railroad that they are seeking dispatcher certification from that their dispatcher certification is currently

suspended or revoked by another railroad.

(d) Paragraphs (d)(1) through (4) of this section apply to persons who are currently certified as a dispatcher and also currently certified in another craft, such as a locomotive engineer or conductor.

(1) If a person's dispatcher certification is revoked under § 245.307 for a violation of § 245.303(e)(7), they may not work in another certified craft, such as a locomotive engineer or conductor, for any railroad during the period of revocation.

(2) If a person's dispatcher certification is revoked under § 245.307 for a violation of § 245.303(e)(1) through (6), they may work in another certified craft, such as a locomotive engineer or conductor, during the period of revocation.

(3) If any of a person's non-dispatcher certifications are revoked for failure to comply with § 219.101 of this chapter, they may not work as a dispatcher for any railroad during the period of revocation.

(4) If any of a person's non-dispatcher certifications are revoked for any reason other than a failure to comply with § 219.101 of this chapter, they may work as a dispatcher during the period of revocation.

(e) A person who has had their dispatcher certification revoked for failure to comply with § 219.101 of this chapter may not obtain any other certification pursuant to this chapter from any railroad during the period of revocation.

(f) A person who has had any of their non-dispatcher certifications revoked for failure to comply with § 219.101 of this chapter, may not obtain a dispatcher certification pursuant to this part from any railroad during the period of revocation.

(g) A railroad that denies a person dispatcher certification or recertification under § 245.301 shall not, solely on the basis of that denial, deny or revoke that person's non-dispatcher certifications or recertifications.

(h) A railroad that denies a person any non-dispatcher certification or recertification pursuant to this chapter shall not, solely on the basis of that denial, deny or revoke that person's dispatcher certification or recertification.

(i) In lieu of issuing multiple certificates, a railroad may issue one certificate to a person who is certified in multiple crafts as long as the single certificate complies with all of the certificate requirements for those crafts.

(j) A person who is certified in multiple crafts and who is involved in a revocable event, as described in this chapter, may only have one certificate revoked for that event. The determination by the railroad as to which certificate to revoke must be based on the work the person was performing at the time the revocable event occurred.

§ 245.215 Railroad oversight responsibilities.

(a) No later than March 31 of each year (beginning in calendar year 2027), each Class I railroad (including the National Railroad Passenger Corporation), each railroad providing commuter service, and each Class II railroad shall conduct a formal annual review and analysis concerning the administration of its program for responding to detected instances of poor safety conduct by certified dispatchers during the prior calendar year.

(b) Each review and analysis shall involve:

(1) The number and nature of the instances of detected poor safety conduct including the nature of the remedial action taken in response thereto;

(2) The number and nature of FRA reported train accidents attributed to poor safety performance by dispatchers; and

(3) The number and type of operational monitoring test failures recorded by railroad officers who meet the requirements of § 217.9(b)(1) of this chapter.

(c) Based on that review and analysis, each railroad shall determine what action(s) it will take to improve the safety of railroad operations to reduce or eliminate future incidents of that nature.

(d) If requested in writing by FRA, by the president of a labor organization that represents the railroad's dispatchers, or by a railroad's certified dispatcher that is not represented by a labor organization, the railroad shall

provide a report of the findings and conclusions reached during such annual review and analysis effort.

(e) For reporting purposes, information about the nature of detected poor safety conduct shall be capable of segregation for study and evaluation purposes into the following categories:

(1) Incidents involving failure to properly issue or apply mandatory directives when warranted.

(2) Incidents involving improperly authorizing a train or on-track equipment to enter into an out-of-service or blue flag protected track.

(3) Incidents involving granting permission for a train or on-track equipment to enter into established RWIC limits without authority or permission from the RWIC.

(4) Incidents involving removal of blocking devices or established protection of RWIC working limits prior to the RWIC releasing the limits.

(5) Incidents involving failure to properly apply blocking devices or failure to establish proper protection for specified working limits or movements of trains or on-track equipment.

(6) Incidents involving granting permission for a train to enter Positive Train Control (PTC) or Cab Signal limits with inoperative or malfunctioning PTC or Cab Signal equipment.

(7) Incidents involving noncompliance with part 219 of this chapter.

(f) For reporting purposes, each category of detected poor safety conduct identified in paragraph (e) of this section shall be capable of being annotated to reflect the following:

(1) The total number of incidents in that category;

(2) The number of incidents within that total which reflect incidents requiring an FRA accident/incident report under part 225 of this chapter; and

(3) The number of incidents within that total which were detected as a result of a scheduled operational monitoring effort.

(g) For reporting purposes, each instance of detected poor safety conduct identified in paragraph (b) of this section shall be capable of being annotated to reflect the following:

(1) The nature of the remedial action taken, and the number of events subdivided, so as to reflect which of the following actions was selected:

(i) Imposition of informal discipline;

(ii) Imposition of formal discipline;

(iii) Provision of informal training; or

(iv) Provision of formal training; and

(2) If the nature of the remedial action taken was formal discipline, the number of events further subdivided so as to reflect which of the following punishments was imposed by the railroad:

(i) The person was withheld from service;

(ii) The person was dismissed from employment; or

(iii) The person was issued demerits. If more than one form of punishment was imposed, only the punishment deemed the most severe shall be shown.

(h) For reporting purposes, each instance of detected poor safety conduct identified in paragraph (b) of this section which resulted in the imposition of formal or informal discipline shall be annotated to reflect the following:

(1) The number of instances in which the railroad's internal appeals process reduced the punishment initially imposed at the conclusion of its hearing; and

(2) The number of instances in which the punishment imposed by the railroad was reduced by any of the following entities: The National Railroad Adjustment Board, a Public Law Board, a Special Board of Adjustment, or other body for the resolution of disputes duly constituted under the provisions of the Railway Labor Act.

(i) For reporting purposes, an instance of poor safety conduct involving a person who is a certified dispatcher and is certified in another craft, such as a locomotive engineer or conductor, need only be reported once (*e.g.*, either under this section or § 240.309 or § 242.215 of this chapter). The determination as to where to report the instance of poor safety conduct should be based on the work the person was performing at the time the conduct occurred.

Subpart D—Denial and Revocation of Certification

§ 245.301 Process for denying certification.

(a) A railroad shall notify a candidate for certification or recertification of information known to the railroad that forms the basis for denying the person certification and provide the person a reasonable opportunity to explain or rebut that adverse information in writing prior to denying certification. A railroad shall provide the dispatcher candidate with any documents or records, including written statements, related to failure to meet a requirement of this part which support its pending denial decision.

(b) If a railroad denies a person certification or recertification, it shall issue a decision that complies with all of the following requirements:

(1) It must be in writing.

(2) It must explain the basis for the railroad's denial decision.

(3) It must address any explanation or rebuttal information that the certification candidate provided pursuant to paragraph (a) of this section.

(4) It must include the date of the railroad's decision.

(5) It must be served on the candidate no later than 10 days after the railroad's decision.

(c) A railroad shall not deny the person's certification for failing to comply with a railroad operating rule or practice which constitutes a violation under § 245.303(e)(1) through (6) if sufficient evidence exists to establish that an intervening cause prevented or materially impaired the dispatcher's ability to comply with that railroad operating rule or practice.

§ 245.303 Criteria for revoking certification.

(a) It shall be unlawful to fail to comply with any of the railroad rules or practices described in paragraph (e) of this section.

(b) A certified dispatcher who fails to comply with a railroad rule or practice described in paragraph (e) of this section shall have their certification revoked.

(c) A certified dispatcher who is assigned to monitor, pilot, or instruct a dispatcher and fails to take appropriate action to prevent a violation of a railroad rule or practice described in paragraph (e) of this section shall have their certification revoked. Appropriate action does not mean that a supervisor, pilot, or instructor must prevent a violation from occurring at all costs; the duty may be met by warning the dispatcher of a potential or foreseeable violation.

(d) A certified dispatcher who is called by a railroad to perform a duty other than that of a dispatcher shall not have their dispatcher certification revoked based on actions taken or not taken while performing that duty except for violations described in paragraph (e)(7) of this section.

(e) When determining whether to revoke a dispatcher's certification, a railroad shall only consider violations of its operating rules or practices that involve:

(1) Failure to properly issue or apply a mandatory directive when warranted.

(2) Improperly authorizing a train or on-track equipment to enter into an out-of-service or blue flag protected track.

(3) Granting permission for a train or on-track equipment to enter into established RWIC limits without authority or permission from the RWIC.

(4) Removal of blocking devices or established protection of RWIC working limits prior to the RWIC releasing the limits.

(5) Failure to properly apply blocking devices or establish proper protection for specified working limits or movements of trains or on-track equipment.

(6) Granting permission for a train to enter PTC or Cab Signal limits with inoperative or malfunctioning PTC or Cab Signal equipment.

(7) Failure to comply with § 219.101 of this chapter. However, such incidents shall be considered as a violation only for the purposes of § 245.305(a)(2) and (b).

(f) In making the determination as to whether to revoke a dispatcher's certification, a railroad shall only consider conduct described in paragraphs (e)(1) through (6) of this section that occurred within the three years prior to the determination.

(g) If in any single incident the person's conduct contravened more than one operating rule or practice, that event shall be treated as a single violation for the purposes of this section.

(h) A violation of one or more operating rules or practices described in paragraphs (e)(1) through (6) of this section that occurs during a properly conducted operational compliance test subject to the provisions of this chapter shall be counted in determining the periods of ineligibility described in § 245.305.

(i) An operational test that is not conducted in compliance with this part, a railroad's operating rules, or a railroad's program under § 217.9 of this chapter, will not be considered a legitimate test of operational skill or knowledge, and will not be considered for revocation purposes.

(j) Each railroad shall adopt and comply with a program meeting the requirements of this section. When any person (including, but not limited to, each railroad, railroad officer, supervisor, and employee) violates any requirement of a program which complies with the requirements of this section, that person shall be considered to have violated the requirements of this section.

§ 245.305 Periods of ineligibility.

(a) The starting date for a period of ineligibility described in this section shall be:

(1) For a person not currently certified, the date of the railroad's written determination that the most recent incident has occurred; or

(2) For a person currently certified, the date of the railroad's notification to the person that recertification has been denied or certification has been suspended.

(b) A period of ineligibility shall be determined according to the following standards:

(1) In the case of a single incident involving a violation of one or more of the operating rules or practices described in § 245.303(e)(1) through (6), the person shall have their certificate revoked for a period of 30 calendar days.

(2) In the case of two separate incidents involving a violation of one or more of the operating rules or practices described in § 245.303(e)(1) through (6), that occurred within 24 months of each other, the person shall have their certificate revoked for a period of six months.

(3) In the case of three separate incidents involving violations of one or more of the operating rules or practices, described in § 245.303(e)(1) through (7), that occurred within 36 months of each other, the person shall have their certificate revoked for a period of one year.

(4) In the case of four separate incidents involving violations of one or more of the operating rules or practices, described in § 245.303(e)(1) through (7), that occurred within 36 months of each other, the person shall have their certificate revoked for a period of three years.

(5) Where, based on the occurrence of violations described in § 245.303(e)(7), different periods of ineligibility may result under the provisions of this section and § 245.115, the longest period of revocation shall control.

(c) Any or all periods of revocation provided in paragraph (b) of this section may consist of training.

(d) A person whose certification is denied or revoked shall be eligible for grant or reinstatement of the certificate prior to the expiration of the initial period of ineligibility only if:

(1) The denial or revocation of certification in accordance with the provisions of paragraph (b) of this section is for a period of one year or less;

(2) Certification is denied or revoked for reasons other than noncompliance with § 219.101 of this chapter;

(3) The person is evaluated by a railroad officer and determined to have received adequate remedial training;

(4) The person successfully completes any mandatory program of training or retraining, if that is determined to be necessary by the railroad prior to return to service; and

(5) At least one half of the pertinent period of ineligibility specified in paragraph (b) of this section has elapsed.

§ 245.307 Process for revoking certification.

(a) If a railroad determines that a dispatcher, who is currently certified by the railroad, has violated a railroad

operating rule or practice described in §245.303(e), the railroad shall revoke the dispatcher's certification in accordance with the procedures and requirements of this section.

(b) Except as provided for in §245.115(f), if a railroad acquires reliable information that a dispatcher, who is currently certified by the railroad, has violated a railroad operating rule or practice described in §245.303(e) or §245.115(d), the railroad shall undertake the following process to determine whether revocation of the dispatcher's certification is warranted:

(1) The dispatcher's certification shall be suspended immediately.

(2) Prior to or upon suspending the dispatcher's certification, the railroad shall provide the dispatcher with notice of: the reason for the suspension; the pending revocation; and an opportunity for a hearing before a presiding officer other than the investigating officer. This notice may initially be given either orally or in writing. If given orally, the notice must be subsequently confirmed in writing in a manner that conforms with the notification provisions of the applicable collective bargaining agreement. If there is no applicable collective bargaining agreement notification provision, the written notice must be made within four days of the date the certification was suspended.

(3) The railroad must convene the hearing within the time frame required under the applicable collective bargaining agreement. If there is no applicable collective bargaining agreement or the applicable collective bargaining agreement does not include such a requirement, the hearing shall be convened within ten days of the date the certification is suspended unless the dispatcher requests or consents to a delay to the start of the hearing.

(4) Except as provided for in paragraph (c) of this section, the railroad shall provide the dispatcher with a copy of the written information and a list of witnesses the railroad will present at the hearing at least 72 hours before the start of the hearing. If this information was provided by an employee of the railroad, the railroad shall make that employee available for examination during the hearing notwithstanding the terms of an applicable collective bargaining agreement.

(5) Following the hearing, the railroad must determine, based on the record of the hearing, whether revocation of the certification is warranted and state explicitly the basis for the conclusion reached. The railroad shall have the burden of proving that revocation of the dispatcher's certification is warranted under §245.303.

(6) If the railroad determines that revocation of the dispatcher's certification is warranted, the railroad shall impose the proper period of revocation provided for in §245.305 or §245.115.

(7) The railroad shall retain the record of the hearing for three years after the date the decision is rendered.

(c) A hearing required by this section which is conducted in a manner that conforms procedurally to the applicable collective bargaining agreement shall satisfy the procedural requirements of this section.

(d) Except as provided for in paragraph (c) of this section, a hearing required under this section shall be conducted in accordance with the following procedures:

(1) The hearing shall be conducted by a presiding officer who can be any proficient person authorized by the railroad other than the investigating officer.

(2) The presiding officer shall convene and preside over the hearing and exercise the powers necessary to regulate the conduct of the hearing for the purpose of achieving a prompt and fair determination of all material issues in dispute.

(3) The presiding officer may:

(i) Adopt any needed procedures for the submission of evidence in written form;

(ii) Examine witnesses at the hearing; and

(iii) Take any other action authorized by or consistent with the provisions of this part and permitted by law that may assist in achieving a prompt and fair determination of all material issues in dispute.

(4) All relevant and probative evidence shall be received into the record unless the presiding officer determines the evidence to be unduly repetitive or have such minimal relevance that its

admission would impair the prompt, orderly, and fair resolution of the proceeding.

(5) Parties may appear at the hearing and be heard on their own behalf or through designated representatives. Parties may offer relevant evidence including testimony and may conduct such examination of witnesses as may be required for a full disclosure of the relevant facts.

(6) Testimony by witnesses at the hearing shall be recorded verbatim. Witnesses can testify in person, over the phone, or virtually.

(7) The record in the proceeding shall be closed at the conclusion of the hearing unless the presiding officer allows additional time for the submission of evidence.

(8) A hearing required under this section may be consolidated with any disciplinary action or other hearing arising from the same facts, but in all instances a railroad official, other than the investigating officer, shall make separate findings as to the revocation required under this section.

(9) A person may waive their right to a hearing. That waiver shall:

(i) Be made in writing;

(ii) Reflect the fact that the person has knowledge and understanding of these rights and voluntarily surrenders them; and

(iii) Be signed by the person making the waiver.

(e) Except as provided for in paragraph (c) of this section, a decision, required by this section, on whether to revoke a dispatcher's certification shall comply with the following requirements:

(1) No later than ten days after the close of the record, a railroad official, other than the investigating officer, shall prepare and sign a written decision as to whether the railroad is revoking the dispatcher's certification.

(2) The decision shall:

(i) Contain the findings of fact on all material issues as well as an explanation for those findings with citations to all applicable railroad operating rules and practices;

(ii) State whether the railroad official found that the dispatcher's certification should be revoked;

(iii) State the period of revocation under § 245.305 (if the railroad official concludes that the dispatcher's certification should be revoked); and

(iv) Be served on the dispatcher and the dispatcher's representative, if any, with the railroad retaining proof of service for three years after the date the decision is rendered.

(f) The period that a dispatcher's certification is suspended in accordance with paragraph (b)(1) of this section shall be credited towards any period of revocation that the railroad assesses in accordance with § 245.305.

(g) A railroad shall revoke a dispatcher's certification if, during the period that certification is valid, the railroad acquires information which convinces it that another railroad has revoked the person's dispatcher certification in accordance with the provisions of this section. Such revocation shall run concurrently with the period of revocation imposed by the railroad that initially revoked the person's certification. The requirement to provide a hearing under this section is satisfied when any single railroad holds a hearing. No additional hearing is required prior to a revocation by more than one railroad arising from the same facts.

(h) A railroad shall not revoke a dispatcher's certification if sufficient evidence exists to establish that an intervening cause prevented or materially impaired the dispatcher's ability to comply with the railroad operating rule or practice which constitutes a violation under § 245.303.

(i) A railroad may decide not to revoke a dispatcher's certification if sufficient evidence exists to establish that the violation of the railroad operating rule or practice described in § 245.303(e) was of a minimal nature and had no direct or potential effect on rail safety.

(j) If sufficient evidence meeting the criteria in paragraph (h) or (i) of this section becomes available, including prior to a railroad's action to suspend the certificate as provided for in paragraph (b)(1) of this section or prior to the convening of the hearing provided for in this section, the railroad shall place the relevant information in the records maintained in compliance with:

(1) Section 245.215 for Class I railroads (including the National Railroad Passenger Corporation), railroads providing commuter service, and Class II railroads; or

(2) Section 245.203 for Class III railroads.

(k) If a railroad makes a good faith determination, after performing a reasonable inquiry, that the course of conduct provided for in paragraph (h) or (i) of this section is warranted, the railroad will not be in violation of paragraph (b)(1) of this section if it decides not to suspend the dispatcher's certification.

Subpart E—Dispute Resolution Procedures

§ 245.401 Review board established.

(a) Any person who has been denied certification, denied recertification, or has had their certification revoked and believes that a railroad incorrectly determined that they failed to meet the certification requirements of this part when making the decision to deny or revoke certification, may petition the Administrator to review the railroad's decision.

(b) The Administrator has delegated initial responsibility for adjudicating such disputes to the Certification Review Board (Board). The Board shall be composed of FRA employees.

§ 245.403 Petition requirements.

(a) To obtain review of a railroad's decision to deny certification, deny recertification, or revoke certification, a person shall file a petition for review that complies with this section.

(b) Each petition shall:

(1) Be in writing;

(2) Be filed no more than 120 days after the date the railroad's denial or revocation decision was served on the petitioner, except as provided for in paragraph (d) of this section;

(3) Be filed on *https://www.regulations.gov*.

(4) Include the following contact information for the petitioner and petitioner's representative (if petitioner is represented):

(i) Full name;

(ii) Daytime telephone number; and

(iii) Email address;

(5) Include the name of the railroad;

(6) Contain the facts that the petitioner believes constitute the improper action by the railroad and the arguments in support of the petition; and

(7) Include all written documents in the petitioner's possession or reasonably available to the petitioner that document the railroad's decision.

(c) If requested by the Board, the petitioner must provide a copy of the information under 49 CFR 40.329 that laboratories, medical review officers, and other service agents are required to release to employees. The petitioner must provide a written explanation in response to a Board request if written documents, that should be reasonably available to the petitioner, are not supplied.

(d) The Board may extend the petition filing period in its discretion provided that the petitioner provides good cause for the extension and:

(1) The request for an extension is filed before the expiration of the period provided for in paragraph (b)(2) of this section; or

(2) The failure to timely file was the result of excusable neglect.

(e) A party aggrieved by a Board decision to deny a petition as untimely or not in compliance with the requirements of this section may file an appeal with the Administrator in accordance with § 245.411.

§ 245.405 Processing certification review petitions.

(a) Each petition shall be acknowledged in writing by FRA. The acknowledgment shall be sent to the petitioner (if an email address is provided), petitioner's representative (if any), and the railroad. The acknowledgment shall contain the docket number assigned to the petition and will notify the parties where the petition can be accessed.

(b) Within 60 days from the date of the acknowledgment provided in paragraph (a) of this section, the railroad may submit to FRA any information that the railroad considers pertinent to the petition and shall supplement the record with any relevant documents in its possession, such as hearing transcripts and exhibits, that were not submitted by the petitioner. Late filings will only be considered to the extent

practicable. A railroad that submits such information shall:

(1) Identify the petitioner by name and the docket number for the petition;

(2) Provide the railroad's email address;

(3) Serve a copy of the information being submitted to the petitioner and petitioner's representative, if any; and

(4) File such information on *https://www.regulations.gov*.

(c) The petition will be referred to the Board for a decision after a railroad's response is received or 60 days from the date of the acknowledgment provided in paragraph (a) of this section, whichever is earlier. Based on the record, the Board shall have the authority to grant, deny, dismiss, or remand the petition. If the Board finds that there is insufficient basis for granting or denying the petition, the Board may issue an order affording the parties an opportunity to provide additional information or argument consistent with its findings.

(d) When considering procedural issues, the Board will grant the petition if the petitioner shows:

(1) That a procedural error occurred; and

(2) The procedural error caused substantial harm to the petitioner.

(e) When considering factual issues, the Board will grant the petition if the petitioner shows that the railroad did not provide substantial evidence to support its decision.

(f) When considering legal issues, the Board will determine whether the railroad's legal interpretations are correct based on a *de novo* review.

(g) The Board will only consider whether the denial or revocation of certification or recertification was improper under this part and will grant or deny the petition accordingly. The Board will not otherwise consider the propriety of a railroad's decision. For example, the Board will not consider whether the railroad properly applied its own more stringent requirements.

(h) The Board's written decision shall be served on the petitioner and/or petitioner's representative (if any) and the railroad.

§ 245.407 Request for a hearing.

(a) If adversely affected by the Board's decision, either the petitioner before the Board or the railroad involved shall have a right to an administrative proceeding as prescribed by § 245.409.

(b) To exercise that right, the adversely affected party shall file a written request for a hearing within 20 days of service of the Board's decision on that party. The request must be filed in the docket on *https://www.regulations.gov* that was used when the case was before the Board.

(c) A written request for a hearing must contain the following:

(1) The name, telephone number, and email address of the requesting party and the requesting party's designated representative (if any);

(2) The name, telephone number, and email address of the respondent;

(3) The docket number for the case while it was before the Board;

(4) The specific factual issues, industry rules, regulations, or laws that the requesting party alleges need to be examined in connection with the certification decision in question; and

(5) The signature of the requesting party or the requesting party's representative (if any).

(d) Upon receipt of a hearing request complying with paragraph (c) of this section, FRA shall arrange for the appointment of a presiding officer who shall schedule the hearing for the earliest practicable date.

(e) If a party fails to request a hearing within the period provided in paragraph (b) of this section, the Board's decision will constitute final agency action.

§ 245.409 Hearings.

(a) An administrative hearing for a dispatcher certification petition shall be conducted by a presiding officer, who can be any person authorized by the Administrator.

(b) The presiding officer shall convene and preside over the hearing. The hearing shall be a *de novo* hearing to find the relevant facts and determine the correct application of this part to those facts. The presiding officer may determine that there is no genuine issue covering some or all material

facts and limit evidentiary proceedings to any issues of material fact as to which there is a genuine dispute.

(c) The presiding officer may exercise the powers of the Administrator to regulate the conduct of the hearing for the purpose of achieving a prompt and fair determination of all material issues in controversy.

(d) The presiding officer may authorize discovery of the types and quantities which in the presiding officer's discretion will contribute to a fair hearing without unduly burdening the parties. The presiding officer may impose appropriate non-monetary sanctions, including limitations as to the presentation of evidence and issues, for any party's willful failure or refusal to comply with approved discovery requests.

(e) Every petition, motion, response, or other authorized or required document shall be signed by the party filing the same, or by a duly authorized officer or representative of record, or by any other person. If signed by such other person, the reason therefor must be stated and the power of attorney or other authority authorizing such other person to subscribe the document must be filed with the document. The signature of the person subscribing any document constitutes a certification that they have read the document; that to the best of their knowledge, information, and belief, every statement contained in the document is true and no such statements are misleading; and that it is not interposed for delay or to be vexatious.

(f) After the request for a hearing is filed, all documents filed or served upon one party must be served upon all parties. Each party may designate a person upon whom service is to be made when not specified by law, regulation, or directive of the presiding officer. If a party does not designate a person upon whom service is to be made, then service may be made upon any person having subscribed to a submission of the party being served, unless otherwise specified by law, regulation, or directive of the presiding officer. Proof of service shall accompany all documents when they are tendered for filing.

(g) If any document initiating, filed in, or served in, a proceeding is not in substantial compliance with the applicable law, regulation, or directive of the presiding officer, the presiding officer may strike or dismiss all or part of such document, or require its amendment.

(h) Any party to a proceeding may appear and be heard in person or by an authorized representative.

(i) Any person testifying at a hearing or deposition may be accompanied, represented, and advised by an attorney or other representative, and may be examined by that person.

(j) Any party may request to consolidate or separate the hearing of two or more petitions by motion to the presiding officer when they arise from the same or similar facts or when the matters are for any reason deemed more efficiently heard together.

(k) Except as provided in §245.407(e) and paragraph (s)(4) of this section, whenever a party has the right or is required to take action within a period prescribed by this part, or by law, regulation, or directive of the presiding officer, the presiding officer may extend such period, with or without notice, for good cause, provided another party is not substantially prejudiced by such extension. A request to extend a period which has already expired may be denied as untimely.

(l) An application to the presiding officer for an order or ruling not otherwise specifically provided for in this part shall be by motion. The motion shall be filed with the presiding officer and, if written, served upon all parties. All motions, unless made during the hearing, shall be written. Motions made during hearings may be made orally on the record, except that the presiding officer may direct that any oral motion be reduced to writing. Any motion shall state with particularity the grounds therefor and the relief or order sought and shall be accompanied by any affidavits or other evidence desired to be relied upon which is not already part of the record. Any matter submitted in response to a written motion must be filed and served within 14 days of the motion, or within such other period as directed by the presiding officer.

(m) Testimony by witnesses at the hearing shall be given under oath and the hearing shall be recorded verbatim. The presiding officer shall give the parties to the proceeding adequate opportunity during the course of the hearing for the presentation of arguments in support of or in opposition to motions, and objections and exceptions to rulings of the presiding officer. The presiding officer may permit oral argument on any issues for which the presiding officer deems it appropriate and beneficial. Any evidence or argument received or proffered orally shall be transcribed and made a part of the record. Any physical evidence or written argument received or proffered shall be made a part of the record, except that the presiding officer may authorize the substitution of copies, photographs, or descriptions, when deemed to be appropriate.

(n) The presiding officer shall employ the Federal Rules of Evidence for United States Courts and Magistrates as general guidelines for the introduction of evidence. Notwithstanding paragraph (m) of this section, all relevant and probative evidence shall be received unless the presiding officer determines the evidence to be unduly repetitive or so extensive and lacking in relevancy that its admission would impair the prompt, orderly, and fair resolution of the proceeding.

(o) The presiding officer may:

(1) Administer oaths and affirmations;

(2) Issue subpoenas as provided for in § 209.7 of this chapter;

(3) Adopt any needed procedures for the submission of evidence in written form;

(4) Examine witnesses at the hearing;

(5) Convene, recess, adjourn, or otherwise regulate the course of the hearing; and

(6) Take any other action authorized by or consistent with the provisions of this part and permitted by law that may expedite the hearing or aid in the disposition of the proceeding.

(p) The petitioner before the Board, the railroad involved in taking the certification action, and FRA shall be parties at the hearing. All parties may participate in the hearing and may appear and be heard on their own behalf or through designated representatives. All parties may offer relevant evidence, including testimony, and may conduct such cross-examination of witnesses as may be required to make a record of the relevant facts.

(q) The party requesting the administrative hearing shall be the ''hearing petitioner.'' The party that the Board issued its decision in favor of will be a respondent. At the start of each proceeding, FRA will be a respondent as well. The hearing petitioner shall have the burden of proving its case by a preponderance of the evidence.

(r) The record in the proceeding shall be closed at the conclusion of the evidentiary hearing unless the presiding officer allows additional time for the submission of additional evidence. In such instances the record shall be left open for such time as the presiding officer grants for that purpose.

(s) At the close of the record, the presiding officer shall prepare a written decision in the proceeding. The decision:

(1) Shall contain the findings of fact and conclusions of law, as well as the basis for each, concerning all material issues of fact or law presented on the record;

(2) Shall be served on all parties to the proceeding;

(3) Shall not become final for 35 days after issuance;

(4) Constitutes final agency action unless an aggrieved party files an appeal within 35 days after issuance; and

(5) Is not precedential.

§ 245.411 Appeals.

(a) Any party aggrieved by the presiding officer's decision may file an appeal in the presiding officer's docket. The appeal must be filed within 35 days of issuance of the decision. A copy of the appeal shall be served on each party. The appeal shall set forth objections to the presiding officer's decision, supported by reference to applicable laws and regulations and with specific reference to the record. If no appeal is timely filed, the presiding officer's decision constitutes final agency action.

(b) A party may file a reply to the appeal within 25 days of service of the appeal. The reply shall be supported by

reference to applicable laws and regulations and with specific reference to the record, if the party relies on evidence contained in the record.

(c) The Administrator may extend the period for filing an appeal or a reply for good cause shown, provided that the written request for extension is served before expiration of the applicable period provided in this section.

(d) The Administrator has sole discretion to permit oral argument on the appeal. On the Administrator's own initiative or written motion by any party, the Administrator may grant the parties an opportunity for oral argument.

(e) The Administrator may remand, vacate, affirm, reverse, alter, or modify the decision of the presiding officer and the Administrator's decision constitutes final agency action except where the terms of the Administrator's decision (for example, remanding a case to the presiding officer) show that the parties' administrative remedies have not been exhausted.

(f) An appeal from a Board decision pursuant to §245.403(e) must be filed in the Board's docket within 35 days of issuance of the decision. A copy of the appeal shall be served on each party. The Administrator may affirm or vacate the Board's decision, and may remand the petition to the Board for further proceedings. An Administrator's decision to affirm the Board's decision constitutes final agency action.

APPENDIX A TO PART 245—PROCEDURES FOR OBTAINING AND EVALUATING MOTOR VEHICLE DRIVING RECORD DATA

(1) The purpose of this appendix is to outline the procedures available to individuals and railroads for complying with the requirements of §245.111 of this chapter. This provision requires that railroads consider the motor vehicle driving record of each person prior to issuing them certification or recertification as a dispatcher.

(2) To fulfill that obligation, a railroad is required to review a certification candidate's recent motor vehicle driving record for information described in §245.111(m). Generally, that will be a single record on file with the state agency that issued the candidate's current motor vehicle driver's license. However, a motor vehicle driving record can include multiple documents if the candidate has been issued a motor vehicle driver's license by more than one state agency or a foreign country.

(3) The right of railroad workers, their employers, or prospective employers to have access to a state motor vehicle licensing agency's data concerning an individual's driving record is controlled by state law. Although many states have mechanisms through which employers and prospective employers, such as railroads, can obtain such data, there are some states where privacy concerns make such access very difficult or impossible. Since individuals are generally entitled to obtain access to their driving record data that will be relied on by a state motor vehicle licensing agency when that agency is taking action concerning their driving privileges, FRA places the responsibility on individuals who want to serve as dispatchers to request that their current state motor vehicle licensing agency (or agencies) furnish such data directly to the railroad that is considering certification (or recertification) of the individual as a dispatcher. Depending on the procedures established by the state motor vehicle licensing agency, the individual may be asked to send the state agency a brief letter requesting such action or to execute a state agency form that accomplishes the same effect. Requests for an individual's motor vehicle driving record normally involve payment of a nominal fee established by the state agency as well. In rare instances, when a certification (or recertification) candidate has been issued multiple licenses, an individual may be required to submit multiple requests.

(4) Once the railroad has obtained the individual's motor vehicle driving record(s), the railroad is required to afford the certification (or recertification) candidate an opportunity to review and comment on the record(s) in writing pursuant to §245.301 if the motor vehicle driving records contain information that could form the basis for denying the person certification. This opportunity to review and comment must occur before the railroad renders a certification decision based on information in the record(s). The railroad is required to evaluate the information in the certification (or recertification) candidate's motor vehicle driving record(s) pursuant to the provisions of this part.

APPENDIX B TO PART 245—MEDICAL STANDARDS GUIDELINES

(1) The purpose of this appendix is to provide greater guidance on the procedures that should be employed in administering the vision and hearing requirements of §§245.117 and 245.118.

(2) For any examination performed to determine whether a person meets the visual acuity requirements in §245.117, it is recommended that such examination be performed by a licensed optometrist or a technician who reports to a licensed optometrist. It is also recommended that any test conducted pursuant to §245.117 be performed according to any directions supplied by the test's manufacturer and any ANSI standards that are applicable.

(3) For any examination performed to determine whether a person meets the hearing acuity requirements in §245.118, it is recommended that such examination be performed by a licensed or certified audiologist or a technician who reports to a licensed or certified audiologist. It is also recommended that any test conducted pursuant to §245.118 be performed according to any directions supplied by the test's manufacturer and any ANSI standards that are applicable.

(4) In determining whether a person has the visual acuity that meets or exceeds the requirements of this part, the following testing protocols are deemed acceptable testing methods for determining whether a person has the ability to recognize and distinguish among the colors used as signals in the railroad industry. The acceptable test methods are shown in the left hand column and the criteria that should be employed to determine whether a person has failed the particular testing protocol are shown in the right hand column.

TABLE 1 TO APPENDIX B TO PART 245

Accepted tests	Failure criteria
Pseudoisochromatic Plate Tests	
American Optical Company 1965	5 or more errors on plates 1–15.
AOC—Hardy-Rand-Ritter plates—second edition	Any error on plates 1–6 (plates 1–4 are for demonstration—test plate 1 is actually plate 5 in book).
Dvorine—Second edition	3 or more errors on plates 1–15.
Ishihara (14 plate)	2 or more errors on plates 1–11.
Ishihara (16 plate)	2 or more errors on plates 1–8.
Ishihara (24 plate)	3 or more errors on plates 1–15.
Ishihara (38 plate)	4 or more errors on plates 1–21.
Richmond Plates 1983	5 or more errors on plates 1–15.
Multifunction Vision Tester	
Keystone Orthoscope	Any error.
OPTEC 2000	Any error.
Titmus Vision Tester	Any error.
Titmus II Vision Tester	Any error.

(5) In administering any of these protocols, the person conducting the examination should be aware that railroad signals do not always occur in the same sequence and that ''yellow signals'' do not always appear to be the same. It is not acceptable to use ''yarn'' or other materials to conduct a simple test to determine whether the certification candidate has the requisite vision. No person shall be allowed to wear chromatic lenses during an initial test of the person's color vision; the initial test is one conducted in accordance with one of the accepted tests in the chart and §245.117(c)(3).

(6) An examinee who fails to meet the criteria in the chart may be further evaluated as determined by the railroad's medical examiner. Ophthalmologic referral, field testing, or other practical color testing may be utilized depending on the experience of the examinee. The railroad's medical examiner will review all pertinent information and, under some circumstances, may restrict an examinee who does not meet the criteria for serving as a dispatcher. The intent of §§245.117(d) and 245.118(d) is not to provide an examinee with the right to make an infinite number of requests for further evaluation, but to provide an examinee with at least one opportunity to prove that a hearing or vision test failure does not mean the examinee cannot safely perform as a dispatcher. Appropriate further medical evaluation could include providing another approved scientific screening test or a field test. All railroads should retain the discretion to limit the number of retests that an examinee can request, but any cap placed on the number of retests should not limit retesting when changed circumstances would make such retesting appropriate. Changed circumstances would most likely occur if the examinee's medical condition has improved in some way or if technology has advanced to the extent that it arguably could compensate for a hearing or vision deficiency.

(7) Dispatchers who wear contact lenses should have good tolerance to the lenses and should be instructed to have a pair of corrective glasses available when on duty.

PART 246—CERTIFICATION OF SIGNAL EMPLOYEES

Subpart A—General

Sec.
246.1 Purpose and scope.
246.3 Application and responsibility for compliance.
246.5 Effect and construction.
246.7 Definitions.
246.9 Waivers.
246.11 Penalties and consequences for noncompliance.

Subpart B—Program and Eligibility Requirements

246.101 Certification program required.
246.103 FRA review of certification programs.
246.105 Implementation schedule for certification programs.
246.106 Requirements for certification programs.
246.107 Signal service classifications.
246.109 Determinations required for certification and recertification.
246.111 Prior safety conduct as motor vehicle operator.
246.113 Prior safety conduct with other railroads.
246.115 Substance abuse disorders and alcohol drug rules compliance.
246.117 Visual acuity.
246.118 Hearing acuity.
246.119 Training requirements.
246.120 Requirements for qualification.
246.121 Knowledge testing.
246.123 Monitoring operational performance.
246.124 Mentoring.
246.125 Certification determinations made by other railroads.

Subpart C—Administration of the Certification Program

246.201 Time limitations for certification.
246.203 Retaining information supporting determinations.
246.205 List of certified signal employees and recordkeeping.
246.207 Certificate requirements.
246.213 Multiple certifications.
246.215 Railroad oversight responsibilities.

Subpart D—Denial and Revocation of Certification

246.301 Process for denying certification.
246.303 Criteria for revoking certification.
246.305 Periods of ineligibility.
246.307 Process for revoking certification.

Subpart E—Dispute Resolution Procedures

246.401 Review board established.
246.403 Petition requirements.
246.405 Processing certification review petitions.
246.407 Request for a hearing.
246.409 Hearings.
246.411 Appeals.

APPENDIX A TO PART 246—PROCEDURES FOR OBTAINING AND EVALUATING MOTOR VEHICLE DRIVING RECORD DATA

APPENDIX B TO PART 246—MEDICAL STANDARDS GUIDELINES

AUTHORITY: 49 U.S.C. 20103, 20107, 20162, 21301, 21304, 21311; 28 U.S.C. 2461 note; 49 CFR 1.89; and Pub. L. 110–432, sec. 402, 122 Stat. 4884.

SOURCE: 89 FR 44873, May 21, 2024, unless otherwise noted.

Subpart A—General

§ 246.1 Purpose and scope.

(a) The purpose of this part is to ensure that only those persons who meet minimum Federal safety standards serve as certified signal employees, to reduce the rate and number of accidents and incidents, and to improve railroad safety.

(b) This part prescribes minimum Federal safety standards for the eligibility, training, testing, certification and monitoring of all signal employees to whom it applies. This part does not restrict a railroad from adopting and enforcing additional or more stringent requirements consistent with this part.

(c) The signal employee certification requirements prescribed in this part apply to any person who meets the definition of signal employee contained in §246.7, regardless of the fact that the person may have a job classification title other than that of signal employee.

§ 246.3 Application and responsibility for compliance.

(a) This part applies to all railroads, except:

(1) Railroads that do not have a signal system as defined in §246.7;

(2) Railroads that operate only on track inside an installation that is not part of the general railroad system of transportation (*i.e.*, plant railroads, as defined in §246.7);

(3) Tourist, scenic, historic, or excursion operations that are not part of the general railroad system of transportation as defined in §246.7; or

(4) Rapid transit operations in an urban area that are not connected to the general railroad system of transportation.

(b) Although the duties imposed by this part are generally stated in terms of the duty of a railroad, each person, as defined in §246.7, who performs any function required by this part must perform that function in accordance with this part.

§246.5 Effect and construction.

(a) FRA does not intend, by use of the term signal employee in this part, to alter the terms, conditions, or interpretation of existing collective bargaining agreements that employ other job classification titles when identifying a person who is engaged in installing, troubleshooting, testing, repair, or maintenance of railroad signal systems and signal-related technology.

(b) FRA does not intend by issuance of these regulations to alter the authority of a railroad to initiate disciplinary sanctions against its employees, including managers and supervisors, in the normal and customary manner, including those contained in its collective bargaining agreements.

(c) Except as provided in §246.213, nothing in this part shall be construed to create or prohibit an eligibility or entitlement to employment in other service for the railroad as a result of denial, suspension, or revocation of certification under this part.

(d) Nothing in this part shall be deemed to abridge any additional procedural rights or remedies not inconsistent with this part that are available to the employee under a collective bargaining agreement, the Railway Labor Act, or (with respect to employment at will) at common law with respect to removal from service or other adverse action taken as a consequence of this part.

§246.7 Definitions.

As used in this part:

Administrator means the Administrator of the FRA or the Administrator's delegate.

Alcohol means ethyl alcohol (ethanol) and includes use or possession of any beverage, mixture, or preparation containing ethyl alcohol.

Contractor means a person under contract with a railroad, including but not limited to, a prime contractor or a subcontractor.

Controlled substance has the meaning assigned by 21 U.S.C. 802 and includes all substances listed on Schedules I through V as they may be revised from time to time (21 CFR parts 1301 through 1316).

Disable means to render a device or system incapable of proper and effective action or to materially impair the functioning of that device or system.

Drug means any substance (other than alcohol) that has known mind or function-altering effects on a human subject, specifically including any psychoactive substance and including, but not limited to, controlled substances.

Drug and alcohol counselor (DAC) means a person who meets the credentialing and qualification requirements of a ''Substance Abuse Professional'' (SAP), as provided in 49 CFR part 40.

File, filed, and *filing* mean submission of a document under this part on the date when the Docket Clerk receives it, or if sent by mail, the date mailing was completed.

FRA means the Federal Railroad Administration.

FRA representative means the FRA Associate Administrator for Railroad Safety/Chief Safety Officer and the Associate Administrator's delegate, including any safety inspector employed by the Federal Railroad Administration and any qualified State railroad safety inspector acting under part 212 of this chapter.

Ineligible or *ineligibility* means that a person is legally disqualified from serving as a certified signal employee. The term covers a number of circumstances in which a person may not serve as a certified signal employee. Revocation of certification pursuant to §246.307 and denial of certification pursuant to §246.301 are two examples in which a person would be ineligible to serve as a certified signal employee. A period of ineligibility may end when a condition or conditions are met, such as when a person meets the conditions to serve as a certified signal employee following

an alcohol or drug violation pursuant to § 246.115.

Knowingly means having actual knowledge of the facts giving rise to the violation or that a reasonable person acting in the circumstances, exercising due care, would have had such knowledge.

Medical examiner means a person licensed as a doctor of medicine or doctor of osteopathy. A medical examiner can be a qualified full-time salaried employee of a railroad, a qualified practitioner who contracts with the railroad on a fee-for-service or other basis, or a qualified practitioner designated by the railroad to perform functions in connection with medical evaluations of employees. As used in this rule, the medical examiner owes a duty to make an honest and fully informed evaluation of the condition of an individual.

Mentor means a certified signal employee who has at least one year of experience as a certified signal employee. For purposes of this part, a mentor provides direct and immediate supervision over the work of one or more signal employees.

On-the-job training means job training that occurs in the workplace, *i.e.*, the employee learns the job while doing the job.

Person means an entity of any type covered under 1 U.S.C. 1, including but not limited to the following: a railroad; a manager, supervisor, official, or other employee or agent of a railroad; any owner, manufacturer, lessor, or lessee of railroad equipment, track, or facilities; any independent contractor or subcontractor providing goods or services to a railroad; and any employee of such owner, manufacturer, lessor, lessee, or independent contractor or subcontractor.

Physical characteristics means the actual track profile of and physical location for points within a specific yard or route that affect the movement of a locomotive or train. Physical characteristics includes how signal systems and related technology are deployed within the territory, for purposes of this part.

Plant railroad means a plant or installation that owns or leases a locomotive, uses that locomotive to switch cars throughout the plant or installation, and is moving goods solely for use in the facility's own industrial processes. The plant or installation could include track immediately adjacent to the plant or installation if the plant railroad leases the track from the general system railroad and the lease provides for (and actual practice entails) the exclusive use of that trackage by the plant railroad and the general system railroad for purposes of moving only cars shipped to or from the plant. A plant or installation that operates a locomotive to switch or move cars for other entities, even if solely within the confines of the plant or installation, rather than for its own purposes or industrial processes, will not be considered a plant railroad because the performance of such activity makes the operation part of the general railroad system of transportation.

Qualified means a person who has successfully completed all instruction, training and examination programs required by the railroad, and the applicable parts of this chapter and that the person therefore may reasonably be expected to be proficient on all safety related tasks the person is assigned to perform.

Qualified instructor means a person who has demonstrated, pursuant to the railroad's written program, an adequate knowledge of the subjects under instruction and, where applicable, has the necessary signal experience to effectively instruct in the field, and has the following qualifications:

(1) Is a certified signal employee under this part; and

(2) Has been selected as such by a designated railroad officer, in concurrence with the designated employee representative, where present; or

(3) In the absence of concurrence provided in paragraph (2) of this definition, has a minimum of 12 months service working as a signal employee.

If a railroad does not have designated employee representation, then a person employed by the railroad need not comply with paragraph (2) or (3) of this definition to be a *qualified instructor*.

Railroad means any form of nonhighway ground transportation that runs on rails or electromagnetic guideways and any entity providing such transportation, including:

(1) Commuter or other short-haul railroad passenger service in a metropolitan or suburban area and commuter railroad service that was operated by the Consolidated Rail Corporation on January 1, 1979; and

(2) High speed ground transportation systems that connect metropolitan areas, without regard to whether those systems use new technologies not associated with traditional railroads; but does not include rapid transit operations in an urban area that are not connected to the general railroad system of transportation.

Railroad officer means any supervisory employee of a railroad.

Serve or service, in the context of serving documents, has the meaning given in Rule 5 of the Federal Rules of Civil Procedure as amended. Similarly, the computation of time provisions in Rule 6 of the Federal Rules of Civil Procedure as amended are also applicable in this part. *See also* the definition of ''filing'' in this section.

Signal employee means, for purposes of this part, a person who is engaged in installing, troubleshooting, testing, repairing, or maintaining railroad signal systems or related technology.

Signal instructor means, for purposes of this part, a person who has demonstrated, pursuant to the railroad's written signal employee certification program, an adequate knowledge of the subject matter under instruction and has the necessary experience to effectively provide formal training of the subject matter.

Signal system, for purposes of this part, includes software and equipment for the following: block signal systems, cab signal systems, train control systems, positive train control systems, highway-rail and pathway grade crossing warning systems, unusual contingency detection devices, power-assisted switches, broken rail detection systems, switch point indicators, as well as other safety-related devices, appliances, technology, and systems installed on the railroad in signaled or non-signaled territory.

Substance abuse disorder refers to a psychological or physical dependence on alcohol or a drug, or another identifiable and treatable mental or physical disorder involving the abuse of alcohol or drugs as a primary manifestation. A substance abuse disorder is ''active'' within the meaning of this part if the person is currently using alcohol or other drugs, except under medical supervision consistent with the restrictions described in §219.103 of this chapter or has failed to successfully complete primary treatment or successfully participate in aftercare as directed by a DAC or SAP.

Substance Abuse Professional (SAP) means a person who meets the qualifications of a substance abuse professional, as provided in 49 CFR part 40.

Tourist, scenic, historic, or excursion operations that are not part of the general railroad system of transportation means a tourist, scenic, historic, or excursion operation conducted only on track used exclusively for that purpose (*i.e.*, there is no freight, intercity passenger, or commuter passenger railroad operation on the track).

Unusual contingency detection device means a device used in the detection of defective conditions on locomotives and rolling stock (*e.g.*, high-wide load, hot or defective bearing, defective wheel detectors) or other unsafe environmental conditions (*e.g.*, high-water, high wind, sliding or slumping soil, rock or snow slide detectors). These devices need not be connected to a signal system for this part to apply.

§ 246.9 Waivers.

(a) A person subject to a requirement of this part may petition FRA for a waiver of compliance with such requirement. The filing of such a petition does not affect that person's responsibility for compliance with that requirement while the petition is being considered.

(b) Each petition for a waiver under this section must be filed in the manner and contain the information required by part 211 of this chapter.

(c) If FRA finds that a waiver of compliance is in the public interest and is consistent with railroad safety, FRA may grant the waiver subject to any conditions FRA deems necessary.

§ 246.11 Penalties and consequences for noncompliance.

(a) Any person, as defined in §246.7, who violates any requirement of this

part or causes the violation of any such requirement is subject to a civil penalty of at least the minimum civil monetary penalty and not more than the ordinary maximum civil monetary penalty per violation. However, penalties may be assessed against individuals only for willful violations, and a penalty not to exceed the aggravated maximum civil monetary penalty per violation may be assessed, where:

(1) A grossly negligent violation, or a pattern of repeated violations, has created an imminent hazard of death or injury to persons, or

(2) A death or injury has occurred. *See* 49 CFR part 209, appendix A.

(b) Each day a violation continues constitutes a separate offense.

(c) A person who violates any requirement of this part or causes the violation of any such requirement may be subject to disqualification from all safety-sensitive service in accordance with part 209 of this chapter.

(d) A person who knowingly and willfully falsifies a record or report required by this part may be subject to criminal penalties under 49 U.S.C. 21311.

(e) In addition to the enforcement methods referred to in paragraphs (a) through (d) of this section, FRA may address violations of this part by use of the emergency order, compliance order, and/or injunctive provisions of the Federal rail safety laws.

(f) FRA's website at *https://railroads.dot.gov/* contains a schedule of civil penalty amounts used in connection with this part.

Subpart B—Program and Eligibility Requirements

§ 246.101 Certification program required.

(a) Each railroad subject to this part shall have a written signal employee certification program.

(b) Each certification program shall include all of the following:

(1) If applicable, an explanation and discussion of the occupational categories and subcategories of certified signal service that comply with the requirements in § 246.107;

(2) A procedure for evaluating prior safety conduct as a motor vehicle operator that complies with the criteria established in § 246.111;

(3) A procedure for evaluating prior safety conduct as an employee or certified signal employee with other railroads that complies with the criteria established in § 246.113;

(4) A procedure for evaluating potential substance abuse disorders and compliance with railroad alcohol and drug rules that complies with the criteria established in § 246.115;

(5) A procedure for evaluating visual and hearing acuity that complies with the criteria established in §§ 246.117 and 246.118;

(6) A procedure for training that complies with the criteria established in § 246.119;

(7) A procedure for qualifying persons on its signal system and signal-related technology that complies with the criteria established in § 246.120;

(8) A procedure for knowledge testing that complies with the criteria established in § 246.121;

(9) A procedure for monitoring operational performance that complies with the criteria established in § 246.123; and

(10) A procedure for mentoring uncertified signal employees that complies with the criteria established in § 246.124.

(c) Each certification program shall be version controlled. Any change from the previous FRA-approved version of the certification program must be tracked.

§ 246.103 FRA review of certification programs.

(a) *Certification program submission schedule for railroads with signal systems in operation.* With the exception of railroads exempted by § 246.3(a), each railroad with a signal system in operation as of July 22, 2024, shall submit its signal employee certification program to FRA, in accordance with the procedures and requirements contained in § 246.106, according to the following schedule:

(1) All Class I railroads (including the National Railroad Passenger Corporation) and railroads providing commuter service shall submit their programs to FRA no later than March 17, 2025.

(2) All Class II railroads and Class III railroads (including a switching, terminal, or other railroad not otherwise classified) shall submit their programs to FRA no later than November 12, 2025.

(b) *Certification program submission for new railroads.* Each railroad that commences operations after July 22, 2024 shall submit to FRA, and obtain FRA approval of, its written signal employee certification program, in accordance with the procedures and requirements contained in § 246.106, prior to installing, implementing, or operating a signal system subject to this part.

(c) *Method for submitting certification programs to FRA.*

(1) Railroads must submit their written certification programs and their requests for FRA approval (described in § 246.106(a)) by emailing the program and the request for FRA approval to *FRASIGNALCERTPROG@dot.gov.*

(2) A parent company may submit a written certification program on behalf of one or more subsidiary railroads in accordance with § 246.106(a).

(d) *Notification requirements.* Each railroad or parent company that submits a certification program to FRA must:

(1) Simultaneously with its submission, provide a copy of the program and the request for FRA approval to the president of each labor organization that represents the railroad's signal employees and to all of the railroad's signal employees who are subject to this part; and

(2) Include in its submission to FRA, a statement affirming that the railroad or parent company has provided a copy of the program and request for FRA approval to the president of each labor organization that represents the railroad's signal employees and to all of the railroad's signal employees who are subject to this part, along with a list of the names and email addresses of each president of a labor organization who was provided a copy of the program.

(e) *Comment period.* Any designated representative of signal employees subject to this part or any directly affected person who does not have a designated representative may comment on a railroad's or parent company's program provided that:

(1) The comment is submitted no later than 60 days after the date the program was submitted to FRA;

(2) The comment includes a concise statement of the commenter's interest in the matter;

(3) The commenter affirms that a copy of the comment was provided to the railroad or parent company; and

(4) The comment was emailed to *FRASIGNALCERTPROG@dot.gov.*

(f) *FRA review period.* Upon receipt of a complete certification program, FRA will commence a thorough review of the program to ensure that it satisfies all of the requirements under this part.

(1) If FRA determines that the program satisfies all of the requirements under this part, FRA will issue a letter notifying the railroad or parent company that its program has been approved. Such letter will typically be issued within 120 days of the date the program was submitted to FRA.

(2) If FRA determines that the program does not satisfy all of the requirements under this part, FRA will issue a letter notifying the railroad or parent company that its program has been disapproved. Such letter will typically be issued within 120 days of the date the program was submitted to FRA and will identify the deficiencies found in the program that must be corrected before the program can be approved. After addressing these deficiencies, railroads and parent companies can resubmit their programs in accordance with paragraph (h) of this section.

(3) If a railroad or parent company does not receive an approval or disapproval letter from FRA within 120 days of the date the program was submitted to FRA, FRA's decision on the program will remain pending until such time that FRA issues a letter either approving or disapproving the program. A certification program is not approved until FRA issues a letter approving the program.

(g) *Material modifications.* A railroad or parent company that intends to make one or more material modifications to its FRA-approved program must submit a request for approval (as

described in § 246.106(a)(3)) of how it intends to modify the program and a copy of the modified program which indicates changes from the last approved version.

(1) A modification is material if it would affect the program's conformance with this part.

(2) The description of the modification and the modified program must conform with the procedures and requirements contained in § 246.106.

(3) The process for submission and review of material modifications shall conform with paragraphs (c) through (f) of this section.

(4) A railroad or parent company shall not implement a material modification to its program until FRA issues its approval of the material modification in accordance with paragraph (f)(1) of this section.

(h) *Resubmissions.* If FRA disapproves a railroad or parent company's program or material modification, as described in paragraph (f)(2) of this section, the railroad or parent company may resubmit its program or material modification after addressing all of the deficiencies noted by FRA.

(1) The resubmission must conform with the procedures and requirements contained in § 246.106.

(2) The process for submission and review of resubmitted programs and resubmitted material modifications shall conform with paragraphs (c) through (f) of this section.

(3) The following deadlines apply to railroads and parent companies that have their programs or material modifications disapproved by FRA:

(i) For a railroad that submitted its program pursuant to paragraph (a) of this section or a parent company that submitted a program on behalf of one or more subsidiary railroads pursuant to the submission deadline in paragraph (a) of this section, the railroad or parent company must resubmit its program within 30 days of the date that FRA notified the railroad of the deficiencies in its program. If a railroad or parent company fails to resubmit its program within this timeframe and continues its rail operations, FRA may consider such actions to be a failure to implement a program.

(ii) For a railroad that submitted its program pursuant to paragraph (b) of this section, there is no FRA-imposed deadline for resubmitting its program. However, pursuant to § 246.105(b), the railroad shall not install, implement, or operate signal systems subject to this part until its program has been approved by FRA.

(iii) For a railroad or parent company that submitted a material modification to its FRA-approved program, there is no FRA-imposed deadline for resubmitting the material modification. However, pursuant to paragraph (g)(4) of this section, the railroad or parent company cannot implement the material modification until it has been approved by FRA.

(i) *Rescinding prior approval of program.* FRA reserves the right to revisit its prior approval of a railroad or parent company's program at any time.

(1) If upon such review FRA discovers deficiencies in the program, FRA shall issue the railroad or parent company a letter rescinding its prior approval of the program and notifying the railroad or parent company of the deficiencies in its program that must be addressed.

(2) Within 30 days of FRA notifying the railroad or parent company of the deficiencies in its program, the railroad or parent company must address these deficiencies and resubmit its program to FRA. The resubmitted program must conform with the procedures and requirements contained in § 246.106.

(3) The process for submission and review of resubmitted programs under this paragraph (i) shall conform with paragraphs (c) through (f) of this section.

(4) If a railroad or parent company fails to resubmit its program to FRA within the timeframe prescribed in paragraph (i)(2) of this section and the railroad continues its rail operations, FRA may consider such actions to be a failure to implement a program.

(5) If FRA issues a letter disapproving the railroad or parent company's resubmitted program, the railroad or parent company shall resubmit its program in accordance with this paragraph (i).

(6) A program that has its approval rescinded under paragraph (i)(1) of this

section may remain in effect until whichever of the following happens first:

(i) FRA approves the railroad or parent company's resubmitted program; or

(ii) FRA disapproves the railroad or parent company's second attempt at resubmitting its program.

(7) If FRA disapproves a railroad or parent company's second attempt at resubmitting its program under this paragraph and the railroad or parent company continues its rail operations, FRA may consider such actions to be a failure to implement a program.

(j) *Availability of Certification Program Documents.* The following documents will be available on FRA's website (*railroads.dot.gov*):

(1) A railroad or parent company's originally submitted program, a resubmission of its program, or a material modification of its program;

(2) Any comments, submitted in accordance with paragraph (e) of this section, to a railroad or parent company's originally submitted program, a resubmission of its program, or a material modification of its program; and

(3) Any approval or disapproval letter issued by FRA in response to a railroad or parent company's originally submitted program, a resubmission of its program, or a material modification of its program.

§ 246.105 Implementation schedule for certification programs.

(a) Each railroad that submits its signal employee certification program to FRA in accordance with § 246.103(a), may continue rail operations while it awaits approval of its program by FRA. However, if FRA disapproves a railroad's program on two occasions and the railroad continues rail operations, FRA may consider such actions to be a failure to implement a program.

(b) Each railroad that submits its signal employee certification program to FRA in accordance with § 246.103(b), must have its program approved by FRA prior to installing, implementing, or operating signal systems subject to this part. If a railroad installs, implements, or operates a signal system before its program is approved by FRA, FRA may consider such actions to be a failure to implement a program.

(c) By March 17, 2025, each railroad shall:

(1) In writing, designate as certified signal employees all persons authorized by the railroad to perform the duties of a certified signal employee as of March 17, 2025; and

(2) Issue a certificate that complies with § 246.207 to each person that it designates.

(d) Between March 17, 2025 and the date FRA approves the railroad's certification program, each railroad shall:

(1) In writing, designate as a certified signal employee any person who has been authorized by the railroad to perform the duties of a certified signal employee between March 17, 2025 and the date FRA approves the railroad's certification program; and

(2) Issue a certificate that complies with § 246.207 to each person that it designates.

(e) After March 17, 2025, no railroad shall permit or require a person to perform service as a certified signal employee unless that person is a certified signal employee.

(f) No railroad shall permit or require a person, designated as a certified signal employee under the provisions of paragraph (c) or (d) of this section, to perform service as a certified signal employee for more than three years after the date FRA approves the railroad's certification program unless that person has been tested and evaluated in accordance with procedures that comply with subpart B of this part.

(1) Except as provided in paragraph (f)(3) of this section, a person who has been designated as a certified signal employee under the provisions of paragraph (c) or (d) of this section and who is eligible to receive a retirement pension in accordance with the terms of an applicable agreement or in accordance with the terms of the Railroad Retirement Act (45 U.S.C. 231) within three years from the date the certifying railroad's program is approved, may request, in writing, that a railroad not recertify that person, pursuant to subpart B of this part, until three years from the date the certifying railroad's program is approved.

(2) Upon receipt of a written request pursuant to paragraph (f)(1) of this section, a railroad may wait to recertify the person making the request until the end of the three-year period after FRA has approved the railroad's certification program. If a railroad grants any request, it must grant the request of all eligible persons to every extent possible.

(3) A person who is subject to recertification under part 240 or 242 of this chapter may not make a request pursuant to paragraph (f)(1) of this section.

(g) After a railroad's certification program has been approved by FRA, the railroad shall only certify or recertify a person as a signal employee if that person has been tested and evaluated in accordance with procedures that comply with subpart B of this part.

§ 246.106 Requirements for certification programs.

(a) *Railroad and parent company certification program submission.* (1)(i) A railroad's certification program submission must include a copy of its certification program and a request for FRA approval.

(ii) Any parent company that submits a single certification program for one or more subsidiary railroads shall provide a list of its railroads that will utilize the program.

(iii) If a parent company submits a certification program on behalf of one or more of its subsidiary railroads, the parent company shall assume responsibility for compliance with this part for all railroads identified on the list required by paragraph (a)(1)(ii) of this section.

(2) For a railroad or parent company's initial certification program submission, the request for FRA approval can be in letter or narrative format and shall include a statement that the railroad or parent company is seeking approval of its program from FRA.

(3) If a railroad or parent company is making a material modification to a program that has been previously approved by FRA, the request for FRA approval can be in letter or narrative format and shall include a copy of the modified certification program that identifies all proposed changes from the last FRA-approved version of the program.

(4) A railroad or parent company will receive approval or disapproval notices from FRA by email.

(5) FRA may electronically store any materials required by this part.

(b) *Organization of the certification program.* Each certification program must be organized to present the required information in paragraphs (b)(1) through (6) of this section. Each section of the certification program must begin with the name, title, telephone number, and email address of the person to be contacted concerning the matters addressed by that section. If a person is identified in a prior section, it is sufficient to merely repeat the person's name in a subsequent section.

(1) *Section One of the certification program: General information and elections.*

(i) The first section of the certification program must contain the name of the railroad or parent company submitting the program, the person to be contacted concerning the request for FRA approval (including the person's name, title, telephone number, and email address), and a statement electing either to accept responsibility for training persons not previously certified as signal employees (''initial signal employee training'') or to not accept this responsibility.

(ii) If a railroad or parent company elects to not provide initial signal employee training, the railroad or parent company shall make the determinations required by § 246.125. The railroad or parent company will be limited to certifying signal employees previously certified by another railroad. A railroad or parent company can change its election by obtaining FRA approval of a material modification to its program, in accordance with § 246.103(g).

(iii) If a railroad or parent company elects to accept responsibility for providing initial signal employee training to persons not previously certified as signal employees, the railroad or parent company must submit information explaining how such persons will be trained but is not required to perform such training. A railroad or parent company that elects to accept responsibility for providing initial signal employee training may authorize another

railroad or non-railroad entity to perform the training. A railroad or parent company that authorizes another railroad or non-railroad entity to perform such training must provide the name of the training provider in its certification program but shall remain responsible for ensuring that the training provider adheres to the training program submitted in the railroad or parent company's certification program.

(iv) If a railroad or parent company elects to classify its certified signal employees into more than one occupational category or subcategory by class, task, location, or other suitable terminology, the railroad or parent company shall include the following in the first section of its certification program:

(A) An up-to-date list and description of each occupational category or subcategory of certified signal employee;

(B) A statement of the roles and responsibilities of each occupational category or subcategory of certified signal employee; and

(C) A detailed list of the safety-related tasks and subtasks performed by each occupational category or subcategory of certified signal employee.

(2) *Section Two of the certification program: Training previously certified signal employees.* The second section of the certification program must contain information about the railroad or parent company's program for training previously certified signal employees, including all of the following information:

(i) As provided for in § 246.119(i), each railroad must have a program for the ongoing education of its certified signal employees to ensure that they maintain the necessary knowledge concerning applicable Federal railroad safety laws, regulations, and orders; railroad signal system safety and operating rules; and applicable standards, procedures, and instructions for the installation, operation, testing, maintenance, troubleshooting, and repair of signal systems and signal-related technology deployed on the railroad. The railroad or parent company must describe in this section of the program how it will ensure that its certified signal employees maintain the necessary knowledge and skills to safely discharge their responsibilities so as to comply with the standard set forth in § 246.119(i).

(ii) The railroad or parent company must provide sufficient detail in this section of its program to permit effective evaluation of its training program in terms of the subject matters covered, the frequency and duration of training sessions (including the interval between attendance at such training sessions), the training environment employed (for example, use of classroom, use of computer-based training, use of film or slide presentations, and use of on-the-job training), and which aspects of the training program will be voluntary or mandatory.

(iii) The railroad or parent company must explain how the training program will address a certified signal employee's loss of retained knowledge over time.

(iv) The railroad or parent company must explain how the training program will address changed circumstances over time, such as the introduction of new or modified signal system equipment and signal-related technology (including software modifications), to ensure qualification on the railroad's signal system and signal-related technology and compliance with the training standard set forth in § 246.119.

(v) The railroad or parent company must explain how qualification training will be provided, how long a certified signal employee can be absent from performing work on signal systems and signal-related technology before needing to be requalified (a time period that cannot exceed 12 months), and once that threshold is reached, how the signal employee will acquire the needed qualification.

(vi) The railroad or parent company must explain how it will administer training for previously certified signal employees who have had their certification expire. If a railroad or parent company's certification program fails to specify how it will administer training for these signal employees, then the railroad or parent company shall require them to successfully complete the railroad or parent company's entire training program.

(3) *Section Three of the certification program: Testing and evaluating previously certified signal employees.* The third section of the certification program must contain information about the railroad or parent company's program for testing and evaluating previously certified signal employees, including all of the following information:

(i) The railroad or parent company must describe in this section how it will ensure that its previously certified signal employees demonstrate their knowledge concerning the safe discharge of their responsibilities, so as to comply with the standards set forth in § 246.121.

(ii) The railroad or parent company must describe in this section how it will have ongoing testing and evaluation to ensure that its previously certified signal employees have the necessary visual and hearing acuity as provided for in §§ 246.117 and 246.118. This section must also address how the railroad or parent company will ensure that its medical examiners have sufficient information concerning the railroad's operations, as well as the certified signal employee's safety-related tasks, to effectively form appropriate conclusions about the ability of a particular individual to safely perform as a certified signal employee.

(4) *Section Four of the certification program: Training, testing, and evaluating persons not previously certified.* Unless a railroad or parent company has elected to not provide initial signal employee certification training, the fourth section of the certification program must contain information about the railroad or parent company's program for educating, testing, and evaluating persons not previously certified as signal employees, including all of the following information:

(i) As provided for in § 246.119, a railroad or parent company that is issuing an initial signal employee certification to a person must have a program for the training, testing, and evaluation of its signal employee certification candidates to ensure that they acquire the necessary knowledge and skills. A railroad or parent company must describe in this section how it will ensure that its signal employee certification candidates acquire sufficient knowledge and skills and demonstrate their knowledge and skills concerning the safe discharge of their responsibilities. A railroad or parent company must also discuss its procedures for mentoring candidates for signal employee certification, in accordance with § 246.124;

(ii) This section of the certification program must contain the same level of detail about the initial signal employee training program and the testing and evaluation of previously uncertified signal employees as is required for previously certified signal employees in paragraphs (b)(2) and (3) of this section (Sections Two and Three of the certification program);

(iii) Railroads and parent companies that elect to rely on other entities to conduct signal employee certification training must explain how certification candidates will be provided with the required training on the signal systems and signal-related technology deployed on the railroad or parent company's territory.

(iv) This section of the certification program must explain how the railroad or parent company will administer the training of previously uncertified signal employees with extensive signal experience. If a railroad or parent company's certification program fails to specify how it will train these signal employees, then the railroad or parent company shall require them to successfully complete the railroad or parent company's entire training program.

(5) *Section Five of the certification program: Monitoring operational performance by certified signal employees.* The fifth section of the certification program must contain information about the railroad or parent company's program for monitoring the operational performance of its certified signal employees, including all of the following information:

(i) Section 246.123 requires that a railroad conduct ongoing monitoring of its certified signal employees and that each certified signal employee performing signal work that requires certification have an annual unannounced compliance test. A railroad or parent company must describe in this section of its certification program its ongoing

program for monitoring that its certified signal employees demonstrate their skills concerning the safe discharge of their responsibilities.

(ii) A railroad or parent company must describe the scoring system used by the railroad during an operational monitoring observation or unannounced compliance test administered in accordance with the procedures required under § 246.123.

(6) *Section Six of the certification program: Procedures for routine administration of the signal employee certification program.* The final section of the certification program must contain a summary of how the railroad or parent company's program and procedures will implement various aspects of the regulatory provisions in this part that relate to the routine administration of its certification program for signal employees. Specifically, this section must address the procedural aspects of the following provisions and must describe the manner in which the railroad or parent company will implement its program so as to comply with all of the following provisions:

(i) Section 246.301, which provides that each railroad must have procedures for review and comment on adverse information.

(ii) Sections 246.111, 246.113, 246.115, and 246.303, which require a railroad to have procedures for evaluating data concerning prior safety conduct as a motor vehicle operator and as a railroad worker.

(iii) Sections 246.109, 246.201, and 246.301, which place a duty on the railroad to make a series of determinations. When describing how it will implement its certification program to comply with those sections, a railroad or parent company must describe: the procedures it will utilize to ensure that all of the necessary determinations have been made in a timely fashion; who will be authorized to conclude that a person will or will not be certified; and how the railroad or parent company will communicate adverse decisions.

(iv) Sections 246.109, 246.117, 246.118, 246.119, and 246.121, which place a duty on the railroad to make a series of determinations. When describing how it will implement its program to comply with these sections, a railroad or parent company must describe how it will document the factual basis the railroad or parent company relied on in making determinations under these sections.

(v) Section 246.124, which require each railroad to have procedures for mentoring signal employees who have not been certified.

(vi) Section 246.125, which permits reliance on signal employee certification determinations made by other railroads.

(vii) Sections 246.207 and 246.307, which contain the requirements for replacing lost certificates and the conduct of certification revocation proceedings.

§ 246.107 Signal service classifications.

(a) A railroad may classify its certified signal employees in occupational categories or subcategories by class, task, location, or other suitable terminology, in accordance with an FRA-approved certification program that complies with the requirements of this part.

(b) Any person called to work on a signal system or signal-related technology on which they have not been certified shall immediately notify the railroad or their employer that they are not certified to work on the signal system or signal-related technology.

(c) After FRA has approved a railroad's certification program pursuant to this part, no railroad shall permit a person to work on a signal system or signal-related technology on which the person has not been certified and qualified, unless the person works under the direct and immediate supervision of a mentor or qualified instructor in accordance with § 246.124.

§ 246.109 Determinations required for certification and recertification.

(a) After FRA has approved a railroad's signal employee certification program, the railroad, prior to initially certifying or recertifying any person as a signal employee, shall, in accordance with its FRA-approved program, determine in writing that:

(1) The individual meets the prior safety conduct eligibility requirements of §§ 246.111 and 246.113;

(2) The individual meets the eligibility requirements of §§ 246.115 and 246.303;

(3) The individual meets the visual and hearing acuity standards of §§ 246.117 and 246.118;

(4) If applicable, the individual has completed a training program that meets the requirements of § 246.119;

(5) The individual meets the qualification requirements of § 246.120; and

(6) The individual has the necessary knowledge, as demonstrated by successfully completing testing and practical demonstration that meet the requirements of § 246.121.

(b) Nothing in this section, § 246.111, or § 246.113 shall be construed to prevent persons subject to this part from entering into an agreement that results in a railroad obtaining the information needed for compliance with this subpart in a different manner than that prescribed in § 246.111 or § 246.113.

§ 246.111 Prior safety conduct as motor vehicle operator.

(a) Except as provided in paragraphs (b) through (e) of this section, after FRA has approved a railroad's signal employee certification program, the railroad, prior to certifying or recertifying any person as a signal employee, shall determine that the person meets the eligibility requirements of this section involving prior conduct as a motor vehicle operator.

(b) A railroad shall certify a person as a signal employee for 60 days if the person:

(1) Requested the information required by paragraph (g) of this section at least 60 days prior to the date of the decision to certify that person; and

(2) Otherwise meets the eligibility requirements provided in § 246.109(a)(1) through (6).

(c) A railroad shall recertify a person as a signal employee for 60 days from the expiration date of that person's certification if the person:

(1) Requested the information required by paragraph (g) of this section at least 60 days prior to the date of the decision to recertify that person; and

(2) Otherwise meets the eligibility requirements provided in § 246.109(a)(1) through (6).

(d) Except as provided in paragraph (e) of this section, if a railroad who certified or recertified a person for 60 days pursuant to paragraph (b) or (c) of this section does not obtain and evaluate the information requested pursuant to paragraph (g) of this section within those 60 days, that person will be ineligible to perform as a certified signal employee until the information can be evaluated by the railroad.

(e) If a person requests the information required pursuant to paragraph (g) of this section but is unable to obtain it, that person or the railroad certifying or recertifying that person may petition for a waiver of the requirements of paragraph (a) of this section in accordance with the provisions of part 211 of this chapter. A railroad shall certify or recertify a person during the pendency of the waiver request if the person otherwise meets the eligibility requirements provided in § 246.109(a)(1) through (6).

(f) Except for persons designated as signal employees under § 246.105(c) or (d) or for persons covered by paragraph (j) of this section, each person seeking certification or recertification under this part shall, no more than one year prior to the date of the railroad's decision on certification or recertification:

(1) Take the actions required by paragraphs (g) through (i) of this section to make information concerning their driving record available to the railroad that is considering such certification or recertification; and

(2) Take any additional actions, including providing any necessary consent required by State, Federal, or foreign law to make information concerning their driving record available to that railroad.

(g) Each person seeking certification or recertification under this part shall request, in writing, that the chief of each driver licensing agency identified in paragraph (h) of this section provide a copy of that agency's available information concerning their driving record to the railroad that is considering such certification or recertification.

(h) Each person shall request the information required under paragraph (g) of this section from:

(1) The chief of the driver licensing agency of any jurisdiction, including a

State or foreign country, which last issued that person a driver's license; and

(2) The chief of the driver licensing agency of any other jurisdiction, including states or foreign countries, where the person held a driver's license within the preceding three years.

(i) If advised by the railroad that a driver licensing agency has informed the railroad that additional information concerning that person's driving history may exist in the files of a State agency or foreign country not previously contacted in accordance with this section, such person shall:

(1) Request in writing that the chief of the driver licensing agency which compiled the information provide a copy of the available information to the prospective certifying railroad; and

(2) Take any additional action required by State, Federal, or foreign law to obtain that additional information.

(j) Any person who has never obtained a motor vehicle driver's license is not required to comply with the provisions of paragraph (g) of this section but shall notify the railroad of that fact in accordance with procedures established by the railroad in its certification program.

(k) Each certified signal employee or person seeking certification as a signal employee shall report motor vehicle incidents described in paragraphs (m)(1) and (2) of this section to the certifying railroad within 48 hours of being convicted for, or completed State action to cancel, revoke, suspend, or deny a motor vehicle driver's license for, such violations. For purposes of this paragraph (k) and paragraph (m) of this section, ''State action'' means action of the jurisdiction that has issued the motor vehicle driver's license, including a foreign country. For purposes of signal employee certification, no railroad shall require reporting earlier than 48 hours after the conviction, or completed State action to cancel, revoke, suspend, or deny a motor vehicle driver's license.

(l) When evaluating a person's motor vehicle driving record, a railroad shall not consider information concerning motor vehicle driving incidents that occurred:

(1) Prior to July 22, 2024; or

(2) More than three years before the date of the railroad's certification decision; or

(3) At a time other than that specifically provided for in § 246.111, § 246.113, § 246.115, or § 246.303.

(m) When evaluating a person's motor vehicle driving record, a railroad shall only consider information concerning the following types of motor vehicle incidents:

(1) A conviction for, or completed State action to cancel, revoke, suspend, or deny a motor vehicle driver's license for operating a motor vehicle while under the influence of, or impaired by, alcohol or a controlled substance; or

(2) A conviction for, or completed State action to cancel, revoke, suspend, or deny a motor vehicle driver's license for refusal to undergo such testing as is required by State or foreign law when a law enforcement official seeks to determine whether a person is operating a vehicle while under the influence of alcohol or a controlled substance.

(n) If such an incident, described in paragraph (m) of this section, is identified:

(1) The railroad shall provide the data to the railroad's Drug and Alcohol Counselor (DAC), together with any information concerning the person's railroad service record, and shall refer the person for evaluation to determine if the person has an active substance abuse disorder.

(2) The person shall cooperate in the evaluation and shall provide any requested records of prior counseling or treatment for review exclusively by the DAC in the context of such evaluation.

(3) If the person is evaluated as not currently affected by an active substance abuse disorder, the subject data shall not be considered further with respect to certification. However, the railroad shall, on recommendation of the DAC, condition certification upon participation in any needed aftercare and/or follow-up testing for alcohol or drugs deemed necessary by the DAC consistent with the technical standards specified in 49 CFR part 219, subpart H, as well as 49 CFR part 40.

(4) If the person is evaluated as currently affected by an active substance

abuse disorder, the provisions of §246.115(c) will apply.

(5) If the person fails to comply with the requirements of paragraph (n)(2) of this section, the person shall be ineligible to perform as a certified signal employee until such time as the person complies with the requirements.

(o) Each railroad shall adopt and comply with a program meeting the requirements of this section. When any person (including but not limited to a railroad; any manager, supervisor, official, or agent of a railroad; any owner, manufacturer, lessor, or lessee of railroad equipment, track, or facilities; any employee of such owner, manufacturer, lessor, lessee, or independent contractor or subcontractor) violates any requirement of a program which complies with the requirements of this section, that person shall be considered to have violated the requirements of this section.

§246.113 Prior safety conduct with other railroads.

(a) After FRA has approved a railroad's signal employee certification program, the railroad shall determine, prior to issuing any person a signal employee certificate, that the certification candidate meets the eligibility requirements of this section.

(b) If the certification candidate has not been employed or certified by any other railroad in the previous five years, they do not have to submit a request in accordance with paragraph (c) of this section, but they must notify the railroad of this fact in accordance with procedures established by the railroad in its certification program.

(c) Except as provided for in paragraph (b) of this section, each person seeking certification or recertification under this part shall submit a written request to each railroad that employed or certified the person within the previous five years to provide the following information to the railroad that is considering whether to certify or recertify that person as a signal employee:

(1) Information about that person's compliance with §246.111 within the three years preceding the date of the request;

(2) Information about that person's compliance with §246.115 within the five years preceding the date of the request; and

(3) Information about that person's compliance with §246.303 within the five years preceding the date of the request.

(d) Each person submitting a written request required by paragraph (c) of this section shall:

(1) Submit the request no more than one year before the date of the railroad's decision on certification or recertification; and

(2) Take any additional actions, including providing any necessary consent required by State or Federal law to make information concerning their service record available to the railroad.

(e) Within 30 days after receipt of a written request that complies with paragraph (c) of this section, a railroad shall provide the information requested to the railroad designated in the written request.

(f) If a railroad is unable to provide the information requested within 30 days after receipt of a written request that complies with paragraph (c) of this section, the railroad shall provide an explanation, in writing, of why it cannot provide the information within the requested time frame. If the railroad will ultimately be able to provide the requested information, the explanation shall state approximately how much more time the railroad needs to supply the requested information. If the railroad will not be able to provide the requested information, the railroad shall provide an adequate explanation for why it cannot provide this information. Copies of this explanation shall be provided to the railroad designated in the written request and to the person who submitted the written request for information.

(g) When evaluating a person's prior safety conduct with a different railroad, a railroad shall not consider information concerning prior safety conduct that occurred:

(1) Prior to July 22, 2024; or

(2) At a time other than that specifically provided for in §246.111, §246.113, §246.115, or §246.303.

(h) Each railroad shall adopt and comply with a program that complies

with the requirements of this section. When any person (including but not limited to a railroad; any manager, supervisor, official, or agent of a railroad; any owner, manufacturer, lessor, or lessee of railroad equipment, track, or facilities; any employee of such owner, manufacturer, lessor, lessee, or independent contractor or subcontractor) violates any requirement of a program that complies with the requirements of this subject, that person shall be considered to have violated the requirements of this section.

§ 246.115 Substance abuse disorders and alcohol drug rules compliance.

(a) *Eligibility determination.* After FRA has approved a railroad's signal employee certification program, the railroad shall determine, prior to issuing any person a signal employee certificate, that the person meets the eligibility requirements of this section.

(b) *Documentation.* In order to make the determination required under paragraph (c) of this section, a railroad shall have on file documents pertinent to that determination, including a written document from its DAC which states their professional opinion that the person has been evaluated as not currently affected by a substance abuse disorder or that the person has been evaluated as affected by an active substance abuse disorder.

(c) *Fitness requirement.* (1) A person who has an active substance abuse disorder shall be denied certification or recertification as a signal employee.

(2) Except as provided in paragraph (e) of this section, a certified signal employee who is determined to have an active substance abuse disorder shall be ineligible to hold certification. Consistent with other provisions of this part, certification may be reinstated as provided in paragraph (e) of this section.

(3) In the case of a current employee of a railroad evaluated as having an active substance abuse disorder (including a person identified under the procedures of § 246.111), the employee may, if otherwise eligible, voluntarily self-refer for substance abuse counseling or treatment under the policy required by § 219.1001(b)(1) of this chapter; and the railroad shall then treat the substance abuse evaluation as confidential except with respect to ineligibility for certification.

(d) *Prior alcohol/drug conduct; Federal rule compliance.* (1) In determining whether a person may be or remain certified as a signal employee, a railroad shall consider conduct described in paragraph (d)(2) of this section that occurred within a period of five consecutive years prior to the review. A review of certification shall be initiated promptly upon the occurrence and documentation of any incident of conduct described in this paragraph (d).

(2) A railroad shall consider any violation of § 219.101 or § 219.102 of this chapter and any refusal to provide a breath or body fluid sample for testing under the requirements of part 219 of this chapter when instructed to do so by a railroad representative.

(3) A period of ineligibility described in this section shall begin:

(i) For a person not currently certified, on the date of the railroad's written determination that the most recent incident has occurred; or

(ii) For a person currently certified, on the date of the railroad's notification to the person that recertification has been denied or certification has been suspended.

(4) The period of ineligibility described in this section shall be determined in accordance with the following standards:

(i) In the case of one violation of § 219.102 of this chapter, the person shall be ineligible to hold a certificate during evaluation and any required primary treatment as described in paragraph (e) of this section. In the case of two violations of § 219.102 of this chapter, the person shall be ineligible to hold a certificate for a period of two years. In the case of more than two such violations, the person shall be ineligible to hold a certificate for a period of five years.

(ii) In the case of one violation of § 219.102 of this chapter and one violation of § 219.101 of this chapter, the person shall be ineligible to hold a certificate for a period of three years.

(iii) In the case of one violation of § 219.101 of this chapter, the person shall be ineligible to hold a certificate for a period of nine months (unless

identification of the violation was through a qualifying referral program described in § 219.1001 of this chapter and the signal employee waives investigation, in which case the certificate shall be deemed suspended during evaluation and any required primary treatment as described in paragraph (e) of this section). In the case of two or more violations of § 219.101 of this chapter, the person shall be ineligible to hold a certificate for a period of five years.

(iv) If a person refuses to provide a breath or body fluid sample for testing under the requirements of part 219 of this chapter when instructed to do so by a railroad representative, the person shall be ineligible to hold a certificate for a period of nine months.

(e) *Future eligibility to hold certificate following alcohol/drug violation.* The following requirements apply to a person who has been denied certification or who has had their certification suspended or revoked as a result of conduct described in paragraph (d) of this section:

(1) The person shall not be eligible for grant or reinstatement of the certificate unless and until the person has:

(i) Been evaluated by a Substance Abuse Professional (SAP) to determine if the person currently has an active substance abuse disorder;

(ii) Successfully completed any program of counseling or treatment determined to be necessary by the SAP prior to return to service; and

(iii) In accordance with the testing procedures of 49 CFR part 219, subpart H, has had a return-to-duty alcohol test with an alcohol concentration of less than .02 and a return-to-duty body fluid sample that tested negative for controlled substances.

(2) A certified signal employee placed in service or returned to service under the conditions described in paragraph (e)(1) of this section shall continue in any program of counseling or treatment deemed necessary by the SAP and shall be subject to a reasonable program of follow-up alcohol and drug testing without prior notice for a period of not more than five years following return to service. Follow-up tests shall include not fewer than six alcohol tests and six drug tests during the first year following return to service.

(3) Return-to-duty and follow-up alcohol and drug tests shall be performed consistent with the requirements of 49 CFR part 219, subpart H.

(4) This paragraph (e) does not create an entitlement to utilize the services of a railroad SAP, to be afforded leave from employment for counseling or treatment, or to employment as a signal employee. Nor does it restrict any discretion available to the railroad to take disciplinary action based on conduct described herein.

(f) *Confidentiality protected.* Nothing in this part shall affect the responsibility of the railroad under § 219.1003(f) of this chapter to treat qualified referrals for substance abuse counseling and treatment as confidential; and the certification status of a signal employee who is successfully assisted under the procedures of that section shall not be adversely affected. However, the railroad shall include in its referral policy a provision that, at least with respect to a certified signal employee or a candidate for certification, the policy of confidentiality is waived (to the extent that the railroad shall receive from the SAP or DAC official notice of the substance abuse disorder and shall suspend or revoke the certification, as appropriate) if the person at any time refuses to cooperate in a recommended course of counseling or treatment.

(g) *Complying with certification program.* Each railroad shall adopt and comply with a program meeting the requirements of this section. When any person (including but not limited to a railroad; any manager, supervisor, official, or agent of a railroad; any owner, manufacturer, lessor, or lessee of railroad equipment, track, or facilities; any employee of such owner, manufacturer, lessor, lessee, or independent contractor or subcontractor) violates any requirement of a program which complies with the requirements of this section, that person shall be considered to have violated the requirements of this section.

§ 246.117 Visual acuity.

(a) After FRA has approved a railroad's signal employee certification

program, the railroad shall determine, prior to issuing any person a signal employee certificate, that the person meets the standards for visual acuity prescribed in this section and appendix B to this part.

(b) Any examination required under this section shall be performed by or under the supervision of a medical examiner or a licensed physician's assistant.

(c) Except as provided in paragraph (d) of this section, each certified signal employee shall have visual acuity that meets or exceeds the following thresholds:

(1) For distant viewing, either:

(i) Distant visual acuity of at least 20/40 (Snellen) in each eye without corrective lenses; or

(ii) Distant visual acuity separately corrected to at least 20/40 (Snellen) with corrective lenses and distant binocular acuity of at least 20/40 (Snellen) in both eyes with or without corrective lenses;

(2) A field of vision of at least 70 degrees in the horizontal meridian in each eye; and

(3) The ability to recognize and distinguish between the colors of railroad signals as demonstrated by successfully completing one of the tests in appendix B to this part.

(d) A person not meeting the thresholds in paragraph (c) of this section shall, upon request of the certification candidate, be subject to further medical evaluation by a railroad's medical examiner to determine that person's ability to safely perform as a certified signal employee. In such cases, the following procedures will apply:

(1) In accordance with the guidance prescribed in appendix B to this part, a person is entitled to:

(i) One retest without making any showing; and

(ii) An additional retest if the person provides evidence that circumstances have changed since the last test to the extent that the person may now be able to safely perform as a certified signal employee.

(2) The railroad shall provide its medical examiner with a copy of this part, including all appendices.

(3) If, after consultation with a railroad officer, the medical examiner concludes that, despite not meeting the threshold(s) in paragraph (c) of this section, the person has the ability to safely perform as a certified signal employee, the railroad may conclude that the person satisfies the visual acuity requirements of this section to be a certified signal employee. Such certification will be conditioned on any special restrictions the medical examiner determines in writing to be necessary.

(e) To make the determination required under paragraph (a) of this section, a railroad shall have on file the following for each certification candidate:

(1) A medical examiner's certificate that the candidate has been medically examined and either does or does not meet the visual acuity standards prescribed in paragraph (c) of this section.

(2) If necessary under paragraph (d) of this section, a medical examiner's written professional opinion which states the basis for their determination that:

(i) The candidate can be certified, under certain conditions if necessary, even though the candidate does not meet the visual acuity standards prescribed in paragraph (c) of this section; or

(ii) The candidate's visual acuity prevents the candidate from being able to safely perform as a certified signal employee.

(f) If the examination required under this section shows that the person needs corrective lenses to meet the standards for visual acuity prescribed in this section and appendix B to this part, that person shall use corrective lenses at all times while performing as a certified signal employee unless the railroad's medical examiner subsequently determines in writing that the person can safely perform as a certified signal employee without corrective lenses.

(g) When a certified signal employee becomes aware that their vision has deteriorated, they shall notify the railroad's medical department or other appropriate railroad official of the deterioration. Such notification must occur prior to performing any subsequent service as a certified signal employee. The individual cannot return to service as a certified signal employee until

they are reexamined and determined by the railroad's medical examiner to satisfy the visual acuity standards prescribed in this section and appendix B to this part.

(h) Each railroad shall adopt and comply with a program meeting the requirements of this section. When any person (including but not limited to a railroad; any manager, supervisor, official, or agent of a railroad; any owner, manufacturer, lessor, or lessee of railroad equipment, track, or facilities; any employee of such owner, manufacturer, lessor, lessee, or independent contractor or subcontractor) violates any requirement of a program which complies with the requirements of this section, that person shall be considered to have violated the requirements of this section.

§ 246.118 Hearing acuity.

(a) After FRA has approved a railroad's signal employee certification program, the railroad shall determine, prior to issuing any person a signal employee certificate, that the person meets the standards for hearing acuity prescribed in this section and appendix B to this part.

(b) Any examination required under this section shall be performed by or under the supervision of a medical examiner or a licensed physician's assistant.

(c) Except as provided in paragraph (d) of this section, each certified signal employee shall have hearing acuity that meets or exceeds the following thresholds with or without use of a hearing aid: The person does not have an average hearing loss in the better ear greater than 40 decibels at 500 hertz (Hz), 1,000 Hz, and 2,000 Hz. The hearing test or audiogram used to show a person's hearing acuity shall meet the requirements of one of the following:

(1) As required in 29 CFR 1910.95(h) (Occupational Safety and Health Administration);

(2) As required in § 227.111 of this chapter; or

(3) Conducted using an audiometer that meets the specifications of, and is maintained and used in accordance with, a formal industry standard such as American National Standards Institute (ANSI) S3.6, ''Specifications for Audiometers.''

(d) A person not meeting the thresholds in paragraph (c) of this section shall, upon request of the certification candidate, be subject to further medical evaluation by a railroad's medical examiner to determine that person's ability to safely perform as a certified signal employee. In such cases, the following procedures will apply:

(1) In accordance with the guidance prescribed in appendix B to this part, a person is entitled to:

(i) One retest without making any showing; and

(ii) An additional retest if the person provides evidence that circumstances have changed since the last test to the extent that the person may now be able to safely perform as a certified signal employee.

(2) The railroad shall provide its medical examiner with a copy of this part, including all appendices.

(3) If, after consultation with a railroad officer, the medical examiner concludes that, despite not meeting the threshold(s) in paragraph (c) of this section, the person has the ability to safely perform as a certified signal employee, the railroad may conclude that the person satisfies the hearing acuity requirements of this section to be a certified signal employee. Such certification will be conditioned on any special restrictions the medical examiner determines in writing to be necessary.

(e) To make the determination required under paragraph (a) of this section, a railroad shall have on file the following for each certification candidate:

(1) A medical examiner's certificate that the candidate has been medically examined and either does or does not meet the hearing acuity standards prescribed in paragraph (c) of this section.

(2) If necessary under paragraph (d) of this section, a medical examiner's written professional opinion which states the basis for their determination that:

(i) The candidate can be certified, under certain conditions if necessary, even though the candidate does not meet the hearing acuity standards prescribed in paragraph (c) of this section; or

(ii) The candidate's hearing acuity prevents the candidate from being able to safely perform as a certified signal employee.

(f) If the examination required under this section shows that the person needs a hearing aid to meet the standards for hearing acuity prescribed in this section and appendix B to this part, that person shall use a hearing aid at all times while performing as a certified signal employee unless the railroad's medical examiner subsequently determines in writing that the person can safely perform as a certified signal employee without a hearing aid.

(g) When a certified signal employee becomes aware that their hearing has deteriorated, they shall notify the railroad's medical department or other appropriate railroad official of the deterioration. Such notification must occur prior to performing any subsequent service as a certified signal employee. The person cannot return to service as a certified signal employee until they are reexamined and determined by the railroad's medical examiner to satisfy the hearing acuity standards prescribed in this section and appendix B to this part.

(h) Each railroad shall adopt and comply with a program meeting the requirements of this section. When any person (including but not limited to a railroad; any manager, supervisor, official, or agent of a railroad; any owner, manufacturer, lessor, or lessee of railroad equipment, track, or facilities; any employee of such owner, manufacturer, lessor, lessee, or independent contractor or subcontractor) violates any requirement of a program which complies with the requirements of this section, that person shall be considered to have violated the requirements of this section.

§ 246.119 Training requirements.

(a) After FRA has approved a railroad or parent company's certification program, the railroad or parent company shall determine, prior to issuing any person a signal employee certificate, that the person has successfully completed training, in accordance with the requirements of this section.

(b) A railroad or parent company that elects to accept responsibility to provide initial signal employee training to persons who have not been previously certified as signal employees shall state in its certification program whether it will conduct the training or authorize another railroad or non-railroad entity to provide the training.

(c) A railroad or parent company that elects to accept responsibility to provide initial signal employee training to persons not previously certified as signal employees shall submit a training program which, at a minimum, includes the following:

(1) An explanation of how training will be structured, developed, and delivered, including an appropriate combination of classroom, simulator, computer-based, correspondence, practical demonstration, on-the-job training, or other formal training. The curriculum shall be designed to impart knowledge of, and ability to comply with, applicable Federal railroad safety laws, regulations, and orders, as well as any relevant railroad rules and procedures promulgated to implement those Federal railroad safety laws, regulations, and orders. The training shall document a person's knowledge of, and ability to comply with, Federal railroad safety laws, regulations, and orders, as well as railroad rules and procedures.

(2) An on-the-job training component which shall include the following:

(i) A syllabus describing content, required tasks, and related steps the person learning the job shall be able to perform within a specified timeframe. If the railroad or parent company has elected to classify its certified signal employees into more than one occupational category or subcategory, this syllabus shall include all safety-related tasks and subtasks performed by each category or subcategory of certified signal employee;

(ii) A statement of the conditions (*e.g.*, prerequisites, tools, equipment, documentation, briefings, demonstrations, and practice) necessary for learning transfer; and

(iii) A statement of the standards by which proficiency is measured through a combination of task/step accuracy, completeness, and repetition.

(3) A description of the processes to review and modify its training program when new safety-related railroad laws,

regulations, orders, procedures, software, or new signal system equipment or signal-related technology are introduced into the workplace, including how it is determined if additional or refresher training is needed.

(d) Prior to beginning the on-the-job exercises discussed in paragraph (c)(2) of this section, each railroad or parent company shall make any relevant information or materials, such as signal standards, test procedures, operating rules, safety rules, or other rules, available for referencing by certification candidates.

(e) Prior to a person not previously certified as a signal employee being certified as a signal employee, a railroad or parent company shall require the person to:

(1) Successfully complete the initial signal employee training program developed pursuant to paragraph (c) of this section and any associated examinations covering the skills and knowledge the person will need to perform the tasks necessary to be a certified signal employee;

(2)(i) Successfully complete on-the-job training and demonstrate on-the-job proficiency by successfully completing the tasks and using the signal system equipment and signal-related technology necessary to be a certified signal employee on the certifying railroad. A certification candidate may only perform such tasks under the direct and immediate supervision of a mentor, signal instructor, or qualified instructor. A qualified instructor must confirm that on-the-job proficiency has been demonstrated.

(ii) If the railroad elects to classify its certified signal employees into more than one occupational category or subcategory, the person must demonstrate on-the-job proficiency by successfully completing the tasks applicable to that occupational category or subcategory in which the person is seeking to be certified. A qualified instructor must confirm that on-the-job proficiency has been demonstrated; and

(3) Demonstrate qualification on the signal system equipment and signal-related technology deployed on the railroad's territory on which the person is expected to work. A qualified instructor must confirm that qualification has been demonstrated.

(f) In making the determination required under paragraph (a) of this section, a railroad shall have written documentation showing that:

(1) The person completed an initial signal employee training program that complies with paragraph (c) of this section (if the person has not been previously certified as a signal employee); and

(2) The person demonstrated their knowledge and on-the-job proficiency by achieving a passing grade under the testing and evaluation procedures of the training program; and

(3) The person achieved a passing score on the qualification exam on the signal system equipment and signal-related technology on which the person will work as a certified signal employee.

(g) The certification program, required under this part and submitted in accordance with the procedures and requirements described in §246.106, shall include:

(1) How comprehensive training will be provided on the installation, operation, testing, maintenance, and repair of the signal systems and signal-related technology deployed on the railroad's territory; and

(2) How the railroad will ensure that each certified signal employee is qualified on the signal system equipment and signal-related technology (whether existing or new) deployed on the railroad's territory before the certified signal employee is required to install, operate, test, maintain, or repair that signal system equipment or signal-related technology; and

(3) The maximum time period that a certified signal employee can be absent from performing work on signal system equipment or signal-related technology that requires certification pursuant to this part before requalification will be required. In accordance with §246.120(c), this time period cannot exceed 12 months.

(h) If ownership of a railroad is being transferred from one company to another, the signal employees of the acquiring company may receive familiarization training from the selling

company prior to the acquiring railroad commencing operation.

(i) A railroad shall provide for the continuing education of its certified signal employees to ensure that each certified signal employee maintains the necessary knowledge concerning:

(1) Railroad safety and operating rules;

(2) Compliance with all applicable Federal railroad safety laws, regulations, and orders; and

(3) Compliance with all applicable standards, procedures, and instructions for the installation, operation, testing, maintenance, troubleshooting, and repair of new and existing signal systems and new and existing signal-related technology deployed on the railroad.

(j) Each railroad shall adopt and comply with a program meeting the requirements of this section. When any person (including but not limited to a railroad; any manager, supervisor, official, or agent of a railroad; any owner, manufacturer, lessor, or lessee of railroad equipment, track, or facilities; any employee of such owner, manufacturer, lessor, lessee, or independent contractor or subcontractor) violates any requirement of a program which complies with the requirements of this section, that person shall be considered to have violated the requirements of this section.

§ 246.120 Requirements for qualification.

(a) After FRA has approved a railroad's certification program, a railroad shall not permit or require a person to serve as a signal employee, as defined in § 246.7, unless that railroad determines that:

(1) The person is a certified signal employee; and

(2) The person either:

(i) Is qualified, as defined in § 246.7, on the signal system equipment and signal-related technology (whether existing or new) and therefore may reasonably be expected to be proficient on all safety related tasks the person is assigned to perform; or

(ii) Is working under the direct and immediate supervision of a mentor or qualified instructor.

(b) If a person is called to perform work on signal system equipment or signal-related technology that they are not qualified on, the person must immediately notify the railroad that they are not qualified on the signal system equipment or signal-related technology.

(c) A person shall no longer be considered qualified on signal system equipment or signal-related technology if they have not performed work that requires certification pursuant to this part on signal system equipment or signal-related technology in the previous 12 months.

(d) Each railroad shall adopt and comply with a program meeting the requirements of this section. When any person (including but not limited to a railroad; any manager, supervisor, official, or agent of a railroad; any owner, manufacturer, lessor, or lessee of railroad equipment, track, or facilities; any employee of such owner, manufacturer, lessor, lessee, or independent contractor or subcontractor) violates any requirement of a program which complies with the requirements of this section, that person shall be considered to have violated the requirements of this section.

§ 246.121 Knowledge testing.

(a) After FRA has approved a railroad's signal employee certification program, the railroad shall determine, prior to issuing any person a signal employee certificate and in accordance with the requirements of this section, that the person has demonstrated sufficient knowledge of the railroad's signal standards, test procedures, and instructions for the installation, operation, testing, maintenance, troubleshooting, and repair of the railroad's signal system equipment and signal-related technology.

(b) To make the knowledge determination required by paragraph (a) of this section, a railroad shall have procedures for testing a person being evaluated for certification as a signal employee that:

(1) Are designed to examine a person's knowledge of:

(i) All applicable Federal railroad safety laws, regulations, and orders governing signal systems and signal-related technology;

(ii) All applicable railroad safety and operating rules; and

(iii) All applicable railroad standards, procedures, and instructions for the installation, operation, testing, maintenance, troubleshooting, and repair of the railroad's signal systems and signal-related technology, including:

(A) The railroad's rules and standards for disabling and removing signal systems from service; and

(B) The railroad's rules and standards for placing signal systems back in service;

(2) Are objective in nature;

(3) Include a practical demonstration component;

(4) Are in written or electronic form;

(5) Are sufficient to accurately measure the person's knowledge of the subjects listed in paragraph (b)(1) of this section; and

(6) Allow for testing conducted with reference to books and other written materials, as addressed in the railroad's certification program.

(c) The railroad shall provide the certification candidate with an opportunity to consult with a mentor, signal instructor or qualified instructor to explain one or more test questions.

(d) If a person fails the test, no railroad shall permit or require that person to work as a certified signal employee prior to that person's achieving a passing score during a reexamination of the test.

(e) Each railroad shall adopt and comply with a program meeting the requirements of this section. When any person (including but not limited to a railroad; any manager, supervisor, official, or agent of a railroad; any owner, manufacturer, lessor, or lessee of railroad equipment, track, or facilities; any employee of such owner, manufacturer, lessor, lessee, or independent contractor or subcontractor) violates any requirement of a program which complies with the requirements of this section, that person shall be considered to have violated the requirements of this section.

§ 246.123 Monitoring operational performance.

(a) Each railroad's certification program shall describe how it will monitor the operational performance of its certified signal employees by including procedures for:

(1) Giving each certified signal employee at least one unannounced compliance test each calendar year in one of the following areas: the railroad's signal system standards and test procedures, or Federal regulations concerning signal systems, except as provided for in paragraph (d) of this section;

(2) Giving unannounced compliance tests to certified signal employees who return to signal work that requires certification pursuant to this part, as described in paragraph (d) of this section;

(3) What actions the railroad will take if it finds deficiencies in a certified signal employee's performance during an unannounced compliance test; and

(4) Monitoring the performance of signal-related tasks.

(b) An unannounced compliance test shall:

(1) Be performed by a certified signal employee; and

(2) Be given to each certified signal employee at least once each calendar year, except as provided for in paragraph (d) of this section.

(c) If the railroad's certification program classifies signal employees pursuant to §246.107, the unannounced compliance test shall be within scope of the certified signal employee's classification.

(d) A certified signal employee who is not performing signal work that requires certification pursuant to this part does not need to be given an unannounced compliance test. However, when the certified signal employee returns to signal work that requires certification pursuant to this part, the railroad shall:

(1) Give the certified signal employee an unannounced compliance test within 30 days of their return to signal work that requires certification; and

(2) Retain a written record that includes the following information:

(i) The date the certified signal employee stopped performing work that required certification pursuant to this part;

(ii) The date the certified signal employee returned to signal work that required certification pursuant to this part; and

(iii) The date and the result of the unannounced compliance test was performed following the signal employee's return to signal work requiring certification.

(e) Each railroad shall adopt and comply with a program meeting the requirements of this section. When any person (including but not limited to a railroad; any manager, supervisor, official, or agent of a railroad; any owner, manufacturer, lessor, or lessee of railroad equipment, track, or facilities; any employee of such owner, manufacturer, lessor, lessee, or independent contractor or subcontractor) violates any requirement of a program which complies with the requirements of this section, that person shall be considered to have violated the requirements of this section.

§ 246.124 Mentoring.

(a) Each railroad's certification program shall include procedures for the mentoring of persons who have not been certified by the railroad. Each railroad shall identify potential scenarios in which mentoring of non-certified persons will be provided.

(b) After FRA has approved a railroad's certification program pursuant to this part, the railroad shall not permit or require any person to perform work on a signal system or signal-related technology on its territory that requires certification unless the railroad first determines that:

(1) The person is a certified signal employee who has been certified by the railroad and qualified on all applicable signal system equipment and signal-related technology deployed on the railroad; or

(2) The person is working under the direct and immediate supervision of a mentor or qualified instructor.

(c) If the railroad elects to classify its certified signal employees into more than one occupational category or subcategory pursuant to § 246.107:

(1) The railroad shall address in its certification program how mentoring will be provided for certified signal employees who move into a different occupational category or subcategory of certified signal service; and

(2) Mentors shall be certified within the occupational category or subcategory of the task being performed by the person or persons working under their direct and immediate supervision.

(d) If allowed by the railroad's certification program, any work on a signal system performed by a person whose signal employee certification has been revoked shall be performed under the direct and immediate supervision of a mentor or qualified instructor.

(e) Each railroad's certification program shall address how mentoring will be provided to ensure that mentors are located in close proximity to each person or persons they are mentoring to allow the mentor to take immediate action to prevent a violation of § 246.303(e) from occurring. Each railroad's certification program shall also address how mentors will be held accountable for the work performed by persons working under the mentor's direct and immediate supervision. Any records of tests performed by persons working under the direct and immediate supervision of a mentor shall reflect the mentor's name.

(f) Each railroad shall adopt and comply with a program meeting the requirements of this section. When any person (including but not limited to a railroad; any manager, supervisor, official, or agent of a railroad; any owner, manufacturer, lessor, or lessee of railroad equipment, track, or facilities; any employee of such owner, manufacturer, lessor, lessee, or independent contractor or subcontractor) violates any requirement of a program which complies with the requirements of this section, that person shall be considered to have violated the requirements of this section.

§ 246.125 Certification determinations made by other railroads.

(a) A railroad or parent company that is considering certification of a person as a signal employee (''certifying railroad or parent company'') may rely on certain determinations made by another railroad or parent

company concerning that person's certification.

(b) A certifying railroad or parent company that relies on the certification determinations made by another railroad shall be responsible for making the following determinations:

(1) The person's signal employee certification is still valid under §§ 246.201 and 246.307;

(2) The person has been qualified on the signal system equipment and signal-related technology deployed on the railroad territory on which the person is expected to work in accordance with § 246.119; and

(3) The person has demonstrated the necessary knowledge concerning the certifying railroad or parent company's signal standards, test procedures, and instructions for the installation, operation, testing, maintenance, troubleshooting, and repair of the certifying railroad or parent company's signal system equipment and signal-related technology in accordance with § 246.121.

Subpart C—Administration of the Certification Program

§ 246.201 Time limitations for certification.

(a) After FRA approves a railroad's signal employee certification program, that railroad shall not certify or recertify a person as a signal employee if the railroad is making:

(1) A determination concerning eligibility under §§ 246.111, 246.113, 246.115, and 246.303 and the eligibility data being relied on was furnished more than one year before the date of the railroad's certification decision;

(2) A determination concerning vision or hearing acuity and the medical examination being relied on was conducted more than 450 days before the date of the railroad's certification decision; or

(3) A determination concerning demonstrated knowledge and the knowledge examination being relied on was conducted more than one year before the date of the railroad's certification decision, or more than two years before the date of the railroad's certification decision if the railroad administers knowledge testing pursuant to § 246.121 at intervals that do not exceed two years.

(b) The time limitations of paragraph (a) of this section do not apply to a railroad that is making a certification decision in reliance on determinations made by another railroad in accordance with § 246.125.

(c) Except if a person is designated as a certified signal employee under § 246.105(c) or (d), no railroad shall certify a person as a signal employee for an interval of more than three years.

(d) Each railroad shall issue each certified signal employee a certificate that complies with § 246.207 no later than 30 days from the date of its decision to certify or recertify that person.

§ 246.203 Retaining information supporting determinations.

(a) After FRA approves a railroad's signal employee certification program, any time the railroad issues, denies, or revokes a certificate after making the determinations required under § 246.109, it shall maintain a record for each certified signal employee and certification candidate. Each record shall contain the information, described in paragraph (b) of this section, that the railroad relied on in making the determinations required under § 246.109.

(b) A railroad shall retain the following information:

(1) Relevant data from the railroad's records concerning the person's prior safety conduct and eligibility;

(2) Relevant data furnished by another railroad;

(3) Relevant data furnished by a governmental agency concerning the person's motor vehicle driving record;

(4) Relevant data furnished by the person seeking certification concerning their eligibility;

(5) The relevant test results data concerning visual and hearing acuity;

(6) If applicable, the relevant data concerning the professional opinion of the railroad's medical examiner on the adequacy of the person's visual or hearing acuity;

(7) Relevant data from the railroad's records concerning the person's success or failure on knowledge test(s) under § 246.121;

(8) A sample copy of the written knowledge test or tests administered; and

(9) The relevant data from the railroad's records concerning the person's success or failure on unannounced tests the railroad performed to monitor the person's performance in accordance with § 246.123.

(c) If a railroad is relying on successful completion of a training program conducted by another entity, the relying railroad shall maintain a record for each certification candidate that contains the relevant data furnished by the training entity concerning the person's demonstration of knowledge relied on by the railroad in making its determinations.

(d) If a railroad is relying on a certification decision initially made by another railroad, the relying railroad shall maintain a record for each certification candidate that contains the relevant data furnished by the other railroad which it relied on in making its determinations.

(e) All records required under this section shall be retained by the railroad for a period of six years from the date of the certification, recertification, denial, or revocation decision and shall, upon request, be made available to FRA representatives in a timely manner.

(f) It shall be unlawful for any railroad to knowingly or any individual to willfully:

(1) Make, cause to be made, or participate in the making of a false entry on the record(s) required by this section; or

(2) Otherwise falsify such records through material misstatement, omission, or mutilation.

(g) Nothing in this section precludes a railroad from maintaining the information required to be retained under this section in an electronic format provided that:

(1) The railroad maintains an information technology security program adequate to ensure the integrity of the electronic data storage system, including the prevention of unauthorized access to the program logic or individual records;

(2) The program and data storage system must be protected by a security system that utilizes an employee identification number and password, or a comparable method, to establish appropriate levels of program access meeting all of the following standards:

(i) No two individuals have the same electronic identity; and

(ii) A record cannot be deleted or altered by any individual after the record is certified by the employee who created the record;

(3) Any amendment to a record is either:

(i) Electronically stored apart from the record that it amends; or

(ii) Electronically attached to the record as information without changing the original record;

(4) Each amendment to a record uniquely identifies the person making the amendment; and

(5) The system employed by the railroad for data storage permits reasonable access and retrieval of the information which can be easily produced in an electronic or printed format that can be:

(i) Provided to FRA representatives in a timely manner; and

(ii) Authenticated by a designated representative of the railroad as a true and accurate copy of the railroad's records if requested to do so by an FRA representative.

§ 246.205 List of certified signal employees and recordkeeping.

(a) After a railroad's certification program has received its initial approval from FRA, pursuant to § 246.103(f)(1), the railroad must maintain a list of each person who is currently certified as a signal employee by the railroad. The list must include the date of the railroad's certification decision and the date the person's signal employee certification expires. If a railroad classifies its certified signal employees into occupational categories or subcategories by class, task, location, or other suitable terminology, the list must indicate the occupational categories and subcategories in which each certified signal employee is certified to perform service.

(b) The list shall:

(1) Be updated at least annually;

(2) Be made available, upon request, to FRA representatives in a timely manner; and

(3) Be available either:

(i) In electronic format pursuant to paragraph (c) of this section; or

(ii) At the divisional or regional headquarters of the railroad.

(c) If a railroad elects to maintain its list in an electronic format, it must:

(1) Maintain an information technology security program adequate to ensure the integrity of the electronic data storage system, including the prevention of unauthorized access to the program logic or the list;

(2) Have its program and data storage system protected by a security system that utilizes an employee identification number and password, or a comparable method, to establish appropriate levels of program access meeting all of the following standards:

(i) No two individuals have the same electronic identity; and

(ii) An entry on the list cannot be deleted or altered by any individual after the entry is certified by the employee who created the entry;

(3) Have any amendment to the list either:

(i) Electronically stored apart from the entry on the list that it amends; or

(ii) Electronically attached to the entry on the list as information without changing the original entry;

(4) Ensure that each amendment to the list uniquely identifies the person making the amendment;

(5) Ensure that the system employed for data storage permits reasonable access and retrieval of the information which can be easily produced in an electronic or printed format that can be:

(i) Provided to FRA representatives within a timely manner; and

(ii) Authenticated by a designated representative of the railroad as a true and accurate copy of the railroad's records if requested to do so by an FRA representative.

(d) It shall be unlawful for any railroad to knowingly or any individual to willfully:

(1) Make, cause to be made, or participate in the making of a false entry on the list required by this section; or

(2) Otherwise falsify such list through material misstatement, omission, or mutilation.

§ 246.207 Certificate requirements.

(a) Each person who becomes a certified signal employee in accordance with this part shall be issued a paper or electronic certificate that:

(1)(i) Identifies the railroad issuing the certificate; or

(ii) Identifies the parent company issuing the certificate, if a parent company submits a certification program for one or more of its subsidiary railroads. The certificate issued by the parent company shall also list each subsidiary railroad on which the person is certified to work as a signal employee;

(2) Indicates it is a signal employee certificate and, if applicable, lists all signal employee occupational categories or subcategories developed pursuant to § 246.107 in which the person is certified;

(3) Provides the following information about the certified signal employee:

(i) Name;

(ii) Employee identification number; and

(iii) Either a physical description or photograph of the person;

(4) Identifies any conditions or limitations, including conditions to ameliorate vision or hearing acuity deficiencies, that restrict, limit, or alter the person's abilities to work as a certified signal employee;

(5) Shows the effective date of the certification;

(6) Shows the expiration date of the certification unless the certificate was issued pursuant to § 246.105(c) or (d);

(7) Has been signed by an individual designated in accordance with paragraph (b) of this section; and

(8) Is electronic or of sufficiently small size to permit being carried in an ordinary pocket wallet.

(b) Each railroad or parent company shall designate in writing any person it authorizes to sign the certificates described in this section. The designation shall identify such persons by name or job title.

(c) Nothing in this section shall prohibit any railroad or parent company

from including additional information on the certificate or supplementing the certificate through other documents.

(d) It shall be unlawful for any railroad or parent company to knowingly or any individual to willfully:

(1) Make, cause to be made, or participate in the making of a false entry on a certificate; or

(2) Otherwise falsify a certificate through material misstatement, omission, or mutilation.

(e) Except as provided for in paragraph (g) of this section, each certified signal employee shall:

(1) Have their certificate in their possession while on duty as a signal employee; and

(2) Display their certificate upon request from:

(i) An FRA representative;

(ii) A state inspector authorized under part 212 of this chapter;

(iii) An officer of the issuing railroad; or

(iv) An officer of the person's employer if the certified signal employee is not employed by the issuing railroad.

(f) If a person's signal employee certificate is lost, stolen, mutilated, or becomes unreadable, the railroad shall promptly replace the certificate at no cost to the person.

(g) A certified signal employee is exempt from the requirements of paragraph (e) of this section if:

(1) The railroad made its certification or recertification decision within the last 30 days and the person has not yet received their certificate; or

(2) The person's signal employee certificate was lost, stolen, mutilated, or became unreadable, and the railroad has not yet issued a replacement certificate to the person who reported their lost certificate.

(h) Any person who is notified or called to work as a certified signal employee and such work would cause the person to exceed certificate limitations, set forth in accordance with subpart B of this part, shall immediately notify the railroad that they are not authorized to perform that work and it shall be unlawful for the railroad to require such work.

(i) Nothing in this section shall be deemed to alter a certified signal employee's duty to comply with other provisions of this chapter concerning railroad safety.

§ 246.213 Multiple certifications.

(a) A person who holds a signal employee certificate may:

(1) Hold a signal employee certificate for multiple types of signal service; and

(2) Be certified in other crafts, such as a locomotive engineer or conductor.

(b) A railroad that issues multiple certificates to a person, shall, to the extent possible, coordinate the expiration date of those certificates.

(c) Paragraphs (c)(1) through (3) of this section apply to persons who are currently certified as a signal employee for multiple railroads or are seeking to become certified signal employees for multiple railroads.

(1) A person who holds a current signal employee certificate from more than one railroad shall immediately notify the other certifying railroad(s) if they are denied signal employee certification or recertification under § 246.301 by a railroad or have their signal employee certification suspended or revoked under § 246.307 by a railroad.

(2) If a person has their signal employee certification suspended or revoked by a railroad under § 246.307, they shall not work as a certified signal employee for any railroad during the period that their certification is suspended or revoked, except as provided for in § 246.124(d).

(3) If a person has their signal employee certification suspended or revoked by a railroad under § 246.307, they shall notify any railroad from whom they are seeking signal employee certification that their signal employee certification is currently suspended or revoked by another railroad.

(d) Paragraphs (d)(1) through (3) of this section apply to persons who are currently certified as a signal employee and also currently certified in another railroad craft, such as a locomotive engineer or conductor:

(1) If a person's signal employee certification is revoked under § 246.307 for a violation of § 246.303(e)(11), they shall not work in another certified railroad craft, such as a locomotive engineer or

conductor, during the period of revocation.

(2) If a person's signal employee certification is revoked under § 246.307 for a violation of § 246.303(e)(1) through (10), they may work in another certified railroad craft, such as a locomotive engineer or conductor, during the period of revocation.

(3) If any of a person's non-signal employee certifications are revoked for failure to comply with § 219.101 of this chapter, they shall not work as a certified signal employee for any railroad during the period of revocation.

(4) If any of a person's non-signal employee certifications are revoked for any reason other than a failure to comply with § 219.101 of this chapter, they may work as a certified signal employee during the period of revocation.

(e) A person who has had their signal employee certification revoked for failure to comply with § 219.101 of this chapter shall not obtain any other certification pursuant to this chapter from any railroad during the period of revocation.

(f) A person who has had any of their non-signal employee certifications revoked for failure to comply with § 219.101 of this chapter shall not obtain signal employee certification pursuant to this part from any railroad during the period of revocation.

(g) A railroad that denies a person signal employee certification or recertification under § 246.301 shall not, solely on the basis of that denial, deny or revoke that person's non-signal employee certifications or recertifications.

(h) A railroad that denies a person any non-signal employee certification or recertification pursuant to this chapter shall not, solely on the basis of that denial, deny or revoke that person's signal employee certification or recertification.

(i) In lieu of issuing multiple certificates, a railroad may issue one certificate to a person who is certified in multiple crafts as long as the single certificate complies with all of the certificate requirements for those crafts.

(j) A person who is certified in multiple crafts and who is involved in a revocable event, as described in this chapter, may only have one certificate revoked for that event. The determination by the railroad as to which certificate to revoke must be based on the work the person was performing at the time the revocable event occurred.

§ 246.215 Railroad oversight responsibilities.

(a) No later than March 31 of each year (beginning in calendar year 2027), each Class I railroad (including the National Railroad Passenger Corporation), each railroad providing commuter service, and each Class II railroad shall conduct a formal annual review and analysis concerning the administration of its program for responding to detected instances of poor safety conduct by certified signal employees during the prior calendar year.

(b) Each review and analysis shall involve:

(1) The number and nature of the instances of detected poor safety conduct including the nature of the remedial action taken in response thereto;

(2) The number and nature of FRA reported accidents/incidents attributed to poor safety performance by signal employees; and

(3) The number and type of operational monitoring test failures recorded by certified signal employees conducting compliance tests pursuant to § 246.123.

(c) Based on that review and analysis, each railroad shall determine what action(s) it will take to improve the safety of railroad operations to reduce or eliminate future accidents/incidents of that nature.

(d) If requested in writing by FRA, by the president of a labor organization that represents the railroad's signal employees, or by a railroad's certified signal employee who is not represented by a labor organization, the railroad shall provide a report of the findings and conclusions reached during such annual review and analysis effort.

(e) For reporting purposes, information about the nature of detected poor safety conduct shall be capable of segregation for study and evaluation purposes into the following categories:

(1) Incidents involving noncompliance with railroad rules and procedures governing the removal from service of:

(i) Highway-rail and pathway grade crossing warning devices and systems; and

(ii) Wayside signal devices and systems;

(iii) Other devices or signal systems subject to this part.

(2) Incidents involving noncompliance with railroad rules and procedures governing the restoration of service of:

(i) Highway-rail and pathway grade crossing warning devices and systems; and

(ii) Wayside signal devices and systems;

(iii) Other devices or signal systems subject to this part.

(3) Incidents involving interference with the normal functioning of:

(i) Highway-rail and pathway grade crossing warning devices and systems; and

(ii) Wayside signal devices and systems.

(4) Incidents involving noncompliance with railroad rules and test procedures governing the inspection and testing of grade crossing warning devices and systems after installation, modification, disarrangement, maintenance, testing, and repair.

(5) Incidents involving noncompliance with railroad test procedures on devices or signal systems subject to this part.

(6) Incidents resulting in a signal false proceed, grade crossing activation failure, or accident or personal injury related to the same.

(7) Incidents involving noncompliance with the on-track safety requirements and blue signal requirements in parts 214 and 218 of this chapter.

(8) Incidents involving noncompliance with part 219 of this chapter.

(f) For reporting purposes, each category of detected poor safety conduct identified in paragraph (e) of this section shall be capable of being annotated to reflect the following:

(1) The total number of incidents in that category;

(2) The number of incidents within that total which reflect incidents requiring an FRA accident/incident report under part 225 of this chapter; and

(3) The number of incidents within that total which were detected as a result of a scheduled operational monitoring effort.

(g) For reporting purposes, each instance of detected poor safety conduct identified in paragraph (b) of this section shall be capable of being annotated to reflect the following:

(1) The nature of the remedial action taken, and the number of events subdivided, so as to reflect which of the following actions was selected:

(i) Imposition of informal discipline;

(ii) Imposition of formal discipline;

(iii) Provision of informal training; or

(iv) Provision of formal training; and

(2) If the nature of the remedial action taken was formal discipline, the number of events further subdivided so as to reflect which of the following punishments was imposed by the railroad:

(i) The person was withheld from service;

(ii) The person was dismissed from employment; or

(iii) The person was issued demerits. If more than one form of punishment was imposed, only the punishment deemed the most severe shall be shown.

(iv) The person's classification or type of signal employee service was removed or reduced.

(h) For reporting purposes, each instance of detected poor safety conduct identified in paragraph (b) of this section which resulted in the imposition of formal or informal discipline shall be annotated to reflect the following:

(1) The number of instances in which the railroad's internal appeals process reduced the punishment initially imposed at the conclusion of its hearing; and

(2) The number of instances in which the punishment imposed by the railroad was reduced by any of the following entities: The National Railroad Adjustment Board, a Public Law Board, a Special Board of Adjustment, or other body for the resolution of disputes duly constituted under the provisions of the Railway Labor Act.

(i) For reporting purposes, an instance of poor safety conduct involving a person who is a certified signal employee and is certified in another craft such as locomotive engineer or conductor, need only be reported once

(*e.g.*, either under this section or § 240.309 or § 242.215 of this chapter). The determination as to where to report the instance of poor safety conduct should be based on the work the person was performing at the time the conduct occurred.

Subpart D—Denial and Revocation of Certification

§ 246.301 Process for denying certification.

(a) A railroad shall notify a candidate for certification or recertification of information known to the railroad that forms the basis for denying the person certification and provide the candidate a reasonable opportunity to explain or rebut that adverse information in writing prior to denying certification. A railroad shall provide the candidate with any documents or records, including written statements, related to failure to meet a requirement of this part that support its pending denial decision.

(b) If a railroad denies a person certification or recertification, it shall issue a decision that complies with all of the following requirements:

(1) It must be in writing.

(2) It must explain the basis for the railroad's denial decision.

(3) It must address any explanation or rebuttal information that the candidate provides pursuant to paragraph (a) of this section.

(4) It must include the date of the railroad's decision.

(5) It must be served on the person no later than 10 days after the railroad's decision.

(c) A railroad shall not deny the person's certification for failing to comply with a railroad test procedure, signal standard, or practice which constitutes a violation under § 246.303(e)(1) through (10) if sufficient evidence exists to establish that an intervening cause prevented or materially impaired the person's ability to comply with that railroad test procedure, signal standard, or practice.

§ 246.303 Criteria for revoking certification.

(a) It shall be unlawful to fail to comply with any of the railroad rules or practices described in paragraph (e) of this section.

(b) A certified signal employee who fails to comply with a railroad test procedure, signal standard or practice described in paragraph (e) of this section shall have their certification revoked.

(c) A certified signal employee who is assigned to monitor, mentor, or instruct a signal employee and fails to take appropriate action to prevent a violation of paragraph (e) of this section shall have their certification revoked.

(d) A certified signal employee who is called by a railroad to perform a duty other than that of a signal employee shall not have their signal employee certification revoked based on actions taken or not taken while performing that duty except for violations described in paragraph (e)(11) of this section.

(e) When determining whether to revoke a person's signal employee certification, a railroad shall only consider violations of Federal regulatory provisions or railroad rules, procedures, signal standards, and practices that involve:

(1) Interfering with the normal functioning of a highway-rail grade crossing warning system under § 234.209 of this chapter, or signal system under § 236.4 of this chapter, without providing an alternative means of protection. (Railroads shall only consider those violations that result in an activation failure or false proceed signal.)

(2) Failure to comply with a railroad rule or procedure when removing from service:

(i) Highway-rail or pathway grade crossing warning devices and systems;

(ii) Wayside signal devices or signal systems; or

(iii) Other devices or signal systems subject to this part.

(3) Failure to comply with railroad rule or procedure when placing in service or restoring to service:

(i) Highway-rail and pathway grade crossing warning devices and systems;

(ii) Wayside signal devices or signal systems; or

(iii) Other devices or signal systems subject to this part.

(4) Failure to perform an inspection or test to ensure a highway-rail or pathway grade crossing warning device or system functions as intended, when required by railroad rule or procedure, after:

(i) Installation, maintenance, testing or repair of the warning device or system;

(ii) Modification or disarrangement of the warning device or system; or

(iii) Malfunction or failure of the warning device or system;

(5) Failure to restore power to train detection device or highway-rail or pathway grade crossing warning device or system after manual interruption of the power source. (Railroads shall consider only those violations that result in activation failures.)

(6) Failure to comply with railroad validation or cutover procedures.

(7) Failure to comply with §§ 214.313, 214.319, 214.321, 214.323, 214.325, 214.327, or 214.329. Railroads shall consider only those violations directly involving a person who failed to obtain proper on-track safety before fouling a track.

(8) Failure to comply with § 218.25 of this chapter (Workers on a main track);

(9) Failure to comply with § 218.27 of this chapter (Workers on other than main track);

(10) Failure to comply with § 218.29 of this chapter (Alternate methods of protection);

(11) Failure to comply with § 219.101 of this chapter. However, such incidents shall be considered as a violation only for the purposes of § 246.305(a)(2) and (b).

(f) In making the determination as to whether to revoke a person's signal employee certification, a railroad shall only consider conduct described in paragraphs (e)(1) through (10) of this section that occurred within the three years prior to the determination.

(g) If in any single incident the person's conduct contravened more than one Federal regulatory provision or railroad rule, procedure, signal standard, or practice, that event shall be treated as a single violation for the purposes of this section.

(h) A violation of one or more railroad rules, procedures, signal standards, or practices described in paragraphs (e)(1) through (10) of this section that occurs during a properly conducted compliance test subject to the provisions of this chapter shall be counted in determining the periods of ineligibility described in § 246.305.

(i) A compliance test that is not conducted in compliance with this part, a railroad's operating rules, or a railroad's program under § 217.9 of this chapter, will not be considered a legitimate test of skill or knowledge, and will not be considered for revocation purposes.

(j) Each railroad shall adopt and comply with a program meeting the requirements of this section. When any person (including, but not limited to, each railroad, railroad officer, supervisor, and employee) violates any requirement of a program which complies with the requirements of this section, that person shall be considered to have violated the requirements of this section.

§ 246.305 Periods of ineligibility.

(a) The starting date for a period of ineligibility described in this section shall be:

(1) For a person not currently certified, the date of the railroad's written determination that the most recent incident has occurred; or

(2) For a person currently certified, the date of the railroad's notification to the person that recertification has been denied or certification has been suspended.

(b) A period of ineligibility shall be determined according to the following standards:

(1) In the case of a single incident involving a violation of one or more of the Federal regulatory provisions or railroad rules, procedures, signal standards, or practices described in § 246.303(e)(1) through (10), the person shall have their certificate revoked for a period of 30 calendar days.

(2) In the case of two separate incidents involving a violation of one or more of the Federal regulatory provisions or railroad rules, procedures, signal standards, or practices described in § 246.303(e)(1) through (10), that occurred within 24 months of each other, the person shall have their certificate revoked for a period of six months.

(3) In the case of three separate incidents involving violations of one or more of the Federal regulatory provisions or railroad rules, procedures, signal standards, or practices, described in §246.303(e)(1) through (11), that occurred within 36 months of each other, the person shall have their certificate revoked for a period of one year.

(4) In the case of four separate incidents involving violations of one or more of the Federal regulatory provisions or railroad rules, procedures, signal standards, or practices, described in §246.303(e)(1) through (11), that occurred within 36 months of each other, the person shall have their certificate revoked for a period of three years.

(5) Where, based on the occurrence of violations described in §246.303(e)(11), different periods of ineligibility may result under the provisions of this section and §246.115, the longest period of revocation shall control.

(c) Any or all periods of revocation provided in paragraph (b) of this section may consist of training.

(d) A person whose certification is denied or revoked shall be eligible for grant or reinstatement of the certificate prior to the expiration of the initial period of ineligibility only if:

(1) The denial or revocation of certification in accordance with the provisions of paragraph (b) of this section is for a period of one year or less;

(2) Certification is denied or revoked for reasons other than noncompliance with §219.101 of this chapter;

(3) The person is evaluated by a railroad officer and determined to have received adequate remedial training;

(4) The person successfully completes any mandatory program of training or retraining, if that is determined to be necessary by the railroad prior to return to service; and

(5) At least one half of the pertinent period of ineligibility specified in paragraph (b) of this section has elapsed.

§246.307 Process for revoking certification.

(a) If a railroad determines that a person, who is currently certified as a signal employee by the railroad, has violated a Federal regulatory provision, railroad test procedure, signal standard or practice described in §246.303(e), the railroad shall revoke the person's signal employee certification in accordance with the procedures and requirements of this section.

(b) Except as provided for in §246.115(f), if a railroad acquires reliable information that a person, who is currently certified as a signal employee by the railroad, has violated a Federal regulatory provision, railroad rule, procedure, signal standard, or practice described in §246.303(e) or §246.115(d), the railroad shall undertake the following process to determine whether revocation of the person's signal employee certification is warranted:

(1) The person's signal employee certification shall be suspended immediately.

(2) The person's employer(s) (if different from the suspending railroad) shall be immediately notified of the certification suspension and the reason for the certification suspension.

(3) Prior to or upon suspending the person's signal employee certification, the railroad shall provide the person with notice of: the reason for the suspension; the pending revocation; and an opportunity for a hearing before a presiding officer other than the investigating officer. This notice may initially be given either orally or in writing. If given orally, the notice must be subsequently confirmed in writing in a manner that conforms with the notification provisions of the applicable collective bargaining agreement. If there is no applicable collective bargaining agreement notification provision, the written notice must be made within four days of the date the certification was suspended.

(4) The railroad must convene the hearing within the time frame required under the applicable collective bargaining agreement. If there is no applicable collective bargaining agreement or the applicable collective bargaining agreement does not include such a requirement, the hearing shall be convened within ten days of the date the certification is suspended unless the person requests or consents to a delay to the start of the hearing.

(5) Except as provided for in paragraph (c) of this section, the railroad

shall provide the certified signal employee with a copy of the written information and a list of witnesses the railroad will present at the hearing at least 72 hours before the start of the hearing. If this information was provided by an employee of the railroad, the railroad shall make that employee available for examination during the hearing notwithstanding the terms of an applicable collective bargaining agreement.

(6) Following the hearing, the railroad must determine, based on the record of the hearing, whether revocation of the certification is warranted and state explicitly the basis for the conclusion reached. The railroad shall have the burden of proving that revocation of the person's signal employee certification is warranted under § 246.303.

(7) If the railroad determines that revocation of the person's signal employee certification is warranted, the railroad shall impose the proper period of revocation provided for in § 246.305 or § 246.115.

(8) The railroad shall retain the record of the hearing for three years after the date the decision is rendered.

(c) A hearing required by this section which is conducted in a manner that conforms procedurally to the applicable collective bargaining agreement shall satisfy the procedural requirements of this section.

(d) Except as provided for in paragraph (c) of this section, a hearing required under this section shall be conducted in accordance with the following procedures:

(1) The hearing shall be conducted by a presiding officer who can be any proficient person authorized by the railroad other than the investigating officer.

(2) The presiding officer shall convene and preside over the hearing and exercise the powers necessary to regulate the conduct of the hearing for the purpose of achieving a prompt and fair determination of all material issues in dispute.

(3) The presiding officer may:

(i) Adopt any needed procedures for the submission of evidence in written form;

(ii) Examine witnesses at the hearing; and

(iii) Take any other action authorized by or consistent with the provisions of this part and permitted by law that may assist in achieving a prompt and fair determination of all material issues in dispute.

(4) All relevant and probative evidence shall be received into the record unless the presiding officer determines the evidence to be unduly repetitive or have such minimal relevance that its admission would impair the prompt, orderly, and fair resolution of the proceeding.

(5) Parties may appear at the hearing and be heard on their own behalf or through designated representatives. Parties may offer relevant evidence including testimony and may conduct such examination of witnesses as may be required for a full disclosure of the relevant facts.

(6) Testimony by witnesses at the hearing shall be recorded verbatim. Witnesses can testify in person, over the phone, or virtually.

(7) The record in the proceeding shall be closed at the conclusion of the hearing unless the presiding officer allows additional time for the submission of evidence.

(8) A hearing required under this section may be consolidated with any disciplinary action or other hearing arising from the same facts, but in all instances a railroad official, other than the investigating officer, shall make separate findings as to the revocation required under this section.

(9) A person may waive their right to a hearing. That waiver shall:

(i) Be made in writing;

(ii) Reflect the fact that the person has knowledge and understanding of these rights and voluntarily surrenders them; and

(iii) Be signed by the person making the waiver.

(e) Except as provided for in paragraph (c) of this section, a decision, required by this section, on whether to revoke a person's signal employee certification shall comply with the following requirements:

(1) No later than ten days after the close of the record, a railroad official, other than the investigating officer,

shall prepare and sign a written decision as to whether the railroad is revoking the person's signal employee certification.

(2) The decision shall:

(i) Contain the findings of fact on all material issues as well as an explanation for those findings with citations to all applicable railroad rules, signal standards and procedures and any applicable Federal regulations;

(ii) State whether the railroad official found that the person's signal employee certification should be revoked;

(iii) State the period of revocation under §246.305 (if the railroad official concludes that the person's signal employee certification should be revoked); and

(iv) Be served on the person and their representative, if any, with the railroad retaining proof of service for three years after the date the decision is rendered.

(f) The period that a person's signal employee certification is suspended in accordance with paragraph (b)(1) of this section shall be credited towards any period of revocation that the railroad assesses in accordance with §246.305.

(g) A railroad shall revoke a person's signal employee certification if, during the period that certification is valid, the railroad acquires information that another railroad has revoked the person's signal employee certification in accordance with the provisions of this section. Such revocation shall run concurrently with the period of revocation imposed by the railroad that initially revoked the person's signal employee certification. The requirement to provide a hearing under this section is satisfied when any single railroad holds a hearing. No additional hearing is required prior to a revocation by more than one railroad arising from the same facts.

(h) A railroad shall not revoke a person's signal employee certification if sufficient evidence exists to establish that an intervening cause prevented or materially impaired the person's ability to comply with the railroad test procedure, signal standard, or practice which constitutes a violation under §246.303.

(i) A railroad may decide not to revoke a person's signal employee certification if sufficient evidence exists to establish that the violation of the railroad test procedure, signal standard, or practice described in §246.303(e) was of a minimal nature and had no direct or potential effect on rail safety.

(j) If sufficient evidence meeting the criteria in paragraph (h) or (i) of this section becomes available, including prior to a railroad's action to suspend the certificate as provided for in paragraph (b)(1) of this section or prior to the convening of the hearing provided for in this section, the railroad shall place the relevant information in the records maintained in compliance with:

(1) Section 246.215 for Class I railroads (including the National Railroad Passenger Corporation), railroads providing commuter service, and Class II railroads; and

(2) Section 246.203 for Class III railroads.

(k) If a railroad makes a good faith determination, after performing a reasonable inquiry, that the course of conduct provided for in paragraph (h) or (i) of this section is warranted, the railroad will not be in violation of paragraph (b)(1) of this section if it decides not to suspend the person's signal employee certification.

Subpart E—Dispute Resolution Procedures

§246.401 Review board established.

(a) Any person who has been denied certification or recertification, or has had their certification revoked and believes that a railroad incorrectly determined that they failed to meet the certification requirements of this part when making the decision to deny or revoke certification, may petition the Administrator to review the railroad's decision.

(b) The Administrator has delegated initial responsibility for adjudicating such disputes to the Certification Review Board (Board). The Board shall be composed of FRA employees.

§ 246.403 Petition requirements.

(a) To obtain review of a railroad's decision to deny certification, deny recertification, or revoke certification, a person shall file a petition for review that complies with this section.

(b) Each petition shall:

(1) Be in writing;

(2) Be filed no more than 120 days after the date the railroad's denial or revocation decision was served on the petitioner, except as provided for in paragraph (d) of this section;

(3) Be filed on *https://www.regulations.gov;*

(4) Include the following contact information for the petitioner and petitioner's representative (if petitioner is represented):

(i) Full name;

(ii) Daytime telephone number; and

(iii) Email address;

(5) Include the name of the railroad and the name of the petitioner's employer (if different from the railroad that revoked petitioner's certification);

(6) Contain the facts that the petitioner believes constitute the improper action by the railroad and the arguments in support of the petition; and

(7) Include all written documents in the petitioner's possession or reasonably available to the petitioner that document the railroad's decision.

(c) If requested by the Board, the petitioner must provide a copy of the information under 49 CFR 40.329 that laboratories, medical review officers, and other service agents are required to release to employees. The petitioner must provide a written explanation in response to a Board request if written documents, that should be reasonably available to the petitioner, are not supplied.

(d) The Board may extend the petition filing period in its discretion provided the petitioner provides good cause for the extension and:

(1) The request for an extension is filed before the expiration of the period provided for in paragraph (b)(2) of this section; or

(2) The failure to timely file was the result of excusable neglect.

(e) A party aggrieved by a Board decision to deny a petition as untimely or not in compliance with the requirements of this section may file an appeal with the Administrator in accordance with § 246.411.

§ 246.405 Processing certification review petitions.

(a) Each petition shall be acknowledged in writing by FRA. The acknowledgment shall be sent to the petitioner (if an email address is provided), petitioner's representative (if any), the railroad, and petitioner's employer (if different from the railroad that revoked petitioner's certification). The acknowledgment shall contain the docket number assigned to the petition and will notify the parties where the petition can be accessed.

(b) Within 60 days from the date of the acknowledgment provided in paragraph (a) of this section, the railroad may submit to FRA any information that the railroad considers pertinent to the petition and shall supplement the record with any relevant documents in its possession, such as hearing transcripts and exhibits, that were not submitted by the petitioner. Late filings will only be considered to the extent practicable. A railroad that submits such information shall:

(1) Identify the petitioner by name and the docket number for the petition;

(2) Provide the railroad's email address;

(3) Serve a copy of the information being submitted to the petitioner and petitioner's representative (if any); and

(4) Be filed on *https://www.regulations.gov*.

(c) The petition will be referred to the Board for a decision after a railroad's response is received or 60 days from the date of the acknowledgment provided in paragraph (a) of this section, whichever is earlier. Based on the record, the Board shall have the authority to grant, deny, dismiss, or remand the petition. If the Board finds that there is insufficient basis for granting or denying the petition, the Board may issue an order affording the parties an opportunity to provide additional information or argument consistent with its findings.

(d) When considering procedural issues, the Board will grant the petition if the petitioner shows:

(1) That a procedural error occurred; and

(2) The procedural error caused substantial harm to the petitioner.

(e) When considering factual issues, the Board will grant the petition if the petitioner shows that the railroad did not provide substantial evidence to support its decision.

(f) When considering legal issues, the Board will determine whether the railroad's legal interpretations are correct based on a *de novo* review.

(g) The Board will only consider whether the denial or revocation of certification or recertification was improper under this part and will grant or deny the petition accordingly. The Board will not otherwise consider the propriety of a railroad's decision. For example, the Board will not consider whether the railroad properly applied its own more stringent requirements.

(h) The Board's written decision shall be served on the petitioner and/or petitioner's representative (if any), the railroad, and petitioner's employer (if different from the railroad that revoked petitioner's certification).

§ 246.407 Request for a hearing.

(a) If adversely affected by the Board's decision, either the petitioner before the Board or the railroad involved shall have a right to an administrative proceeding as prescribed by § 246.409.

(b) To exercise that right, the adversely affected party shall file a written request for a hearing within 20 days of service of the Board's decision on that party. The request must be filed in the docket on *https://www.regulations.gov* that was used when the case was before the Board.

(c) A written request for a hearing must contain the following:

(1) The name, telephone number, and email address of the requesting party and the party's designated representative (if any);

(2) The name, telephone number, and email address of the respondent;

(3) The docket number for the case while it was before the Board;

(4) The specific factual issues, industry rules, regulations, or laws that the requesting party alleges need to be examined in connection with the certification decision in question; and

(5) The signature of the requesting party or the requesting party's representative (if any).

(d) Upon receipt of a hearing request complying with paragraph (c) of this section, FRA shall arrange for the appointment of a presiding officer who shall schedule the hearing for the earliest practicable date.

(e) If a party fails to request a hearing within the period provided in paragraph (b) of this section, the Board's decision will constitute final agency action.

§ 246.409 Hearings.

(a) An administrative hearing for a signal employee certification petition shall be conducted by a presiding officer, who can be any person authorized by the Administrator.

(b) The presiding officer shall convene and preside over the hearing. The hearing shall be a *de novo* hearing to find the relevant facts and determine the correct application of this part to those facts. The presiding officer may determine that there is no genuine issue covering some or all material facts and limit evidentiary proceedings to any issues of material fact as to which there is a genuine dispute.

(c) The presiding officer may exercise the powers of the Administrator to regulate the conduct of the hearing for the purpose of achieving a prompt and fair determination of all material issues in controversy.

(d) The presiding officer may authorize discovery of the types and quantities which in the presiding officer's discretion will contribute to a fair hearing without unduly burdening the parties. The presiding officer may impose appropriate non-monetary sanctions, including limitations as to the presentation of evidence and issues, for any party's willful failure or refusal to comply with approved discovery requests.

(e) Every petition, motion, response, or other authorized or required document shall be signed by the party filing the same, or by a duly authorized officer or representative of record, or by any other person. If signed by such other person, the reason therefor must

be stated and the power of attorney or other authority authorizing such other person to subscribe the document must be filed with the document. The signature of the person subscribing any document constitutes a certification that they have read the document; that to the best of their knowledge, information, and belief, every statement contained in the document is true and no such statements are misleading; and that it is not interposed for delay or to be vexatious.

(f) After the request for a hearing is filed, all documents filed or served upon one party must be served upon all parties. Each party may designate a person upon whom service is to be made when not specified by law, regulation, or directive of the presiding officer. If a party does not designate a person upon whom service is to be made, then service may be made upon any person having subscribed to a submission of the party being served, unless otherwise specified by law, regulation, or directive of the presiding officer. Proof of service shall accompany all documents when they are tendered for filing.

(g) If any document initiating, filed in, or served in, a proceeding is not in substantial compliance with the applicable law, regulation, or directive of the presiding officer, the presiding officer may strike or dismiss all or part of such document, or require its amendment.

(h) Any party to a proceeding may appear and be heard in person or by an authorized representative.

(i) Any person testifying at a hearing or deposition may be accompanied, represented, and advised by an attorney or other representative, and may be examined by that person.

(j) Any party may request to consolidate or separate the hearing of two or more petitions by motion to the presiding officer when they arise from the same or similar facts or when the matters are for any reason deemed more efficiently heard together.

(k) Except as provided in §246.407(e) and paragraph (s)(4) of this section, whenever a party has the right or is required to take action within a period prescribed by this part, or by law, regulation, or directive of the presiding officer, the presiding officer may extend such period, with or without notice, for good cause, provided another party is not substantially prejudiced by such extension. A request to extend a period which has already expired may be denied as untimely.

(l) An application to the presiding officer for an order or ruling not otherwise specifically provided for in this part shall be by motion. The motion shall be filed with the presiding officer and, if written, served upon all parties. All motions, unless made during the hearing, shall be written. Motions made during hearings may be made orally on the record, except that the presiding officer may direct that any oral motion be reduced to writing. Any motion shall state with particularity the grounds therefor and the relief or order sought and shall be accompanied by any affidavits or other evidence desired to be relied upon which is not already part of the record. Any matter submitted in response to a written motion must be filed and served within 14 days of the motion, or within such other period as directed by the presiding officer.

(m) Testimony by witnesses at the hearing shall be given under oath and the hearing shall be recorded verbatim. The presiding officer shall give the parties to the proceeding adequate opportunity during the course of the hearing for the presentation of arguments in support of or in opposition to motions, and objections and exceptions to rulings of the presiding officer. The presiding officer may permit oral argument on any issues for which the presiding officer deems it appropriate and beneficial. Any evidence or argument received or proffered orally shall be transcribed and made a part of the record. Any physical evidence or written argument received or proffered shall be made a part of the record, except that the presiding officer may authorize the substitution of copies, photographs, or descriptions, when deemed to be appropriate.

(n) The presiding officer shall employ the Federal Rules of Evidence for United States Courts and Magistrates as general guidelines for the introduction of evidence. Notwithstanding

paragraph (m) of this section, all relevant and probative evidence shall be received unless the presiding officer determines the evidence to be unduly repetitive or so extensive and lacking in relevancy that its admission would impair the prompt, orderly, and fair resolution of the proceeding.

(o) The presiding officer may:

(1) Administer oaths and affirmations;

(2) Issue subpoenas as provided for in § 209.7 of this chapter;

(3) Adopt any needed procedures for the submission of evidence in written form;

(4) Examine witnesses at the hearing;

(5) Convene, recess, adjourn, or otherwise regulate the course of the hearing; and

(6) Take any other action authorized by or consistent with the provisions of this part and permitted by law that may expedite the hearing or aid in the disposition of the proceeding.

(p) The petitioner before the Board, the railroad involved in taking the certification action, and FRA shall be parties at the hearing. All parties may participate in the hearing and may appear and be heard on their own behalf or through designated representatives. All parties may offer relevant evidence, including testimony, and may conduct such cross-examination of witnesses as may be required to make a record of the relevant facts.

(q) The party requesting the administrative hearing shall be the ''hearing petitioner.'' The party that the Board issued its decision in favor of will be a respondent. At the start of each proceeding, FRA will be a respondent as well. The hearing petitioner shall have the burden of proving its case by a preponderance of the evidence.

(r) The record in the proceeding shall be closed at the conclusion of the evidentiary hearing unless the presiding officer allows additional time for the submission of additional evidence. In such instances the record shall be left open for such time as the presiding officer grants for that purpose.

(s) At the close of the record, the presiding officer shall prepare a written decision in the proceeding. The decision:

(1) Shall contain the findings of fact and conclusions of law, as well as the basis for each, concerning all material issues of fact or law presented on the record;

(2) Shall be served on all parties to the proceeding;

(3) Shall not become final for 35 days after issuance;

(4) Constitutes final agency action unless an aggrieved party files an appeal within 35 days after issuance; and

(5) Is not precedential.

§ 246.411 Appeals.

(a) Any party aggrieved by the presiding officer's decision may file an appeal in the presiding officer's docket. The appeal must be filed within 35 days of issuance of the decision. A copy of the appeal shall be served on each party. The appeal shall set forth objections to the presiding officer's decision, supported by reference to applicable laws and regulations and with specific reference to the record. If no appeal is timely filed, the presiding officer's decision constitutes final agency action.

(b) A party may file a reply to the appeal within 25 days of service of the appeal. The reply shall be supported by reference to applicable laws and regulations and with specific reference to the record, if the party relies on evidence contained in the record.

(c) The Administrator may extend the period for filing an appeal or a reply for good cause shown, provided that the written request for extension is served before expiration of the applicable period provided in this section.

(d) The Administrator has sole discretion to permit oral argument on the appeal. On the Administrator's own initiative or written motion by any party, the Administrator may grant the parties an opportunity for oral argument.

(e) The Administrator may remand, vacate, affirm, reverse, alter, or modify the decision of the presiding officer and the Administrator's decision constitutes final agency action except where the terms of the Administrator's decision (for example, remanding a case to the presiding officer) show that the parties' administrative remedies have not been exhausted.

(f) An appeal from a Board decision pursuant to §246.403(e) must be filed in the Board's docket within 35 days of issuance of the decision. A copy of the appeal shall be served on each party. The Administrator may affirm or vacate the Board's decision, and may remand the petition to the Board for further proceedings. An Administrator's decision to affirm the Board's decision constitutes final agency action.

APPENDIX A TO PART 246—PROCEDURES FOR OBTAINING AND EVALUATING MOTOR VEHICLE DRIVING RECORD DATA

(1) The purpose of this appendix is to outline the procedures available to individuals and railroads for complying with the requirements of §246.111. This provision requires that railroads consider the motor vehicle driving record of each person prior to issuing them certification or recertification as a signal employee.

(2) To fulfill that obligation, a railroad is required to review a certification candidate's recent motor vehicle driving record for information described in §246.111(m). Generally, that will be a single record on file with the state agency that issued the candidate's current motor vehicle driver's license. However, a motor vehicle driving record can include multiple documents if the candidate has been issued a motor vehicle driver's license by more than one state agency or a foreign country.

(3) The right of railroad workers, their employers, or prospective employers to have access to a state motor vehicle licensing agency's data concerning an individual's driving record is controlled by state law. Although many states have mechanisms through which employers and prospective employers, such as railroads, can obtain such data, there are some states where privacy concerns make such access very difficult or impossible. Since individuals are generally entitled to obtain access to their driving record data that will be relied on by a state motor vehicle licensing agency when that agency is taking action concerning their driving privileges, FRA places the responsibility on individuals who want to serve as certified signal employees to request that their current state motor vehicle licensing agency (or agencies) furnish such data directly to the railroad that is considering certification (or recertification) of the individual as a signal employee. Depending on the procedures established by the state motor vehicle licensing agency, the individual may be asked to send the state agency a brief letter requesting such action or to execute a state agency form that accomplishes the same effect. Requests for an individual's motor vehicle driving record normally involve payment of a nominal fee established by the state agency as well. In rare instances, when a certification (or recertification) candidate has been issued multiple licenses, an individual may be required to submit multiple requests.

(4) Once the railroad has obtained the individual's motor vehicle driving record(s), the railroad is required to afford the certification (or recertification) candidate an opportunity to review and comment on the record(s) in writing pursuant to §246.301 if the motor vehicle driving records contain information that could form the basis for denying the person certification. This opportunity to review and comment must occur before the railroad renders a certification decision based on information in the record(s). The railroad is required to evaluate the information in the certification (or recertification) candidate's motor vehicle driving record(s) pursuant to the provisions of this part.

APPENDIX B TO PART 246—MEDICAL STANDARDS GUIDELINES

(1) The purpose of this appendix is to provide greater guidance on the procedures that should be employed in administering the vision and hearing requirements of §§246.117 and 246.118.

(2) For any examination performed to determine whether a person meets the visual acuity requirements in §246.117, it is recommended that such examination be performed by a licensed optometrist or a technician who reports to a licensed optometrist. It is also recommended that any test conducted pursuant to §246.117 be performed according to any directions supplied by the test's manufacturer and any ANSI standards that are applicable.

(3) For any examination performed to determine whether a person meets the hearing acuity requirements in §246.118, it is recommended that such examination be performed by a licensed or certified audiologist or a technician who reports to a licensed or certified audiologist. It is also recommended that any test conducted pursuant to §246.118 be performed according to any directions supplied by the test's manufacturer and any ANSI standards that are applicable.

(4) In determining whether a person has the visual acuity that meets or exceeds the requirements of this part, the following testing protocols are deemed acceptable testing methods for determining whether a person has the ability to recognize and distinguish among the colors used as signals in the railroad industry. The acceptable test methods are shown in the left hand column and the

criteria that should be employed to determine whether a person has failed the particular testing protocol are shown in the right hand column.

TABLE 1 TO APPENDIX B TO PART 246

Accepted tests	Failure criteria
Pseudoisochromatic Plate Tests	
American Optical Company 1965	5 or more errors on plates 1–15.
AOC—Hardy-Rand-Ritter plates—second edition	Any error on plates 1–6 (plates 1–4 are for demonstration—test plate 1 is actually plate 5 in book).
Dvorine—Second edition	3 or more errors on plates 1–15.
Ishihara (14 plate)	2 or more errors on plates 1–11.
Ishihara (16 plate)	2 or more errors on plates 1–8.
Ishihara (24 plate)	3 or more errors on plates 1–15.
Ishihara (38 plate)	4 or more errors on plates 1–21.
Richmond Plates 1983	5 or more errors on plates 1–15.
Multifunction Vision Tester	
Keystone Orthoscope	Any error.
OPTEC 2000	Any error.
Titmus Vision Tester	Any error.
Titmus II Vision Tester	Any error.

(5) In administering any of these protocols, the person conducting the examination should be aware that railroad signals do not always occur in the same sequence and that ''yellow signals'' do not always appear to be the same. It is not acceptable to use ''yarn'' or other materials to conduct a simple test to determine whether the certification candidate has the requisite vision. No person shall be allowed to wear chromatic lenses during an initial test of the person's color vision; the initial test is one conducted in accordance with one of the accepted tests in the chart and §246.117(c)(3).

(6) An examinee who fails to meet the criteria in the chart may be further evaluated as determined by the railroad's medical examiner. Ophthalmologic referral, field testing, or other practical color testing may be utilized depending on the experience of the examinee. The railroad's medical examiner will review all pertinent information and, under some circumstances, may restrict an examinee who does not meet the criteria for serving as a certified signal employee. The intent of §§246.117(d) and 246.118(d) is not to provide an examinee with the right to make an infinite number of requests for further evaluation, but to provide an examinee with at least one opportunity to prove that a hearing or vision test failure does not mean the examinee cannot safely perform as a certified signal employee. Appropriate further medical evaluation could include providing another approved scientific screening test or a field test. All railroads should retain the discretion to limit the number of retests that an examinee can request, but any cap placed on the number of retests should not limit retesting when changed circumstances would make such retesting appropriate. Changed circumstances would most likely occur if the examinee's medical condition has improved in some way or if technology has advanced to the extent that it arguably could compensate for a hearing or vision deficiency.

(7) Certified signal employees who wear contact lenses should have good tolerance to the lenses and should be instructed to have a pair of corrective glasses available when on duty.

PART 250—GUARANTEE OF CERTIFICATES OF TRUSTEES OF RAILROADS IN REORGANIZATION

Sec.

250.1 Form and content of application.
250.2 Required exhibits.
250.3 Fees.
250.4 Execution and filing of application.
250.5 General instructions.

AUTHORITY: Sec. 3(f) of the Emergency Rail Services Act of 1970, Pub. L. 91–663; sec. 1.49(m), regulations of the Office of the Secretary of Transportation, 49 CFR 1.49(m).

SOURCE: 36 FR 770, Jan. 16, 1971, unless otherwise noted.

§250.1 Form and content of application.

The application shall include, in the order indicated and by section numbers and letters corresponding to those used in this part, the following:

(a) *As to the Trustee:*

(1) Full and correct name and principal business address.

(2) The name and address of the reorganization court under the direction of which the Trustee is acting and the docket number of the proceeding.

(3) Name, title, and address of the person to whom correspondence regarding the application should be addressed.

(4) Brief description of the loan and its purpose or purposes, including statements of

(i) The total amount of the loan and the amount of the guarantee being sought,

(ii) The purpose or purposes for which the loan proceeds will be used,

(iii) The maturity date or dates,

(iv) The date or dates on which the Trustee desires the funds to be made available, and

(v) The rate of interest.

(5) Statement, in summary form, showing financial obligations to or claims against the United States or obligations for which the United States is guarantor, if any, by applicant or any applicant's parent as to the date of the application, including:

(i) Status of any claims under litigation; and

(ii) Any other debts or credits existing between the applicant and the United States, showing the department or agency involved in such loans, claims and other debts;

(6)(i) Statement on behalf of the Trustee that the Trustee has endeavored to obtain a loan or loans for the purpose or purposes proposed without a guarantee by the Secretary, but has not been able to obtain a loan therefor upon reasonable terms, or if only upon terms considered unreasonable, a statement setting forth such terms and describing any facts relevant thereto.

(ii) Information as to the Trustee's efforts to obtain the needed financing without a guarantee thereof by the Secretary, and as to the results of such efforts. (See § 250.2(b)(1) as to exhibits on this subject.)

(7) Full and complete statement, together with independent supporting evidence, where feasible, concerning the effect that cessation of essential transportation services of carrier would have on the public welfare.

(8) Full and complete statement, together with supporting evidence, where possible, demonstrating that cessation of essential transportation services by applicant carrier is imminent.

(9) Full and complete statement, together with supporting evidence, if possible, that there is no other practicable means of obtaining funds to meet payroll and other expenses necessary to provide essential transportation services other than the issuance of Trustee certificates. Such statements shall include in detail a complete listing of all nontransportation assets of the carrier and corporate affiliates, or subsidiaries having a fair market value of not less than $50,000, together with the amount of encumbrances thereon, if any, and a statement or plan for the disposition or sale of such assets as a means of obtaining funds necessary for essential transportation services.

(10) Full and complete statement, together with supporting evidence, if possible, demonstrating, with particularity, that the carrier can reasonably be expected to become self sustaining within a reasonable period of time.

(11) Full and complete statement, together with supporting evidence, that the probable value of the assets of the carrier in the event of liquidation provides reasonable protection to the United States.

(b) *As to the holder or holders:*

(1) Full and correct name and principal business address.

(2) Names and addresses of principal executive officers and directors, or partners.

(3) Reference to applicable provisions of law and the charter or other governing instruments conferring authority to the lender to make the loan and to accept the proposed obligation.

(4) Brief statement of the circumstances and negotiations leading to the agreement by the lender to make the proposed loan, including the name and address of any person or persons, or employees of the carrier, representing or purporting to represent the Trustee in connection with such negotiations.

(5) Brief statement of the nature and extent of any affiliation or business relationship between the lender and any of its directors, partners, or principal executive officers, on the one hand, and, on the other, the carrier and any

of its directors, partners, or principal executive officers, or any person or persons whose names are required to be furnished under paragraph (b)(4) of this section.

(6) Full and complete statement of all sums paid or to be paid and of any other consideration given or to be given by lender in connection with the proposed loan, including with respect thereto:

(i) Name and address of each person to whom the payment is made or to be made,

(ii) The amount of the cash payment, or the nature and value of other consideration,

(iii) The exact nature of the services rendered or to be rendered,

(iv) Any condition upon the obligation of the lender to make such payment, and

(v) The nature of any affiliation, association, or prior business relationship between any person named in answer to paragraph (6)(i) of this section and the lender or any of its directors, partners, or officers.

(c) *As to the impact of the financing on the environment.* (1) Summary statement of the use to which funds will be put and any anticipated impact on the environment. After reviewing this submission, the Administrator retains the right to require the Trustee to submit a detailed assessment of the financing's impact on the environment in a general format to be supplied by the Administrator.

(2) [Reserved]

[44 FR 23851, Apr. 23, 1979]

§ 250.2 Required exhibits.

There shall be filed with and made a part of each application and copy thereof the following exhibits, except that exhibits filed with the Administrator pursuant to some other statutory provision or regulation which are in the same format as the following exhibits may be incorporated in and made part of the application filed under this part by reference. While the application is pending, when actual data become available in place of the estimated or forecasted data required in the exhibits under this part, such actual data must be reported promptly to the Administrator in the form required in the appropriate exhibit.

(a) The following exhibits are required concerning the Trustee and the carrier:

(1) As Exhibit 1, copy of duly certified order of the court, or instrument of appointment, appointing trustees of the carrier.

(2) As Exhibit 2, a certified copy of the order(s) of the reorganization court having jurisdiction of applicant authorizing (i) the filing of the application with the Administrator for a guarantee of the Trustee's certificate; (ii) filing of the application with the Interstate Commerce Commission for authority to issue a Trustee's certificate; (iii) such pledge of security for the loan and the guarantee as the applicant proposes in connection with Exhibit 3; and (iv) compliance by the Trustee with conditions to the guarantee imposed by law and the Administrator.

(3) As Exhibit 3, full and complete statement, together with supporting evidence, that the probable value of the assets of the railroad in the event of liquidation provides reasonable protection to the United States.

(4) As Exhibit 4, a map of the carrier's existing railroad.

(5) As Exhibit 5, statement showing miles of line owned; miles operated; number of units of locomotives, freight cars, and passenger cars owned and leased; principal commodities carried; and identification of the ten most important industries served.

(6) As Exhibit 6, statement as to whether any railroad affiliated with the carrier has applied for or received any Federal assistance since 1970.

(7) As Exhibit 7, statement showing total dividends, if any, declared and total dividends paid for each of the last 5 calendar years and for each month of the current year to latest available date.

(8) As Exhibit 8, a copy of applicant's most recent year-end general balance sheet certified by applicant's independent public accountants, if available, and a copy of applicant's most recent unaudited general balance sheet as of a date no less recent than the end of the third month preceding the date of the filing of the application. The

unaudited balance sheet shall be presented in account form and detail as required in Schedule 200 of the Commission's annual report R–1 or R–2, as appropriate, together with the following schedules (where changes in accounts from the end of the prior year to date of the application have not been significant, copies of the appropriate schedules in the prior year's R–1 or R–2 with marginal notations listing the changes may be substituted):

(i) Particulars of Account 704, Loans and Notes Receivable, in form and detail as required in Schedule 201 of annual report R–1 for the Class I railroads, and in similar form for the Class II railroads except that for Class II railroads, loans and notes receivable that are each less than $25,000 may be combined into a single amount;

(ii) Particulars of investment in affiliated companies and other investment in form and detail required in Schedules 205 and 206 of annual report R–1, or Schedules 1001 and 1002 of annual report R–2, as appropriate;

(iii) Particulars of balances in Accounts 741, Other Assets, and 743, Other Deferred Changes, in form and detail required in Schedule 216 of annual report R–1 or Schedule 1703 of annual report R–2, as appropriate;

(iv) Particulars of loans and notes payable in form and detail required in Schedule 223 of annual report R–1, or Schedule 1701 of annual report R–2, as appropriate, as well as information as to bank loans, including the name of the bank, date and amount of the original loan, current balance, maturities, rate of interest, and security, if any;

(v) Particulars of long-term debt in form and detail required in Schedules 218 and 219 of annual report R–1 or Schedules 670, 695, 901, 902 and 1702 of annual report R–2, as appropriate, together with a brief statement concerning each mortgage, pledge, and other lien, indicating the property or securities encumbered, the mortgage limit per mile, if any, and particulars as to priority;

(vi) Particulars of balance in Account 784. Other Deferred Credits, in form and detail required in Schedule 225 of annual report R–1 or Schedule 1704 of annual report R–2, as appropriate; and

(vii) Particulars as to capital stock in form and detail required in Schedules 228, 229, and 230 of annual report R–1 or Schedule 690 in annual report R–2, as appropriate.

(9) As Exhibit 9, a copy of carrier applicant's report to its stockholders or report of the trustee for each of the 3 years preceding the year in which the application is filed.

(10) As Exhibit 10, applicant's most recent annual income statement certified by applicant's independent public accounts if available, and a spread sheet showing unaudited monthly and year-to-date income statement data for the calendar year in which the application is filed in account form similar to that required in column (a) of Schedule 300 of annual report R–1 or R–2 as appropriate. For those months preceding and ending upon the date of the unaudited balance sheet presented in Exhibit 8, the income statement shall be reported on an actual basis and so noted. For those months between the dates of the unaudited balance sheet and the filing of the application, the income statement data shall be reported on an estimated basis and so noted and shall be submitted in conjunction with corresponding estimated month-end balance sheets. For those months between the date of the application and the end of the year income statement data shall be presented on a forecasted basis and so noted and shall be submitted in conjunction with a forecasted balance sheet as at the year end.

(11) As Exhibit 11, spread sheets showing for each of the four years subsequent to the year in which the application is filed, both before and after giving effect to the proceeds of the assistance required in the application:

(i) Forecasted annual income statement data in account form and detail similar to that required in column (a) of Schedule 300 of annual report R–1 or R–2 as appropriate, including the subaccounts comprising line 2 (railway operating expenses), as specified by lines 64, 92, 105, 159, 166, and 180 of Schedule 320; and

(ii) Forecasted year-end balance sheets in account form and detail similar to that required in Schedule 200 of

annual report R–1 or R–2, as appropriate. These spread sheets shall be accompanied by a statement setting forth the bases for such forecasts.

(12) As Exhibit 12, a spread sheet showing changes in financial position for the year in which the application is filed in account form and detail as required in Schedule 309 of annual report R–1 and R–2 as appropriate as follows:

(i) For that period ending on the date of the unaudited balance sheet in Exhibit C, based upon actual data; and

(ii) For that period from the balance sheet date to the end of the year, based upon estimated and forecasted data.

(13) As Exhibit 13, a spread sheet showing forecasted changes in financial position for each of the four calendar years subsequent to the year in which the application is filed, both before and after giving effect to any funds requested in the application and including a statement showing the bases for such estimates, in account form and detail as required in Schedule 309 of the annual Report R–1 for Class I railroads in similar form and detail for Class II railroads.

(14) As Exhibit 14, a statement showing actual cash balance at the beginning of each month and the actual cash receipts and disbursements during each month of the current year to the date of the latest balance sheet furnished as Exhibit 8, together with a monthly forecast (both before and after giving effect to use of proceeds from the proposed loan) for the balance of the current year and the year subsequent thereto.

(15) As Exhibit 15, a general statement setting forth the facts as to estimated prospective earnings and other funds upon which applicant relies to repay the loan.

(b) The following exhibits are required as to the transaction.

(1) As Exhibit 16, copies of correspondence from all, and not less than three, lending institutions or security underwriters to which application for the financing has been made, evidencing that they have declined the financing unless guaranteed by the Secretary or specifying the terms upon which they will undertake the financing without such guarantee.

(2) As Exhibit 17, specimens, or forms where specimens are not available, of all securities to be pledged or otherwise issued in connection with the proposed loan; and in case of mortgage, a copy of the mortgage or indenture.

(3) As Exhibit 18, copies of the loan agreement entered into, or to be entered into, between the Trustee and lender, and of any agreements or instruments executed or be executed in connection with the proposed loan.

[44 FR 23852, Apr. 23, 1979]

§ 250.3 Fees.

On date of final payment of the loan guaranteed by the Secretary pursuant to application filed under this part, the applicant carrier or the trustee, if still in existence, shall pay, or cause to be paid, to the Administrator as a guarantee fee such amount as the Administrator hereafter may determine and prescribe as necessary to cover the administrative costs of carrying out the provisions of the Emergency Rail Services Act of 1970.

§ 250.4 Execution and filing of application.

The following procedure shall govern the execution and filing of the application:

(a) The original application shall bear the date of execution and be signed with ink by or on behalf of the trustee and the lender. Execution on behalf of the trustee shall be by the trustee or trustees having knowledge of the matters therein set forth. Persons signing the application on behalf of the trustee and lender, respectively, shall also sign a certificate in form as follows:

(Name of official) _____ certifies that he is the _____ (title of official) of the _____ (name of carrier or lender); that he is authorized on the part of said applicant to sign and file with the Administrator this application and exhibits attached thereto; that he has carefully examined all of the statements contained in such application and the exhibits attached thereto and made a part thereof relating to the aforesaid _____ (name of carrier or lender); that he has knowledge of the matters set forth therein and that all such statements made and matters set forth therein

are true and correct to the best of his knowledge, information, and belief.

(Date)

(b) There shall be made a part of the original application the following certificate by the Chief Accounting Officer of the carrier:

(Name of officer) _____, certifies that he is _____ (title of officer) of _____ (name of carrier applicant); that he has supervision over the books of account and other financial records of the carrier and has control over the manner in which they are kept; that such accounts are maintained in good faith in accordance with the effective accounting and other orders of the Interstate Commerce Commission; that he has examined the financial statements and supporting schedules included in this application and to the best of his knowledge and belief said statements accurately reflect the accounts as stated in the books of account; and that, other than the matters set forth in the exceptions attached to such statements, said financial statements and supporting schedules represent a true and complete statement of the financial position of the carrier applicant and that there are no undisclosed assets, liabilities, commitments to purchase property or securities, other commitments, litigation in the courts, contingent rental agreements, or other contingent transactions which might materially affect the financial position of the carrier applicant.

(Date)

(c) The original application and supporting papers, and six copies thereof for the use of the Administrator shall be filed with the Administrator, Federal Railroad Administration, Department of Transportation, Washington, DC. Simultaneously, one copy of the application and supporting papers shall be filed with the Secretary of the Interstate Commerce Commission, Washington, DC. Each copy shall bear the dates and signatures that appear in the original and shall be complete in itself, but the signatures in the copies may be stamped or typed. If unusual difficulties arise in the furnishing of any of the exhibits required in § 250.2, the carrier applicant or the lender, upon appropriate showing and with the consent of the Administrator, may file a lesser number.

(d) In the event the furnishing of exhibits in the detail required by § 250.2 is shown by the applicant or applicants to be unduly burdensome in relation to the nature and amount of the loan, the Administrator may modify the requirements of said section. In addition, the Administrator may waive or modify any requirement of this part upon good cause shown, or make any additional requirements he deems necessary.

§ 250.5 General instructions.

(a) If the application is approved by the Administrator and the Secretary of Transportation and the latter agrees to make the guarantee, the following documents will be required for deposit with the Administrator before the transaction is closed:

(1) Final opinion by counsel for the Trustee to the effect that he is familiar with the corporate powers of the carrier applicant and the orders of the reorganization court; that the Trustees of the carrier applicant are authorized to execute and deliver the certificate or other obligations evidencing the same, and to pledge and hypothecate any securities pledged as collateral; that the certificate or other obligations so executed and so delivered constitute the valid and binding obligations of the Trustees of the carrier that the certificate or other obligations of the Trustee will be treated as an expense of administration and receive the highest lien on the railroads property and priority in payment under the Bankruptcy Act, and that the lender and the Secretary will obtain a lien on any security involved of the rank and priority represented by the Trustee. Such opinion shall also cover the priority and lien of each item of the collateral offered.

(2) Certified copies of the reorganization court orders and decrees authorizing the Trustee to execute and deliver the certificates or other obligations and to give the security under and according to the terms of the loan and guarantee as prescribed by the Administrator. Such order or orders of the reorganization court shall specify that trustee certificates, guaranteed by the Secretary as to payment of principal and interest, shall be treated as an expense of administration and receive the highest lien on the railroad's property and priority in payment under the Bankruptcy Act.

(3) Unexecuted copies of the foregoing documents will be delivered to the Administrator 3 business days prior to closing.

(b) The guarantee by the Secretary of a loan pursuant to an application filed as provided in this part should not be construed as relieving a carrier from complying with applicable provisions of section 20a of the Interstate Commerce Act (49 U.S.C. 20a) in relation to the issuance of Trustee certificates.

PART 256—FINANCIAL ASSISTANCE FOR RAILROAD PASSENGER TERMINALS

REGULATIONS GOVERNING APPLICATIONS FOR AND DISBURSEMENT OF FINANCIAL ASSISTANCE

APPENDIX A TO PART 256—CERTIFICATE

AUTHORITY: Sec. 4(i) of the Department of Transportation Act, 49 U.S.C. 5561–5568, as amended by (1) sec. 15 of the Amtrak Improvement Act of 1974, Public Law 93–496, 88 Stat. 1528; (2) sec. 13 of the Amtrak Improvement Act of 1975, Public Law 94–25, 89 Stat. 93; (3) sec. 706 of the Railroad Revitalization and Regulatory Reform Act of 1976, Publaw Law 94–210, 90 Stat. 125; and (4) sec. 219(a) of the Rail Transportation Improvement Act, Public Law 94–555, 90 Stat. 2629; and regulations of the Office of the Secretary of Transportation, 49 CFR 1.49(r).

REGULATIONS GOVERNING APPLICATIONS FOR AND DISBURSEMENT OF FINANCIAL ASSISTANCE

§ 256.1 Purpose.

The purpose of this part is to establish procedures for implementing subsection 4(i) of the Department of Transportation Act as amended (49 U.S.C. 1653(i)) with respect to all financial assistance provided under that subsection.

[40 FR 29080, July 10, 1975]

§ 256.3 Definitions.

As used in this part—

(a) *Act* means the Department of Transportation Act, as amended.

(b) *Administrator* means the Federal Railroad Administrator, or his delegate.

(c) *Allowable project costs* means those project costs for which Federal financial assistance may be expended under § 256.7.

(d) *Applicant* means a governmental entity, a non-profit public-purpose organization, or any responsible person having the legal, financial, and technical capacity to implement an intermodal passenger terminal project under this part. The applicant must have legal authority to receive and expend Federal funds.

(e) *Chairman* means the Chairman of the National Endowment for the Arts.

(f) *Civic and cultural activities* includes, but is not limited to, museums, libraries, musical and dramatic presentations, art exhibitions, adult education programs, public meetings of community groups, convention visitors and others, and other public activities supported in whole or in part under Federal law.

(g) *Council* means the Advisory Council on Historic Preservation.

(h) *Demonstration funds* means funds authorized for the purpose set forth in paragraph (1)(A) of subsection 4(i) of the Act.

(i) *Intermodal passenger terminal* means an existing railroad passenger terminal which has been or may be modified as necessary to accommodate several modes of transportation, including intercity rail service and some or all of the following: Intercity bus, commuter rail, intra-city rail transit and bus transportation, airport limousine service and airline ticket offices, rent-a-car facilities, taxis, private parking, and other transportation services.

(j) *National Register* means the National Register of Historic Places maintained by the Secretary of the Interior.

(k) *Planning funds* means funds authorized for the purpose set forth in paragraph (1)(D) of subsection 4(i) of the Act.

(l) *Preservation funds* means funds authorized for the purpose set forth in

paragraph (1)(B) of subsection 4(i) of the Act.

(m) *Project* means a locally sponsored, coordinated, and administered program, or any part thereof, to plan, finance, construct, maintain, or improve an intermodal passenger terminal, which may incorporate civic or cultural activities where feasible in an architecturally or historically distinctive railroad passenger terminal.

(n) *4R Act* means the Railroad Revitalization and Regulatory Reform Act of 1976, as amended, Public Law 94–210, 90 Stat. 125, 49 U.S.C. 1653.

(o) *Sufficient commitments* means commitments of a binding nature adequate to ensure the successful operation of a project. Such commitments may be conditional, requiring, for example, the participation of other entities in the project, or action by a date certain.

[40 FR 29080, July 10, 1975, as amended at 43 FR 21887, May 22, 1978; 44 FR 21647, Apr. 11, 1979]

§ 256.5 Eligibility.

(a) *General.* A project is eligible for financial assistance under subsection 4(i) of the Act if:

(1) The applicant provides satisfactory assurance that such fiscal control and fund accounting procedures will be adopted as may be necessary to assure proper disbursement of and accounting for Federal financial assistance granted to the applicant under the Act;

(2) The applicant complies with the regulations of the Administrator prescribed in this part, and with such other terms and conditions as may be included in the grant of assistance; and

(3) The Council is given a reasonable opportunity to review and comment upon the project as it affects property listed or eligible for listing on the National Register.

(b) *Demonstration funds.* A project is eligible for financial assistance in accordance with subsection 4(i) of the Act if the Administrator determines that:

(1) The railroad passenger terminal can be converted to an intermodal passenger terminal;

(2) There exist sufficient commitments by Amtrak or other rail passenger carriers, and by intercity bus carriers, the local public transportation authority, or other public or private transportation operators, to provide co-ordinated service for convenient intermodal interchange to meet the goals enumerated in paragraph (b) of § 256.13;

(3) The railroad passenger terminal is listed on the National Register;

(4) The architectural integrity of the railroad passenger terminal will be preserved, and this determination is concurred in by the consultants recommended by the Chairman and Council and retained by the Administrator for this purpose;

(5) To the extent practicable, the use of station facilities for transportation purposes may be combined with use for other civic and cultural activities, especially when such use is recommended by the Council or the Chairman, or the consultants retained by the Administrator upon their recommendation;

(6) The applicant has provided the information and documentation required under § 256.11(c).

(7) The railroad passenger terminal and the conversion project meet such other criteria as the Administrator may develop and promulgate in consultation with the Chairman and the Council.

(c) *Preservation funds.* A project is eligible for financial assistance in accordance with subsection 4(i) of the Act if the Administrator determines that:

(1) The applicant is empowered by applicable law, and is qualified, prepared, and committed, on an interim basis pending the formulation of plans for reuse, to maintain and prevent the demolition, dismantling, or further deterioration of, a railroad passenger terminal;

(2) The railroad passenger terminal is threatened with demolition, dismantling, or further deterioration;

(3) There is a reasonable likelihood that the railroad passenger terminal will be converted to or conditioned for reuse as an intermodal passenger terminal. The primary use of the terminal shall be for intermodal purposes, but facilities for the provision of civic and cultural activities may be incorporated to the extent feasible. Such dual use of the terminal is particularly encouraged when it is recommended by the Council or the Chairman.

(4) Planning activity aimed at conversion or reuse has commenced and is proceeding in a competent manner;

(5) The expenditure of funds on such project would be in the manner most likely to maximize the preservation of railroad passenger terminals which are:

(i) Reasonably capable of conversion to intermodal passenger terminals;

(ii) Listed in the National Register; or

(iii) Recommended on the basis of architectural integrity and quality by the Chairman or the Council; and

(6) The applicant has provided the information and documentation required by § 256.11(d).

(d) *Planning funds.* A project is eligible for financial assistance in accordance with subsection 4(i)(5) of the Act if the Administrator determines that:

(1) The applicant is prepared to develop practicable plans meeting the zoning, land use, and other requirements of the applicable State and local jurisdictions in which the rail passenger terminal is located;

(2) The applicant incorporates into its plans for the conversion of an historic terminal into an intermodal passenger terminal, features which appear reasonably likely to attract private investors willing to finance the planned conversion and/or its subsequent maintenance and operation. The primary use of the terminal shall be for intermodal purposes, but facilities for the provision of civic or cultural activities may be incorporated to the extent feasible.

(3) The applicant will be able to complete the designs and plans for such conversion within two years following the approval of the application for Federal financial assistance;

(4) The expenditure of funds on such project would be in the manner most likely to maximize the preservation of railroad passenger terminals which are listed in the National Register or recommended on the basis of architectural integrity and quality by the Chairman or the Council; and

(5) The applicant has provided the information and documentation required under § 256.11(e).

[40 FR 29080, July 10, 1975, as amended at 43 FR 21887, May 22, 1978; 44 FR 21647, Apr. 11, 1979]

§ 256.7 Financial assistance.

(a) *Demonstration funds.* Federal financial assistance for the conversion of a railroad passenger terminal into an intermodal passenger terminal, under subsection 4(i)(2) of the Act, may be expended for the following project costs incurred after the date of final project approval:

(1) Acquisition or long-term lease of real property or other property interests, including air rights, subterranean rights, or easements, where necessary for project implementation;

(2) Final architectural and engineering construction documentation, including all necessary plans, specifications, detailed cost estimates, and implementation schedules; and

(3) Construction, which may include, but is not limited to:

(i) Complete rehabilitation and refurbishment of the interior and exterior of the structure;

(ii) Provision of necessary public service facilities;

(iii) Structural modifications and minor additions necessary to permit the development of (A) improved rail passenger facilities, (B) intercity bus terminal and docking facilities, (C) adequate facilities for local mass transit, and (D) parking and access for automobiles and bicycles; and

(iv) Provisions for accommodating major tenants and concessionaires such as airline ticket offices, rent-a-car offices, and other transportation service facilities.

(b) *Preservation funds.* Federal financial assistance under subsection 4(i)(3) of the Act, for the preservation of a railroad passenger terminal which has a reasonable likelihood of being converted or otherwise maintained, may be expended for costs incurred after the date of project approval which are necessary to maintain (and prevent the demolition, dismantling, or further deterioration of) a railroad passenger terminal pending the completion of project planning, for a period not to exceed five years.

(c) *Planning funds.* Federal financial assistance granted under subsection 4(i)(5) of the Act for the development of plans for the conversion of a railroad passenger terminal into an intermodal

passenger terminal, which may incorporate civic and cultural activities where feasible, may be expended for the following project costs if incurred within two years after project approval:

(1) Cost of a study or studies to:

(i) Assess the need for and the feasibility of converting an existing railroad passenger terminal into an intermodal passenger terminal which may incorporate civic and cultural activities where feasible;

(ii) Develop a fiscal plan and agreements for the plan's implementation; and

(iii)(A) Relate the project to other transportation priorities in the area; and

(B) Evaluate alternate means of providing needed intermodal passenger services within the community.

(2) Costs of preparation of preliminary architectural and engineering design documents for the project, including:

(i) Plans, sections, and sketches illustrating the functional as well as preservation aspects of the recommended development;

(ii) Assessment of the condition of existing structural and utilities systems and requirements for their improvement;

(iii) Outline specifications and preliminary estimates of project costs; and

(iv) Required environmental impact reviews and analyses.

(d) *Federal share.* The Federal share of any project under this part shall not exceed 80 percent of the total allowable project costs. The non-Federal share may not be augmented by any Federal funds, directly or indirectly, unless the funds are provided through a Federal program which specifically authorizes the augmentation of a non-Federal share of a federally-assisted program with such funds.

[40 FR 29080, July 10, 1975, as amended at 43 FR 21887, May 22, 1978; 44 FR 21647, Apr. 11, 1979]

§ 256.9 [Reserved]

§ 256.11 Applications.

(a) *Incorporation by reference in application of previously submitted information or material.* Any information or material of any kind which has been submitted by an applicant need not be resubmitted if the prior submission is identified and incorporated by reference in the application. Where the prior submission is in need of any changes of any kind, the changes may be submitted provided the prior submission is identified and incorporated by reference with the changes. Any assurance, certification, or affirmation previously made by the applicant, in connection with a prior submission, must be reaffirmed by the applicant when any identification and incorporation by reference of previously submitted materials is made.

(b) *Pre-applications for demonstration funds.* In accordance with appendix M of Office of Management and Budget Circular A–102, applicants shall use the pre-application form directed for use for construction, land acquisition, and land development projects when applying for demonstration funds under this program. Applicants shall include under Part IV (Program Narrative) of the pre-application form:

(1) A statement of whether the railroad passenger terminal is listed in the National Register;

(2) A statement as to the interest and anticipated cooperation of the terminal owner and the relevant transportation companies;

(3) Where the applicant contemplates using funds it has received or will receive from other Federal programs for the planning or preservation stage of the projects, a brief description of the sources, and total anticipated amount of such funds; and

(4) A breakdown of the total allowable project costs.

(c) *Applications for demonstration funds.* Upon notification of the approval of the pre-application, applicants shall submit a final application for demonstration funds using the Federal Assistance Application for Construction Programs in accordance with appendix M of Office of Management and Budget Circular A–102. Applicants shall include under Part IV (Program Narrative) of the form:

(1) A list of all organizations which will participate in the planning, implementation, or operation of each

project, along with a discussion of the role of each organization;

(2) A full discussion of the desirability and feasibility of the project and a summary of the benefits to be derived;

(3) A summary of each proposed use of the intermodal passenger terminal for a civic or cultural activity;

(4) A description and documentation of existing or potential markets for interline intermodal service making use of the project facility, and of any changes in existing services which must be provided to achieve this potential;

(5) The proposed period during which the project will be evaluated to determine whether it has achieved the goals set forth in § 256.13(b);

(6) A detailed description of the rail passenger terminal (including where applicable the description on file with the National Register), the available transportation facilities, and the proposed intermodal passenger transportation improvements;

(7) Evidence that the architectural integrity of the railroad passenger terminal will be preserved;

(8) A detailed estimate of the total allowable project costs, listing and identifying each cost to the maximum possible extent;

(9) Evidence of the applicant's ability and intent to furnish its share of the total allowable costs;

(10) Evidence that the applicant has established, in accordance with Attachment G of Office of Management and Budget Circular A–102, adequate procedures for financial control, accounting, and performance evaluation, in order to assure proper use of the Federal funds;

(11) An assurance by the applicant that it will use Federal funds provided under the Act solely for the purpose for which assistance is sought and in conformance with the limitations on the expenditures allowed under the Act and applicable regulations;

(12) A description of the proposed methods of monitoring and evaluating the demonstration;

(13) Copies of the following: Preliminary architectural and engineering design documents, plans, sections, sketches, and outline specifications;

(14) A proposed draft of an environmental impact statement, including documentation that the project includes all possible planning to minimize harm to the historic nature of the facility as required by section 4(f) of the Act (49 U.S.C. 1653(f)), to be reviewed, analyzed and used by the Administrator in preparation of a final Environmental Impact Statement under Department of Transportation Order 5610.IB (39 FR 35234, September 30, 1974);

(15) Two copies of an affirmative action program prepared in accordance with section 905 of the 4R Act (45 U.S.C. 803) and 49 CFR part 265;

(16) Assurances that the applicant will comply with the following Federal laws, policies, regulations and pertinent directives:

(i) Title VI of the Civil Rights Act of 1964 42 U.S.C. 2000d *et seq.*, and 49 CFR part 21;

(ii) Section 905 of the 4R Act (45 U.S.C. 803), and 49 CFR part 265;

(iii) Executive Order 11246, as amended (30 FR 12319, 32 FR 14303) and 41 CFR 60–4, as amended (43 FR 14888, Apr. 7, 1978) which require equal employment opportunity in federally-assisted construction programs.

(iv) Titles II and III of the Uniform Relocation Assistance and Real Property Acquisition Policies Act of 1970, 42 U.S.C. 4601 *et seq.*, and 49 CFR part 25;

(v) 42 U.S.C. 4151 *et seq.*, with regard to Federal policies ensuring that physically handicapped persons will have ready access to, and use of, public buildings;

(vi) The Rehabilitation Act of 1973, 29 U.S.C. 794, with regard to nondiscrimination under Federal grants;

(vii) The Hatch Act, 5 U.S.C. 1501 *et seq.*, which limits the political activities of employees; and

(viii) Where applicable, the State and Local Fiscal Assistance Act of 1972, 31 U.S.C. 1221 *et seq.*, and 31 CFR part 51.

(17) Evidence of all legal commitments including, but not limited to, operating agreements and right-of-way leases which have been obtained from private carriers, public transportation operating agencies, and other entities as appropriate, to assure continued operation of the transportation services during the evaluation period;

(18) Evidence (including, but not limited to, copies of leases, deeds, easements, certificates of title, and mortgage agreements) that the applicant's property interest in the railroad passenger terminal is or will be, at the commencement of the project, sufficient for the applicant to implement the project;

(19) A summary of each proposed agreement permitting the use of any portion of the imtermodal passenger terminal for commercial purposes other than the provision of transportation services (if a standard form contract is to be used, applicant may submit a copy of the standard contract, a list of parties with whom it has contracted, and a list of any terms not common to the standard contract);

(20) An opinion of the applicant's legal counsel advising that—

(i) Counsel is familiar with—

(A) The applicant's corporate or other organization powers;

(B) Section 4(i) of the Act, as amended (49 U.S.C. 1653(i));

(C) The other Acts referred to in these regulations; and

(D) Any regulations issued to implement those Acts;

(ii) The applicant is authorized to make the application including all certifications, assurances, and affirmations required;

(iii) The applicant has the requisite authority to carry out the actions proposed in the application and to fulfill the obligations created thereby, including the obligation to pay a share of the costs of the proposed project;

(iv) The applicant has the authority to enter into all of the legal commitments referred to in paragraph (c)(16) of this section and that these commitments are legal and binding by their terms; and

(v) The applicant's property interest in the railroad passenger terminal is sufficient for the applicant to implement the project;

(21) For projects located in urbanized areas, as defined by the Bureau of the Census, a statement that the application has been coordinated with the metropolitan planning organization, designated by the Governor of the State in which the project is located pursuant to 23 U.S.C. 104(f)(3);

(22) A certification by the applicant that, in accordance with Office of Management and Budget Circular A–95 (41 FR 2052, Jan. 13, 1976), section 204 of the Demonstration Cities and Metropolitan Development Act of 1966 (42 U.S.C. 3334), and section 401 of the Intergovernmental Cooperation Act of 1968 (42 U.S.C. 4231), notification of the project has been submitted to, and comments thereon have been solicited from, the appropriate State and regional agencies and clearinghouses; and

(23) Any other information that the Administrator may require.

(d) *Applications for preservation funds.* Each application for preservation assistance shall include:

(1) The complete name and principal business address of the applicant;

(2) The complete name, title, and address of the person to whom correspondence regarding the application should be addressed;

(3) A list of all organizations which will participate in the planning, implementation, or operation of each project, and a discussion of each organization's role;

(4) A full discussion of the desirability and feasibility of the project and a summary of the benefits to be derived;

(5) A detailed description of the rail passenger terminal (including where applicable the description on file with the National Register), the available transportation facilities, and the proposed intermodal passenger transportation improvements;

(6) Documentation of the threat to the existing terminal, involving demolition, dismantling, or further deterioration of the terminal and the causes thereof;

(7) Evidence that the planning for conversion or reuse of the terminal has commenced and that it is proceeding in a timely manner, including a copy of the projected planning schedule;

(8) A proposed draft of an environmental impact statement or a negative declaration, including documentation that the project includes all possible planning to minimize harm to the historic nature of the facility as required by section 4(f) of the Act, 49 U.S.C. 1653(f), to be reviewed, analyzed, and

used by the Administrator in preparation of a final Environmental Impact Statement or Negative Declaration as required by Department of Transportation Order 5610.1B (39 FR 35234, Sept. 30, 1974);

(9) A detailed estimate of the total allowable project costs, listing and identifying all anticipated preservation costs to the maximum extent possible;

(10) The total amount of Federal assistance requested;

(11) Evidence of the applicant's ability and intent to furnish its share of the total allowable project costs;

(12) Where the applicant contemplates using funds which it has received or will receive from other Federal programs for the planning or demonstration stage of the project, a brief description of the sources, use and total anticipated amount of such funds;

(13) Evidence that the applicant has established in accordance with Attachment G of Office of Management and Budget Circular A–102, adequate procedures for financial control, accounting, and performance evaluation in order to assure proper use of the Federal funds;

(14) An assurance by the applicant that it will use Federal funds provided under the Act solely for the purpose for which assistance is sought and in conformance with the limitations on the expenditures allowed under the Act and applicable regulations;

(15) Evidence of substantial local public and/or private interest in organizing a project to convert the existing railroad passenger terminal to an intermodal passenger terminal, which may include use for civic or cultural activities;

(16) An opinion of the applicant's legal counsel stating that:

(i) Counsel is familiar with (A) the applicant's corporate or other organizational powers; (B) section 4(i) of the Act, as amended (49 U.S.C. 1653(i)), (C) the other Acts referred to in these regulations; (D) and any regulation issued to implement those Acts;

(ii) The applicant is authorized to make this application including all certifications, assurances, and affirmations required;

(iii) The applicant has the requisite authority to carry out the actions proposed in its application and to fulfill the obligations created thereby, including the obligation to pay a share of the cost of the proposed project, and

(iv) The applicant is empowered, for an interim period pending the formulation of plans for the conversion of the existing railroad passenger terminal, to maintain the terminal building and prevent its demolition, dismantling, or further deterioration;

(17) For projects located in urbanized areas, as defined by the Bureau of the Census, a statement that the application has been coordinated with the metropolitan planning organization, designated by the Governor of the State in which the project is located, pursuant to 23 U.S.C. 104(f)(3);

(18) A certification by the applicant that, in accordance with Office of Management and Budget Circular A–95 (41 FR 2052, Jan. 13, 1976), section 204 of the Demonstration Cities and Metropolitan Development Act of 1966 (42 U.S.C. 3334), and section 401 of the Intergovernmental Cooperation Act of 1968 (42 U.S.C. 4231), notification of the project has been submitted to, and comments thereon have been solicited from, the appropriate State and regional agencies and clearinghouses;

(19) Two copies of an affirmative action program prepared in accordance with section 905 of the 4R Act (45 U.S.C. 803) and 49 CFR part 265;

(20) Assurances that the applicant will comply with the following Federal laws, policies, regulations and pertinent directives:

(i) Title VI of the Civil Rights Act of 1964, 42 U.S.C. 2000d *et seq.*, and 49 CFR part 21;

(ii) Section 905 of the 4R Act (45 U.S.C. 803) and 49 CFR part 265;

(iii) Executive Order 11246, as amended (30 FR 12319, 32 FR 14303) and 41 CFR 60–4, as amended (43 FR 14888, Apr. 7, 1978), which requires equal employment opportunity in federally-assisted construction programs.

(iv) Titles II and III of the Uniform Relocation Assistance and Real Property Acquisition Policies Act of 1970, 42 U.S.C. 4601 *et seq.*, and 49 CFR part 25;

(v) 42 U.S.C. 4151 *et seq.*, with regard to Federal policies ensuring that physically handicapped persons will have ready access to, and use of, public buildings;

(vi) The Rehabilitation Act of 1973, 29 U.S.C. 794, with regard to nondiscrimination under Federal grants;

(vii) The Hatch Act, 5 U.S.C. 1501 *et seq.*, which limits the political activities of employees; and

(viii) Where applicable, the State and Local Fiscal Assistance Act of 1972, 31 U.S.C. 1221 *et seq.*, and 31 CFR part 51; and

(21) Any other information that the Administrator may require.

(e) *Applications for planning funds.* Each application for planning assistance shall include:

(1) The complete name and principal business address of the applicant;

(2) The name, title, and address of the person to whom correspondence regarding the application should be addressed;

(3) A list of all organizations which will participate in the planning, implementation, or operation of each project, and a discussion of each organization's role;

(4) A preliminary statement of work, and a detailed estimate of all planning costs broken down by project task;

(5) A proposed schedule for the planning process;

(6) A full discussion of the desirability and feasibility of the project and a summary of the benefits to be derived;

(7) A detailed description of the rail passenger terminal (including, where applicable, the description on file with the National Register), the available transportation facilities, and the proposed intermodal passenger transportation improvements;

(8) The total amount of Federal assistance requested;

(9) Evidence of the applicant's ability and intent to furnish its share of the total allowable project costs;

(10) Where the applicant contemplates using funds which it has received or will receive from other Federal programs for the preservation or demonstration stages of the project, a brief description of the sources, use, and anticipated amount of such funds;

(11) Evidence that the applicant has established, in accordance with Attachment G of Office of Management and Budget Circular A–102, adequate procedures for financial control, accounting, and performance evaluation, in order to assure proper use of the Federal funds;

(12) An assurance by the applicant that it will use Federal funds provided under the Act solely for the purpose for which assistance is sought and in conformance with the limitations on the expenditures allowed under the Act and applicable regulations;

(13) An opinion of the applicant's legal counsel stating that:

(i) Counsel is familiar with (A) the applicant's corporate or other organization powers; (B) section 4(i) of the Act, as amended, 49 U.S.C. 1653(i); (C) the other Acts referred to in these regulations; and (D) any regulations issued to implement those Acts;

(ii) The applicant is authorized to make this application including all certifications, assurances, and affirmations required; and

(iii) The applicant has the requisite authority to carry out the actions proposed in its applications and to fulfill the obligations created thereby, including the obligation to pay a share of the costs of the proposed project;

(14) A proposed schedule for the implementation of the applicant's completed designs and plans;

(15) For projects located in urbanized areas, as defined by the Bureau of the Census, a statement that the application has been coordinated with the metropolitan planning organization, designated by the Governor of the State in which the project is located, pursuant to 23 U.S.C. 104(f)(3);

(16) A certification by the applicant that, in accordance with Office of Management and Budget Circular A–95 (41 FR 2052, Jan. 13, 1976), section 204 of the Demonstration Cities and Metropolitan Development Act of 1966 (42 U.S.C. 3334), and section 401 of the Intergovernmental Cooperation Act of 1968 (42 U.S.C. 4231), notification of the project has been submitted to, and comments thereon have been solicited from, the appropriate State and regional agencies and clearinghouses;

(17) Two copies of an affirmative action program prepared in accordance with section 905 of the 4R Act (45 U.S.C. 803) and 49 CFR part 265;

(18) Assurances that the applicant will comply with the following Federal

laws, policies, regulations, and pertinent directives:

(i) Title VI of the Civil Rights Act of 1964, 42 U.S.C. 2000d *et seq.* and 49 CFR part 21;

(ii) Section 905 of the 4R Act (45 U.S.C. 803) and 49 CFR part 265;

(iii) Title II and title III of the Uniform Relocation Assistance and Real Property Acquisition Policies Act of 1970, 42 U.S.C. 4601 *et seq.* and 49 CFR part 25;

(iv) 42 U.S.C. 4151 *et seq.*, with regard to Federal policies ensuring that physically handicapped persons will have ready access to, and use of, public buildings;

(v) The Rehabilitation Act of 1973, 29 U.S.C. 794, with regard to nondiscrimination under Federal grants;

(vi) The Hatch Act, 5 U.S.C. 1501, *et seq.*, which limits the political activities of employees; and

(vii) Where applicable, the State and Local Fiscal Assistance Act of 1972, 31 U.S.C. 1221 *et seq.*, and 31 CFR part 51;

(19) A statement that the applicant is prepared to develop practicable plans meeting the zoning, land use, and other requirements of the applicable State and local jurisdictions in which the rail passenger terminal is located.

(20) An assurance by the applicant that the designs and plans for the conversion to an intermodal passenger terminal, including any use for civic or cultural activities, will be completed within two years following the approval of the application for Federal financial assistance;

(21) A description of how the applicant can incorporate features which appear reasonably likely to attract private investors willing to share in the implementation of the planned conversion and its subsequent maintenance and operation;

(22) An environmental assessment using an interdisciplinary approach in identifying the type, degree, effect, and probability of occurrence of potential environmental impacts due to the conversion to an intermodal passenger terminal; and

(23) Any other information that the Administrator may require.

(f) *Execution and filing of applications.* (1) The original application shall bear the date of execution and be signed by the Chief Executive Officer of the applicant or by the applicant, where the applicant is an individual. Each person required to execute an application shall execute a certificate in the form of appendix A hereto.

(2) The original application shall be filed with the Federal Railroad Administrator, Department of Transportation, 1200 New Jersey Avenue, SE., Washington, DC 20590.

(3) Pre-applications for demonstration funds must be submitted to the Administrator no later than August 21, 1978. Applications for planning, preservation and demonstration funds must be submitted to the Administrator no later than September 19, 1978. Applications received after these deadlines will not be considered for funding, unless all funds are not granted to applicants who have met the application deadline.

[43 FR 21887, May 22, 1978, as amended at 74 FR 25176, May 27, 2009]

§ 256.13 Review and approval of applications.

(a) *Pre-applications.* Pre-applications for demonstration funds shall be reviewed by the Administrator in consultation with the Chairman and the Council.

(b) *Applications.* The Administrator shall review applications in consultation with the Chairman and the Council and select and monitor projects most likely to accomplish the following goals:

(1) Demonstrate the capabilities of intermodal terminals to provide a more effective means of passenger interchange between various modes of transportation;

(2) Demonstrate the advantages of joint use terminal facilities to carriers;

(3) Demonstrate a more comprehensive and effective network of energy efficient surface common carrier transportation services through improving coordinated interline intermodal exchange at selected intermodal passenger terminals distinguished by coordinated information systems, schedules, and through ticketing and baggage handling;

(4) Evaluate user response to such coordinated interline intermodal transportation services, and to joint carrier use of terminal facilities;

(5) Demonstrate the potential of underutilized railroad passenger terminals of historical and architectural distinction for improving intermodal passenger transportation services and for providing an appropriate focal point for civic and cultural activities;

(6) Stimulate local public and private investment, by transportation carriers and others, in improved intercity and local public transportation facilities and services;

(7) Encourage the preservation of railroad passenger terminals pending the formulation of plans for reuse; and

(8) Encourage the development of plans for the conversion of railroad passenger terminals into intermodal passenger terminals, which may incorporate civic and cultural activities where feasible.

(c) *Preferential consideration.* In reviewing applications for planning funds, the Administrator shall give preferential consideration to applicants whose completed designs and plans will be implemented and effectuated within three years after the date of completion.

(d) *Approval within 90 days.* The Administrator will approve or deny each application within 90 days of the submission dates set forth in §256.11(f)(3) and the Administrator will promptly notify in writing each applicant whose application has been approved.

[40 FR 29080, July 10, 1975, as amended at 43 FR 21890, May 22, 1978; 44 FR 21647, Apr. 11, 1979]

§256.15 Disbursement of financial assistance.

(a) *Grant agreement.* After receipt, review, and approval of an application, the Administrator will enter into a grant agreement with an applicant for the Federal share of the total allowable project costs. The terms and conditions of payment of the Federal share shall be set forth in the grant agreement.

(b) *Record retention.* Each recipient of financial assistance under this part shall keep such records as the Administrator shall prescribe, including records which fully disclose the amount and disposition by such recipient of the proceeds of such assistance, the total cost of the project or undertaking in connection with which such assistance was given or used, the amount of that portion of the cost of the project or undertaking supplied by other sources, and such other records as will facilitate an effective audit.

(c) *Audit and examination.* Until the expiration of three years after the completion of the project or undertaking referred to in paragraph (b) of this section, the Administrator and the Comptroller General of the United States, or any of their duly authorized representatives, shall have access for the purpose of audit and examination to any books, documents, papers, and records of such receipts which, in the opinion of the Administrator or the Comptroller General, may be related or pertinent to such financial assistance.

[40 FR 29080, July 10, 1975, as amended at 43 FR 21890, May 22, 1978]

APPENDIX A TO PART 256—CERTIFICATE

The following is the form of the certificate to be executed by each person signing a pre-application or application:

_____ (Name of Person) certifies that he is the Chief Executive Officer of _____ (Name of Agency or Organization); that he is authorized to sign and file with the Federal Railroad Administrator this (pre-application or application); that he has carefully examined all of the statements contained in the (pre-application or application) relating to _____; that he has knowledge of the matters set forth therein and that all statements made and matters set forth therein are true and correct to the best of his knowledge, information and belief.

Subpart A—Overview

§ 260.1 Program authority.

Section 502 of the Railroad Revitalization and Regulatory Reform Act of 1976, as amended, 45 U.S.C. 821 *et seq.*, authorizes the Secretary of Transportation to provide direct loans and loan guarantees to State and local governments, government sponsored authorities and corporations, railroads, and joint ventures that include at least one railroad. The Secretary's authority has been delegated to the Administrator of the Federal Railroad Administration, an agency of the Department of Transportation.

§ 260.3 Definitions.

As used in this part—

(a) *Act* means the Railroad Revitalization and Regulatory Reform Act of 1976, as amended, 45 U.S.C. 821 *et seq.*

(b) *Administrator* means the Federal Railroad Administrator, or his or her representative.

(c) *Applicant* means any State or local government, government sponsored authority or corporation, railroad, or group of two or more entities, at least one of which is a railroad, participating in a joint venture, that submits an application to the Administrator for a direct loan or the guarantee of an existing obligation under which it is an obligor or for a commitment to guarantee a new obligation.

(d) *Borrower* means an Applicant that has been approved for, and has received, financial assistance under this part.

(e) *Credit risk premium* means that portion of the total subsidy cost to the Government of a direct loan or loan guarantee that is not covered by Federal appropriations and which must be paid by Applicant or its non-Federal infrastructure partner before that direct loan can be disbursed or loan guarantee can be issued.

(f) *Direct loan* means a disbursement of funds by the Government to a non-federal borrower under a contract that requires the repayment of such funds.

(g) *FRA* means the Federal Railroad Administration.

(h) *Financial assistance* means a direct loan, or a guarantee of a new loan issued under this part.

(i) *Holder* means the current owner of an obligation or the entity retained by the owner to service and collect an obligation which is guaranteed under the provisions of this part.

(j) *Including* means including but not limited to.

(k) *Infrastructure partner* means any non-Federal source of the Credit Risk Premium which must be paid to the Administrator in lieu of, or in combination with, an appropriation in connection with financial assistance provided under this part.

(l) *Intermodal* means of or relating to the connection between rail service and other modes of transportation, including all parts of facilities at which such connection is made.

(m) *Lender* means the non-Federal entity making a loan to an Applicant for which a loan guarantee under this part is sought.

(n) *Loan guarantee* means any guarantee, insurance, or other pledge with respect to the payment of all or a part of the principal or interest on any debt obligation of a non-Federal borrower to a non-Federal Lender, but does not include the insurance of deposits, shares, or other withdrawable accounts in financial institutions.

(o) *Obligation* means a bond, note, conditional sale agreement, equipment trust certificate, security agreement, or other obligation.

(p) *Obligor* means the debtor under an obligation, including the original obligor and any successor or assignee of such obligor.

(q) *Project* means the purpose for which financial assistance is requested.

(r) *Railroad* means a rail carrier subject to part A of subtitle IV of title 49, United States Code.

(s) *Subsidy cost of a direct loan* means the net present value, at the time when the direct loan is disbursed, of the following estimated cash flows:

(1) Loan disbursements;

(2) Repayments of principal; and

(3) Payments of interest and other payments by or to the Government over the life of the loan after adjusting for estimated defaults, prepayments, fees, penalties, and other recoveries; including the effects of changes in loan terms resulting from the exercise by the borrower of an option included in the loan contract.

(t) *Subsidy cost of a loan guarantee* means the net present value, at the time when the guaranteed loan is disbursed, of the following estimated cash flows:

(1) Payments by the Government to cover defaults, delinquencies, interest subsidies, or other payments; and

(2) The payments to the Government including origination and other fees, penalties and recoveries.

§ 260.5 Eligible purposes.

(a) Financial assistance under this part is available solely to:

(1) Acquire, improve, or rehabilitate intermodal or rail freight or passenger equipment or facilities, including track, components of track, bridges, yards, buildings, and shops;

(2) Refinance outstanding debt incurred for purposes described in paragraph (a)(1) of this section; or

(3) Develop or establish new intermodal or railroad facilities.

(b) Financial assistance under this part cannot be used for railroad operating expenses.

§ 260.7 Priority consideration.

When evaluating applications, the Administrator will give priority consideration (but not necessarily in the following order) to projects that:

(a) Enhance public safety;

(b) Enhance the environment;

(c) Promote economic development;

(d) Enable United States companies to be more competitive in international markets;

(e) Are endorsed by the plans prepared under section 135 of title 23, United States Code, by the State or States in which they are located; or

(f) Preserve or enhance rail or intermodal service to small communities or rural areas.

§ 260.9 Loan terms.

(a) The interest rate on a direct loan will be not less than the rate on United States Treasury securities of a similar maturity of the direct loan on the date of the execution of the loan agreement, except as described in paragraph (b) of this section and in § 260.17(d).

(b) If, on the date of the execution of the loan agreement, the United States Treasury does not post the rate of securities of a similar maturity of the direct loan, the interest rate on any direct loan with both a final maturity date that is more than 35 years after the date of substantial completion of

the project, and a loan term that is more than 40 years, will be equal to not less than the rate on thirty-to-forty year Treasury securities plus an annual interest rate adjustment. The annual interest rate adjustment will be, cumulatively:

(i) 1.4 basis points for each year of the loan term after year 40 to, but not including, year 51;

(ii) 0.4 basis points for each year of the loan term from year 51 to, but not including, year 71; and

(iii) 0.2 basis points for each year of the loan term from year 71 to year 100.

(c) For purposes of this section, ''loan term'' means the period beginning on the date of the execution of the loan agreement and ending on the final maturity date.

[89 FR 45776, May 24, 2024]

§ 260.11 Investigation charge.

(a) Applicants for financial assistance under this part may be required to pay an investigation charge of up to one-half of one percent of the principal amount of the direct loan or portion of the loan to be guaranteed.

(b) When an investigation charge is assessed, one-half of the investigation charge shall be paid by Applicant at the time a formal application is submitted to FRA.

(c) Within 60 days after the date of filing of the application, Applicant shall pay to the Administrator the balance of the investigation charge.

§ 260.13 Credit reform.

The Federal Credit Reform Act of 1990, 2 U.S.C. 661, requires Federal agencies to set aside the subsidy cost of new credit assistance provided in the form of direct loans or loan guarantees. The subsidy cost will be the estimated long term cost to the Government of the loan or loan guarantee. The subsidy cost associated with each direct loan or loan guarantee, which the Administrator must set aside, may be funded by Federal appropriations, direct payment of a Credit Risk Premium by the Applicant or a non-Federal infrastructure partner on behalf of the Applicant, or any combination thereof.

§ 260.15 Credit risk premium.

(a) Where available Federal appropriations are inadequate to cover the subsidy cost, a non-Federal infrastructure partner may pay to the Administrator a Credit Risk Premium adequate to cover that portion of the subsidy cost not covered by Federal appropriations. Where there is no Federal appropriation, the Credit Risk Premium must cover the entire subsidy cost.

(b) The amount of the Credit Risk Premium required for each direct loan or loan guarantee, if any, shall be established by the Administrator. The Credit Risk Premium shall be determined based on the credit risk and anticipated recovery in the event of default, including the recovery of collateral.

(c) The Credit Risk Premium must be paid before the disbursement of a direct or guaranteed loan. Where the borrower draws down the direct or guaranteed loan in several increments, the borrower may pay a portion of the total Credit Risk Premium for each increment equal to the proportion of that increment to the total amount of the direct or guaranteed loan.

(d) Each direct loan and loan guarantee made by the Administrator will be included in one cohort of direct loans or one cohort of loan guarantees, respectively, made during that same fiscal year, or longer period, as may be determined by the Administrator. When all obligations in a cohort have been satisfied or liquidated, the amount of Credit Risk Premiums, paid by applicants or infrastructure partners, remaining in the cohort, after deductions made to mitigate losses from any loan or loan guarantee in the cohort, together with interest accrued thereon, will be repaid on a pro rata basis to each original payor of a Credit Risk Premium for any obligation which was fully satisfied. If the Administrator's estimate of the default risk cost of each loan is accurate, the aggregate of Credit Risk Premiums associated with each cohort of loans will fully offset all losses in the cohort and none will remain to be returned to the payees.

Subpart B—FRA Policies and Procedures for Evaluating Applications for Financial Assistance

§ 260.17 Credit risk premium analysis.

(a) When Federal appropriations are not available to cover the total subsidy cost, the Administrator will determine the Credit Risk Premium necessary for each direct loan or loan guarantee by estimating the credit risk and the potential recovery in the event of a default of each project evaluating the factors described in paragraphs (b) and (c) of this section.

(b) Establishing the credit risk.

(1) Where an Applicant has received a recent credit rating from one or more nationally recognized rating agencies, that rating will be used to estimate the credit risk.

(2) Where an Applicant has not received a credit rating from a credit rating agency, the Administrator will determine the credit risk based on an evaluation of the following factors:

(i) Business risk, based on Applicant's:

(A) Industry outlook;

(B) Market position;

(C) Management and financial policies;

(D) Capital expenditures; and

(E) Operating efficiency.

(ii) Financial risk, based on Applicant's past and projected:

(A) Profitability;

(B) Liquidity;

(C) Financial strength;

(D) Size; and

(E) Level of capital expenditures; and

(iii) Project risk, based on the proposed project's:

(A) Potential for improving revenues, profitability and cash flow from operations; and

(B) Reliance on third parties for success.

(c) The potential recovery in the event of a default will be based on:

(1) The nature of the Applicant's assets; and

(2) Liquidation value of the collateral offered, including the terms and conditions of the lien securing the collateral.

(d)(1) Where the Credit Risk Premium determined pursuant to paragraph (a) of this section is a positive amount, the interest rate on the direct loan will be equal to not less than the rate set pursuant to § 260.9 plus an interest rate adjustment sufficient to result in a Credit Risk Premium of zero dollars.

(2) Paragraph (d)(1) of this section shall apply to a direct loan or loan guarantee only so long as the Act requires the Secretary to return Credit Risk Premiums paid on that loan or loan guarantee to the original source.

[65 FR 41841, July 6, 2000, as amended at 89 FR 45776, May 24, 2024]

§ 260.19 Preapplication meeting.

Potential Applicants may request a meeting with the FRA Associate Administrator for Railroad Development to discuss the nature of the project being considered. Applicants must be prepared to provide at least the following information:

(a) Applicant's name, address, and contact person;

(b) Name of the proposed infrastructure partner(s), if any, including the identification of potential amounts of funding from each;

(c) Amount of the direct loan or loan guarantee request, and a description of the technical aspects of the project including a map of the existing railroad lines with the location of the project indicated;

(d) Brief description and estimate of the economic impact, including future demand for service, improvements that can be achieved, the project's relation to the priorities listed in § 260.7, along with any feasibility, market or other studies that may have been done as attachments;

(e) Amount of Applicant's equity and a description of collateral offered, with estimated values, including the basis of such, to be offered as security for the loan;

(f) If applicable, the names and addresses of the Applicant's parent, affiliates, and subsidiary corporations, if any, and a description of the ownership relationship and the level of guarantee, if any, to be offered;

(g) For existing companies, a current balance sheet and an income statement not more than 90 days old and financial statements for the borrower and any

parent, affiliates, and subsidiaries for at least the four most recent years; and

(h) Information relevant to the potential environmental impacts of the project in the context of applicable Federal law.

Subpart C—Applications for Financial Assistance

§ 260.21 Eligibility.

The Administrator may make a direct loan to an Applicant, or guarantee the payment of the principal balance and any interest of an obligation of an Applicant prior to, on, or after the date of execution or the date of disbursement of such obligation, if the proceeds of such direct loan or obligation shall be, or have been, used by the Applicant for the eligible purposes listed in § 260.5(a)(1), (2), and (3).

§ 260.23 Form and content of application generally.

Each application shall include, in the order indicated and identified by applicable paragraph numbers and letters corresponding to those used in this section, the following information:

(a) Full and correct name and principal business address of the Applicant;

(b) Date of Applicant's incorporation, or organization if not a corporation, and name of the government, State or territory under the laws of which it was incorporated or organized. If Applicant is a partnership, association, or other form of organization other than a corporation, a full description of the organization should be furnished;

(c) Name, title, and address of the person to whom correspondence regarding the application should be addressed.

(d) A statement of whether the project involves another railroad or other participant, through joint execution, coordination, or otherwise; if so, description of the relative participation of Applicant and such other railroad or participant, including financial statements (if applicable) and financing arrangements of each participant, portion of the work to be performed by each participant, and anticipated level of usage of the equipment or facility of each participant when the work is completed, along with a statement by a responsible officer or official of the other railroad or participant that the information provided reflects their agreement on these matters;

(e) A detailed description of the amount and timing of the financial assistance that is being requested and its purpose or purposes, including:

(1) Detailed description of the project and its purpose or purposes;

(2) A description of all facilities or equipment and the physical condition of such facilities or equipment included in or directly affected by the proposed project;

(3) Each part or sub-part into which the project may reasonably be divided and the priority and schedule of expenditure for each part or sub-part; and

(4) Proposed dates of commencement and completion of the project and estimated timing of the expenditure of the proceeds of the obligation;

(5) A map of Applicant's existing railroad with location of project indicated, if appropriate.

(f) A listing and description of the collateral to be offered the Administrator in connection with any financial assistance provided; Applicant's opinion of the value of this security and the basis for such opinion; in the case of leased equipment to be rehabilitated or improved with the proceeds of the obligation proposed to be guaranteed, Applicant shall state, in addition to the above, whether the lease provides for, or the lessor will permit, encumbrance of the leasehold or subordination of the lessor's interest in the equipment to the Administrator;

(g) A statement, in summary form, showing financial obligations to or claims against the United States or obligations for which the United States is guarantor, if any, by Applicant or any affiliated corporate entity of the Applicant or the Applicant's parent as of the date of the application, including:

(1) Status of any claims under litigation; and

(2) Any other debits or credits existing between the Applicant and the United States, showing the department or agency involved in such loans, claims and other debts;

(h) To the extent such information is available, an analysis that includes:

(1) A statement, together with supporting evidence including copies of all market analyses and studies that have been performed to determine present and future demand for rail services or facilities, that the financing is justified by present and future probable demand for rail services or facilities, will meet existing needs for such services or facilities, and will provide shippers or passengers with improved service;

(2) Description of the impact of the project upon the projected freight or passenger traffic to be originated, terminated, or carried by the Applicant for at least the five years immediately following completion of the project;

(3) Explanation of the manner in which the project will increase the economical and efficient utilization of equipment and facilities; and

(4) Description of cost savings or any other benefit which would accrue to the Applicant from the project;

(i) A statement as to how the project will contribute to, or enhance, the safe operation of the railroad, considering such factors as the occupational safety and health of the employees and the improvement of the physical and other conditions that have caused or may cause serious injury or loss of life to the public or significant property damage;

(j) A statement of the Applicant's maintenance program for its entire rail system and planned maintenance program for the equipment or facilities financed by the proceeds of the financial assistance;

(k) A certified statement in the form contained in §260.31(d) that Applicant will pay to the Administrator, in accordance with §260.11, the investigation charge with respect to the application.

(l) Information relevant to the potential environmental impacts of the project in the context of applicable Federal laws;

(m) Any additional information that the Applicant deems appropriate to convey a full and complete understanding of the project, the project's relations to the priorities listed in §260.7, and its impact, or to assist the Administrator in making the statutorily prescribed findings; and

(n) Any other information which the Administrator may deem necessary concerning an application filed under this part.

(o) Railroad applicants must also submit a copy of application for financing for the project in the private sector, including terms requested, from at least one commercial lender, and its response refusing to provide such financing.

§ 260.25 Additional information for Applicants not having a credit rating.

Each application submitted by Applicants not having a recent credit rating from one or more nationally recognized rating agencies shall include, in the order indicated and identified by applicable numbers and letters corresponding to those used in this section, the following information:

(a) A narrative statement detailing management's business plan to enhance Applicant's ability to provide rail services including a discussion of the following:

(1) Applicant's current and prospective traffic base, including by commodity and geographic region, major markets served, major interchange points, and market development plans;

(2) Applicant's current operating patterns, and plans, if any, to enhance its ability to serve its current and prospective traffic base;

(3) System-wide plans to maintain equipment and rights-of-way at current or improved levels; and

(4) Specific plans for rationalization of marginal or uneconomic services;

(b) Detailed financial information, including:

(1) Financial statements prepared by a Certified Public Accountant (audited, if available), for the four calendar years immediately preceding the date of filing of the application, including:

(i) A copy of Applicant's most recent year-end general balance sheet and a copy of Applicant's most recent unaudited general balance sheet; and

(ii) Applicant's most recent annual income statement and a spread sheet showing unaudited monthly and year-to-date income statement data up to the date the application is filed;

(2) Projected financial statements, including spread sheets showing for each of the four years subsequent to the year in which the application is

filed, both before and after giving effect to the proceeds of the assistance requested in the application:

(i) Forecasted annual income statement;

(ii) Forecasted year-end balance sheets. These spread sheets shall be accompanied by a statement setting forth the bases for such forecasts; and

(iii) A spread sheet showing changes in financial position for the year in which the application is filed, including the period ending on the date of the application based upon actual data and the period from the date of the application to the end of the year, based upon estimated and forecasted data;

(c) Capital spending plans for the next five years;

(d) Cash flow projections;

(e) Contingency plans for termination of the project before completion, if necessary; and

(f) A narrative description of Applicant's management team, including:

(1) Rail experience of top management;

(2) Management's plans for achieving growth and its long-term capital spending plan; and

(3) A narrative description of Applicant's workforce and the historical rate of employee turnover.

§ 260.27 Additional information for loan guarantees.

Applications for a loan guarantee shall also include in the order indicated and identified by applicable numbers and letters corresponding to those used in this section, the following information:

(a) With respect to each existing obligation to be refinanced or proposed obligation:

(1) A certified copy of proposed or executed obligation agreements;

(2) A detailed description of the obligation, and a description of the series or issue of which the obligation is, or will be, a part, including:

(i) Effective date, or anticipated effective date;

(ii) Where a guarantee is sought for an outstanding obligation being refinanced, actual effective rate of interest; or where the obligation is new, the terms of the proposed obligation including the proposed effective rate of interest; and

(iii) All related documents, whether executed or proposed;

(3) For an existing obligation, the Applicant's payment history on that obligation; and

(b) With respect to each existing Lender, Holder, or prospective Lender, a statement as to:

(1) Full and correct name and principal business address;

(2) Reference to applicable provisions of law and the charter or other governing instruments conferring authority to do business on the Lender, Holder, or prospective Lender;

(3) Brief statement of the circumstances and negotiations leading to the agreement by the Lender, Holder, or prospective Lender to make the loan;

(4) Brief statement of the nature and extent of any affiliation or business relationship between the Lender, Holder, or prospective Lender and the Applicant or any of Applicant's directors, partners, or principal executive officers; and.

(5) Full and complete statement of all sums to be provided by the Lender or Holder, or to be provided by the prospective Lender in connection with the proposed obligation including:

(i) Name and address of each person to whom the payment has been made or will be made and nature of any affiliation, association, or prior business relationship between any person named in this paragraph and the Lender, Holder or prospective Lender or any of its directors, partners, or officers; and

(ii) Amount of the cash payment, or the nature and value of other consideration.

§ 260.29 Third party consultants.

Applicants may utilize independent third-party consultants to prepare a financial evaluation of the proposed project and the applicant, if approved by FRA. Providing such an evaluation would greatly assist FRA in the evaluation of the application and would significantly reduce the time necessary for FRA to process the application. We encourage the use of third party consultants.

§ 260.31 Execution and filing of the application.

(a) The original application shall bear the date of execution, be signed in ink by or on behalf of the Applicant, and shall bear the corporate seal in the case of an Applicant which is a corporation. Execution shall be by all partners if a partnership, unless satisfactory evidence is furnished of the authority of a partner to bind the partnership, or if a corporation, an association or other similar form of organization, by its president or other executive officer having knowledge of the matters therein set forth. Persons signing the application on behalf of the Applicant shall also sign a certificate in form as follows:

(Name of official) certifies that he or she is the (Title of official) of the (Name of Applicant); that he or she is authorized on the part of the Applicant to sign and file with the Administrator this application and exhibits attached thereto; that the consent of all parties whose consent is required, by law or by binding commitment of the Applicant, in order to make this application has been given; that he or she has carefully examined all of the statements contained in such application and the exhibits attached thereto and made a part thereof relating to the aforesaid (Name of Applicant); that he or she has knowledge of the matters set forth therein and that all such statements made and matters set forth therein are true and correct to the best of his or her knowledge, information, and belief; and that Applicant will pay the balance of the investigation charge in accordance with § 260.11.

(Signature of official)
(Date)

(b) There shall be made a part of the original application the following certificate by the Chief Financial Officer or equivalent officer of the Applicant:

(Name of officer) certifies that he or she is (Title of officer) of (Name of Applicant); that he or she has supervision over the books of accounts and other financial records of the affected Applicant and has control over the manner in which they are kept; that such accounts are maintained in good faith in accordance with the effective accounting practices; that such accounts are adequate to assure that proceeds from the financing being requested will be used solely and specifically for the purposes authorized; that he or she has examined the financial statements and supporting schedules included in this application and to the best of his or her knowledge and belief those statements accurately reflect the accounts as stated in the books of account; and that, other than the matters set forth in the exceptions attached to such statements, those financial statements and supporting schedules represent a true and complete statement of the financial position of the Applicant and that there are no undisclosed assets, liabilities, commitments to purchase property or securities, other commitments, litigation in the courts, contingent rental agreements, or other contingent transactions which might materially affect the financial position of the Applicant.

(Signature of official)
(Date)

(c) The Applicant shall pay the investigation charge in accordance with § 260.11.

(d) The application shall be accompanied by a transmittal letter in form as follows:

Federal Railroad Administrator, c/o Associate Administrator for Railroad Development, Federal Railroad Administration, Washington, D.C. 20590

Re: Application for financial assistance under the Railroad Rehabilitation and Improvement Financing Program.

Dear Sir or Madam: Being duly authorized by (jointly and severally/if more than one) (the ''Applicant'') to convey the understandings hereinafter set forth, I respectfully submit this application and remit its investigation fee in the amount equal to one-half the total investigation fee established by the Administrator. By this filing, Applicant requests the Administrator to investigate the application and make the necessary findings upon which Applicant's eligibility for a direct loan or loan guarantee may be determined. Applicant understands that neither the acceptance of this filing, the deposit of the investigation charge, nor the commencement of an investigation acknowledges the sufficiency of the application's form, content or merit. Furthermore, Applicant understands that the Administrator will incur numerous expenses by this filing with respect to the investigation of the application, the appraisal of security being offered, and the making of the necessary determinations and findings, and promises to pay, within 60 days, the remainder of the investigation fee required by the Administrator. Applicant understands that the Administrator will establish the amount of Credit Risk Premium due from Applicant, if any, as provided in § 260.15. Applicant agrees to pay such Credit Risk Premium prior to the disbursement of direct or guaranteed loan, as appropriate. Such Credit Risk Premium may be refunded as provided in § 260.15.

Respectfully submitted.

Applicant(s)

Seal(s) by Its(Their).

(e) The original application and supporting papers, and two copies thereof for the use of the Administrator, shall be filed with the Associate Administrator for Railroad Development of the Federal Railroad Administration, 1200 New Jersey Avenue, SE., MailStop 20, Washington, DC 20590. Each copy shall bear the dates and signatures that appear in the original and shall be complete in itself, but the signatures in the copies may be stamped or typed.

[65 FR 41841, July 6, 2000, as amended at 74 FR 25176, May 27, 2009]

§ 260.33 Information requests.

If an Applicant desires that any information submitted in its application or any supplement thereto not be released by the Administrator upon request from a member of the public, the Applicant must so state and must set forth any reasons why such information should not be released, including particulars as to any competitive harm which would probably result from release of such information. The Administrator will keep such information confidential to the extent permitted by law.

§ 260.35 Environmental assessment.

(a) The provision of financial assistance by the Administrator under this Part is subject to a variety of environmental and historic preservation statutes and implementing regulations including the National Environmental Policy Act (''NEPA'') (42 U.S.C. 4332 *et seq.*), Section 4(f) of the Department of Transportation Act (49 U.S.C. 303(c)), the National Historic Preservation Act (16 U.S.C. 470(f)), the Coastal Zone Management Act (16 U.S.C. 1451), and the Endangered Species Act (16 U.S.C. 1531). Appropriate environmental/historic preservation documentation must be completed and approved by the Administrator prior to a decision by the Administrator on the applicant's financial assistance request. FRA's ''Procedures for Considering Environmental Impacts'' (''FRA's Environmental Procedures'') (65 FR 28545 (May 26, 1999)) or any replacement environmental review procedures that the FRA may later issue and the NEPA regulation of the Council on Environmental Quality (''CEQ Regulation'') (40 CFR Part 1500) will govern the FRA's compliance with applicable environmental/historic preservation review requirements.

(b) The Administrator, in cooperation with the applicant, has the responsibility to manage the preparation of the appropriate environmental document. The role of the applicant will be determined by the Administrator in accordance with the CEQ Regulation and Environmental Procedures.

(c) Depending on the type, size and potential environmental impact of the project for which the applicant is seeking financial assistance, FRA will need to determine whether the project is categorically excluded from detailed environmental review under FRA's Environmental Procedures and, if not, to prepare or have prepared an Environmental Assessment leading to an Environmental Impact Statement (EIS) or a Finding of No Significant Impact. At the discretion of the Administrator, Applicants may be required to prepare and submit an environmental assessment of the proposed project or to submit adequate documentation to support a finding that the project is categorically excluded from detailed environmental review. If the applicant is a public agency that has statewide jurisdiction or is a local unit of government acting through a statewide agency, and meets the requirements of section 102(2)(D) of NEPA, the applicant may be requested to prepare the EIS and other environmental documents under the Administrator's guidance.

(d) Applicants are strongly urged to consult with the Associate Administrator for Railroad Development at the earliest possible stage in project development in order to assure that the environmental/historic preservation review process can be completed in a timely manner.

(e) Applicants may not initiate any activities that would have an adverse environmental impact or limit the choice of reasonable alternatives in advance of the completion of the environmental review process. This does not preclude development by applicants of plans or designs or performance of other work necessary to support the application for financial assistance.

Subpart D—Standards for Maintenance of Facilities Involved in the Project

§ 260.37 Applicability.

This subpart prescribes standards governing the maintenance of facilities that are being, or have been, acquired, rehabilitated, improved, or constructed with the proceeds of a direct loan or a guaranteed loan issued under this part for the period during which any portion of the principal or interest of such obligation remains unpaid.

§ 260.39 Maintenance standards.

(a) When the proceeds of a direct loan or an obligation guaranteed by the Administrator under this part are, or were, used to acquire, rehabilitate, improve or construct track, roadbed, and related structures, Borrower shall, as long as any portion of the principal or interest of such obligation remains unpaid, maintain such facilities in at least the highest track class, as defined by FRA Track Safety Standards in part 213 of this chapter, specified in the Application at which the rehabilitated, improved, acquired, or constructed track is to be operated upon completion of the project.

(b) When the proceeds of a direct loan or an obligation guaranteed by the Administrator under this part are, or were, used for equipment or facilities, the Borrower shall, during the period in which any portion of the principal or interest in such obligation remains unpaid, maintain such equipment or facilities in a manner consistent with sound engineering and maintenance practices and in a condition that will permit the level of use that existed upon completion of the acquisition, rehabilitation, improvement or construction of such equipment or facilities.

§ 260.41 Inspection and reporting.

(a) Equipment or facilities subject to the provisions of this subpart may be inspected at such times as the Administrator deems necessary to assure compliance with the standards set forth in § 260.39. Each Borrower shall permit representatives of the FRA to enter upon its property to inspect and examine such facilities at reasonable times and in a reasonable manner. Such representatives shall be permitted to use such testing devices as the Administrator deems necessary to insure that the maintenance standards imposed by this subpart are being followed.

(b) Each Borrower shall submit annually to the Administrator financial records and other documents detailing the maintenance and inspections performed which demonstrate that the Borrower has complied with the standards in § 260.39.

§ 260.43 Impact on other laws.

Standards issued under this subpart shall not be construed to relieve the Borrower of any obligation to comply with any other Federal, State, or local law or regulation.

Subpart E—Procedures To Be Followed in the Event of Default

§ 260.45 Events of default for guaranteed loans.

(a) If the Borrower is more than 30 days past due on a payment or is in violation of any covenant or condition of the loan documents and such violation constitutes a default under the provisions of the loan documents, Lender must notify the Administrator in writing and must continue to submit this information to the Administrator each month until such time as the loan is no longer in default; and the Administrator will pay the Lender of the obligation, or the Lenders's agent, an amount equal to the past due interest on the guaranteed portion of the defaulted loan. This payment will in no way reduce the Borrower's obligation to the Lender to make all payments of principal and interest in accordance with the note. If the loan is brought current, the Lender will repay to the Agency any interest payments made by the Agency, plus accrued interest at the note rate.

(b) If the default has continued for more than 90 days, the Administrator will pay to the Lender, or the Lender's agent, 90 percent of the unpaid guaranteed principal. If, subsequent to this payment being made, the default is cured and liquidation is no longer appropriate, the Lender will repay such

funds to the Administrator, plus interest at the note rate.

(c) After the default has continued for more than 90 days, the Lender shall expeditiously submit to the Administrator, in writing, its proposed detailed plan to resolve the default by liquidating the collateral or by any other means. If the resolution will require the liquidation of the collateral, then the Lender's plan shall include:

(1) Proof adequate to establish that the Lender is legally in possession of the obligation, or is the agent for a Holder who is legally in possession of the obligation, and a statement of the current loan balance and accrued interest to date and the method of computing the interest;

(2) A full and complete list of all collateral, including any personal and corporate guarantees;

(3) The recommended liquidation methods for making the maximum collection possible and the justification for such methods, including recommended action for acquiring and disposing of all collateral and collecting from any guarantors;

(4) Necessary steps for preservation of the collateral;

(5) Copies of the Borrower's latest available financial statements;

(6) Copies of any guarantor's latest available financial statements;

(7) An itemized list of estimated liquidation expenses expected to be incurred along with justification for each expense;

(8) A schedule to periodically report to the FRA on the progress of liquidation;

(9) Proposed protective bid amounts on collateral to be sold at auction and a breakdown to show how the amounts were determined;

(10) If a voluntary conveyance is considered, the proposed amount to be credited to the guaranteed debt;

(11) Legal opinions, as appropriate;

(12) The Lender will obtain an independent appraisal on all collateral securing the loan which will reflect the fair market value and potential liquidation value. In order to formulate a liquidation plan that maximizes recovery, the appraisal shall consider the presence of hazardous substances, petroleum products, or other environmental hazards, which may adversely impact the market value of the collateral; and

(13) The anticipated expenses associated with the liquidation will be considered a cost of liquidation.

(d) The Administrator will inform the Lender in writing whether the Administrator concurs in the Lender's liquidation plan. Should the Administrator and the Lender not agree on the liquidation plan, negotiations will take place between the Administrator and the Lender to resolve the disagreement. When the liquidation plan is approved by the Administrator, the Lender will proceed expeditiously with liquidation. The liquidation plan may be modified when conditions warrant. All modifications must be approved in writing by the Administrator prior to implementation.

(e) Lender will account for funds during the period of liquidation and will provide the Administrator with reports at least quarterly on the progress of liquidation including disposition of collateral, resulting costs, and additional procedures necessary for successful completion of the liquidation.

(f) Within 30 days after final liquidation of all collateral, the Lender will prepare and submit to the Administrator a final report in which the Lender must account for all funds during the period of liquidation, disposition of the collateral, all costs incurred, and any other information necessary for the successful completion of liquidation. Upon receipt of the final accounting and report of loss, the Administrator may audit all applicable documentation to confirm the final loss. The Lender will make its records available and otherwise assist the Administrator in making any investigation.

(g) The Administrator shall be subrogated to all the rights of the Lender, or if Lender is agent for a Holder then to all of the rights of the Holder, with respect to the Borrower to the extent of the Administrator's payment to the Lender under this section.

(h) When the Administrator finds the final report to be proper in all respects:

(1) All amounts recovered in liquidation shall be paid to the Administrator; and

(2) The remaining obligation of the Administrator to the Lender under the guarantee, if any, will be paid directly to Lender by the Administrator.

(i) The Administrator shall not be required to make any payment under paragraphs (a) and (b) of this section if the Administrator finds, before the expiration of the periods described in such subsections, that the default has been remedied.

(j) The Administrator shall have the right to charge Borrower interest, penalties and administrative costs, including all of the United States' legally assessed or reasonably incurred expenses of its counsel and court costs in connection with any proceeding brought or threatened to enforce payment or performance under applicable loan documents, in accordance with OMB Circular A–129 (*www.whitehouse.gov/omb*), as it may be revised from time to time.

§ 260.47 Events of default for direct loans.

(a) Upon the Borrower's failure to make a scheduled payment, or upon the Borrower's violation of any covenant or condition of the loan documents which constitutes a default under the provisions of the loan documents, the Administrator, at the Administrator's discretion may:

(1) Exercise any and all remedies available under the provisions of the loan agreement and other loan documents, including any guarantees, or inherent in law or equity;

(2) Terminate further borrowing of funds;

(3) Take possession of assets pledged as collateral; and

(4) Liquidate pledged collateral.

(b) The Administrator shall have the right to charge Borrower interest, penalties and administrative costs, including all of the United States' legally assessed or reasonably incurred expenses of its counsel and court costs in connection with any proceeding brought or threatened to enforce payment or performance under applicable loan documents, in accordance with OMB Circular A–129, as it may be revised from time to time.

§ 260.49 Avoiding defaults.

Borrowers are encouraged to contact the Administrator prior to the occurrence of an event of default to explore possible avenues for avoiding such an occurrence.

Subpart F—Loan Guarantees—Lenders

§ 260.51 Conditions of guarantee.

(a) The percentage of the obligation for which Applicant seeks a guarantee is a matter of negotiation between the Lender and the Applicant, subject to the Administrator's approval. The maximum percentage of the total obligation that the Administrator will guarantee is 80 percent. The amount of guarantee allowed will depend on the total credit quality of the transaction and the level of risk believed to be assumed by the Administrator.

(b) A guarantee under this part constitutes an obligation supported by the full faith and credit of the United States and is incontestable except for fraud or misrepresentation of which a Lender or Holder has actual knowledge at the time it becomes such Lender or Holder or which a Lender or Holder participates in or condones. In addition, the guarantee will be unenforceable by the Lender or the Holder to the extent any loss is occasioned by the violation of usury laws, negligent servicing, or failure to obtain the required security regardless of the time at which the Administrator acquires knowledge thereof. Any losses occasioned will be unenforceable to the extent that loan funds are used for purposes other than those specifically approved by FRA in its guarantee.

(c) The Administrator may guarantee an Applicant's obligation to any Lender provided such Lender can establish to the satisfaction of the Administrator that it has the legal authority and sufficient expertise and financial strength to operate a successful lending program. Loan guarantees will only be approved for Lenders with adequate experience and expertise to make, secure, service, and collect the loans.

(d) The Lender may sell all of the guaranteed portion of the loan on the secondary market, provided the loan is

not in default, or retain the entire loan.

(e) When a guaranteed portion of a loan is sold to a Holder, the Holder shall succeed to all rights of the Lender under the loan guarantee to the extent of the portion purchased. The Lender will remain bound to all obligations under the loan guarantee and the provisions of this part. In the event of material fraud, negligence or misrepresentation by the Lender or the Lender's participation in or condoning of such material fraud, negligence or misrepresentation, the Lender will be liable for payments made by the Agency to any Holder.

§ 260.53 Lenders' functions and responsibilities.

Lenders have the primary responsibility for the successful delivery of the program consistent with the policies and procedures outlined in this part. All Lenders obtaining or requesting a loan guarantee from the Administrator are responsible for:

(a) *Loan processing.* Lender shall be responsible for all aspects of loan processing, including:

(1) Processing applications for the loan to be guaranteed;

(2) Developing and maintaining adequately documented loan files;

(3) Recommending only loan proposals that are eligible and financially feasible;

(4) Obtaining valid evidence of debt and collateral in accordance with sound lending practices;

(5) Supervising construction, where appropriate;

(6) Distributing loan funds;

(7) Servicing guaranteed loans in a prudent manner, including liquidation if necessary; and

(8) Obtaining the Administrator's approval or concurrence as required in the loan guarantee documentation;

(b) *Credit evaluation.* Lender must analyze all credit factors associated with each proposed loan and apply its professional judgment to determine that the credit factors, considered in combination, ensure loan repayment. The Lender must have an adequate underwriting process to ensure that loans are reviewed by other than the originating officer. There must be good credit documentation procedures;

(c) *Environmental responsibilities.* Lender has a responsibility to become familiar with Federal environmental requirements; to consider, in consultation with the prospective borrower, the potential environmental impacts of their proposals at the earliest planning stages; and to develop proposals that minimize the potential to adversely impact the environment. Lender must alert the Administrator to any controversial environmental issues related to a proposed project or items that may require extensive environmental review. Lender must assist borrowers as necessary to comply with the environmental requirements outlined in this part. Additionally, Lender will assist in the collection of additional data when the Agency needs such data to complete its environmental review of the proposal; and assist in the resolution of environmental problems;

(d) *Loan closing.* The Lender will conduct or arrange for loan closings; and

(e) *Fees and charges.* The Lender may establish charges and fees for the loan provided they are similar to those normally charged other Applicants for the same type of loan in the ordinary course of business.

§ 260.55 Lender's loan servicing.

(a) The lender is responsible for servicing the entire loan and for taking all servicing actions that are prudent. This responsibility includes but is not limited to the collection of payments, obtaining compliance with the covenants and provisions in the loan documents, obtaining and analyzing financial statements, verification of tax payments, and insurance premiums, and maintaining liens on collateral.

(b) The lender must report the outstanding principal and interest balance on each guaranteed loan semiannually.

(c) At the Administrator's request, the Lender will periodically meet with the Administrator to ascertain how the guaranteed loan is being serviced and that the conditions and covenants of the loan documents are being enforced.

(d) The Lender must obtain and forward to the Administrator the Borrower's annual financial statements within 120 days after the end of the

Borrower's fiscal year and the due date of other reports as required by the loan documents. The Lender must analyze the financial statements and provide the Agency with a written summary of the Lender's analysis and conclusions, including trends, strengths, weaknesses, extraordinary transactions, and other indications of the financial condition of the Borrower.

(e) Neither the Lender nor the Holder shall alter, nor approve any amendments of, any loan instrument without the prior written approval of the Administrator.

PART 261—CREDIT ASSISTANCE FOR SURFACE TRANSPORTATION PROJECTS

AUTHORITY: Secs. 1501 *et seq.*, Pub. L. 105–178, 112 Stat. 107, 241, as amended; 23 U.S.C. 181–189 and 315; 49 CFR 1.49.

SOURCE: 64 FR 29753, June 2, 1999, unless otherwise noted.

§ 261.1 Cross-reference to credit assistance.

The regulations in 49 CFR part 80 shall be followed in complying with the requirements of this part. Title 49 CFR part 80 implements the Transportation Infrastructure Finance and Innovation Act of 1998, secs. 1501 *et seq.*, Pub. L. 105–178, 112 Stat. 107, 241.

PART 262—IMPLEMENTATION OF PROGRAM FOR CAPITAL GRANTS FOR RAIL LINE RELOCATION AND IMPROVEMENT PROJECTS

Sec.

262.1 Purpose.
262.3 Definitions.
262.5 Allocation requirements.
262.7 Eligibility.
262.9 Criteria for selection of projects.
262.11 Application process.
262.13 Matching requirements.
262.15 Environmental assessment.
262.17 Combining grant awards.
262.19 Close-out procedures.

AUTHORITY: 49 U.S.C. 20154 and 49 CFR 1.49.

SOURCE: 73 FR 39886, July 11, 2008, unless otherwise noted.

§ 262.1 Purpose.

The purpose of this part is to carry out the statutory mandate set forth in 49 U.S.C. 20154 requiring the Secretary of Transportation to promulgate regulations implementing a capital grants program to provide financial assistance for local rail line relocation and improvement projects.

§ 262.3 Definitions.

Administrator means the Federal Railroad Administrator, or his or her delegate.

Allowable costs means those project costs for which Federal funding may be expended under this part. Only construction and construction-related costs will be allowable.

Construction means supervising, inspecting, demolition, actually building, and incurring all costs incidental to building a project described in § 262.9 of this part, including bond costs and other costs related to the issuance of bonds or other debt financing instruments and costs incurred by the Grantee in performing project related audits, and includes:

(1) Locating, surveying, and mapping;

(2) Track and related structure installation, restoration, and rehabilitation;

(3) Acquisition of rights-of-way;

(4) Relocation assistance, acquisition of replacement housing sites, and acquisition and rehabilitation, relocation, and construction of replacement housing;

(5) Elimination of obstacles and relocation of utilities; and

(6) Any other activities as defined by FRA, including architectural and engineering costs, and costs associated with compliance with the National Environmental Policy Act, National Historic Preservation Act, and related statutes, regulations, and orders.

FRA means the Federal Railroad Administration.

Improvement means repair or enhancement to existing rail infrastructure, or construction of new rail infrastructure, that results in improvements to the efficiency of the rail system and the safety of those affected by the system.

Non-federal share means the portion of the allowable cost of the local rail

line relocation or improvement project that is being paid for through cash or in-kind contributions by a State or other non-Federal entity or any combination thereof.

Private entity means any domestic or foreign nongovernmental for-profit or not-for-profit organization.

Project means the local rail line relocation or improvement for which a grant is requested under this section.

Quality of life means the level of social, environmental and economic satisfaction and well being a community experiences, and includes factors such as first responders' emergency response time, impact on emergency services, accessibility to the disabled as required under the Americans with Disabilities Act and section 504 of the Rehabilitation Act of 1973 (as amended), school access, safety, traffic delay and congestion, the environment, grade crossing safety, and noise levels.

Real property means land, including land improvements, structures and appurtenances thereto, excluding movable machinery and equipment.

Relocation means moving a rail line vertically or laterally to a new location. Vertical relocation refers to raising above the current ground level or sinking below the current ground level a rail line. Lateral relocation refers to moving a rail line horizontally to a new location.

Secretary means the Secretary of Transportation.

State except as used in §262.17, means any of the fifty United States, a political subdivision of a State, and the District of Columbia. In §262.17, *State* means any of the fifty United States and the District of Columbia.

Tangible personal property means property, other than real property, that has a physical existence and an intrinsic value, including machinery, equipment and vehicles.

§262.5 Allocation requirements.

At least fifty percent of all grant funds awarded under this section out of funds appropriated for a fiscal year shall be provided as grant awards of not more than $20,000,000 each. Designated, high-priority projects will be excluded from this allocation formula. FRA will adjust the $20,000,000 amount to reflect inflation for fiscal years beginning after fiscal year 2006 based on the materials and supplies component from the all-inclusive index of the *AAR Railroad Cost Indexes*.

§262.7 Eligibility.

(a) A State is eligible for a grant from FRA under this section for any construction project for the improvement of the route or structure of a rail line that either:

(1) Is carried out for the purpose of mitigating the adverse effects of rail traffic on safety, motor vehicle traffic flow, community quality of life, or economic development; or

(2) Involves a lateral or vertical relocation of any portion of the rail line.

(b) Only costs associated with construction as defined in §262.3 will be considered allowable costs.

§262.9 Criteria for selection of projects.

Applicants must submit evidence sufficient for the FRA to determine whether projects proposed for Federal investment are cost-effective in terms of the benefits achieved in relation to the funds expended. To that end, the FRA will consider the anticipated public and private benefits associated with each rail line relocation or improvement project. In evaluating applications, FRA will consider the following factors in determining whether to grant an award to a State under this part.

(a) The capability of the State to fund the rail line relocation project without Federal grant funding;

(b) The requirement and limitation relating to allocation of grant funds provided in §262.5;

(c) Equitable treatment of various regions of the United States;

(d) The effects of the rail line, relocated or improved as proposed, on motor vehicle and pedestrian traffic, safety, community quality of life, and area commerce;

(e) The effects of the rail line, relocated as proposed, on the freight rail and passenger rail operations on the line;

(f) Any other factors FRA determines to be relevant to assessing the effectiveness and/or efficiency of the grant

application in achieving the goals of the national program, including the level of commitment of non-Federal and/or private funds to a project and the anticipated public and private benefits.

§ 262.11 Application process.

(a) All grant applications for opportunities funded under this subsection must be submitted to FRA through *www.grants.gov*. Opportunities to apply will be posted by FRA on *www.grants.gov* only after funds have been appropriated for Capital Grants for Rail Line Relocation Projects. The electronic posting will contain all of the information needed to apply for the grant, including required supporting documentation.

(b) In addition to the information required with an individual application, a State must submit a description of the anticipated public and private benefits associated with each rail line relocation or improvement project described in § 262.7(a)(1) and (2) and the State's assessment of how those benefits outweigh the costs of the proposed project. The determination of such benefits shall be developed in consultation with the owner and user of the rail line being relocated or improved or other private entity involved in the project. The State should also identify any financial contributions or commitments it has secured from private entities that are expected to benefit from the proposed project.

(c) Potential applicants may request a meeting with the FRA Associate Administrator for Railroad Development or his designee to discuss the nature of the project being considered.

§ 262.13 Matching requirements.

(a) A State or other non-Federal entity shall pay at least ten percent of the construction costs of a project that is funded in part by the grant awarded under this section.

(b) The non-Federal share required by paragraph (a) of this section may be paid in cash or in-kind. In-kind contributions that are permitted to be counted under this section are as follows:

(1) A contribution of real property or tangible personal property (whether provided by the State or a person for the state) needed for the project;

(2) A contribution of the services of employees of the State or other non-Federal entity or allowable costs, calculated on the basis of costs incurred by the State or other non-Federal entity for the pay and benefits of the employees, but excluding overhead and general administrative costs;

(3) A payment of any allowable costs that were incurred for the project before the filing of an application for a grant for the project under this part, and any in-kind contributions that were made for the project before the filing of the application; if and to the extent that the costs were incurred or in-kind contributions were made, as the case may be, to comply with a provision of a statute required to be satisfied in order to carry out the project.

(c) In determining whether to approve an application, FRA will consider the feasibility of seeking financial contributions or commitments from private entities involved with the project in proportion to the expected benefits determined under § 262.11(b) that accrue to such entities from the project.

§ 262.15 Environmental assessment.

(a) The provision of grant funds by FRA under this Part is subject to a variety of environmental and historic preservation statutes and implementing regulations including, but not limited to, the National Environmental Policy Act (NEPA) (42 U.S.C. 4332 *et seq.*), Section 4(f) of the Department of Transportation Act (49 U.S.C. 303(c)), the National Historic Preservation Act (16 U.S.C. 470(f)), and the Endangered Species Act (16 U.S.C. 1531). Appropriate environmental and historic documentation must be completed and approved by the Administrator prior to a decision by FRA to approve a project for physical construction. FRA's ''Procedures for Considering Environmental Impacts,'' as posted at *http://www.fra.dot.gov/us/content/252*, the NEPA regulation of the Council on Environmental Quality (40 CFR part 1500) and the Advisory Council on Historic Preservation Protection of Historic Properties regulation (36 CFR part 800)

will govern FRA's compliance with applicable environmental and historic preservation review requirements.

(b) States have two options for proceeding with environmental/historic preservation reviews. A State may file an application under subsection § 262.11 seeking funds for preliminary design and environmental/historic preservation compliance for a potentially eligible project and FRA will review and decide on the application as outlined in this Part. Alternatively, a State may proceed with and fund any costs associated with environmental/historic preservation reviews (including environmental assessments and categorical excisions, but not environmental impact statements since there are restrictions on what types of entities can manage an environmental impact statement) and seek reimbursement from FRA for these costs to the extent they otherwise qualify as allowable costs if FRA later approves the project for physical construction and enters into a grant agreement with the State. If a State pays for the compliance work itself, it may apply this cost to the 10% matching requirement if a grant is awarded. Applicants should consult with FRA before beginning any environmental or historic preservation analysis.

§ 262.17 Combining grant awards.

Two or more States, but not political subdivisions of States, may, pursuant to an agreement entered into by the States, combine any part of the amounts provided through grants for a project under this section provided:

(1) The project will benefit each of the States entering into the agreement; and

(2) The agreement is not a violation of the law of any such State.

§ 262.19 Close-out procedures.

(a) Thirty days before the end of the grant period, FRA will notify the State that the period of performance for the grant is about to expire and that close-out procedures will be initiated.

(b) Within 90 days after the expiration or termination of the grant, the State must submit to FRA any or all of the following information, depending on the terms of the grant:

(1) Final performance or progress report;

(2) Financial Status Report (SF–269) or Outlay Report and Request for Reimbursement for Construction Programs (SF–271);

(3) Final Request for Payment (SF–270);

(4) Patent disclosure (if applicable);

(5) Federally-owned Property Report (if applicable)

(c) If the project is completed, within 90 days after the expiration or termination of the grant, the State shall complete a full inspection of all construction work completed under the grant and submit a report to FRA. If the project is not completed, the State shall submit a report detailing why the project was not completed.

(d) FRA will review all close-out information submitted, and adjust payments as necessary. If FRA determines that the State is owed additional funds, FRA will promptly make payment to the State for any unreimbursed allowable costs. If the State has received more funds than the total allowable costs, the State must immediately refund to the FRA any balance of unencumbered cash advanced that is not authorized to be retained for use on other grants.

(e) FRA will notify the State in writing that the grant has been closed out.

PART 264—ENVIRONMENTAL IMPACT AND RELATED PROCEDURES

AUTHORITY: 42 U.S.C. 4321 *et seq.;* 49 U.S.C. 303; 23 U.S.C. 139, 327, 330; 40 CFR parts 1500–1508; 49 CFR 1.81; Pub. L. 112–141, 126 Stat. 405, Section 1319; and Pub. L. 114–94, 129 Stat. 1312, Sections 1309, 1432, 11502, and 11503.

SOURCE: 79 FR 55403, Sept. 16, 2014, unless otherwise noted.

§ 264.101 Cross reference to environmental impact and related procedures.

The procedures for complying with the National Environmental Policy Act of 1969, as amended (42 U.S.C. 4321 *et seq.*), and related statutes, regulations, and orders are set forth in part 771 of title 23 of the Code of Federal Regulations. The procedures for complying with 49 U.S.C. 303, commonly known as

''Section 4(f),'' are set forth in part 774 of title 23 of the Code of Federal Regulations. The procedures for complying with the Surface Transportation Project Delivery Program application requirements and termination are set forth in part 773 of title 23 of the CFR. The procedures for participating in and complying with the program for eliminating duplication of environmental reviews are set forth in part 778 of title 23 of the CFR.

PART 266—ASSISTANCE TO STATES FOR LOCAL RAIL SERVICE UNDER SECTION 5 OF THE DEPARTMENT OF TRANSPORTATION ACT

Sec.

266.1 Definitions.
266.3 Rail Service Assistance Program.
266.5 State eligibility.
266.7 Project eligibility.
266.9 Federal/State share.
266.11 Allowable costs.
266.13 Distribution of funds.
266.15 Requirements for State Rail Plan.
266.17 Applications.
266.19 Environmental impact.
266.21 Grant agreement and disbursement.
266.23 Record, audit, and examination.
266.25 Waivers and modifications.

AUTHORITY: Sec. 5 of the Department of Transportation Act (49 U.S.C. 1654), as amended by the Local Rail Service Assistance Act of 1978, Pub. L. 95–607, 92 Stat. 3059.

SOURCE: 44 FR 51129, Aug. 30, 1979, unless otherwise noted.

§ 266.1 Definitions.

As used in this part:

Acquisition assistance means funds granted to a State under section 5(f)(2) of the Department of Transportation Act (49 U.S.C. 1654(f)(2)) to cover the cost of acquiring by purchase, lease, or in such other manner as the State considers appropriate, a line of railroad or other rail properties, or any interest therein for existing or future rail freight service.

Act means the Department of Transportation Act (49 U.S.C. 1650 *et seq.*).

Administrator means the Administrator of the Federal Railroad Administration or the Administrator's delegate.

Cash means an outlay of funds.

Commission means the Interstate Commerce Commission or any successor Federal agency to the relevant activity.

Common carrier means a person providing railroad transportation for compensation who is subject to the jurisdiction of the Commission under subchapter I of chapter 105 of title 49 of the U.S.C.

Designated State Agency means the State agency designated under section 5(j)(2) of the Act (49 U.S.C. 1654(j)(2)).

Entitlement means the amount of assistance which a State is eligible to receive annually under section 5(h) of the Act (49 U.S.C. 1654(h)).

Equipment means rolling stock of the kind generally used by American railroads in revenue freight service.

Facilities means track, ties, roadbed and related structures including terminals, team tracks and appurtenances, bridges and tunnels, and other structures used or usable for rail service operations.

FRA means the Federal Railroad Administration.

Federal Share means the contribution by the Administrator under section 5(g) of the Act (49 U.S.C. 1654(g)) to a State's rail service assistance program.

Final System Plan means the plan approved by the Congress under section 208 of the Regional Rail Reorganization Act of 1973 (45 U.S.C. 718).

Gross ton miles per mile means the combined weight of locomotives and all trailing cars and their contents used in revenue freight trains multiplied by the number of route miles traveled and divided by the number of route miles of the line.

Line means a line of railroad.

Maintenance means inspection and light repairs, emergency repairs and a planned program of periodic maintenance which is necessary to keep a line at its existing condition or to comply with FRA Class 1 Safety Standards.

Planning assistance means funds granted to a State under section 5(i) of the Act (49 U.S.C. 1654(i)) to meet the cost of establishing (including developing a planning application), implementing, revising, and updating the State Rail Plan required by section 5(j) of the Act (49 U.S.C. 1654(j)).

Planning Work Program means that portion of a State's planning application which outlines the State's plan for establishing, implementing, revising, or updating a State Rail Plan which meets the requirements of section 5(i) of the Act, (49 U.S.C. 1654(i)).

Program operation assistance means funds granted to a State to cover those administrative costs allowable under Federal Management Circular 74–4.

Rail Act means the Regional Rail Reorganization Act of 1973 (45 U.S.C. 701 *et seq.*).

Rail banking means the acquisition of an interest in a rail right-of-way sufficient to ensure its preservation for future rail freight service.

Rail facility construction assistance means funds granted to a State under section 5(f)(5) of the Act (49 U.S.C. 1654(f)(5)) to cover the cost of constructing rail or rail related facilities (including new connections between two or more existing lines, intermodal freight terminals, sidings, and relocation of existing lines) for the purpose of improving the quality and efficiency of rail freight service.

Rail service continuation assistance means funds granted to a State under section 5(f)(1) of the Act (49 U.S.C. 1654(f)(1)) to cover rail service continuation payments for the difference between the revenue attributable to a line of railroad and the avoidable costs of providing rail service on that line, together with a reasonable return on the value of the line and other rail properties related to that line, all as determined in accordance with 49 CFR part 1121 with the following exceptions:

(1) Where service was eligible to be subsidized under section 402(c)(2) (A) and (B) of the Rail Act, rail service continuation assistance means funds for payments determined in accordance with 49 CFR part 1125; and

(2) Where service was eligible to be subsidized under section 402(c)(2)(C) of the Rail Act, rail service continuation assistance means funds for payments calculated, to the greatest extent possible, in a manner consistent with 49 CFR part 1121.

Rehabilitation or improvement assistance means funds granted to a State under section 5(f)(3) of the Act (49 U.S.C. 1654(f)(3)) to cover the cost of replacing or upgrading, to the extent necessary to permit adequate and efficient rail freight service, facilities needed to provide service on a line.

Relocation costs means actual expenses directly incurred in moving shippers from a line to a new location.

State means any State or the District of Columbia in which a common carrier maintains any line.

State Rail Plan means the current plan, including all updates, revisions, and amendments required by section 5(j)(1) of the Act (49 U.S.C. 1654(j)(1)).

Substitute service assistance means funds granted to a State under section 5(f)(4) of the Act (49 U.S.C. 1654(f)(4)) to cover the cost of reducing the costs of lost rail service in a manner less expensive than continuing rail service and includes (but is not limited to) the acquisition, construction, or improvement of facilities for the provision of substitute freight transportation services and relocation costs.

§ 266.3 Rail Service Assistance Program.

(a) *Scope of the program.* The Rail Service Assistance Program includes:

(1) Rail service continuation assistance;

(2) Acquisition assistance;

(3) Rehabilitation or improvement assistance;

(4) Substitute service assistance;

(5) Rail facility construction assistance;

(6) Planning assistance; and

(7) Program operations assistance.

(b) *Special limitations on planning assistance and program operation assistance.* (1) A State is eligible to receive up to $100,000, or 5 percent of its entitlement, whichever is greater, as planning assistance; and

(2) A State is eligible to receive up to 5 percent of the total amount of funds granted to it each fiscal year under paragraphs (a)(1) to (5) of this section as program operation assistance.

§ 266.5 State eligibility.

(a) *General eligibility requirements under the rail service assistance program.* A State is eligible for assistance if:

(1) The State has certified pursuant to section 5(j)(4) of the Act that it has or will adopt and maintain adequate

procedures for financial control, accounting and performance evaluation in order to assure proper use of Federal funds;

(2) For purpose of establishing a State Rail Plan, the State has submitted, in accordance with § 266.17(e) of this part, a planning application; and

(3) For any other assistance,

(i) The State has established an adequate plan for rail services in the State which:

(A) Meets the requirements of § 266.15 of this part;

(B) Is part of an overall planning process for all transportation services in the State;

(C) Includes a suitable procedure for updating, revising, and amending such plan; and

(D) As updated, revised, or amended has been approved by the Administrator;

(ii) Such State Rail Plan:

(A) Is administered or coordinated by a designated State agency;

(B) Provides for the equitable distribution of resources; and

(C) Includes a methodology for determining the ratio of benefits to costs of projects for which acquisition assistance, rehabilitation or improvement assistance, substitute service assistance, and rail facility construction assistance is sought;

(iii) The State agency:

(A) Has authority and administrative jurisdiction to develop, promote, supervise, and support safe, adequate, and efficient rail transportation services;

(B) Employs or will employ, directly or indirectly, sufficient trained and qualified personnel;

(C) Maintains or will maintain adequate programs of investigation, research, promotion, and development with provision for public participation; and

(D) Is designated and directed solely or in cooperation with other State agencies to take all practicable steps to improve transportation safety and to reduce transportation-related energy utilization and pollution; and

(iv) The State undertakes to immediately notify the Administrator of any changes in conditions which might affect its compliance with this section.

§ 266.7 Project eligibility.

(a) *Rail service continuation assistance, acquisition assistance and substitute service assistance.* A project is eligible for assistance under § 266.3(a) (1), (2), and (4) of this part, respectively, if:

(1) The Commission pursuant to 49 U.S.C. 10903 has found since February 5, 1976, that the public convenience and necessity permit the abandonment and discontinuance of rail service on the line related to the project, except that any such line or related project eligible prior to October 1, 1978, is eligible only until September 30, 1981 and any such line eligible for rail service continuation assistance shall receive such assistance for no more than 36 months after October 1, 1978;

(2) The line related to the project was eligible for assistance under section 402 of the Rail Act (45 U.S.C. 762), except that any such line or related project is eligible only until September 30, 1981; or

(3) For purposes of acquisition assistance, the line related to the project is listed for possible inclusion in a rail bank in Part III, Section C of the Final System Plan.

(b) *Rehabilitation and improvement assistance and rail facility construction assistance.* A project is eligible for assistance under § 266.3(a) (3) and (5) of this part, respectively, if:

(1)(i) The Commission has not made a finding that the public convenience and necessity would require or permit abandonment or discontinuance of rail service on the line related to the project;

(ii) Any pending application for a certificate of abandonment or discontinuance of rail service on the line related to the project is withdrawn within a reasonable period (as determined by the Administrator) following the execution of the grant agreement and before Federal funds are disbursed for the project; and

(iii)(A) The line related to the project is certified by the railroad as having carried three million gross ton miles per mile or less during the prior year; or

(B) The line related to the project is certified by the railroad in a written statement which identifies the name of the line, the State or States in which it

is located, its length, termini, and termini mile posts as having carried between three and five million gross ton miles per mile during the prior year, and the Administrator has determined that the project is consistent with proposals made under the authority of subsections 5 (a) through (e) of the Act (49 U.S.C. 1654 (a)–(e));

(2)(i) An application for a certificate of abandonment or discontinuance of rail service on the line related to the project has been filed with the Commission during the period February 5, 1976 through December 31, 1978, whether or not such application has been granted; or

(ii) During the period February 5, 1976, through December 31, 1978, the Commission has found that the public convenience and necessity would require or permit abandonment or discontinuance of rail service on the line related to the project irrespective of when the application was filed;

(3) The line related to the project is listed for possible inclusion in a rail bank in Part III, Section C of the Final System Plan; or

(4) The line related to the project was eligible to be acquired under section 402(c)(3) of the Rail Act (45 U.S.C. 762(c)(3)).

(c) Projects eligible under paragraphs (b)(2), (b)(3), and (b)(4), of this section are eligible only until September 30, 1981. Projects initially eligible under paragraph (b)(2) of this section, may subsequently become eligible under paragraph (b)(1) of this section, if the Commission issues a new certificate of public convenience and necessity with respect to the line related to the project.

§ 266.9 Federal/State share.

(a) *Federal share.* The Federal share of allowable costs under the Rail Service Assistance Program is 80 percent, with the exception that the Federal share of payments to be covered by rail service continuation assistance shall be 70 percent for any third twelve month period which begins on or after October 1, 1980 that such assistance is provided.

(b) *State share-general.* The State share of allowable costs under the Rail Service Assistance Program shall be provided either in cash or through eligible in-kind benefits which would not otherwise have been provided. When more than the required State share is provided during the Federal fiscal year beginning October 1, 1978, or thereafter, the amount in excess of the required State share may be carried forward to subsequent fiscal years. The State share of allowable costs under the Rail Service Assistance Program may not be satisfied directly or indirectly by any Federal funds unless the funds are provided through a Federal program which specifically authorizes the use of such funds to satisfy the non-Federal share of a Federally subsidized program.

(c) *In-kind benefits*—(1) *Eligible types of benefits and their valuation.* The following types of in-kind benefits are eligible when they are provided for projects eligible under § 266.7 of this part (whether or not Federal assistance is requested for the projects) or they are activities which would be eligible for planning and program operation assistance. Eligible in-kind benefits are valued as follows:

(i) The value of forgiven taxes, such as those portions of gross receipts or revenue taxes which are applicable to an approved project or property taxes on project related property, shall be the amount which would otherwise have been levied by the taxing authority. Forgiveness may be through exemption or remission;

(ii) The value of trackage rights secured by a State for a common carrier shall be the amount paid by railroads for comparable rights on comparable rail freight properties;

(iii) The value of State salaries for State public employees working in the State Rail Service Assistance Program, shall be consistent with rates paid for similar work by state public employees working in comparable state programs but shall not include overhead or general administrative costs;

(iv) The value of donations by the State or by a third party on behalf of the State of real property or tangible personal property of the kind necessary for safe and efficient operation of rail freight service, such as State or locally owned or leased buildings used in rail

freight operations or equipment or materials, shall be determined as follows:

(A) The value of State tangible personal property shall be established at the State's actual cost in accordance with Federal Management Circular 74–4;

(B) The value of donated tangible personal property shall be determined in accordance with Attachment F of Office of Management and Budget Circular (OMB) A–102;

(C) The value of State real property shall be established at the State's actual cost in accordance with Federal Management Circular 74–4, if at least one independent appraisal based on the results of a title search was performed when the property was purchased by the State, otherwise it shall be valued at the fair market value as established by at least one independent appraisal based on the results of a title search at the time the state proposes to make the property available as in-kind benefit; and

(D) The value of donated real property shall be its fair market value, at the time of donation to the State, as established by at least one independent appraisal based on the results of a title search;

(2) *Eligibility criteria.* To be applied toward the State share, in-kind benefits must:

(i) Be verifiable from the State's records;

(ii) Be necessary and reasonable for proper and efficient accomplishment of the objectives of the Rail Service Assistance Program;

(iii) Be provided for in the approved grant budget; and

(iv) Be approved under paragraph (3) of this paragraph (c).

(v) The State shall submit such information as the Administrator may request to verify the value of in-kind benefits.

(3) *Request for approval.* A request for approval of the in-kind benefits are to be applied and shall include the following:

(i) Full name and principal business address of the contributor if other than grantee;

(ii) Detailed documentation of the in-kind benefits including identification of the kind of in-kind benefits to be provided as well as their estimated value. When in-kind benefits are to be provided by a third party, a copy of the executed agreement between the State and the third party; and

(iii) Certification by the State that the contribution will be used solely for the purposes documented.

§ 266.11 Allowable costs.

Allowable costs include only the following costs which are properly allocable to the work performed: Planning and program operation costs which are allowed under Federal Management Circular 74–4; and costs of projects eligible under § 266.7 of this part. All allowable costs shall be authorized by a fully executed grant agreement. A State may incur costs prior to the execution of a grant agreement only if the Administrator, based on the State's demonstration of a compelling need to incur costs prior to the execution of a grant agreement, has authorized the costs in writing prior to their incurrence by the State.

§ 266.13 Distribution of funds.

(a) *Formula.* Funds appropriated for or reallocated in any fiscal year (in this section referred to jointly as ''funds'') are to be distributed to each State as follows:

(1) Two-thirds of the funds will be allocated in the ratio which a State's rail mileage that, in accordance with 49 U.S.C. 10904(d), is either potentially subject to abandonment or is to become the subject of an application for a certificate of abandonment or discontinuance which a carrier plans to submit, but has not yet submitted, bears to the total such rail mileage in all the States;

(2) One-third of the funds will be allocated in the ratio which a State's rail mileage for which the Commission has found within three years prior to the first day of the fiscal year for which the funds are being allocated that the public convenience and necessity permits the abandonment, or the discontinuance, of rail service on such rail mileage, bears to the total such rail mileage in all the States. Until September 30, 1981, such rail mileage includes the rail mileage which was eligible under the Rail Service Assistance

Program pursuant to section 402 of the Rail Act, and all rail mileage which, prior to October 1, 1978, had been included for formula allocation purposes. The Administrator will calculate rail mileage under this paragraph as of October 1 of each year; and

(3) The above calculations will be adjusted if necessary so that no State receives less than 1 percent of the funds appropriated for a fiscal year.

(b) *Reallocation.* The Administrator will reallocate among the States funds which have not been granted under an executed grant agreement by the end of the fiscal year for which the funds were appropriated and funds determined by a Federal audit to be in excess of allowable costs when they have not been granted under an executed grant agreement by the end of the fiscal year in which the Federal audit is made. Reallocated funds are distributed in accordance with the allocation formula described in paragraph (a) of this section.

(c) *Interstate sharing of allocated funds.* Where not in violation of State law, two or more States, which are eligible to receive assistance under the Rail Service Assistance Program pursuant to § 266.5 of this part may combine any portion of their entitlements for purposes of conducting any eligible project of mutual benefit provided that they enter into an agreement for this purpose.

§ 266.15 Requirements for State Rail Plan.

(a) *State planning process.* The State Rail Plan shall be based on a comprehensive, coordinated and continuing planning process for all transportation services within the State and shall be developed with an opportunity for participation by persons interested in rail activity in the State and adjacent States where appropriate. At a minimum, the State shall hold a public hearing if, on the basis of reasonable public notice appearing in the press, there is sufficient public interest to justify a hearing. Public notice shall be given, in accordance with applicable State law and practice concerning comparable matters, that a draft of the State Rail Plan is available for public inspection at a reasonable time in advance of the hearing. The State shall enable local and regional governmental bodies to review and comment on appropriate elements of the State Rail Plan. Provisions shall also be made for updating, revising, and amending the State Rail Plan.

(b) *Format of the State Rail Plan.* Each item submitted in response to a requirement of this section shall reference that requirement by subsection, paragraph, and subparagraph.

(c) *Contents of the State Rail Plan.* Each State Rail Plan shall:

(1) Specify the objectives of the State's Rail Service Assistance Program and explain how the implementation of the State Rail Plan will accomplish these objectives and explain relevant data sources, assumptions, analytical methodology, other legal constraints and special problems or conditions which will aid the public in understanding the State Rail Plan;

(2) Contain an illustration of the State's entire rail system on suitable scale maps of the State highway system (such as a reduction of the County Highway Planning Series of maps), designating with respect to each line listed under subparagraph (3) of this subsection, including all lines connecting to them:

(i) The operating carrier or carriers;

(ii) Freight traffic density, and

(iii) Location of passenger service.

These maps shall be accompanied by a written description of the service provided on each line;

(3) Identify the following classes of rail service within the State:

(i) Lines in the State which are eligible for assistance under § 266.7 of this part other than those included in paragraph (c)(3)(ii) of this section;

(ii) Lines in the State which a common carrier has identified on its system diagram map submitted under 49 CFR 1121.20(b) (1) and (2) as potentially subject to abandonment and lines which are anticipated to be the subject of an abandonment or discontinuance application within three years following the date of submission;

(iii) [Reserved]

(iv) Lines in the State for which abandonment or discontinuance applications are pending;

(v) Lines in the State which are involved in the following kinds of proposals that have been submitted to the Commission for approval or are in the process of negotiation, to the extent that this information is publicly available:

(A) Mergers;

(B) Consolidations;

(C) Reorganizations;

(D) Purchases by other common carriers; or

(E) Other unification and coordination projects.

(vi) Rail projects for which the State plans to request Federal assistance or approval as in-kind benefits; and

(vii) Rail projects for which a State provides or plans to provide assistance from sources other than the Rail Service Assistance Program, including the estimated cost of the projects;

(4) Establish and describe screening criteria to be used in selecting the eligible lines which the State analyzes in detail, identify these lines, and explain how the application of the screening criteria resulted in their selection;

(5) Describe the State's methodology for determining the ratio of benefits to the costs of proposed projects eligible under §266.7 of this part (except projects to be funded with rail service continuation assistance);

(6) Include, to the extent that the information is available to the State, the following data for each line the State has selected to analyze in detail:

(i) Annual freight tonnage and carloads segregated by commodity type and indicating any seasonal traffic fluctuations and the number of shippers and receivers on the line aggregated by type (e.g., grain elevator, power plant, heavy manufacturing), including identification of information which a shipper wishes the Administrator to consider confidential to the extent permitted by law;

(ii) Revenues and costs of providing rail freight service on the line;

(iii) Condition of the related rail facilities and equipment, and for a line eligible under §266.7(b) of this part, a description of the particular rail facilities involved in any project a State may be considering on the line;

(iv) When the State is considering a line for rail service continuation assistance, projections of freight traffic needs on the line for at least the three succeeding calendar years and estimates of the amount and type of equipment, the condition of the rail facilities, and the level of service necessary to satisfy the projected traffic needs as well as estimates of the revenue and costs of providing this service; and

(v) When the State is considering a project eligible under §266.7(b) of this part, the amount of funds expended for the maintenance of the line and the kinds of work performed during the five year period preceding its eligibility.

(vi) When the State is considering a line for rail banking, a description of the line's future economic potential, such as the existence of fossil fuel reserves or agricultural production likely to be served;

(7) Describe the alternatives which the State will analyze in applying the methodology described in paragraph (c)(5) of this section, such as: Rail service continuation payments, rehabilitation or improvement, acquisition, rail facility construction, potential for moving freight by alternate modes, or abandonment or discontinuance of rail freight service;

(8) Apply the methodology described in paragraph (c)(5) of this section to each line the State has selected to analyze in detail;

(9) Specify the State's decision regarding the alternative selected for each line the State has analyzed in detail and include the following:

(i) An indication of whether Federal assistance will be requested or other funds will be used to implement the alternative selected;

(ii) An identification of lines which may be affected by the alternative selected;

(iii) An explanation of how the alternative selected contributes to the accomplishment of the State's objectives as stated in paragraph (c)(1) of this section; and

(iv) A statement of the projected future of the line after the alternative selected is implemented and the line is no longer eligible for rail service continuation assistance under §266.7(a) of this part or after the payback period

used in the State's benefit-cost analysis, whichever is appropriate;

(10) Describe the planning process participation of local and regional governmental bodies, the railroads, railroad labor, rail service users, and the public in general;

(11) Describe the overall planning process for all transportation services in the State; and

(11A) Indicate how the overall planning process in the State addresses the need to improve national energy efficiency, reduce the national use of petroleum and natural gas, and increase the national use of coal.

(12) Include a program of projects which identifies the projects for which the State expects to submit applications and the anticipated submission date. The program shall group the proposed projects in the order they comply with the State's criteria and goals for assistance, and shall:

(i) Identify the type of project (i.e., rail service continuation payments, acquisition, rehabilitation or improvement, rail facility construction, or substitute service), its location, and duration; and

(ii) Include the anticipated amount of funds to be requested for each project:

(d) *Updates, revisions, and amendments of the State Rail Plan*—(1) *General.* As provided for in paragraph (e) of this section, State Rail Plans shall be updated at least on an annual basis but may be revised more frequently at the discretion of the State in accordance with its program needs. Such updates shall be subject to the same review, public participation and approval procedures by the State and FRA as the original State Rail Plan.

(2) *Contents.* Annual updates shall include the following:

(i) A response to unanswered FRA comments on previously submitted updates, revisions, amendments, or the original State Rail Plan;

(ii) An update of information in previous submittals which is no longer accurate as a result of plan implementation, action by a governmental entity or railroad, or changed conditions;

(iii) For lines receiving rail service continuation assistance, inclusion of revenue and cost information from the past year's operating experience and a reevaluation of service based on these new data;

(iv) Updating of the maps and descriptions required under paragraph (c)(2) of this section;

(v) Analysis of any new projects developed by the State in accordance with paragraphs (c)(4), (5) and (6) of this section;

(vi) Changes in agency responsibilities and authority including ability to provide the non-Federal share; and

(vii) Revisions in the State's policies, objectives or long-range expectations.

(e) *Adoption and submission of State Rail Plan and annual updates.* An original and five copies of the State Rail Plan, and any amendments, revisions, or updates shall be submitted to FRA for review and approval with a certification by the Governor, or by the Governor's delegate, that the submission constitutes the State Rail Plan established by the State as provided in section 5(j) of the Act. The State Rail plan, and all amendments, revisions, and updates shall be submitted to the FRA through the appropriate Federal Highway Division Office. A current list of mailing addresses of the above offices will be provided by FRA to each State.

(f) *Review of the State Rail Plan and Updates.* The State Rail Plan and all amendments, revisions, and updates shall analyze in accordance with this section all projects for which the State anticipates requesting rail service assistance, other than planning assistance, during the fiscal year. In accordance with §266.17(b) of this part, a project for which funds are requested must have been addressed in a previously approved State Rail Plan or update. If the Administrator determines that the State Rail Plan or update is not in accordance with this part, the Administrator will notify the State in writing setting forth the Administrator's reasons for such a determination.

[44 FR 51129, Aug. 30, 1979, as amended at 45 FR 58038, Aug. 29, 1980; 48 FR 29274, June 24, 1983]

§266.17 Applications.

(a) *General.* (1) Applications for planning assistance shall comply with paragraphs (b), (c) and (e) of this section.

(2) Applications for rail service continuation assistance shall comply with paragraphs (b), (c), (d) and (f) of this section.

(3) Applications for acquisition assistance shall comply with paragraphs (b), (c), (d) and (g) of this section.

(4) Applications for rehabilitation or improvement assistance and rail facility construction assistance shall comply with paragraphs (b), (c), (d) and (h) of this section.

(5) Applications for substitute service assistance shall comply with paragraphs (b), (c), (d) and (i) of this section.

(b) *Submission.* (1) Applications shall be submitted by the designated State agency using the standard forms contained in Attachment M of Office of Management and Budget Circular No. A–102 (''OMB Circular A–102''). Each item submitted in response to a requirement of this section shall reference that requirement by subsection, paragraph, and subparagraph. Each application shall be consistent with the current State Rail Plan and analyzed in it.

(2) A State may apply for planning assistance to cover prospective costs at any time during the planning process.

(3) Exhibits previously filed with the Administrator need not be refiled unless the prior filing has been rendered obsolete by changed circumstances. Such prior filing shall be appropriately referenced by source, location of data and date of submittal.

(c) *Contents.* Each application shall include:

(1) Full name and principal business address of the applicant;

(2) Name, title, address and phone number of the person to whom correspondence regarding the application should be addressed;

(3) Budget estimates for the total amount of assistance required for projects or planning;

(4) Applicant's proposed means of furnishing its share of the total costs of the projects, as well as copies of executed agreements between the agency and any third party which may be providing the non-Federal share or a portion thereof;

(5) Assurance by the chief executive officer of the applicant that the Federal funds provided under the Act will be used solely for the purpose for which the assistance will be provided and in conformity with limitations on expenditures under the Act and applicable regulations;

(6) Evidence that the applicant has established in accordance with Attachment G of OMB Circular A–102, adequate procedures for financial control, accounting and performance evaluation in order to assure proper use of the Federal funds;

(7) Assurance by applicant's chief executive officer that the timing of all advances by the applicant will comply with the Department of Treasury advance financing regulations (31 CFR part 205);

(8) Statement as to whether the applicant prefers to receive disbursement of Federal funds by advance payment or reimbursement;

(9) Opinion of applicant's legal counsel showing that counsel is familiar with the corporate or other organizational powers of the applicant, that the applicant is authorized to make the application, that the applicant is eligible to participate in the Rail Service Assistance Program in accordance with the provisions of the Act and this part, and that the applicant has the requisite authority to carry out actions proposed in the application and to assume the responsibilities and obligations created thereby;

(10) Assurances that the applicant will comply with and that the program will be conducted in accordance with the following Federal laws, policies, regulations and pertinent directives:

(i) Title VI of the Civil Rights Act of 1964, 42 U.S.C. 2000d *et seq.*, and 49 CFR part 21;

(ii) Section 905 of the Railroad Revitalization and Regulatory Reform Act of 1976, 45 U.S.C. 803, and 49 CFR part 265;

(iii) The Rehabilitation Act of 1973, 29 U.S.C. 794 and 49 CFR part 27 (44 FR 31442, May 31, 1979) relating to non-discrimination on the basis of handicap; and

(iv) The State and Local Fiscal Assistance Act of 1972, 31 U.S.C. 1221 *et seq.* and 31 CFR part 51; and

(11) When two or more States desire to combine their entitlements or any

portion of them for the purpose of funding a project, certification of the Governor or the Governor's delegate of each State involved that it is a party to an interstate agreement as required under section 5(h)(4) of the Act (49 U.S.C. 1654(h)(4)). Such certification shall include the amount of money to be used from each State's entitlement and which State is to enter into a grant for the project.

(d) *Additional contents.* In addition to meeting the requirements of paragraphs (b) and (c) of this section each application except when planning assistance is requested, shall include evidence that the agency submitting the application has the statutory authority and administrative jurisdiction to develop, promote, supervise and support safe, adequate, and efficient rail services; that it employs or will employ, directly or indirectly, sufficient trained and qualified personnel; that it maintains or will maintain adequate programs of investigation, research, promotion, and development with provision for public participation; and that it is designated and directed solely, or in cooperation with other State agencies, to take all practicable steps to improve transportation safety and to reduce transportation related energy utilization and pollution.

(e) *Planning assistance.* In addition to meeting the requirements of paragraphs (b) and (c) of this section, each application for planning assistance shall include a Planning Work Program which, together with such other information the State may choose to submit, demonstrates to the satisfaction of the Administrator that the State's proposed use of planning assistance will produce a State Rail Plan, or an update, amendment or revision which meets the requirements of §266.15 of this part. The Planning Work Program shall include the following information:

(1) An explanation of how the State Rail Plan will be related to the overall planning process for transportation within the State. This explanation shall concentrate on the expectations of the State for the future of local rail freight services and consider such factors as likelihood of profitability of existing rail lines, necessity of rail service continuation payments, State acquisition of rail lines, use of alternate modes of transportation in lieu of rail freight service, and other long-term alternatives;

(2) A description of the methods by which the State will involve local and regional governmental bodies and the public generally in its rail planning process, including its methods of providing for equitable distribution of resources;

(3) An identification of the data to be obtained on the rail network and rail services in the State, the sources of this data, and the methodology to be employed in the collection of the data;

(4) A description of the method by which the State will develop the State Rail Plan, including a brief description of discrete tasks or activities to be accomplished; and

(5) A list of the individuals responsible for the planning, a work schedule and a budget.

(f) *Rail service continuation assistance.* In addition to meeting the requirements of paragraphs (b), (c), and (d) of this section, each application for rail service continuation assistance shall include the following:

(1) The amount of the estimated rail service continuation payment for each line; and

(2) A description of the arrangements which the applicant has made for operation of the rail services to be subsidized including copies of the proposed operating agreements, leases, or other compensation agreements under which service is to be provided, and the results of the application's preaward audit of proposed operators and equipment leasing companies if the equipment to be used in providing the rail service is to be leased by the proposed operator.

(g) *Acquisition assistance.* In addition to meeting the requirements of paragraphs (b), (c), and (d) of this section, each application for acquisition assistance shall include the following:

(1) Copies of the results of a title search, and the basis for the proposed acquisition price including two independent valuation appraisals by qualified appraisers. Such appraisals shall be performed in accordance with the

''Uniform Appraisal Standards for Federal Land Acquisition'' proposed by the Interagency Land Acquisition Conference and shall be based on the results of a title search and comparable sales and shall take cognizance of all easements, encumbrances and restrictions that may affect the value of the property. Such appraisals shall be reviewed by a State Review appraiser to establish just compensation;

(2) Written assurance that the acquisition is being undertaken in accordance with 49 CFR 25.253, 25.255, 25.257, and 25.259 to the greatest extent practicable under State law and fully in compliance with 49 CFR 25.261(a) and 25.263;

(3) Written assurance that the owner of the property to be acquired has been advised of the requirements of 49 CFR 25.259 or will be advised of such requirements prior to the consummation of the acquisition;

(4) A description of the necessary steps, and timing for completion of the acquisition;

(5) When rail service is to be immediately provided over the line, a description of the arrangements which the applicant has made for operation of the rail service, including copies of the proposed operating agreements, leases, and other compensation agreements under which the service is to be provided, and a description of the means by which the State will continue rail service on the property to be acquired once assistance under the Act is terminated;

(6) For applications regarding rail banking, evidence that the properties for which assistance is requested have potential for rail freight service such as plans for agricultural development or existence of fossil fuel reserves, the State's anticipated timetable for returning the line to service, and its proposed use of the property while it is out of service including its maintenance plans; and

(7) Evidence that the anticipated benefits and costs of the proposed acquisition have been analyzed in accordance with the methodology established by the State under §266.15(c)(5) of this part.

(h) *Rehabilitation or improvement assistance and rail facility construction assistance.* (1) In addition to meeting the requirements of paragraphs (b), (c), and (d) of this section, each application for rehabilitation or improvement assistance and rail facility construction assistance shall include the following:

(i) A detailed estimate of the materials and labor required to complete the work, the total estimated costs of the work, the estimated numbers and kinds of ties and other material, the milepost termini involved, and a schedule for completion of the work;

(ii) Evidence that the anticipated benefits and costs of the proposed acquisition have been analyzed in accordance with the methodology established by the State under §266.15(c)(5) of this part;

(iii) When rehabilitation assistance is requested—

(A) A copy of the document by which funds will be granted or loaned (at an interest rate determined by the State) to the owner of the rail properties or the operator of the rail service related to the project; and

(B) An assurance by the chief executive officer of the applicant that:

(*1*) Repaid loan funds and interest accumulated with respect to such funds will not be loaned or granted without the prior written approval of the Administrator;

(*2*) The Federal share of repaid loan funds will be placed in an interest-bearing account or with the prior written approval of the Administrator will be deposited by the borrower, for the benefit and use of the State, in a bank which has been designated by the Secretary of Treasury in accordance with 12 U.S.C. 265; and

(*3*) If the rehabilitated or improved facilities are not used for rail freight service during the useful life of the improvement the Federal share of the fair market value of the improvement or facility will be placed in an interest-bearing account or with the prior written approval of the Administrator will be deposited by the owner of the rail properties, for the benefit and use of the State, in a bank which has been designated by the Secretary of the Treasury in accordance with 12 U.S.C. 265;

(iv) An assurance by chief executive officer of the applicant that rehabilitated or improved facilities or newly constructed facilities will be maintained to prevent deterioration below the speed at which the line could be operated upon completion of the project during the period of time established as the payback period in the benefit-cost analysis of the project;

(2) In addition to meeting the requirements of paragraphs (b), (c), and (d) and (h)(1) of this section, each application for a project eligible under §266.7(b)(2)(i) (if the Commission has made a finding granting the application for abandonment and discontinuance) (ii), (3) or (4) shall also include the following:

(i) An indication of which of the following methods will be used to complete the work, including proposed contracts unless the work will be performed under method (A):

(A) On an actual cost basis by the operator or the applicant;

(B) By contracting for the work in accordance with Attachment O to OMB Circular A–102; or

(C) Under an existing continuing contract between the operator and another firm provided that the applicant can demonstrate the costs are comparable to those under paragraph (h)(2)(i) (A) or (B) of this section; and

(ii) A description of the plans for inspection of the work including identification and qualifications of the staff to be responsible for the inspection and a proposed schedule of inspections; and

(iii) A description of the arrangements made for the operation of rail service over the property including copies of the proposed operating agreements, leases or other compensation agreements under which service is to be provided, and the proposed method of financing the operation of such rail service;

(3) In addition to meeting the requirements of paragraphs (b), (c), (d), and (h)(1) of this section, each application for a project eligible under §266.7 (b)(1) or (2)(i) (if the Commission has not made a finding granting the application for abandonment discontinuance) shall include an assurance by the common carrier which operates service on or owns the line related to the project that if an application for a certificate of abandonment or discontinuance has been filed with the Commission the application will be withdrawn within a reasonable period following execution of a grant agreement and before Federal funds are disbursed for the project; and

(4) When rail facility construction assistance is requested an assurance by the chief executive officer of the applicant that if the facility is abandoned, sold, or converted to non-rail freight use during its useful life, FRA will be compensated an amount computed by applying FRA's participation in the cost of constructing the facility to the fair market value of the facility at the time it is abandoned, sold, or converted to non-rail use.

(i) *Substitute service assistance.* In addition to meeting the requirements of paragraphs (b), (c), and (d) of this section, each application for substitute service assistance shall include:

(1) A detailed description of the substitute service project, including evidence that the cost and scope of the project are limited to that necessary to replace the rail service being discontinued;

(2) Evidence that the anticipated benefits and costs of the proposed acquisition have been analyzed in accordance with the methodology established by the State under §266.15(c)(5) of this part;

(3) For construction or improvement of fixed facilities, a description of the proposed work, including:

(i) The cost and timing of the work; and

(ii) An assurance by the chief executive officer of the applicant that the Federal share of the project will be repaid in accordance with Attachment N of OMB Circular A–102, if the properties are not used for rail freight service during the useful life of the project properties;

(4) For relocation costs, the following assurances by the chief executive officer of the applicant:

(i) When the rail line related to the project is eligible under section 5(k)(4)(A) of the Act (49 U.S.C.

1654(k)(4)(A)), an assurance that the applicant is requesting only such assistance as is needed to relocate the shippers which were receiving rail service on the line at the time the Commission found that the public convenience and necessity would permit discontinuance or abandonment of the rail service;

(ii) When the rail line related to the project is eligible under section 5(k)(4)(B) of the Act (49 U.S.C. 1654(k)(4)(B)), an assurance that assistance is being requested to relocate only the shippers who received rail service on the line as of April 1, 1976; and

(iii) An assurance, and the basis therefor, that the shippers will not be relocated to a line with respect to which an application for a certificate of abandonment or discontinuance has been filed with the Commission or that if an application has been filed it will be withdrawn within a reasonable period following execution of a grant agreement and before Federal funds are disbursed for the project;

(5) An assurance by the chief executive officer of the applicant that after completion of the substitute service project, additional Federal assistance will not be requested for the continuation of the rail freight service that the substitute service is designed to replace, unless the Administrator determines that circumstances have changed so that continuation of rail freight service is more cost-effective than continued use of the substitute service project;

(6) A description of the arrangements made for operation of service where rail service is to be provided in conjunction with a substitute service project, including copies of proposed operating agreements, leases, or other compensation agreements under which service is to be provided; and

(7) An assurance by the chief executive officer of the applicant that assistance provided will not be used to pay the non-Federal share under any Federal program.

(j) *Execution and filing of applications.* (1) Each original application shall bear the date of execution and be signed by the chief executive officer of the agency submitting the application;

(2) Each application for planning assistance, and two (2) copies thereof, shall be filed with the Administrator through the appropriate Federal Highway Administration Division Office;

(3) Each application (excluding requests for planning assistance), and two (2) copies thereof, shall be filed with the Administrator through the appropriate Regional Director of Federal Assistance. A current list of the appropriate mailing addresses of the above officials will be provided by FRA to each State.

§ 266.19 Environmental impact.

(a) *General.* The Administrator has determined that providing assistance to cover the following costs is not a major action significantly affecting the quality of the human environment: Rehabilitation or improvement consisting of work normally performed on a periodic basis which does not change the existing character of the facility (including work to overcome normal periodic maintenance that had been deferred) rail service continuation, acquisition, and planning.

(b) *Substitute service assistance, rail facility construction assistance, and non-exempt rehabilitation or improvement assistance*—(1) *Environmental assessment.* (i) When an applicant requests substitute service assistance, rail facility construction assistance, or rehabilitation or improvement assistance (except for rehabilitation or improvement assistance which is exempt under paragraph (a) of this section), the applicant shall:

(A) Prepare an environmental assessment to determine whether the future use of the property will significantly affect the quality of the human environment; or

(B) Provide sufficient documentation to enable the Administrator to determine that the project satisfies the following criteria:

(*1*) The action is not likely to be environmentally controversial from the point of view of people living within the environment affected by the action or controversial with respect to the availability of adequate relocation housing;

(*2*) The action is not inconsistent with any Federal, State, or local law, regulation, ordinance, or judicial or administrative determination relating to environmental protection;

(*3*) The action will not have any significant adverse impact in any natural, cultural, recreational, or scenic environment(s) in which the action takes place, or on the air or water quality or ambient noise levels of such environment(s);

(*4*) The action will not: use 4(f)-protected properties; adversely affect properties under section 106 of the National Historic Preservation Act; involve new construction location in a wetlands area; or affect a base floodplain;

(*5*) The action will not cause a significant short- or long-term increase in traffic congestion, or other significant adverse environmental impact on any mode of transportation;

(*6*) The action is not an integral part of a program of actions which, when considered separately, would not be classified as major FRA actions, but when considered together would be so classified; and

(*7*) Environmental assessment or documentation is not required by any Federal law, regulation, guideline, order, or judicial or administrative determination other than this part.

(ii) Prior to submitting an application, FRA recommends that the applicant seek the Administrator's advice as to form and substance of the assessment for the project under consideration. The environmental assessment shall utilize an interdisciplinary approach in identifying the type, degree of effect, and probability of occurrence of primary, secondary and cumulative potential environmental impacts (positive and negative) of the proposed action and of alternative courses of action. The depth of coverage shall be consistent with the magnitude of the project and its expected environmental effects. The environmental assessment and all documents used as a basis for the assessment shall be submitted together with the application for assistance.

(2) *Environmental impact statement.* A draft environmental impact statement (EIS) shall be submitted with each application when the environmental assessment concludes that the future use significantly affects the quality of human environment. FRA recommends that prior to submitting the application, the applicant seek the Administrator's advice as to form and substance of the EIS for the project under consideration.

(3) *Finding of no significant impact.* A draft finding of no significant impact declaration shall be submitted with each application when the applicant's environmental assessment concludes that the figure use does not significantly affect the quality of the human environment. The finding of no significant impact shall include a description of the project, and sufficient data and environmental findings to support the conclusions as to the impact upon the quality of the human environment. FRA recommends that prior to submitting the application, the applicant seek the Administrator's advice as to the form and substance of this finding for the project under consideration.

(4) *Section 4(f) determination.* For projects involving the use of any land from a public park, recreation area, wildlife and waterfowl refuge, or historic site of national, State or local significance as determined by the Federal, State, or local officials having jurisdiction thereon, information to support a determination pursuant to section 4(f) of the Act shall be submitted together with the application. The section 4(f) determination shall document that:

(i) There is no feasible and prudent alternative to the use of such land; and

(ii) The project includes all planning to minimize harm resulting from such use.

(5) *Historic preservation.* For projects involving the use of historic, cultural or archeological resources listed or eligible for listing in the National Register of Historic Places, information which documents that the Advisory Council on Historic Preservation has been afforded an opportunity for review and comment on the proposed project in accordance with 16 U.S.C. 470 and 36 CFR part 800 shall be submitted with the application.

(c) *Highway or highway-related facilities.* Substitute service projects involving highway or highway-related facilities are subject to the applicable substantive Federal Highway Administration regulations on environmental considerations (23 CFR part 771).

§ 266.21 Grant agreement and disbursement.

(a) *Grant agreement.* (1) Upon the approval of an application meeting the requirements of § 266.17 of this part, a grant agreement for the Federal share of the approved amount of estimated program costs will be executed by the Administrator and the grantee.

(2) The grant agreement will identify the amount of the grantee's share of program costs to be furnished in cash and through approved in-kind benefits. The grantee shall expend a pro-rata share of its cash contribution at the same time payments of the Federal share are made available to the grantee.

(b) *Disbursement.* (1) Federal funds are provided either in advance by a letter-of-credit or a Treasury check or by reimbursement in accordance with Attachment J of OMB Circular A–102.

(2) Prior to receipt of advance payments, the grantee must have demonstrated to the satisfaction of the Administrator that it has established procedures to comply with OMB Circular A–102, Attachment J, including procedures that will minimize the time elapsing between the receipt of funds by the grantee and their disbursement. Evidence of such compliance shall be provided to the Administrator at least 30 days prior to the anticipated date of receipt of advance payments. An advance by letter-of-credit is used when the rail service assistance is expected to be provided for a minimum of one (1) year, and is expected to involve annual payments aggregating at least $120,000. Otherwise, advance payments are made by Treasury check.

(3) If the grantee is not eligible for advance payments or does not desire them, the grantee will be reimbursed for eligible expenditures at the end of each fiscal quarter upon submission of a request for reimbursement.

(4) Before disbursement of Federal funds can be made to a grantee for payment to third parties under this subsection, the grantee must have executed an agreement with the third party.

(5) Acquisition assistance will be disbursed only after the following have been approved by the Administrator:

(i) A title opinion of the chief legal officer of the grantee that describe the type of title being acquired, and if a general warranty deed is not being given, it must explain why it could not be given. The opinion shall also advise of any need for use of the State's eminent domain powers to assure adequate title. In addition, the opinion shall explain how the defects disclosed by the title search might affect the marketability of the property;

(ii) A written determination that the property acquired is limited to the land and facilities that are needed for the rail freight services which would have been curtailed or abandoned but for the acquisition has been accepted by the Administrator; and

(iii) A written determination that the purchase price is consistent with the value of the property interest being acquired, and the evidence upon which the determination is based.

(c) *Settlement.* (1) Settlement under the grant agreement is made on the basis of a Federal audit which has determined the allowable costs over the entire term of the grant agreement. If the Federal audit determines that the allowable costs under the grant agreement are less than the amount of the grant, the difference shall be refunded to FRA at the end of the fiscal year in which the audit was made unless it has become the subject of another executed grant agreement. Upon termination of a State's participation in the Rail Service Assistance Program, the State shall repay FRA the Federal share of any unused rehabilitation and improvement assistance and any accumulated interest.

§ 266.23 Record, audit, and examination.

(a) Retention and custodial requirements for financial records, supporting documents, statistical records, and all other records pertinent to a grant provided under this part shall be governed by Attachment C of OMB Circular A–102.

(b) The Administrator and the Comptroller General of the United States or any of their duly authorized representatives shall, until the expiration of

three years after submission to the Administrator of the grantee's final accounting of all program funds, and for any longer period necessary to resolve audit findings, have access for the purpose of audit and examination to any books, documents, papers, and records which in the opinion of the Administrator or the Comptroller General of the United States may be related or pertinent to the grants, contracts, or other arrangements arising out of, or in any way connected with, the rail service assistance program.

§ 266.25 Waivers and modifications.

The Administrator may, with respect to individual requests, upon good cause shown, waive or modify any requirement of this part not required by law or make any additional requirements the Administrator deems necessary. Procedures for submission and consideration of petitions for waiver or modification are governed by 49 CFR part 211.

PART 268—MAGNETIC LEVITATION TRANSPORTATION TECHNOLOGY DEPLOYMENT PROGRAM

Subpart A—Overview

Sec.

268.1 Definitions.
268.3 Different phases of the Maglev Deployment Program.
268.5 Federal funding sources for the Maglev Deployment Program.
268.7 Federal/State share and restrictions on the uses of Federal Maglev Funds.

Subpart B—Procedures For Financial Assistance

268.9 Eligible participants.
268.11 Project eligibility standards.
268.13 Deadline for submission of applications for preconstruction planning assistance.
268.15 Form and contents of applications for preconstruction planning assistance.
268.17 Project selection criteria.
268.19 Evaluation of applications for preconstruction planning assistance.
268.21 Down-selection of one or more Maglev projects for further study and selection of one project for final design, engineering, and construction funding.

AUTHORITY: 49 U.S.C. 322; 23 U.S.C. 322; 49 CFR 1.49.

SOURCE: 65 FR 2344, Jan. 14, 2000, unless otherwise noted.

Subpart A—Overview

§ 268.1 Definitions.

As used in this part—

CMAQ means Congestion Mitigation and Air Quality Improvement Program (23 U.S.C. 149).

Environmental assessment (''EA'') means the environmental assessment in support of the project description and containing the information listed in § 268.11(b)(6)(i).

Environmental impact statement (''EIS'') means the environmental impact statement which is required pursuant to §§ 268.3.

Eligible project costs means the costs of preconstruction planning activities and the capital cost of the fixed guideway infrastructure of a Maglev project, including land, piers, guideways, propulsion equipment and other components attached to guideways, power distribution facilities (including substations), control and communications facilities, access roads, and storage, repair, and maintenance facilities, but eligible project costs do not include the cost of stations, vehicles, and equipment.

Federal Maglev funds means such funds as are provided under the authority of 23 U.S.C. 322 to pay for Eligible Project Costs.

Full project costs means the total capital costs of a Maglev project, including Eligible Project Costs and the costs of stations, vehicles, and equipment.

Phase means one of the five different phases of the Maglev Deployment Program; these phases are described in § 268.3.

Maglev means transportation systems employing magnetic levitation that would be capable of safe use by the public at a speed in excess of 240 miles per hour.

Maglev Deployment Program means the program authorized by 23 U.S.C. 322.

Partnership potential means the usage of the term in the commercial feasibility study of high-speed ground transportation (*High Speed Ground Transportation for America*) mandated under section 1036 of the Intermodal

Surface Transportation Efficiency Act of 1991 (105 Stat. 1978). Under that usage any corridor exhibiting Partnership Potential must at least meet the following two conditions:

(1) Private enterprise must be able to run on the corridor—once built and paid for—as a completely self-sustaining entity; and

(2) The total benefits of a Maglev corridor must equal or exceed its total costs.

STP means the Surface Transportation Program (23 U.S.C. 133).

TEA 21 means the Transportation Equity Act for the 21st Century (Public Law No. 105–178, 112 Stat. 107).

§ 268.3 Different phases of the Maglev Deployment Program.

(a) The Maglev Deployment Program includes five phases, as described in paragraphs (b) through (f) of this section. The current projected timing for implementing these phases is indicated to assist applicants in planning their projects. All dates beyond the first date (the deadline for the submission of preconstruction planning applications) are for planning purposes only and are subject to change—including possible acceleration of deadlines—based on the progress of the Maglev Deployment Program; grantees will be notified accordingly.

(b) *Phase I—Competition for Planning Grants (Early October 1998—September 15, 1999)*—(1) *Description.* In Phase I, States will apply for funds for preconstruction planning activities. As required by § 268.13, applications must be filed with FRA by February 15, 1999. FRA will select one or more projects to receive preconstruction planning financial assistance awarded under this part to perform Phase II of the Maglev Deployment Program.

(2) *Timing of Major Milestones.* (i) February 15, 1999—Planning grant applications due.

(ii) May 24, 1999—FRA announces grantees for planning grants.

(iii) August 31, 1999—FRA awards planning grants for the conduct of activities listed in Phase II.

(c) *Phase II—Project Description Development (July 1, 1999—June 30, 2000)*—(1) *Description.* In Phase II, each grant recipient will prepare and submit to FRA a project description, supporting preconstruction planning reports, and an EA. Supporting reports may include demand and revenue analyses, project specification, cost estimates, scheduling, financial studies, a system safety plan (including supporting analysis), and other information in support of the project description. FRA will use this information in reaching a decision on which projects to down-select for completion of site-specific environmental studies, investment grade revenue forecasts, and other studies and analyses necessary prior to initiation of construction. FRA will initiate documentation of environmental factors considered in the project selection process.

(2) *Timing of Major Milestones.* (i) February 29, 2000—Deadline for submission of appropriate EA's needed by FRA for the down-selection of one or more projects under Phase III.

(ii) June 30, 2000—Deadline for submission of project descriptions and any related supporting reports needed by FRA for down-selection of one or more projects.

(d) *Phase III—Project Selection Process (July 1, 2000—September 30, 2000)*—(1) *Description.* FRA will evaluate the information provided by the grant recipients under Phase II and will down-select one or more projects for completion of additional environmental studies, investment grade revenue forecasts, and other studies and analyses necessary prior to initiation of construction.

(2) *Timing of Major Milestones.* September 30, 2000—FRA down-selects one or more project(s).

(e) *Phase IV—Project Development and Completion of Site-specific EIS (October 1, 2000—November 30, 2001)*—(1) *Description.* The financial assistance recipient(s) down-selected in Phase III will complete additional environmental studies, investment grade revenue forecasts, and other studies and analyses necessary prior to initiation of construction, and address issues raised by FRA's review of system safety plans (including supporting analysis). They will also initiate final design and engineering work for the down-selected project(s). If more than one project is down-selected in Phase III, FRA will

select one of them for final design, engineering, and construction funding. Detailed agreements for the construction and operation of the selected project will be negotiated.

(2) *Timing of Major Milestones.* (i) March 31, 2001—If more than one project is down-selected in Phase III, FRA will select one project.

(ii) December 31, 2001—FRA will issue a Final Record of Decision on the site-specific EIS for the one selected project, confirming the project design.

(f) *Phase V—Completion of Detailed Engineering and Construction January 1, 2002 and beyond).* In Phase V, the sponsoring State or State-designated authority will oversee the efforts of the public/private partnership formed to progress the selected project, to complete the detailed engineering designs, and finance, construct, equip, and operate the project in revenue service. Construction will be contingent upon the appropriation of Federal funds. In no event will construction be authorized until FRA is fully satisfied that the system will meet appropriate safety standards.

§ 268.5 Federal funding sources for the Maglev Deployment Program.

(a) *Federal Maglev Funds.* Section 322 of Title 23 provides for the following funds for the Maglev Deployment Program:

(1) *Contract authority.* Fifty-five million has been made available for the Maglev Deployment Program as contract authority from the Highway Trust Fund for Fiscal Years 1999 through 2001; this would be used to fund the competition in all its phases and could also be used for final design, engineering, and construction activities of the selected project. Of the $55 million, the Congress has made available up to $15 million for Fiscal Year 1999, up to $15 million for Fiscal Year 2000, and $25 million for Fiscal Year 2001.

(2) *Authorization for appropriations.* Nine hundred fifty million, also from the Highway Trust Fund, has been authorized to be appropriated for the Maglev Deployment Program for Fiscal Years 2000 through 2003. Of the $950 million, $200 million is authorized to be appropriated for each of Fiscal Years 2000 and 2001, $250 million for Fiscal Year 2002, and $300 million for Fiscal Year 2003. Any decision to proceed with possible Federal funding of the construction of a Maglev system will be contingent upon the receipt of appropriations, and upon completion of appropriate environmental documentation.

(b) *Other Federal funds.* Section 322 of Title 23 provides that the portion of the Maglev project not covered by Federal Maglev Funds may be covered by any non-Federal funding sources—including private (debt and/or equity), State, local, regional, and other public or public/private entities—as well as by Federally-provided STP and CMAQ funds, and by other forms of financial assistance made available under title 23 and TEA 21, such as loans and loan guarantees.

(c) *Costs Incurred in Advance of Cooperative Agreement.* Certain costs incurred in advance of the execution of a cooperative agreement between FRA and the grantee for pre-construction planning but after enactment of TEA 21 (June 9, 1998) will be eligible for reimbursement, but such costs are allowable only to the extent that they are otherwise allowable under the terms of a fully executed cooperative agreement.

§ 268.7 Federal/State share and restrictions on the uses of Federal Maglev Funds.

(a) *Federal share.* The Federal share of Full Projects Costs shall be not more than ⅔, with the remaining ⅓ paid by the grant recipient using non-Federal funds. Funds made available under STP and CMAQ are considered non-Federal funds for purposes of the matching requirement.

(b) *Restrictions on the uses of Federal Maglev Funds.* (1) Federal Maglev Funds may be applied only to Eligible Project Costs;

(2) Federal Maglev Funds provided under a preconstruction planning grant may be used only for Phase II activities, and for completion of site-specific draft EIS's; see § 268.3;

(3) Federal Maglev Funds may be used to pay for only ⅔ of preconstruction planning costs; grant

recipients are required to pay the remaining ⅓ of the costs with non-Federal funds; and

(4) The ''prevailing wages'' requirement of the Davis Bacon Act (40 U.S.C. 276a–276a–5) applies to any construction contracts under the Maglev Deployment Program.

Subpart B—Procedures For Financial Assistance

§ 268.9 Eligible participants.

Any State, or any authority designated by one or more State(s) to carry out the preconstruction planning activities under the Maglev Deployment Program is eligible to participate in the Maglev Deployment Program.

§ 268.11 Project eligibility standards.

(a) *Project eligibility standards for preconstruction planning financing.* (1) As required by 23 U.S.C. 322(d)(4), in order to be eligible to receive financial assistance, a Maglev project shall:

(i) Involve a segment or segments of a high-speed ground transportation corridor that exhibit Partnership Potential;

(ii) Require an amount of Federal funds for project financing that will not exceed the sum of Federal Maglev Funds, and the amounts made available by States under STP and CMAQ;

(iii) Result in an operating transportation facility that provides a revenue producing service;

(iv) Be undertaken through a public and private partnership, with at least ⅓ of Full Project Costs paid using non-Federal funds;

(v) Satisfy applicable statewide and metropolitan planning requirements;

(vi) Be approved by FRA based on an application submitted by a State or authority designated by one or more States;

(vii) To the extent that non-United States Maglev technology is used within the United States, be carried out as a technology transfer project; and

(viii) Be carried out using materials at least 70 percent of which are manufactured in the United States.

(2) FRA recognizes that applicants for preconstruction planning grants will not have detailed information with respect to some of the requirements of paragraph (a)(1) of this section, and that the purpose of a preconstruction planning grant is to develop much of this information with respect to a particular Maglev project. As required by § 268.15, an applicant will need to provide whatever information it has with respect to each of the requirements of paragraph (a)(1) of this section, together with a certification that the applicant fully intends to comply with the requirements of this paragraph (a) should its project be selected by FRA for final design, engineering and construction financing.

(b) *Project eligibility standards for final design, engineering, and construction financing.* FRA will select the most promising Maglev project for final design, engineering, and construction financing. To be eligible to be considered, the project must meet each of the following requirements; these requirements restate the requirements in paragraph (a)(1) of this section, but with more detail and in a different order:

(1) *Purpose and significance of the project.* (i) The project description shall point to a Maglev facility and daily operation the primary purpose of which is the conduct of a revenue-producing passenger transportation service between distinct points, rather than a service solely for the passengers' riding pleasure.

(ii) The project description shall incorporate scheduled operation at a top speed of not less than 240 mph.

(2) *Benefits for the American economy.* The project description shall include a certification as to paragraphs (b)(2) (i) and (ii) of this section and, as appropriate, a technology acquisition/transfer plan which describes the strategy for their accomplishment.

(i) Processes will be established that will enable an American-owned and -sited firm (or firms) to gain, in the course of the project, the capability to participate in the design, manufacture, and installation of the facilities and vehicles needed for a Maglev operation, if the owner of the selected version of Maglev technology is not an American-owned and -sited firm (thus meeting the technology transfer requirement of 23 U.S.C. 322).

(ii) The 70 percent U.S. content requirement content of 23 U.S.C. 322 will be carried out.

(3) *Partnership potential.* The project shall exhibit Partnership potential by satisfying the following:

(i) A private/public partnership must be in place that is ready, willing, and able to finance, construct, operate, and maintain the project;

(ii) The private/public partnership either owns the version of Maglev technology proposed to be implemented in the project, or has an agreement with the owner which affords full cooperation to the partnership in progressing the project, including implementation of the technology acquisition/transfer plan if applicable; and

(iii) The recipient of a preconstruction planning grant or the FRA has developed and endorsed a projection of system capital costs, demand, revenues, operating expenses, and total costs and benefits, that:

(A) Covers either the entire corridor in which the Maglev project is involved (''Corridor''), or the project considered independently;

(B) Demonstrates that private enterprise would be able to run the Corridor or the project—once built and paid for—as a completely self-sustaining entity, in which revenues will cover operating expenses and continuing investment needs; and

(C) Shows total benefits equal to or exceeding total costs.

(4) *Funding Limits and Sources.* The project description shall include a financing plan that demonstrates project completion with the $950 million in Federal Maglev Funds, funds remaining unobligated from the $55 million in contract authority, and the funds made available under STP and CMAQ. The project that is selected will be eligible for other forms of financial assistance provided under title 23 and TEA 21, including loans, loan guarantees, and lines of credit. However, at least ⅓ of Full Project Costs must come from non-Federal Funds.

(5) *Project Management.* The State, the technology owner, and all other relevant project partners must include in the project description, an agreed upon—

(i) *Management plan* that defines the partnership, responsibilities, and procedures for accomplishing the project;

(ii) *Project schedule* that shows how timely implementation of the project will be accomplished, including, to the extent possible, a construction plan and schedule; and

(iii) *Financial plan* that shows how funds will flow, in accordance with the other requirements of this subsection.

(6) *Planning/environmental process*—(i) *Assessment of environmental consequences of the proposed project.* Recipients of preconstruction planning grants shall conduct an EA in support of the project description; and will prepare additional environmental studies for the project. The EA shall include information to support the grantee's decision to pursue the proposed project. The grantee shall develop the information and discuss the environmental consequences of the proposed technology and route in sufficient detail for the preparation of appropriate documentation by FRA to support selection of one project. This shall include: the identification of potential positive and negative environmental effects resulting from the technology (e.g. energy consumption compared to other transportation options); generic noise emissions at various distances from the centerline of the guideway; changes in electromagnetic field levels at various distances from the centerline of the guideway; and environmental screening of the proposed route (e.g., identification of land use; identification of endangered species possibly present and location of their critical habitat; identification of navigable waterways, wetlands and other sensitive water resources; and identification of the location of parks, wildlife refuges, historic and archaeological sites of National, State or local significance and other sites protected by section 4(f) of the Department of Transportation Act). The latter information and analysis shall be submitted four months in advance of the remainder of the project description. The above list is illustrative only. Grantees will be expected to review proposed work statements with FRA at pre-application meetings

or through some other means to develop the final scope of this environmental review.

(ii) The project description must also include letters of endorsement of project implementation from all the State departments of transportation involved, and from all Metropolitan Planning Organizations for metropolitan areas that would be served by the project.

§ 268.13 Deadline for submission of applications for preconstruction planning assistance.

Completed application packages shall be returned to FRA by December 31, 1998. Applications shall be submitted to: Administrator, Federal Railroad Administration, ATTN: Maglev Project, RDV–11, 1200 New Jersey Avenue, SE., Stop 20,Washington, DC 20590.

[65 FR 2344, Jan. 14, 2000, as amended at 74 FR 25176, May 27, 2009]

§ 268.15 Form and contents of applications for preconstruction planning assistance.

States, groups of States, or designated authorities that have Maglev projects are invited to submit applications in Phase I of the Maglev Deployment Program, the competition for preconstruction planning grants. The applications shall contain:

(a)(1) If submitted by a State: name, address, responsible party, telephone, fax number, and e-mail address of the State agency submitting the application; or

(2) If submitted by a designated authority: name, address, responsible party, telephone, fax number, and e-mail address of the designated authority and of the State agency or agencies on whose behalf the designated authority is submitting the application, together with letters from the State(s) evidencing all such designations;

(b) A description of the project concept, identifying its likely location, market area, length, and the transportation service that it would perform, and a preliminary estimate of the time that would be required—if funds are made available—to bring the project to the start of construction and then to the initiation of full revenue service. At its option, the applicant may include any reports already completed on the project as well as any additional descriptive material that would assist the FRA in evaluating the application;

(c) Whatever information the applicant has to demonstrate that the project meets the project eligibility standards in § 269.11(a), and the project selection criteria in § 268.17. together with a certification that the applicant fully intends to comply with the requirements in § 269.11 should its project be selected by FRA for final design, engineering and construction financing.

(d) A statement of work for the preconstruction planning activities to be accomplished under the planning grant. The statement shall describe the work to be performed, including but not necessarily limited to:

(1) Preconstruction planning work as is needed to develop a Maglev project, and project description that will satisfy the project eligibility standards in § 268.11(b), and the project selection criteria in § 268.17; and

(2) Preparation of EAs, as described in § 268.11(b)(6)(i);

(e) Management plan, schedule, and financial plan for accomplishing the preconstruction planning work under the planning grant;

(f) Letters supporting the application from the heads of all State departments of transportation involved, as well as from responsible officials of the Metropolitan Planning Organizations of all metropolitan areas to be served by the proposed project;

(g) A certification from the State, or from the authority designated by one or more States, that the ⅓ matching funds required for work under the planning grant are, or will be, available by the time the grants are announced. The source(s) of the matching must be shown in the financial plan under paragraph (e); and

(h) If the applicant has made a definitive choice of the particular Maglev technology proposed to be included, a description of that technology and the degree to which it has been produced and tested should be submitted. Further, if the applicant has identified organizations that would form members of the team that would implement the

project, the names of those organizations and the persons representing them should also be submitted.

§ 268.17 Project selection criteria.

Except as qualified by § 268.19, the following criteria will govern FRA's selection of projects to receive funding under the Maglev Deployment Program.

(a) *Purpose and significance of the project.* (1) The degree to which the project description demonstrates attractiveness to travelers, as measured in passengers and passenger-miles.

(2) The extent to which implementation of the project will reduce congestion, and attendant delay costs, in other modes of transportation; will reduce emissions and/or energy consumption; or will reduce the rate of growth in needs for additional highway or airport construction. Measures for this criterion will include but not be limited to the present value of congestion reduction, pollution reduction, and/or facility cost-avoidance benefits.

(3) The degree to which the project will demonstrate the variety of operating conditions which are to be expected in the United States.

(4) The degree to which the project will augment a Maglev corridor or network that has been identified, by any State, group of States, or the FRA, as having Partnership Potential.

(b) *Timely implementation.* The speed with which the project can realistically be brought into full revenue service, based on the project description and on the current and projected development status of the Maglev technology selected by the applicant for the project.

(c) *Benefits for the American economy.* The extent to which the project is expected to create new jobs in traditional and emerging industries in the United States.

(d) *Partnership potential.* The degree to which the project description demonstrates Partnership Potential for the corridor in which it is involved, and/or for the project independently.

(e) *Funding limits and sources.* (1) The extent and proportion to which States, regions, and localities commit to financially contributing to the project, both in terms of their own locally-raised, entirely non-Federal funds, and in terms of commitments of scarce Federal resources from non-Maglev funds; and

(2) The extent and proportion to which the private sector contributes financially to the project.

NOTE TO § 268.17: FRA recognizes that applicants for preconstruction planning assistance may not have detailed information with respect to each of these criteria, and that the purpose of the preconstruction planning assistance is to develop much of this information with respect to a particular Maglev project. The preconstruction planning application requirements of this part 268 are designed to elicit whatever information an applicant may have pertaining to these criteria.

§ 268.19 Evaluation of applications for preconstruction planning assistance.

The FRA will evaluate the applications for their completeness and responsiveness to the requirements listed in § 268.15. In addition, applicants are advised that the Maglev Deployment Program contains a number of project eligibility standards (minimum threshold standards) and project evaluation criteria that will guide the FRA's review of the project descriptions produced under the Planning Grants. The FRA's implementation of these standards and criteria appears in § 268.11 and § 268.17, respectively. Although subject to revision, the information in § 268.11 and § 268.17 should assist the States in completing their applications in the competition for planning grants, since the project descriptions will need to respond to the standards and criteria. In evaluating the applications for planning grants, FRA will consider how consistent the applicant's project is to the standards and criteria, and the application's likelihood of leading to a project that meets all the standards and criteria.

§ 268.21 Down-selection of one or more Maglev projects for further study and selection of one project for final design, engineering, and construction funding.

(a) Upon completion of Phase III of the Maglev Deployment Program, FRA will down-select one or more projects to complete additional environmental

studies, investment grade revenue forecasts, and other studies and analyses necessary prior to initiation of construction. Final design and engineering work will also be initiated for the down-selected project(s). To be down-selected a project must appear to meet the project eligibility standards contained in § 268.11 (b), rate highly in the project selection criteria specified in § 268.17, be judged by FRA to have a good chance of being constructed with the Federal funds authorized for this program, and be successfully operated by a public/private partnership.

(b) Only one project will be selected in Phase IV of the Maglev Deployment Program and be eligible for any Federal construction funds that Congress chooses to make available. That one project must meet each and every project eligibility standard contained in § 268.11 (b). If more than one project down-selected in Phase III and funded through Phase IV meets all of these standards, then FRA will evaluate and compare the eligible projects according to the set of project selection criteria contained in § 268.17.

(c) In reviewing competing projects under the project eligibility standards and project selection criteria, the FRA will exercise particular vigilance regarding the following elements of the preconstruction planning process, although not to the exclusion of others:

(1) The credibility of the demand and revenue forecasts, cost estimates, and benefit/cost comparisons; and

(2) The credibility of the financial plan.

(d) FRA intends to make periodic reviews of the processes and products of grant recipients. Such reviews may include, at the FRA's option, reviews at key milestones in the preparation of project descriptions.

PART 269—COMPETITIVE PASSENGER RAIL SERVICE PILOT PROGRAM

Sec.

269.1 Purpose.
269.3 Limitations.
269.5 Definitions.
269.7 Petitions.
269.9 Bid process.
269.11 Evaluation.

269.15 Access to facilities; employees.
269.17 Cessation of service.

AUTHORITY: Sec. 11307, Pub. L. 114–94; 49 U.S.C. 24711; and 49 CFR 1.89.

SOURCE: 82 FR 31487, July 7, 2017, unless otherwise noted.

§ 269.1 Purpose.

The purpose of this part is to carry out the statutory mandate in 49 U.S.C. 24711 requiring the Secretary to implement a pilot program for competitive selection of eligible petitioners in lieu of Amtrak to operate not more than three long-distance routes.

§ 269.3 Limitations.

(a) *Route limitations.* The pilot program this part implements is available for not more than three Amtrak long-distance routes.

(b) *Time limitations.* An eligible petitioner awarded a contract to provide passenger rail service under the pilot program this part implements shall only provide such service for a period not to exceed four years from the date of commencement of service. The Administrator has the discretion to renew such service for one additional operation period of four years.

§ 269.5 Definitions.

As used in this part—

Act means the Fixing America's Surface Transportation Act (Pub. L. 114–94 (Dec. 4, 2015)).

Administrator means the Federal Railroad Administrator, or the Federal Railroad Administrator's delegate.

Amtrak means the National Railroad Passenger Corporation.

Eligible petitioner means one of the following entities, other than Amtrak, that has submitted a petition to FRA under § 269.7:

(1) A rail carrier or rail carriers that own the infrastructure over which Amtrak operates a long-distance route, or another rail carrier that has a written agreement with a rail carrier or rail carriers that own such infrastructure;

(2) A State, group of States, or State-supported joint powers authority or other sub-State governance entity responsible for providing intercity rail passenger transportation with a written agreement with the rail carrier or

rail carriers that own the infrastructure over which Amtrak operates a long-distance route and that host or would host the intercity rail passenger transportation; or

(3) A State, group of States, or State-supported joint powers authority or other sub-State governance entity responsible for providing intercity rail passenger transportation and a rail carrier with a written agreement with another rail carrier or rail carriers that own the infrastructure over which Amtrak operates a long-distance route and that host or would host the intercity rail passenger transportation.

File and *filed* mean submission of a document under this part to FRA at *PassengerRail.Liaison@dot.gov* on the date the document was emailed to FRA.

Financial plan means a plan that contains, for each Federal fiscal year fully or partially covered by the bid:

(1) An annual projection of the revenues, expenses, capital expenditure requirements, and cash flows (from operating activities, investing activities, and financing activities, showing sources and uses of funds, including the operating subsidy amount) attributable to the route; and

(2) A statement of the assumptions underlying the financial plan's contents.

FRA means the Federal Railroad Administration.

Operating plan means a plan that contains, for each Federal fiscal year fully or partially covered by the bid:

(1) A complete description of the service planned to be offered, including the train schedules, frequencies, equipment consists, fare structures, and such amenities as sleeping cars and food service provisions; station locations; hours of operation; provisions for accommodating the traveling public, including proposed arrangements for stations shared with other routes; expected ridership; passenger-miles; revenues by class of service between each city-pair proposed to be served; connectivity with other intercity transportation services; and compliance with applicable Service Outcome Agreements; and

(2) A statement of the assumptions underlying the operating plan's contents.

Long-distance route means those routes described in 49 U.S.C. 24102(5) and operated by Amtrak on the date of enactment of the Act.

§ 269.7 Petitions.

(a) *In general.* An eligible petitioner may petition FRA to provide intercity passenger rail transportation over a long-distance route in lieu of Amtrak for a period of time consistent with the time limitations described in § 269.3(b).

(b) *Petition requirements.* Eligible petitioners must:

(1) File the petition with FRA no later than 180 days after September 5, 2017;

(2) Describe the petition as a ''Petition to Provide Passenger Rail Service under 49 CFR part 269'';

(3) Describe the long-distance route or routes over which the eligible petitioner wants to provide intercity passenger rail transportation and the Amtrak service that the eligible petitioner wants to replace; and

(4) If applicable, provide an executed copy of all written agreements with all entities that own infrastructure on the long-distance route or routes over which the eligible petitioner wants to provide intercity passenger rail transportation. The written agreement(s) must demonstrate the infrastructure owner's support for the petition.

§ 269.9 Bid process.

(a) *Notification.* FRA will notify the eligible petitioner and Amtrak of receipt of a petition filed with FRA and will publish a notice of receipt in the FEDERAL REGISTER not later than 30 days after FRA's receipt of such petition.

(b) *Bid requirements.* An eligible petitioner that has filed a timely petition under § 269.7 and Amtrak, if Amtrak desires, may file a bid with FRA not later than 120 days after FRA publishes the notice of receipt in the FEDERAL REGISTER under paragraph (a) of this section. Each such bid must:

(1) Provide FRA with sufficient information to evaluate the level of service

described in the proposal, and to evaluate the proposal's compliance with the requirements in § 269.13(b);

(2) Describe how the bidder would operate the route;

(i) This description must include, but is not limited to, an operating plan, a financial plan and, if applicable, any executed agreement(s) necessary for the operation of passenger service over right-of-way on the route that is not owned by the bidder.

(ii) In addition, if the bidder intends to generate any revenues from ancillary activities (*i.e.,* activities other than passenger transportation, accommodations, and food service) as part of its proposed operation of the route, then the bidder must fully describe such ancillary activities and identify their incremental impact in all relevant sections of the operating plan and the financial plan, and on the route's performance, together with the assumptions underlying the estimates of such incremental impacts.

(3) Describe what passenger equipment the bidder would need, including how it would be procured;

(4) Describe in detail, including amounts, timing, and intended purpose, what sources of Federal and non-Federal funding the bidder would use, including but not limited to any Federal or State operating subsidy and any other Federal or State payments;

(5) Contain a staffing plan describing the number of employees the bidder needs to operate the service, the job assignments and requirements, and the terms of work for prospective and current employees of the bidder for the service outlined in the bid;

(6) Describe the capital needs for the passenger rail service including in detail any costs associated with compliance with Federal law and regulations;

(7) Describe in detail the bidder's plans for meeting all FRA safety requirements, including equipment, employee, and passenger parameters;

(8) Describe, for each Federal fiscal year fully or partially covered by the bid, a projection of the passenger rail service route's total revenue, total costs, total contribution/loss, and net cash used in operating activities per passenger-mile attributable to the route;

(9) Describe how the passenger rail service would meet or exceed the performance required of or achieved by Amtrak on the applicable route during the last fiscal year, and how the bidder would report on the performance standards. At a minimum, this description must include, for each Federal fiscal year fully or partially covered by the bid a projection of the route's expected Passenger Miles per Train Mile, End-Point and All Stations On-Time Performance, Host Railroad and Operator Responsible Delays per 10,000 Train Miles, Percentage of Passenger Trips to/from Underserved Communities, Service Interruptions per 10,000 Train Miles due to Equipment-Related Problems, and customer service quality;

(10) Analyze the reasonably foreseeable effects, both positive and negative, of the passenger rail service on other intercity passenger rail services;

(11) Describe the bidder's compliance with all applicable Federal, state, and local laws; and

(12) Provide State or States written concurrence of the bid for a route that receives funding from a State or States.

(c) *Supplemental information.* (1) FRA may request supplemental information from a bidder and/or Amtrak if FRA determines it needs such information to evaluate a bid.

(2) FRA's request may seek information about the costs related to the service that Amtrak would still incur following the cessation of service, including the increased costs for other services.

(3) FRA will establish a deadline by which the bidder and/or Amtrak must file the supplemental information with FRA.

§ 269.11 Evaluation.

(a) *Evaluation.* FRA will select a winning bidder by evaluating the bids based on the requirements of this part.

(b) *Notification.* (1) Upon selecting a winning bidder, FRA will publish a notice in the FEDERAL REGISTER describing the identity of the winning bidder, the long-distance route the bidder will operate, a detailed justification explaining why FRA selected the bid, and any other information the Administrator determines appropriate.

(2) The notice under this paragraph (b) will be open for public comment for 30 days after the date FRA selects the bid.

§ 269.13 Award.

(a) *Award.* FRA will execute a contract with a winning bidder that is not or does not include Amtrak, consistent with the requirements of this section and as FRA may otherwise require, not later than 270 days after the bid deadline established by § 269.9(b).

(b) *Contract requirements.* Among other things, the contract between FRA and a winning bidder that is not or does not include Amtrak must:

(1) Award to the winning bidder the right and obligation to provide intercity passenger rail transportation over that route subject to such performance standards as FRA may require for a duration consistent with § 269.3(b);

(2) Award to the winning bidder an operating subsidy, as determined by FRA and based on Amtrak's final audited publicly-reported fully-allocated operating costs of the route for the prior fiscal year, excluding costs related to Other Postretirement Employee Benefits, Amtrak Performance Tracking System Asset Allocations, Project Related Costs, and Amtrak Office of Inspector General activities, subject to the availability of funding, for the first year at a level that does not exceed 90 percent of the level in effect for that specific route during the fiscal year preceding the fiscal year in which the petition was received, adjusted for inflation;

(3) State that any award of an operating subsidy is made annually, is subject to the availability of funding, and is based on the amount calculated under paragraph (b)(2) of this section, adjusted for inflation;

(4) Condition the operating and subsidy rights upon the winning bidder providing intercity passenger rail transportation over the route that is no less frequent, nor over a shorter distance, than Amtrak provided on that route before the award;

(5) Condition the operating and subsidy rights upon the winning bidder's compliance with performance standards FRA may require, but which, at a minimum, must meet or exceed the performance required of or achieved by Amtrak on the applicable route during the fiscal year immediately preceding the year the bid is submitted;

(6) Subject the winning bidder to the grant conditions established by 49 U.S.C. 24405; and

(7) Subject the winning bidder to the requirements of the appropriations act(s) funding the contract.

(c) *Publication.* The winning bidder shall make their bid available to the public after the bid award with any appropriate redactions for confidential or proprietary information.

§ 269.15 Access to facilities; employees.

(a) *Access to facilities.* (1) If the award under § 269.13 is made to an eligible petitioner, Amtrak must provide that eligible petitioner access to the Amtrak-owned reservation system, stations, and facilities directly related to operations of the awarded route(s).

(2) If Amtrak and the eligible petitioner awarded a route cannot agree on the terms of access, either party may petition the Surface Transportation Board under 49 U.S.C. 24711(g).

(b) *Employees.* The employees of any person, except as provided in a collective bargaining agreement, an eligible petitioner uses in the operation of a route under this part shall be considered an employee of that eligible petitioner and subject to the applicable Federal laws and regulations governing similar crafts or classes of employees of Amtrak.

(c) *Hiring preference.* The winning bidder must provide hiring preference to qualified Amtrak employees displaced by the award of the bid, consistent with the staffing plan the winning bidder submits and the grant conditions established by 49 U.S.C. 24405.

§ 269.17 Cessation of service.

(a) If an eligible petitioner awarded a route under this part ceases to operate the service or fails to fulfill its obligations under the contract required under § 269.13, the Administrator, in collaboration with the Surface Transportation Board, shall take any necessary action consistent with title 49 of the United States Code to enforce the

contract and ensure the continued provision of service, including the installment of an interim service and re-bidding the contract to operate the service.

(b) In re-bidding the contract, the entity providing service must either be Amtrak or an eligible petitioner.

PART 270—SYSTEM SAFETY PROGRAM

Subpart A—General

Sec.
270.1 Purpose and scope.

AUTHORITY: 49 U.S.C. 20103, 20106–20107, 20118–20119, 20156, 21301, 21304, 21311; 28 U.S.C. 2461, note; and 49 CFR 1.89.

SOURCE: 81 FR 53896, Aug. 12, 2016, unless otherwise noted.

Subpart A—General

§ 270.1 Purpose and scope.

(a) The purpose of this part is to improve railroad safety through structured, proactive processes and procedures developed and implemented by passenger rail operations. This part requires certain passenger rail operations to establish a system safety program that systematically evaluates railroad safety hazards and the resulting risks on their systems and manages those risks to reduce the number and rates of railroad accidents, incidents, injuries, and fatalities.

(b) This part prescribes minimum Federal safety standards for the preparation, adoption, and implementation of railroad system safety programs. This part does not restrict passenger rail operations from adopting and enforcing additional or more stringent requirements not inconsistent with this part.

(c) This part prescribes the protection of information generated solely for the purpose of planning, implementing, or evaluating a system safety program under this part.

[81 FR 53896, Aug. 12, 2016, as amended at 85 FR 12843, Mar. 4, 2020]

§ 270.3 Application.

(a) Except as provided in paragraph (b) of this section, this part applies to all—

(1) Passenger rail operations that operate intercity or commuter passenger train service on the general railroad system of transportation; and

(2) Passenger rail operations that operate commuter or other short-haul rail passenger train service in a metropolitan or suburban area (as described by 49 U.S.C. 20102(2)), including public authorities operating passenger train service.

(b) This part does not apply to:

(1) Rapid transit operations in an urban area that are not connected to the general railroad system of transportation;

(2) Tourist, scenic, historic, or excursion operations, whether on or off the general railroad system of transportation;

(3) Operation of private cars, including business/office cars and circus trains; or

(4) Railroads that operate only on track inside an installation that is not part of the general railroad system of transportation (*i.e.*, plant railroads, as defined in § 270.5).

[81 FR 53896, Aug. 12, 2016, as amended at 85 FR 12843, Mar. 4, 2020]

§ 270.5 Definitions.

As used in this part—

Administrator means the Federal Railroad Administrator or his or her delegate.

Confidential Close Call Reporting System (C³RS) means an FRA-sponsored voluntary program designed to improve the safety of railroad operations by allowing railroad employees to confidentially report currently unreported or underreported unsafe events.

Configuration management means a process that ensures that the configurations of all property, equipment, and system design elements are accurately documented.

FRA means the Federal Railroad Administration.

Fully implemented means that all elements of a system safety program as described in the SSP plan are established and applied to the safety management of the passenger rail operation.

Hazard means any real or potential condition (as identified in a risk-based hazard analysis) that can cause injury, illness, or death; damage to or loss of a system, equipment, or property; or damage to the environment.

Passenger means a person, excluding an on-duty employee, who is on board, boarding, or alighting from a rail vehicle for the purpose of travel.

Passenger rail operation means an intercity, commuter, or other short-haul passenger rail service.

Person means an entity of any type covered under 49 U.S.C. 21301, including, but not limited to, the following: A railroad; a manager, supervisor, official, or other employee or agent of a railroad; any owner, manufacturer, lessor, or lessee of railroad equipment, track, or facilities; any independent contractor or subcontractor providing goods or services to a railroad; any employee of such owner, manufacturer, lessor, lessee, or independent contractor or subcontractor.

Plant railroad means a plant or installation that owns or leases a locomotive, uses that locomotive to switch cars throughout the plant or installation, and is moving goods solely for use in the facility's own industrial processes. The plant or installation could include track immediately adjacent to the plant or installation if the plant railroad leases the track from the general system railroad and the lease provides for (and actual practice entails) the exclusive use of that trackage by the plant railroad and the general system railroad for purposes of moving only cars shipped to or from the plant. A plant or installation that operates a locomotive to switch or move cars for other entities, even if solely within the confines of the plant or installation, rather than for its own purposes or industrial processes, is not considered a plant railroad because the performance of such activity makes the operation part of the general railroad system of transportation.

Positive train control system means a system designed to prevent train-to-train collisions, overspeed derailments, incursions into established work zone limits, and the movement of a train through a switch left in the wrong position, as described in subpart I of part 236 of this chapter.

Rail vehicle means railroad rolling stock, including, but not limited to, passenger and maintenance vehicles.

Railroad means—

(1) Any form of non-highway ground transportation that runs on rails or electromagnetic guideways, including—

(i) Commuter or other short-haul rail passenger service in a metropolitan or suburban area and commuter railroad service that was operated by the Consolidated Rail Corporation on January 1, 1979; and

(ii) High speed ground transportation systems that connect metropolitan areas, without regard to whether those

systems use new technologies not associated with traditional railroads, but does not include rapid transit operations in an urban area that are not connected to the general railroad system of transportation; and

(2) A person or organization that provides railroad transportation, whether directly or by contracting out operation of the railroad to another person.

Risk means the combination of the probability (or frequency of occurrence) and the consequence (or severity) of a hazard.

Risk-based hazard management means the processes (including documentation) used to identify and analyze hazards, assess and rank corresponding risks, and eliminate or mitigate the resulting risks.

Safety culture means the shared values, actions and behaviors that demonstrate commitment to safety over competing goals and demands.

SSP plan means system safety program plan.

System safety means the application of management, economic, and engineering principles and techniques to optimize all aspects of safety, within the constraints of operational effectiveness, time, and cost, throughout all phases of a system life cycle.

System safety program means a comprehensive process for the application of management and engineering principles and techniques to optimize all aspects of safety.

System safety program plan means a document developed by the passenger rail operation that implements and supports the system safety program.

Tourist, scenic, historic, or excursion operations means railroad operations that carry passengers, often using antiquated equipment, with the conveyance of the passengers to a particular destination not being the principal purpose. Train movements of new passenger equipment for demonstration purposes are not tourist, scenic, historic, or excursion operations.

[81 FR 53896, Aug. 12, 2016, as amended at 85 FR 12843, Mar. 4, 2020]

§ 270.7 Penalties and responsibility for compliance.

(a) Any person who violates any requirement of this part or causes the violation of any such requirement is subject to a civil penalty of at least the minimum civil monetary penalty and not more than the ordinary maximum civil monetary penalty per violation, except that: Penalties may be assessed against individuals only for willful violations, and, where a grossly negligent violation or a pattern of repeated violations has created an imminent hazard of death or injury to persons, or has caused death or injury, a penalty not to exceed the aggravated maximum civil monetary penalty per violation may be assessed. *See* 49 CFR part 209, appendix A. Each day a violation continues shall constitute a separate offense. Any person who knowingly and willfully falsifies a record or report required by this part may be subject to criminal penalties under 49 U.S.C. 21311. FRA's website at *www.fra.dot.gov* contains a schedule of civil penalty amounts used in connection with this part.

(b) Although the requirements of this part are stated in terms of the duty of a railroad or passenger rail operation, when any person, including a contractor or subcontractor to a railroad, performs any function covered by this part, that person (whether or not a railroad or passenger rail operation) shall perform that function in accordance with this part.

(c)(1) All persons providing intercity rail passenger or commuter (or other short-haul) rail passenger service share responsibility for ensuring compliance with this part. Nothing in this paragraph (c), however, shall restrict the ability to provide for an appropriate designation of responsibility for compliance with this part.

(2)(i) Any passenger rail operation subject to this part may designate a person as responsible for compliance with this part by including a designation of responsibility in the SSP plan. This designation must be included in the SSP plan's statement describing the passenger rail operation's management and organizational structure and include the information specified by § 270.103(e)(6).

(ii) A passenger rail operation subject to this part may notify FRA of a designation of responsibility before submitting an SSP plan by first submitting a designation of responsibility notice to the Associate Administrator for Railroad Safety and Chief Safety Officer. The notice must include all information required under §270.103(e)(6), and this information must also be included in the SSP plan.

[85 FR 12843, Mar. 4, 2020]

Subpart B—System Safety Program Requirements

§270.101 System safety program; general.

(a) Each passenger rail operation subject to this part shall establish and fully implement a system safety program that continually and systematically evaluates railroad safety hazards on its system and manages the resulting risks to reduce the number and rates of railroad accidents, incidents, injuries, and fatalities. A system safety program shall include a risk-based hazard management program and risk-based hazard analysis designed to proactively identify hazards and mitigate or eliminate the resulting risks. The system safety program shall be fully implemented and supported by a written SSP plan described in §270.103.

(b) A system safety program shall be designed so that it promotes and supports a positive railroad safety culture.

[85 FR 12844, Mar. 4, 2020]

§270.103 System safety program plan.

(a) *General.* (1) Each railroad subject to this part shall adopt and fully implement a system safety program through a written SSP plan that, at a minimum, contains the elements in this section and in subpart E of this part. This SSP plan shall be approved by FRA under the process specified in §270.201.

(2) Each passenger rail operation subject to this part shall communicate with each railroad that hosts passenger train service for that passenger rail operation and coordinate the portions of the SSP plan applicable to the railroad hosting the passenger train service.

(b) *System safety program policy statement.* Each SSP plan shall contain a policy statement that endorses the passenger rail operation's system safety program. This policy statement shall:

(1) Define the passenger rail operation's authority for the establishment and implementation of the system safety program;

(2) Describe the safety philosophy and safety culture of the passenger rail operation; and

(3) Be signed by the chief official of the passenger rail operation.

(c) *System safety program goals.* Each SSP plan shall contain a statement defining the goals for the passenger rail operation's system safety program. This statement shall describe clear strategies on how the goals will be achieved and what management's responsibilities are to achieve them. At a minimum, the goals shall be:

(1) Long-term;

(2) Meaningful;

(3) Measurable; and

(4) Focused on the identification of hazards and the mitigation or elimination of the resulting risks.

(d) *Rail system description.* (1) Each SSP plan shall include a statement describing the rail system. The description shall include: The rail operations, including any host operations; the physical characteristics of the rail system; the scope of rail service; the rail system's maintenance activities; and any other pertinent aspects of the rail system.

(2) Each SSP plan shall identify the persons that enter into a contractual relationship with the passenger rail operation to either perform significant safety-related services on the passenger rail operation's behalf or to utilize significant safety-related services provided by the passenger rail operation for purposes related to railroad operations.

(3) Each SSP plan shall describe the relationships and responsibilities between the passenger rail operation and: Host railroads, contractor operators, shared track/corridor operators, and persons providing or utilizing significant safety-related services as identified pursuant to paragraph (d)(2) of this section.

(e) *Management and organizational structure.* Each SSP plan shall contain a statement that describes the management and organizational structure of the passenger rail operation. This statement shall include the following:

(1) A chart or other visual representation of the organizational structure of the passenger rail operation;

(2) A description of the passenger rail operation's management responsibilities within the system safety program;

(3) A description of how safety responsibilities are distributed within the rail organization;

(4) Clear identification of the lines of authority used by the passenger rail operation to manage safety issues;

(5) A description of the roles and responsibilities in the passenger rail operation's system safety program for each host railroad, contractor operator, shared track/corridor operator, and any persons utilizing or providing significant safety-related services as identified pursuant to (d)(2) of this section. As part of this description, the SSP plan shall describe how each host railroad, contractor operator, shared track/corridor operator, and any persons utilizing or providing significant safety-related services as identified pursuant to paragraph (d)(2) of this section supports and participates in the passenger rail operation's system safety program, as appropriate; and

(6) If a passenger rail operation subject to this part designates a person as responsible for compliance with this part under § 270.7(c)(2), the following information must be included in the passenger rail operation's SSP plan and any notice of designation submitted under § 270.7(c)(2):

(i) The name and contact information of the designator;

(ii) The name and contact information of the designated entity and a statement signed by an authorized representative of the designated entity acknowledging responsibility for compliance with this part;

(iii) A statement affirming that a copy of the designation has been provided to the primary point of contact for each non-profit employee labor organization representing directly affected employees for consultation purposes under § 270.107(a)(2); and

(iv) A description of how directly affected employees not represented by a non-profit employee labor organization were notified of the designation for consultation purposes under § 270.107(a).

(f) *System safety program implementation process.* (1) Each SSP plan shall contain a statement that describes the process the passenger rail operation will use to implement its system safety program. As part of the implementation process, the SSP plan shall describe:

(i) Roles and responsibilities of each position that has significant responsibility for implementing the system safety program, including those held by employees and other persons utilizing or providing significant safety-related services as identified pursuant to (d)(2) of this section; and

(ii) Milestones necessary to be reached to fully implement the program.

(2) A system safety program shall be fully implemented within 36 months of FRA's approval of the SSP plan pursuant to subpart C of this part.

(g) *Maintenance, repair, and inspection program.* (1) Each SSP plan shall identify and describe the processes and procedures used for maintenance and repair of infrastructure and equipment directly affecting railroad safety. Examples of infrastructure and equipment that directly affect railroad safety include: Fixed facilities and equipment, rolling stock, signal and train control systems, track and right-of-way, passenger train/station platform interface (gaps), and traction power distribution systems.

(2) Each description of the processes and procedures used for maintenance and repair of infrastructure and equipment directly affecting safety shall include the processes and procedures used to conduct testing and inspections of the infrastructure and equipment.

(3) If a manual or manuals comply with all applicable Federal regulations and describe the processes and procedures that satisfy this section, the SSP plan may reference those manuals. FRA approval of an SSP plan that contains or references such manuals is not approval of the manuals themselves; each manual must independently comply with applicable regulations and is

subject to a civil penalty if not in compliance with applicable regulations.

(4) The identification and description required by this section of the processes and procedures used for maintenance, repair, and inspection of infrastructure and equipment directly affecting railroad safety is not intended to address and should not include procedures to address employee working conditions that arise in the course of conducting such maintenance, repair, and inspection of infrastructure and equipment directly affecting railroad safety as set forth in the plan. FRA does not intend to approve any specific portion of an SSP plan that relates exclusively to employee working conditions.

(h) *Rules compliance and procedures review.* Each SSP plan shall contain a statement describing the processes and procedures used by the passenger rail operation to develop, maintain, and comply with applicable rules and procedures directly affecting railroad safety and to comply with the applicable railroad safety laws and regulations found in this chapter. The statement shall identify:

(1) The operating and safety rules and maintenance procedures that are subject to review under this chapter;

(2) Techniques used to assess the compliance of the passenger rail operation's employees with applicable operating and safety rules and maintenance procedures, and applicable railroad safety laws and regulations; and

(3) Techniques used to assess the effectiveness of the passenger rail operation's supervision relating to the compliance with the applicable operating and safety rules and maintenance procedures, and applicable railroad safety laws and regulations.

(i) *System safety program employee/contractor training.* (1) Each employee who is responsible for implementing and supporting the system safety program, and any persons utilizing or providing significant safety-related services will be trained on the passenger rail operation's system safety program.

(2) Each passenger rail operation shall establish and describe in its SSP plan a system safety program training plan. A system safety program training plan shall set forth the procedures by which employees that are responsible for implementing and supporting the system safety program, and any persons utilizing or providing significant safety-related services, will be trained on the system safety program. A system safety program training plan shall help ensure that all personnel who are responsible for implementing and supporting the system safety program understand the goals of the program, are familiar with the elements of the program, and have the requisite knowledge and skills to fulfill their responsibilities under the program.

(3) For each position identified pursuant to paragraph (f)(1)(i) of this section, the training plan shall describe the frequency and content of the system safety program training that the position receives.

(4) If a position is not identified under paragraph (f)(1)(i) of this section as having significant responsibility to implement the system safety program but the position is safety-related or has a significant impact on safety, personnel in those positions shall receive training in basic system safety concepts and the system safety implications of their position.

(5) Training under this subpart may include, but is not limited to, classroom, computer-based, or correspondence training.

(6) The passenger rail operation shall keep a record of all training conducted under this part and update that record as necessary. The system safety program training plan shall set forth the process used to maintain and update the necessary training records required by this part.

(7) The system safety program training plan shall set forth the process used by the passenger rail operation to ensure that it is complying with the training requirements set forth in the training plan.

(j) *Emergency management.* Each SSP plan shall contain a statement that describes the processes used to manage emergencies that may arise within the passenger rail operation's system including, but not limited to, the processes to comply with applicable emergency equipment standards in part 238 of this chapter and the passenger train

emergency preparedness requirements in part 239 of this chapter.

(k) *Workplace safety.* Each SSP plan shall contain a statement that describes the programs established to protect the safety of the passenger rail operation's employees and contractors. The statement shall include a description of:

(1) The processes that help ensure the safety of employees and contractors while working on or in close proximity to railroad property as described in paragraph (d) of this section;

(2) The processes that help ensure that employees and contractors understand the requirements established by the passenger rail operation pursuant to paragraph (f)(1) of this section;

(3) Any fitness-for-duty programs or any medical monitoring programs; and

(4) The standards for the control of alcohol and drug use in part 219 of this chapter.

(l) *Public safety outreach program.* Each passenger rail operation shall establish and set forth a statement in its SSP plan that describes its public safety outreach program to provide safety information to railroad passengers and the general public. Each passenger rail operation's safety outreach program shall provide a means for railroad passengers and the general public to report any observed hazards.

(m) *Accident/incident reporting and investigation.* Each SSP plan shall include a statement that describes the processes that the passenger rail operation uses to receive notification of accidents/incidents, investigate and report those accidents/incidents, and develop, implement, and track any corrective actions found necessary to address an investigation's finding(s).

(n) *Safety data acquisition.* Each passenger rail operation shall establish and set forth a statement in its SSP plan that describes the processes it uses to collect, maintain, analyze, and distribute safety data in support of the system safety program.

(o) *Contract procurement requirements.* Each SSP plan shall set forth a statement that describes the process(es) used to help ensure that safety concerns and hazards are adequately addressed during the safety-related contract procurement process.

(p) *Risk-based hazard management program.* Each passenger rail operation shall establish a risk-based hazard management program as part of the system safety program. The risk-based hazard management program shall be fully described in the SSP plan.

(1) The risk-based hazard management program shall establish:

(i) The processes or procedures used in the risk-based hazard analysis to identify hazards on the rail system;

(ii) The processes or procedures used in the risk-based hazard analysis to analyze identified hazards and support the risk-based hazard management program;

(iii) The methods used in the risk-based hazard analysis to determine the severity and frequency of hazards and to determine the corresponding risk;

(iv) The methods used in the risk-based hazard analysis to identify actions that mitigate or eliminate hazards and corresponding risks;

(v) The process for setting goals for the risk-based hazard management program and how performance against the goals will be reported;

(vi) The process to make decisions that affect the safety of the rail system relative to the risk-based hazard management program;

(vii) The methods used in the risk-based hazard management program to support continuous safety improvement throughout the life of the rail system; and

(viii) The methods used to maintain records of identified hazards and risks and the mitigation or elimination of the identified hazards and risks throughout the life of the rail system.

(2) The SSP plan's description of the risk-based hazard management program shall include:

(i) The position title of the individual(s) responsible for administering the risk-based hazard management program;

(ii) The identities of stakeholders who will participate in the risk-based hazard management program; and

(iii) The position title of the participants and structure of any hazard management teams or safety committees that may be established to support the risk-based hazard management program.

(q) *Risk-based hazard analysis.* (1) Once FRA approves a passenger rail operation's SSP plan pursuant to §270.201(b), the risk-based hazard analysis methodology identified in paragraphs (p)(1)(i) through (iii) of this section shall be applied to identify and analyze hazards on the rail system and to determine the resulting risks. At a minimum, the aspects of the rail system that shall be analyzed include: Operating rules and practices, infrastructure, equipment, employee levels and schedules, management structure, employee training, and other aspects that have an impact on railroad safety not covered by railroad safety regulations or other Federal regulations.

(2) A risk-based hazard analysis shall identify specific actions that shall be implemented using the methods described in paragraph (p)(1)(iv) of this section that will mitigate or eliminate the hazards and resulting risks identified by paragraph (q)(1) of this section.

(3) A passenger rail operation shall also conduct a risk-based hazard analysis pursuant to paragraphs (q)(1) and (2) of this section when there are significant operational changes, system extensions, system modifications, or other circumstances that have a direct impact on railroad safety.

(r) *Technology analysis and implementation plan.* (1) A passenger rail operation shall develop, and periodically update as necessary, a technology analysis and implementation plan as described by this paragraph. The passenger rail operation shall include this technology analysis and implementation plan in its SSP plan.

(2) A passenger rail operation's technology analysis and implementation plan shall describe the process used to:

(i) Identify and analyze current, new, or novel technologies that will mitigate or eliminate the hazards and resulting risks identified by the risk-based hazard analysis pursuant to paragraph (q)(1) of this section; and

(ii) Analyze the safety impact, feasibility, and costs and benefits of implementing the technologies identified by the processes under paragraph (r)(2)(i) of this section that will mitigate or eliminate hazards and the resulting risks.

(3) Once FRA approves a passenger rail operation's SSP plan pursuant to §270.201(b), including the technology analysis and implementation plan, the passenger rail operation shall apply:

(i) The processes described in paragraph (r)(2)(i) of this section to identify and analyze technologies that will mitigate or eliminate the hazards and resulting risks identified by the risk-based hazard analysis pursuant to paragraph (q)(1) of this section. At a minimum, the technologies a passenger rail operation shall consider as part of its technology analysis are: Processor-based technologies, positive train control systems, electronically-controlled pneumatic brakes, rail integrity inspection systems, rail integrity warning systems, switch position monitors and indicators, trespasser prevention technology, and highway-rail grade crossing warning and protection technology; and

(ii) The processes described in paragraph (r)(2)(ii) of this section to the technologies identified by the analysis under paragraph (r)(3)(i) of this section.

(4) If a passenger rail operation decides to implement any of the technologies identified in paragraph (r)(3) of this section, in the technology analysis and implementation plan in the SSP plan, the passenger rail operation shall:

(i) Describe how it will develop, adopt, implement, maintain, and use the identified technologies; and

(ii) Set forth a prioritized implementation schedule for the development, adoption, implementation and maintenance of those technologies over a 10-year period.

(5) Except as required by subpart I of part 236 of this chapter, if a passenger rail operation decides to implement a positive train control system as part of its technology analysis and implementation plan, the technology implementation plan shall set forth and comply with a schedule for implementation of the positive train control system consistent with the deadlines in the Positive Train Control Enforcement and Implementation Act of 2015, Public Law 114–73, 129 Stat. 576–82 (Oct. 29, 2015), and 49 CFR 236.1005(b)(7).

(6) The passenger rail operation shall not include in its SSP plan the analysis conducted pursuant to paragraph (r)(3) of this section. A passenger rail operation shall make the results of any analysis conducted pursuant to paragraph (r)(3) of this section available upon request to representatives of FRA and States participating under part 212 of this chapter.

(s) *Safety Assurance*—(1) *Change management.* Each passenger rail operation shall establish and set forth a statement in its SSP plan describing the processes and procedures used to manage significant operational changes, system extensions, system modifications, or other significant changes that will have a direct impact on railroad safety.

(2) *Configuration management.* Each passenger rail operation shall establish a configuration management program and describe the program in its SSP plan. The configuration management program shall:

(i) Identify who has authority to make configuration changes;

(ii) Establish processes to make configuration changes to the rail system; and

(iii) Establish processes to ensure that all departments of the system affected by the configuration changes are formally notified and approve of the change.

(3) *Safety certification.* Each passenger rail operation shall establish and set forth a statement in its SSP plan that describes the certification process used to help ensure that safety concerns and hazards are adequately addressed before the initiation of operations or major projects to extend, rehabilitate, or modify an existing system or replace vehicles and equipment.

(t) *Safety culture.* Each SSP plan shall contain a statement that describes how the passenger rail operation measures the success of its safety culture identified in paragraph (b)(2) of this section.

[85 FR 12844, Mar. 4, 2020, as amended at 87 FR 35671, June 13, 2022]

§ 270.105 Discovery and admission as evidence of certain information.

(a) *Protected information.* Except as provided in paragraph (a)(3) of this section, any information compiled or collected after August 14, 2017, solely for the purpose of planning, implementing, or evaluating a system safety program under this part shall not be subject to discovery, admitted into evidence, or considered for other purposes in a Federal or State court proceeding for damages involving personal injury, wrongful death, or property damage. For purposes of this section:

(1) ''Information'' includes plans, reports, documents, surveys, schedules, lists, or data, and specifically includes a passenger rail operation's analysis of its safety risks under § 270.103(q)(1) and a passenger rail operation's statement of mitigation measures under § 270.103(q)(2);

(2) ''Solely'' means that a passenger rail operation originally compiled or collected the information for the exclusive purpose of planning, implementing, or evaluating a system safety program under this part. Information compiled or collected for any other purpose is not protected, even if the passenger rail operation also uses that information for a system safety program. ''Solely'' also means that a passenger rail operation continues to use that information only for its system safety program. If a passenger rail operation subsequently uses for any other purpose information that was initially compiled or collected for a system safety program, this section does not protect that information to the extent that it is used for the non-system safety program purpose. The use of that information within the passenger rail operation's system safety program, however, remains protected. This section does not protect information that is required to be compiled or collected pursuant to any other provision of law of regulation; and

(3) A passenger rail operation may include a Confidential Close Call Reporting System (C^3RS) program in a system safety program established under this part. For Federal or State court proceedings described by this paragraph (a) that are initiated after March 4, 2021, the information protected by this paragraph (a) includes C^3RS information a passenger rail operation includes in its system safety program, even if the passenger rail operation compiled or collected the C^3RS information on

or before August 14, 2017, for purposes other than planning, implementing, or evaluating a system safety program under this part.

(b) *Non-protected information.* This section does not affect the discovery, admissibility, or consideration for other purposes in a Federal or State court proceedings for damages involving personal injury, wrongful death, or property damage of information compiled or collected for a purpose other than that specifically identified in paragraph (a) of this section. Such information shall continue to be discoverable, admissible, or considered for other purposes in a Federal or State court proceedings for damages involving personal injury, wrongful death, or property damage if it was discoverable, admissible, or considered for other purposes in a Federal or State court proceedings for damages involving personal injury, wrongful death, or property damage on or before August 14, 2017. Specifically, the types of information not affected by this section include:

(1) Information compiled or collected on or before August 14, 2017;

(2) Information compiled or collected on or before August 14, 2017, and that continues to be compiled or collected, even if used to plan, implement, or evaluate a system safety program; or

(3) Information that is compiled or collected after August 14, 2017, and is compiled or collected for a purpose other than that identified in paragraph (a) of this section.

(c) *Information protected by other law or regulation.* Nothing in this section shall affect or abridge in any way any other protection of information provided by another provision of law or regulation. Any such provision of law or regulation applies independently of the protections provided by this section.

(d) *Preemption.* To the extent that State discovery rules and sunshine laws would require disclosure of information protected by this section in a Federal or State court proceedings for damages involving personal injury, wrongful death, or property damage, those rules and laws are preempted.

(e) *Enforcement.* This section does not apply to civil enforcement or criminal law enforcement proceedings.

[81 FR 53896, Aug. 12, 2016, as amended at 85 FR 12847, Mar. 4, 2020]

§ 270.107 Consultation requirements.

(a) *General duty.* (1) Each passenger rail operation required to establish a system safety program under this part shall in good faith consult with, and use its best efforts to reach agreement with, all of its directly affected employees, including any non-profit labor organization representing a class or craft of directly affected employees, on the contents of the SSP plan.

(2) A passenger rail operation that consults with a non-profit employee labor organization as required by paragraph (a)(1) of this section is considered to have consulted with the directly affected employees represented by that organization. For directly affected employees represented by a non-profit employee labor organization, the primary point of contact shall be either the general chairperson of that non-profit employee labor organization or a non-profit employee labor organization primary point of contact the passenger rail operation and the non-profit employee labor organization agree on at the beginning of the consultation process. If a passenger rail operation contracts out significant portions of its operations, the contractor and the contractor's employees performing those operations shall be considered directly affected employees for the purposes of this part.

(3) A passenger rail operation shall have a preliminary meeting with its directly affected employees to discuss how the consultation process will proceed. A passenger rail operation is not required to discuss the substance of an SSP plan during this preliminary meeting. A passenger rail operation must:

(i) Hold the preliminary meeting no later than July 2, 2020;

(ii) Notify the directly affected employees of the preliminary meeting no less than 60 days before it is held.

(4) Appendix B to this part contains non-mandatory guidance on how a passenger rail operation may comply with the requirements of this section.

(b) *Consultation statements.* A passenger rail operation required to submit an SSP plan under § 270.201 must also submit, together with the plan, a consultation statement that includes the following information:

(1) A detailed description of the process utilized to consult with directly affected employees;

(2) If the passenger rail operation could not reach agreement with its directly affected employees on the contents of its SSP plan, identification of any known areas of disagreement and an explanation of why it believes agreement was not reached; and

(3) A service list containing the name and contact information for either each international/national president and general chairperson of any non-profit employee labor organization representing a class or craft of the passenger rail operation's directly affected employees, or each non-profit employee labor organization primary point of contact the passenger rail operation and the non-profit employee labor organization agree on at the beginning of the consultation process. The service list must also contain the name and contact information for any directly affected employee who significantly participated in the consultation process independently of a non-profit employee labor organization. When a passenger rail operation submits its SSP plan and consultation statement to FRA pursuant to § 270.201, it must also simultaneously send a copy of these documents to all individuals identified in the service list.

(c) *Statements from directly affected employees.* (1) If a passenger rail operation and its directly affected employees cannot reach agreement on the proposed contents of an SSP plan, the directly affected employees may file a statement with the FRA Associate Administrator for Railroad Safety and Chief Safety Officer explaining their views on the plan on which agreement was not reached with the FRA Associate Administrator for Railroad Safety and Chief Safety Officer at Mail Stop 25, 1200 New Jersey Avenue SE, Washington, DC 20590. The FRA Associate Administrator for Railroad Safety and Chief Safety Officer shall consider any such views during the plan review and approval process.

(2) A passenger rail operation's directly affected employees have 30 days following the date of the submission of a proposed SSP plan to submit the statement described in paragraph (c)(1) of this section.

(d) *Consultation requirements for system safety program plan amendments.* A passenger rail operation's SSP plan must include a description of the process the passenger rail operation will use to consult with its directly affected employees on any subsequent substantive amendments to the system safety program. The requirements of this paragraph do not apply to non-substantive amendments (*e.g.*, amendments that update names and addresses of railroad personnel).

[85 FR 12847, Mar. 4, 2020]

Subpart C—Review, Approval, and Retention of System Safety Program Plans

§ 270.201 Filing and approval.

(a) *Filing.* (1) Each passenger rail operation to which this part applies shall submit one copy of its SSP plan to the FRA Associate Administrator for Railroad Safety and Chief Safety Officer, 1200 New Jersey Avenue SE, Washington, DC 20590, no later than March 4, 2021, or not less than 90 days before commencing passenger operations, whichever is later.

(2) The passenger rail operation shall not include in its SSP plan the risk-based hazard analysis conducted pursuant to § 270.103(q). A passenger rail operation shall make the results of any risk-based hazard analysis available upon request to representatives of FRA and States participating under part 212 of this chapter.

(3) The SSP plan shall include:

(i) The signature, name, title, address, and telephone number of the chief safety officer who bears primary managerial authority for implementing the program for the submitting passenger rail operation. By signing, this chief official is certifying that

the contents of the SSP plan are accurate and that the passenger rail operation will implement the contents of the program as approved by FRA;

(ii) The contact information for the primary person responsible for managing the system safety program; and

(iii) The contact information for the senior representatives of any host railroad, contractor operator, shared track/corridor operator, or persons utilizing or providing significant safety-related services.

(4) As required by §270.107(b), each passenger rail operation must submit with its SSP plan a consultation statement describing how it consulted with its directly affected employees on the contents of its SSP plan. Directly affected employees may also file a statement in accordance with §270.107(c).

(b) *Approval.* (1) Within 90 days of receipt of an SSP plan, FRA will review the SSP plan to determine if the elements prescribed in this part are sufficiently addressed. This review will also consider any statement submitted by directly affected employees pursuant to §270.107(c).

(2) FRA will notify each person identified in the SSP plan under §270.201(a)(3) in writing whether the proposed plan has been approved by FRA, and, if not approved, the specific points in which the SSP plan is deficient. FRA will also provide this notification to each individual identified in the service list accompanying the consultation statement required under §270.107(b).

(3) If FRA does not approve an SSP plan, the affected passenger rail operation shall amend the proposed plan to correct all deficiencies identified by FRA and provide FRA with a corrected copy of the SSP plan not later than 90 days following receipt of FRA's written notice that the proposed SSP plan was not approved.

(4) Approval of an SSP plan under this part does not constitute approval of the specific actions a passenger rail operation will implement under an SSP plan pursuant to §270.103(q)(2) and shall not be construed as establishing a Federal standard regarding those specific actions.

(c) *Review of amendments.* (1)(i) A passenger rail operation shall submit any amendment(s) to the SSP plan to FRA not less than 60 days before the proposed effective date of the amendment(s). The passenger rail operation shall file the amended SSP plan with a cover letter outlining the changes made to the original approved SSP plan by the proposed amendment(s). The cover letter shall also describe the process the passenger rail operation used pursuant to §270.107(d) to consult with its directly affected employees on the amendment(s).

(ii) If an amendment is safety-critical and the passenger rail operation is unable to submit the amended SSP plan to FRA 60 days before the proposed effective date of the amendment, the passenger rail operation shall submit the amended SSP plan with a cover letter outlining the changes made to the original approved SSP plan by the proposed amendment(s) and why the amendment is safety-critical to FRA as near as possible to 60 days before the proposed effective date of the amendment(s).

(iii) If the proposed amendment is limited to adding or changing a name, title, address, or telephone number of a person, FRA approval is not required under the process in paragraphs (c)(1)(i) and (ii) of this section, although the passenger rail operation shall still file the proposed amendment with FRA's Associate Administrator for Railroad Safety and Chief Safety Officer. These proposed amendments may be implemented upon filing with FRA. All other proposed amendments must comply with the formal approval process in paragraph (c) of this section.

(2)(i) Except as provided in paragraph (c)(1)(iii) of this section, FRA will review the proposed amended SSP plan within 45 days of receipt. FRA will then notify the primary contact person of each affected passenger rail operation whether the proposed amended plan has been approved by FRA, and if not approved, the specific points in which each proposed amendment to the SSP plan is deficient.

(ii) If FRA has not notified the passenger rail operation by the proposed effective date of the amendment(s) whether the proposed amended plan has been approved or not, the passenger rail operation may implement

the amendment(s) pending FRA's decision.

(iii) If a proposed SSP plan amendment is not approved by FRA, no later than 60 days following the receipt of FRA's written notice, the passenger rail operation shall provide FRA either a corrected copy of the amendment that addresses all deficiencies noted by FRA or written notice that the passenger rail operation is retracting the amendment.

(d) *Reopened review.* Following initial approval of a plan, or amendment, FRA may reopen consideration of the plan or amendment for cause stated.

(e) *Electronic submission.* All documents required to be submitted to FRA under this part may be submitted electronically. Appendix C to this part provides instructions on electronic submission of documents.

[85 FR 12848, Mar. 4, 2020]

§ 270.203 Retention of system safety program plan.

Each passenger rail operation to which this part applies shall retain at its system headquarters, and at any division headquarters, one copy of the SSP plan required by this part and one copy of each subsequent amendment to that plan. These records shall be made available to representatives of FRA and States participating under part 212 of this chapter for inspection and copying during normal business hours.

[85 FR 12849, Mar. 4, 2020]

Subpart D—System Safety Program Internal Assessments and External Auditing

§ 270.301 General.

The system safety program and its implementation shall be assessed internally by the passenger rail operation and audited externally by FRA or FRA's designee.

[85 FR 12849, Mar. 4, 2020]

§ 270.303 Internal system safety program assessment.

(a) Following FRA's initial approval of the passenger rail operation's SSP plan pursuant to § 270.201, the passenger rail operation shall annually conduct an assessment of the extent to which:

(1) The system safety program is fully implemented;

(2) The passenger rail operation is in compliance with the implemented elements of the approved system safety program; and

(3) The passenger rail operation has achieved the goals set forth in § 270.103(c).

(b) As part of its SSP plan, the passenger rail operation shall set forth a statement describing the processes used to:

(1) Conduct internal system safety program assessments;

(2) Internally report the findings of the internal system safety program assessments;

(3) Develop, track, and review recommendations as a result of the internal system safety program assessments;

(4) Develop improvement plans based on the internal system safety program assessments. Improvement plans shall, at a minimum, identify who is responsible for carrying out the necessary tasks to address assessment findings and specify a schedule of target dates with milestones to implement the improvements that address the assessment findings; and

(5) Manage revisions and updates to the SSP plan based on the internal system safety program assessments.

(c)(1) Within 60 days of completing its internal SSP plan assessment pursuant to paragraph (a) of this section, the passenger rail operation shall:

(i) Submit to FRA a copy of the passenger rail operation's internal assessment report that includes a system safety program assessment and the status of internal assessment findings and improvement plans to the FRA Associate Administrator for Railroad Safety and Chief Safety Officer, Mail Stop 25, 1200 New Jersey Avenue SE, Washington, DC 20590; and

(ii) Outline the specific improvement plans for achieving full implementation of the SSP plan, as well as achieving the goals of the plan.

(2) The passenger rail operation's chief official responsible for safety

shall certify the results of the internal SSP plan assessment.

[85 FR 12849, Mar. 4, 2020]

§ 270.305 External safety audit.

(a) FRA may conduct, or cause to be conducted, external audits of a system safety program. Each audit will evaluate compliance with the elements required by this part in an approved SSP plan. FRA shall provide the passenger rail operation written notification of the results of any audit.

(b)(1) Within 60 days of FRA's written notification of the results of the audit, the passenger rail operation shall submit to FRA for approval an improvement plan to address the audit findings that require corrective action. At a minimum, the improvement plan shall identify who is responsible for carrying out the necessary tasks to address audit findings and specify target dates and milestones to implement the improvements that address the audit findings.

(2) If FRA does not approve the passenger rail operation's improvement plan, FRA will notify the passenger rail operation of the specific deficiencies in the improvement plan. The affected passenger rail operation shall amend the proposed plan to correct the deficiencies identified by FRA and provide FRA with a corrected copy of the improvement plan no later than 30 days following its receipt of FRA's written notice that the proposed plan was not approved.

(3) Upon request, the passenger rail operation shall provide to FRA and States participating under part 212 of this chapter for review a report upon request regarding the status of the implementation of the improvements set forth in the improvement plan established pursuant to paragraph (b)(1) of this section.

[85 FR 12849, Mar. 4, 2020]

Subpart E—Fatigue Risk Management Programs

SOURCE: 87 FR 35671, June 13, 2022, unless otherwise noted.

§ 270.401 Definitions.

As used in this subpart—

Contributing factor means a circumstance or condition that helps cause a result.

Fatigue means a complex state characterized by a lack of alertness and reduced mental and physical performance, often accompanied by drowsiness.

Fatigue-risk analysis means a railroad's analysis of its operations that:

(1) Identifies and evaluates the fatigue-related railroad safety hazards on its system(s); and

(2) Determines the degree of risk associated with each of those hazards.

FRMP means a Fatigue Risk Management Program.

FRMP plan means a Fatigue Risk Management Program plan.

Safety-related railroad employee means:

(1) A person subject to 49 U.S.C. 21103, 21104, or 21105;

(2) Another person involved in railroad operations not subject to 49 U.S.C. 21103, 21104, or 21105;

(3) A person who inspects, installs, repairs or maintains track, roadbed, signal and communication systems, and electric traction systems including a roadway worker or railroad bridge worker;

(4) A hazmat employee defined under 49 U.S.C. 5102(3);

(5) A person who inspects, repairs, or maintains locomotives, passenger cars, or freight cars; or

(6) An employee of any person who utilizes or performs significant railroad safety-related services, as described in § 270.103(d)(2), if that employee performs a function identified in paragraphs (1) through (5) of this definition.

§ 270.403 Purpose and scope of a Fatigue Risk Management Program (FRMP).

(a) *Purpose.* The purpose of an FRMP is to improve railroad safety through structured, systematic, proactive processes and procedures that a railroad subject to this part develops and implements to identify and mitigate the effects of fatigue on its employees.

(b) *Scope.* A railroad shall:

(1) Design its FRMP to reduce the fatigue its safety-related railroad employees experience and to reduce the risk of railroad accidents, incidents,

injuries, and fatalities where the fatigue of any of these employees is a contributing factor;

(2) Develop its FRMP by systematically identifying and evaluating the fatigue-related railroad safety hazards on its system, determining the degree of risk associated with each hazard, and managing those risks to reduce the fatigue that its safety-related railroad employees experience. This system-wide fatigue risk identification and evaluation process must account for the varying circumstances of a railroad's operations on different parts of its system; and

(3) Employ in its FRMP the fatigue risk mitigation strategies a railroad identifies as appropriate to address those varying circumstances.

§ 270.405 General requirements; procedure.

(a) Each railroad subject to this part shall:

(1) Establish and implement an FRMP as part of its SSP; and

(2) Establish an FRA-approved FRMP plan as a component of a railroad's FRA-approved SSP plan and then update its FRMP plan as necessary as part of the annual internal assessment of its SSP under § 270.303.

(b) A railroad's FRMP plan must explain the railroad's method of analysis of fatigue risks and the railroad's process(es) for implementing its FRMP.

(c)(1) A railroad shall submit an FRMP plan to FRA for approval no later than either the applicable timeline in § 270.201(a) for filing its SSP plan or July 13, 2023, whichever is later.

(2) A railroad shall submit updates to its FRMP plan under the process for amending its SSP plan in § 270.201(c).

(d) FRA shall review and approve or disapprove a railroad's FRMP plan and amendments to that plan under the process for reviewing SSP plans and amendments in § 270.201(b) and (c), respectively. FRA approval of a railroad's FRMP plan amends a railroad's SSP plan to include the FRMP plan as a component.

§ 270.407 Requirements for an FRMP.

(a) *In general.* An FRMP shall include an analysis of fatigue risks and mitigation strategies, as described in paragraphs (b) and (c) of this section.

(b) *Analysis of fatigue risks.* A railroad shall conduct a fatigue-risk analysis as part of its FRA-approved FRMP, which includes identification of fatigue-related railroad safety hazards, assessment of the risks associated with those hazards, and prioritization of risks for mitigation. At a minimum, a railroad shall consider the following categories of risk factors:

(1) General health and medical conditions that can affect the fatigue levels among the population of safety-related railroad employees;

(2) Scheduling issues that can affect the opportunities of safety-related railroad employees to obtain sufficient quality and quantity of sleep; and

(3) Characteristics of each job category of safety-related railroad employees work that can affect fatigue levels and risk for fatigue of those employees.

(c) *Mitigation strategies.* A railroad shall develop and implement mitigation strategies to reduce the risk of railroad accidents, incidents, injuries, and fatalities where fatigue of any of its safety-related employees is a contributing factor. At a minimum, in developing and implementing these mitigation strategies, a railroad shall consider the railroad's policies, practices, and communication related to its safety-related railroad employees.

(1) *Policies.* A railroad shall consider developing and implementing policies to reduce the risk of the exposure of its safety-related railroad employees to fatigue-related railroad safety hazards on its system. At a minimum, a railroad shall consider these policies:

(i) Providing opportunities for identification, diagnosis, and treatment of any medical condition that may affect alertness or fatigue, including sleep disorders;

(ii) Identifying methods to minimize accidents and incidents that occur as a result of working at times when scientific and medical research have shown increased fatigue disrupts employees' circadian rhythms;

(iii) Developing and implementing alertness strategies, such as policies on napping, to address acute drowsiness

and fatigue while an employee is on duty;

(iv) Increasing the number of consecutive hours of off-duty rest, during which an employee receives no communication from the employing railroad or its managers, supervisors, officers, or agents; and

(v) Avoiding abrupt changes in rest cycles for employees.

(2) *Practices.* A railroad shall consider developing and implementing operational practices to reduce the risk of exposure of its safety-related railroad employees to fatigue-related railroad safety hazards on its system. At a minimum, a railroad shall consider these practices:

(i) Minimizing the effects on employee fatigue of an employee's short-term or sustained response to emergency situations, such as derailments and natural disasters, or engagement in other intensive working conditions;

(ii) Developing and implementing scheduling practices for employees, including innovative scheduling practices, on-duty call practices, work and rest cycles, increased consecutive days off for employees, changes in shift patterns, appropriate scheduling practices for varying types of work, and other aspects of employee scheduling to reduce employee fatigue and cumulative sleep loss; and

(iii) Providing opportunities to obtain restful sleep at lodging facilities, including employee sleeping quarters provided by the railroad carrier.

(3) *Communications.* A railroad shall consider developing and implementing training, education, and outreach methods to deliver fatigue-related information effectively to its safety-related railroad employees. At a minimum, a railroad shall consider including in its employee education and training information on the physiological and human factors that affect fatigue, as well as strategies to reduce or mitigate the effects of fatigue, based on the most current scientific and medical research and literature.

(d) *Evaluation.* A railroad shall develop and implement procedures and processes for monitoring and evaluating its FRMP to assess whether the FRMP effectively meets the goals its FRMP plan describes, as required under § 270.409(b).

(1) The evaluation shall include, at a minimum:

(i) Periodic monitoring of the railroad's operational environment to detect changes that may generate new hazards;

(ii) Analysis of the risks associated with any identified hazards; and

(iii) Periodic safety assessments to determine the need for changes to its mitigation strategies.

(2) A railroad shall evaluate newly-identified hazards, and hazards associated with ineffective mitigation strategies, through processes for analyzing fatigue risks described in the railroad's FRMP plan.

(3) Any necessary changes not addressed prior to a railroad's annual internal assessment must be included in the internal assessment improvement plans required under § 270.303.

§ 270.409 Requirements for an FRMP plan.

(a) *In general.* A railroad shall adopt and implement its FRMP through an FRA-approved FRMP plan, developed in consultation with directly affected employees as described under § 270.107. A railroad FRMP plan must contain the elements described in this section. A railroad must submit the plan to FRA for approval under the criteria of subpart C.

(b) *Goals.* An FRMP plan must contain a statement that defines the specific fatigue-related goals of the FRMP and describes strategies for reaching those goals.

(c) *Methods*—(1) *Analysis of fatigue risk.* An FRMP plan shall describe a railroad's method(s) for conducting its fatigue-risk analysis as part of its FRMP. The description shall specify:

(i) The scope of the analysis, which is the covered population of safety-related railroad employees;

(ii) The processes a railroad will use to identify fatigue-related railroad safety hazards on its system and determine the degree of risk associated with each fatigue-related hazard identified;

(iii) The processes a railroad will use to compare and prioritize identified fatigue-related risks for mitigation purposes; and

(iv) The information sources a railroad will use to support ongoing identification of fatigue-related railroad safety hazards and determine the degree of risk associated with those hazards.

(2) *Mitigation strategies.* An FRMP plan shall describe a railroad's processes for:

(i) Identifying and selecting fatigue risk mitigation strategies; and

(ii) Monitoring identified fatigue-related railroad safety hazards.

(3) *Evaluation.* An FRMP plan shall describe:

(i) A railroad's processes for monitoring and evaluating the overall effectiveness of its FRMP and the effectiveness of fatigue-related mitigation strategies the railroad uses under §270.407; and

(ii) A railroad's procedures for reviewing the FRMP as part of the annual internal assessment of its SSP under §270.303 and for updating the FRMP plan under the process for amending its SSP plan under §270.201(c).

(d) *FRMP implementation plan.* A railroad shall describe in its FRMP plan how it will implement its FRMP. This description must cover an implementation period not to exceed 36 months, and shall include:

(1) A description of the roles and responsibilities of each position or job function with significant responsibility for implementing the FRMP, including those held by employees, contractors who provide significant FRMP-related services, and other entities or persons that provide significant FRMP services;

(2) A timeline describing when certain milestones that must be met to implement the FRMP fully will be achieved. Implementation milestones shall be specific and measurable;

(3) A description of how a railroad may make significant changes to the FRMP plan under the process for amending its SSP plan in §270.201(c); and

(4) The procedures for consultation with directly affected employees on any subsequent substantive amendments to the railroad's FRMP plan. The requirements of this section do not apply to non-substantive amendments (*e.g.*, amendments that update names and addresses of railroad personnel).

APPENDIX A TO PART 270 [RESERVED]

APPENDIX B TO PART 270—FEDERAL RAILROAD ADMINISTRATION GUIDANCE ON THE SYSTEM SAFETY PROGRAM CONSULTATION PROCESS

A passenger rail operation required to develop a system safety program under this part must in good faith consult with and use its best efforts to reach agreement with its directly affected employees on the contents of the SSP plan. *See* §270.107(a). This appendix discusses the meaning of the terms ''good faith'' and ''best efforts,'' and provides nonmandatory guidance on how to comply with the requirement to consult with directly affected employees on the contents of the SSP plan.

The guidance is provided for employees who are represented by a non-profit employee labor organization and employees who are not represented by any such organization. The guidance is not legally binding in its own right and will not be relied upon by the U.S. Department of Transportation as a separate basis for affirmative enforcement action or other administrative penalty. Conformity with this guidance (as distinct from existing statutes and regulations) is voluntary only, and nonconformity will not affect rights and obligations under existing statutes and regulations.

THE MEANING OF ''GOOD FAITH'' AND ''BEST EFFORTS''

''Good faith'' and ''best efforts'' are not interchangeable terms representing a vague standard for the §270.107 consultation process. Rather, each term has a specific and distinct meaning. When consulting with directly affected employees, therefore, a passenger rail operation must independently meet the standards for both the good faith and best efforts obligations. A passenger rail operation that does not meet the standard for one or the other will not be in compliance with the consultation requirements of §270.107.

The good faith obligation requires a passenger rail operation to consult with employees in a manner that is honest, fair, and reasonable, and to genuinely pursue agreement on the contents of an SSP plan. If a passenger rail operation consults with its employees merely in a perfunctory manner, without genuinely pursuing agreement, it will not have met the good faith requirement. For example, a lack of good faith may be found if a passenger rail operation's directly affected employees express concerns

with certain parts of the SSP plan, and the passenger rail operation neither addresses those concerns in further consultation nor attempts to address those concerns by making changes to the SSP plan.

On the other hand, ''best efforts'' establishes a higher standard than that imposed by the good faith obligation, and describes the diligent attempts that a passenger rail operation must pursue to reach agreement with its employees on the contents of its system safety program. While the good faith obligation is concerned with the passenger rail operation's state of mind during the consultation process, the best efforts obligation is concerned with the specific efforts made by the passenger rail operation in an attempt to reach agreement. This would include considerations such as whether a passenger rail operation had held sufficient meetings with its employees to address or make an attempt to address any concerns raised by the employees, or whether the passenger rail operation had made an effort to respond to feedback provided by employees during the consultation process. For example, a passenger rail operation would not meet the best efforts obligation if it did not initiate the consultation process in a timely manner, and thereby failed to provide employees sufficient time to engage in the consultation process. Generally, best efforts are measured by the measures that a reasonable person in the same circumstances and of the same nature as the acting party would take. Therefore, the standard imposed by the best efforts obligation may vary with different railroads, depending on a railroad's size, resources, and number of employees.

When reviewing SSP plans, FRA will determine on a case-by-case basis whether a passenger rail operation has met its §270.107 good faith and best efforts obligations. This determination will be based upon the consultation statement submitted by the passenger rail operation pursuant to §270.107(b) and any statements submitted by employees pursuant to §270.107(c). If FRA finds that these statements do not provide sufficient information to determine whether a passenger rail operation used good faith and best efforts to reach agreement, FRA may investigate further and contact the passenger rail operation or its employees to request additional information. If FRA determines that a passenger rail operation did not use good faith and best efforts, FRA may disapprove the SSP plan submitted by the passenger rail operation and direct the passenger rail operation to comply with the consultation requirements of §270.107. Pursuant to §270.201(b)(3), if FRA does not approve the SSP plan, the passenger rail operation will have 90 days, following receipt of FRA's written notice that the plan was not approved, to correct any deficiency identified. In such cases, the identified deficiency would be that the passenger rail operation did not use good faith and best efforts to consult and reach agreement with its directly affected employees. If a passenger rail operation then does not submit to FRA within 90 days an SSP plan meeting the consultation requirements of §270.107, FRA could impose penalties for failure to comply with §270.201(b)(3).

GUIDANCE ON HOW A PASSENGER RAIL OPERATION MAY CONSULT WITH DIRECTLY AFFECTED EMPLOYEES

Because the standard imposed by the best efforts obligation will vary depending upon the passenger rail operation, there may be countless ways to comply with the consultation requirements of §270.107. Therefore, FRA believes it is important to maintain a flexible approach to the §270.107 consultation requirements, to give a passenger rail operation and its directly affected employees the freedom to consult in a manner best suited to their specific circumstances.

FRA is nevertheless providing guidance in this appendix as to how a passenger rail operation may proceed when consulting (utilizing good faith and best efforts) with employees in an attempt to reach agreement on the contents of an SSP plan. FRA believes this guidance may be useful as a starting point for those that are uncertain about how to comply with the §270.107 consultation requirements. This guidance distinguishes between employees who are represented by a non-profit employee labor organization and employees who are not, as the processes a passenger rail operation may use to consult with represented and non-represented employees could differ significantly.

This guidance does not establish prescriptive requirements but merely outlines a consultation process a passenger rail operation may choose to follow. A passenger rail operation's consultation statement could indicate that it followed the guidance in this appendix as evidence that it utilized good faith and best efforts to reach agreement with its employees on the contents of an SSP plan.

Employees Represented by a Non-Profit Employee Labor Organization

As provided in §270.107(a)(2), a passenger rail operation consulting with the representatives of a non-profit employee labor organization on the contents of an SSP plan will be considered to have consulted with the directly affected employees represented by that organization.

A passenger rail operation may utilize the following process as a roadmap for using good faith and best efforts when consulting with represented employees in an attempt to reach agreement on the contents of an SSP plan.

• Pursuant to §270.107(a)(3)(i), a passenger rail operation must meet with representatives from a non-profit employee labor organization (representing a class or craft of the passenger rail operation's directly affected employees) no later than July 2, 2020, to begin the process of consulting on the contents of the SSP plan. A passenger rail operation must provide notice at least 60 days before the scheduled meeting.

• During the time between the initial meeting and the applicability date of §270.105 the parties may meet to discuss administrative details of the consultation process as necessary.

• Within 60 days after the applicability date of §270.105 a passenger rail operation should have a meeting with the directed affected railroad employees to discuss substantive issues with the SSP.

• Pursuant to §270.201(a)(1), a passenger rail operation would file its SSP plan with FRA no later than March 4, 2021, or not less than 90 days before commencement of new passenger service, whichever is later.

• As provided by §270.107(c), if agreement on the contents of an SSP plan could not be reached, a labor organization (representing a class or craft of the passenger rail operation's directly affected employees) may file a statement with the FRA Associate Administrator for Railroad Safety and Chief Safety Officer explaining its views on the plan on which agreement was not reached.

Employees Who Are Not Represented by a Non-Profit Employee Labor Organization

FRA recognizes that some (or all) of a passenger rail operation's directly affected employees may not be represented by a non-profit employee labor organization. For such non-represented employees, the consultation process described for represented employees may not be appropriate or sufficient. For example, FRA believes that a passenger rail operation with non-represented employees should make a concerted effort to ensure that its non-represented employees are aware that they are able to participate in the development of the SSP plan. FRA therefore is providing the following guidance regarding how a passenger rail operation may utilize good faith and best efforts when consulting with non-represented employees on the contents of its SSP plan.

• By April 20, 2020, a passenger rail operation should notify non-represented employees that—

(1) The passenger rail operation is required to consult in good faith with, and use its best efforts to reach agreement with, all directly affected employees on the proposed contents of its SSP plan;

(2) The passenger rail operation is required to meet with its directly affected employees by July 2, 2020, to address the consultation process;

(3) Non-represented employees are invited to participate in the consultation process (and include instructions on how to engage in this process); and

(4) If a passenger rail operation is unable to reach agreement with its directly affected employees on the contents of the proposed SSP plan, an employee may file a statement with the FRA Associate Administrator for Railroad Safety and Chief Safety Officer explaining the employee's views on the plan on which agreement was not reached.

• This initial notification (and all subsequent communications, as necessary or appropriate) could be provided to non-represented employees in the following ways:

(1) Electronically, such as by email or an announcement on the passenger rail operation's website;

(2) By posting the notification in a location easily accessible and visible to non-represented employees; or

(3) By providing all non-represented employees a hard copy of the notification. A passenger rail operation could use any or all of these methods of communication, so long as the notification complies with the passenger rail operation's obligation to utilize best efforts in the consultation process.

• Following the initial notification and initial meeting to discuss the consultation process (and before the passenger rail operation submits its SSP plan to FRA), a passenger rail operation should provide non-represented employees a draft proposal of its SSP plan. This draft proposal should solicit additional input from non-represented employees, and the passenger rail operation should provide non-represented employees 60 days to submit comments to the passenger rail operation on the draft.

• Following this 60-day comment period and any changes to the draft SSP plan made as a result, the passenger rail operation should submit the proposed SSP plan to FRA, as required by this part.

• As provided by §270.107(c), if agreement on the contents of an SSP plan cannot be reached, then a non-represented employee may file a statement with the FRA Associate Administrator for Railroad Safety and Chief Safety Officer explaining employee's views on the plan on which agreement was not reached.

[85 FR 12849, Mar. 4, 2020]

APPENDIX C TO PART 270—PROCEDURES FOR SUBMISSION OF SSP PLANS AND STATEMENTS FROM DIRECTLY AFFECTED EMPLOYEES

This appendix summarizes procedures for the submission of an SSP plan and statements by directly affected employees consistent with the requirements of this part.

SUBMISSION BY A PASSENGER RAIL OPERATION AND DIRECTLY AFFECTED EMPLOYEES

As provided for in §270.101, a system safety program shall be fully implemented and supported by a written SSP plan. Each passenger rail operation must submit its SSP plan to FRA for approval as provided for in §270.201.

As provided for in §270.107(c), if a passenger rail operation and its directly affected employees cannot come to agreement on the proposed contents of the SSP plan, the directly affected employees have 30 days following the submission of the proposed SSP plan to submit a statement to the FRA Associate Administrator for Railroad Safety and Chief Safety Officer explaining the directly affected employees' views on the plan on which agreement was not reached.

The passenger rail operation's and directly affected employees' submissions shall be sent to the FRA Associate Administrator for Railroad Safety and Chief Safety Officer, Mail Stop 25, 1200 New Jersey Avenue SE, Washington, DC 20590. When a passenger rail operation submits its SSP plan and consultation statement to FRA pursuant to §270.201, it must also simultaneously send a copy of these documents to all individuals identified in the service list pursuant to §270.107(b)(3).

Each passenger rail operation and directly affected employee is authorized to file by electronic means any submissions required under this part. Before any person submits anything electronically, the person shall provide the FRA Associate Administrator for Railroad Safety and Chief Safety Officer with the following information in writing:

(1) The name of the passenger rail operation or directly affected employee(s);

(2) The names of two individuals, including job titles, who will be the passenger rail operation's or directly affected employees' points of contact and will be the only individuals allowed access to FRA's secure document submission site;

(3) The mailing addresses for the passenger rail operation's or directly affected employees' points of contact;

(4) The system or main headquarters address located in the United States;

(5) The email addresses for the passenger rail operation's or directly affected employees' points of contact; and

(6) The daytime telephone numbers for the passenger rail operation's or directly affected employees' points of contact.

A request for electronic submission or FRA review of written materials shall be addressed to the FRA Associate Administrator for Railroad Safety and Chief Safety Officer, Mail Stop 25, 1200 New Jersey Avenue SE, Washington, DC 20590. Upon receipt of a request for electronic submission that contains the information listed above, FRA will then contact the requestor with instructions for electronically submitting its program or statement. A passenger rail operation that electronically submits an initial SSP plan or new portions or revisions to an approved program required by this part shall be considered to have provided its consent to receive approval or disapproval notices from FRA by email. FRA may electronically store any materials required by this part regardless of whether the passenger rail operation that submits the materials does so by delivering the written materials to the Associate Administrator and opts not to submit the materials electronically. A passenger rail operation that opts not to submit the materials required by this part electronically, but provides one or more email addresses in its submission, shall be considered to have provided its consent to receive approval or disapproval notices from FRA by email or mail.

PART 271—RISK REDUCTION PROGRAM

Subpart A—General

Sec.
271.1 Purpose and scope.
271.3 Application.
271.5 Definitions.
271.7 [Reserved]
271.9 Penalties and responsibility for compliance.
271.11 Discovery and admission as evidence of certain information.
271.13 Determination of inadequate safety performance.
271.15 Voluntary compliance.

Subpart B—Risk Reduction Program Requirements

271.101 Risk reduction programs.
271.103 Risk-based hazard management program.
271.105 Safety performance evaluation.
271.107 Safety outreach.
271.109 Technology analysis and technology implementation plan.
271.111 Implementation and support training.
271.113 Involvement of railroad employees.

Subpart C—Risk Reduction Program Plan Requirements

271.201 General.
271.203 Policy, purpose and scope, and goals.
271.205 System description.
271.207 Consultation requirements.
271.209 Consultation on amendments.
271.211 Risk-based hazard management program process.
271.213 Safety performance evaluation process.

271.215 Safety outreach process.
271.217 Technology implementation plan process.
271.219 Implementation and support training plan.
271.221 Involvement of railroad employees process.
271.223 Internal assessment process.
271.225 RRP implementation plan.

Subpart D—Review, Approval, and Retention of Risk Reduction Program Plans

271.301 Filing and approval.
271.303 Amendments.
271.305 Reopened review.
271.307 Retention of RRP plans.

Subpart E—Internal Assessments

271.401 Annual internal assessments.
271.403 Internal assessment improvement plans.
271.405 Internal assessment reports.

Subpart F—External Audits

271.501 External audits.
271.503 External audit improvement plans.

Subpart G—Fatigue Risk Management Programs

271.601 Definitions.
271.603 Purpose and scope of a Fatigue Risk Management Program (FRMP).
271.605 General requirements; procedure.
271.607 Requirements for an FRMP.
271.609 Requirements for an FRMP plan.

APPENDIX A TO PART 271—FEDERAL RAILROAD ADMINISTRATION GUIDANCE ON THE RISK REDUCTION PROGRAM CONSULTATION PROCESS

APPENDIX B TO PART 271—PROCEDURES FOR SUBMISSION OF RRP PLANS AND STATEMENTS FROM DIRECTLY AFFECTED EMPLOYEES

AUTHORITY: 49 U.S.C. 20103, 20106–20107, 20118–20119, 20156, 21301, 21304, 21311; 28 U.S.C. 2461, note; and 49 CFR 1.89.

SOURCE: 85 FR 9314, Feb. 18, 2020, unless otherwise noted.

Subpart A—General

§ 271.1 Purpose and scope.

(a) The purpose of this part is to improve railroad safety through structured, proactive processes and procedures developed and implemented by railroads. Each railroad subject to this part must establish a Risk Reduction Program (RRP) that systematically evaluates railroad safety hazards on its system and manages the risks associated with those hazards to reduce the number and rates of railroad accidents/incidents, injuries, and fatalities.

(b) This part prescribes minimum Federal safety standards for the preparation, adoption, and implementation of RRPs. This part does not restrict railroads from adopting and enforcing additional or more stringent requirements not inconsistent with this part.

(c) This part prescribes the protection of information a railroad compiles or collects solely for the purpose of planning, implementing, or evaluating an RRP under this part.

(d) This part does not require an RRP to address hazards completely unrelated to railroad safety and that fall under the exclusive jurisdiction of another Federal agency. Additionally, an RRP required by this part is not intended to address and should not address the safety of employees while performing inspections, tests, and maintenance, except where FRA has already addressed workplace safety issues, such as blue signal protection in part 218 of this chapter. FRA does not intend to approve any specific portion of an RRP plan that relates exclusively to employee working conditions.

§ 271.3 Application.

(a) Except as provided in paragraph (b) of this section, this part applies to—

(1) Class I railroads;

(2) Railroads determined to have inadequate safety performance pursuant to § 271.13; and

(3) Railroads that voluntarily comply with the requirements of this part pursuant to § 271.15.

(b) This part does not apply to:

(1) Rapid transit operations in an urban area that are not connected to the general railroad system of transportation;

(2) Tourist, scenic, historic, or excursion operations, whether on or off the general railroad system of transportation;

(3) Operation of private cars, including business/office cars and circus trains;

(4) Railroads that operate only on track inside an installation that is not part of the general railroad system of

transportation (*i.e.*, plant railroads, as defined in § 271.5); and

(5) Commuter or intercity passenger railroads that are subject to Federal system safety program requirements contained in part 270 of this chapter.

(c) If a railroad contracts out significant portions of its operations, the contractor and the contractor's employees performing the railroad's operations shall be considered directly affected employees for purposes of this part.

§ 271.5 Definitions.

As used in this part only—

Accident/incident means an ''accident/incident'' as defined in § 225.5 of this chapter.

Administrator means the Administrator of the Federal Railroad Administration or the Administrator's delegate.

Confidential Close Call Reporting System (C³RS) means an FRA-sponsored voluntary program designed to improve the safety of railroad operations by allowing railroad employees to confidentially report currently unreported or underreported unsafe events.

FRA means the Federal Railroad Administration.

FRA Associate Administrator means the Associate Administrator for Railroad Safety and Chief Safety Officer, Federal Railroad Administration, or the Associate Administrator's delegate.

Fully implemented means that all elements of an RRP as described in the RRP plan are established and applied to the safety management of the railroad.

Hazard means any real or potential condition that can cause injury, illness, or death; damage to or loss of a system, equipment, or property; or damage to the environment.

Inadequate safety performance means safety performance that FRA has determined to be inadequate based on the criteria described in § 271.13.

Mitigation strategy means an action or program intended to reduce or eliminate the risk associated with a hazard.

Person means an entity of any type covered under 49 U.S.C. 21301, including, but not limited to, the following: A railroad; a manager, supervisor, official, or other employee or agent of a railroad; any owner, manufacturer, lessor, or lessee of railroad equipment, track, or facilities; any independent contractor or subcontractor providing goods or services to a railroad; any employee of such owner, manufacturer, lessor, lessee, or independent contractor or subcontractor.

Pilot project means a limited scope project used to determine whether quantitative evaluation and analysis suggests that a particular system or mitigation strategy has potential to succeed on a full-scale basis.

Plant railroad means a plant or installation that owns or leases a locomotive, uses that locomotive to switch cars throughout the plant or installation, and is moving goods solely for use in the facility's own industrial processes. The plant or installation could include track immediately adjacent to the plant or installation if the plant railroad leases the track from the general system railroad and the lease provides for (and actual practice entails) the exclusive use of that trackage by the plant railroad and the general system railroad for purposes of moving only cars shipped to or from the plant. A plant or installation that operates a locomotive to switch or move cars for other entities, even if solely within the confines of the plant or installation, rather than for its own purposes or industrial processes, is not considered a plant railroad because the performance of such activity makes the operation part of the general railroad system of transportation.

Positive train control system means a system designed to prevent train-to-train collisions, overspeed derailments, incursions into established work zone limits, and the movement of a train through a switch left in the wrong position, as described in subpart I of part 236 of this chapter.

Railroad means:

(1) Any form of non-highway ground transportation that runs on rails or electromagnetic guideways, including:

(i) Commuter or other short-haul rail passenger service in a metropolitan or suburban area and commuter railroad service that was operated by the Consolidated Rail Corporation on January 1, 1979; and

(ii) High speed ground transportation systems that connect metropolitan areas, without regard to whether those systems use new technologies not associated with traditional railroads, but does not include rapid transit operations in an urban area that are not connected to the general railroad system of transportation; and

(2) A person or organization that provides railroad transportation, whether directly or by contracting out operation of the railroad to another person.

Risk means the combination of the probability (or frequency of occurrence) and the consequence (or severity) of a hazard.

Risk-based HMP means a risk-based hazard management program (HMP).

Risk reduction means the formal, top-down, organization-wide approach to managing safety risk and assuring the effectiveness of safety risk mitigation strategies. It includes systematic procedures, practices, and policies for the management of safety risk.

RRP means a Risk Reduction Program.

RRP plan means a Risk Reduction Program plan.

Safety culture means the shared values, actions, and behaviors that demonstrate a commitment to safety over competing goals and demands.

Safety performance means a realized or actual safety accomplishment relative to stated safety objectives.

Safety outreach means the communication of safety information to support the implementation of an RRP throughout a railroad.

Senior management means personnel at the highest level of a railroad's management who are responsible for making major policy decisions and long-term business plans regarding the operation of the railroad.

STB means the Surface Transportation Board of the United States.

Tourist, scenic, historic, or excursion operations means railroad operations that carry passengers, often using antiquated equipment, with the conveyance of the passengers to a particular destination not being the principal purpose. Train movements of new passenger equipment for demonstration purposes are not tourist, scenic, historic, or excursion operations.

[85 FR 9314, Feb. 18, 2020, as amended at 85 FR 12852, Mar. 4, 2020]

§ 271.7 [Reserved]

§ 271.9 Penalties and responsibility for compliance.

(a) Any person that violates any requirement of this part or causes the violation of any such requirement is subject to a civil penalty of at least the minimum civil monetary penalty and not more than the ordinary maximum civil monetary penalty per violation, except that: Penalties may be assessed against individuals only for willful violations, and, where a grossly negligent violation or a pattern of repeated violations has created an imminent hazard of death or injury to individuals, or has caused death or injury, a penalty not to exceed the aggravated maximum civil monetary penalty per violation may be assessed. *See* 49 CFR part 209, appendix A. Each day a violation continues shall constitute a separate offense. Any person that knowingly and willfully falsifies a record or report required by this part may be subject to criminal penalties under 49 U.S.C. 21311. See FRA's website at *www.fra.dot.gov* for a statement of agency civil penalty policy.

(b) Although the requirements of this part are stated in terms of the duty of a railroad, when any person, including a contractor or subcontractor to a railroad, performs any function covered by this part, that person (whether or not a railroad) shall perform that function in accordance with this part.

§ 271.11 Discovery and admission as evidence of certain information.

(a) *Protected information.* Except as provided in paragraph (a)(3) of this section, any information compiled or collected after February 17, 2021 solely for the purpose of planning, implementing, or evaluating a risk reduction program under this part shall not be subject to discovery, admitted into evidence, or considered for other purposes in a Federal or State court proceeding for damages involving personal injury, wrongful death, or property damage. For purposes of this section:

(1) ''Information'' includes plans, reports, documents, surveys, schedules, lists, or data, and specifically includes a railroad's analysis of its safety risks under § 271.103(b) and a railroad's statement of mitigation measures under § 271.103(c);

(2) ''Solely'' means that a railroad originally compiled or collected the information for the exclusive purpose of planning, implementing, or evaluating a risk reduction program under this part. Information compiled or collected for any other purpose is not protected, even if the railroad also uses that information for a risk reduction program. ''Solely'' also means a railroad continues to use that information only for its risk reduction program. If a railroad subsequently uses for any other purpose information that was initially compiled or collected for a risk reduction program, this section does not protect that information to the extent that it is used for the non-risk reduction program purpose. The use of that information within the railroad's risk reduction program, however, remains protected. This section does not protect information that is required to be compiled or collected pursuant to any other provision of law or regulation; and

(3) A railroad may include a Confidential Close Call Reporting System (C^3RS) program in a risk reduction program established under this part. For Federal or State court proceedings described by this paragraph (a) that are initiated after March 4, 2021, the information protected by this paragraph (a) includes C^3RS information a railroad includes in its risk reduction program, even if the railroad compiled or collected the C^3RS information on or before February 17, 2021, for purposes other than planning, implementing, or evaluating a risk reduction program under this part.

(b) *Non-protected information.* This section does not affect the discovery, admissibility, or consideration for other purposes in a Federal or State court proceeding for damages involving personal injury, wrongful death, or property damage of information compiled or collected for a purpose other than that specifically identified in paragraph (a) of this section. Such information shall continue to be discoverable, admissible, or considered for other purposes in a Federal or State court proceeding for damages involving personal injury, wrongful death, or property damage if it was discoverable, admissible, or considered for other purposes in a Federal or State court proceeding for damages involving personal injury, wrongful death, or property damage on or before February 17, 2021. Specifically, the types of information not affected by this section include:

(1) Information compiled or collected on or before February 17, 2021;

(2) Information compiled or collected on or before February 17, 2021 and that continues to be compiled or collected, even if used to plan, implement, or evaluate a railroad's risk reduction program; or

(3) Information that is compiled or collected after February 17, 2021, and is compiled or collected for a purpose other than that identified in paragraph (a) of this section.

(c) *Information protected by other law or regulation.* Nothing in this section shall affect or abridge in any way any other protection of information provided by another provision of law or regulation. Any such provision of law or regulation applies independently of the protections provided by this section.

(d) *Preemption.* To the extent that State discovery rules and sunshine laws would require disclosure of information protected by this section in a Federal or State court proceeding for damages involving personal injury, wrongful death, or property damage, those rules and laws are preempted.

(e) *Enforcement.* This section does not apply to civil or criminal law enforcement proceedings.

[85 FR 9314, Feb. 18, 2020, as amended at 85 FR 12852, Mar. 4, 2020]

§ 271.13 Determination of inadequate safety performance.

(a) *General.* (1) This section describes FRA's methodology for determining which railroads shall establish an RRP because they have inadequate safety performance. FRA's methodology consists of a two-phase annual analysis, comprised of both a quantitative analysis and qualitative assessment. FRA's

methodology analyzes all railroads except for:

(i) Railroads excluded from this part under § 271.3(b);

(ii) Railroads already required to comply with this part;

(iii) Railroads that are voluntarily complying with this part under § 271.15; and

(iv) Except as provided in paragraph (a)(2) of this section, new start-up railroads that have reported accident/incident data to FRA pursuant to part 225 of this chapter for fewer than three years.

(2) Notwithstanding paragraph (a)(1)(iv) of this section, railroads formed through amalgamation of operations (for example, railroads formed through consolidations, mergers, or acquisitions of control) are included in the analysis using the combined data of the pre-amalgamation entities.

(b) *Quantitative analysis*—(1) *Methodology*. The first phase of FRA's annual analysis is a statistically-based quantitative analysis of each railroad within the scope of the analysis, using historical safety data maintained by FRA for the three most recent full calendar years. The purpose of the quantitative analysis is to make a threshold identification of railroads that possibly have inadequate safety performance. The quantitative analysis consists of a preliminary selection and a rate-based analysis. Only railroads that the preliminary selection identifies will proceed to the rate-based analysis.

(i) The preliminary selection calculates the following values:

(A) A railroad's number of worker on duty fatalities during the 3-year period, calculated using ''Worker on Duty-Railroad Employee (Class A),'' ''Worker on Duty-Contractor (Class F),'' and ''Worker on Duty-Volunteer (Class H)'' information reported on FRA Form 6180.55 pursuant to FRA's accident/incident reporting regulations in part 225 of this chapter; and

(B) The sum total of a railroad's number of worker on duty injuries/illnesses during the 3-year period (calculated using ''Worker on Duty-Railroad Employee (Class A),'' ''Worker on Duty-Contractor (Class F),'' and ''Worker on Duty-Volunteer (Class H)'' information reported on FRA Form 6180.55 pursuant to FRA's accident/incident reporting regulations in part 225 of this chapter) added to the number of rail equipment accidents/incidents during the 3-year period (calculated using information reported on FRA Forms 6180.54 and 6180.55 pursuant to FRA's accident/incident reporting regulations in part 225 of this chapter).

(ii) For railroads that the preliminary selection identifies, as described in paragraph (b)(2)(i) of this section, the rate-based analysis calculates the following three factors:

(A) A railroad's number of worker on duty fatalities during the 3-year period, calculated using ''Worker on Duty-Railroad Employee (Class A),'' ''Worker on Duty-Contractor (Class F),'' and ''Worker on Duty-Volunteer (Class H)'' information reported on FRA Form 6180.55 pursuant to FRA's accident/incident reporting regulations in part 225 of this chapter;

(B) A railroad's on duty employee injury/illness rate, calculated using ''Worker on Duty-Railroad Employee (Class A),'' ''Worker on Duty-Contractor (Class F),'' and ''Worker on Duty-Volunteer (Class H)'' information reported on FRA Form 6180.55 pursuant to FRA's accident/incident reporting regulations in part 225 of this chapter. FRA calculates this rate using the following formula, which gives the rate of employee injuries/illnesses per 200,000 employee hours over a 3-year period:

Injury/Illness Rate = (Total FRA Reportable Worker On Duty Injuries + Total FRA Reportable On Duty Employee Illnesses over a 3-year Period)/(Total Employee Hours over a 3-year Period/200,000); and

(C) A railroad's rail equipment accident/incident rate, calculated using information reported on FRA Forms 6180.54 and 6180.55 pursuant to FRA's accident/incident reporting regulations in part 225 of this chapter. FRA calculates this rate using the following formula, which gives the rate of rail equipment accidents/incidents per 1,000,000 train miles operated over a 3-year period:

Rail Equipment Accident/Incident Rate = Total FRA Reportable Rail Equipment Accidents/Incidents over a 3-year Period/(Total Train Miles over a 3-year Period/1,000,000)

(2) *Identification.* (i) The preliminary selection phase of the quantitative analysis identifies railroads for further analysis in the rate-based analysis if at least one of the following two conditions exist within the scope and timeframe of the analysis:

(A) A railroad has one or more worker on duty fatalities as calculated in paragraph (b)(1)(i)(A) of this section; or

(B) A railroad is at or above the 90th percentile for the sum total of worker on duty injuries/illnesses and rail equipment accidents/incidents, as calculated in paragraph (b)(1)(i)(B) of this section.

(ii) For railroads identified in the preliminary selection, the rate-based analysis identifies railroads as possibly having inadequate safety performance if at least one of the following two conditions exists within the scope and time frame of the analysis:

(A) A railroad has one or more worker on duty fatalities as calculated in paragraph (b)(1)(ii)(A) of this section; or

(B) A railroad is at or above the 90th percentile of railroads identified in the preliminary selection in either of the factors described in paragraphs (b)(1)(ii)(B) and (C) of this section.

(c) *Qualitative assessment.* The second phase of FRA's analysis is a qualitative assessment of railroads identified in the quantitative analysis as possibly having inadequate safety performance.

(1) *Notification and railroad/employee comment.* FRA will notify a railroad in writing if FRA conducts a qualitative assessment of the railroad because the quantitative analysis identified the railroad as possibly having inadequate safety performance.

(i) No later than 15 days after receiving FRA's written notice, a railroad shall notify its employees of FRA's written notice. The railroad shall post this employee notification at all locations where the railroad reasonably expects its employees to report and to have an opportunity to observe the notice. The railroad shall post and continuously display the employee notification until 45 days after FRA's initial written notice. The railroad shall notify employees who do not have a regular on-duty point for reporting to work by other means, under the railroad's standard practice for communicating with employees. The notification shall inform railroad employees that they may confidentially submit comments to FRA regarding the railroad's safety performance and that employees shall file any such comments with the FRA Associate Administrator for Railroad Safety and Chief Safety Officer, 1200 New Jersey Avenue SE, Washington, DC 20590 no later than 45 days following FRA's initial written notice.

(ii) No later than 45 days after receiving FRA's written notice, a railroad may provide FRA documentation supporting any claims that the railroad does not have inadequate safety performance.

(2) *Methodology.* No later than 90 days after providing the initial notice to a railroad identified by the quantitative analysis, FRA will conduct a qualitative assessment of the identified railroad and make a final determination regarding whether it has inadequate safety performance. The qualitative assessment will consider any documentation provided by the railroad, comments submitted by railroad employees, and any other pertinent information, including information regarding violations FRA has issued against the railroad.

(d) *Final notification.* For each railroad that FRA provides an initial written notice, FRA will provide a final written notice informing the railroad whether or not FRA determines that the railroad has demonstrated inadequate safety performance.

(e) *Compliance.* (1) A railroad with inadequate safety performance shall develop and implement an RRP meeting the requirements of this part and submit an RRP plan meeting the filing and timing requirements in § 271.301.

(2) A railroad with inadequate safety performance must comply with the requirements of this part for a minimum of five years from the date FRA approves the railroad's RRP plan under subpart D of this part.

(f) *Petition for reconsideration of inadequate safety performance determination.* (1) To appeal a final written notice under paragraph (d) of this section, a

railroad shall file a petition for reconsideration with the Administrator. To file a petition, the railroad must:

(i) File the petition no later than 30 days after the date the railroad receives FRA's final written notice under paragraph (d) of this section informing the railroad that it has demonstrated inadequate safety performance; and

(ii) File the petition in accordance with the procedures in §§ 211.7(b)(1) and 211.57 of this chapter.

(2) FRA will process petitions under § 211.59 of this chapter.

(g) *Petition to discontinue compliance with this part.* After the five-year compliance period, the railroad may petition FRA for approval to discontinue compliance with this part. A railroad shall file a petition, and FRA will process the petition, under the procedures contained in § 211.41 of this chapter. When processing a petition, FRA will reevaluate the railroad's safety performance to determine whether the railroad's RRP has resulted in significant and sustained safety improvements, and whether these measured improvements are likely sustainable in the long term. FRA's evaluation will include a quantitative analysis as described in paragraph (b) of this section, although FRA will not automatically grant a petition to discontinue compliance if the quantitative analysis results do not meet the identification thresholds described in paragraph (b)(2) of this section. For all petitions under this section, FRA will also examine qualitative factors and review information from FRA RRP audits and other relevant sources.

§ 271.15 Voluntary compliance.

(a) *General.* A railroad not otherwise subject to this part may voluntarily comply by establishing and fully implementing an RRP meeting the requirements of this part. A voluntary RRP shall be supported by an RRP plan that has been submitted to FRA for approval pursuant to the requirements of subpart D of this part. After FRA has approved its RRP plan, a voluntarily-compliant railroad that fails to comply with the requirements of this part is subject to civil penalties or other FRA enforcement action.

(b) *Duration.* A voluntarily-compliant railroad will be required to comply with the requirements of this part for a minimum period of five years, running from the date on which FRA approves the railroad's plan pursuant to subpart D of this part.

(c) *Notification to discontinue compliance.* After this five-year period, a voluntarily-compliant railroad may discontinue compliance with this part by providing written notice to the FRA Associate Administrator for Railroad Safety and Chief Safety Officer, 1200 New Jersey Avenue SE, Washington, DC 20590.

(d) *Discovery and admission as evidence of certain information.* The information protection provisions in § 271.11 apply to information compiled or collected pursuant to a voluntary RRP that is conducted in accordance with the requirements of this part and as provided by § 271.301(b)(4)(ii).

Subpart B—Risk Reduction Program Requirements

§ 271.101 Risk reduction programs.

(a) *Program required.* Each railroad shall establish and fully implement an RRP meeting the requirements of this part. An RRP shall systematically evaluate railroad safety hazards on a railroad's system and manage the resulting risks to reduce the number and rates of railroad accidents/incidents, injuries, and fatalities. An RRP is an ongoing program that supports continuous safety improvement. A railroad shall design its RRP so that it promotes and supports a positive safety culture at the railroad. An RRP shall include the following:

(1) A risk-based hazard management program, as described in § 271.103;

(2) A safety performance evaluation component, as described in § 271.105;

(3) A safety outreach component, as described in § 271.107;

(4) A technology analysis and technology implementation plan, as described in § 271.109;

(5) RRP implementation and support training, as described in § 271.111;

(6) Involvement of railroad employees in the establishment and implementation of an RRP, as described in § 271.113; and

(7) An FRMP as described in § 271.607.

(b) *RRP plans.* A railroad's RRP shall be supported by an FRA-approved RRP plan meeting the requirements of subpart C of this part.

(c) *Host railroads and system safety programs.* (1) If a railroad subject to this part (RRP railroad) hosts passenger train service for a railroad subject to the system safety program requirements in part 270 of this title (system safety program (SSP) railroad), the RRP railroad shall communicate with the SSP railroad to coordinate the portions of the system safety program applicable to the RRP railroad hosting the passenger train service.

(2) The RRP railroad shall incorporate its communication and coordination with the SSP railroad into its own RRP.

(d) *Persons that perform or utilize significant safety-related services.* Under § 271.205(a)(3), a railroad's RRP plan shall identify persons that enter into a contractual relationship with the railroad to either perform significant safety-related services on the railroad's behalf or to utilize significant safety-related services provided by the railroad for railroad operations purposes. For example, a railroad's RRP plan shall identify entities such as host railroads, contract operators, shared track/corridor operators, or other contractors utilizing or performing significant safety-related services. A railroad shall identify such persons even if the persons are not required to comply with this part (*e.g.*, a railroad shall identify a tourist railroad that operates over the railroad's track even though the tourist railroad is exempt from this rule under § 271.3(b)(2)). A railroad shall ensure persons performing or utilizing significant safety-related services support and participate in its RRP.

[85 FR 9314, Feb. 18, 2020, as amended at 87 FR 35673, June 13, 2022]

§ 271.103 Risk-based hazard management program.

(a) *General.* (1) An RRP shall include an integrated, system-wide, and ongoing risk-based HMP that proactively identifies hazards and mitigates the risks resulting from those hazards.

(2) A risk-based HMP shall be fully implemented (*i.e.*, activities initiated) within 36 months after FRA approves a railroad's RRP plan pursuant to § 271.301(d).

(b) *Risk-based hazard analysis.* As part of its risk-based HMP, a railroad shall conduct a risk-based hazard analysis that addresses, at a minimum, the following aspects of a railroad's system: Infrastructure; equipment; employee levels and work schedules; operating rules and practices; management structure; employee training; and other areas impacting railroad safety that are not covered by railroad safety laws or regulations or other Federal laws or regulations. A railroad shall make the results of its risk-based hazard analysis available to FRA upon request. At a minimum, a risk-based hazard analysis shall:

(1) Identify hazards by analyzing:

(i) Aspects of the railroad's system, including any operational changes, system extensions, or system modifications; and

(ii) Accidents/incidents, injuries, fatalities, and other known indicators of hazards;

(2) Calculate risk by determining and analyzing the likelihood and severity of potential events associated with identified risk-based hazards; and

(3) Compare and prioritize the identified risks for mitigation purposes.

(c) *Mitigation strategies.* (1) As part of its risk-based HMP, a railroad shall design and implement mitigation strategies that improve safety by:

(i) Mitigating or eliminating aspects of a railroad's system that increase risks identified in the risk-based hazard analysis; and

(ii) Enhancing aspects of a railroad's system that decrease risks identified in the risk-based hazard analysis.

(2) A railroad may use pilot projects, including pilot projects conducted by other railroads, to determine whether quantitative data suggests that a particular mitigation strategy has potential to succeed on a full-scale basis.

§ 271.105 Safety performance evaluation.

(a) *General.* As part of its RRP, a railroad shall develop and maintain ongoing processes and systems for evaluating the safety performance of its system and identifying and analyzing its

safety culture. A railroad's safety performance evaluation shall consist of both a safety monitoring and a safety assessment component.

(b) *Safety monitoring.* A railroad shall monitor the safety performance of its system by, at a minimum, establishing processes and systems to acquire safety data and information from the following sources:

(1) Continuous monitoring of operational processes and systems (including any operational changes, system extensions, or system modifications);

(2) Periodic monitoring of the operational environment to detect changes that may generate new hazards;

(3) Investigations of accidents/incidents, injuries, fatalities, and other known indicators of hazards;

(4) Investigations of reports regarding potential non-compliance with Federal railroad safety laws or regulations, railroad operating rules and practices, or mitigation strategies established by the railroad; and

(5) A reporting system through which employees can report safety concerns (including, but not limited to, hazards, issues, occurrences, and incidents) and propose safety solutions and improvements.

(c) *Safety assessment.* To assess the need for changes to a railroad's mitigation strategies or overall RRP, a railroad shall establish processes to analyze the data and information collected pursuant to paragraph (b) of this section (as well as any other relevant data regarding its operations, products, and services). At a minimum, this assessment shall:

(1) Evaluate the overall effectiveness of the railroad's RRP in reducing the number and rates of railroad accidents/incidents, injuries, and fatalities;

(2) Evaluate the effectiveness of the railroad's RRP in meeting the goals described by its RRP plan (see § 271.203(c));

(3) Evaluate the effectiveness of risk mitigations in reducing the risk associated with an identified hazard. Any hazards associated with ineffective mitigation strategies shall be reevaluated through the railroad's risk-based HMP, as described in § 271.103; and

(4) Identify new, potential, or previously unknown hazards, which shall then be evaluated by the railroad's risk-based HMP, as described in § 271.103.

§ 271.107 Safety outreach.

(a) *Outreach.* An RRP shall include a safety outreach component that communicates RRP safety information to railroad personnel (including contractors) as that information is relevant to their positions. At a minimum, a safety outreach program shall:

(1) Convey safety-critical information;

(2) Explain why RRP-related safety actions are taken; and

(3) Explain why safety procedures are introduced or changed.

(b) *Reporting to management.* The status of risk-based HMP activities shall be reported to railroad senior management on an ongoing basis.

§ 271.109 Technology analysis and technology implementation plan.

(a) *General.* As part of its RRP, a Class I railroad shall conduct a technology analysis and develop and adopt a technology implementation plan no later than February 17, 2023. A railroad with inadequate safety performance shall conduct a technology analysis and develop and adopt a technology implementation plan no later than three years after receiving final written notification from FRA to comply with this part, pursuant to § 271.13(d), or no later than February 17, 2023, whichever is later. A railroad that the STB reclassifies or newly classifies as a Class I railroad shall conduct a technology analysis and develop and adopt a technology implementation plan no later than three years following the effective date of the classification or reclassification or no later than April 18, 2023, whichever is later. A voluntarily-compliant railroad shall conduct a technology analysis and develop and adopt a technology implementation plan no later than three years after FRA approves the railroad's RRP plan.

(b) *Technology analysis.* A technology analysis shall evaluate current, new, or novel technologies that may mitigate or eliminate hazards and the resulting risks identified through the risk-based HMP. The railroad shall analyze the safety impact, feasibility, and costs

and benefits of implementing technologies that will mitigate or eliminate hazards and the resulting risks. At a minimum, the technologies a railroad shall consider as part of its technology analysis are: Processor-based technologies, positive train control systems, electronically-controlled pneumatic brakes, rail integrity inspection systems, rail integrity warning systems, switch position monitors and indicators, trespasser prevention technology, and highway-rail grade crossing warning and protection technology.

(c) *Technology implementation plan.* A railroad shall develop, and periodically update as necessary, a technology implementation plan that contains a prioritized implementation schedule describing the railroad's plan for development, adoption, implementation, maintenance, and use of current, new, or novel technologies on its system over a 10-year period to reduce safety risks identified in the railroad's risk-based HMP.

(d) *Positive train control.* Except as required by subpart I of part 236 of this chapter, if a railroad decides to implement positive train control systems as part of its technology analysis and implementation plan, the railroad shall set forth and comply with a schedule for implementation of the positive train control system consistent with the deadlines in the Positive Train Control Enforcement and Implementation Act of 2015, Public Law 114–73, 129 Stat. 576–82 (Oct. 29, 2015), and 49 CFR 236.1005(b)(7).

§ 271.111 Implementation and support training.

(a) A railroad shall provide RRP training to each employee, including an employee of any person identified by the railroad's RRP plan pursuant to § 271.205(a)(3) as performing significant safety-related services on the railroad's behalf or utilizing significant safety-related services provided by the railroad, who has significant responsibility for implementing and supporting the railroad's RRP. This training shall help ensure that all personnel with significant responsibility for implementing and supporting the RRP understand the goals of the program, are familiar with the elements of the railroad's program, and have the requisite knowledge and skills to fulfill their responsibilities under the program.

(b) A railroad shall keep a record of training conducted under this section and update that record as necessary. A railroad shall make training records available for inspection and copying upon the request of representatives of FRA or States participating under part 212 of this chapter.

(c) Training under this section may include, but is not limited to, interactive computer-based training, video conferencing, or formal classroom training.

§ 271.113 Involvement of railroad employees.

(a) An RRP shall involve a railroad's directly affected employees in the establishment and implementation of the RRP.

(b) For example, a railroad must have a process for involving directly affected employees when identifying hazards, developing and implementing mitigation strategies, conducting internal annual assessments, or otherwise performing actions required by this part.

Subpart C—Risk Reduction Program Plan Requirements

§ 271.201 General.

A railroad shall adopt and implement its RRP through a written RRP plan containing the elements described in this subpart and in § 271.609. A railroad's RRP plan shall be approved by FRA according to the requirements contained in subpart D of this part.

[87 FR 35673, June 13, 2022]

§ 271.203 Policy, purpose and scope, and goals.

(a) *Policy statement.* An RRP plan shall contain a policy statement endorsing the railroad's RRP. This statement shall be signed by the chief official at the railroad (*e.g.*, chief executive officer).

(b) *Purpose and scope.* An RRP plan shall contain a statement describing the purpose and scope of the railroad's

RRP. This purpose and scope statement shall describe:

(1) The railroad's safety philosophy and safety culture;

(2) How the railroad promotes improvements to its safety culture; and

(3) The roles and responsibilities of railroad personnel (including management) within the railroad's RRP.

(c) *Goals.* An RRP plan shall contain a statement that defines the specific goals of the RRP and describes clear strategies for reaching those goals. These goals shall be long-term, meaningful, measurable, and focused on the mitigation of risks arising from identified safety hazards.

§ 271.205 System description.

(a) An RRP plan shall contain a description of the characteristics of the railroad's system. At a minimum, the system description shall:

(1) Support the identification of hazards by establishing a basic understanding of the scope of the railroad's system;

(2) Include components briefly describing the railroad's history, operations, scope of service, maintenance, physical plant, and system requirements;

(3) Identify all persons that enter into a contractual relationship with the railroad to either perform significant safety-related services on the railroad's behalf or to utilize significant safety-related services provided by the railroad for railroad operations purposes. For example, a railroad's RRP plan shall identify entities such as host railroads, contract operators, shared track/corridor operators, or other contractors utilizing or performing significant safety-related services. A railroad shall identify such persons even if the persons are not required to comply with this part (*e.g.*, a railroad shall identify a tourist railroad that operates over the railroad's track even though the tourist railroad is exempt from this part pursuant to § 271.3(b)(2)); and

(4) Describe how the railroad will ensure that any persons identified pursuant to paragraph (a)(3) of this section will support and participate in the railroad's RRP. For example, the system description shall describe the extent to which such persons will, as part of the railroad's RRP, assist in identifying hazards, developing and implementing mitigation strategies, conducting internal annual assessments, or otherwise performing actions required by this part.

(b) [Reserved]

§ 271.207 Consultation requirements.

(a) *General duty.* (1) Each railroad required to establish an RRP under this part shall in good faith consult with, and use its best efforts to reach agreement with, all of its directly affected employees, including any non-profit labor organization representing a class or craft of directly affected employees, on the contents of the RRP plan.

(2) A railroad that consults with a non-profit employee labor organization is considered to have consulted with the directly affected employees represented by that organization. For directly affected employees represented by a non-profit employee labor organization, the primary point of contact shall be either the general chairperson of the non-profit employee labor organization or a non-profit employee labor organization primary point of contact the railroad and the non-profit employee labor organization agree on at the beginning of the consultation process.

(b) *Preliminary meeting.* A railroad shall have a preliminary meeting with its directly affected employees to discuss how the consultation process will proceed. A railroad is not required to discuss the substance of an RRP plan during this preliminary meeting.

(1) A Class I railroad shall meet no later than October 15, 2020 with its directly affected employees to discuss the consultation process. The Class I railroad shall notify the directly affected employees of this meeting no less than 60 days before it is scheduled.

(2) A railroad determined to have inadequate safety performance shall meet no later than 30 days following FRA's notification with its directly affected employees to discuss the consultation process. The inadequate safety performance railroad shall notify the directly affected employees of this meeting no less than 15 days before it is scheduled.

(3) A railroad that the STB reclassifies or newly classifies as a Class I railroad shall meet with its directly affected employees to discuss the consultation process no later than 30 days following the effective date of the classification or reclassification. The reclassified or newly classified Class I railroad shall notify the directly affected employees of this meeting no less than 15 days before it is scheduled.

(4) A voluntarily-compliant railroad that files a notification with FRA of its intent to file an RRP plan under §271.301(b)(4)(i) shall meet with its directly affected employees to discuss the consultation process no later than 30 days following the date that the railroad filed the notification. The voluntarily-compliant railroad shall notify the directly affected employees of this meeting no less than 15 days before it is scheduled.

(5) Compliance with the mandatory preliminary meeting requirements of this paragraph (b) does not constitute full compliance with the consultation requirements of this section.

(c) *Guidance.* Appendix A to this part contains guidance on how a railroad could comply with the requirements of this section.

(d) *Railroad consultation statements.* A railroad required to submit an RRP plan under §271.301 shall also submit, together with that plan, a consultation statement that includes the following information:

(1) A detailed description of the process the railroad utilized to consult with its directly affected employees;

(2) If the railroad could not reach agreement with its directly affected employees on the contents of its RRP plan, identification of any known areas of non-agreement and an explanation why it believes agreement was not reached; and

(3) A service list containing the names and contact information for each international/national president of any non-profit employee labor organization representing a class or craft of the railroad's directly affected employees, or each non-profit employee labor organization primary point of contact the railroad and the non-profit employee labor organization agree on at the beginning of the process. The service list must also contain the name and contact information for any directly affected employee who significantly participated in the consultation process independently of a non-profit employee labor organization. When a railroad submits its RRP plan and consultation statement to FRA under §271.301, it shall also simultaneously send a copy of these documents to all individuals identified in the service list. A railroad may send the documents to the identified individuals via electronic means or other service means reasonably calculated to succeed.

(e) *Statements from directly affected employees.* (1) If a railroad and its directly affected employees cannot reach agreement on the proposed contents of an RRP plan, the directly affected employees may file a statement explaining their views on the plan on which agreement was not reached with the FRA Associate Administrator for Railroad Safety and Chief Safety Officer, 1200 New Jersey Avenue SE, Washington, DC 20590. The FRA Associate Administrator shall consider any such views during the plan review and approval process.

(2) A railroad's directly affected employees have 30 days following the railroad's submission of a proposed RRP plan to submit the statement described in paragraph (e)(1) of this section.

[85 FR 9314, Feb. 18, 2020, as amended at 85 FR 12852, Mar. 4, 2020]

§271.209 Consultation on amendments.

A railroad's RRP plan shall include a description of the process the railroad will use to consult with its directly affected employees on any subsequent substantive amendments to the railroad's RRP plan. The requirements of this section do not apply to non-substantive amendments (*e.g.*, amendments that update names and addresses of railroad personnel).

§271.211 Risk-based hazard management program process.

(a) *Risk-based hazard analysis.* An RRP plan shall describe the railroad's method for conducting its risk-based hazard analysis pursuant to §271.103(b).

At a minimum, the description shall specify:

(1) The processes the railroad will use to identify hazards and the risks associated with those hazards;

(2) The sources the railroad will use to support the ongoing identification of hazards and the risks associated with those hazards; and

(3) The processes the railroad will use to compare and prioritize identified risks for mitigation purposes.

(b) *Mitigation strategies.* An RRP plan shall describe the railroad's processes for designing and implementing mitigation strategies pursuant to § 271.103(c). At a minimum, the description shall specify the railroad's processes for:

(1) Identifying and selecting mitigation strategies; and

(2) Monitoring an identified hazard through the mitigation of the risk associated with that hazard.

§ 271.213 Safety performance evaluation process.

An RRP plan shall describe a railroad's processes for identifying and analyzing its safety culture pursuant to § 271.105(a), monitoring safety performance pursuant to § 271.105(b), and conducting safety assessments pursuant to § 271.105(c).

§ 271.215 Safety outreach process.

An RRP plan shall describe a railroad's processes for communicating safety information to railroad personnel and management pursuant to § 271.107.

§ 271.217 Technology implementation plan process.

(a) An RRP plan shall contain a description of the railroad's processes for:

(1) Conducting a technology analysis pursuant to § 271.109(b); and

(2) Developing a technology implementation plan pursuant to § 271.109(c).

(b) [Reserved]

§ 271.219 Implementation and support training plan.

(a) An RRP plan shall contain a training plan describing the railroad's processes, pursuant to § 271.111, for training employees with significant responsibility for implementing and supporting the RRP (including employees of a person identified pursuant to § 271.205(a)(3) as performing significant safety-related services on the railroad's behalf or utilizing significant safety-related services provided by the railroad for railroad operations purposes who have significant responsibility for implementing and supporting the railroad's RRP).

(b) The training plan shall describe the content of the RRP training for each position or job function identified pursuant to § 271.225(b)(3) as having significant responsibilities for implementing the RRP.

§ 271.221 Involvement of railroad employees process.

An RRP plan shall contain a description of the railroad's processes for involving railroad employees in the establishment and implementation of an RRP pursuant to § 271.113. If a railroad contracts out significant portions of its operations, the contractor and the contractor's employees performing the railroad's operations shall be considered employees for the purposes of this section.

§ 271.223 Internal assessment process.

(a) An RRP plan shall describe the railroad's processes for conducting an internal assessment of its RRP pursuant to subpart E of this part. At a minimum, this description shall contain the railroad's processes used to:

(1) Conduct an internal assessment of its RRP;

(2) Internally report the results of its internal assessment to railroad senior management; and

(3) Develop improvement plans, including developing and monitoring recommended improvements (including any necessary revisions or updates to the RRP plan) for fully implementing the railroad's RRP, complying with the implemented elements of the RRP plan, or achieving the goals identified in the railroad's RRP plan pursuant to § 271.203(c).

(b) [Reserved]

§ 271.225 RRP implementation plan.

(a) An RRP plan shall describe how the railroad will implement its RRP. A railroad may implement its RRP in

stages, so long as the railroad fully implements the entire RRP within 36 months of FRA's approval of the plan.

(b) At a minimum, a railroad's implementation plan shall:

(1) Cover the entire implementation period;

(2) Contain a timeline describing when certain implementation milestones will be achieved. Implementation milestones shall be specific and measurable;

(3) Describe the roles and responsibilities of each position or job function that has significant responsibility for implementing the railroad's RRP or any changes to the railroad's RRP (including any such positions or job functions held by a person that enters into a contractual relationship with the railroad to either perform significant safety-related services on the railroad's behalf or to utilize significant safety-related services provided by the railroad for railroad operations purposes); and

(4) Describe how significant changes to the RRP may be made.

Subpart D—Review, Approval, and Retention of Risk Reduction Program Plans

§ 271.301 Filing and approval.

(a) *Filing.* A railroad shall submit one copy of its RRP plan to the FRA Associate Administrator for Railroad Safety and Chief Safety Officer, 1200 New Jersey Avenue SE, Washington, DC 20590.

(b) *Filing timeline.* (1) A Class I railroad shall submit its RRP plan no later than August 16, 2021.

(2) A railroad with inadequate safety performance shall submit its RRP plan no later than 180 days after receiving final written notification from FRA that it shall comply with this part, pursuant to § 271.13(d), or no later than August 16, 2021, whichever is later.

(3) A railroad that the STB reclassifies or newly classifies as a Class I railroad shall submit its RRP plan no later than 90 days following the effective date of the classification or reclassification or no later than August 16, 2021, whichever is later.

(4)(i) Before submitting an RRP plan for FRA's review and approval, a voluntarily-compliant railroad shall notify FRA of its intent to submit an RRP plan by providing written notice to the FRA Associate Administrator for Railroad Safety and Chief Safety Officer, 1200 New Jersey Avenue SE, Washington, DC 20590.

(ii) The date that FRA receives a voluntarily-compliant railroad's written notice or February 18, 2021, whichever is later, serves as the date on which the voluntarily-compliant railroad may start compiling or collecting information solely for the purpose of planning, implementing, or evaluating a risk reduction program, as described by § 271.11.

(iii) A voluntarily-compliant railroad shall submit its RRP plan no later than 180 days after FRA receives written notice that the voluntarily-compliant railroad intends to submit an RRP plan for review and approval.

(c) *RRP plan requirements.* An RRP plan submitted by a railroad shall include:

(1) The signature, name, title, address, and telephone number of the chief official responsible for safety and who bears the primary managerial authority for implementing the submitting railroad's safety policy. By signing, this chief official is certifying that the contents of the RRP plan are accurate and that the railroad will implement the contents of the program as approved by FRA;

(2) The contact information for the primary person responsible for managing the RRP;

(3) The contact information for the senior representatives of any person that the railroad has determined has entered into a contractual relationship with the railroad to either perform significant safety-related services on the railroad's behalf or to utilize significant safety-related services provided by the railroad for railroad operations purposes (including host railroads, contract operators, shared track/corridor operators, and other contractors); and

(4) As required by § 271.207(d), a statement describing how it consulted with its directly affected employees on the contents of its RRP plan. Directly affected employees have 30 days following the railroad's submission of its

proposed RRP plan to file a statement under § 271.207(e)(2).

(d) *Approval.* (1) Within 90 days of receipt of an RRP plan, or within 90 days of receipt of each RRP plan submitted before the start of railroad operations, FRA will review the proposed RRP plan to determine if it sufficiently addresses the required elements. This review will also consider any statement submitted by directly affected employees pursuant to § 271.207(e).

(2) FRA will notify the primary contact person of the submitting railroad in writing whether FRA has approved the proposed plan and, if not approved, the specific points in which the RRP plan is deficient. FRA will also provide this notification to each individual identified in the service list accompanying the consultation statement required under § 271.207(d).

(3) If FRA does not approve an RRP plan, the submitting railroad shall amend the proposed plan to correct all identified deficiencies and shall provide FRA a corrected copy no later than 90 days following receipt of FRA's written notice that the submitted plan was not approved. If FRA determines that the necessary corrections are substantively significant, it will direct the railroad to consult further with its directly affected employees regarding the corrections. If the corrections are substantively significant, a railroad will also be required to include an updated consultation statement, along with its resubmitted plan, pursuant to § 271.207(d). Directly affected employees will also have 30 days following the railroad's resubmission of its proposed RRP plan to file a statement addressing the substantively significant changes under § 271.207(e). Within 60 days of receipt of a corrected RRP plan, FRA will review the corrected RRP plan to determine if it sufficiently addresses the identified deficiencies.

(4) Approval of a railroad's RRP plan under this part does not constitute approval of the specific actions the railroad will implement under its RRP plan and shall not be construed as establishing a Federal standard regarding those specific actions.

(e) *Electronic submission.* All documents required to be submitted to FRA under this part may be submitted electronically pursuant to the procedures in appendix B to this part.

§ 271.303 Amendments.

(a) *Consultation requirements.* (1) For substantive amendments, a railroad shall follow the process, described in its RRP plan pursuant to § 271.209, for consulting with its directly affected employees and submitting a consultation statement to FRA. The requirements of this paragraph (a)(1) do not apply to non-substantive amendments (*e.g.*, amendments that update names and addresses of railroad personnel).

(2) If a railroad and its directly affected employees cannot reach agreement on the proposed contents of a substantive amendment, the directly affected employees may file a statement with FRA under the procedures in § 271.207(e)(1). A railroad's directly affected employees have 15 days following the railroad's submission of a proposed amendment to submit the statement described in this paragraph.

(b) *Filing.* (1) A railroad shall submit any amendment(s) to its approved RRP plan to FRA's Associate Administrator not less than 60 days before the proposed effective date of the amendment(s). The railroad shall file the amendment(s) with a cover letter outlining the proposed change(s) to the approved RRP plan.

(2) If the proposed amendment is limited to adding or changing a name, title, address, or telephone number of a person, FRA approval is not required under the process of this section, although the railroad shall still file the amended RRP plan with FRA's Associate Administrator for Railroad Safety and Chief Safety Officer. These proposed amendments may be implemented by the railroad upon filing with FRA. All other proposed amendments must comply with the formal approval process described by this section.

(c) *Review.* (1) FRA will review a proposed amendment to an RRP plan within 45 days of receipt. FRA will then notify the primary contact person of the railroad regarding whether FRA has approved the proposed amendment. FRA will also provide this notification to each individual identified in the service list accompanying the consultation statement required under

paragraph (a)(1) of this section. If not approved, FRA will inform the railroad and the individuals identified in the service list of the specific points in which the proposed amendment is deficient.

(2) If FRA has not notified the railroad and the individuals identified in the service list by the proposed effective date of the amendment whether the amendment has been approved or not, the railroad may implement the amendment, subject to FRA's decision.

(3) If a proposed RRP plan amendment is not approved by FRA, no later than 60 days following the receipt of FRA's written notice, the railroad shall either provide FRA a corrected copy of the amendment that addresses all deficiencies noted by FRA or notice that the railroad is retracting the amendment.

§ 271.305 Reopened review.

Following approval of an RRP plan or an amendment to such a plan, FRA may reopen review of the plan or amendment, in whole or in part, for cause stated.

§ 271.307 Retention of RRP plans.

(a) *Railroads.* A railroad shall retain at its system and division headquarters one copy of its RRP plan and each subsequent amendment to that plan. A railroad may comply with this requirement by making an electronic copy available.

(b) *Inspection and copying.* A railroad shall make a copy of the RRP plan and each subsequent amendment available to representatives of FRA or States participating under part 212 of this chapter for inspection and copying during normal business hours.

Subpart E—Internal Assessments

§ 271.401 Annual internal assessments.

(a) Beginning with the first calendar year after the calendar year in which FRA approves a railroad's RRP plan pursuant to § 271.301(d), the railroad shall annually (*i.e.*, once every calendar year) conduct an internal assessment of its RRP.

(b) The internal assessment shall determine the extent to which the railroad has:

(1) Achieved the implementation milestones described in its RRP plan pursuant to § 271.225(b);

(2) Complied with the implemented elements of the approved RRP plan;

(3) Achieved the goals described in its RRP plan pursuant to § 271.203(c);

(4) Implemented previous internal assessment improvement plans pursuant to § 271.403; and

(5) Implemented previous external audit improvement plans pursuant to § 271.503.

(c) A railroad shall ensure that the results of its internal assessments are internally reported to railroad senior management.

§ 271.403 Internal assessment improvement plans.

(a) Within 30 days of completing its internal assessment, a railroad shall develop an improvement plan that addresses the findings of its internal assessment.

(b) At a minimum, a railroad's improvement plan shall:

(1) Describe recommended improvements (including any proposed revisions or updates to the RRP plan the railroad expects to make through the amendment process described in § 271.303) that address the findings of the internal assessment for fully implementing the railroad's RRP, complying with the implemented elements of the RRP plan, achieving the goals identified in the railroad's RRP plan pursuant to § 271.203(c), and implementing previous internal assessment improvement plans and external audit improvement plans;

(2) Identify by position title the individual who is responsible for carrying out the recommended improvements;

(3) Contain a timeline describing when specific and measurable milestones for implementing the recommended improvements will be achieved; and

(4) Specify processes for monitoring the implementation and evaluating the effectiveness of the recommended improvements.

§ 271.405 Internal assessment reports.

(a) Within 60 days of completing its internal assessment, a railroad shall

submit a copy of an internal assessment report to the FRA Associate Administrator for Railroad Safety and Chief Safety Officer, 1200 New Jersey Avenue SE, Washington, DC 20590.

(b) This report shall be signed by the railroad's chief official responsible for safety and who bears primary managerial authority for implementing the railroad's safety policy. The report shall include:

(1) A description of the railroad's internal assessment;

(2) The findings of the internal assessment;

(3) A specific description of the recommended improvements contained in the railroad's internal assessment improvement plan, including any proposed amendments the railroad intends to make to the railroad's RRP plan pursuant to § 271.303; and

(4) The status of the recommended improvements contained in the railroad's internal assessment improvement plan and any outstanding recommended improvements from previous internal assessment improvement plans.

Subpart F—External Audits

§ 271.501 External audits.

FRA will conduct (or cause to be conducted) external audits of a railroad's RRP. Each audit shall evaluate the railroad's compliance with the elements of its RRP required by this part. A railroad shall make documentation kept pursuant to its RRP plan available for inspection and copying by representatives of FRA or States participating under part 212 of this chapter upon request. FRA will provide a railroad written notice of the audit results.

§ 271.503 External audit improvement plans.

(a) *Submission.* Within 60 days of receiving FRA's written notice of the audit results, if necessary, a railroad shall submit for approval an improvement plan addressing any instances of deficiency or non-compliance found in the audit to the FRA Associate Administrator for Railroad Safety and Chief Safety Officer, 1200 New Jersey Avenue SE, Washington, DC 20590.

(b) *Requirements.* At a minimum, an improvement plan shall:

(1) Describe the improvements the railroad will implement to address the audit findings;

(2) Identify by position title the individual(s) responsible for carrying out the improvements necessary to address the audit findings; and

(3) Contain a timeline describing when milestones for implementing the recommended improvements will be achieved. These implementation milestones shall be specific and measurable.

(c) *Approval.* If FRA does not approve the railroad's improvement plan, FRA will notify the railroad of the plan's specific deficiencies. The railroad shall amend the proposed plan to correct the identified deficiencies and provide FRA a corrected copy no later than 30 days following receipt of FRA's notice that the proposed plan was not approved.

(d) *Status reports.* Upon the request of the FRA Associate Administrator, a railroad shall provide FRA for review a status report on the implementation of the improvements contained in the improvement plan.

Subpart G—Fatigue Risk Management Programs

SOURCE: 87 FR 35673, June 13, 2022, unless otherwise noted.

§ 271.601 Definitions.

As used in this subpart—

Contributing factor means a circumstance or condition that helps cause a result.

Fatigue means a complex state characterized by a lack of alertness and reduced mental and physical performance, often accompanied by drowsiness.

Fatigue-risk analysis means a railroad's analysis of its operations that:

(1) Identifies and evaluates the fatigue-related railroad safety hazards on its system(s) and;

(2) Determines the degree of risk associated with each of those hazards.

FRMP means a Fatigue Risk Management Program.

FRMP plan means a Fatigue Risk Management Program plan.

Safety-related railroad employee means:

(1) A person subject to 49 U.S.C. 21103, 21104, or 21105;

(2) Another person involved in railroad operations not subject to 49 U.S.C. 21103, 21104, or 21105;

(3) A person who inspects, installs, repairs or maintains track, roadbed, signal and communication systems, and electric traction systems including a roadway worker or railroad bridge worker;

(4) A hazmat employee defined under 49 U.S.C. 5102(3);

(5) A person who inspects, repairs, or maintains locomotives, passenger cars, or freight cars; or

(6) An employee of any person who utilizes or performs significant railroad safety-related services, as described in §271.205(a)(3), if that employee performs a function identified in paragraphs (1) through (5) of this definition.

§271.603 Purpose and scope of a Fatigue Risk Management Program (FRMP).

(a) *Purpose.* The purpose of an FRMP is to improve railroad safety through structured, proactive processes and procedures a railroad subject to this part develops and implements. A railroad's FRMP shall systematically identify and evaluate the fatigue-related railroad safety hazards on its system, determine the degree of risk associated with each hazard, and manage those risks to reduce the fatigue that its safety-related railroad employees experience and to reduce the risk of railroad accidents, incidents, injuries, and fatalities where the fatigue of any of these employees is a contributing factor.

(b) *Scope.* A railroad shall:

(1) Design its FRMP to reduce the fatigue its safety-related railroad employees experience and to reduce the risk of railroad accidents, incidents, injuries, and fatalities where the fatigue of any of these employees is a contributing factor;

(2) Develop its FRMP by conducting a system-wide fatigue-risk analysis that accounts for the varying circumstances of its operations on different parts of its system; and

(3) Employ in its FRMP the fatigue risk mitigation strategies the railroad identifies as appropriate to address those varying circumstances.

§271.605 General requirements; procedure.

(a) Each railroad subject to this part shall:

(1) Establish and implement an FRMP as part of its RRP; and

(2) Establish an FRA-approved FRMP plan as a component of a railroad's FRA-approved RRP plan and then update the FRMP plan as necessary as part of the annual internal assessment of its RRP under §271.401.

(b) A railroad's FRMP plan must explain the railroad's method of analysis of fatigue risks and the railroad's process(es) for implementing its FRMP.

(c)(1) A railroad shall submit an FRMP plan to FRA for approval no later than either the applicable timeline in §271.301(b) for filing its RRP plan or July 13, 2023, whichever is later; and

(2) A railroad shall submit updates to its FRMP plan under the process for amending its RRP plan in §271.303.

(d) FRA shall review and approve or disapprove a railroad's FRMP plan under the process for reviewing RRP plans in §271.301(d) and updates to the railroad's FRMP plan under the process for reviewing amendments to an RRP plan in §271.303(c). FRA approval of a railroad's FRMP plan amends a railroad's RRP plan to include the FRMP plan as a component.

§271.607 Requirements for an FRMP.

(a) *In general.* An FRMP shall include an analysis of fatigue risks and mitigation strategies described in paragraphs (b) and (c) of this section.

(b) *Analysis of fatigue risks.* A railroad shall conduct a fatigue-risk analysis as part of its FRA-approved FRMP, which includes identification of fatigue-related railroad safety hazards, assessment of the risks associated with those hazards, and prioritization of risks for mitigation. At a minimum, railroads must consider the following categories of risk factors, as applicable:

(1) General health and medical conditions that can affect the fatigue levels among the population of safety-related railroad employees;

(2) Scheduling issues that can affect the opportunities of safety-related railroad employees to obtain sufficient quality and quantity of sleep; and

(3) Characteristics of each job category safety-related railroad employees work that can affect fatigue levels and risk for fatigue of those employees.

(c) *Mitigation strategies.* A railroad shall develop and implement mitigation strategies to reduce the risk of railroad accidents, incidents, injuries, and fatalities where fatigue of any of its safety-related employees is a contributing factor. At a minimum, in developing and implementing these mitigation strategies, a railroad shall consider the railroad's policies, practices, and communications related to its safety-related railroad employees.

(1) *Policies.* A railroad shall consider developing and implementing policies to reduce the risk of the exposure of its safety-related railroad employees to fatigue-related railroad safety hazards on its system. At a minimum, a railroad shall consider these policies:

(i) Providing opportunities for identification, diagnosis, and treatment of any medical condition that may affect alertness or fatigue, including sleep disorders;

(ii) Identifying methods to minimize accidents and incidents that occur as a result of working at times when scientific and medical research have shown increased fatigue disrupts employees' circadian rhythms;

(iii) Developing and implementing alertness strategies, such as policies on napping, to address acute drowsiness and fatigue while an employee is on duty;

(iv) Increasing the number of consecutive hours of off-duty rest, during which an employee receives no communication from the employing railroad or its managers, supervisors, officers, or agents; and

(v) Avoiding abrupt changes in rest cycles for employees.

(2) *Practices.* A railroad shall consider developing and implementing operational practices to reduce the risk of exposure of its safety-related railroad employees to fatigue-related railroad safety hazards on its system. At a minimum, a railroad shall consider these practices:

(i) Minimizing the effects on employee fatigue of an employee's short-term or sustained response to emergency situations, such as derailments and natural disasters, or engagement in other intensive working conditions;

(ii) Developing and implementing scheduling practices for employees, including innovative scheduling practices, on-duty call practices, work and rest cycles, increased consecutive days off for employees, changes in shift patterns, appropriate scheduling practices for varying types of work, and other aspects of employee scheduling to reduce employee fatigue and cumulative sleep loss; and

(iii) Providing opportunities to obtain restful sleep at lodging facilities, including employee sleeping quarters provided by the railroad carrier.

(3) *Communication.* A railroad shall consider developing and implementing training, education, and outreach methods to deliver fatigue-related information effectively to its safety-related railroad employees. At a minimum, a railroad shall consider communications regarding employee education and training on the physiological and human factors that affect fatigue, as well as strategies to reduce or mitigate the effects of fatigue, based on the most current scientific and medical research and literature.

(d) *Evaluation.* A railroad shall develop and implement procedures and processes for monitoring and evaluating its FRMP to assess whether the FRMP effectively meets the goals its FRMP plan describes under § 271.609(b).

(1) The evaluation shall include, at a minimum:

(i) Periodic monitoring of the railroad's operational environment to detect changes that may generate new hazards;

(ii) Analysis of the risks associated with any identified hazards; and

(iii) Periodic safety assessments to determine the need for changes to its mitigation strategies.

(2) A railroad shall evaluate newly-identified hazards, and hazards associated with ineffective mitigation strategies, through processes for analyzing fatigue risks described in the railroad's FRMP plan.

(3) Any necessary changes not addressed prior to a railroad's annual internal assessment must be included in the internal assessment improvement plans required under § 271.403.

§ 271.609 Requirements for an FRMP plan.

(a) *In general.* A railroad shall adopt and implement its FRMP through an FRA-approved FRMP plan, developed in consultation with directly affected employees as described under § 271.207. A railroad FRMP plan must contain the elements described in this section. The railroad must submit the plan to FRA for approval under the criteria of subpart D.

(b) *Goals.* An FRMP plan must contain a statement that defines the specific fatigue-related goals of the FRMP and describes strategies for reaching those goals.

(c) *Methods*—(1) *Analysis of fatigue risk.* An FRMP plan shall describe a railroad's method(s) for conducting its fatigue-risk analysis as part of its FRMP. The description shall specify:

(i) The scope of the analysis, which is the covered population of safety-related railroad employees;

(ii) The processes a railroad will use to identify fatigue-related railroad safety hazards on its system and determine the degree of risk associated with each fatigue-related hazard identified;

(iii) The processes a railroad will use to compare and prioritize identified fatigue-related risks for mitigation purposes; and

(iv) The information sources a railroad will use to support ongoing identification of fatigue-related railroad safety hazards and determine the degree of risk associated with those hazards.

(2) *Mitigation strategies.* An FRMP plan shall describe a railroad's processes for:

(i) Identifying and selecting fatigue risk mitigation strategies; and

(ii) Monitoring identified fatigue-related railroad safety hazards.

(3) *Evaluation.* An FRMP plan shall describe:

(i) A railroad's processes for monitoring and evaluating the overall effectiveness of its FRMP and the effectiveness of fatigue-related mitigation strategies the railroad uses under § 271.607; and

(ii) A railroad's procedures for reviewing the FRMP as part of the annual assessment of its RRP under § 271.401 and for updating the FRMP plan under the process for amending its RRP plan under § 271.303.

(d) *FRMP implementation plan.* A railroad shall describe in its FRMP plan how it will implement its FRMP. This description must cover an implementation period not to exceed 36 months, and shall include:

(1) A description of the roles and responsibilities of each position or job function with significant responsibility for implementing the FRMP, including those held by employees, contractors who provide significant FRMP-related services, and other entities or persons that provide significant FRMP services;

(2) A timeline describing when certain milestones that must be met to implement the FRMP fully will be achieved. Implementation milestones shall be specific and measurable;

(3) A description of how the railroad may make significant changes to the FRMP plan under the process for amending its RRP plan in § 271.303; and

(4) The procedures for consultation with directly affected employees on any subsequent substantive amendments to the railroad's FRMP plan. The requirements of this section do not apply to non-substantive amendments (*e.g.,* amendments that update names and addresses of railroad personnel).

APPENDIX A TO PART 271—FEDERAL RAILROAD ADMINISTRATION GUIDANCE ON THE RISK REDUCTION PROGRAM CONSULTATION PROCESS

A railroad required to develop a risk reduction program (RRP) under this part shall in good faith consult with and use its best efforts to reach agreement with its directly affected employees on the contents of the RRP plan. *See* § 271.207(a)(1). This appendix discusses the meaning of the terms ''good faith'' and ''best efforts,'' and provides nonmandatory guidance on how a railroad may comply with the requirement to consult with directly affected employees on the contents of its RRP plan. Guidance is provided for employees who are represented by a non-profit

employee labor organization and employees who are not represented by any such organization.

I. THE MEANING OF ''GOOD FAITH'' AND ''BEST EFFORTS''

''Good faith'' and ''best efforts'' are not interchangeable terms representing a vague standard for the §271.207 consultation process. Rather, each term has a specific and distinct meaning. When consulting with directly affected employees, therefore, a railroad shall independently meet the standards for both the good faith and best efforts obligations. A railroad that does not meet the standard for one or the other will not be in compliance with the consultation requirements of §271.207.

The good faith obligation requires a railroad to consult with employees in a manner that is honest, fair, and reasonable, and to genuinely pursue agreement on the contents of an RRP plan. If a railroad consults with its employees merely in a perfunctory manner, without genuinely pursuing agreement, it will not have met the good faith requirement. For example, a lack of good faith may be found if a railroad's directly affected employees express concerns with certain parts of the railroad's RRP plan, and the railroad neither addresses those concerns in further consultation nor attempts to address those concerns by making changes to the RRP plan.

On the other hand, ''best efforts'' establishes a higher standard than that imposed by the good faith obligation, and describes the diligent attempts that a railroad shall pursue to reach agreement with its employees on the contents of its RRP plan. While the good faith obligation is concerned with the railroad's state of mind during the consultation process, the best efforts obligation is concerned with the specific efforts made by the railroad in an attempt to reach agreement. This would include considerations such as whether a railroad had held sufficient meetings with its employees to address or make an attempt to address any concerns raised by the employees, or whether the railroad had made an effort to respond to feedback provided by employees during the consultation process. For example, a railroad would not meet the best efforts obligation if it did not initiate the consultation process in a timely manner, and thereby failed to provide employees sufficient time to engage in the consultation process. A railroad would also likely not meet the best efforts obligation if it presented employees with an RRP plan and only permitted the employees to express agreement or disagreement on the plan (assuming that the employees had not previously indicated that such a consultation would be acceptable). A railroad may, however, wish to hold off substantive consultations regarding the contents of its RRP plan until one year after publication of the rule to ensure that information generated as part of the process is protected from discovery and admissibility into evidence under §271.11. Generally, best efforts are measured by the measures that a reasonable person in the same circumstances and of the same nature as the acting party would take. Therefore, the standard imposed by the best efforts obligation may vary with different railroads, depending on a railroad's size, resources, and number of employees.

When reviewing RRP plans, FRA will determine on a case-by-case basis whether a railroad has met its §271.207 good faith and best efforts obligations. This determination will be based upon the consultation statement submitted by the railroad pursuant to §271.207(b) and any statements submitted by employees pursuant to §271.207(c). If FRA finds that these statements do not provide sufficient information to determine whether a railroad used good faith and best efforts to reach agreement, FRA may investigate further and contact the railroad or its employees to request additional information. (FRA also expects a railroad's directly affected employees to utilize good faith and best efforts when negotiating on the contents of an RRP plan. If FRA's review and investigation of the statements submitted by the railroad under §271.207(b) and the directly affected employees under §271.207(c) reveal that the directly affected employees did not utilize good faith and best efforts, FRA could consider this as part of its approval process.)

If FRA determines that a railroad did not use good faith and best efforts, FRA may disapprove the RRP plan submitted by the railroad and direct the railroad to comply with the consultation requirements of §271.207. Pursuant to §271.301(b)(3), if FRA does not approve the RRP plan, the railroad will have 90 days, following receipt of FRA's written notice that the plan was not approved, to correct any deficiency identified. In such cases, the identified deficiency would be that the railroad did not use good faith and best efforts to consult and reach agreement with its directly affected employees. If a railroad then does not submit to FRA within 90 days an RRP plan meeting the consultation requirements of §271.207, the railroad could be subject to penalties for failure to comply with §271.301(b)(3).

II. GUIDANCE ON HOW A RAILROAD MAY CONSULT WITH DIRECTLY AFFECTED EMPLOYEES

Because the standard imposed by the best efforts obligation will vary depending upon the railroad, there may be countless ways for various railroads to comply with the consultation requirements of §271.207. Therefore,

it is important to maintain a flexible approach to the §271.207 consultation requirements, to give a railroad and its directly affected employees the freedom to consult in a manner best suited to their specific circumstances.

FRA is nevertheless providing guidance in this appendix as to how a railroad may proceed when consulting (utilizing good faith and best efforts) with employees in an attempt to reach agreement on the contents of an RRP plan. This guidance may be useful as a starting point for railroads that are uncertain about how to comply with the §271.207 consultation requirements. This guidance distinguishes between employees who are represented by a non-profit employee labor organization and employees who are not, as the processes a railroad may use to consult with represented and non-represented employees could differ significantly.

This guidance does not establish prescriptive requirements with which a railroad shall comply, but merely outlines a consultation process a railroad may choose to follow. A railroad's consultation statement could indicate that the railroad followed the guidance in this appendix as evidence that it utilized good faith and best efforts to reach agreement with its employees on the contents of an RRP plan.

(a) Employees Represented by a Non-Profit Employee Labor Organization

As provided in §271.207(b)(1), a railroad consulting with the representatives of a non-profit employee labor organization on the contents of an RRP plan will be considered to have consulted with the directly affected employees represented by that organization.

A railroad may utilize the following process as a roadmap for using good faith and best efforts when consulting with represented employees in an attempt to reach agreement on the contents of an RRP plan.

(1) Pursuant to §271.207(b)(1), a railroad must meet with representatives from a non-profit employee labor organization (representing a class or craft of the railroad's directly affected employees) within 240 days from February 18, 2020 to begin the process of consulting on the contents of the railroad's RRP plan. A railroad must provide notice at least 60 days before the scheduled meeting.

(2) During the time between the initial meeting and the applicability date of §271.11, the parties may meet to discuss administrative details of the consultation process as necessary.

(3) Within 60 days after February 17, 2021, a railroad should have a meeting with the representatives of the directly affected employees to discuss substantive issues with the RRP plan.

(4) Within 180 days after February 17, 2021 or as otherwise provided by §271.301(b), a railroad would file its RRP plan with FRA.

(5) As provided by §271.207(e), if agreement on the contents of an RRP plan could not be reached, a labor organization (representing a class or craft of the railroad's directly affected employees) may file a statement with the FRA Associate Administrator for Railroad Safety and Chief Safety Officer explaining its views on the plan on which agreement was not reached.

(b) Employees Who Are Not Represented by a Non-Profit Employee Labor Organization

FRA recognizes that some (or all) of a railroad's directly affected employees may not be represented by a non-profit employee labor organization. For such non-represented employees, the consultation process described for represented employees may not be appropriate or sufficient. For example, a railroad with non-represented employees should make a concerted effort to ensure that its non-represented employees are aware that they are able to participate in the development of the railroad's RRP plan. FRA therefore is providing the following guidance regarding how a railroad may utilize good faith and best efforts when consulting with non-represented employees on the contents of its RRP plan.

(1) Within 120 days from February 18, 2020, a railroad may notify non-represented employees that—

(A) The railroad is required to consult in good faith with, and use its best efforts to reach agreement with, all directly affected employees on the proposed contents of its RRP plan;

(B) Non-represented employees are invited to participate in the consultation process (and include instructions on how to engage in this process); and

(C) If a railroad is unable to reach agreement with its directly affected employees on the contents of the proposed RRP plan, an employee may file a statement with the FRA Associate Administrator for Railroad Safety and Chief Safety Officer explaining his or her views on the plan on which agreement was not reached.

(2) This initial notification (and all subsequent communications, as necessary or appropriate) could be provided to non-represented employees in the following ways:

(A) Electronically, such as by email or an announcement on the railroad's website;

(B) By posting the notification in a location easily accessible and visible to non-represented employees; or

(C) By providing all non-represented employees a hard copy of the notification.

A railroad could use any or all of these methods of communication, so long as the notification complies with the railroad's obligation to utilize best efforts in the consultation process.

(3) Following the initial notification (and before submitting its RRP plan to FRA), a

railroad should provide non-represented employees a draft proposal of its RRP plan. This draft proposal should solicit additional input from non-represented employees, and the railroad should provide non-represented employees 60 days to submit comments to the railroad on the draft.

(4) Following this 60-day comment period and any changes to the draft RRP plan made as a result, the railroad should submit the proposed RRP plan to FRA, as required by this part.

(5) As provided by §271.207(e), if agreement on the contents of an RRP plan cannot be reached, then a non-represented employee may file a statement with the FRA Associate Administrator for Railroad Safety and Chief Safety Officer explaining his or her views on the plan on which agreement was not reached.

APPENDIX B TO PART 271—PROCEDURES FOR SUBMISSION OF RRP PLANS AND STATEMENTS FROM DIRECTLY AFFECTED EMPLOYEES

This appendix establishes procedures for the submission of a railroad's RRP plan and statements by directly affected employees consistent with the requirements of this part.

SUBMISSION BY A RAILROAD AND DIRECTLY AFFECTED EMPLOYEES

(a) As provided for in §271.101, each railroad must establish and fully implement an RRP that continually and systematically evaluates railroad safety hazards on its system and manages the resulting risks to reduce the number and rates of railroad accidents, incidents, injuries, and fatalities. The RRP shall be fully implemented and supported by a written RRP plan. Each railroad must submit its RRP plan to FRA for approval as provided for in §271.201.

(b) As provided for in §271.207(e), if a railroad and its directly affected employees cannot come to agreement on the proposed contents of the railroad's RRP plan, the directly affected employees have 30 days following the railroad's submission of its proposed RRP plan to submit a statement to the FRA Associate Administrator for Railroad Safety and Chief Safety Officer explaining the directly affected employees' views on the plan on which agreement was not reached.

(c) The railroad's and directly affected employees' submissions shall be sent to the Associate Administrator for Railroad Safety and Chief Safety Officer, FRA. The mailing address for FRA is 1200 New Jersey Avenue SE, Washington, DC 20590. When a railroad submits its RRP plan and consultation statement to FRA pursuant to §271.301, it must also simultaneously send a copy of these documents to all individuals identified in the service list pursuant to §271.207(d)(3).

(d) Each railroad and directly affected employee is authorized to file by electronic means any submissions required under this part. Before any person files a submission electronically, the person shall provide the FRA Associate Administrator for Railroad Safety and Chief Safety Officer with the following information in writing:

(1) The name of the railroad or directly affected employee(s);

(2) The names of two individuals, including job titles, who will be the railroad's or directly affected employees' points of contact and will be the only individuals allowed access to FRA's secure document submission site;

(3) The mailing addresses for the railroad's or directly affected employees' points of contact;

(4) The railroad's system or main headquarters address located in the United States;

(5) The email addresses for the railroad's or directly affected employees' points of contact; and

(6) The daytime telephone numbers for the railroad's or directly affected employees' points of contact.

(e) A request for electronic submission or FRA review of written materials shall be addressed to the FRA Associate Administrator for Railroad Safety and Chief Safety Officer, Federal Railroad Administration, 1200 New Jersey Avenue SE, Washington, DC 20590. Upon receipt of a request for electronic submission that contains the information listed above, FRA will then contact the requestor with instructions for electronically submitting its program or statement. A railroad that electronically submits an initial RRP plan or new portions or revisions to an approved program required by this part shall be considered to have provided its consent to receive approval or disapproval notices from FRA by email. FRA may electronically store any materials required by this part regardless of whether the railroad that submits the materials does so by delivering the written materials to the Associate Administrator and opts not to submit the materials electronically. A railroad that opts not to submit the materials required by this part electronically, but provides one or more email addresses in its submission, shall be considered to have provided its consent to receive approval or disapproval notices from FRA by email or mail.

PART 272—CRITICAL INCIDENT STRESS PLANS

Subpart A—General

Sec.
272.1 Purpose.
272.3 Application.
272.5 General duty.
272.7 Coverage of a critical incident stress plan.
272.9 Definitions.
272.11 Penalties.

Subpart B—Plan Components and Approval Process

272.101 Content of a critical incident stress plan.
272.103 Submission of critical incident stress plan for approval by the Federal Railroad Administration.
272.105 Requirement to file critical incident stress plan electronically.

AUTHORITY: 49 U.S.C. 20103, 20107, 20109 note; 28 U.S.C. 2461 note; and 49 CFR 1.89.

SOURCE: 79 FR 16233, Mar. 25, 2014, unless otherwise noted.

Subpart A—General

§ 272.1 Purpose.

(a) The purpose of this part is to promote the safety of railroad operations and the health and safety of railroad employees, especially those who are directly involved in a critical incident by requiring that the employing railroad offers and provides appropriate support services, including appropriate relief, to the directly-involved employees following that critical incident.

(b) Nothing in this part constrains a railroad from implementing a critical incident stress plan that contains additional provisions beyond those specified in this part (including provisions covering additional incidents or persons), provided that such additional provisions are not inconsistent with this part.

§ 272.3 Application.

This part applies to each

(a) Class I railroad, including the National Railroad Passenger Corporation;

(b) Intercity passenger railroad; or

(c) Commuter railroad.

§ 272.5 General duty.

A railroad subject to this part shall adopt a written critical incident stress plan approved by the Federal Railroad Administration under § 272.103 and shall comply with that plan. Should a railroad subject to this part make a material modification to the approved plan, the railroad shall adopt the modified plan approved by the Federal Railroad Administration under § 272.103 and shall comply with that plan, as revised.

§ 272.7 Coverage of a critical incident stress plan.

The critical incident stress plan of a railroad subject to this part shall state that it covers, and shall cover, the following individuals employed by the railroad if they are directly involved (as defined in § 272.9) in a critical incident:

(a) Railroad employees who are subject to the hours of service laws at—

(1) 49 U.S.C. 21103 (that is, train employees not subject to subpart F of part 228 of this chapter regarding the hours of service of train employees engaged in commuter or intercity rail passenger transportation);

(2) 49 U.S.C. 21104 (signal employees); or

(3) 49 U.S.C. 21105 (dispatching service employees);

(b) Railroad employees who are subject to the hours of service regulations at subpart F of part 228 of this chapter (regarding the hours of service of train employees engaged in commuter or intercity rail passenger transportation);

(c) Railroad employees who inspect, install, repair, or maintain railroad right-of-way or structures; and

(d) Railroad employees who inspect, repair, or maintain locomotives, passenger cars, or freight cars.

§ 272.9 Definitions.

As used in this part—

Accident/incident has the meaning assigned to that term by part 225 of this chapter.

Administrator means the Administrator of the Federal Railroad Administration or the Administrator's delegate.

Associate Administrator means the Associate Administrator for Railroad

Safety and Chief Safety Officer of the Federal Railroad Administration or that person's delegate.

Class I has the meaning assigned to that term by the regulations of the Surface Transportation Board (49 CFR part 1201; General Instructions 1–1).

Commuter railroad means a railroad, as described by 49 U.S.C. 20102(2), including public authorities operating passenger train service, that provides regularly-scheduled passenger service in a metropolitan or suburban area and commuter railroad service that was operated by the Consolidated Rail Corporation on January 1, 1979.

Critical incident means either—

(1) An accident/incident reportable to FRA under part 225 of this chapter that results in a fatality, loss of limb, or a similarly serious bodily injury; or

(2) A catastrophic accident/incident reportable to FRA under part 225 of this chapter that could be reasonably expected to impair a directly-involved employee's ability to perform his or her job duties safely.

Directly-involved employee means a railroad employee covered under § 272.7—

(1) Whose actions are closely connected to the critical incident;

(2) Who witnesses the critical incident in person as it occurs or who witnesses the immediate effects of the critical incident in person; or

(3) Who is charged to directly intervene in, or respond to, the critical incident (excluding railroad police officers or investigators who routinely respond to and are specially trained to handle emergencies).

FRA means the Federal Railroad Administration, 1200 New Jersey Ave. SE., Washington, DC 20590.

Home terminal means an employee's regular reporting point at the beginning of the tour of duty.

Intercity passenger railroad means a railroad, as described by 49 U.S.C. 20102(2), including public authorities operating passenger train service, which provides regularly-scheduled passenger service between large cities.

§ 272.11 Penalties.

(a) *Civil penalties.* A person who violates any requirement of this part, or causes the violation of any such requirement, is subject to a civil penalty of at least $1,086 and not more than $35,516 per violation, except that: Penalties may be assessed against individuals only for willful violations, and, where a grossly negligent violation or a pattern of repeated violations has created an imminent hazard of death or injury to persons, or has caused death or injury, a penalty not to exceed $142,063 per violation may be assessed. Each day that a violation continues is a separate offense. *See* appendix A to part 209 of this chapter for a statement of agency civil penalty policy.

(b) *Criminal penalties.* A person who knowingly and willfully falsifies a record or report required by this part may be subject to criminal penalties under 49 U.S.C. 21311.

[79 FR 16233, Mar. 25, 2014, as amended at 81 FR 43113, July 1, 2016; 82 FR 16135, Apr. 3, 2017; 83 FR 60750, Nov. 27, 2018; 84 FR 37076, July 31, 2019; 86 FR 1760, Jan. 11, 2021; 86 FR 23256, May 3, 2021; 87 FR 15870, Mar. 21, 2022; 88 FR 1129, Jan. 6, 2023; 88 FR 89564, Dec. 28, 2023]

Subpart B—Plan Components and Approval Process

§ 272.101 Content of a critical incident stress plan.

Each critical incident stress plan under this part shall include, at a minimum, provisions for—

(a) Informing each directly-involved employee as soon as practicable of the relief options available in accordance with the railroad's critical incident stress plan;

(b) Offering timely relief from the balance of the duty tour for each directly-involved employee, after the employee has performed any actions necessary for the safety of persons and contemporaneous documentation of the incident;

(c) Offering timely transportation to each directly-involved employee's home terminal, if necessary;

(d) Offering counseling, guidance, and other appropriate support services to each directly-involved employee;

(e) Permitting relief from the duty tour(s) subsequent to the critical incident, for an amount of time to be determined by each railroad, if requested

by a directly-involved employee as may be necessary and reasonable;

(f) Permitting each directly-involved employee such additional leave from normal duty as may be necessary and reasonable to receive preventive services or treatment related to the incident or both, provided the employee's clinical diagnosis supports the need for additional time off or the employee is in consultation with a health care professional related to the incident and such health care professional supports the need for additional time off in order for the employee to receive preventive services or treatment related to the incident, or both; and

(g) Addressing how the railroad's employees operating or otherwise working on track owned by or operated over by a different railroad will be afforded the protections of the plan.

§ 272.103 Submission of critical incident stress plan for approval by the Federal Railroad Administration.

(a) Each railroad subject to this part shall submit to the Federal Railroad Administration, Office of Railroad Safety, 1200 New Jersey Avenue SE, Washington, DC 20590, for approval, the railroad's critical incident stress plan no later than 12 months after June 23, 2014.

(b) Each railroad subject to this part shall—

(1) Simultaneously with its filing with FRA, serve, either by hard copy or electronically, a copy of the submission filed pursuant to paragraph (a) of this section or a material modification filed pursuant to paragraph (e) of this section on the international/national president of any non-profit employee labor organization representing a class or craft of the railroad's employees subject to this part; and

(2) Include in its submission filed pursuant to paragraph (a) of this section or a material modification filed pursuant to paragraph (e) of this section a statement affirming that the railroad has complied with the requirements of paragraph (b)(1) of this section, together with a list of the names and addresses of the persons served.

(c) Not later than 90 days after the date of filing a submission pursuant to paragraph (a) of this section or a material modification pursuant to paragraph (e) of this section, a labor organization representing a class or craft of the railroad's employees subject to this part, may file a comment on the submission or material modification.

(1) Each comment shall be submitted to the Associate Administrator for Railroad Safety and Chief Safety Officer, FRA, 1200 New Jersey Avenue SE, Washington, DC 20590; and

(2) The commenter shall certify that a copy of the comment was served on the railroad.

(d) A critical incident stress plan is considered approved for purposes of this part if and when FRA notifies the railroad in writing that the critical incident stress plan is approved, or 120 days after FRA has received the railroad's critical incident stress plan, whichever occurs first.

(e) After FRA's initial approval of a railroad's critical incident stress plan, if the railroad makes a material modification of the critical incident stress plan, the railroad shall submit to FRA for approval a copy of the critical incident stress plan as it has been revised to reflect the material modification within 30 days of making the material modification.

(f) Upon FRA approval of a railroad's critical incident stress plan and any material modification of the critical incident stress plan, the railroad must make a copy of the railroad's plan and the material modification available to the railroad's employees identified in § 272.7.

(g) Each railroad subject to this part must make a copy of the railroad's plan available for inspection and reproduction by the FRA.

§ 272.105 Requirement to file critical incident stress plan electronically.

(a) Each railroad subject to this part must submit its critical incident stress plan and any material modifications to that plan electronically through FRA's Web site at *http://safetydata.fra.dot.gov/OfficeofSafety/CISP*.

(b) The railroad's electronic submission shall provide the Associate Administrator with the following:

(1) The name of the railroad;

(2) The names of two individuals, including job titles, who will be the railroad's points of contact;

(3) The mailing addresses for the railroad's points of contact;

(4) The railroad's system or main headquarters address located in the United States;

(5) The email addresses for the railroad's points of contact;

(6) The daytime telephone numbers for the railroad's points of contact; and

(7) An electronic copy of the railroad's critical incident stress plan or any material modifications to that plan being submitted for FRA approval.

(c) FRA may electronically store any materials required by this part.

PART 273—METRICS AND MINIMUM STANDARDS FOR INTERCITY PASSENGER TRAIN OPERATIONS

Sec.
273.1 Purpose.
273.3 Definitions.
273.5 On-time performance and train delays.
273.7 Customer service.
273.9 Financial.
273.11 Public benefits.

AUTHORITY: Sec. 207, Div. B, Pub. L. 110–432; 49 U.S.C. 24101, note; 49 U.S.C. 103(j); 49 CFR 1.81; 49 CFR 1.88; and 49 CFR 1.89.

SOURCE: 85 FR 73000, Nov. 16, 2020, unless otherwise noted.

§ 273.1 Purpose.

The purpose of this part is to establish metrics and minimum standards for measuring the performance and service quality of intercity passenger train operations.

§ 273.3 Definitions.

As used in this part—

Actual running time means the actual elapsed travel time of a train's travel on a host railroad, between the departure time at the first reporting point for a host railroad segment and the arrival time at the reporting point at the end of the host railroad segment.

Adjusted operating expenses means Amtrak's operating expenses adjusted to exclude certain Amtrak expenses that are not considered core to operating the business. The major exclusions are depreciation, capital project related expenditures not eligible for capitalization, non-cash portion of pension and post-retirement benefits, and Amtrak's Office of Inspector General expenses. Adjusted operating expenses do not include any operating expenses for State-supported routes that are paid for separately by States.

Adjusted operating revenue means Amtrak's operating revenue adjusted to exclude certain revenue that is associated with capital projects. The major exclusions are the amortization of State capital payments and capital project revenue related to expenses not eligible for capitalization.

Amtrak means the National Railroad Passenger Corporation.

Amtrak's customer satisfaction survey means a market-research survey that measures Amtrak's satisfaction score as measured by specific service attributes that cover the entire customer journey.

Amtrak-responsible delays means delays recorded by Amtrak, in accordance with Amtrak procedures, as Amtrak-responsible delays, including passenger-related delays at stations, Amtrak equipment failures, holding for connections, injuries, initial terminal delays, servicing delays, crew and system delays, and other miscellaneous Amtrak-responsible delays.

Avoidable operating costs means costs incurred by Amtrak to operate train service along a route that would no longer be incurred if the route were no longer operated.

Certified schedule means a published train schedule that Amtrak and the host railroad jointly certify is aligned with the customer on-time performance metric and standard in § 273.5(a)(1) and (2). If a published train schedule is reported as a certified schedule under § 273.5(c)(1), then it cannot later be designated as an uncertified schedule.

Disputed schedule means:

(1) A published train schedule for which a specific change is sought:

(i) That is the only subject of a nonbinding dispute resolution process led by a neutral third-party and involving Amtrak and one or more host railroads;

(ii) That is the only subject of a nonbinding dispute resolution process led by a neutral third-party that has been

initiated by one or more host railroads and Amtrak has not consented to participate in the process within 30 calendar days; or

(iii) That is the only subject of a non-binding dispute resolution process led by a neutral third-party that has been initiated by Amtrak and the host railroad has not consented to participate in the process within 30 calendar days.

(2) The written decision resulting from a non-binding dispute resolution process is admissible in Surface Transportation Board investigations under 49 U.S.C. 24308(f). If a published train schedule is reported as a disputed schedule under §273.5(c)(1), then it remains a disputed schedule until reported as a certified schedule.

Fully allocated core operating costs means Amtrak's total costs associated with operating an Amtrak route, including direct operating expenses, a portion of shared expenses, and a portion of corporate overhead expenses. Fully allocated core operating costs exclude ancillary and other expenses that are not directly reimbursed by passenger revenue to match revenues with expenses.

Host railroad means a railroad that is directly accountable to Amtrak by agreement for Amtrak operations over a railroad line segment. Amtrak is a host railroad of Amtrak trains and other trains operating over an Amtrak owned or controlled railroad line segment. For purposes of the certified schedule metric under §273.5(c), Amtrak is not a host railroad.

Host-responsible delays means delays recorded by Amtrak, in accordance with Amtrak procedures, as host-responsible delays, including freight train interference, slow orders, signals, routing, maintenance of way, commuter train interference, passenger train interference, catenary or wayside power system failure, and detours.

Not well-served communities means those rural communities: Within 25 miles of an intercity passenger rail station; more than 75 miles from a large airport; and more than 25 miles from any other airport with scheduled commercial service or an intercity bus stop.

Passenger revenue means intercity passenger rail revenue generated from passenger train operations, including ticket revenue, food and beverage sales, operating payments collected from States or other sponsoring entities, special trains, and private car operations.

Ridership data means, in a machine-readable format: The total number of passengers, by train and by day; the station-specific number of detraining passengers, reported by host railroad whose railroad right-of-way serves the station, by train, and by day; and the station-specific number of on-time passengers reported by host railroad whose railroad right-of-way serves the station, by train, and by day.

Scheduled running time means the scheduled duration of a train's travel on a host railroad, as set forth in the Amtrak schedule skeleton.

Schedule skeleton means a schedule grid used by Amtrak and host railroads to communicate the public schedule of an Amtrak train and the schedule of operations of an Amtrak train on host railroads.

Third party delays means delays recorded by Amtrak, in accordance with Amtrak procedures, as third party delays, including bridge strikes, debris strikes, customs, drawbridge openings, police-related delays, trespassers, vehicle strikes, utility company delays, weather-related delays (including heat or cold orders, storms, floods/washouts, earthquake-related delays, slippery rail due to leaves, flash-flood warnings, wayside defect detector actuations caused by ice, and high-wind restrictions), acts of God, or waiting for scheduled departure time.

Uncertified schedule means a published train schedule that has not been reported as a certified schedule or a disputed schedule under §273.5(c)(1).

§ 273.5 On-time performance and train delays.

(a) *Customer on-time performance*—(1) *Metric.* The customer on-time performance metric is the percentage of all customers on an intercity passenger rail train who arrive at their detraining point no later than 15 minutes after their published scheduled arrival time, reported by train and by route.

(2) *Standard.* The customer on-time performance minimum standard is 80

percent for any 2 consecutive calendar quarters.

(3) *Application*. (i) Except as provided in paragraph (a)(3)(ii) of this section, the customer on-time performance standard shall apply to a train beginning on the first full calendar quarter after May 17, 2021.

(ii) If a train schedule is a disputed schedule on or before May 17, 2021, then the customer on-time performance standard for the disputed schedule shall apply beginning on the second full calendar quarter after May 17, 2021.

(b) *Ridership data*. The ridership data metric is the number of host railroads to whom Amtrak has provided ridership data consistent with this paragraph (b), reported by host railroad and by month. Not later than December 16, 2020, Amtrak must provide host railroad-specific ridership data to each host railroad for the preceding 24 months. On the 15th day of every month following December 16, 2020, Amtrak must provide host railroad-specific ridership data to each host railroad for the preceding month.

(c) *Certified schedule*—(1) *Metric*. The certified schedule metric is the number of certified schedules, uncertified schedules, and disputed schedules, reported by train, by route, and by host railroad (excluding switching and terminal railroads), identified in a notice to the Federal Railroad Administrator by Amtrak:

(i) On December 16, 2020;

(ii) On January 19, 2021;

(iii) On February 16, 2021;

(iv) On March 16, 2021;

(v) On April 16, 2021;

(vi) On May 17, 2021;

(vii) On November 16, 2021; and

(viii) Every 12 months after November 16, 2021.

(2) *Reporting*. If a train schedule is reported as a an uncertified schedule under paragraph (c)(1)(vi), (vii), or (viii) of this section, then Amtrak and the host railroad must transmit a joint letter and status report on the first of each month following the report, signed by their respective chief executive officers to each U.S. Senator and U.S. Representative whose district is served by the train, the Chairman and Ranking Member of the Committee on Transportation and Infrastructure of the House of Representatives, the Chairman and Ranking Member of the Committee on Commerce, Science, and Transportation of the Senate, the Chairman and Ranking Member of the Committee on Appropriations of the House of Representatives, the Chairman and Ranking Member of the Committee on Appropriations of the Senate, the Secretary of Transportation, and the Chairman of the Surface Transportation Board, which states:

(i) The Amtrak train schedule(s) at issue;

(ii) The specific components of the train schedule(s) on which Amtrak and host railroad cannot reach agreement;

(iii) Amtrak's position regarding the disagreed upon components of the train schedule(s);

(iv) Host railroad's position regarding the disagreed upon components of the train schedule(s); and

(v) Amtrak and the host railroad's plan and expectation date to resolve the disagreement(s). The requirement to transmit this joint letter and status report ends for the train schedule at issue when the uncertified schedule becomes a certified schedule.

(3) *Ongoing coordination between Amtrak and host railroads*. When conditions have changed that impact a certified schedule, Amtrak or a host railroad may seek to modify the certified schedule. The customer on-time performance standard in paragraph (a)(2) of this section remains in effect for the existing certified schedule, until a modified schedule is jointly certified.

(d) *Train delays*. The train delays metric is the minutes of delay for all Amtrak-responsible delays, host-responsible delays, and third party delays, for the host railroad territory within each route. The train delays metric is reported by delay code by: total minutes of delay; Amtrak-responsible delays; Amtrak's host-responsible delays; Amtrak's host responsible delays and Amtrak-responsible delays, combined; non-Amtrak host-responsible delays; and third party delays. The train delays metric is also reported by the number of non-Amtrak host-responsible delay minutes disputed by host railroad and not resolved by Amtrak.

(e) *Train delays per 10,000 train miles.* The train delays per 10,000 train miles metric is the minutes of delay per 10,000 train miles for all Amtrak-responsible and host-responsible delays, for the host railroad territory within each route.

(f) *Station performance.* The station performance metric is the number of detraining passengers, the number of late passengers, and the average minutes late that late customers arrive at their detraining stations, reported by route, by train, and by station. The average minutes late per late customer calculation excludes on-time customers that arrive no later than 15 minutes after their scheduled time.

(g) *Host running time.* The host running time metric is the average actual running time and the median actual running time compared with the scheduled running time between the first and final reporting points for a host railroad set forth in the Amtrak schedule skeleton, reported by route, by train, and by host railroad (excluding switching and terminal railroads).

§ 273.7 Customer service.

(a) *Customer satisfaction.* The customer satisfaction metric is the percent of respondents to the Amtrak customer satisfaction survey who provided a score of 70 percent or greater for their ''overall satisfaction'' on a 100 point scale for their most recent trip, by route, shown both adjusted for performance and unadjusted.

(b) *Amtrak personnel.* The Amtrak personnel metric is the average score from respondents to the Amtrak customer satisfaction survey for their overall review of Amtrak personnel on their most recent trip, by route.

(c) *Information given.* The information given metric is the average score from respondents to the Amtrak customer satisfaction survey for their overall review of information provided by Amtrak on their most recent trip, by route.

(d) *On-board comfort.* The on-board comfort metric is the average score from respondents to the Amtrak customer satisfaction survey for their overall review of on-board comfort on their most recent trip, by route.

(e) *On-board cleanliness.* The on-board cleanliness metric is the average score from respondents to the Amtrak customer satisfaction survey for their overall review of on-board cleanliness on their most recent trip, by route.

(f) *On-board food service.* The on-board food service metric is the average score from respondents to the Amtrak customer satisfaction survey for their overall review of on-board food service on their most recent trip, by route.

§ 273.9 Financial.

(a) *Cost recovery.* The cost recovery metric is Amtrak's adjusted operating revenue divided by Amtrak's adjusted operating expense. This metric is reported at the corporate level/systemwide and for each route and is reported in constant dollars of the reporting year based on the Office of Management and Budget's gross domestic product chain deflator.

(b) *Avoidable operating costs covered by passenger revenue.* The avoidable operating costs covered by passenger revenue metric is the percent of avoidable operating costs divided by passenger revenue for each route, shown with and without State operating payments.

(c) *Fully allocated core operating costs covered by passenger revenue.* The fully allocated core operating costs covered by passenger revenue metric is the percent of fully allocated core operating costs divided by passenger revenue for each route, shown with and without State operating payments.

(d) *Average ridership.* The average ridership metric is the number of passenger-miles divided by train-mile for each route.

(e) *Total ridership.* The total ridership metric is the total number of passengers on Amtrak trains, reported by route.

§ 273.11 Public benefits.

(a) *Connectivity.* The connectivity metric is the percent of passengers connecting to and from other Amtrak routes, updated on an annual basis.

(b) *Missed connections.* The missed connections metric is the percent of passengers connecting to/from other Amtrak routes who missed connections

due to a late arrival from another Amtrak train, reported by route and updated on an annual basis.

(c) *Community access.* The community access metric is the percent of Amtrak passenger-trips to and from not well-served communities, updated on an annual basis.

(d) *Service availability.* The service availability metric is the total number of daily Amtrak trains per 100,000 residents in a metropolitan statistical area (MSA) for each of the top 100 MSAs in the United States, shown in total and adjusted for time of day, updated on an annual basis.

299.201 Technical PTC system requirements.
299.203 PTC system required.
299.205 PTC System Certification.
299.207 PTC Safety Plan content requirements.
299.209 PTC system use and failures.
299.211 Communications and security requirements.
299.213 Records retention.
299.215 Operations and Maintenance Manual.

Subpart C—Track Safety Standards

299.301 Restoration or renewal of track under traffic conditions.
299.303 Measuring track not under load.
299.305 Drainage.
299.307 Vegetation.
299.309 Classes of track: operating speed limits.
299.311 Track geometry; general.
299.313 Track geometry; performance based.
299.315 Curves; elevations and speed limitations.
299.317 Track strength.
299.319 Track fixation and support.
299.321 Defective rails.
299.323 Continuous welded rail (CWR) plan.
299.325 Continuous welded rail (CWR); general.
299.327 Rail end mismatch.
299.329 Rail joints and torch cut rails.
299.331 Turnouts and crossings generally.
299.333 Frog guard rails and guard faces; gauge.
299.335 Derails.
299.337 Automated vehicle-based inspection systems.
299.339 Daily sweeper inspection.
299.341 Inspection of rail in service.
299.343 Initial inspection of new rail and welds.
299.345 Visual inspections; right-of-way.
299.347 Special inspections.
299.349 Inspection records.
299.351 Qualifications for track maintenance and inspection personnel.
299.353 Personnel qualified to supervise track restoration and renewal.
299.355 Personnel qualified to inspect track.
299.357 Personnel qualified to inspect and restore continuous welded rail.

Subpart D—Rolling Stock

299.401 Clearance requirements.
299.403 Trainset structure.
299.405 Trainset interiors.
299.407 Glazing.
299.409 Brake system.
299.411 Bogies and suspension system.
299.413 Fire safety.
299.415 Doors.
299.417 Emergency lighting.
299.419 Emergency communication.
299.421 Emergency roof access.
299.423 Markings and instructions for emergency egress and rescue access.
299.425 Low-location emergency exit path marking.
299.427 Emergency egress windows.
299.429 Rescue access windows.
299.431 Driver's controls and cab layout.
299.433 Exterior lights.
299.435 Electrical system design.
299.437 Automated monitoring.
299.439 Event recorders.
299.441 Trainset electronic hardware and software safety.
299.443 Safety appliances.
299.445 Trainset inspection, testing, and maintenance requirements.
299.447 Movement of defective equipment.
299.449 Trainset image and audio recording system.

Subpart E—Operating Rules

299.501 Purpose.
299.503 Operating rules; filing and recordkeeping.

299.505 Programs of operational tests and inspections; recordkeeping.
299.507 Program of instruction on operating rules; recordkeeping.

Subpart F—System Qualification Tests

299.601 Responsibility for verification demonstrations and tests.
299.603 Preparation of system-wide qualification test plan.
299.605 Functional and performance qualification tests.
299.607 Pre-revenue service systems integration testing.
299.609 Vehicle/track system qualification.
299.611 Simulated revenue operations.
299.613 Verification of compliance.

Subpart G—Inspection, Testing, and Maintenance Program

299.701 General requirements.
299.703 Compliance.
299.705 Standard procedures for safely performing inspection, testing, and maintenance, or repairs.
299.707 Maintenance intervals.
299.709 Quality control program.
299.711 Inspection, testing, and maintenance program format.
299.713 Program approval procedures.

APPENDIX A TO PART 299—CRITERIA FOR CERTIFICATION OF CRASHWORTHY EVENT RECORDER MEMORY MODULE
APPENDIX B TO PART 299—CAB NOISE TEST PROTOCOL

AUTHORITY: 49 U.S.C. 20103, 20107, 20133, 20141, 20302–20303, 20306, 20701–20702, 21301–21302, 21304; 28 U.S.C. 2461, note; and 49 CFR 1.89.

SOURCE: 85 FR 69731, Nov. 3, 2020, unless otherwise noted.

Subpart A—General Requirements

§ 299.1 Purpose and scope.

This part prescribes minimum Federal safety standards for the high-speed transportation system described in detail in § 299.13, known as Texas Central Railroad, LLC and hereinafter referred to as the ''railroad.'' The purpose of this part is to prevent accidents, casualties, and property damage which could result from operation of this system.

§ 299.3 Applicability.

(a) This part applies only to the railroad, as described in § 299.13.

(b) Except as stated in paragraph (c) of this section, this part, rather than the generally applicable Federal railroad safety regulations, shall apply to the railroad.

(c) The following Federal railroad safety regulations found in Title 49 of the Code of Federal Regulations, and any amendments are applicable to the railroad.

(1) Part 207, Railroad Police Officers;

(2) Part 209, Railroad Safety Enforcement Procedures;

(3) Part 210, Railroad Noise Emission Compliance Regulations;

(4) Part 211, Rules of Practice;

(5) Part 212, State Safety Participation Regulations;

(6) Part 214, Railroad Workplace Safety, except § 214.339;

(7) Part 216, Special Notice and Emergency Order Procedures;

(8) Part 218, Railroad Operating Practices;

(9) Part 219, Control of Alcohol and Drug Use;

(10) Part 220, Radio Standards and Procedures;

(11) Part 225, Railroad Accidents/Incidents: Reports, Classification, and Investigations;

(12) Part 227, Occupational Noise Exposure except § 227.119(c)(10) and (11) with respect to the railroad's high-speed trainsets only, which shall comply with 299.431(h) and (i);

(13) Part 228, Hours of Service of Railroad Employees;

(14) Part 233, Signal Systems Reporting Requirements;

(15) Part 235, Instructions Governing Applications for Approval of a Discontinuance or Material Modification of a Signal System or Relief from the Requirements of Part 236, except § 235.7;

(16) Part 236, Installation, Inspection, Maintenance and Repair of Signal and Train Control System, Devices, and Appliances, subparts A through G, as excepted by the railroad's PTC Safety Plan (PTCSP) under § 299.201(d);

(17) Part 237, Railroad Bridge Safety Standards;

(18) Part 239, Passenger Train Emergency Preparedness;

(19) Part 240, Qualification and Certification of Locomotive Engineers;

(20) Part 242, Qualification and Certification of Train Conductors;

(21) Part 243, Training, Qualification, and Oversight for Safety-Related Railroad Employees;

(22) Part 270, System Safety Program

(23) Part 272, Critical Incident Stress Plans; and

(24) The following parts shall apply to the railroad's maintenance-of-way equipment as it is used in work trains, rescue operations, yard movements, and other non-passenger functions:

(i) Part 215, Railroad Freight Car Safety Standards;

(ii) Part 223, Glazing Standards;

(iii) Part 229, Railroad Locomotive Safety Standards, except—

(A) Section 229.71. Instead, the railroad's maintenance-of-way equipment shall comply with §299.401(b), except for the sweeper vehicle, which shall have a clearance above top of rail no less than 35 mm (1.77 inches).

(B) Section 229.73. Instead, the railroad's maintenance-of-way equipment shall be designed so as to be compatible with the railroad's track structure under subpart C of this part.

(iv) Part 231, Railroad Safety Appliance Standards; and,

(v) Part 232, Railroad Power Brakes and Drawbars.

(d) The Federal railroad safety statutes apply to all railroads, as defined in 49 U.S.C. 20102. The railroad covered by this part is a railroad under that definition. Therefore, the Federal railroad safety statutes, Subtitle V of Title 49 of the United States Code, apply directly to the railroad. However, pursuant to authority granted under 49 U.S.C. 20306, FRA has exempted the railroad from certain requirements of 49 U.S.C. ch. 203.

§ 299.5 Definitions.

As used in this part—

Absolute block means a block of track circuits in which no trainset is permitted to enter while occupied by another trainset.

Adjusting/de-stressing means the procedure by which a rail's neutral temperature is readjusted to the desired value. It typically consists of cutting the rail and removing rail anchoring devices, which provides for the necessary expansion and contraction, and then re-assembling the track.

Administrator means the Administrator of the FRA or the Administrator's delegate.

Associate Administrator means FRA's Associate Administrator for Safety and Chief Safety Officer, or that person's delegate.

Automatic train control (ATC) means the signaling system, composed of ground and on-board equipment. The on-board equipment continually receives a signal from the ground equipment. ATC on-board equipment controls the trainset speed to prevent train-to-train collisions and overspeed derailments.

ATC cut-out mode means the mode of ATC on-board equipment used for emergency operations to disable the ATC on-board equipment on the trainset.

ATC main line mode means the mode of ATC on-board equipment which controls trainset speed on mainlines.

ATC overrun protection means an overlay of the ATC shunting mode to prevent overrun at the end of a track.

ATC shunting mode means the mode of ATC on-board equipment which restricts the trainsets maximum speed to 30 km/h (19 mph).

Brake, air means a combination of devices operated by compressed air, arranged in a system and controlled electrically or pneumatically, by means of which the motion of a train or trainset is retarded or arrested.

Brake, disc means a retardation system used on the passenger trainsets that utilizes flat discs as the braking surface.

Brake, electric means a trainset braking system in which the kinetic energy of a moving trainset is used to generate electric current at the traction motors, which is then returned into the catenary system.

Brake, emergency application means a brake application initiated by a de-energized brake command and is retrievable when there is no malfunction that initiates an automatic emergency brake application. An emergency brake application can be initiated by the driver or automatically by ATC. An emergency brake application, as defined here, is equivalent to a full-service brake application in the U.S.

Brake, urgent application means an irretrievable brake application designed to minimize the braking distance. An urgent brake application, as defined here, is the equivalent of an emergency brake application in the U.S.

Bogie means an assembly that supports the weight of the carbody and which incorporates the suspension, wheels and axles, traction motors and friction brake components. Each unit of a trainset is equipped with two bogies. In the U.S., a bogie is commonly referred to as a truck.

Broken rail means a partial or complete separation of an otherwise continuous section of running rail, excluding rail joints, expansion joints, and insulated joints.

Buckling incident/buckling rail means the formation of a lateral misalignment caused by high longitudinal compressive forces in a rail sufficient in magnitude to exceed the track geometry alignment safety limits defined in § 299.311.

Buckling-prone condition means a track condition that can result in the track being laterally displaced due to high compressive forces caused by critical rail temperature combined with insufficient track strength and/or train dynamics.

Cab means the compartment or space within a trainset that is designed to be occupied by a driver and contain an operating console for exercising control over the trainset.

Cab car means a rail vehicle at the leading or trailing end, or both, of a trainset which has a driver's cab and is intended to carry passengers, baggage, or mail. A cab car may or may not have propelling motors.

Cab end structure means the main support projecting upward from the underframe at the cab end of a trainset.

Cab signal means a signal located in the driver's compartment or cab, indicating a condition affecting the movement of a trainset.

Calendar day means a time period running from one midnight to the next midnight on a given date.

Cant deficiency means the additional height, which if added to the outer rail in a curve, at the designated vehicle speed, would provide a single resultant force, due to the combined effects of weight and centrifugal force on the vehicle, having a direction perpendicular to the plane of the track.

Continuous welded rail (CWR) means rail that has been welded together into lengths exceeding 122 m (400 feet). Rail installed as CWR remains CWR, regardless of whether a joint is installed into the rail at a later time.

Consist, fixed means a semi-permanently coupled trainset that is arranged with each unit in a specific location and orientation within the trainset.

Core system, high-speed means the safety-critical systems, sub-systems, and procedures required for a high-speed system operation that assures a safe operation as required within this part.

Crewmember means a railroad employee called to perform service covered by 49 U.S.C. 21103.

Critical buckling stress means the minimum stress necessary to initiate buckling of a structural member.

Desired rail installation temperature range means the rail temperature range in a specific geographical area, at which forces in CWR installed in that temperature range should not cause a track buckle in extreme heat, or a pull-apart during extreme cold weather.

Disturbed track means the disturbance of the roadbed or ballast section, as a result of track maintenance or any other event, which reduces the lateral or longitudinal resistance of the track, or both.

Driver means any person who controls the movement of a trainset(s) from the cab, and is required to be certified under 49 CFR part 240. A driver, as used in this part, is equivalent to a locomotive engineer.

Employee or railroad employee means an individual who is engaged or compensated by the railroad or by a contractor to the railroad to perform any of the duties defined in this part.

Event recorder means a device, designed to resist tampering, that monitors and records data, as detailed in §§ 299.439 and 236.1005(d) of this chapter, over the most recent 48 hours of operation of the trainset.

Event recorder memory module means that portion of an event recorder used

to retain the recorded data as described in §§ 299.439(c) and 299.449(a) through (c).

Expansion joint means a piece of special trackwork designed to absorb heat-induced expansion and contraction of the rails.

General control center means the location where the general control center staff work.

General control center staff means qualified individuals located in the general control center who are responsible for the safe operation of the railroad's high-speed passenger rail system. The duties of individuals who work at the general control center include: Trainset movement control, crew logistic management, signaling, passenger services, rolling stock logistic management, and right-of-way maintenance management.

Glazing, end-facing means any exterior glazing installed in a trainset cab located where a line perpendicular to the exterior surface glazing material makes horizontal angle of 50 degrees or less with the longitudinal center line of the rail vehicle in which the panel is installed. A glazing panel that curves so as to meet the definition for both side-facing and end-facing glazing is end-facing glazing.

Glazing, exterior means a glazing panel that is an integral part of the exterior skin of a rail vehicle with a surface exposed to the outside environment.

Glazing, side-facing means any glazing located where a line perpendicular to the exterior surface of the panel makes an angle of more than 50 degrees with the longitudinal center line of the rail vehicle in which the panel is installed.

High voltage means an electrical potential of more than 150 volts.

Image recording device means a device that records images, as described in § 299.449.

Image recording system means a system of electronic devices capable of recording images as described in § 299.449, and any components that convert those images into electronic data transmitted to, and stored on, a certified crashworthy memory module as described in appendix A to this part.

In passenger service/in revenue service means a trainset that is carrying, or available to carry, passengers. Passengers need not have paid a fare in order for the trainset to be considered in passenger or in revenue service.

In service means, when used in connection with a trainset, a trainset subject to this part that is in revenue service, unless the equipment—

(1) Is being handled in accordance with § 299.447, as applicable;

(2) Is in a repair shop or on a repair track;

(3) Is on a storage track and is not carrying passengers; or,

(4) Is parked at a station location and has been properly secured in accordance with §§ 299.409(n) and 299.431(d).

Insulated joint, glued means a rail joint located at the end of a track circuit designed to insulate electrical current from the signal system in the rail.

Interior fitting means any component in the passenger compartment which is mounted to the floor, ceiling, sidewalls, or end walls and projects into the passenger compartment more than 25 mm (1 in.) from the surface or surfaces to which it is mounted. Interior fittings do not include side and end walls, floors, door pockets, or ceiling lining materials, for example.

Intermediate car means a passenger car or unit of a trainset located between cab cars which may or may not have propelling motors.

L/V ratio means the ratio of the lateral force that any wheel exerts on an individual rail to the vertical force exerted by the same wheel on the rail.

Lateral means the horizontal direction perpendicular to the direction of travel.

Locomotive means a piece of on-track rail equipment, other than hi-rail, specialized maintenance, or other similar equipment, which may consist of one or more units operated from a single control stand with one or more propelling motors designed for moving other passenger equipment; with one or more propelling motors designed to transport freight or passenger traffic, or both; or without propelling motors but with one or more control stands.

Longitudinal means in a direction parallel to the direction of travel of a rail vehicle.

Marking/delineator means a visible notice, sign, symbol, line or trace.

N700 means the N700 series trainset that is based on trainsets currently in, or future variants operated on, JRC's Tokaido Shinkansen system, or any unit thereof.

Occupied volume means the volume of a passenger car or a unit in a trainset where passengers or crewmembers are normally located during service operation, such as the cab and passenger seating areas. The entire width of a vehicle's end compartment that contains a control stand is an occupied volume. A vestibule is typically not considered occupied.

On-board attendant means a qualified individual on a trainset that is responsible for coordination with a station platform attendant to assure safety during passenger boarding and alighting within a station. An on-board attendant, as used in this part, is equivalent to a passenger conductor.

Override means to climb over the normal coupling or side buffers and linking mechanism and impact the end of the adjoining rail vehicle or unit above the underframe.

Overrun protection coil means track circuit cables placed short of turnouts, or crossovers within stations and trainset maintenance facilities to prevent unauthorized route access.

Passenger car means a unit of a trainset intended to provide transportation for members of the general public. A cab car and an intermediate car are considered passenger cars.

Passenger compartment means an area of a passenger car that consists of a seating area and any vestibule that is connected to the seating area by an open passageway.

Passenger equipment means the N700 series trainset that is based on trainsets currently in, or future variants operated on, JRC's Tokaido Shinkansen system, or any unit thereof.

Permanent deformation means the undergoing of a permanent change in shape of a structural member of a rail vehicle.

PTC means positive train control as further described in § 299.201.

Qualified individual means a person that has successfully completed all instruction, training, and examination programs required by both the employer and this part, and that the person, therefore, may reasonably be expected to perform his or her duties proficiently in compliance with all Federal railroad safety laws, regulations, and orders.

Rail neutral temperature is the temperature at which the rail is neither in compression nor tension.

Rail temperature means the temperature of the rail, measured with a rail thermometer.

Rail vehicle means railroad rolling stock, including, but not limited to, passenger and maintenance vehicles.

Railroad equipment means all trains, trainsets, rail cars, locomotives, and on-track maintenance vehicles owned or used by the railroad.

Railroad, the means the company, also known as the Texas Central Railroad, LLC, which is the entity that will operate and maintain the high-speed rail system initially connecting Dallas to Houston, Texas, and is responsible for compliance with all aspects of this rule.

Repair point means a location designated by the railroad where repairs of the type necessary occur on a regular basis. A repair point has, or should have, the facilities, tools, and personnel qualified to make the necessary repairs. A repair point need not be staffed continuously.

Representative car/area means a car/area that shares the relevant characteristics as the car(s)/area(s) it represents (*i.e.*, same signage/marking layout, and charging light system for passive systems or light fixtures and power system for electrically powered systems).

Rollover strength means the strength provided to protect the structural integrity of a rail vehicle in the event the vehicle leaves the track and impacts the ground on its side or roof.

Safety appliance means an appliance, required under 49 U.S.C. ch. 203, excluding power brakes. The term includes automatic couplers, handbrakes, crew steps, handholds, handrails, or ladder treads made of steel or a material of equal or greater mechanical strength used by the traveling public or railroad employees that provides a means for safe coupling, uncoupling, or ascending or descending passenger equipment.

Safety-critical means a component, system, software, or task that, if not available, defective, not functioning, not functioning correctly, not performed, or not performed correctly, increases the risk of damage to railroad equipment or injury to a passenger, railroad employee, or other person.

Search, valid means a continuous inspection for internal rail defects where the equipment performs as intended and equipment responses are interpreted by a qualified individual as defined in subpart C.

Semi-permanently coupled means coupled by means of a drawbar or other coupling mechanism that requires tools to perform the coupling or uncoupling operation. Coupling and uncoupling of each semi-permanently coupled unit in a trainset can be performed safely only while at a trainset maintenance facility where personnel can safely get under a unit or between units, or other location under the protections of subpart B of part 218 of this chapter.

Side sill means that portion of the underframe or side at the bottom of the rail vehicle side wall.

Shinkansen, Tokaido means the high-speed rail system operated by the Central Japan Railway Company between Tokyo and Shin-Osaka, Japan, that is fully dedicated and grade separated.

Slab track means railroad track structure in which the rails are attached to and supported by a bed or slab, usually of concrete (or asphalt), which acts to transfer the load and provide track stability.

Spall, glazing means small pieces of glazing that fly off the back surface of the glazing when an object strikes the front surface.

Speed, maximum approved means the maximum trainset speed approved by FRA based upon the qualification tests conducted under § 299.609(g).

Speed, maximum authorized means the speed at which trainsets are permitted to travel safely, as determined by all operating conditions and signal indications.

Speed, maximum safe operating means the highest speed at which trainset braking may occur without thermal damage to the discs.

Station platform attendant means a qualified individual positioned on the station platform in close proximity to the train protection switches while a trainset is approaching and departing a station, and is responsible for coordination with an on-board attendant to assure safety during passenger boarding and alighting within a station.

Superelevation means the actual elevation of the outside rail above the inside rail.

Sweeper vehicle means a rail vehicle whose function is to detect obstacles within the static construction gauge prior to the start of daily revenue service.

Tight track means CWR which is in a considerable amount of compression.

Track acceleration measurement system (TAMS) means an on-track, vehicle-borne technology used to measure lateral and vertical carbody accelerations.

Track geometry measurement system (TGMS) means an on-track, vehicle-borne technology used to measure track surface, twist, crosslevel, alignment, and gauge.

Track lateral resistance means the resistance provided to the rail/crosstie structure against lateral displacement.

Track longitudinal resistance means the resistance provided by the rail anchors/rail fasteners and the ballast section to the rail/crosstie structure against longitudinal displacement.

Track, non-ballasted means a track structure not supported by ballast in which the rails are directly supported by concrete or steel structures. Non-ballasted track can include slab track and track structures where the rails are directly fixed to steel bridges or to servicing pits within trainset maintenance facilities.

Train means a trainset, or locomotive or locomotive units coupled with or without cars.

Train-induced forces means the vertical, longitudinal, and lateral dynamic forces which are generated during train movement and which can contribute to the buckling potential of the rail.

Train protection switch means a safety device located on station platforms and on safe walkways along the right-of-way. The train protection switch is

tied directly into the ATC system and is used in the event that trainsets in the immediate area must be stopped.

Trainset means a passenger train including the cab cars and intermediate cars that are semi-permanently coupled to operate as a single consist. The individual units of a trainset are uncoupled only for emergencies or maintenance conducted in repair facilities.

Trainset maintenance facility means a location equipped with the special tools, equipment, and qualified individuals capable of conducting pre-service inspections and regular inspections on the trainsets in accordance with the railroad's inspection, testing, and maintenance program. Trainset maintenance facilities are also considered repair points.

Transponder means a wayside component of the ATC system used to provide trainset position correction on the mainline or to provide an overlay of overrun protection within a trainset maintenance facility.

Underframe means the lower horizontal support structure of a rail vehicle.

Unit, trainset means a cab car or intermediate car of a trainset.

Vestibule means an area of a passenger car that normally does not contain seating, is located adjacent to a side exit door, and is used in passing from a seating area to a side exit door.

Yard means a system of tracks within defined limits and outside of the territory controlled by signals, which can be used for the making up of non-passenger trains or the storing of maintenance-of-way equipment.

Yield strength means the ability of a structural member to resist a change in length caused by an applied load. Exceeding the yield strength will cause permanent deformation of the member.

[85 FR 69731, Nov. 3, 2020, as amended at 88 FR 70764, Oct. 12, 2023]

§ 299.7 Responsibility for compliance.

(a) The railroad shall not—

(1) Use, haul, or permit to be used or hauled on its line(s) any trainset—

(i) With one or more defects not in compliance with this part; or

(ii) That has not been inspected and tested as required by a provision of this part.

(2) Operate over any track, except as provided in paragraph (e) of this section, with one or more conditions not in compliance this part, if the railroad has actual knowledge of the facts giving rise to the violation, or a reasonable person acting in the circumstances and exercising reasonable care would have that knowledge.

(3) Violate any other provision of this part or any provision of the applicable FRA regulations listed under § 299.3(c).

(b) For purposes of this rule, a trainset shall be considered in use prior to the trainset's departure as soon as it has received, or should have received the inspection required under this part for movement and is ready for service.

(c) Although many of the requirements of this part are stated in terms of the duties of the railroad, when any person (including, but not limited to, a contractor performing safety-related tasks under contract to the railroad subject to this part) performs any function required by this part, that person (whether or not the railroad) is required to perform that function in accordance with this part.

(d) For purposes of this part, the railroad shall be responsible for compliance with all track safety provisions set forth in subpart C of this part. When the railroad and/or its assignee have actual knowledge of the facts giving rise to a violation, or a reasonable person acting in the circumstances and exercising reasonable care would have knowledge that the track does not comply with the requirements of this part, it shall—

(1) Bring the track into compliance;

(2) Halt operations over that track; or

(3) Continue operations over the segment of non-complying track in accordance with the provisions of § 299.309(b) or (c).

(e) The FRA Administrator may hold the railroad, the railroad's contractor, or both responsible for compliance with the requirements of this part and subject to civil penalties.

§ 299.9 Notifications and filings.

All notifications and filings to the FRA required by this part shall be submitted to the Associate Administrator for Railroad Safety and Chief Safety

Officer, 1200 New Jersey Avenue SE, Washington, DC 20590, unless otherwise specified.

§ 299.11 Electronic recordkeeping.

The railroad's electronic recordkeeping shall be retained such that—

(a) The railroad maintains an information technology security program adequate to ensure the integrity of the electronic data storage system, including the prevention of unauthorized access to the program logic or individual records;

(b) The program and data storage system must be protected by a security system that utilizes an employee identification number and password, or a comparable method, to establish appropriate levels of program access meeting all of the following standards:

(1) No two individuals have the same electronic identity; and

(2) A record cannot be deleted or altered by any individual after the record is certified by the employee who created the record.

(c) Any amendment to a record is either—

(1) Electronically stored apart from the record that it amends; or

(2) Electronically attached to the record as information without changing the original record;

(d) Each amendment to a record uniquely identifies the person making the amendment;

(e) The system employed by the railroad for data storage permits reasonable access and retrieval; and

(f) Information retrieved from the system can be easily produced in a printed format which can be readily provided to FRA representatives in a timely manner and authenticated by a designated representative of the railroad as a true and accurate copy of the railroad's records if requested to do so by FRA representatives.

§ 299.13 System description.

(a) *General.* This section describes the components, operations, equipment, and systems of the railroad's high-speed rail system. The railroad shall adhere to the following general requirements:

(1) The railroad shall not exceed the maximum trainset speed approved by FRA under § 299.609(g) while in revenue service, up to a maximum speed of 330 km/h (205 mph).

(2) The railroad shall not transport or permit to be transported in revenue service any product that has been established to be a hazardous material pursuant to 49 CFR part 172, as amended.

(3) The railroad shall not conduct scheduled right-of-way maintenance on a section of the right-of-way prior to that section of the right-of-way being cleared of all revenue service trainsets (including any trainset repositioning moves), and proper action is taken by the general control center staff to protect incursion into established maintenance zones by revenue trainsets. Additionally, the railroad shall not commence revenue service prior to completion of the maintenance activities, that section of the right-of-way being cleared of all maintenance-of-way equipment. Further, the railroad is prohibited from commencing revenue operations until after conclusion of the daily sweeper inspection, under § 299.339, and the general control center returning the signal and trainset control system to the state required to protect revenue operations.

(b) *Right-of-way.* (1) The railroad shall operate on a completely dedicated right-of-way and shall not operate or conduct joint operations with any other freight equipment, other than the railroad's maintenance-of-way equipment, or passenger rail equipment. Only the railroad's high-speed trainsets approved for revenue operations under this part, and any equipment required for construction, maintenance, and rescue purposes may be operated over the railroad's right-of-way.

(2) There shall be no public highway-rail grade crossings. Animal and non-railroad equipment crossings shall be accomplished by means of an underpass or overpass. Private at-grade crossings shall be for the exclusive use by the railroad and shall be limited to track Classes H0 and H1.

(3) The railroad shall develop and comply with a right-of-way barrier plan. The right-of-way barrier plan shall be maintained at the system

headquarters and will be made available to FRA upon request. At a minimum, the plan will contain provisions in areas of demonstrated need for the prevention of—

(i) Vandalism;

(ii) Launching of objects from overhead bridges or structures onto the path of trainsets;

(iii) Intrusion of vehicles from adjacent rights-of-way; and

(iv) Unauthorized access to the right-of-way.

(4) The entire perimeter of the system's right-of-way, except for elevated structures such as bridges and viaducts, shall be permanently fenced. Elevated structures shall be equipped with walkways and safety railing.

(5) The railroad shall install intrusion detectors in accordance with the requirements set forth in subpart B of this part.

(6) The railroad shall install rain, flood, and wind detectors in locations identified by the railroad, based on relevant criteria used by JRC to provide adequate warning of when operational restrictions are required due to adverse weather conditions. Operating restrictions shall be defined in the railroad's operating rules.

(7) Access to the right-of-way for maintenance-of-way staff shall be provided on both sides of the right-of-way in accordance with the inspection, testing, and maintenance program. This access shall be protected against entry by unauthorized persons.

(8) Provisions shall be made to permit emergency personnel to access the right-of-way in accordance with the Emergency Preparedness Plan pursuant to part 239 of this chapter. This access shall be protected against entry by unauthorized persons.

(9) Throughout the length of the right-of-way, the railroad shall install walkways located at a safe distance from the tracks at a minimum distance of 2.0 m (6.56 feet) from the field side of the outside rail for a design speed of 330 km/h (205 mph). The walkways shall be used primarily for track and right-of-way inspection, but may be used for emergency evacuation or rescue access.

(10) Access to the right-of-way by maintenance-of-way personnel shall not be allowed during revenue operations unless the access is outside the minimum safe distance defined in §299.13(b)(9). In the event of unscheduled maintenance or repair, emergency access will be provided under specific circumstances allowed under the railroad's operating rules and the inspection, testing, and maintenance program.

(11) The railroad shall record all difficulties and special situations regarding geology, hydrology, settlement, landslide, concrete, and quality criteria that arise during construction of the right-of-way. After construction, the railroad shall monitor the stability and quality standards of structures such as bridges, viaducts, and earth structures.

(12) The railroad shall make available for review by the FRA the track layout drawings which show, at a minimum, the following information:

(i) Length of straight sections, spirals and curves, curve radius, superelevation, superelevation variations, gradients, and vertical curve radii;

(ii) Turnouts and crossover location, technology, and geometry;

(iii) Maximum operating speed and allowable cant deficiencies;

(iv) Signal boxes, Go/No-Go signals, and communication devices;

(v) Details and arrangement of track circuitry;

(vi) Power feeding equipment including sectionalization, and return routing;

(vii) Location of accesses to the right-of-way; and

(viii) The railroad shall also submit the specifications for the track layout, permissible track forces, components such as rail, ballast, ties, rail fasteners, and switches.

(13) Protection devices shall be installed on all highway bridge overpasses in accordance with the right-of-way plan in paragraph (b)(3) of this section.

(14) There shall be no movable bridges in the railroad's system. Stationary rail bridges located over highways or navigable waterways shall have their foundations, piers, or other support structure appropriately protected against the impact of road vehicles or water-borne vessels.

(15) Train protection switches shall be installed at regular intervals on both sides of the right-of-way at intervals defined by the railroad and at intervals not to exceed 60 m (197 feet) on platforms within stations. These devices shall act directly on the ATC system.

(16) The railroad shall use the design wheel and rail profiles, service-proven on the Tokaido Shinkansen system, or alternate wheel and rail profiles approved by FRA.

(c) *Railroad system safety*—(1) *Inspection, testing, and maintenance procedures and criteria.* The railroad shall develop, implement, and use a system of inspection, testing, maintenance procedures and criteria, under subpart G of this part, which are initially based on the Tokaido Shinkansen system service-proven procedures and criteria, to ensure the integrity and safe operation of the railroad's rolling stock, infrastructure, and signal and trainset control system. The railroad may, subject to FRA review and approval, implement inspection, testing, maintenance procedures and criteria, incorporating new or emerging technology, under § 299.713(c)(4).

(2) *Operating practices.* The railroad shall develop, implement, and use operating rules, which meet the standards set forth in subpart E of this part and which are based on practices and procedures proven on the Tokaido Shinkansen system to ensure the integrity and safe operation of the railroad's system. The railroad shall have station platform attendants on the platform in close proximity to the train protection switches required by paragraph (b)(15) of this section, while trainsets are approaching and departing the station. The railroad's operating rules shall require coordination between on-board crew and station platform attendants to assure safety during passenger boarding and alighting from trainsets at stations.

(3) *Personnel qualification requirements.* The railroad shall develop, implement, and use a training and testing program, which meets the requirements set forth in this part and part 243 of this chapter, to ensure that all personnel, including railroad employees and employees of railroad contractors, possess the skills and knowledge necessary to effectively perform their duties.

(4) *System qualification tests.* The railroad shall develop, implement, and use a series of operational and design tests, which meet the standards set forth in subpart F of this part, to demonstrate the safe operation of system components, and the system as a whole.

(d) *Track and infrastructure.* (1) The railroad shall construct its track and infrastructure to meet all material and operational design criteria, within normal acceptable construction tolerances, and to meet the requirements set forth in subpart C of this part.

(2) The railroad shall operate on nominal standard gauge, 1,435 mm (56.5 inches), track.

(3) The railroad shall install and operate on double track throughout the mainlines, with a minimum nominal distance between track centerlines of 4 m (13.1 feet) for operating speeds up to 170 km/h (106 mph) (track Classes up to H4) and 4.2 m (13.8 feet) for operating speeds greater than 170 km/h (106 mph) (track Classes H5 and above). Generally, each track will be used for a single direction of traffic, and trainset will not overtake each other on mainline tracks (except at non-terminal station locations). The railroad may install crossover connections between the double track at each station, and at regular intervals along the line to permit flexibility in trainset operations, maintenance, and emergency rescue.

(4) The railroad's main track (track Classes H4 and above) shall consist of continuous welded rail. Once installed, the rail shall be field-welded to form one continuous track segment except rail expansion joints and where glued-insulated joints are necessary for signaling purposes. The rail shall be JIS E 1101 60 kg rail, as specified in JIS E 1101:2001(E) as amended by JIS E 1101:2006(E), and JIS E 1101:2012(E) (all incorporated by reference, see § 299.17).

(5) In yards and maintenance facilities, where operations will be at lower speeds, the railroad shall install either JIS E 1101 50kgN rail or JIS E 1101 60 kg rail as specified in JIS E 1101:2001(E) as amended by JIS E 1101:2006(E), and

JIS E 1101:2012(E) (all incorporated by reference, see § 299.17).

(6) The railroad shall use either ballasted or non-ballasted track to support the track structure, as appropriate for the intended high-speed system.

(i) Except as noted in paragraph (c)(6)(ii) of this section, for ballasted mainline track structure, the railroad shall install pre-stressed concrete ties.

(ii) For special track work such as turnouts and expansion joints, and at transitions to bridges, and for non-ballasted track, the railroad shall install either pre-stressed, composite ties, or use direct fixation. Detailed requirements are included in subpart C of this part.

(7) Turnouts, expansion joints and glued-insulated joints shall be of the proven design as used on the Tokaido Shinkansen system.

(8) The trainsets and stations shall be designed to permit level platform boarding for passengers and crew at all side entrance doors. Provisions for high level boarding shall be made at all locations in trainset maintenance facilities where crew and maintenance personnel are normally required to access or disembark trainsets.

(e) *Signal and trainset control systems.* (1) The railroad's signal and trainset control systems, shall be based upon the service-proven system utilized on the Tokaido Shinkansen system and shall include an automatic train control (ATC) system, interlocking equipment, and wayside equipment, including: track circuits, transponders, and Go/No-Go signals in stations and trainset maintenance facilities.

(2) The railroad's signaling system shall extend beyond the mainline into trainset maintenance facilities and be designed to prevent collisions at all speeds.

(3) The ATC system shall be designed with a redundant architecture utilizing an intrinsic fail-safe design concept.

(4) The trainset braking curves shall be determined by the on-board equipment based on the ATC signal from the ground facility and on-board database that includes the alignment and rolling stock performance data. The on-board equipment shall generate the braking command based upon the trainset location, speed, and braking curves.

(5) The ATC on-board equipment shall have three modes: mainline, shunting, and cut-out.

(i) Mainline mode shall be used for operations on mainlines and for entering into the trainset maintenance facilities. The mainline mode of ATC on-board equipment shall provide the following functions:

(A) Prevent train-to-train collisions; and

(B) Prevent overspeed derailments.

(ii) Shunting mode shall be used to protect movements within trainset maintenance facilities and for emergency operations as required by the operating rules. When operating in shunting mode, the trainset shall be restricted to a maximum speed of 30 km/h.

(iii) Cut-out mode shall be used for emergency operations and/or in the event of an ATC system failure as required by the operating rules.

(6) Interlocking equipment shall prevent the movement of trainsets through a switch in an improper position and command switch-and-lock movements on mainlines and within trainset maintenance facilities.

(7) Track circuits shall be used to provide broken rail detection.

(8) Overrun protection coils shall be used at mainline turnouts, crossovers within stations and trainset maintenance facilities to prevent unauthorized route access.

(9) Transponders shall be used on the mainline to provide trainset position correction. Transponders may be used to provide an overlay of overrun protection within a trainset maintenance facility.

(10) Go/No-Go signals shall be used in stations for shunting and emergency operations and in trainset maintenance facilities to provide trainset movement authority.

(11) The railroad shall include an intrusion detection system as required by paragraph (b)(3) and (5) of this section that shall interface with the ATC system and have the capability to stop the trainset under specified intrusion scenarios.

(f) *Communications.* (1) The railroad shall install a dedicated communication system along the right-of-way to transmit data, telephone, and/or radio communications that is completely isolated and independent of the signal and trainset control system. To ensure transmission reliability, the system shall include back-up transmission routes.

(2) For trainset operation and maintenance, the railroad shall install—

(i) A portable radio system for maintenance and service use; and

(ii) A trainset radio, which shall facilitate communication between each trainset and the general control center.

(g) *Rolling stock.* (1) The railroad's rolling stock shall be designed, operated, and maintained in accordance with the requirements set forth in subparts D, E, and G of this part.

(2) The railroad shall utilize bi-directional, fixed-consist, electric multiple unit (EMU), high-speed trainsets based on the N700.

(3) Each trainset shall be equipped with wheel slide control.

(4) Each trainset shall be equipped with two electrically connected pantographs. The position of the pantographs (up or down) shall be displayed in the driver's cab.

(5) The driver's cab shall be a full width and dedicated cab and shall be arranged to enhance safety of operation, range of vision, visibility and readability of controls and indicators, accessibility of controls, and climate control.

(6) The railroad's passenger equipment brake system shall be based on the N700's design and shall meet the following standards:

(i) Each trainset shall be equipped with an electronically controlled brake system that shall ensure that each unit in the trainset responds independently to a brake command. The brake command shall be transmitted through the on-board internal trainset control network, as well as through the trainline for redundancy.

(A) Motorized cars shall be equipped with regenerative and electronically controlled pneumatic brakes. The system shall be designed to maximize the use of regenerative brakes.

(B) Non-motorized cars shall be equipped with electronically controlled pneumatic brakes.

(C) The friction brakes on each bogie shall be cheek mounted disc brakes.

(D) Each car shall be equipped with an electronic and pneumatic brake control unit and a main reservoir. The system shall be designed that in the event of a failure of an electronic control unit in a car, brake control shall be provided by the electronic control unit on the adjacent car. Each car in the trainset shall be equipped with a backup wheel slide protection controller that will provide wheel slide protection in the event of a wheel slide protection controller failure.

(ii) The braking system shall be designed with the following brake controls: Service, emergency, urgent, and rescue brake.

(iii) The service and emergency brake shall be applied automatically by ATC or manually by the driver.

(iv) The urgent brake control shall be independent of the service and emergency brake control and shall be automatically applied if the trainset is parted. Application of the urgent brake shall produce an irretrievable stop. The urgent brake force shall be designed to vary according to speed in order to minimize the braking distance and avoid excessive demand of adhesion at higher speeds.

(v) A disabled trainset shall be capable of having its brake system controlled electronically by a rescue trainset.

(vi) Independent of the driver's brake handle in the cab, each trainset shall be equipped with two urgent brake switches in each cab car, accessible only to the crew; located adjacent to the door control station and that can initiate an urgent brake application. If door control stations are provided in intermediate cars that are accessible only to crew members, then the urgent brake switches must also be included adjacent to the door control stations.

(vii) The railroad shall establish a maximum safe operating speed to address brake failures that occur in revenue service as required by § 299.409(f)(4). In the event of any friction brake failure on a trainset, the speed shall be limited by ATC on-board

equipment in accordance with the brake failure switch position selected by the driver and as required by § 299.447.

§ 299.15 Special approvals.

(a) *General.* The following procedures govern consideration and action upon requests for special approval of alternative standards to this part.

(b) *Petitions for special approval of alternative standard.* Each petition for special approval of an alternative standard shall contain—

(1) The name, title, address, and telephone number of the primary person to be contacted with regard to review of the petition;

(2) The alternative proposed, in detail, to be substituted for the particular requirements of this part; and

(3) Appropriate data or analysis, or both, establishing that the alternative will provide at least an equivalent level of safety.

(c) *Petitions for special approval of alternative compliance.* Each petition for special approval of alternative compliance shall contain—

(1) The name, title, address, and telephone number of the primary person to be contacted with regard to the petition;

(2) High-speed core systems and system components of special design shall be deemed to comply with this part, if the FRA Associate Administrator determines under paragraph (d) of this section that the core system or system components provide at least an equivalent level of safety in the environment defined within § 299.13 with respect to the protection of railroad employees and the public. In making a determination under paragraph (d) of this section the Associate Administrator shall consider, as a whole, all of those elements of casualty prevention or mitigation relevant to the integrity of the core system or components that are addressed by the requirements of this part.

(d) *Petition contents.* The Associate Administrator may only make a finding of equivalent safety and compliance with this part, based upon a submission of data and analysis sufficient to support that determination. The petition shall include—

(1) The information required by § 299.15(b) or (c), as appropriate; Information, including detailed drawings and materials specifications, sufficient to describe the actual construction and function of the core systems or system components of special design;

(2) A quantitative risk assessment, incorporating the design information and engineering analysis described in this paragraph, demonstrating that the core systems or system components, as utilized in the service environment defined in § 299.13, presents no greater hazard of serious personal injury than existing core system or system components that conform to the specific requirements of this part.

(e) FEDERAL REGISTER *notice.* FRA will publish a notice in the FEDERAL REGISTER concerning each petition under paragraphs (b) and (c) of this section.

(f) *Comment.* Not later than 30 days from the date of publication of the notice in the FEDERAL REGISTER concerning a petition under paragraphs (b) and (c) of this section, any person may comment on the petition.

(1) Each comment shall set forth specifically the basis upon which it is made, and contain a concise statement of the interest of the commenter in the proceeding.

(2) Each comment shall be submitted to the U.S. Department of Transportation, Docket Operations (M–30), West Building Ground Floor, Room W12–140, 1200 New Jersey Avenue SE, Washington, DC 20590, and shall contain the assigned docket number for that proceeding. The form of such submission may be in written or electronic form consistent with the standards and requirements established by the Federal Docket Management System and posted on its website at *http://www.regulations.gov*.

(g) *Disposition of petitions.* (1) FRA will conduct a hearing on a petition in accordance with the procedures provided in § 211.25 of this chapter.

(2) If FRA finds that the petition complies with the requirements of this section or that the proposed plan is acceptable the petition will be granted, normally within 90 days of its receipt. If the petition is neither granted nor

denied within 90 days, the petition remains pending for decision. FRA may attach special conditions to the approval of the petition. Following the approval of a petition, FRA may reopen consideration of the petition for cause stated.

(3) If FRA finds that the petition does not comply with the requirements of this section, or that the proposed plan is not acceptable or that the proposed changes are not justified, or both, the petition will be denied, normally within 90 days of its receipt.

(4) When FRA grants or denies a petition, or reopens consideration of the petition, written notice is sent to the petitioner and other interested parties.

§ 299.17 Incorporation by reference.

Certain material is incorporated by reference into this part with the approval of the Director of the Federal Register under 5 U.S.C. 552(a) and 1 CFR part 51. All approved material is available for inspection at Federal Railroad Administration, Docket Clerk, 1200 New Jersey Avenue SE, Washington, DC 20590 (telephone: 202–493–6052); email: *FRALegal@dot.gov* and is available from the sources indicated in this section. It is also available for inspection at the National Archives and Records Administration (NARA). For information on the availability of this material at NARA, email *fedreg.legal@nara.gov* or go to www.archives.gov/federal-register/cfr/ibr-locations.html.

(6) JIS E 7105:2011(E), ''Rolling Stock—Test methods of static load for body structures,'' (Amendment 1) Published September 7, 2011, First English edition, published December 2011; into § 299.403(b).

Subpart B—Signal and Trainset Control System

§ 299.201 Technical PTC system requirements.

(a) The railroad shall comply with all applicable requirements under 49 U.S.C. 20157, including, but not limited to, the statutory requirement to fully implement an FRA-certified PTC system prior to commencing revenue service.

(b) The railroad's PTC system shall be designed to prevent train-to-train collisions, over-speed derailments, incursions into established work zone limits, and movements of trainset

through switches left in the wrong position, reliably and functionally, in accordance with §236.1005(a) and (c) through (f) of this chapter.

(c) The railroad is authorized to conduct field testing of its PTC system on its system, prior to obtaining PTC System Certification from FRA, in accordance with its system-wide qualification test plan under §299.603. During any field testing of its uncertified PTC system and regression testing of its FRA-certified PTC system, FRA may oversee the railroad's testing, audit any applicable test plans and procedures, and impose additional testing conditions that FRA believes may be necessary for the safety of trainset operations.

(d) The railroad is not exempted from compliance with any requirement of subparts A through G of 49 CFR part 236, or 49 CFR parts 233 and 235, unless the railroad's FRA-approved PTCSP provides for such an exemption.

(e)(1) All materials filed in accordance with this subpart must be in the English language, or have been translated into English and attested as true and correct.

(2) Each filing referenced in this subpart may include a request for full or partial confidentiality in accordance with §209.11 of this chapter. If confidentiality is requested as to a portion of any applicable document, then in addition to the filing requirements under §209.11 of this chapter, the person filing the document shall also file a copy of the original unredacted document, marked to indicate which portions are redacted in the document's confidential version without obscuring the original document's contents.

§299.203 PTC system required.

The railroad shall not commence revenue service prior to installing and making operative its FRA-certified PTC system.

§299.205 PTC System Certification.

(a) Prior to operating its PTC system in revenue service, the railroad must first obtain a PTC System Certification from FRA by submitting an acceptable PTCSP and obtaining FRA's approval of its PTCSP.

(b) Each PTCSP requirement under this subpart shall be supported by information and analysis sufficient to establish that the PTC system meets the requirements of §236.1005(a) and (c) through (f) of this chapter.

(c) If the Associate Administrator finds that the PTCSP and its supporting documentation support a finding that the PTC system complies with §236.1005(a) and (c) through (f) of this chapter and §299.211, the Associate Administrator shall approve the PTCSP. If the Associate Administrator approves the PTCSP, the railroad shall receive PTC System Certification for its PTC system and shall implement the PTC system according to the PTCSP.

(d) Issuance of a PTC System Certification is contingent upon FRA's confidence in the implementation and operation of the subject PTC system. This confidence may be based on FRA-monitored field testing or an independent assessment performed in accordance with §236.1017 of this chapter.

(e)(1) As necessary to ensure safety, FRA may attach special conditions to its certification of the railroad's PTC System.

(2) After granting a PTC System Certification, FRA may reconsider the PTC System Certification upon revelation of any of the following factors concerning the contents of the PTCSP:

(i) Potential error or fraud;

(ii) Potentially invalidated assumptions determined as a result of in-service experience or one or more unsafe events calling into question the safety analysis supporting the approval.

(3) During FRA's reconsideration in accordance with this paragraph, the PTC system may remain in use if otherwise consistent with the applicable law and regulations, and FRA may impose special conditions for use of the PTC system.

(4) After FRA's reconsideration in accordance with this paragraph, FRA may:

(i) Dismiss its reconsideration and continue to recognize the existing PTC System Certification;

(ii) Allow continued operations under such conditions the Associate Administrator deems necessary to ensure safety; or

(iii) Revoke the PTC System Certification and direct the railroad to cease operations.

(f) FRA shall be afforded reasonable access to monitor, test, and inspect processes, procedures, facilities, documents, records, design and testing materials, artifacts, training materials and programs, and any other information used in the design, development, manufacture, test, implementation, and operation of the system, as well as interview any personnel.

(g) Information that has been certified under the auspices of a foreign regulatory entity recognized by the Associate Administrator may, at the Associate Administrator's sole discretion, be accepted as independently verified and validated and used to support the railroad's PTCSP.

(h) The railroad shall file its PTCSP in FRA's Secure Information Repository at *https://sir.fra.dot.gov*, consistent with § 299.201(e).

§ 299.207 PTC Safety Plan content requirements.

(a) The railroad's PTCSP shall contain the following elements:

(1) A hazard log consisting of a comprehensive description of all safety-relevant hazards of the PTC system, specific to implementation on the railroad, including maximum threshold limits for each hazard (for unidentified hazards, the threshold shall be exceeded at one occurrence);

(2) A description of the safety assurance concepts that are to be used for system development, including an explanation of the design principles and assumptions;

(3) A risk assessment of the as-built PTC system;

(4) A hazard mitigation analysis, including a complete and comprehensive description of each hazard and the mitigation techniques used;

(5) A complete description of the safety assessment and Verification and Validation processes applied to the PTC system, their results, and whether these processes address the safety principles described in appendix C to part 236 of this chapter directly, using other safety criteria, or not at all;

(6) A complete description of the railroad's training plan for railroad, and contractor employees and supervisors necessary to ensure safe and proper installation, implementation, operation, maintenance, repair, inspection, testing, and modification of the PTC system;

(7) A complete description of the specific procedures and test equipment necessary to ensure the safe and proper installation, implementation, operation, maintenance, repair, inspection, testing, and modification of the PTC system on the railroad and establish safety-critical hazards are appropriately mitigated. These procedures, including calibration requirements, shall be consistent with or explain deviations from the equipment manufacturer's recommendations;

(8) A complete description of the configuration or revision control measures designed to ensure that the railroad or its contractor does not adversely affect the safety-functional requirements and that safety-critical hazard mitigation processes are not compromised as a result of any such change;

(9) A complete description of all initial implementation testing procedures necessary to establish that safety-functional requirements are met and safety-critical hazards are appropriately mitigated;

(10) A complete description of all post-implementation testing (validation) and monitoring procedures, including the intervals necessary to establish that safety-functional requirements, safety-critical hazard mitigation processes, and safety-critical tolerances are not compromised over time, through use, or after maintenance (adjustment, repair, or replacement) is performed;

(11) A complete description of each record necessary to ensure the safety of the system that is associated with periodic maintenance, inspections, tests, adjustments, repairs, or replacements, and the system's resulting conditions, including records of component failures resulting in safety-relevant hazards (*see* § 299.213);

(12) A safety analysis to determine whether, when the system is in operation, any risk remains of an unintended incursion into a roadway work zone due to human error. If the analysis reveals any such risk, the PTCSP

shall describe how that risk will be mitigated;

(13) A complete description of how the PTC system will enforce authorities and signal indications;

(14) A complete description of how the PTC system will appropriately and timely enforce all integrated hazard detectors in accordance with § 236.1005 of this chapter;

(15) The documents and information required under § 299.211;

(16) A summary of the process for the product supplier or vendor to promptly and thoroughly report any safety-relevant failures or previously unidentified hazards to the railroad, including when another user of the product experiences a safety-relevant failure or discovers a previously unidentified hazard;

(17) Documentation establishing—by design, data, or other analysis—that the PTC system meets the fail-safe operation criteria under paragraph (b)(4)(v) of appendix C to part 236 of this chapter; and,

(18) An analysis establishing that the PTC system will be operated at a level of safety comparable to that achieved over the 5-year period prior to the submission of the railroad's PTCSP by other train control systems that perform PTC functions, and which have been utilized on high-speed rail systems with similar technical and operational characteristics in the United States or in foreign service.

(b) As the railroad's PTC system may be considered a standalone system pursuant to § 236.1015(e)(3) of this chapter, the following requirements apply:

(1) The PTC system shall reliably execute the functions required by § 236.1005 of this chapter and be demonstrated to do so to FRA's satisfaction; and

(2) The railroad's PTCSP shall establish, with a high degree of confidence, that the system will not introduce any hazards that have not been sufficiently mitigated.

(c) When determining whether the PTCSP fulfills the requirements under this section, the Associate Administrator may consider all available evidence concerning the reliability of the proposed system.

(d) When reviewing the issue of the potential data errors (for example, errors arising from data supplied from other business systems needed to execute the braking algorithm, survey data needed for location determination, or mandatory directives issued through the computer-aided dispatching system), the PTCSP must include a careful identification of each of the risks and a discussion of each applicable mitigation. In an appropriate case, such as a case in which the residual risk after mitigation is substantial, the Associate Administrator may require submission of a quantitative risk assessment addressing these potential errors.

(e) The railroad must comply with the applicable requirements under § 236.1021 of this chapter prior to modifying a safety-critical element of an FRA-certified PTC system.

(f) If a PTCSP applies to a PTC system designed to replace an existing certified PTC system, the PTCSP will be approved provided that the PTCSP establishes with a high degree of confidence that the new PTC system will provide a level of safety not less than the level of safety provided by the system to be replaced.

§ 299.209 PTC system use and failures.

(a) When any safety-critical PTC system component fails to perform its intended function, the cause must be determined and the faulty component adjusted, repaired, or replaced without undue delay. Until repair of such essential components is completed, the railroad shall take appropriate action as specified in its PTCSP.

(b) Where a trainset that is operating in, or is to be operated within, a PTC-equipped track segment experiences a PTC system failure or the PTC system is otherwise cut out while en route (*i.e.,* after the trainset has departed its initial terminal), the trainset may only continue in accordance with all of the following:

(1) Except as provided in paragraph (b)(4) of this section, when no absolute block protection is established, the trainset may proceed at a speed not to exceed restricted speed.

(2) When absolute block protection can be established in advance of the

trainset, the trainset may proceed at a speed not to exceed 120 km/h (75 mph), and the trainset shall not exceed restricted speed until the absolute block in advance of the trainset is established.

(3) A report of the failure or cut-out must be made to a designated railroad officer of the railroad as soon as safe and practicable.

(4) Where the PTC system is the exclusive method of delivering mandatory directives, an absolute block must be established in advance of the trainset as soon as safe and practicable, and the trainset shall not exceed restricted speed until the absolute block in advance of the trainset is established.

(5) Where the failure or cut-out is a result of a defective onboard PTC apparatus, the trainset may be moved in passenger service only to the next forward location where the necessary repairs can be made; however, if the next forward location where the necessary repairs can be made does not have the facilities to handle the safe unloading of passengers, the trainset may be moved past the repair location in service only to the next forward passenger station in order to facilitate the unloading of passengers. When the passengers have been safely unloaded, the defective trainset shall be moved to the nearest location where the onboard PTC apparatus can be repaired or exchanged.

(c) The railroad shall comply with all provisions in its PTCSP for each PTC system it uses and shall operate within the scope of initial operational assumptions and predefined changes identified.

(d) The normal functioning of any safety-critical PTC system must not be interfered with in testing or otherwise without first taking measures to provide for the safe movement of trainsets that depend on the normal functioning of the system.

(e) The railroad shall comply with the reporting requirements under § 236.1029(h) of this chapter.

(f) The railroad and the PTC system vendors and/or suppliers must comply with each applicable requirement under § 236.1023 of this chapter.

§ 299.211 Communications and security requirements.

(a) All wireless communications between the office, wayside, and onboard components in a PTC system shall provide cryptographic message integrity and authentication.

(b) Cryptographic keys required under this section shall—

(1) Use an algorithm approved by the National Institute of Standards or a similarly recognized and FRA-approved standards body;

(2) Be distributed using manual or automated methods, or a combination of both; and

(3) Be revoked—

(i) If compromised by unauthorized disclosure of the cleartext key; or

(ii) When the key algorithm reaches its lifespan as defined by the standards body responsible for approval of the algorithm.

(c) The cleartext form of the cryptographic keys shall be protected from unauthorized disclosure, modification, or substitution, except during key entry when the cleartext keys and key components may be temporarily displayed to allow visual verification. When encrypted keys or key components are entered, the cryptographically protected cleartext key or key components shall not be displayed.

(d) Access to cleartext keys shall be protected by a tamper-resistant mechanism.

(e) If the railroad elects to also provide cryptographic message confidentiality, it shall:

(1) Comply with the same requirements for message integrity and authentication under this section; and

(2) Only use keys meeting or exceeding the security strength required to protect the data as defined in the railroad's PTCSP.

(f) The railroad, or its vendor or supplier, shall have a prioritized service restoration and mitigation plan for scheduled and unscheduled interruptions of service. This plan shall be made available to FRA upon request, without undue delay, for restoration of communication services that support PTC system services.

§ 299.213 Records retention.

(a) The railroad shall maintain at a designated office on the railroad—

(1) A current copy of each FRA-approved PTCSP that it holds;

(2) Adequate documentation to demonstrate that the PTCSP meets the safety requirements of this RPA, including the risk assessment;

(3) An Operations and Maintenance Manual, pursuant to § 299.215; and

(4) Training and testing records pursuant to § 236.1043(b) of this chapter.

(b) Results of inspections and tests specified in the PTCSP must be recorded pursuant to § 236.110 of this chapter.

(c) Each contractor providing services relating to the testing, maintenance, or operation of the railroad's PTC system shall maintain at a designated office training records required under §§ 236.1043(b) of this chapter, and 299.207(a)(6).

(d) After the PTC system is placed in service, the railroad shall maintain a database of all safety-relevant hazards as set forth in its PTCSP and those that had not been previously identified in its PTCSP. If the frequency of the safety-relevant hazards exceeds the threshold set forth in its PTCSP, then the railroad shall—

(1) Report the inconsistency in writing to FRA's Secure Information Repository at *https://sir.fra.dot.gov*, within 15 days of discovery;

(2) Take prompt countermeasures to reduce the frequency of each safety-relevant hazard to below the threshold set forth in its PTCSP; and

(3) Provide a final report when the inconsistency is resolved to FRA's Secure Information Repository at *https://sir.fra.dot.gov*, on the results of the analysis and countermeasures taken to reduce the frequency of the safety-relevant hazard(s) below the threshold set forth in its PTCSP.

§ 299.215 Operations and Maintenance Manual.

(a) The railroad shall catalog and maintain all documents as specified in its PTCSP for the operation, installation, maintenance, repair, modification, inspection, and testing of the PTC system and have them in one Operations and Maintenance Manual, readily available to persons required to perform such tasks and for inspection by FRA and FRA-certified state inspectors.

(b) Plans required for proper maintenance, repair, inspection, and testing of safety-critical PTC systems must be adequate in detail and must be made available for inspection by FRA and FRA-certified state inspectors where such PTC systems are deployed or maintained. They must identify all software versions, revisions, and revision dates. Plans must be legible and correct.

(c) Hardware, software, and firmware revisions must be documented in the Operations and Maintenance Manual according to the railroad's configuration management control plan and any additional configuration/revision control measures specified in its PTCSP.

(d) Safety-critical components, including spare equipment, must be positively identified, handled, replaced, and repaired in accordance with the procedures specified in the railroad's PTCSP.

(e) The railroad shall designate in its Operations and Maintenance Manual an appropriate railroad officer responsible for issues relating to scheduled interruptions of service.

Subpart C—Track Safety Standards

§ 299.301 Restoration or renewal of track under traffic conditions.

(a) Restoration or renewal of track, other than in yards and trainset maintenance facilities, under traffic conditions is prohibited.

(b) Restoration or renewal of track under traffic conditions on track Class H2 in trainset maintenance facilities is limited to the replacement of worn, broken, or missing components or fastenings that do not affect the safe passage of trainset.

(c) The following activities are expressly prohibited on track Class H2 in trainset maintenance facilities under traffic conditions:

(1) Any work that interrupts rail continuity, *e.g.*, as in joint bar replacement or rail replacement;

(2) Any work that adversely affects the lateral or vertical stability of the

track with the exception of spot tamping an isolated condition where not more than 4.5 m (15 feet) of track are involved at any one time and the ambient air temperature is not above 35 °C (95 °F); and

(3) Removal and replacement of the rail fastenings on more than one tie at a time within 4.5 m (15 feet).

§ 299.303 Measuring track not under load.

When unloaded track is measured to determine compliance with requirements of this part, evidence of rail movement, if any, that occurs while the track is loaded shall be added to the measurements of the unloaded track.

§ 299.305 Drainage.

Each drainage or other water carrying facility under or immediately adjacent to the roadbed shall be maintained and kept free of obstruction, to accommodate expected water flow for the area concerned.

§ 299.307 Vegetation.

Vegetation on railroad property which is on or immediately adjacent to roadbed shall be controlled so that it does not—

(a) Become a fire hazard to track-carrying structures;

(b) Obstruct visibility of railroad signs and signals along the right-of-way;

(c) Interfere with railroad employees performing normal trackside duties;

(d) Prevent proper functioning of signal and communication lines; or

(e) Prevent railroad employees from visually inspecting moving equipment from their normal duty stations.

§ 299.309 Classes of track: operating speed limits.

(a) Except as provided in paragraph (b) of this section and as otherwise provided in this part, the following maximum allowable operating speeds apply—

TABLE 1 TO PARAGRAPH (a)

Over track that meets all of the requirements prescribed in this part for—	The maximum allowable operating speed in km/h (mph)
Class H0 track	20 (12)
Class H1 track	30 (19)
Class H2 track	70 (44)
Class H3 track	120 (75)
Class H4 track	170 (106)
Class H5 track	230 (143)
Class H6 track	285 (177)
Class H7 track	330 (205)

(b) Except as provided in paragraph (c) of this section, if a segment of track does not meet all of the requirements for its intended Class, it is to be reclassified to the next lower track Class for which it does meet all of the requirements of this part. However, if the segment of track does not at least meet the requirements for track Class H1 track, operations may continue at Class H1 speeds for a period of not more than 30 days without bringing the track into compliance, under the authority of an individual designated under § 299.353, after that individual determines that operations may safely continue and subject to any limiting conditions specified by such individual.

(c) If a segment of track designated as track Class H0 does not meet all of the requirements for its intended class, operations may continue at Class H0 speeds for a period of not more than 30 days without bringing the track into compliance, under the authority of an individual designated under § 299.353, after that individual determines that operations may safely continue and subject to any limiting conditions specified by such individual.

(d) No high-speed passenger trainset shall operate over track Class H0.

§ 299.311 Track geometry; general.

If the values listed in the following table are exceeded, the railroad shall initiate remedial action. A reduction in operating speed so that the condition complies with the limits listed for a lower speed shall constitute bringing the track into compliance.

TABLE 1 TO § 299.311

Track geometry parameter (millimeter (mm))	Track class	H0	H1	H2	H3	H4	H5	H6	H7
Gauge is measured between the heads of the rails at right angles to the rails in a plane 14 mm (0.55 inches) below the top of the rail head and may not exceed—.	Min.	1429	1429	1429	1429	1429	1429	1429	1429
	Max.	1454	1454	1454	1454	1454	1454	1454	1454
The deviation from uniformity[1] of the mid-chord offset on either rail for a 10 meter (m) chord (alignment) may not be more than—.	10 m chord	38	31	31	14	12	10	8	7
The deviation from uniform profile on either rail at the mid-ordinate of a 10 m chord (surface) may not be more than—.	10 m chord	40	40	40	27	22	18	15	13
The deviation from uniform crosslevel at any point on tangent and curved track may not be more than—.		50	26	26	22	18	14	9	9
The difference in crosslevel between any two points 2.5 meters (8.2 feet) apart (twist) may not be more than—.	2.5 m	26	26	26	22	18	14	9	9

[1] Uniformity for alignment at any point along the track is established by averaging the measured mid-chord offset values for a 10 m (32.8 feet) chord for nine consecutive points that are centered around that point and spaced at 2.5 m (8.2 feet) intervals.

§ 299.313 Track geometry; performance based.

(a) For all track of Class H4 and above, vibration in the lateral and vertical directions measured on the carbody of a vehicle representative of the service fleet traveling at a speed no less than 10 km/h (6.2 mph) below the maximum speed permitted for the class of track, shall not exceed the limits prescribed in the following table:

TABLE 1 TO PARAGRAPH (a)

Carbody acceleration limits[1] [2]	
Lateral vibration[3]	Vertical vibration[3]
≤ 0.35 g peak-to-peak	≤ 0.45g peak-to-peak
1 sec window	1 sec window
excluding peaks < 50 msec	excluding peaks < 50 msec

[1] Carbody accelerations in the vertical and lateral directions shall be measured by accelerometers oriented and located in accordance with § 299.337(c)(3).

[2] Acceleration measurements shall be processed through an LPF with a minimum cut-off frequency of 10 Hz. The sample rate for acceleration data shall be at least 200 samples per second.

[3] Peak-to-peak accelerations shall be measured as the algebraic difference between the two extreme values of measured acceleration in any 1-second time period, excluding any peak lasting less than 50 milliseconds.

(b) If the carbody acceleration requirements are not met on a segment of track, the segment of track is to be reclassified to the next lower Class of track for which it does meet the requirements of this part.

§ 299.315 Curves; elevation and speed limitations.

(a) The maximum elevation of the outside rail of a curve may not be more than 200 mm (7-7/8 inches). The outside rail of a curve may not be lower than the inside rail by design, except when engineered to address specific track or operating conditions; the limits in § 299.311 apply in all cases.

(b) The maximum allowable posted timetable operating speed for each curve is determined by the following formula:

$$V_{max} = \sqrt{\frac{(E_a + E_u)xR}{11.8}}$$

Where—

V_{max} = Maximum allowable posted timetable operating speed (km/h).

E_a = Actual elevation of the outside rail (mm). Actual elevation, E_a, for each 50-meter track segment in the body of the curve is determined by averaging the elevation for 11 points through the segment at 5-meter spacing. If the curve length is less than 50-meters, average the points through the full length of the body of the curve.

E_u = Qualified cant deficiency (mm) of the vehicle type.

R = Radius of curve (m). Radius of curve, R, is determined by averaging the radius of the curve over the same track segment as the elevation.

(c) All vehicles are considered qualified for operating on track with a cant deficiency, E_u, not exceeding 75 mm (3 inches).

(d) Each vehicle type must be approved by FRA, under §299.609, to operate on track with a qualified cant deficiency, E_u, greater than 75 mm (3 inches). Each vehicle type must demonstrate in a ready-for-service load condition, compliance with the requirements of either paragraph (d)(1) or (2) of this section.

(1) When positioned on a track with a uniform superelevation equal to the proposed cant deficiency:

(i) No wheel of the vehicle unloads to a value less than 60 percent of its static value on perfectly level track; and

(ii) For passenger cars, the roll angle between the floor of the equipment and the horizontal does not exceed 8.6 degrees; or

(2) When operating through a constant radius curve at a constant speed corresponding to the proposed cant deficiency, and a test plan is submitted and approved by FRA in accordance with §299.609(d)—

(i) The steady-state (average) load on any wheel, throughout the body of the curve, is not less than 60 percent of its static value on perfectly level track; and

(ii) For passenger cars, the steady-state (average) lateral acceleration measured on the floor of the carbody does not exceed 0.15g.

(e) The railroad shall transmit the results of the testing specified in paragraph (d) of this section to FRA in accordance with §§299.9 and 299.613 requesting approval under §299.609(g) for the vehicle type to operate at the desired curving speeds allowed under the formula in paragraph (b) of this section. The request shall be made in writing and shall contain, at a minimum, the following information:

(1) A description of the vehicle type involved, including schematic diagrams of the suspension system(s) and the estimated location of the center of gravity above top of rail; and

(2) The test procedure, including the load condition under which the testing was performed, and description of the instrumentation used to qualify the vehicle type, as well as the maximum values for wheel unloading and roll angles or accelerations that were observed during testing.

NOTE 1 TO PARAGRAPH (e)(2): The test procedure may be conducted whereby all the wheels on one side (right or left) of the vehicle are raised to the proposed cant deficiency and lowered, and then the vertical wheel loads under each wheel are measured and a level is used to record the angle through which the floor of the vehicle has been rotated.

(f) Upon FRA approval of the request to approve the vehicle type to operate at the desired curving speeds allowed under the formula in paragraph (b) of this section, the railroad shall notify FRA in accordance with §299.9 in writing no less than 30 calendar days prior to the proposed implementation of the approved higher curving speeds allowed under the formula in paragraph (b) of this section. The notification shall contain, at a minimum, identification of the track segment(s) on which the higher curving speeds are to be implemented.

(g) As used in this section, and §299.609, vehicle type means like vehicles with variations in their physical properties, such as suspension, mass,

interior arrangements, and dimensions that do not result in significant changes to their dynamic characteristics.

§ 299.317 Track strength.

(a) Track shall have a sufficient vertical strength to withstand the maximum vehicle loads generated at maximum permissible trainset speeds, cant deficiencies and surface limitations. For purposes of this section, vertical track strength is defined as the track capacity to constrain vertical deformations so that the track shall, under maximum load, remain in compliance with the track performance and geometry requirements of this part.

(b) Track shall have sufficient lateral strength to withstand the maximum thermal and vehicle loads generated at maximum permissible trainset speeds, cant deficiencies and lateral alignment limitations. For purposes of this section lateral track strength is defined as the track capacity to constrain lateral deformations so that track shall, under maximum load, remain in compliance with the track performance and geometry requirements of this part.

§ 299.319 Track fixation and support.

(a) Crossties, if used shall be of concrete or composite construction, unless otherwise approved by FRA under § 299.15, for all tracks over which trainsets run in revenue service.

(b) Each 25 m (82 feet) segment of track that contains crossties shall have—

(1) A sufficient number of crossties to provide effective support that will—

(i) Hold gauge within limits prescribed in § 299.311;

(ii) Maintain surface within the limits prescribed in § 299.311;

(iii) Maintain alignment within the limits prescribed in § 299.311; and

(iv) Maintain longitudinal rail restraint.

(2) The minimum number and type of crossties specified in paragraph (b)(4) of this section and described in paragraph (c) or (d) of this section, as applicable, effectively distributed to support the entire segment;

(3) At least one non-defective crosstie of the type specified in paragraphs (c) and (d) of this section that is located at a joint location as specified in paragraph (e) of this section; and

(4) The minimum number of crossties as indicated in the following table:

TABLE 1 TO PARAGRAPH (b)(4)

Minimum number of non-defective crossties			
Track class	Other than on non-ballasted bridge & turnout	Non-ballasted bridge	Turnout
H0	20	26	24
H1	28	36	33
H2	31, unless inside a TMF, then 28	36	33
H3	35	40	37
H4–H7	39	45	41

(c) Crossties, other than concrete, counted to satisfy the requirements set forth in paragraph (b)(4) of this section shall not be—

(1) Broken through;

(2) Split or otherwise impaired to the extent the crossties will allow the ballast to work through, or will not hold spikes or rail fasteners;

(3) Deteriorated so that the tie plate or base of rail can move laterally 9.5 mm (3/8 inch) relative to the crossties;

(4) Cut by the tie plate through more than 40 percent of a crosstie's thickness;

(5) Configured with less than 2 rail holding spikes or fasteners per tie plate; or

(6) Unable, due to insufficient fastener toeload, to maintain longitudinal restraint and maintain rail hold down and gauge.

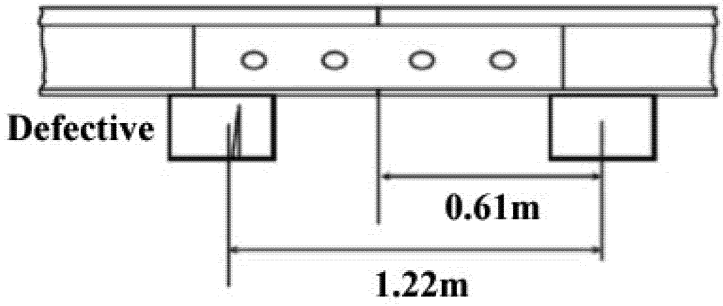
(d) Concrete crossties counted to satisfy the requirements set forth in paragraph (b)(4) of this section shall not be—

(1) Broken through or deteriorated to the extent that prestressing material is visible;

(2) Deteriorated or broken off in the vicinity of the shoulder or insert so that the fastener assembly can either pull out or move laterally more than 9.5 mm (⅜ inch) relative to the crosstie;

(3) Deteriorated such that the base of either rail can move laterally more than 9.5 mm (⅜ inch) relative to the crosstie;

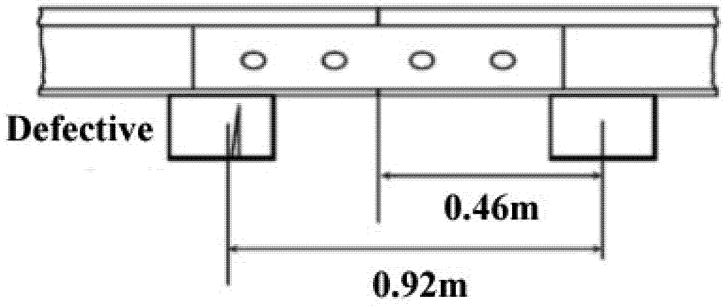
(4) Deteriorated so that rail seat abrasion is sufficiently deep so as to cause loss of rail fastener toeload;



(5) Deteriorated such that the crosstie's fastening or anchoring system is unable to maintain longitudinal rail restraint, or maintain rail hold down, or maintain gauge due to insufficient fastener toeload; or

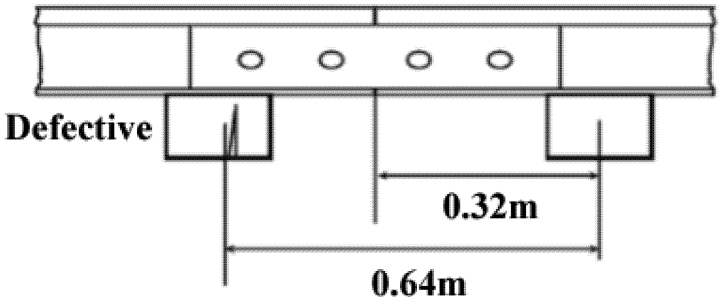
(6) Configured with less than two fasteners on the same rail.

(e) Classes H0 and H1 track shall have one crosstie whose centerline is within 0.61 m (24 inches) of each rail joint (end) location. Classes H2 and H3 track shall have one crosstie whose centerline is within 0.46 m (18 inches) of each rail joint (end) location. Classes H4–H7 track shall have one crosstie whose centerline is within 0.32 m (12.6 inches) of each rail joint (end) location. The relative position of these crossties is described in the following three diagrams:



(1) Each rail joint in Classes H0 and H1 track shall be supported by at least one crosstie specified in paragraphs (c) and (d) of this section whose centerline is within 1.22 m (48 inches) as shown in Figure 1 to this paragraph.

Figure 1 to paragraph (e)(1) - Classes H0 and H1



(2) Each rail joint in Classes H2 and H3 track shall be supported by at least one crosstie specified in paragraphs (c) and (d) of this section whose centerline is within 0.92 m (36.2 inches) as shown in Figure 2 to this paragraph.

Figure 2 to paragraph (e)(2) - Classes H2 and H3

(3) Each rail joint in Classes H4–H7 track shall be supported by at least one crosstie specified in paragraphs (c) and (d) of this section whose centerline is within 0.64 m (25.2 inches) as shown in Figure 3 to this paragraph.

Figure 3 to paragraph (e)(3) - Classes H4 - H7

(f) In Class H3 track there shall be at least two non-defective ties each side of a defective tie.

(g) In Classes H4 to H7 track and at any expansion joints there shall be at least three non-defective ties each side of a defective tie.

(h) Defective ties shall be replaced in accordance with the railroad's inspection, testing, and maintenance program.

(i) Track shall be fastened by a system of components that effectively maintains gauge within the limits prescribed in § 299.311. Each component of each such system shall be evaluated to determine whether gauge is effectively being maintained.

(j) For track constructed without crossties, such as slab track and track connected directly to bridge structural components, track over servicing pits, etc., the track structure shall be sufficient to maintain the geometry limits specified in § 299.311.

§ 299.321 Defective rails.

(a) The railroad's inspection, testing, and maintenance program shall include a description of defective rails consistent with the practice on the

Tokaido Shinkansen system. The inspection, testing, and maintenance program shall include identification of rail defect types, definition of the inspection criteria, time required for verification and the corresponding remedial action.

(b) When the railroad learns that a rail in that track contains any of the defects listed in the railroad's inspection, testing, and maintenance program, a person designated under § 299.353 or § 299.355 shall determine whether the track may continue in use. If the designated person determines that the track may continue in use, operation over the defective rail is not permitted until—

(1) The rail is replaced or repaired; or

(2) The remedial action prescribed in the inspection, testing, and maintenance program is initiated.

§ 299.323 Continuous welded rail (CWR) plan.

(a) The railroad shall have in effect and comply with a plan that contains written procedures which address: The installation, adjustment, maintenance, and inspection of CWR; and inspection of CWR joints.

(b) The railroad shall file its CWR plan with FRA pursuant to § 299.9. The initial CWR plan shall be filed 60 days prior to installation of any CWR track. The effective date of the plan is the date the plan is filed with FRA.

(c) The railroad's existing plan shall remain in effect until the railroad's new plan is developed and filed with FRA.

§ 299.325 Continuous welded rail (CWR); general.

The railroad shall comply with the contents of the CWR plan developed under § 299.323. The plan shall contain the following elements—

(a) Procedures for the installation and adjustment of CWR which include—

(1) Designation of a desired rail installation temperature range for the geographic area in which the CWR is located;

(2) De-stressing procedures/methods which address proper attainment of the desired rail installation temperature range when adjusting CWR; and

(3) Glued insulated or expansion joint installation and maintenance procedures.

(b) Rail anchoring, if used, or fastening requirements that will provide sufficient restraint to limit longitudinal rail and crosstie movement to the extent practical, and that specifically address CWR rail anchoring or fastening patterns on bridges, bridge approaches, and at other locations where possible longitudinal rail and crosstie movement associated with normally expected trainset-induced forces—is restricted.

(c) CWR joint installation and maintenance procedures.

(d) Procedures which specifically address maintaining a desired rail installation temperature range when cutting CWR including rail repairs, in-track welding, and in conjunction with adjustments made in the area of tight track, a track buckle, or a pull-apart.

(e) Procedures which control trainset speed on CWR track when—

(1) Maintenance work, track rehabilitation, track construction, or any other event occurs which disturbs the roadbed or ballast section and reduces the lateral or longitudinal resistance of the track; and

(2) The difference between the rail temperature and the rail neutral temperature is in a range that causes buckling-prone conditions to be present at a specific location.

(f) Procedures which prescribe when and where physical track inspections are to be performed under extreme temperature conditions.

(g) Scheduling and procedures for inspections to detect cracks and other indications of potential failures in CWR joints.

(h) The railroad shall have in effect a comprehensive training program for the application of these written CWR procedures, with provisions for periodic retraining for those individuals designated as qualified in accordance with this subpart to supervise the installation, adjustment, and maintenance of CWR track and to perform inspections of CWR track.

(i) The plan shall prescribe and require compliance with recordkeeping requirements necessary to provide an adequate history of track constructed

with CWR. At a minimum, these records shall include—

(1) The rail laying temperature, location, and date of CWR installations. Each record shall be retained until the rail neutral temperature has been adjusted; and

(2) A record of any CWR installation or maintenance work that does not conform to the written procedures. Such record must include the location of the rail and be maintained until the CWR is brought into conformance with such procedures.

§ 299.327 Rail end mismatch.

Any mismatch of rails at joints may not be more than that prescribed by the following table:

TABLE 1 TO § 299.327

Track class	Any mismatch of rails at joints may not be more than the following:	
	On the tread of the rail ends (mm)	On the gauge side of the rail ends (mm)
H0	6	5
H1–H2	4	4
H3–H7	2	2

§ 299.329 Rail joints and torch cut rails.

(a) Each rail joint, insulated joint, expansion joint, and compromise joint shall be of a structurally sound design and appropriate dimensions for the rail on which it is applied.

(b) If a joint bar is cracked, broken, or permits excessive vertical movement of either rail when all bolts are tight, it shall be replaced.

(c) Except for glued-insulated joints, each joint bar shall be held in position by track bolts tightened to allow the joint bar to firmly support the abutting rail ends. For track Classes H0 to H3 track bolts shall be tightened, as required, to allow longitudinal movement of the rail in the joint to accommodate expansion and contraction due to temperature variations.

(d) Except as provided in paragraph (e) of this section, each rail shall be bolted with at least two bolts at each joint.

(e) Clamped joint bars may be used for temporary repair during emergency situations, and speed over that rail end and the time required to replace the joint bar must not exceed the limits specified in the inspection, testing, and maintenance program.

(f) No rail shall have a bolt hole which is torch cut or burned.

(g) No joint bar shall be reconfigured by torch cutting.

(h) No rail having a torch cut or flame cut end may be used.

§ 299.331 Turnouts and crossings generally.

(a) In turnouts and track crossings, the fastenings shall be intact and maintained to keep the components securely in place. Also, each switch, frog, and guard rail shall be kept free of obstructions that may interfere with the passage of wheels. Use of rigid rail crossings at grade is limited to track Classes H0, H1, and H2.

(b) The track through and on each side of track crossings and turnouts shall be designed to restrain rail movement affecting the position of switch points and frogs.

(c) Each flangeway at turnouts shall be at least 39 mm (1.5 inches) wide.

(d) For all turnouts and track crossings, the railroad shall prepare inspection and maintenance requirements to be included in the railroad's inspection, testing, and maintenance program.

§ 299.333 Frog guard rails and guard faces; gauge.

The guard check and guard face gages in frogs shall be within the limits prescribed in the following table:

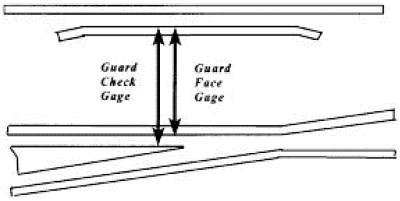
TABLE 1 TO § 299.333

Track class	Guard check gage The distance between the gauge line of a frog to the guard line[1] of its guard rail or guarding face, measured across the track at right angles to the gauge line,[2] may not be less than—	Guard face gage The distance between the guard lines,[1] measured across the track at right angles to the gauge line,[2] may not be more than—
H0–H7	1,393 mm	1,358 mm.

[1] A line along that side of the flangeway which is nearer to the center of the track and at the same elevation as the gage line.

[2] A line 14 mm (0.55 inches) below the top of the center line of the head of the running rail, or corresponding location of the tread portion of the track structure.

Figure 1 to § 299.333 – Guard Check and Guard Face Gage Measurement (Top View)



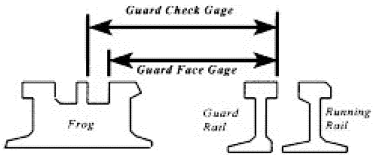


Figure 2 to § 299.333 – Guard Check and Guard Face Gage Measurement (In line with rail view)

§ 299.335 Derails.

(a) Derails shall be installed at locations where maintenance-of-way equipment can access track other than Class H0, in a configuration intended to derail the un-controlled equipment away from the mainline and at a distance from the point of intersection with the mainline that will not foul the dynamic envelope of the mainline.

(b) Each derail shall be clearly visible to railroad personnel operating rail equipment on the affected track and to railroad personnel working adjacent to the affected track. When in a locked position, a derail shall be free of any lost motion that would allow it to be operated without removal of the lock.

(c) Each derail shall be maintained and function as intended.

(d) Each derail shall be properly installed for the rail to which it is applied.

(e) If a track is equipped with a derail it shall be in the derailing position except as provided in the railroad's operating rules, special instructions, or changed to permit movement.

§ 299.337 Automated vehicle-based inspection systems.

(a) A qualifying Track Geometry Measurement System (TGMS) and a qualifying Track Acceleration Measurement System (TAMS) shall be operated over the route at the following frequency:

(1) For track Class H3, at least twice per calendar year with not less than 120 days between inspections; and

(2) For track Classes H4, H5, H6, and H7, at least twice within any 60-day period with not less than 12 days between inspections.

(b) The qualifying TGMS shall meet or exceed minimum design requirements which specify that—

(1) Track geometry measurements shall be taken no more than 1 meter (3.3 feet) away from the contact point of wheels carrying a vertical load of no less than 4,500 kg (10,000 lb) per wheel;

(2) Track geometry measurements shall be taken and recorded on a distance-based sampling interval not exceeding 0.60 m (2 feet), preferably 0.30 m (1 foot);

(3) Calibration procedures and parameters are assigned to the system which assures that measured and recorded values accurately represent track conditions. Track geometry measurements recorded by the system shall not differ on repeated runs at the same site at the same speed more than 3 mm (⅛ inch); and

(4) The TGMS shall be capable of measuring and processing the necessary track geometry parameters to determine compliance with §§ 299.311 and 299.315.

(c) A qualifying TAMS shall be on a vehicle having dynamic response characteristics that are representative of other vehicles assigned to the service and shall—

(1) Be operated at the revenue speed profile in accordance with § 299.309;

(2) Be capable of measuring and processing carbody acceleration parameters to determine compliance with Carbody Acceleration Limits per § 299.313; and

(3) Monitor lateral and vertical accelerations of the carbody. The accelerometers shall be attached to the carbody on or under the floor of the vehicle, as near the center of a bogie as practicable.

(d) The qualifying TGMS and TAMS shall be capable of producing, within 24 hours of the inspection, output reports that—

(1) Provide a continuous plot, on a constant-distance axis, of all measured track geometry and carbody acceleration parameters required in paragraph (b) and (c) of this section;

(2) Provide an exception report containing a systematic listing of all track geometry and all acceleration conditions which constitute an exception to the class of track over the segment surveyed.

(e) The output reports required under paragraph (d) of this section shall contain sufficient location identification information which enables field personnel to easily locate indicated exceptions.

(f) Following a track inspection performed by a qualifying TGMS or TAMS, the railroad shall, institute remedial action for all exceptions to the class of track in accordance with the railroad's inspection, testing, and maintenance program.

(g) The railroad shall maintain for a period of one year following an inspection performed by a qualifying TGMS and TAMS, a copy of the plot and the exception report for the track segment involved, and additional records which—

(1) Specify the date the inspection was made and the track segment involved; and,

(2) Specify the location, remedial action taken, and the date thereof, for all listed exceptions to the class.

§ 299.339 Daily sweeper inspection.

A sweeper vehicle shall be operated each morning after the overnight maintenance over all tracks except track Class H2 in stations, prior to commencing revenue service over that track. The sweeper vehicle shall operate at a speed no greater than 120 km/h (75 mph) to conduct a visual inspection to ensure the right-of-way is clear of obstacles within the clearance envelope and to identify conditions that could cause accidents, and shall have a minimum clearance of no less than 35 mm above top of rail.

§ 299.341 Inspection of rail in service.

(a) Prior to revenue service the railroad shall submit written procedures for the inspection of rails in accordance with the inspection, testing, and maintenance program.

(b) On track Classes H4 to H7, and H2 within stations, a continuous search for internal defects shall be made of all rail within 180 days after initiation of revenue service and, thereafter, at least annually, with not less than 240 days between inspections.

(c) Each defective rail shall be marked with a highly visible marking on both sides of the rail.

(d) Inspection equipment shall be capable of detecting defects between joint bars and within the area enclosed by joint bars.

(e) If the person assigned to operate the rail defect detection equipment being used determines that, due to rail surface conditions, a valid search for internal defects could not be made over a particular length of track, the test on that particular length of track cannot be considered as a search for internal defects under this section.

(f) When the railroad learns, through inspection or otherwise, that a rail in that track contains any of the defects in accordance with § 299.321, a qualified individual designated under § 299.353 or § 299.355 shall determine whether or not the track may continue in use. If the qualified individual so designated determines that the track may continue in use, operation over the defective rail is not permitted until—

(1) The rail is replaced; or

(2) The remedial action as prescribed in § 299.321 has been taken.

(g) The person assigned to operate the rail defect detection equipment must be a qualified operator as defined in this subpart and have demonstrated proficiency in the rail flaw detection process for each type of equipment the operator is assigned.

§ 299.343 Initial inspection of new rail and welds.

(a) The railroad shall provide for the initial inspection of newly manufactured rail, and for initial inspection of new welds made in either new or used rail. The railroad may demonstrate compliance with this section by providing for—

(1) *Mill inspection.* A continuous inspection at the rail manufacturer's mill shall constitute compliance with the requirement for initial inspection of new rail, provided that the inspection equipment meets the applicable requirements as specified under the railroad's inspection, testing, and maintenance program and § 299.321. The railroad shall obtain a copy of the manufacturer's report of inspection and retain it as a record until the rail receives its first scheduled inspection under § 299.341;

(2) *Welding plant inspection.* A continuous inspection at a welding plant, if conducted in accordance with the provisions of paragraph (a)(1) of this section, and accompanied by a plant operator's report of inspection which is retained as a record by the railroad, shall constitute compliance with the requirements for initial inspection of new rail and plant welds, or of new plant welds made in used rail; and

(3) *Inspection of field welds.* Initial inspection of new field welds, either those joining the ends of CWR strings or those made for isolated repairs, shall be conducted before the start of revenue service in accordance with the railroad's inspection, testing, and maintenance program. The initial inspection may be conducted by means of portable test equipment. The railroad shall retain a record of such inspections until the welds receive their first scheduled inspection under § 299.341.

(b) Each defective rail found during inspections conducted under paragraph (a)(3) of this section shall be marked with highly visible markings on both sides of the rail and the appropriate remedial action as set forth in § 299.341 will apply.

§ 299.345 Visual inspections; right of way.

(a) *General.* All track shall be visually inspected in accordance with the schedule prescribed in paragraph (c) of this section by an individual qualified under this subpart. The visual inspection shall be conducted in accordance with the requirements set forth in the inspection, testing, and maintenance program under subpart G of this part.

(b) *Inspection types and frequency*—(1) *Safe walkway inspection.* Except for track located inside trainset maintenance facilities and MOW yards and the associated portions of the right-of-way, the right-of-way and all track shall be inspected from the safe walkway during daytime hours, in accordance with the following conditions:

(i) Ballasted track shall be inspected at least once every two weeks, with a minimum of six calendar days in between inspections.

(ii) Non-ballasted track shall be inspected at least once every four weeks, with a minimum of twelve calendar days in between inspections.

(iii) No two consecutive visual inspections from the safe walkway shall be performed from the same safe walkway. Safe walkway inspections shall alternate between safe walkways on each side of the right-of-way.

(iv) In stations, the safe walkway inspection may be performed from either the safe walkway or the station platform.

(v) An additional on-track visual inspection conducted during maintenance hours under paragraph (b)(2) of this section performed in place of a visual inspection from the safe walkway under paragraph (b)(1) of this section will satisfy the visual inspection requirement of paragraph (b)(1) of this section. However, a safe walkway visual inspection performed under paragraph (b)(1) of this section cannot replace an on-track visual inspection conducted during maintenance hours under paragraph (b)(2) of this section.

(vi) Except for paragraph (b)(1)(v) of this section, inspections performed under paragraph (b)(1) of this section

shall not occur during the same week as inspections performed under paragraph (b)(2) of this section.

(vii) In the event a safe walkway visual inspection is not possible on a given day due to extreme weather, the inspection may be conducted from the cab of a trainset or as an on-track visual inspection on that day in accordance with the inspection, testing, and maintenance program.

(2) *On-track inspections; other than trainset maintenance facilities and MOW yards.* Except for track located inside trainset maintenance facilities and MOW yards and the associated portions of the right-of-way, on-track visual inspections, conducted on foot during maintenance hours, shall be performed on all track in accordance with the following conditions:

(i) Ballasted track shall be inspected at least once every two weeks, with a minimum of six calendar days in between inspections.

(ii) Non-ballasted track shall be inspected at least once every four weeks, with a minimum of twelve calendar days in between inspections.

(iii) Turn-outs and track crossings on ballasted track shall be inspected at least once a week, with a minimum of three calendar days in between inspections.

(iv) Turn-outs and track crossings on non-ballasted track shall be inspected at least once every two weeks, with a minimum of six calendar days in between inspections.

(3) *On-track inspections; trainset maintenance facilities and MOW yards.* For track located inside trainset maintenance facilities and MOW yards and the associated portions of the right-of-way, including turn-outs and track crossings, on-track visual inspections, conducted on foot, shall be performed on all track in accordance with the following conditions:

(i) Ballasted track shall be inspected at least once during any 60-day period, with a minimum of twelve calendar days in between inspections.

(ii) Non-ballasted track shall be inspected at least once within any 120-day period, with a minimum of twenty-four calendar days in between inspections.

(iii) On-track safety shall be established in accordance with 49 CFR part 214 of this chapter, except for 49 CFR 214.339.

(4) *Visual inspections from trainset cab.* Visual inspections from trainset cab shall be performed for the right-of-way and track for track Class H3 and above, except for track leading to a trainset maintenance facility, at least twice weekly with a minimum of two calendar days between inspections.

(c) If a deviation from the requirements of this subpart is found during the visual inspection, remedial action shall be initiated immediately in accordance with the railroad's inspection, testing, and maintenance program required under subpart G of this part.

§ 299.347 Special inspections.

(a) In the event of fire, flood, severe storm, temperature extremes, or other occurrence which might have damaged track structure, a special inspection shall be made of the track and right-of-way involved as soon as possible after the occurrence, prior to the operation of any trainset over that track.

(b) Should a trainset be between stations when an event such as those described in paragraph (a) of this section occurs, that trainset may proceed to the next forward station at restricted speed, in accordance with the railroad's operating rules and inspection, testing, and maintenance program.

§ 299.349 Inspection records.

(a) The railroad shall keep a record of each inspection required to be performed on that track under this subpart.

(b) Except as provided in paragraph (f) of this section, each record of an inspection under §§ 299.325 and 299.345 shall be prepared on the day the inspection is made and signed by the person making the inspection.

(c) Records shall specify the track inspected, date of inspection, location, and nature of any deviation from the requirements of this part, name of qualified individual who made the inspection, and the remedial action, if any, taken by the person making the inspection.

(d) Rail inspection records shall specify the date of inspection, the location and nature of any internal defects found, name of qualified individual who made the inspection, the remedial action taken and the date thereof, and the location of any intervals of track not tested pursuant to § 299.341 of this part. The railroad shall retain a rail inspection record for at least two years after the inspection and for one year after remedial action is taken.

(e) The railroad shall make inspection records required by this section available for inspection and copying by the FRA.

(f) For purposes of compliance with the requirements of this section, the railroad may maintain and transfer records through electronic transmission, storage, and retrieval provided that—

(1) The electronic system is compliant with the requirements of § 299.11;

(2) The electronic storage of each record shall be initiated by the person making the inspection within 24 hours following the completion of that inspection; and

(3) Track inspection records shall be kept available to persons who performed the inspection and to persons performing subsequent inspections.

(g) Each track/vehicle performance record required under § 299.337 shall be made available for inspection and copying by the FRA.

§ 299.351 Qualifications for track maintenance and inspection personnel.

(a) *General.* The railroad shall designate qualified individuals responsible for the maintenance and inspection of track in compliance with the safety requirements prescribed in this subpart. Each designated individual, including contractors and their employees, must meet the minimum qualifications set forth in this subpart.

(b) *Recordkeeping.* In addition to the requirements contained in § 243.203 of this chapter, the railroad shall also maintain, with respect to the designation of individuals under this subpart, the track inspection records made by each individual as required by § 299.349.

§ 299.353 Personnel qualified to supervise track restoration and renewal.

Each individual designated to supervise restorations and renewals of track, shall have—

(a) Successfully completed a course offered by the employer or by a college level engineering program, supplemented by special on-the-job training emphasizing the techniques to be employed in the supervision, restoration, and renewal of high-speed track;

(b) Demonstrated to the railroad, at least once per calendar year, that the individual—

(1) Knows and understands the requirements of this subpart that apply to the restoration and renewal of the track for which he or she is responsible;

(2) Can detect deviations from those requirements; and

(3) Can prescribe appropriate remedial action to correct or safely compensate for those deviations.

(c) Written authorization from the railroad or the employer to prescribe remedial actions to correct or safely compensate for deviations from the requirements of this subpart and shall have successfully completed a recorded examination on this subpart as part of the qualification process.

§ 299.355 Personnel qualified to inspect track.

Each individual designated to inspect track for defects, shall have—

(a) Successfully completed a course offered by the railroad or by a college level engineering program, supplemented by special on-the-job training emphasizing the techniques to be employed in the inspection of high-speed track;

(b) Demonstrated to the railroad, at least once per calendar year, that the individual—

(1) Knows and understands the requirements of this subpart that apply to the inspection of the track for which he or she is responsible;

(2) Can detect deviations from those requirements; and

(3) Can prescribe appropriate remedial action to correct or safely compensate for those deviations.

(c) Written authorization from the railroad or the employer to prescribe

remedial actions to correct or safely compensate for deviations from the requirements in this subpart and shall have successfully completed a recorded examination on this subpart as part of the qualification process.

§ 299.357 Personnel qualified to inspect and restore continuous welded rail.

Individuals designated under § 299.353 or 299.355 that inspect continuous welded rail (CWR) or supervise the installation, adjustment, and maintenance of CWR in accordance with the written procedures established by the railroad shall have—

(a) Current qualifications under either § 299.353 or 299.355;

(b) Successfully completed a training course of at least eight hours duration specifically developed for the application of written CWR procedures issued by the railroad;

(c) Demonstrated to the railroad that the individual—

(1) Knows and understands the requirements of those written CWR procedures;

(2) Can detect deviations from those requirements; and

(3) Can prescribe appropriate remedial action to correct or compensate for those deviations safely.

(d) Written authorization from the railroad or the employer to prescribe remedial actions to correct or safely compensate for deviations from the requirements in those procedures and must have successfully completed a recorded examination on those procedures as part of the qualification process. The recorded examination may be written, or in the form of a computer file with the results of an interactive training course.

Subpart D—Rolling Stock

§ 299.401 Clearance requirements.

(a) *General.* The rolling stock shall be designed to meet all applicable clearance requirements of the railroad. The railroad shall make its clearance diagrams available to FRA upon request.

(b) *Clearance above top of rail.* No part or appliance of a trainset except the wheels, sander tips, wheel guards, and other components designed to be in the path of the wheel (*i.e.*, above the rail and aligned inside the wheel width path) may be less than 60 mm (2.36 inches) above the top of rail.

(c) *Obstacle deflector.* The leading end of a trainset shall be equipped with an obstacle deflector that extends across both rails of the track. The minimum clearance above the rail of the obstacle deflector shall be 76 mm (3 inches), and the maximum clearance shall be 229 mm (9 inches).

(d) *Flexible wheel guards.* The lead axle of a trainset shall be equipped with flexible wheel guards mounted on the bogie below the primary suspension with a maximum clearance above the rail of 15 mm (0.59 inches).

§ 299.403 Trainset structure.

(a) *Occupied volume integrity.* To demonstrate resistance to loss of occupied volume, the trainsets shall comply with both the compression load requirement in paragraph (b) of this section and the dynamic collision requirements in paragraph (c) of this section.

(b) *Compression load requirement.* The end compression load shall be applied to the vehicle as defined in JIS E 7105:2006(E) as amended by JIS E 7105:2011(E) (all incorporated by reference, see § 299.17), with an end load magnitude no less than 980 kN (220,300 lbf) without permanent deformation of the occupied volume.

(c) *Dynamic collision scenario.* In addition to the requirements of paragraph (b) of this section, occupied volume integrity shall also be demonstrated for the trainset through an evaluation of a dynamic collision scenario in which a moving trainset impacts a proxy object under the following conditions:

(1) The initially-moving trainset is made up of the equipment undergoing evaluation at its AW0 ready-to-run weight.

(2) The scenario shall be evaluated on tangent, level track.

(3) The trainset shall have an initial velocity of 32 km/h (20 mph) and shall not be braked.

(4) The proxy object shall have the following characteristics:

(i) The object shall be a solid circular cylinder that weighs 6350 kg (14,000 pounds);

(ii) The object shall have a width of 914 mm (36 inches) and a diameter of 1219 mm (48 inches);

(iii) The axis of the cylinder shall be perpendicular to the direction of trainset motion and parallel to the ground; and

(iv) The center of the object shall be located 762 mm (30 inches) above the top of the underframe.

(5) Two collision configurations shall be evaluated.

(i) The center of the object shall be located 483 mm (19 inches) from the longitudinal centerline of the trainset; and

(ii) The center of the object shall be aligned with the side of the cab car at the point of maximum width.

(6) The model used to demonstrate compliance with the dynamic collision requirements must be validated. Model validation shall be demonstrated and submitted to FRA for review and approval.

(7) As a result of the impact described in paragraphs (c)(5)(i) and (ii) of this section—

(i) One of the following two conditions must be met for the occupied volume:

(A) There shall be no more than 254 mm (10 inches) of longitudinal permanent deformation; or

(B) Global vehicle shortening shall not exceed 1 percent over any 4.6 m (15-feet) length of occupied volume.

(ii) Compliance with each of the following conditions shall also be demonstrated for the cab after the impact:

(A) Each seat provided for an employee regularly assigned to occupy the cab, and any floor-mounted seat in the cab, shall maintain a survival space where there is no intrusion for a minimum of 305 mm (12 inches) from each edge of the seat. Walls or other items originally within this defined space shall not further intrude more than 38 mm (1.5 inches) towards the seat under evaluation.

(B) There shall be a clear exit path for the occupants of the cab;

(C) The vertical height of the cab (floor to ceiling) shall not be reduced by more than 20 percent; and

(D) The operating console shall not have moved closer to the driver's seat by more than 51 mm (2 inches).

(d) *Equipment override.* (1) Using the dynamic collision scenarios described in paragraph (c) of this section, and with all units in the trainset positioned at their nominal running heights, the anti-climbing performance shall be evaluated for each of the following sets of initial conditions:

(2) For the initial conditions specified in paragraphs (c)(1) through (3) of this section, compliance with the following conditions shall be demonstrated after a dynamic impact:

(i) The relative difference in elevation between the underframes of the connected equipment shall not change by more than 102 mm (4 inches); and

(ii) The tread of any wheel of the trainset shall not rise above the top of rail by more than 102 mm (4 inches).

(e) *Roof and side structure integrity.* To demonstrate roof and side structure integrity, each passenger car shall comply with the following:

(1) *Rollover strength.* (i) Each passenger car shall be designed to rest on its side and be uniformly supported at the top and bottom cords of the vehicle side. The allowable stress in the structural members of the occupied volumes for this condition shall be one-half yield or one-half the critical buckling stress, whichever is less. Local yielding to the outer skin of the passenger car is allowed provided that the resulting deformations in no way intrude upon the occupied volume of the car.

(ii) Each passenger car shall also be designed to rest on its roof so that any damage in occupied areas is limited to roof extrusions. Other than roof extrusions, the allowable stress in the structural members of the occupied volumes for this condition shall be one-half yield or one-half the critical buckling stress, whichever is less. Local yielding to the outer skin, including the floor structure, of the car is allowed provided that the resulting deformations in no way intrude upon the occupied volume of the car. Deformation to the roof extrusions is allowed to the extent necessary to permit the vehicle to be supported directly on the top chords of the sides and ends.

(2) *Side structure.* (i) The sum of the section moduli about a longitudinal axis, taken at the weakest horizontal section between the side sill and roof,

of the extrusions on each side of the car located between the inside edge of the doors shall be not less than 3.95 x 105 mm^3 (24.1 in^3).

(ii) The sum of the section moduli about a transverse axis, taken at the weakest horizontal section on each side of the car located between body corners shall be not less than 2.64 x 105 mm^3 (16.1 in^3).

(iii) The minimum section moduli or thicknesses specified in paragraph (f)(2)(i) of this section shall be adjusted in proportion to the ratio of the yield strength of the material used to a value of 172 MPa (25 ksi).

(iv) The combined thickness of the skin of the side structure extrusions shall not be less than 3 mm (0.125 inch) nominal thickness. The thicknesses shall be adjusted in proportion to the ratio of the yield strength of the material used to a value of 172 MPa (25 ksi).

(f) *Bogie-to-carbody attachment.* (1) The bogie-to-carbody attachment shall utilize the service-proven design as used on the N700.

(2) The bogie shall be securely attached to the carbody and designed to operate without failure under the operating conditions of the railroad, including expected mechanical shocks and vibrations.

§ 299.405 Trainset interiors.

(a) *Interior fittings.* Interior fittings of trainsets shall be—

(1) Securely attached and designed to operate without failure under the conditions typically found in passenger rail equipment including expected mechanical vibrations, and shock.

(2) To the extent possible, all interior fittings shall be recessed or flush mounted. Corners and/or sharp edges shall be either avoided or padded to mitigate the consequence of impact with such surfaces.

(b) *Luggage stowage.* (1) Luggage stowage racks shall slope downward in the outboard direction at a minimum ratio of 1:8 with respect to a horizontal plane to provide lateral restraint for stowed articles.

(2) Luggage stowage compartments shall provide longitudinal restraint for stowed articles.

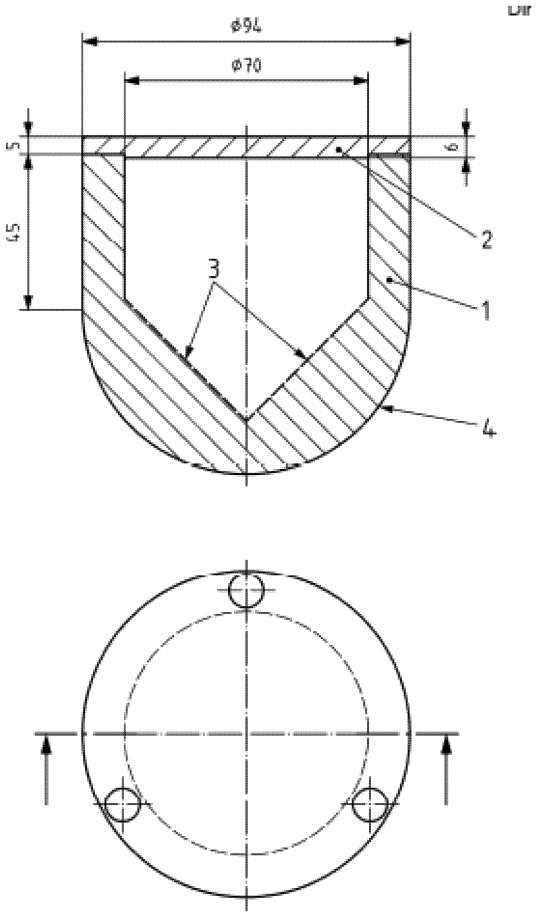
§ 299.407 Glazing.

(a) *General.* The railroad shall install glazing systems compliant with the requirements defined in this section.

(b) *Trainset glazing; end-facing.* (1) Each end-facing exterior window of the trainset shall comply with the requirements for large object and ballistic impact scenarios as defined in this section.

(2) Each end-facing exterior window of the trainset shall demonstrate compliance with the following requirements for the large object impact test.

(i) The glazing article shall be impacted with a cylindrical projectile that complies with the following design specifications as depicted in Figure 1 to paragraph (b)(2)(i)(D) of this section:



(A) The projectile shall be constructed of aluminum alloy such as ISO 6362–2:1990, grade 2017A, or its demonstrated equivalent;

(B) The projectile end cap shall be made of steel;

(C) The projectile assembly shall weigh 1 kilogram (kg) (−0, +0.020 kg) or 2.2 lbs (−0, +0.044 lbs) and shall have a hemispherical tip. Material may be removed from the interior of the aluminum portion to adjust the projectile mass according to the prescribed tolerance. The hemispherical tip shall have a milled surface with 1 mm (0.04 inches) grooves; and

(D) The projectile shall have an overall diameter of 94 mm (3.7 inches) with a nominal internal diameter of 70 mm (2.76 inches).

Figure 1 to paragraph (b)(2)(i)(D) - Large Object Glazing Test Projectile

Key

1 projectile in aluminium alloy (ISO 6362-2:1990, grade 2017A)
2 steel projectile cover
3 material may be removed for adjustment purposes
4 milled surface of hemispheric tip (1 mm)

(ii) The test of the glazing article shall be deemed satisfactory if the test projectile does not penetrate the glazing article, the glazing article remains in its frame, and the witness plate is not marked by spall.

(iii) A new projectile shall be used for each test.

(iv) The glazing article to be tested shall be that which has the smallest area for each design type. For the test, the glazing article shall be fixed in a frame of the same construction as that mounted on the vehicle.

(v) A minimum of four tests shall be conducted and all must be deemed satisfactory. Two tests shall be conducted with the complete glazing article at 0 °C ± 0.5 °C (32 °F ± 0.9 °F) and two tests shall be conducted with the complete

glazing article at 20 °C ± 5 °C (68 °F ± 9 °F). For the tests to be valid it shall be demonstrated that the core temperature of the complete glazing article during each test is within the required temperature range.

(vi) The test glazing article shall be mounted at the same angle relative to the projectile path as it will be to the direction of travel when mounted on the vehicle.

(vii) The projectile's impact velocity shall equal the maximum operating speed of the trainset plus 160 km/h (100 mph). The projectile velocity shall be measured within 4 m (13 feet) of the point of impact.

(viii) The point of impact shall be at the geometrical center of the glazing article.

(3) Representative samples for large object impact testing of large end-facing cab glazing articles may be used, instead of the actual design size provided that the following conditions are met:

(i) Testing of glazing articles having dimensions greater than 1,000 mm by 700 mm (39.4 by 27.6 inches), excluding framing, may be performed using a flat sample having the same composition as the glazing article for which compliance is to be demonstrated. The glazing manufacturer shall provide documentation containing its technical justification that testing a flat sample is sufficient to verify compliance of the glazing article with the requirements of this paragraph.

(ii) Flat sample testing is permitted only if no surface of the full-size glazing article contains curvature whose radius is less than 2,500 mm (98 inches); and when a complete, finished, glazing article is laid (convex side uppermost) on a flat horizontal surface, the distance, (measured perpendicularly to the flat surface) between the flat surface and the inside face of the glazing article is not greater than 200 mm (8 inches).

(4) End-facing glazing shall demonstrate sufficient resistance to spalling, as verified by the large impact projectile test under the following conditions:

(i) An annealed aluminum witness plate of maximum thickness 0.15 mm (0.006 inches) and of dimension 500 mm by 500 mm (19.7 by 19.7 inches) is placed vertically behind the sample under test, at a horizontal distance of 500 mm (19.7 inches) from the point of impact in the direction of travel of the projectile or the distance between the point of impact of the projectile and the location of the driver's eyes in the driver's normal operating position, whichever is less. The center of the witness plate is aligned with the point of impact.

(ii) Spalling performance shall be deemed satisfactory if the aluminum witness plate is not marked.

(iii) For the purposes of this part, materials used specifically to protect the cab occupants from spall (*i.e.*, spall shields) shall not be required to meet the flammability and smoke emission performance requirements of § 299.413.

(5) Each end-facing exterior window in a cab shall, at a minimum, provide ballistic penetration resistance that meets the requirements of appendix A to part 223 of this chapter.

(c) *Trainset glazing; side-facing.* Except as provided in paragraph (d) of this section, each side-facing exterior window in a trainset shall comply with the requirements for Type II glazing as defined in part 223 of this chapter or other alternative standard approved by FRA.

(d) *Side-facing breakable glazing.* A side-facing exterior window intended to be breakable and serve as an emergency egress window may comply with an alternative standard approved for use by FRA under § 299.15.

(e) *Certification of Glazing Materials.* Glazing materials shall be certified in accordance with the following procedures:

(1) Each manufacturer that provides glazing materials, intended by the manufacturer for use in achieving compliance with the requirements of this subpart, shall certify that each type of glazing material being supplied for this purpose has been successfully tested in accordance with this section and that test verification data are available to the railroad or to FRA upon request.

(2) Tests performed on glazing materials for compliance with this part shall be conducted by either—

(i) An independent third party (lab, facility, underwriter); or

(ii) The glazing manufacturer, providing FRA with the opportunity to witness all tests by written notice, a minimum of 30 days prior to testing.

(3) Any glazing material certified to meet the requirements of this part shall be re-certified if any change is made to the glazing that may affect its mechanical properties or its mounting arrangement on the vehicle.

(4) All certification/re-certification documentation shall be made available to FRA upon request. The test verification data shall contain all pertinent original data logs and documentation that the selection of material samples, test set-ups, test measuring devices, and test procedures were performed by qualified individuals using recognized and acceptable practices and in accordance with this section.

(5) Glazing shall be marked in the following manner:

(i) Each end-facing exterior window in a cab shall be permanently marked, prior to installation, in such a manner that the marking is clearly visible after the material has been installed. The marking shall include:

(A) The words ''FRA TYPE IHS'' to indicate that the material meets the requirements specified in paragraph (b) of this section;

(B) The manufacturer of the material; and

(C) The type or brand identification of the material.

(ii) Each side-facing exterior window in a trainset shall be permanently marked, prior to installation, in such a manner that the marking is clearly visible after the material has been installed. The marking shall include:

(A) The words ''FRA TYPE II'' to indicate that the material meets the requirements specified in paragraph (c) of this section;

(B) The manufacturer of the material; and

(C) The type or brand identification of the material.

(f) *Glazing securement.* Each exterior window shall remain in place when subjected to—

(1) The forces due to air pressure differences caused when two trainsets pass at the minimum separation for two adjacent tracks, while traveling in opposite directions, each trainset traveling at the maximum approved trainset speed in accordance with § 299.609(g); and

(2) The impact forces that the exterior window is required to resist as specified in this section.

§ 299.409 Brake system.

(a) *General.* The railroad shall demonstrate through analysis and testing the maximum safe operating speed for its trainsets that results in no thermal damage to equipment or infrastructure during normal operation of the brake system.

(b) *Minimum performance requirement for brake system.* Each trainset's brake system, under the worst-case adhesion conditions as defined by the railroad, shall be capable of stopping the trainset from its maximum operating speed within the signal spacing existing on the track over which the trainset is operating.

(c) *Urgent brake system.* A trainset shall be provided with an urgent brake application feature that produces an irretrievable stop. An urgent brake application shall be available at any time, and shall be initiated by an unintentional parting of the trainset or by the trainset crew from the conductor rooms.

(d) *Application/release indication.* The brake system shall be designed so that an inspector may determine whether the brake system is functioning properly without being placed in a dangerous position on, under or between the equipment. This determination may be made through automated monitoring system that utilizes sensors to verify that the brakes have been applied and released.

(e) *Passenger brake alarm.* (1) A means to initiate a passenger brake alarm shall be provided at two locations in each unit of a trainset. The words ''Passenger Brake Alarm'' shall be legibly stenciled or marked on each device or on an adjacent badge plate.

(2) All passenger brake alarms shall be installed so as to prevent accidental activation.

(3) When a passenger brake alarm is activated, it shall initiate an emergency brake application. The emergency brake application can be overridden by the driver so that the trainset can be stopped at a safe location.

(4) To retrieve the emergency brake application described in paragraph (e)(3) of this section, the driver must activate appropriate controls to issue a command for brake application as specified in the railroad's operating rules.

(f) *Degraded brake system performance.* The following requirements address degraded brake system performance on the railroad's high-speed trainsets—

(1) Loss of power or failure of regenerative brake shall not result in exceeding the allowable stopping distance as defined by the railroad;

(2) The available friction braking shall be adequate to stop the trainset safely under the operating conditions defined by the railroad;

(3) The operational status of the trainset brake system shall be displayed for the driver in the operating cab; and

(4) Under §299.607(b)(5), the railroad shall demonstrate through analysis and testing the maximum speed for safely operating its trainsets using only the friction brake system with no thermal damage to equipment or infrastructure. The analysis and testing shall also determine the maximum safe operating speed for various percentages of operative friction brakes.

(g) *Main reservoir system.* The main reservoirs in a trainset shall be designed and tested to meet the requirements set forth in JIS B 8265:2010(E) (incorporated by reference, *see* §299.17). Reservoirs shall be certified based on their size and volume requirements.

(h) *Main reservoir tests.* Prior to initial installation, each main reservoir shall be subjected to a pneumatic or hydrostatic pressure test based on the maximum working pressure defined in paragraph (g) of this section unless otherwise established by the railroad's mechanical officer. Records of the test date, location, and pressure shall be maintained by the railroad for the life of the equipment. Periodic inspection requirements for main reservoirs shall be defined in the railroad's inspection, testing, and maintenance program required under §299.445.

(i) *Brake gauges.* All mechanical gauges and all devices providing electronic indication of air pressure that are used by the driver to aid in the control or braking of a trainset shall be located so that they can be conveniently read from the driver's normal position during operation of the trainset.

(j) *Brake application/release.* (1) Brake actuators shall be designed to provide brake pad clearance when the brakes are released.

(2) The minimum brake cylinder pressure shall be established to provide adequate adjustment from minimum service to emergency for proper trainset operation.

(k) *Leakage.* The method of inspection for main reservoir pipe and brake cylinder pipe leakage shall be prescribed in the railroad's inspection, testing, and maintenance program required by §299.445.

(l) *Slide alarm.* (1) A trainset shall be equipped with an adhesion control system designed to automatically adjust the braking force on each wheel to prevent sliding during braking.

(2) A wheel slide alarm that is visual or audible, or both, shall alert the driver in the operating cab to wheel-slide conditions on any axle of the trainset.

(3) Operating restrictions for a trainset with wheel slide protection devices that are not functioning as intended shall be defined by the railroad under its requirements for movement of defective equipment required by §299.447, and within the railroad's operating rules, as appropriate.

(m) *Monitoring and diagnostic system.* Each trainset shall be equipped with a monitoring and diagnostic system that is designed to assess the functionality of the brake system for the entire trainset automatically. Details of the system operation and the method of communication of brake system functionality prior to the dispatch of the trainset shall be described in detail in the railroad's Operating Rules and inspection, testing, and maintenance program required by §299.445.

(n) *Trainset securement.* Each trainset shall be equipped with a means of securing the equipment, independent of

the friction brake, on the grade condition defined by the railroad. The railroad's operating rules shall define procedures for trainset securement and the railroad shall demonstrate that these procedures effectively secure the equipment in accordance with § 299.607(b)(5).

(o) *Rescue operation; brake system.* A trainset's brake system shall be designed so as to allow a rescue vehicle or trainset to control its brakes when the trainset is disabled.

§ 299.411 Bogies and suspension system.

(a) *Wheel climb.* (1) Suspension systems shall be designed to reasonably prevent wheel climb, wheel unloading, rail rollover, rail shift, and a vehicle from overturning to ensure safe, stable performance and ride quality. These requirements shall be met—

(i) In all operating environments, and under all track conditions and loading conditions as determined by the railroad; and

(ii) At all track speeds and over all track qualities consistent with the requirements in subpart C of this part, up to the maximum trainset speed and maximum cant deficiency of the equipment in accordance with § 299.609(g).

(2) All passenger equipment shall meet the safety performance standards for suspension systems contained in § 299.609(h). In particular—

(i) *Vehicle/track system qualification.* All trainsets shall demonstrate safe operation during vehicle/track system qualification in accordance with § 299.609 and is subject to the requirements of § 299.315.

(ii) *Revenue service operation.* All passenger equipment in service is subject to the requirements of § 299.315.

(b) *Lateral accelerations.* The trainsets shall not operate under conditions that result in a steady-state lateral acceleration greater than 0.15g, as measured parallel to the car floor inside the passenger compartment.

(c) *Journal bearing overheat sensors.* Bearing overheat sensors shall be provided on all journal bearings on each trainset.

§ 299.413 Fire safety.

(a) *General.* All materials used in constructing the interior of the trainset shall meet the flammability and smoke emission characteristics and testing standards contained in appendix B to part 238 of this chapter. For purposes of this section, the interior of the trainset includes walls, floors, ceilings, seats, doors, windows, electrical conduits, air ducts, and any other internal equipment.

(b) *Certification.* The railroad shall require certification that a representative sample of combustible materials to be—

(1) Used in constructing a passenger car or a cab, or

(2) Introduced in a passenger car or a cab, as part of any kind of rebuild, refurbishment, or overhaul of the car or cab, has been tested by a recognized independent testing laboratory and that the results show the representative sample complies with the requirements of paragraph (a) of this section at the time it was tested.

(c) *Fire safety analysis.* The railroad shall ensure that fire safety considerations and features in the design of the trainsets reduce the risk of personal injury caused by fire to an acceptable level in its operating environment using a formal safety methodology. To this end, the railroad shall complete a written fire safety analysis for the passenger equipment being procured. In conducting the analysis, the railroad shall—

(1) Identify, analyze, and prioritize the fire hazards inherent in the design of the equipment.

(2) Take effective steps to design the equipment and select materials which help provide sufficient fire resistance to reasonably ensure adequate time to detect a fire and safely evacuate the passengers and crewmembers, if a fire cannot be prevented. Factors to consider include potential ignition sources; the type, quantity, and location of the materials; and availability of rapid and safe egress to the exterior of the equipment under conditions secure from fire, smoke, and other hazards.

(3) Reasonably ensure that a ventilation system in the equipment does not contribute to the lethality of a fire.

(4) Identify in writing any trainset component that is a risk of initiating fire and which requires overheat protection. An overheat detector shall be installed in any component when the analysis determines that an overheat detector is necessary.

(5) Identify in writing any unoccupied trainset compartment that contains equipment or material that poses a fire hazard, and analyze the benefit provided by including a fire or smoke detection system in each compartment so identified. A fire or smoke detector shall be installed in any unoccupied compartment when the analysis determines that such equipment is necessary to ensure sufficient time for the safe evacuation of passengers and crewmembers from the trainset. For purposes of this section, an unoccupied trainset compartment means any part of the equipment structure that is not normally occupied during operation of the trainset, including a closet, baggage compartment, food pantry, etc.

(6) Determine whether any occupied or unoccupied space requires a portable fire extinguisher and, if so, the proper type and size of the fire extinguisher for each location. As required by § 239.101 of this chapter, each passenger car is required to have a minimum of one portable fire extinguisher. If the analysis performed indicates that one or more additional portable fire extinguishers are needed, such shall be installed.

(7) Analyze the benefit provided by including a fixed, automatic fire-suppression system in any unoccupied trainset compartment that contains equipment or material that poses a fire hazard, and determine the proper type and size of the automatic fire-suppression system for each such location. A fixed, automatic fire-suppression system shall be installed in any unoccupied compartment when the analysis determines that such equipment is practical and necessary to ensure sufficient time for the safe evacuation of passengers and crewmembers from the trainset.

(8) Explain how safety issues are resolved in the design of the equipment and selection of materials to reduce the risk of each fire hazard.

(9) Describe the analysis and testing necessary to demonstrate that the fire protection approach taken in the design of the equipment and selection of materials meets the fire protection requirements of this part.

(d) *Inspection, testing, and maintenance.* The railroad shall develop and adopt written procedures for the inspection, testing, and maintenance of all fire safety systems and fire safety equipment on the passenger equipment it operates under § 299.445(b), and subpart G of this part. The railroad shall comply with those procedures that it designates as mandatory for the safety of the equipment and its occupants.

§ 299.415 Doors.

(a) Each powered, exterior side door in a vestibule that is partitioned from the passenger compartment of a trainset shall have a manual override device that is—

(1) Capable of releasing the door to permit it to be opened without power.

(2) Located such that—

(i) Interior access is provided adjacent to each manual door release mechanism; and,

(ii) Exterior access is provided on each side of each car.

(3) Designed and maintained so that a person may access and operate the override device readily without requiring the use of a tool or other implement.

(4) The railroad may protect a manual override device used to open a powered, exterior door with a cover or a screen.

(5) When a manual override device is activated, door panel friction, including seals and hangers, shall allow the doors to be opened or closed manually with as low a force as practicable.

(6) The emergency release mechanism shall require manual reset.

(b) Each passenger car shall have a minimum of one exterior side door per side. Each such door shall provide a minimum clear opening with dimensions of 813 mm (32 inches) horizontally by 1,850 mm (72.8 inches) vertically.

(c) Door exits shall be marked, and instructions provided for their use, as specified in § 299.423.

(d) All doors intended for access by emergency responders shall be marked,

and instructions provided for their use, as specified in § 299.423.

(e) Vestibule doors and other interior doors intended for passage through a passenger car.

(1) *General.* Except for a door providing access to a control compartment each powered vestibule door and any other powered interior door intended for passage through a passenger car shall have a manual override device that conforms with the requirements of paragraphs (e)(2) and (3) of this section.

(2) *Manual override devices.* Each manual override device shall be:

(i) Capable of releasing the door to permit it to be opened without power;

(ii) Located adjacent to the door it controls; and

(iii) Designed and maintained so that a person may readily access and operate the override device from each side of the door without the use of a tool or other implement.

(3) *Marking and instructions.* Each manual override device and each retention mechanism shall be marked, and instructions provided for their use, as specified in § 299.423.

(f) The status of each powered, exterior side door in a passenger car shall be displayed to the driver in the operating cab. Door interlock sensors shall be provided to detect trainset motion and shall be nominally set to operate at 5 km/h.

(g) All powered exterior side passenger doors shall—

(1) Be equipped with the service-proven door safety system utilized by the N700 or an alternate door safety system designed subject to a Failure Modes, Effects, Criticality Analysis (FMECA);

(2) Be designed with an obstruction detection system capable of detecting a rigid flat bar, 6.4 mm (¼ inches) wide and 76 mm (3 inches) high and a rigid rod, 9.5 mm (⅜ inches) in diameter;

(3) Incorporate an obstruction detection system sufficient to detect large obstructions;

(4) Be designed so that activation of a door by-pass feature does not affect the operation of the obstruction detection system on all the other doors on the trainset;

(5) Have the door control station located in a secured area that is only accessible to crewmembers or maintenance personnel;

(6) Be designed such that the door open or closed circuit is not affected by the throttle position; and

(7) Use discrete, dedicated trainlines for door-open and door-close commands, door-closed summary circuit, and no motion, if trainlined.

(h) All powered exterior side door systems in a trainset shall—

(1) Be designed with a door summary circuit. The door summary circuit shall be connected or interlocked to prohibit the trainset from developing tractive power if an exterior side door in a passenger car, other than a door under the direct physical control of a crewmember for his or her exclusive use, is not closed;

(2) Be connected to side door status indicators located on the exterior of each unit of the trainset;

(3) Be connected to a door summary status indicator that is readily viewable to the driver from his or her normal position in the operating cab;

(4) If equipped with a trainset-wide door by-pass device, be designed so that the trainset-wide door by-pass functions only when activated from the operating cab of the trainset;

(5) Be equipped with a lock (cut-out/lock-out) mechanism installed at each door panel to secure a door in the closed and locked position. When the lock mechanism is utilized to secure the door in the closed position, a door-closed indication shall be provided to the door summary circuit; and

(6) Be designed such that a crew key or other secure device be required to lock-out an exterior side door to prevent unauthorized use.

(i)(1) *Visual inspections and functional tests.* The inspection and functional tests required for the door safety system, including the trainset-wide door by-pass verification, shall be conducted in accordance with the railroad's trainset inspection, testing, and maintenance program in accordance with § 299.445, and operating rules under subpart E.

(2) *Face-to-face relief.* Crewmembers taking control of a trainset do not need to perform a visual inspection or a functional test of the door by-pass devices in cases of face-to-face relief of

another trainset crew and notification by that crew as to the functioning of the door by-pass devices.

(j) The railroad shall maintain a record of each door by-pass activation and each unintended opening of a powered exterior side door, including any repair(s) made, in the defect tracking system as required by § 299.445(h).

§ 299.417 Emergency lighting.

(a) *General.* Emergency lighting shall be provided in each unit of a trainset. The emergency lighting system shall be designed to facilitate the ability of passengers and trainset crew members, and/or emergency responders to see and orient themselves, to identify obstacles, in order to assist them to safely move through and out of a passenger rail car.

(1) Emergency lighting shall illuminate the following areas:

(i) Passenger car aisles, passageways, and toilets;

(ii) Door emergency exit controls/manual releases;

(iii) Vestibule floor near the door emergency exits (to facilitate safe entrance/exit from the door);

(iv) Within the car diaphragm and adjacent area; and

(v) Specialty car locations such as crew offices.

(b) *Minimum illumination levels.* (1) A minimum, average illumination level of 10.7 lux (1 foot-candle) measured at floor level adjacent to each exterior door and each interior door providing access to an exterior door (such as a door opening into a vestibule);

(2) A minimum, average illumination level of 10.7 lux (1 foot-candle) measured 635 mm (25 inches) above floor level along the center of each aisle and passageway;

(3) A minimum illumination level of 1.1 lux (0.1 foot-candle) measured 635 mm (25 inches) above floor level at any point along the center of each aisle and passageway;

(c) *Lighting activation.* Each emergency lighting fixture shall activate automatically or be energized continuously whenever the car is in revenue service and normal lighting is not available.

(d) *Independent power source.* Emergency lighting system shall have an independent power source(s) that is located in or within one half a car length of each light fixture it powers.

(e) *Functional requirements.* Emergency lighting system components shall be designed to operate without failure and capable of remaining attached under the conditions typically found in passenger rail equipment including expected mechanical vibrations, and shock in accordance with § 299.405(a)(1), as well as comply with electromagnetic interference criteria in § 299.435(e).

(1) All emergency lighting system components shall be capable to operate in all railcar orientations.

(2) All emergency lighting system components shall be capable to operate when normal power is unavailable for 90 minutes without a loss of more than 40% of the minimum illumination levels specified in paragraph (b) of this section.

(f) *Inspection.* (1) The railroad shall inspect the emergency lighting system as required by its inspection, testing, and maintenance program in accordance with § 299.445.

(2) If batteries are used as independent power sources, they shall have automatic self-diagnostic modules designed to perform discharge tests.

§ 299.419 Emergency communication.

(a) *PA (public address) system.* Each passenger car shall be equipped with a PA system that provides a means for a trainset crewmember to communicate by voice to passengers of his or her trainset in an emergency situation. The PA system shall also provide a means for a trainset crewmember to communicate by voice in an emergency situation to persons in the immediate vicinity of his or her trainset (*e.g.*, persons on the station platform). The PA system may be part of the same system as the intercom system.

(b) *Intercom system.* Each passenger car shall be equipped with an intercom system that provides a means for passengers and crewmembers to communicate by voice with each other in an emergency situation. Except as further specified, at least one intercom that is accessible to passengers without using a tool or other implement shall be located in each end (half) of each car.

(c) *Marking and instructions.* The following requirements apply to all units of a trainset:

(1) The location of each intercom intended for passenger use shall be conspicuously marked with HPPL material in accordance with § 299.423; and

(2) Legible and understandable operating instructions shall be made of HPPL material in accordance with § 299.423 and posted at or near each such intercom.

(d) *Back-up power.* PA and intercom systems shall have a back-up power system capable of—

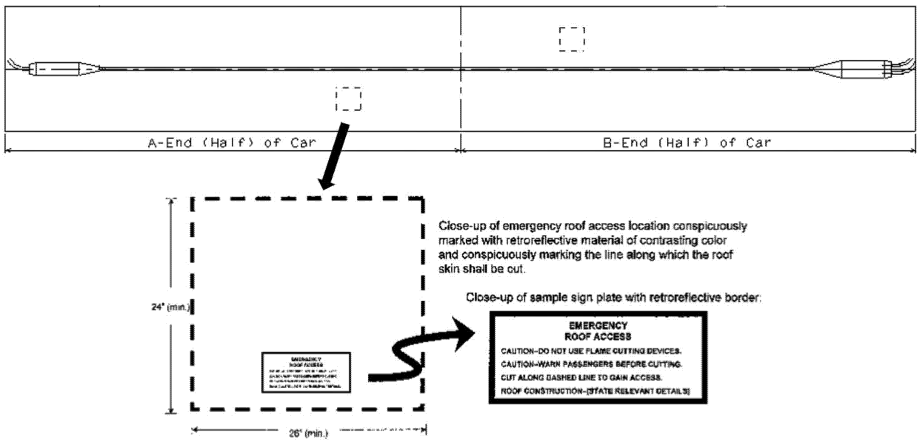
(1) Powering each system to allow intermittent emergency communication for a minimum period of 90 minutes. Intermittent communication shall be considered equivalent to continuous communication during the last 15 minutes of the 90-minute minimum period; and

(2) Operating in all equipment orientations within 90 degrees of vertical.

(e) *Additional requirements.* The PA and intercom systems shall be designed to operate without failure and remain attached under the conditions typically found in passenger rail equipment including expected mechanical vibrations, and shock in accordance with § 299.405(a)(1), as well as comply with electromagnetic interference criteria in § 299.435(e).

§ 299.421 Emergency roof access.

(a) *Number and dimensions.* Each passenger car shall have a minimum of two emergency roof access locations, each providing a minimum opening of 660 mm (26 inches) longitudinally (*i.e.*, parallel to the longitudinal axis of the car) by 610 mm (24 inches) laterally.



(b) *Means of access.* Emergency roof access shall be provided by means of a conspicuously marked structural weak point in the roof for access by properly equipped emergency response personnel.

(c) *Location.* Emergency roof access locations shall be situated so that when a car is on its side—

(1) One emergency access location is situated as close as practicable within each half of the roof as divided top from bottom; and

(2) One emergency access location is situated as close as practicable within each half of the roof as divided left from right. (*See* Figure 1 to this paragraph.)

Figure 1 to paragraph (c)(2) - Example of Location of Emergency Roof Access

(d) *Obstructions.* The ceiling space below each emergency roof access location shall be free from wire, cabling, conduit, and piping. This space shall

also be free of any rigid secondary structure (*e.g.*, a diffuser or diffuser support, lighting back fixture, mounted PA equipment, or luggage rack) where practicable. It shall be permissible to cut through interior panels, liners, or other non-rigid secondary structures after making the cutout hole in the roof, provided any such additional cutting necessary to access the interior of the vehicle permits a minimum opening of the dimensions specified in paragraph (a) of this section to be maintained.

(e) *Marking instructions.* Each emergency roof access location shall be conspicuously marked with retroreflective material of contrasting color meeting the minimum requirements specified in §299.423. Legible and understandable instructions shall be posted at or near each such location.

§299.423 Markings and instructions for emergency egress and rescue access.

(a) *General.* Instructions and markings shall be provided in each unit of a trainset in accordance with the minimum requirements of this section to provide instructions for passengers and trainset crewmembers regarding emergency egress, and rescue access instructions for emergency responders.

(b) *Visual identity and recognition.* Emergency exit signage/marking systems shall enable passengers and trainset crewmembers to make positive identification of emergency exits.

(1) Each interior emergency exit sign and emergency exit locator sign shall be conspicuous (*i.e.*, clearly recognizable/distinguishable) or become conspicuous to passengers and trainset crewmembers immediately and automatically upon the loss of power for normal lighting, from a minimum distance of 1.52 m (5 feet).

(2) The signs and markings shall operate independently of the car's normal and emergency lighting systems, for a minimum of 90 minutes after loss of all power for normal lighting.

(3) An emergency exit locator sign shall be located in close proximity of each emergency exit and shall work in conjunction with the emergency exit sign. The location of the sign, directional arrow(s), or wording shall guide passengers and trainset crewmembers to the emergency exit route.

(c) *Rescue access signage/marking systems.* (1) Rescue access signage and marking systems shall enable emergency responders to make positive identification of rescue access points.

(2) Rescue access information for emergency responders placed on the exterior of the carbody shall, at a minimum, consist of the following:

(i) Each door intended for use by emergency responders for rescue access shall be identified with emergency access signs, symbols, or other conspicuous marking consisting of retroreflective material that complies with paragraphs (d) and (e) of this section.

(ii) Rescue access door control locator signs/markings and instructions;

(A) Each door intended for use by emergency responders for rescue access shall have operating instructions for opening the door from outside the car placed on or immediately adjacent to the door on the carbody. If a power door does not function with an integral release mechanism, the instructions shall indicate the location of the exterior manual door control.

(B) Each power door intended for use by emergency responders for rescue access which has a non-integral release mechanism located away from the door, shall have a door control sign/marking placed at the location of this control that provides instructions for emergency operation, either as part of the access sign/marking or as another sign/marking.

(C) Each car equipped with manual doors shall have operating instructions for opening the door from the exterior, either as part of the access sign/marking or as another sign/marking.

(iii) Rescue access window locator signs/markings and instructions; and

(A) Each rescue access window shall be identified with a unique retroreflective and easily recognizable sign, symbol, or other conspicuous marking that complies with paragraphs (d) and (e) of this section.

(B) Signs, symbols, or marking shall be placed at the bottom of each such window, on each window, or adjacent to each window, utilizing arrows, where necessary, to clearly designate

rescue assess window location. Legible and understandable window-access instructions, including any pictogram/instructions for removing the window, shall be posted at or near each rescue access window.

(iv) Roof access locator signs/markings and instructions.

(A) The location of each emergency access point provided on the roof of a passenger car shall be clearly marked with retroreflective material of contrasting color that complies with paragraphs (d) and (e) of this section.

(B) Legible and understandable instructions shall be posted at or near each such location.

(C) If emergency roof access is provided by means of a structural weak point:

(*1*) The retroreflective material shall clearly mark the line along which the roof skin shall be cut; and

(*2*) A sign plate with a retroreflective border shall also state:

CAUTION—DO NOT USE FLAME CUTTING DEVICES.

CAUTION—WARN PASSENGERS BEFORE CUTTING.

CUT ALONG DASHED LINE TO GAIN ACCESS.

ROOF CONSTRUCTION—[STATE RELEVANT DETAILS].

(d) *Color contrast.* Exterior signs/markings shall provide luminance contrast ratio of not less than 0.5, as measured by a color-corrected photometer.

(e) *Materials*—(1) *Retroreflective material.* Exterior emergency rescue access locator signs/markings shall be constructed of retroreflective material that conforms to the specifications for Type I material sheeting, as specified in ASTM D 4956–07$^{\varepsilon 1}$ (incorporated by reference, *see* § 299.17), as tested in accordance with ASTM E 810–03 (incorporated by reference, *see* § 299.17).

(2) *HPPL materials.* All HPPL materials used in finished component configurations shall comply with the minimum luminance criterion of 7.5 mcd/m^2 after 90 minutes when tested according to the provisions of ASTM E 2073–07 (incorporated by reference, *see* § 299.17), with the following three modifications:

(i) *Activation.* The HPPL material shall be activated with a fluorescent lamp of 40W or less and a color temperature of 4000–4500K that provides no more than 10.7 lux (1 fc) of illumination as measured on the material surface. The activation period shall be for no more than 60 minutes.

(ii) *Luminance.* The photopic luminance of all specimens of the HPPL material shall be measured with a luminance meter as defined in section 5.2 of ASTM E 2073–07, a minimum of 90 minutes after activation has ceased.

(iii) *Luminance in mcd/m*^{2}. The test report shall include a luminance measurement 90 minutes after activation has ceased.

(f) *Recordkeeping.* (1) The railroad shall retain a copy of the car manufacturer/supplier provided independent laboratory certified test report results showing that the illuminance or luminance measurements, as appropriate, on the active area of the signage/marking component. Such records shall be kept until all cars with those components are retired, transferred, leased, or conveyed to another railroad for use in revenue service. A copy of such records shall be transferred to the accepting railroad along with any such cars.

(2) The railroad shall retain a copy of the railroad-approved illuminance test plan(s) and test results until the next periodic test, or other test specified in accordance with the railroad's inspection, testing, and maintenance program is conducted on a representative car/area, or until all cars of that type are retired, or are transferred, leased, or conveyed to another railroad. A copy of such records shall be transferred to the accepting railroad along with such car(s).

(3) The railroad shall retain a copy of the certified independent laboratory test report results that certify that the retroreflective material complies with Type I materials per ASTM D–4956–07$^{\varepsilon 1}$ until all cars containing the retroreflective material are retired, or are transferred, leased, or conveyed to another railroad. A copy of such records shall be provided to the accepting railroad along with any car(s) that are transferred, leased, or conveyed.

§ 299.425 Low-location emergency exit path marking.

(a) *General.* Low-location emergency exit path marking (LLEEPM) shall be provided in each unit of a trainset. The LLEEPM system shall be designed to identify the location of primary door exits and the exit path to be used to reach such doors by passengers and trainset crewmembers under conditions of darkness when normal and emergency sources of illumination are obscured by smoke or are inoperative.

(b) *Visual identity and recognition.* The LLEEPM system shall be conspicuous (*i.e.*, clearly recognizable/distinguishable), or become conspicuous immediately and automatically from a low-location upon loss of power for normal lighting, and under the minimum general emergency light illumination levels as specified in § 299.423.

(c) *Signage and markings.* At a minimum, the LLEEPM system shall have the following three components:

(1) *Primary door exit signs.* (i) Each primary door exit shall be clearly marked with an exit sign;

(ii) The exit sign shall be visible from a low-location from the exit along the exit path; and

(iii) Each exit sign shall be located on or immediately adjacent to each door and placed between 152.4 and 457.2 mm (6 and 18 inches) above the floor.

(2) *Primary door exit marking/delineators.* (i) The location of the exit path shall be marked using electrically powered (active) marking/delineators or light fixtures, HPPL (passive) marking/delineators or a combination of these two systems.

(ii) The requirements in this section apply for both electrical and HPPL components, whether installed on the walls, floors, or seat assemblies.

(iii) Each primary door shall be marked on or around the door's operating handle.

(3) *Exit path marking/delineators.* (i) The marking/delineator components shall be positioned so as to identify an exit path to all primary exits that is clearly visible and easily recognizable from any seat or compartment in the trainset, when normal lighting and emergency lighting are unavailable in conditions of darkness and/or smoke.

(ii) Markings/delineators shall be located on the floor or no higher than 457.2 mm (18 inches) on the seat assembly, or walls/partitions of aisles, and/or passageways.

(iii) Changes in the direction of the exit path shall be indicated by the LLEEPM and be placed within 102 mm (4 inches) of the corner of the exit path.

(d) *Material*—(1) *HPPL passive systems.* HPPL strip marking/delineator material used for LLEEPM components shall be capable of providing a minimum luminance level of 7.5 mcd/m^2, measured 90 minutes after normal power has ceased.

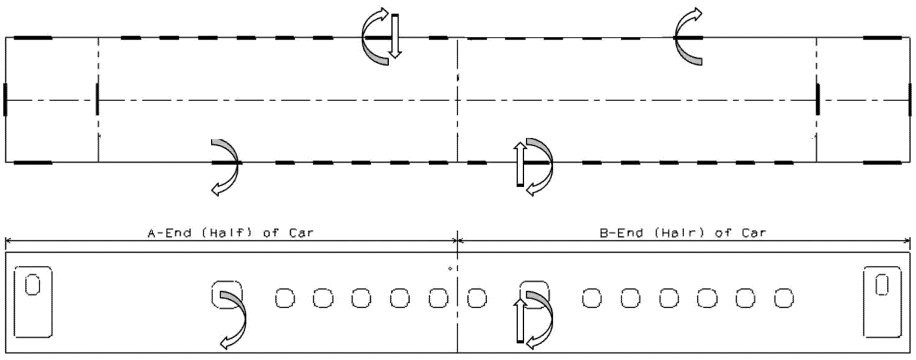
(2) *Electroluminescent marking/delineator strips.* The luminance value of the electroluminescent (EL) marking/delineator strip shall be at least 1,000 mcd/m^2, as measured on the strip surface.

(e) *Conspicuity of markings.* LLEEPM signs shall comply with the text, color and respective illuminance or luminance requirements specified in § 299.423 and in this section.

(f) *Emergency performance duration.* The LLEEPM system shall operate independently of the car's normal and emergency lighting systems for 90 minutes after loss of all power for normal lighting.

(g) *Recordkeeping.* (1) The railroad shall retain a copy of the car manufacturer/supplier provided certified independent laboratory test report results showing that the illuminance or luminance measurements, as appropriate, on the active area of the signage/marking/delineator component comply with the criteria specified in § 299.423 and in this section.

(2) The railroad shall retain a copy of the railroad-approved illuminance test plan(s) and test results until the next periodic test, or other test specified in accordance with the railroad's inspection, testing, and maintenance program and ensure that tests are conducted on a representative car, or until all cars of that type are retired, transferred, leased, or conveyed to another railroad. A copy of such records shall be provided to the accepting railroads along with any car(s) that are transferred, leased, or conveyed.



(3) Illegible, broken, damaged, missing, or non-functioning components of

the LLEEPM system, including the normal and emergency power systems, shall be reported and repaired in accordance with the railroad's inspection, testing, and maintenance program as specified in § 299.445.

§ 299.427 Emergency egress windows.

(a) *Number and location.* Each unit in a trainset shall have a minimum of four emergency egress windows. At least one emergency egress window shall be located in each side of each end (half) of the car, in a staggered configuration where practicable. (See Figure 1 to this paragraph.)

Figure 1 to paragraph (a) - Example of Location and Staggering of Emergency Egress and Rescue Access Windows—Top and Side View Depictions

(b) *Ease of operability.* Each emergency egress window shall be designed to permit rapid and easy removal from the inside of the car during an emergency situation using a hammer designed to break the glazing that shall be located adjacent to each emergency egress window. The railroad shall inspect for the presence of the emergency hammers each day prior to the trainset being placed into service in accordance with § 299.711(b).

(c) *Dimensions.* Except as provided in paragraph (f) of this section, each emergency egress window in a passenger car shall have an unobstructed opening with minimum dimensions of 660 mm (26 inches) horizontally by 610 mm (24 inches) vertically. A seatback is not an obstruction if it can be moved away from the window opening without using a tool or other implement.

(d) *Marking and instructions.* (1) Each emergency egress window shall be conspicuously and legibly marked with luminescent material on the inside of each car to facilitate passenger egress as specified in § 299.423.

(2) Legible and understandable operating instructions, including instructions for removing the emergency egress window shall be made of luminescent material, shall be posted at or near each such emergency egress window as specified in § 299.423.

(e) *Obstructions.* If emergency egress window removal may be hindered by the presence of a seatback, headrest, luggage rack, or other fixture, the instructions shall state the method for allowing rapid and easy removal of the emergency egress window, taking into account the fixture(s), and this portion of the instructions may be in written or pictorial format.

(f) *Additional emergency egress windows.* Any emergency egress window in addition to the minimum number required by paragraph (a) of this section that has been designated for use by the

railroad need not comply with the minimum dimension requirements in paragraph (c) of this section, but must otherwise comply with all requirements in this subpart applicable to emergency egress windows.

§ 299.429 Rescue access windows.

(a) *General.* Each emergency egress window required by § 299.427 shall also serve as a means of rescue access.

(b) *Ease of operability.* Each rescue access window must be capable of being removed without unreasonable delay by an emergency responder using tools or implements that are commonly available to the responder in a passenger trainset emergency.

(c) *Marking and instructions.* (1) Each rescue access window shall be marked with retroreflective material on the exterior of each car as specified in § 299.423. A unique and easily recognizable symbol, sign, or other conspicuous marking shall also be used to identify each such window.

(2) Legible and understandable window-access instructions, including instructions for removing the window, shall be posted at or near each rescue access window as specified in § 299.423.

§ 299.431 Driver's controls and cab layout.

(a) *Driver controls and cab layout.* Driver controls and cab layout shall replicate that used in the N700, unless otherwise approved by FRA.

(b) *Cab seating.* Each seat provided for an employee regularly assigned to occupy a cab and any floor-mounted seat in the cab shall be securely attached in accordance with § 299.405.

(c) *Cab interior surface.* Sharp edges and corners shall be eliminated from the interior of the cab, and interior surfaces of the cab likely to be impacted by an employee during a collision or derailment shall be padded with shock-absorbent material.

(d) *Cab securement.* Trainset interior cab doors shall be equipped with the following:

(1) A secure and operable device to lock the door from the outside that does not impede egress from the cab; and

(2) A securement device on each cab door that is capable of securing the door from inside of the cab.

(e) *Cab glazing serviceability.* End-facing cab windows of the lead trainset cab shall be free of cracks, breaks, or other conditions that obscure the view of the right-of-way for the crew from their normal position in the cab.

(f) *Floors of cabs, passageways, and compartments.* Floors of cabs, passageways, and compartments shall be kept free from oil, water, waste or any obstruction that creates a slipping, tripping or fire hazard. Floors shall be properly treated to provide secure footing.

(g) *Cab environmental control.* Each lead cab in a trainset shall be heated and air conditioned. The HVAC system shall be inspected and maintained to ensure that it operates properly and meets the railroad's performance standard which shall be defined in the inspection, testing, and maintenance program.

(h) *Trainset cab noise.* Performance standards for the railroad's trainsets—

(1) The average noise levels in the trainset cab shall be less than or equal to 85 dB(A) when the trainset is operating at maximum approved trainset speed as approved under § 299.609(g). Compliance with this paragraph (h)(1) shall be demonstrated during the pre-revenue service system integration testing as required by § 299.607.

(2) The railroad shall not make any alterations during maintenance or modifications to the cab, that cause the average sound level to exceed the requirements in paragraph (h)(1) of this section.

(3) The railroad or manufacturer shall follow the test protocols set forth in appendix B to this part to determine compliance with paragraph (h)(1) of this section, and, to the extent reasonably necessary to evaluate the effect of alterations during maintenance, to determine compliance with paragraph (h)(2) of this section.

(i) *Maintenance of trainset cabs.* (1) If the railroad receives an excessive noise report, and if the condition giving rise to the noise is not required to be immediately corrected under this part, the railroad shall maintain a record of the report, and repair or replace the item

identified as substantially contributing to the noise:

(i) On or before the next periodic inspection required by the railroad's inspection, testing, and maintenance program under subpart G; or

(ii) If the railroad determines that the repair or replacement of the item requires significant shop or material resources that are not readily available, at the time of the next major equipment repair commonly used for the particular type of maintenance needed.

(2) The railroad has an obligation to respond to an excessive noise report that a trainset-cab-occupant files. The railroad meets its obligation to respond to an excessive noise report, as set forth in paragraph (i)(1) of this section, if the railroad makes a good faith effort to identify the cause of the reported noise, and where the railroad is successful in determining the cause, if the railroad repairs or replaces the items that cause the noise.

(3)(i) The railroad shall maintain a written or electronic record of any excessive noise report, inspection, test, maintenance, replacement, or repair completed pursuant to paragraph (i) of this section, and the date on which that inspection, test, maintenance, replacement, or repair occurred. If the railroad elects to maintain an electronic record, the railroad must satisfy the conditions listed in § 299.11.

(ii) The railroad shall retain these records for a period of one year.

(iii) The railroad shall establish an internal, auditable, monitorable system that contains these records.

(j) *Trainset sanitation facilities for employees.* Sanitation facilities shall be provided for crewmembers either:

(1) On the trainset, that meet otherwise applicable sanitation standards, which are accessible at frequent intervals during the course of their work shift; or

(2) Ready access to railroad-provided sanitation facilities outside of the trainset.

(k) *Speed indicators.* (1) Each trainset controlling cab shall be equipped with a speed indicator which is—

(i) Accurate within ±2 km/h (1.24 miles per hour) for speed lower than 30 km/h (18.6 miles per hour), then increasing linearly up to ±12 km/h (7.5 miles per hour) at 500 km/h (311 miles per hour); and

(ii) Clearly readable from the driver's normal position under all light conditions.

(2) The speed indicator shall be based on a system of independent on-board speed measurement sources guaranteeing the accuracy level specified in paragraph (a)(1) of this section under all operational conditions. The system shall be automatically monitored for inconsistencies and the driver shall be automatically notified of any inconsistency potentially compromising this accuracy level.

(3) The speed indicator shall be calibrated periodically as defined in the railroad's inspection, testing, and maintenance program.

(l) *Cab lights.* (1) Each trainset cab shall have cab lights which will provide sufficient illumination for the control instruments, meters, and gauges to enable the driver to make accurate readings from his or her normal positions in the cab. These lights shall be located, constructed, and maintained so that light shines only on those parts requiring illumination and does not interfere with the driver's vision of the track and signals. Each trainset cab shall also have a conveniently located light that can be readily turned on and off by the driver operating the trainset and that provides sufficient illumination for them to read trainset orders and timetables.

(2) Cab passageways and compartments shall be illuminated.

§ 299.433 Exterior lights.

(a) *Headlights.* Each leading end of a trainset shall be equipped with two or more headlights.

(1) Each headlight shall produce 80,000 candela.

(2) Headlights shall be arranged to illuminate signs in the right-of-way.

(3) Headlights shall be recognized 600 m (1,968 feet) ahead of the cab car by a driver in another trainset or a maintenance person standing in the right-of-way under clear weather conditions.

(b) *Taillights (marking devices).* (1) The trailing end of the trainset shall be equipped with two red taillights;

(2) Each taillight shall be located at least 1.2 m (3.9 feet) above rail;

(3) Each taillight shall be recognizable 200 m (656 feet) ahead of the cab car by a driver in another trainset or a maintenance person standing in the right-of-way under clear weather conditions;

(4) Taillights of the trailing end of the trainset shall be on when the trainset is in operation;

(5) Taillights shall not be on in the direction of trainset travel, except if the driver shall re-position the trainset in a station. Such re-positioning operations shall be done in accordance with the railroad's operating rules; and

(6) In an emergency situation, the headlight on the rear of the trainset may serve as the taillights in accordance with the railroad's operating rules.

§ 299.435 Electrical system design.

(a) *Overhead collector systems.* (1) Pantographs shall be so arranged that they can be operated from the driver's normal position in the cab. Pantographs that automatically rise when released shall have an automatic locking device to secure them in the down position.

(2) Each overhead collector system, including the pantograph, shall be equipped with a means to electrically ground any uninsulated parts to prevent the risk of electrical shock when working on the system.

(3) Means shall be provided to permit the driver to determine that the pantograph is in its lowest position, and for securing the pantograph if necessary, without the need to mount the roof of the trainset.

(4) Each trainset equipped with a pantograph operating on an overhead collection system shall also be equipped with a means to safely lower the pantograph in the event of an emergency. If an emergency pole is used for this purpose, that part of the pole which can be safely handled shall be marked to so indicate. This pole shall be protected from moisture and damage when not in use. Means of securement and electrical isolation of a damaged pantograph, when it cannot be performed automatically, shall be addressed in the railroad's operating rules.

(b) *Circuit protection.* (1) Each auxiliary circuit shall be provided with a circuit breaker or equivalent current-limiting devices located as near as practicable to the point of connection to the source of power for that circuit. Such protection may be omitted from circuits controlling safety-critical devices.

(2) The 25-kV main power line shall be protected with a lightning arrestor, automatic circuit breaker, and overload relay. The lightning arrestor shall be run by the most direct path possible to ground with a connection to ground of not less than No. 6 AWG. These overload protection devices shall be housed in an enclosure designed specifically for that purpose with the arc chute vented directly to outside air.

(3) Auxiliary power supply (440 VAC), providing power distribution, shall be provided with both overload and ground fault protection.

(c) *Main battery system.* (1) The main batteries shall be isolated from the cab and passenger seating areas by a non-combustible barrier.

(2) If batteries have the potential to vent explosive gases, the batteries shall be adequately ventilated to prevent accumulation of explosive concentrations of these gases.

(3) Battery chargers shall be designed to protect against overcharging.

(4) Battery circuits shall include an emergency battery cut-off switch to completely disconnect the energy stored in the batteries from the load.

(d) *Capacitors for high-energy storage.* (1) Capacitors, if provided, shall be isolated from the cab and passenger seating areas by a non-combustible barrier.

(2) Capacitors shall be designed to protect against overcharging and overheating.

(e) *Electromagnetic interference (EMI) and electromagnetic compatibility (EMC).* (1) The railroad shall ensure electromagnetic compatibility of the safety-critical equipment systems with their environment. Electromagnetic compatibility can be achieved through equipment design or changes to the operating environment.

(2) The electronic equipment shall not produce electrical noise that interferes with trainline control and communications or with wayside signaling systems.

(3) To contain electromagnetic interference emissions, suppression of transients shall be at the source wherever possible.

(4) Electrical and electronic systems of equipment shall be capable of operation in the presence of external electromagnetic noise sources.

(5) All electronic equipment shall be self-protected from damage or improper operation, or both, due to high voltage transients and long-term overvoltage or under-voltage conditions. This includes protection from both power frequency and harmonic effects as well as protection from radio frequency signals into the microwave frequency range.

(f) *Insulation or grounding of metal parts.* All unguarded noncurrent-carrying metal parts subject to becoming charged shall be grounded or thoroughly insulated.

(g) *High voltage markings: doors, cover plates, or barriers.* External surfaces of all doors, cover plates, or barriers providing direct access to high voltage equipment shall be conspicuously and legibly marked ''DANGER–HIGH VOLTAGE'' or with the word ''DANGER'' and the normal voltage carried by the parts so protected. Labels shall be retro-reflective.

(h) *Hand-operated switches.* All hand-operated switches carrying currents with a potential of more than 150 volts that may be operated while under load shall be covered and shall be operative from the outside of the cover. Means shall be provided to show whether the switches are open or closed. Switches that should not be operated while under load shall be conspicuously and legibly marked with the words ''must not be operated under load'' and the voltage carried.

(i) *Conductors; jumpers; cable connections.* (1) Conductor sizes shall be selected on the basis of current-carrying capacity, mechanical strength, temperature, flexibility requirements, and maximum allowable voltage drop. Current-carrying capacity shall be derated for grouping and for operating temperature.

(2) Jumpers and cable connections between trainset units shall be located and guarded to provide sufficient vertical clearance. They may not hang with one end free.

(3) Cable and jumper connections between trainset units may not have any of the following conditions:

(i) Broken or badly chafed insulation;

(ii) Broken plugs, receptacles, terminals, or trainline pins; and

(iii) Broken or protruding strands of wire.

(j) *Traction motors.* All traction motors shall be in proper working order, or safely cut-out.

§ 299.437 Automated monitoring.

(a) Each trainset shall be equipped to monitor the performance of the following systems or components:

(1) Reception of cab and trainset control signals;

(2) Electric brake status;

(3) Friction brake status;

(4) Fire detection systems, if so equipped;

(5) Auxiliary power status;

(6) Wheelslide;

(7) On-board bearing-temperature sensors;

(8) Door open/closed status; and

(9) Bogie vibration detection.

(b) When any of the monitored parameters are out of predetermined limits, an alert shall be sent immediately to the driver. The railroad's operating rules shall control trainset movement when the monitored parameters are out of predetermined limits.

(c) The railroad shall develop appropriate operating rules to address driver and equipment performance in the event that the automatic monitoring system becomes defective.

(d) The monitoring system shall be designed with an automatic self-test feature that notifies the driver that the monitoring capability is functioning correctly and alerts the driver when a system failure occurs.

§ 299.439 Event recorders.

(a) *Duty to equip and record.* Each trainset shall be equipped with an operative event recorder that monitors and records as a minimum all safety data

required by paragraph (b) of this section. The event recorder shall record the most recent 48 hours of operational data of the trainset on which it is installed.

(b) *Equipment requirements.* Event recorders shall monitor and record data elements or information needed to support the data elements required by paragraph (c) of this section. The data shall be recorded with at least the accuracy required of the indicators displaying any of the required data elements to the driver.

(c) *Data elements.* The event recorder shall be equipped with a certified crashworthy event recorder memory module that meets the requirements of appendix A to this part. The certified event recorder memory module shall be mounted for its maximum protection. The event recorder shall record, and the certified crashworthy event recorder memory module shall retain, the following data elements or information needed to support the data elements:

(1) Trainset speed;

(2) Selected direction of motion;

(3) Date and time;

(4) Distance traveled;

(5) Throttle position;

(6) Applications and operations of the trainset brake system, including urgent and emergency applications. The system shall record, or provide a means of determining, that a brake application or release resulted from manipulation of brake controls at the position normally occupied by the driver. In the case of a brake application or release that is responsive to a command originating from or executed by an on-board computer (*e.g.*, electronic braking system controller, controlling cab electronic control system, or trainset control computer), the system shall record, or provide a means of determining, the involvement of any such computer;

(7) Applications and operations of the regenerative brake;

(8) Cab signal aspect(s);

(9) Urgent brake application(s);

(10) Passenger brake alarm request;

(11) Wheel slip/slide alarm activation (with a property-specific minimum duration);

(12) Trainset number;

(13) Trainset tractive effort (positive and negative);

(14) Trainset brake cylinder pressures;

(15) Cruise control on/off, if so equipped and used;

(16) Bogie vibration detection;

(17) Door status opened/closed; and

(18) Safety-critical trainset control data routed to the controlling driver's display with which the driver is required to comply, specifically including text messages conveying mandatory directives and maximum authorized speed. The specific information format, content, and proposed duration for retention of such data shall be specified in the PTC Safety Plan submitted for the trainset control system under subpart B, subject to FRA approval. If it can be calibrated against other data required by this part, such trainset control data may, at the election of the railroad, be retained in a separate certified crashworthy memory module.

(d) *Response to defective equipment.* A trainset on which the event recorder has been taken out of service may remain in-service only until the next pre-service inspection. A trainset with an inoperative event recorder is not deemed to be in improper condition, unsafe to operate, or a non-complying trainset under § 299.447.

(e) *Annual tests.* (1) The railroad's inspection, testing, and maintenance program under subpart G of this part shall require annual testing of the event recorder. All testing under this section shall be performed at intervals that do not exceed 368 calendar days.

(2) A microprocessor-based event recorder with a self-monitoring feature equipped to verify that all data elements required by this part are recorded, requires further maintenance and testing only if either of the following conditions exist:

(i) The self-monitoring feature displays an indication of a failure. If a failure is displayed, further maintenance and testing must be performed until a subsequent test is successful. When a successful test is accomplished, a record, in any medium, shall be made of that fact and of any maintenance work necessary to achieve the successful result. This record shall be available at the location where the trainset

is maintained until a record of a subsequent successful test is filed; or

(ii) A download of the event recorder, taken within the preceding 30 days and reviewed for the previous 48 hours of trainset operation, reveals a failure to record a regularly recurring data element or reveals that any required data element is not representative of the actual operations of the trainset during this time period. If the review is not successful, further maintenance and testing shall be performed until a subsequent test is successful. When a successful test is accomplished, a record, in any medium, shall be made of that fact and of any maintenance work necessary to achieve the successful result. This record shall be kept at the location where the trainset is maintained until a record of a subsequent successful test is filed. The download shall be taken from information stored in the certified crashworthy crash hardened event recorder memory module.

(f) *Preserving accident data.* If any trainset equipped with an event recorder, or any other trainset mounted recording device or devices designed to record information concerning the functioning of a trainset, is involved in an accident/incident that is required to be reported to FRA under part 225 of this chapter, the railroad shall, to the extent possible, and to the extent consistent with the safety of life and property, preserve the data recorded by each such device for analysis by FRA in accordance with § 299.11. This preservation requirement permits the railroad to extract and analyze such data, provided the original downloaded data file, or an unanalyzed exact copy of it, shall be retained in secure custody and shall not be utilized for analysis or any other purpose except by direction of FRA or the National Transportation Safety Board. This preservation requirement shall expire one (1) year after the date of the accident/incident unless FRA or the Board notifies the railroad in writing that the data are desired for analysis.

(g) *Relationship to other laws.* Nothing in this section is intended to alter the legal authority of law enforcement officials investigating potential violation(s) of Federal or State criminal law(s), and nothing in this chapter is intended to alter in any way the priority of National Transportation Safety Board investigations under 49 U.S.C. 1131 and 1134, nor the authority of the Secretary of Transportation to investigate railroad accidents under 49 U.S.C. 5121, 5122, 20107, 20111, 20112, 20505, 20702, 20703, and 20902.

(h) *Disabling event recorders.* Any individual who willfully disables an event recorder, or who tampers with or alters the data recorded by such a device is subject to civil penalty as provided in part 218 of this chapter, and to disqualification from performing safety-sensitive functions on a railroad under subpart D of part 209 of this chapter.

§ 299.441 Trainset electronic hardware and software safety.

(a) *Purpose and scope.* The requirements of this section apply to all safety-critical electronic control systems, subsystems, and components on the trainsets, except for on-board signaling and trainset control system components that must meet the software safety requirements defined in subpart B of this part.

(b) *Applicability.* (1) The trainsets shall utilize the service-proven safety-critical electronic control systems, subsystems, and components as used on the N700 to control and monitor safety-critical components.

(2) Any modifications to the existing service-proven safety-critical electronic control systems, subsystems, and components shall be subject to the requirements defined in paragraph (c) of this section.

(i) The railroad shall assure that the suppliers of new or modified safety-critical systems, subsystems, and components utilize an industry recognized hardware and software development process which is evaluated and certified by an independent third-party assessor authorized by the industry standard utilized.

(ii) The railroad shall require that all suppliers submit the certifications and audit results as applicable. All such certifications shall be made available to FRA upon request.

(3) Any major upgrades or introduction of new safety-critical technology shall be subject to § 299.613(d).

(c) *Electronic hardware and software safety program.* The railroad shall develop and maintain a written electronic hardware and software safety program to guide the design, development, testing, integration, and verification of all new or modified safety-critical trainset hardware and software.

(1) *Hardware and software safety program description.* The hardware and software safety program shall include a description of how the following will be implemented to ensure safety and reliability:

(i) The hardware and software design process;

(ii) The hardware and software design documentation;

(iii) The hardware and software hazard analysis;

(iv) Hardware and software safety reviews;

(v) Hardware and software hazard monitoring and tracking;

(vi) Hardware and software integration safety testing;

(vii) Demonstration of overall hardware and software system safety as part of the pre-revenue service testing of the equipment; and

(viii) Safety-critical changes and failures.

(2) *Safety analysis.* The hardware and software safety program shall be based on a formal safety methodology that includes a FMECA; verification and validation testing for all hardware and software components and their interfaces; and comprehensive hardware and software integration testing to ensure that the hardware and software system functions as intended.

(3) *Compliance.* The railroad shall comply with the elements of its hardware and software safety program that affect the safety of the passenger trainset.

(4) *Safety-critical changes and failures.* Whenever a planned safety-critical design change is made to the safety-critical electronic control systems, subsystems and components (the products) that are in use by the railroad and subject to this subpart, the railroad shall—

(i) Notify FRA in accordance with § 299.9 of the design changes made by the product supplier;

(ii) Ensure that the safety analysis required under paragraph (c)(2) of this section is updated as required;

(iii) Conduct all safety-critical changes in a manner that allows the change to be audited;

(iv) Document all arrangements with suppliers for notification of all electronic safety-critical changes as well as safety-critical failures in the supplier's system, subsystem, or components, and the reasons for that change or failure from the suppliers, whether or not the railroad has experienced a failure of that safety-critical system, sub-system, or component;

(v) Specify the railroad's procedures for action upon receipt of notification of a safety-critical change or failure of an electronic system, sub-system, or component, and until the upgrade or revision has been installed;

(vi) Identify all configuration/revision control measures designed to ensure that safety-functional requirements and safety-critical hazard mitigation processes are not compromised as a result of any such change, and that any such change can be audited;

(vii) Require suppliers to provide notification of all electronic safety-critical changes as well as safety-critical failures in the supplier's system, subsystem, or components;

(ix) Document all arrangements with suppliers for notification of any and all electronic safety-critical changes as well as safety-critical failures in the supplier's system, subsystem, or components.

(d) *Specific requirements.* Hardware and software that controls or monitors a trainset's primary braking system shall either—

(1) Fail safely by initiating an emergency or urgent brake application in the event of a hardware or software failure that could impair the ability of the driver to apply or release the brakes; or

(2) Provide the driver access to direct manual control of the primary braking system (emergency or urgent braking).

(e) *Inspection, testing, and maintenance records.* The inspection, testing, and maintenance conducted by the railroad in accordance with § 299.445 shall be recorded in hardcopy or stored electronically. Electronic recordkeeping or

automated tracking systems, subject to the provisions contained in § 299.11, may be utilized to store and maintain any testing or training record required by this subpart. Results of product testing conducted by a vendor in support of a safety analysis shall be provided to and recorded by the railroad.

(1) The testing records shall contain all of the following:

(i) The name of the railroad;

(ii) The location and date that the test was conducted;

(iii) The equipment tested;

(iv) The results of tests;

(v) The repairs or replacement of equipment;

(vi) Any preventative adjustments made; and

(vii) The condition in which the equipment is left.

(2) Each record shall be—

(i) Signed by the employee conducting the test, or electronically coded, or identified by the automated test equipment number;

(ii) Filed in the office of a supervisory official having jurisdiction, unless otherwise noted; and

(iii) Available for inspection and copying by FRA.

(3) The results of the testing conducted in accordance with this section shall be retained as follows:

(i) The results of tests that pertain to installation or modification of a product shall be retained for the life-cycle of the product tested and may be kept in any office designated by the railroad;

(ii) The results of periodic tests required for the maintenance or repair of the product tested shall be retained until the next record is filed and in no case less than one year; and

(iii) The results of all other tests and training shall be retained until the next record is filed and in no case less than one year.

(f) *Review of safety analysis.* (1) Prior to the initial planned use of a new product as defined by paragraphs (b)(2) or (3) of this section, the railroad shall notify FRA in accordance with § 299.9 of the intent to place this product in service. The notification shall provide a description of the product, and identify the location where the complete safety analysis documentation and the testing are maintained.

(2) The railroad shall maintain and make available to FRA upon request all railroad or vendor documentation used to demonstrate that the product meets the safety requirements of the safety analysis for the life-cycle of the product.

(g) *Hazard tracking.* After a new product is placed in service in accordance with paragraphs (b)(2) or (3) of this section, the railroad shall maintain a database of all safety-relevant hazards encountered with the product. The database shall include all hazards identified in the safety analysis and those that had not been previously identified in the safety analysis. If the frequency of the safety-relevant hazards exceeds the threshold set forth in the safety analysis, then the railroad shall—

(1) Report the inconsistency to the Associate Administrator, within 15 days of discovery in accordance with § 299.9;

(2) Take immediate countermeasures to reduce the frequency of the safety-relevant hazard(s) below the threshold set forth in the safety analysis;

(3) Provide a final report to the Associate Administrator, on the results of the analysis and countermeasures taken to mitigate the hazard to meet the threshold set forth in the safety analysis when the problem is resolved. For hazards not identified in the safety analysis the threshold shall be exceeded at one occurrence; and

(4) Electronic or automated tracking systems used to meet the requirements contained in paragraph (g) of this section shall be in accordance with § 299.11.

(h) *Operations and maintenance manual.* The railroad shall maintain all supplier or vendor documents pertaining to the operation, installation, maintenance, repair, modification, inspection, and testing of the safety-critical electronic control systems, subsystems and components.

(i) *Training and qualification program.* Under § 299.13(c)(3), the railroad shall establish and implement a training and qualification program for the safety-critical electronic control systems, subsystems, and components subject to

subpart G of this part prior to the safety-critical electronic control systems, subsystems, and components being placed in use.

(j) *Operating personnel training.* The training program required by §299.13(c)(3) for any driver or other person who participates in the operation of a trainset using the safety-critical electronic control systems, subsystems and components shall address all the following elements:

(1) Familiarization with the electronic control system equipment onboard the trainset and the functioning of that equipment as part of the system and in relation to other on-board systems under that person's control;

(2) Any actions required of the operating personnel to enable or enter data into the system and the role of that function in the safe operation of the trainset;

(3) Sequencing of interventions by the system, including notification, enforcement, and recovery from the enforcement as applicable;

(4) Railroad operating rules applicable to control systems, including provisions for movement and protection of any unequipped passenger equipment, or passenger equipment with failed or cut-out controls;

(5) Means to detect deviations from proper functioning of on-board electronic control system equipment and instructions explaining the proper response to be taken regarding control of the trainset and notification of designated railroad personnel; and

(6) Information needed to prevent unintentional interference with the proper functioning of on-board electronic control equipment.

§299.443 Safety appliances.

(a) *Couplers.* (1) The leading and trailing ends of each trainset shall be equipped with an automatic rescue coupler that couples on impact.

(i) Uncoupling of the rescue coupler shall be done only at a trainset maintenance facility or other location where personnel can safely get under or between units.

(ii) The leading and the trailing ends of a trainset are not required to be equipped with sill steps or end or side handholds.

(2) The leading and trailing end couplers and uncoupling devices may be stored within a removable shrouded housing.

(3) Leading and trailing automatic couplers of trainsets shall be compatible with the railroad's rescue vehicles. A coupler adaptor can be used to meet this requirement.

(4) The railroad shall develop and implement rescue procedures that assure employee safety during rescue operations and shall be contained in the railroad's operating rules.

(5) Each unit within a trainset shall be semi-permanently coupled and shall only be uncoupled at a trainset maintenance facility or other locations identified by the railroad where the protections afforded in subpart B of part 218 of this chapter can be applied.

(6) The ends of units in a trainset that are semi-permanently coupled are not required to be equipped with automatic couplers, sill steps, end handholds or side handholds.

(b) *Crew access.* (1) Each trainset shall provide a minimum of two (2) locations per side, where crew members can board or disembark the trainset safely from ground level.

(2) Each location used for crew access shall be equipped with retractable stairs with handrails designed for safe access to the trainset from ground level.

§299.445 Trainset inspection, testing, and maintenance requirements.

(a) *General.* (1) The railroad shall develop a written inspection program for the rolling stock, in accordance with and approved under the requirements of §299.713. As further specified in this section, the program shall describe in detail the procedures, equipment, and other means necessary for the safe operation of the passenger equipment, including all inspections set forth in paragraph (e) of this section. This information shall include a detailed description of the methods of ensuring accurate records of required inspections.

(2) The initial inspection, testing, and maintenance program submitted under §299.713 shall, as a minimum, address the specific safety inspections contained in paragraphs (e)(1) through

(4) of this section. The railroad may submit the procedures detailing the bogie inspections or general overhaul requirements contained in paragraph (e)(3) and (4) of this section, respectively, at a later date than the initial inspection, testing, and maintenance program, but not less than 180 days prior to the scheduled date of the first bogie inspection or general overhaul.

(b) *Identification of safety-critical items.* In addition to safety critical items identified under § 299.711(b), on-board emergency equipment, emergency back-up systems, trainset exits and trainset safety-critical hardware and software systems in accordance with § 299.441 shall be deemed safety-critical.

(c) *Compliance.* The railroad shall adopt and comply with the approved inspection, testing, and maintenance program in accordance with § 299.703.

(d) *General condition.* The inspection, testing, and maintenance program shall ensure that all systems and components of the equipment are free of conditions that endanger the safety of the crew, passengers, or equipment. These conditions include, but are not limited to the following:

(1) A continuous accumulation of oil or grease;

(2) Improper functioning of a component;

(3) A crack, break, excessive wear, structural defect, or weakness of a component;

(4) A leak;

(5) Use of a component or system under conditions that exceed those for which the component or system is designed to operate; and

(6) Insecure attachment of a component.

(e) *Specific safety inspections.* The program under paragraph (a) of this section shall specify that all passenger trainsets shall receive thorough safety inspections by qualified individuals designated by the railroad at regular intervals. At a minimum, and in addition to the annual tests required for event recorder under § 299.439(e), the following shall be performed on each trainset:

(1) *Pre-service inspections.* (i) Each trainset in use shall be inspected at least once every two calendar days by qualified individuals at a location where there is a repair pit and access to the top of the trainset. The inspection shall verify the correct operation of on-board safety systems defined in the inspection, testing, and maintenance program. If any of the conditions defined as safety-critical in paragraph (b) of this section and § 299.711(b) are found during this inspection, the trainset shall not be put into service until that condition is rectified. The pre-service inspection shall include the following:

(A) Functional tests to determine the status of application and release of the service, emergency, and urgent air brakes using the monitoring system;

(B) Operational tests of the exterior doors; and

(C) A review of the log of on-board ATC equipment.

(ii) If the existence of any safety-critical conditions cannot be determined by use of an automated monitoring system, the railroad shall perform a visual inspection to determine if the condition exists.

(2) *Regular inspections.* The railroad shall perform a regular inspection on all trainsets in accordance with the test procedures and inspection criteria established in paragraph (a) of this section and at the intervals defined by paragraph (f) of this section. If any of the conditions defined as safety-critical in paragraph (b) of this section and § 299.711(b) are found during this inspection, the trainset shall not be put into service until that condition is rectified.

(3) *Bogie inspections.* The railroad shall perform a bogie inspection on all trainsets in accordance with the test procedures and inspection criteria established in paragraph (a) of this section and at the intervals defined by paragraph (f) of this section. If any of the conditions defined as safety-critical in paragraph (b) of this section and § 299.711(b) are found during this inspection, the trainset shall not be put into service until that condition is rectified.

(4) *General overhaul.* The railroad shall perform a general overhaul on all trainsets in accordance with the test

procedures and inspection criteria established in paragraph (a) of this section and at the intervals defined by paragraph (f) of this section. If any of the conditions defined as safety-critical in paragraph (b) of this section and §299.711(b) are found during this inspection, the trainset shall not be put into service until that condition is rectified.

(f) *Maintenance intervals.* The railroad's program established pursuant to paragraph (a) of this section shall include the railroad's scheduled maintenance intervals for all specific safety inspections in paragraph (e) of this section, as required by §299.707.

(g) *Training and qualification program.* The railroad shall establish a training and qualification program as defined in §299.13(c)(3) to qualify individuals to perform inspections, testing, and maintenance on the equipment. Only qualified individuals shall perform inspections, testing, and maintenance of the equipment.

(h) *Reporting and tracking of repairs to defective trainsets.* The railroad shall have in place prior to start of operations a reporting and tracking system for passenger trainsets with a defect not in conformance with this subpart. The reporting and tracking system shall record the following information:

(1) The identification number of the defective unit within a trainset, and trainset identification number;

(2) The date the defect was discovered;

(3) The nature of the defect;

(4) The determination made by a qualified individual whether the equipment is safe to run;

(5) The name of the qualified individual making such a determination;

(6) Any operating restrictions placed on the equipment; and

(7) Repairs made and the date that they were completed.

(i) *Retention of records.* At a minimum, the railroad shall keep the records described in paragraph (j) of each required inspection under this section in accordance with §299.11. Each record shall be maintained for at least one year from the date of the inspection.

(j) *Availability of records.* The railroad shall make defect reporting and tracking records available to FRA upon request.

(k) *Brake system repair points.* The railroad shall designate brake system repair points in the inspection, testing, and maintenance program required by paragraph (a) of this section. No trainset shall depart a brake system repair point unless that trainset has a 100 percent operational brake system.

§299.447 Movement of defective equipment.

(a) A trainset with one or more conditions not in compliance with the list of safety critical defects identified in accordance with §299.445(b) during a pre-service inspection required by §299.445(e)(1) shall not be moved in revenue service and shall only be moved in accordance with paragraph (e) of this section.

(b) Except as provided in paragraph (c) of this section, and after departure in compliance with the pre-service inspection required by §299.445(e)(1), a trainset with one or more conditions not in compliance with the list of safety critical defects identified in accordance with §§299.445(b) and 299.711(b) may be moved in revenue service only after the railroad has complied with all of the following:

(1) A qualified individual determines that it is safe to move the trainset, consistent with the railroad's operating rules;

(i) If appropriate, these determinations may be made based upon a description of the defective condition provided by a crewmember.

(ii) If the determinations required by this paragraph are made by an off-site qualified individual based on a description of the defective condition by on-site personnel, then a qualified individual shall perform a physical inspection of the defective equipment, at the first location possible, in accordance with the railroad's inspection, testing, and maintenance program and operating rules, to verify the description of the defect provided by the on-site personnel.

(2) The qualified individual who made the determination in paragraph (b)(1) of this section, notifies the driver in charge of movement of the trainset, in

accordance with the railroad's operating rules, of the maximum authorized speed, authorized destination, and any other operational restrictions that apply to the movement of the non-compliant trainset. This notification may be achieved through the tag required by paragraph (b)(3) of this section; and

(3) A tag bearing the words ''non-complying trainset'' and containing the following information, are securely attached to the control stand on each control cab of the trainset:

(i) The trainset number and unit or car number;

(ii) The name of the qualified individual making the determination in paragraph (b)(1) of this section;

(iii) The location and date of the inspection that led to the discovery of the non-compliant item;

(iv) A description of each defect;

(v) Movement restrictions, if any;

(vi) The authorized destination of the trainset; and

(vii) The signature, if possible, as well as the job title and location of the person making the determinations required by this section.

(4) Automated tracking systems used to meet the tagging requirements contained in paragraph (b)(3) of this section may be reviewed and monitored by FRA at any time to ensure the integrity of the system. FRA's Associate Administrator may prohibit or revoke the railroad's ability to utilize an automated tracking system in lieu of tagging if FRA finds that the automated tracking system is not properly secure, is inaccessible to FRA or the railroad's employees, or fails to track or monitor the movement of defective equipment adequately. Such a determination will be made in writing and will state the basis for such action.

(c) A trainset that develops a non-complying condition in service may continue in revenue service, so long as the requirements of paragraph (b) of this section are otherwise fully met, until the next pre-service inspection.

(d) In the event of an in-service failure of the braking system, the trainset may proceed in accordance with the railroad's operating rules relating to the percentage of operative brakes and at a speed no greater than the maximum authorized speed as determined by § 299.409(f)(4) so long as the requirements of paragraph (b) of this section are otherwise fully met, until the next pre-service inspection.

(e) A non-complying trainset may be moved without passengers within a trainset maintenance facility, at speeds not to exceed 16 km/h (10 mph), without meeting the requirements of paragraph (a) of this section where the movement is solely for the purpose of repair. The railroad shall ensure that the movement is made safely.

(f) Nothing in this section authorizes the movement of equipment subject to a Special Notice for Repair under part 216 of this chapter unless the movement is made in accordance with the restrictions contained in the Special Notice.

§ 299.449 Trainset image and audio recording system.

(a) *Duty to equip and record.* (1) Each trainset used in revenue service must be equipped with an image recording system comprised of—

(i) Outward-facing image recording devices capable of recording images of the right-of-way ahead of the trainset in the direction of travel as further described in paragraph (b) of this section; and,

(ii) Inward-facing image recording devices capable of recording images of crewmember activities inside the leading trainset cab as further described in paragraph (c) of this section.

(2) The image recording system must be turned on and recording whenever a trainset is in motion, at all speeds. If operating circumstances cause the controlling cab to be other than the cab of the leading end of the trainset, the railroad must also record images of activities inside the controlling cab.

(3) The trainset image recording system shall record at a minimum the most recent 12 hours of operation of a leading trainset cab used in revenue service.

(4) Image recording device data for each leading trainset cab used in revenue service shall be recorded on a memory module meeting the requirements for a certified crashworthy event recorder memory module described in appendix A to this part or on an alternative, remote storage system

that provides at least equivalent data protections and is approved by FRA under paragraph (g) of this section.

(b) *Outward-facing recording device requirements for leading trainset cabs used in revenue service.* The image recording system shall—

(1) Include an image recording device aimed parallel to the centerline of tangent track within the gauge on the leading end of the trainset;

(2) Be able to distinguish the signal aspects displayed by go/no-go signals;

(3) Record at a minimum frame rate of 15 frames per second (or its equivalent);

(4) Have sufficient resolution, as defined by the railroad in the railroad's inspection, testing, and maintenance program under § 299.445, to record the position of switch points in advance of the trainset at speeds of 170 km/h (106 mph) and below, and to capture images in daylight or with normal nighttime illumination from the headlight of the trainset; and

(5) Include an accurate time and date stamp on image recordings.

(c) *Inward-facing image recording device requirements for leading trainset cabs used in revenue service.* (1) The image recording system shall include an image recording device positioned to provide complete coverage of all areas of the leading trainset cab where a crewmember typically may be positioned, including complete coverage of the instruments and controls required to operate the trainset in normal use, and—

(i) Have sufficient resolution, as defined in the railroad's inspection, testing, and maintenance program under § 299.445, to record crewmember actions;

(ii) Record at a minimum frame rate of 5 frames per second;

(iii) Be capable of using ambient light in the cab, and when ambient light levels drop too low for normal operation, automatically switch to infrared or another operating mode that enables the recording sufficient clarity to comply with the requirements of this paragraph (c)(1); and

(iv) Include an accurate time and date stamp on image recordings.

(2) Inward-facing image recording devices shall not be installed in a location where the device can record activities within a trainset cab's sanitation compartment, as defined in § 229.5 of this chapter, and shall not be used to make recordings of any activities within a trainset cab's sanitation compartment.

(3) If a leading trainset cab used in revenue service experiences a technical failure of its inward-facing image recording system, then the system shall be removed from service and handled in accordance with paragraph (i) of this section.

(d) *Image recording system protection requirements for leading trainset cabs used in revenue service.* The railroad must provide convenient wired or wireless connections to allow authorized railroad personnel to download audio or image recordings from any certified crashworthy event recorder memory module in leading trainset cabs used in revenue service. The railroad also must use electronic security measure(s), and apply appropriate cybersecurity measures, to prevent unauthorized access to, and download, deletion, or alteration of, the recording system or its recordings.

(e) *Inspection, testing, and maintenance for image recording systems in leading trainset cabs used in revenue service.* (1) The image recording system in trainsets used in revenue service shall have self-monitoring features to assess whether the system is operating properly, including whether the system is powered on.

(2) Periodic inspection requirements for the trainset image recording system shall be defined in the railroad's inspection, testing, and maintenance program required under § 299.445. As part of the periodic inspection, the railroad shall take sample download(s) from the image recording system's crashworthy memory module to confirm proper operation of the system, and, if necessary, repair the system to full operation.

(f) *Handling of recordings*–(1) *Chain-of-custody procedure.* The railroad shall develop, adopt, maintain, and comply with a chain-of-custody procedure governing the handling and the release of the image recordings described in paragraphs (a) through (c) of this section and any audio recordings. The chain-of-custody procedure must specifically address the preservation and handling

requirements for post-accident/incident recordings provided to FRA or other Federal agencies under paragraph (f)(2) of this section.

(2) *Accident/incident preservation.* If any trainset equipped with an image or audio recording system is involved in an accident/incident that must be reported to FRA under part 225 of this chapter, the railroad shall, to the extent possible, and to the extent consistent with the safety of life and property, preserve the data recorded by the system for analysis by FRA or other Federal agencies. The railroad must either provide the image and/or audio data in a format readable by FRA or other Federal agencies; or make available to FRA or other Federal agencies any platform, software, media device, etc., that is required to play back the image and/or audio data. This preservation requirement shall expire one year after the date of the accident unless FRA or another Federal agency notifies the railroad in writing that it must preserve the recording longer. The railroad may extract and analyze such data for the purposes described in paragraph (f)(3) of this section, only if—

(i) The original downloaded data file, or an unanalyzed exact copy of it, is retained in secure custody under the railroad's procedure adopted under paragraph (f)(1) of this section; and

(ii) It is not utilized for analysis or any other purpose, except by direction of FRA or another Federal agency.

(3) *Recording uses.* Subject to the conditions specified in paragraph (f)(2) of this section, the railroad may use image and audio recordings from a leading trainset cab used in revenue service subject to this section to—

(i) Investigate an accident/incident that is required to be reported to FRA under part 225 of this chapter;

(ii) Investigate a violation of a Federal railroad safety law, regulation, or order, or the railroad's operating rules and procedures;

(iii) Conduct an operational test under § 299.505;

(iv) Monitor for unauthorized occupancy of a trainset's cab or operating compartment;

(v) Investigate a violation of a criminal law;

(vi) Assist Federal agencies in the investigation of a suspected or confirmed act of terrorism; or

(vii) Perform inspection, testing, maintenance, or repair activities to ensure the proper installation and functioning of an image or audio recorder as required under paragraph (e)(2) of this section.

(g) *Image recording system approval process.* The railroad must submit for approval a description of the technical aspects of its trainset image recording system installed pursuant this section. The required description must be submitted via electronic mail to the following email address: *FRARRSMPE@dot.gov.*

(1) The description must specifically address the image recording system's—

(i) Minimum 12-hour continuous recording capability;

(ii) Crashworthiness; and

(iii) Post-accident accessibility of the system's recordings.

(2) The railroad must submit the written statement not less than 90 days before the installation of such image recording system.

(3) The Associate Administrator will review the railroad's description and may approve, or disapprove, the image recording system if it does not meet the requirements of this section. FRA may disapprove any recording systems that do not meet the requirements of this section.

(h) *Relationship to other laws.* Nothing in this section is intended to alter the legal authority of law enforcement officials investigating potential violation(s) of State criminal law(s), and nothing in this section is intended to alter in any way the priority of investigations under 49 U.S.C. 1131 and 1134, or the authority of the Secretary of Transportation to investigate railroad accidents under 49 U.S.C. 5121, 5122, 20107, 20111, 20112, 20505, 20702, 20703, and 20902.

(i) *Removal of an image recording system or device from service and handling for repair.* (1) Notwithstanding the duty established in paragraph (a) of this section to equip trainsets cabs used in revenue service with an image recording system, the railroad—

(i) May remove from service the entire image recording system or an

image recording device in a leading trainset cab used in revenue service for any reason.

(ii) Must remove from service the entire image recording system or an image recording device in a leading trainset cab used in revenue service if the railroad knows the system or device is not properly recording.

(2) When a railroad removes the entire image recording system or an image recording device in a leading trainset cab used in revenue service from service, a qualified person shall record the date the system or device was removed from service in the trainset's maintenance records.

(3) A trainset on which the entire image recording system, or an image recording device in a leading trainset cab used in revenue service, has been taken out of service as provided in paragraphs (i)(1)(i) or (ii) of this section may be used as a leading trainset cab in revenue service only until the next pre-service inspection required under the railroad's inspection, testing, and maintenance program.

(4) A trainset with an image recording device that has been taken out of service on only one cab end may be used in revenue service beyond the next pre-service inspection without repair provided the other cab end is the leading end of the trainset and the image recording system is otherwise operative for that cab end.

(5) A trainset with an inoperative image recording device alone is not deemed to be in an improper condition, unsafe to operate, or non-complying under §299.447. However, a trainset with an entire image record system taken out of service or image recording devices taken out service in both cab ends, may not be used in revenue service beyond the next pre-service inspection required under the railroad's inspection, testing, and maintenance program without repair or replacement of the non-operative system or devices.

(j) *Disabling or interfering with locomotive-mounted audio and video recording equipment.* Any individual who willfully disables or interferes with the intended functioning of image or audio recording system equipment mounted in a leading trainset cab used in revenue service, or who tampers with or alters the data recorded by such equipment, is subject to a civil penalty and to disqualification from performing safety-sensitive functions on a railroad as provided in parts 209 and 218 of this chapter.

(k) *Employee protections.* (1) If inward-facing image or in-cab audio trainset recordings are utilized to conduct operational tests and inspections under §299.505, the railroad shall adopt and comply with a procedure in its operational tests and inspections program that ensures employees are randomly subject to such operational tests and inspections involving image or audio recordings. The procedure adopted must:

(i) Establish objective, neutral criteria to ensure every employee subject to such operational tests and inspections is selected randomly for such operational tests and inspections within a specified time frame;

(ii) Not permit subjective factors to play a role in selection, *i.e.*, no employee may be selected based on the exercise of the railroad's discretion; and

(iii) Require that any operational test or inspection using trainset image or audio recordings be performed within 72 hours of the completion of the employee's tour of duty that is the subject of the operational test. Any operational test performed more than 72 hours after the completion of the tour of duty that is the subject of the test is a violation of this section. The 72-hour limitation does not apply to investigations of railroad accidents/incidents or to violations of Federal railroad safety laws, regulations, or orders, or any criminal laws.

(2) FRA may review the railroad's procedure implementing paragraph (k)(1) of this section, and, for cause stated, may disapprove such procedure under §299.505(h).

[88 FR 70764, Oct. 12, 2023]

Subpart E—Operating Rules

§299.501 Purpose.

Through the requirements of this subpart, FRA learns the condition of the operating rules and practices in use by the railroad. The rules and practices covered by this subpart include the

procedures for instruction and testing of all employees involved with the movement of rail vehicles, including drivers, on-board attendants, station platform attendants, general control center staff, and all maintenance staff, which are necessary to ensure that they possess the requisite skill and knowledge of the rules and operating practices to maintain the safety of the system.

§ 299.503 Operating rules; filing and recordkeeping.

(a) Prior to commencing operations, the railroad shall develop a code of operating rules, timetables, and timetable special instructions. The initial code of operating rules, timetables, and timetable special instructions shall be based on practices and procedures proven on the Tokaido Shinkansen system.

(b) The railroad shall keep one copy of its current code of operating rules, timetables, timetable special instruction, at its system headquarters, and shall make them available to FRA for inspection and copying during normal business hours. If the railroad elects to maintain an electronic record, the railroad must satisfy the conditions listed in § 299.11.

§ 299.505 Programs of operational tests and inspections; recordkeeping.

(a) *Requirement to conduct operational tests and inspections.* The railroad shall periodically conduct operational tests and inspections to determine the extent of employee knowledge, application, and compliance with its code of operating rules, timetables, and timetable special instructions in accordance with a written program retained at its system headquarters.

(b) *Railroad and railroad testing officer responsibilities.* (1) Each railroad officer who conducts operational tests and inspections (railroad testing officer) shall—

(i) Be qualified on the railroad's operating rules in accordance with § 299.507;

(ii) Be qualified on the operational testing and inspection program requirements and procedures relevant to the testing and inspections the officer will conduct;

(iii) Receive appropriate field training, as necessary to achieve proficiency, on each operational test or inspection that the officer is authorized to conduct; and

(iv) Conduct operational tests and inspections in accordance with the railroad's program of operational tests and inspections.

(2) The railroad shall maintain a record documenting qualification of each railroad testing officer. The record shall be retained by the railroad and shall be made available to representatives of the FRA for inspection and copying during normal business hours. If the railroad elects to maintain an electronic record, the railroad must satisfy the conditions listed in § 299.11.

(c) *Written program of operational tests and inspections.* Within 30 days of commencing operations, the railroad shall have a written program of operational tests and inspections in effect. The railroad shall maintain one copy of its current program for periodic performance of the operational tests and inspections required by paragraph (a) of this section, and shall maintain one copy of each subsequent amendment to the program as amendments are made. These records shall be retained at the system headquarters of the railroad for three calendar years after the end of the calendar year to which they relate. These records shall be made available to representatives of the FRA for inspection and copying during normal business hours. The program shall—

(1) Provide for operational testing and inspection under the various operating conditions on the railroad;

(2) Describe each type of operational test and inspection adopted, including the means and procedures used to carry it out;

(3) State the purpose of each type of operational test and inspection;

(4) State the frequency with which each type of operational test and inspection is conducted;

(5) The program shall address with particular emphasis those operating rules that cause or are likely to cause the most accidents or incidents, such as those accidents or incidents identified in the six-month reviews and the annual summaries as required under paragraphs (e) and (f) of this section;

(6) Identify the officer(s) by name and job title responsible for ensuring that the program of operational tests and inspections is properly implemented and is responsible for overseeing the entire program. The responsibilities of such officer(s) shall include, but not be limited to, ensuring that the railroad's testing officers are directing their efforts in an appropriate manner to reduce accidents/incidents and that all required reviews and summaries are completed; and

(7) Include a schedule for making the program fully operative within 210 days after it begins.

(d) *Records.* (1) The railroad shall keep a written or electronic record of the date, time, place, and result of each operational test and inspection that was performed in accordance with its program. Each record shall specify the officer administering the test and inspection and each employee tested. These records shall be retained at the system headquarters of the railroad for one calendar year after the end of the calendar year to which they relate. These records shall be made available to representatives of the FRA for inspection and copying during normal business hours.

(2) The railroad shall retain one copy of its current program for periodic performance of the operational tests and inspections required by paragraph (a) of this section and one copy of each subsequent amendment to such program. These records shall be retained for three calendar years after the end of the calendar year to which they relate at the system headquarters where the tests and inspections are conducted. These records shall be made available to representatives of the FRA for inspection and copying during normal business hours.

(e) *Reviews of tests and inspections and adjustments to the program of operational tests*—(1) *Reviews by the railroad.* Not less than once every 180 days the railroad's designated officer(s) shall conduct periodic reviews and analyses as provided in this paragraph and shall retain, at its system headquarters, one copy of the reviews. Each such review shall be completed within 30 days of the close of the period. The designated officer(s) shall conduct a written review of—

(i) The operational testing and inspection data for the system to determine compliance by the railroad testing officers with its program of operational tests and inspections required by paragraph (c) of this section. At a minimum, this review shall include the name of each railroad testing officer, the number of tests and inspections conducted by each officer, and whether the officer conducted the minimum number of each type of test or inspection required by the railroad's program;

(ii) Accident/incident data, the results of prior operational tests and inspections, and other pertinent safety data for the system to identify the relevant operating rules related to those accidents/incidents that occurred during the period. Based upon the results of that review, the designated officer(s) shall make any necessary adjustments to the tests and inspections required of railroad officers for the subsequent period(s); and

(iii) Implementation of the program of operational tests and inspections from a system perspective, to ensure that it is being utilized as intended, that the other reviews provided for in this paragraph have been properly completed, that appropriate adjustments have been made to the distribution of tests and inspections required, and that the railroad testing officers are appropriately directing their efforts.

(2) *Records retention.* The records of reviews required in paragraphs (e)(1) of this section shall be retained for a period of one year after the end of the calendar year to which they relate and shall be made available to representatives of FRA for inspection and copying during normal business hours.

(f) *Annual summary on operational tests and inspections.* Before March 1 of each calendar year, the railroad shall retain, at its system headquarters, one copy of a written summary of the following with respect to its previous year's activities: The number, type, and result of each operational test and inspection that was conducted as required by paragraphs (a) and (c) of this section. These records shall be retained for three calendar years after the end

of the calendar year to which they relate and shall be made available to representatives of FRA for inspection and copying during normal business hours.

(g) *Electronic recordkeeping.* Nothing in this section precludes the railroad from maintaining the information required to be retained under this part in an electronic format provided that the railroad satisfy the conditions listed in § 299.11.

(h) *Disapproval of program.* Upon review of the program of operational tests and inspections required by this section, the Associate Administrator for Safety may, for cause stated, disapprove the program in whole or in part. Notification of such disapproval shall be made in writing and specify the basis for the disapproval decision. If the Associate Administrator for Safety disapproves the program—

(1) The railroad has 35 days from the date of the written notification of such disapproval to—

(i) Amend its program; or

(ii) Provide a written response in support of the program to the Associate Administrator for Safety. If the Associate Administrator for Safety still disapproves the program in whole or in part after receiving the railroad's written response, the railroad shall amend its program.

(2) A failure to adequately amend the program will be considered a failure to implement a program under this subpart.

§ 299.507 Program of instruction on operating rules; recordkeeping.

(a) To ensure that each railroad employee whose activities are governed by the railroad's operating rules understands those rules, the railroad periodically shall instruct each such employee on the meaning and application of its operating rules with a written program developed under § 299.13(c)(3) and retained at its system headquarters.

(b) Prior to commencing operations, the railroad shall file and retain one copy of its current program for the periodic instruction of its employees as required by paragraph (a) of this section and shall file and retain one copy of any amendment to that program as amendments are made. These records shall be retained at the railroad's system headquarters for one calendar year after the end of the calendar year to which they relate. These records shall be made available to representatives of the FRA for inspection and copying during normal business hours. This program shall—

(1) Describe the means and procedures used for instruction of the various classes of affected employees;

(2) State the frequency of instruction and the basis for determining that frequency;

(3) Include a schedule for completing the initial instruction of employees who are already employed when the program begins;

(4) Begin on the date of commencing operations; and

(5) Provide for initial instruction of each employee hired after the program begins.

(c) The railroad is authorized to retain by electronic recordkeeping its program for periodic instruction of its employees on operating rules, provided that the requirements stated in § 299.11 are satisfied.

Subpart F—System Qualification Tests

§ 299.601 Responsibility for verification demonstrations and tests.

The railroad shall comply with the pre-revenue qualification tests and verification requirements set forth in this subpart to demonstrate the overall safety of the system, prior to revenue operations.

§ 299.603 Preparation of system-wide qualification test plan.

(a) Prior to execution of any tests as defined in this subpart, the railroad shall develop a system-wide qualification test plan, that identifies the tests that will be carried out, to demonstrate the operability of all system elements, including track and infrastructure, signal and trainset control system, communications, rolling stock, software, and operating practices, and the system as a whole.

(b) The system-wide qualification test plan shall be submitted to FRA in accordance with § 299.9 for review at least 180 days prior to testing. FRA

shall notify the railroad, in writing, within 45 days of receipt of the railroad's submission, and identify any deficiencies in the test plan. FRA will notify the railroad of any procedures to be submitted for review. The plan shall include the following:

(1) A list of all tests to be conducted;

(2) A summary statement of the test objectives;

(3) A planned schedule for conducting the tests which indicates the sequence of testing and interdependencies; and

(4) The approach taken for—

(i) Verifying results of installation tests performed by contractors and manufacturers;

(ii) Functional and performance qualification testing of individual safety-related equipment, facilities, and subsystems in accordance with § 299.605;

(iii) Pre-revenue service system integration testing of the system per § 299.607, that includes vehicle/track system qualification testing per § 299.609;

(iv) Simulated revenue operations of the system per § 299.611;

(v) Compliance with operating rules as per subpart E of this part;

(vi) Training and qualification of all personnel involved in the test program to conduct tests safely and in accordance with operating rules;

(vii) Verification of all emergency preparedness procedures; and

(viii) Field testing of the railroad's uncertified PTC system and regression testing of its FRA-certified PTC system, under § 299.201.

(c) The railroad shall adopt and comply with the system-wide qualification test plan, including completion of all tests required by the plan.

(d) After FRA review of the system-wide test plan, detailed test procedures as required by paragraph (b) of this section shall be submitted 15 days prior to testing to FRA in accordance with § 299.9 for review.

(e) Each test procedure shall include the following elements:

(1) A clear statement of the test objectives. One of the principal test objectives shall be to demonstrate that the railroad's system meets the safety design and performance requirements specified in this part when operated in the environment in which it will be used;

(2) Any special safety precautions to be observed during the testing;

(3) A description of the railroad property or facilities to be used to conduct the tests;

(4) Prerequisites for conducting each test;

(5) A detailed description of how the tests are to be conducted. This description shall include—

(i) An identification of the systems and equipment to be tested;

(ii) The method by which the systems and equipment shall be tested;

(iii) The instrumentation to be used and calibration procedures;

(iv) The means by which the test results will be recorded, analyzed and reported to FRA;

(v) A description of the information or data to be obtained;

(vi) A description of how the information or data obtained is to be analyzed or used;

(vii) A description of any criteria to be used as safety limits during the testing;

(viii) The criteria to be used to evaluate performance of the systems and equipment. If system qualification is to be based on extrapolation of less than full-level testing results, the analysis done to justify the validity of the extrapolation shall be described; and

(ix) Inspection, testing, and maintenance procedures to be followed to ensure that testing is conducted safely.

(f) The railroad shall provide FRA notice at least 30 days in advance of the times and places of any domestic testing and notice at least 90 days in advance for testing not conducted domestically to permit FRA observation of such tests.

§ 299.605 Functional and performance qualification tests.

The railroad shall conduct functional and performance qualification tests, prior to commencing revenue operations, to verify that all safety-critical components meet all functional and all performance specifications.

§ 299.607 Pre-revenue service system integration testing.

(a) Prior to commencing revenue operations, the railroad shall conduct tests of the trainsets throughout the system to—

(1) Verify mechanical positioning of the overhead catenary system; and

(2) Verify performance of the trainset, track, and signal and trainset control systems.

(b) The railroad shall demonstrate safe operation of the system during normal and degraded-mode operating conditions. At a minimum, the following operation tests shall be performed:

(1) Slow-speed operation of a trainset;

(2) Verification of correct overhead catenary and pantograph interaction;

(3) Verification of trainset clearance at structures and passenger platforms;

(4) Incremental increase of trainset speed;

(5) Performance tests on trainsets to verify braking rates in accordance with § 299.409;

(6) Verification of vehicle noise;

(7) Verification of correct vehicle suspension characteristics;

(8) Vehicle/track system qualification as defined in § 299.609;

(9) Load tests with vehicles to verify relay settings and signal and communication system immunization;

(10) Monitoring of utility supply circuits and telephone circuits to ensure the adequacy of power supplies, and to verify that transient-related disturbances are within acceptable limits;

(11) Verification of vehicle detection due to shunting of signal system circuits;

(12) Verification of safe operation of the signal and trainset control system as required by subpart B of this part;

(13) Tests of trainset radio reception during system-wide vehicle operation; and

(14) Verification of electromagnetic interference/electromagnetic compatibility between various subsystems.

§ 299.609 Vehicle/track system qualification.

(a) *General.* All vehicles types intended to operate in revenue service shall be qualified for operation in accordance with this subpart. A qualification program shall be used to demonstrate that the vehicle/track system will not exceed the wheel/rail force safety limits, and the carbody and bogie acceleration criteria specified in paragraph (h) of this section—

(1) At any speed up to and including 10 km/h (6 mph) above the proposed maximum operating speed; and

(2) On track meeting the requirements for the class of track associated with the proposed maximum operating speed as defined in § 299.309. For purposes of qualification testing, speeds may exceed the maximum allowable operating speed for the class of track in accordance with the test plan approved by FRA.

(b) *New vehicle/track system qualification.* Vehicle types not previously qualified under this subpart shall be qualified in accordance with the requirements of this paragraph (b).

(1) *Carbody acceleration.* For vehicle types intended to operate in revenue service at track class H4 speeds or above, qualification testing conducted over a representative segment of the route shall demonstrate that the vehicle type will not exceed the carbody lateral and vertical acceleration safety limits specified in paragraph (h) of this section.

(2) *Bogie lateral acceleration.* For vehicle types intended to operate at track class H4 speeds or above, qualification testing conducted over a representative segment of the route shall demonstrate that the vehicle type will not exceed the bogie lateral acceleration safety limit specified in paragraph (h) of this section.

(3) *Measurement of wheel/rail forces.* For vehicle types intended to operate at track class H4 speeds or above, qualification testing conducted over a representative segment of the route shall demonstrate that the vehicle type will not exceed the wheel/rail force safety limits specified in paragraph (h) of this section.

(c) *Previously qualified vehicle/track system.* Vehicle/track systems previously qualified under this subpart for a track class and cant deficiency on

one route may be qualified for operation at the same class and cant deficiency on another route through testing to demonstrate compliance with paragraph (a) of this section in accordance with the following:

(1) *Carbody acceleration.* For vehicle types intended to operate at track class H4 speeds and above, qualification testing conducted over a representative segment of the new route shall demonstrate that the vehicle type will not exceed the carbody lateral and vertical acceleration safety limits specified in paragraph (h) of this section.

(2) *Bogie lateral acceleration.* For vehicle types intended to operate at track class H4 speeds or above, measurement of bogie lateral acceleration during qualification testing shall demonstrate that the vehicle type will not exceed the bogie lateral acceleration safety limit specified in paragraph (h) of this section. Measurement of bogie lateral acceleration, if conducted, shall be performed over a representative segment of the new route.

(d) *Vehicle/track system qualification testing plan.* To obtain the data required to support the qualification program outlined in paragraphs (b) and (c) of this section, the railroad shall submit a qualification testing plan as required by §299.603(b) at least 60 days prior to testing, requesting approval to conduct the testing at the desired speeds and cant deficiencies. This test plan shall provide for a test program sufficient to evaluate the operating limits of the track and vehicle type and shall include—

(1) Identification of the representative segment of the route for qualification testing;

(2) Consideration of the operating environment during qualification testing, including operating practices and conditions, the signal system, and trainset on adjacent tracks;

(3) The maximum angle found on the gauge face of the designed (newly-profiled) wheel flange referenced with respect to the axis of the wheelset that will be used for the determination of the Single Wheel L/V Ratio safety limit specified in paragraph (h) of this section; and

(4) A target maximum testing speed in accordance with paragraph (a) of this section and the maximum testing cant deficiency.

(e) *Qualification testing.* Upon FRA approval of the vehicle/track system qualification testing plan, qualification testing shall be conducted in two sequential stages as required in this subpart.

(1) Stage-one testing shall include demonstration of acceptable vehicle dynamic response of the subject vehicle as speeds are incrementally increased—

(i) On a segment of tangent track, from acceptable track class H4 speeds to the target maximum test speed; and

(ii) On a segment of curved track, from the speeds corresponding to 76 mm (3 inches) of cant deficiency to the maximum testing cant deficiency.

(2) When stage-one testing has successfully demonstrated a maximum safe operating speed and cant deficiency, stage-two testing shall commence with the subject equipment over a representative segment of the route as identified in paragraph (d)(1) of this section.

(i) A test run shall be conducted over the route segment at the speed the railroad will request FRA to approve for such service.

(ii) An additional test run shall be conducted at 10 km/h (6 mph) above this speed.

(3) When conducting stage-one and stage-two testing, if any of the monitored safety limits are exceeded on any segment of track, testing may continue provided that the track location(s) where any of the limits are exceeded be identified and test speeds be limited at the track location(s) until corrective action is taken. Corrective action may include making adjustments to the track, to the vehicle, or to both of these system components.

(4) Prior to the start of the qualification testing program, a qualifying Track Geometry Measurement System (TGMS) shall be operated over the intended route within 30 calendar days prior to the start of the qualification testing program to verify compliance with the track geometry limits specified in §299.311.

(f) *Qualification testing results.* The railroad shall submit a report to FRA

detailing all the results of the qualification program in accordance with § 299.613. The report shall be submitted at least 60 days prior to the intended operation of the equipment in revenue service over the route.

(g) *Cant deficiency*. Based on the test results and all other required submissions, FRA will approve a maximum trainset speed and value of cant deficiency for revenue service, normally within 45 days of receipt of all the required information. FRA may impose conditions necessary for safely operating at the maximum approved trainset speed and cant deficiency.

(h) *Vehicle/track interaction regulatory limits*. The following vehicle/track interaction regulatory limits shall not be exceeded during qualification testing in accordance with this section.

Table 1 to paragraph (h)			
Vehicle/Track Interaction Safety Limits			
Wheel-Rail Forces[1]			
Parameter	Safety Limit	Filter / Window	Requirements
Single Wheel Vertical Load Ratio	≥ 0.15	1.5 m (5 ft)	No wheel of the vehicle shall be permitted to unload to less than 15 percent of the static vertical wheel load for 1.5 m (5 ft) or more continuous meters. The static vertical wheel load is defined as the load that the wheel would carry when stationary on level track.
Single Wheel L/V Ratio	$\leq \frac{\tan(\delta) - 0.5}{1 + 0.5\tan(\delta)}$	1.5 m (5 ft)	The ratio of the lateral force that any wheel exerts on an individual rail to the vertical force exerted by the same wheel on the rail shall not be greater than the safety limit calculated for the wheel's flange angle (δ) for 1.5 m (5 ft) or more continuous meters.
Net Axle Lateral L/V Ratio	$\leq 0.4 + \frac{22.24}{Va}$	1.5 m (5 ft)	The net axle lateral force, in kN, exerted by any axle on the track shall not exceed a total of 22.24 kN (5 kips) plus 40 percent of the static vertical load that the axle exerts on the track for 1.5 m (5 ft) or more continuous meters. Va = static vertical axle load (kN)
Bogie Side L/V Ratio	≤ 0.6	1.5 m (5 ft)	The ratio of the lateral forces that the wheels on one side of any bogie exert on an individual rail to the vertical forces exerted by the same wheels on that rail shall not be greater than 0.6 for 1.5 m (5 ft) or more continuous meters.

Carbody Accelerations[2]		
Parameter	All Vehicles	Requirements
Carbody Lateral (Transient)	≤ 0.35g peak-to-peak 1 sec window[3] excludes peaks < 50 msec	The peak-to-peak accelerations, measured as the algebraic difference between the two extreme values of measured acceleration in any 1-second time period, excluding any peak lasting less than 50 milliseconds, shall not exceed 0.35g for all vehicles.
Carbody Lateral (Sustained Oscillatory)	≤ 0.10g RMS_t[4] 4 sec window[3] 4 sec sustained	Sustained oscillatory lateral acceleration of the carbody shall not exceed the prescribed (root mean squared) safety limits of 0.10g for all vehicles. Root mean squared values shall be determined over a sliding 4- second window with linear trend removed and shall be sustained for more than 4 seconds.
Carbody Vertical (Transient)	≤ 0.45g peak-to-peak 1 sec window[3] excludes peaks < 50 msec	The peak-to-peak accelerations, measured as the algebraic difference between the two extreme values of measured acceleration in any one second time period, excluding any peak lasting less than 50 milliseconds, shall not exceed 0.45g for all vehicles.
Carbody Vertical (Sustained Oscillatory)	≤ 0.16g RMS_t[4] 4 sec window[3] 4 sec sustained	Sustained oscillatory vertical acceleration of the carbody shall not exceed the prescribed (root mean squared) safety limit of 0.16g for all vehicles. Root mean squared values shall be determined over a sliding 4-second window with linear trend removed and shall be sustained for more than 4 seconds.

Bogie Lateral Acceleration[5]			
Parameter	Safety Limit	Filter / Window	Requirements
Bogie Lateral Acceleration	≤ 0.30g RMS_t[4]	2 sec window[3] 2 sec sustained	Bogie hunting shall not develop below the maximum authorized speed. Bogie hunting is defined as a sustained cyclic oscillation of the bogie evidenced by lateral accelerations exceeding 0.30g root mean squared for more than 2 seconds. Root mean squared values shall be determined over a sliding 2-second window with linear trend removed.

[1] The lateral and vertical wheel forces shall be measured and processed through a low pass filter (LPF) with a minimum cut-off frequency of 25 Hz. The sample rate for wheel force data shall be at least 250 samples per second.
[2] Carbody accelerations in the vertical and lateral directions shall be measured by accelerometers oriented and located in accordance with § 299.337(c)(3).
[3] Acceleration measurements shall be processed through an LPF with a minimum cut-off frequency of 10 Hz. The sample rate for acceleration data shall be at least 100 samples per second.
[4] RMS_t = RMS with linear trend removed.
[5] Bogie lateral acceleration shall be measured by accelerometers mounted on the bogie frame at a longitudinal location as close as practicable to an axle's centerline, or if approved by FRA, at an alternate location.

§ 299.611 Simulated revenue operations.

(a) The railroad shall conduct simulated revenue operations for a minimum period of two weeks prior to revenue operations to verify overall system performance, and provide operating and maintenance experience.

(b) The railroad shall maintain a log of tests conducted during the simulated revenue operations period. This log of tests shall identify any problems encountered during testing, and actions necessary to correct defects in workmanship, materials, equipment, design, or operating parameters.

(c) The railroad shall implement all actions necessary to correct safety defects, as identified by the log prior to the initiation of revenue service.

§ 299.613 Verification of compliance.

(a) The railroad shall prepare a report detailing the results of functional and performance qualification tests, pre-revenue service system integration testing, and vehicle/track system qualification tests required under §§ 299.605, 299.607, and 299.609 respectively. The report shall identify any problems encountered during testing, and alternative actions necessary to correct defects in workmanship, materials, equipment, design, or operating parameters.

(b) The railroad shall implement all actions necessary to correct defects, as identified by the report.

(c) The railroad shall submit the report(s) required by paragraph (a) of this section to FRA prior to commencing simulated revenue operations and at least 60 days prior to the intended start of full revenue service per § 299.609(f).

(d)(1) Prior to implementing a major upgrade to any safety-critical system component or sub-system, or prior to introducing any new safety-critical technology, the railroad shall submit for FRA approval the detailed test procedures and/or analysis in accordance with § 299.603(d).

(2) The railroad shall prepare a report detailing the results of functional and performance qualification tests, pre-revenue service system integration testing, and vehicle/track system qualification tests required under §§ 299.605, 299.607, and 299.609 respectively pertaining to a major upgrade to any safety-critical system component or subsystem, or introduction of any new safety-critical technology. The report shall identify any problems encountered during testing, and alternative actions necessary to correct defects in workmanship, materials, equipment, design, or operating parameters.

Subpart G—Inspection, Testing, and Maintenance Program

§ 299.701 General requirements.

Under the procedures provided in § 299.713, the railroad shall obtain FRA approval of a written inspection, testing, and maintenance program. The program shall provide detailed information, consistent with the requirements set forth in §§ 299.337 through

299.349, and 299.445(a), on the inspection, testing, and maintenance procedures necessary for the railroad to safely operate its system. This information shall include a detailed description of—

(a) Safety inspection procedures, intervals, and criteria;

(b) Test procedures and intervals;

(c) Scheduled preventive maintenance intervals;

(d) Maintenance procedures; and

(e) Special testing equipment or measuring devices required to perform safety inspections and tests.

§ 299.703 Compliance.

After the railroad's inspection, testing, and maintenance program is approved by FRA pursuant to the requirements and procedures set forth in § 299.713, the railroad shall adopt and comply with the program, and shall perform—

(a) All inspections and tests described in the program in accordance with the procedures and criteria that the railroad identified as safety-critical; and

(b) All maintenance tasks and procedures described in the program in accordance with the procedures and intervals that the railroad identified as safety-critical.

§ 299.705 Standard procedures for safely performing inspection, testing, and maintenance, or repairs.

(a) The railroad shall establish written standard procedures for performing all safety-critical or potentially hazardous inspection, testing, maintenance, and repair tasks. These standard procedures shall—

(1) Describe in detail each step required to safely perform the task;

(2) Describe the knowledge necessary to safely perform the task;

(3) Describe any precautions that shall be taken to safely perform the task;

(4) Describe the use of any safety equipment necessary to perform the task;

(5) Be approved by the railroad's official responsible for safety;

(6) Be enforced by the railroad's supervisors responsible for accomplishing the tasks; and

(7) Be reviewed annually by the railroad. The railroad shall provide written notice to FRA in accordance with § 299.9 at least one month prior to the annual review. If the Associate Administrator or their designee indicates a desire to be present, the railroad shall provide a scheduled date and location for the annual review. If the Associate Administrator requests the annual review be performed on another date but the railroad and the Associate Administrator are unable to agree on a date for rescheduling, the annual review may be performed as scheduled.

(b) The inspection, testing, and maintenance program required by this section is not intended to address and should not include procedures to address employee working conditions that arise in the course of conducting the inspections, tests, and maintenance set forth in the program. When reviewing the railroad's program, FRA does not intend to review or approve any portion of the program that relates to employee working conditions.

§ 299.707 Maintenance intervals.

(a) The initial scheduled maintenance intervals shall be based on those in effect on the Tokaido Shinkansen system as required under § 299.13(c)(1).

(b) The maintenance interval of safety-critical components shall be changed only when justified by accumulated, verifiable operating data, and approved by FRA under paragraph § 299.713.

§ 299.709 Quality control program.

The railroad shall establish an inspection, testing, and maintenance quality control program enforced by the railroad or its contractor(s) to reasonably ensure that inspections, testing, and maintenance are performed in accordance with inspection, testing, and maintenance program established under this subpart.

§ 299.711 Inspection, testing, and maintenance program format.

The submission to FRA for each identified subsystem shall consist of two parts—

(a) The complete inspection, testing, and maintenance program, in its entirety, including all required information prescribed in § 299.701, and all information and procedures required for the railroad and its personnel to implement the program.

(b) A condensed version of the program that contains only those items identified as safety-critical, per § 299.703 submitted for approval by FRA under § 299.713.

§ 299.713 Program approval procedure.

(a) *Submission.* Except as provided in § 299.445(a)(2), the railroad shall submit for approval an inspection, testing, and maintenance program as described in § 299.711(b) not less than 180 days prior to pre-revenue service system integration testing. The program shall be submitted to FRA in accordance with § 299.9. If the railroad seeks to amend an approved program as described in § 299.711(b), the railroad shall file with FRA in accordance with § 299.9 for approval of such amendment not less than 60 days prior to the proposed effective date of the amendment. A program responsive to the requirements of this subpart or any amendment to the program shall not be implemented prior to FRA approval.

(b) *Contents.* Each program or amendment shall contain:

(1) The information prescribed in § 299.701 for such program or amendment; and

(2) The name, title, address, and telephone number of the primary person to be contacted with regard to review of the program, its content, or amendments.

(c) *Approval.* (1) Within 90 days of receipt of the initial inspection, testing, and maintenance program, FRA will review the program. The Associate Administrator will notify the primary railroad contact person in writing whether the inspection, testing, and maintenance program is approved and, if not approved, the specific points in which the program is deficient. Deficiencies identified shall be addressed as directed by FRA prior to implementing the program.

(2) FRA will review each proposed amendment to the program that relaxes an FRA-approved requirement within 45 days of receipt. The Associate Administrator will then notify the primary railroad contact person in writing whether the proposed amendment has been approved by FRA and, if not approved, the specific points in which the proposed amendment is deficient. The railroad shall correct any deficiencies as directed by FRA prior to implementing the amendment. For amendments proposing to make an FRA-approved program requirement more stringent, the railroad is permitted to implement the amendment prior to obtaining FRA approval.

(3) Following initial approval of a program or amendment, FRA may reopen consideration of the program or amendment for cause stated.

(4) The railroad may, subject to FRA review and approval under § 299.15, implement inspection, testing, maintenance procedures and criteria, incorporating new or emerging technology.

Appendix A to Part 299—Criteria for Certification of Crashworthy Event Recorder Memory Module

Section 299.439(c) requires that trainsets be equipped with an event recorder that includes a certified crashworthy event recorder memory module. Section 299.449(a)(1) requires the railroad to install an image recording system in its trainsets used in revenue service. As required by § 299.449(a)(4), data from these image recording systems must be recorded on a certified crashworthy memory module or an alternative, remote storage system that provides at least equivalent data protections and is approved by FRA under § 299.15. This appendix prescribes the requirements for certifying an event recorder memory module (ERMM) or a trainset-mounted audio and/or image recording device memory module as crashworthy. For purposes of this appendix, a trainset-mounted audio or image recording system memory module is also considered an ERMM. This appendix includes the performance criteria and test sequence for establishing the crashworthiness of the ERMM as well as the marking of the event recorder containing the crashworthy ERMM.

A. General Requirements

(a) Each manufacturer that represents its ERMM as crashworthy shall, by marking it as specified in section B of this appendix, certify that the ERMM meets the performance criteria contained in this appendix and

that test verification data are available to the railroad or to FRA upon request.

(b) The test verification data shall contain, at a minimum, all pertinent original data logs and documentation that the test sample preparation, test set up, test measuring devices and test procedures were performed by designated, qualified individuals using recognized and acceptable practices. Test verification data shall be retained by the manufacturer or its successor as long as the specific model of ERMM remains in service on any trainset.

(c) A crashworthy ERMM shall be marked by its manufacturer as specified in section B of this appendix.

B. MARKING REQUIREMENTS

(a) The outer surface of the event recorder containing a certified crashworthy ERMM shall be colored international orange. In addition, the outer surface shall be inscribed, on the surface allowing the most visible area, in black letters on an international orange background, using the largest type size that can be accommodated, with the words ''CERTIFIED DOT CRASHWORTHY'', followed by the ERMM model number (or other such designation), and the name of the manufacturer of the event recorder. This information may be displayed as follows:

CERTIFIED DOT CRASHWORTHY

Event Recorder Memory Module Model Number

Manufacturer's Name

Marking ''CERTIFIED DOT CRASHWORTHY'' on an event recorder designed for installation in the railroad's trainsets is the certification that all performance criteria contained in this appendix have been met and all functions performed by, or on behalf of, the manufacturer whose name appears as part of the marking, conform to the requirements specified in this appendix.

(b) Retro-reflective material shall be applied to the edges of each visible external surface of an event recorder containing a certified crashworthy ERMM.

C. PERFORMANCE CRITERIA FOR THE ERMM

An ERMM is crashworthy if it has been successfully tested for survival under conditions of fire, impact shock, static crush, fluid immersion, and hydro-static pressure contained in one of the two tables shown in this section of appendix B. (See Tables 1 and 2.) Each ERMM must meet the individual performance criteria in the sequence established in section D of this appendix. A performance criterion is deemed to be met if, after undergoing a test established in this appendix B for that criterion, the ERMM has preserved all of the data stored in it. The data set stored in the ERMM to be tested shall include all the recording elements required by §299.439(c). The following tables describe alternative performance criteria that may be used when testing an ERMM's crashworthiness. A manufacturer may utilize either table during its testing but may not combine the criteria contained in the two tables.

TABLE 1 TO APPENDIX A OF PART 299—ACCEPTABLE PERFORMANCE CRITERIA—OPTION A

Parameter	Value	Duration	Remarks
Fire, High Temperature	750 °C (1400 °F)	60 minutes	Heat source: Oven.
Fire, Low Temperature	260 °C (500 °F)	10 hours.	
Impact Shock	55g	100 ms	½ sine crash pulse.
Static Crush	110kN (25,000 lbf)	5 minutes.	
Fluid Immersion	#1 Diesel, #2 Diesel, Water, Salt Water, Lube Oil.	Any *single* fluid, 48 hours.	
	Fire Fighting Fluid	10 minutes, following immersion above.	Immersion followed by 48 hours in a dry location without further disturbance.
Hydrostatic Pressure	Depth equivalent = 15 m. (50 ft.).	48 hours at nominal temperature of 25 °C (77 °F).	

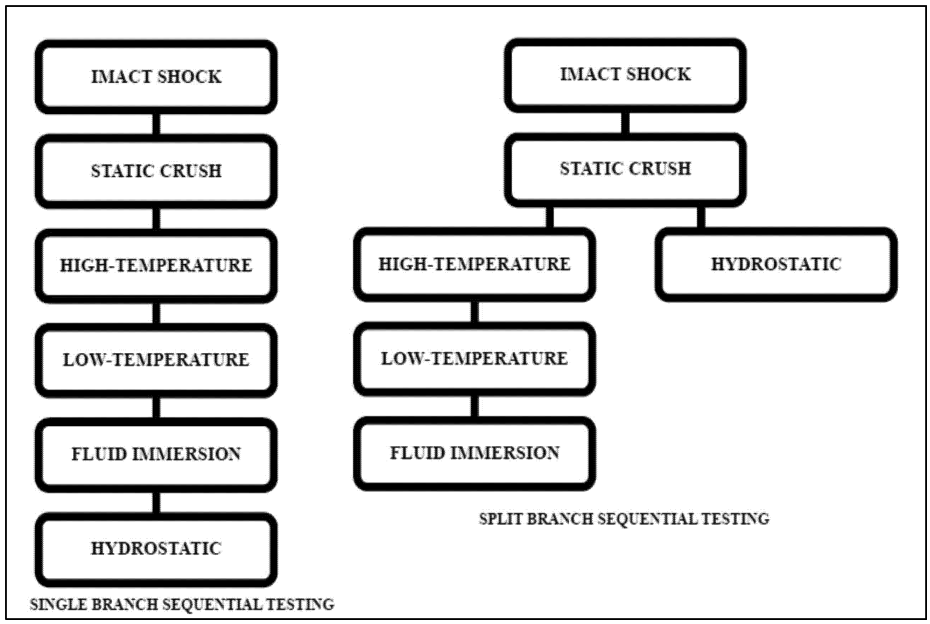


TABLE 2 TO APPENDIX A TO PART 299—ACCEPTABLE PERFORMANCE CRITERIA—OPTION B

Parameter	Value	Duration	Remarks
Fire, High Temperature	1,000 °C (1,832 °F)	60 minutes	Heat source: Open flame.
Fire, Low Temperature	260 °C (500 °F)	10 hours	Heat source: Oven.
Impact Shock—Option 1	23gs	250 ms.	
Impact Shock—Option 2	55gs	100 ms	½ sine crash pulse.
Static Crush	111.2kN (25,000 lbf), 44.5kN (10,000 lbf).	5 minutes. (single ''squeeze'')	Applied to 25% of surface of largest face.
Fluid Immersion	#1 Diesel, #2 Diesel, Water, Salt Water, Lube Oil, Fire Fighting Fluid.	48 hours *each*.	
Hydrostatic Pressure	46.62 psig (= 30.5 m. or 100 ft.).	48 hours at nominal temperature of 25 °C (77 °F).	

D. TESTING SEQUENCE

In order to reasonably duplicate the conditions an event recorder may encounter, the ERMM shall meet the various performance criteria, described in section C of this appendix, in a set sequence. (See Figure 1). If all tests are done in the set sequence (single branch testing), the same ERMM must be utilized throughout. If a manufacturer opts for split branch testing, each branch of the test must be conducted using an ERMM of the same design type as used for the other branch. Both alternatives are deemed equivalent, and the choice of single branch testing or split branch testing may be determined by the party representing that the ERMM meets the standard.

Figure 1 to Appendix A to Part 299 – Event Recorder Memory Module Sequential Testing

E. TESTING EXCEPTION

If a new model ERMM represents an evolution or upgrade from an older model ERMM that was previously tested and certified as meeting the performance criteria contained in section C of this appendix, the new model ERMM need only be tested for compliance with those performance criteria contained in section C of this appendix that are potentially affected by the upgrade or modification. FRA will consider a performance criterion not to be potentially affected if a preliminary engineering analysis or other pertinent data establishes that the modification or upgrade will not change the performance of the older model ERMM against the performance criterion in question. The manufacturer shall retain and make available to FRA upon request any analysis or data relied upon to satisfy the requirements of this paragraph to sustain an exception from testing.

[85 FR 69731, Nov. 3, 2020, as amended at 88 FR 70766, Oct. 12, 2023]

APPENDIX B TO PART 299—CAB NOISE TEST PROTOCOL

This appendix prescribes the procedures for the in-cab noise measurements for high-speed trainsets at speed. The purpose of the cab noise testing is to ensure that the noise levels within the cab of the trainset meet the minimum requirements defined within §299.431(h).

A. MEASUREMENT INSTRUMENTATION

The instrumentation used shall conform to the requirements prescribed in appendix H to part 229 of this chapter.

B. TEST SITE REQUIREMENTS

The test shall meet the following requirements:

(a) The passenger trainset shall be tested over a representative segment of the railroad and shall not be tested in any site specifically designed to artificially lower in-cab noise levels.

(b) All windows, doors, cabinets, seals, etc., must be installed in the trainset cab and be closed.

(c) The heating, ventilation and air conditioning (HVAC) system or a dedicated heating or air conditioner system must be operating on high, and the vents must be open and unobstructed.

C. PROCEDURES FOR MEASUREMENT

(a) $L_{Aeq,T}$ is defined as the A-weighted, equivalent sound level for a duration of T seconds, and the sound level meter shall be set for A-weighting with slow response.

(b) The sound level meter shall be calibrated with the acoustic calibrator immediately before and after the in-cab tests. The calibration levels shall be recorded.

(c) Any change in the before and after calibration level(s) shall be less than 0.5 dB.

(d) The sound level meter shall be located:

(1) Laterally as close as practicable to the longitudinal centerline of the cab, adjacent to the driver's seat,

(2) Longitudinally at the center of the driver's nominal seating position, and

(3) At a height 1219 mm (48 inches) above the floor.

(e) The sound measurements shall be taken autonomously within the cab.

(f) The sound level shall be recorded at the maximum approved trainset speed (0/−3 km/h).

(g) After the passenger trainset speed has become constant at the maximum test speed and the in-cab noise is continuous, $L_{Aeq,T}$ shall be measured, either directly or using a 1 second sampling interval, for a minimum duration of 30 seconds at the measurement position ($L_{Aeq,\ 30s}$).

D. REPORTING

To demonstrate compliance, the railroad shall prepare and submit a test report in accordance with §299.613. As a minimum that report shall contain—

(a) Name(s) of person(s) conducting the test, and the date of the test.

(b) Description of the passenger trainset cab being tested, including: Car number and date of manufacture.

(c) Description of sound level meter and calibrator, including: Make, model, type, serial number, and manufacturer's calibration date.

(d) The recorded measurement during calibration and for the microphone location during operating conditions.

(e) The recorded measurements taken during the conduct of the test.

(f) Other information as appropriate to describe the testing conditions and procedure.

FINDING AIDS

A list of CFR titles, subtitles, chapters, subchapters and parts and an alphabetical list of agencies publishing in the CFR are included in the CFR Index and Finding Aids volume to the Code of Federal Regulations which is published separately and revised annually.

Table of CFR Titles and Chapters

V Marine Mammal Commission (Parts 500—599)

VI Fishery Conservation and Management, National Oceanic and Atmospheric Administration, Department of Commerce (Parts 600—699)

Alphabetical List of Agencies Appearing in the CFR

(Revised as of October 1, 2024)

Agency	CFR Title, Subtitle or Chapter
Administrative Conference of the United States	1, III
Advisory Council on Historic Preservation	36, VIII
Advocacy and Outreach, Office of	7, XXV
Afghanistan Reconstruction, Special Inspector General for	5, LXXXIII
African Development Foundation	22, XV
Federal Acquisition Regulation	48, 57
Agency for International Development	2, VII; 22, II
Federal Acquisition Regulation	48, 7
Agricultural Marketing Service	7, I, VIII, IX, X, XI; 9, II
Agricultural Research Service	7, V
Agriculture, Department of	2, IV; 5, LXXIII
Advocacy and Outreach, Office of	7, XXV
Agricultural Marketing Service	7, I, VIII, IX, X, XI; 9, II
Agricultural Research Service	7, V
Animal and Plant Health Inspection Service	7, III; 9, I
Chief Financial Officer, Office of	7, XXX
Commodity Credit Corporation	7, XIV
Economic Research Service	7, XXXVII
Energy Policy and New Uses, Office of	2, IX; 7, XXIX
Environmental Quality, Office of	7, XXXI
Farm Service Agency	7, VII, XVIII
Federal Acquisition Regulation	48, 4
Federal Crop Insurance Corporation	7, IV
Food and Nutrition Service	7, II
Food Safety and Inspection Service	9, III
Foreign Agricultural Service	7, XV
Forest Service	36, II
Information Resources Management, Office of	7, XXVII
Inspector General, Office of	7, XXVI
National Agricultural Library	7, XLI
National Agricultural Statistics Service	7, XXXVI
National Institute of Food and Agriculture	7, XXXIV
Natural Resources Conservation Service	7, VI
Operations, Office of	7, XXVIII
Procurement and Property Management, Office of	7, XXXII
Rural Business-Cooperative Service	7, XVIII, XLII
Rural Development Administration	7, XLII
Rural Housing Service	7, XVIII, XXXV
Rural Utilities Service	7, XVII, XVIII, XLII
Secretary of Agriculture, Office of	7, Subtitle A
Transportation, Office of	7, XXXIII
World Agricultural Outlook Board	7, XXXVIII
Air Force, Department of	32, VII
Federal Acquisition Regulation Supplement	48, 53
Air Transportation Stabilization Board	14, VI
Alcohol and Tobacco Tax and Trade Bureau	27, I
Alcohol, Tobacco, Firearms, and Explosives, Bureau of	27, II
AMTRAK	49, VII
American Battle Monuments Commission	36, IV
American Indians, Office of the Special Trustee	25, VII
Animal and Plant Health Inspection Service	7, III; 9, I
Appalachian Regional Commission	5, IX
Architectural and Transportation Barriers Compliance Board	36, XI

Agency	CFR Title, Subtitle or Chapter
Arctic Research Commission	45, XXIII
Armed Forces Retirement Home	5, XI; 38, II
Army, Department of	32, V
Engineers, Corps of	33, II; 36, III
Federal Acquisition Regulation	48, 51
Benefits Review Board	20, VII
Bilingual Education and Minority Languages Affairs, Office of	34, V
Blind or Severely Disabled, Committee for Purchase from People Who Are	41, 51
Federal Acquisition Regulation	48, 19
Career, Technical, and Adult Education, Office of	34, IV
Census Bureau	15, I
Centers for Medicare & Medicaid Services	42, IV
Central Intelligence Agency	32, XIX
Chemical Safety and Hazard Investigation Board	40, VI
Chief Financial Officer, Office of	7, XXX
Child Support Services, Office of	45, III
Children and Families, Administration for	45, II, IV, X, XIII
Civil Rights, Commission on	5, LXVIII; 45, VII
Civil Rights, Office for	34, I
Coast Guard	33, I; 46, I; 49, IV
Coast Guard (Great Lakes Pilotage)	46, III
Commerce, Department of	2, XIII; 44, IV; 50, VI
Census Bureau	15, I
Economic Affairs, Office of the Under-Secretary for	15, XV
Economic Analysis, Bureau of	15, VIII
Economic Development Administration	13, III
Emergency Management and Assistance	44, IV
Federal Acquisition Regulation	48, 13
Foreign-Trade Zones Board	15, IV
Industry and Security, Bureau of	15, VII
International Trade Administration	15, III; 19, III
National Institute of Standards and Technology	15, II; 37, IV
National Marine Fisheries Service	50, II, IV
National Oceanic and Atmospheric Administration	15, IX; 50, II, III, IV, VI
National Technical Information Service	15, XI
National Telecommunications and Information Administration	15, XXIII; 47, III, IV
National Weather Service	15, IX
Patent and Trademark Office, United States	37, I

List of CFR Sections Affected

All changes in this volume of the Code of Federal Regulations (CFR) that were made by documents published in the FEDERAL REGISTER since January 1, 2019 are enumerated in the following list. Entries indicate the nature of the changes effected. Page numbers refer to FEDERAL REGISTER pages. The user should consult the entries for chapters, parts and subparts as well as sections for revisions.

For changes to this volume of the CFR prior to this listing, consult the annual edition of the monthly List of CFR Sections Affected (LSA). The LSA is available at *www.govinfo.gov*. For changes to this volume of the CFR prior to 2001, see the ''List of CFR Sections Affected, 1949–1963, 1964–1972, 1973–1985, and 1986–2000'' published in 11 separate volumes. The ''List of CFR Sections Affected 1986–2000'' is available at *www.govinfo.gov*.
